quite so extensive as England, nor is the "twang" characteristic of England. There are, however, many English dialects, and these mar what Cockneydom has spared. Moreover, Prof. Brandl has conducted continuous systematic observations on American students at German Universities during twenty years, and he has studied the speech of students at various American Universities and Colleges and listened critically to thirty-five American orators representative of different parts of America; and his conclusion is that the English of the ordinary educated American is quite on an equality with that of the ordinary educated Englishman. We gather from the report that "English" in this high argument is not so much a matter of vocabulary and composition, but rather of speech, delivery, or accent. Now we must look to our accent, for there is practical, not to say imperial, importance in it. We were remiss enough not to take up with enthusiasm the project of an exchange of teachers between Germany and England: the projectors consequently turned their eager gaze to America; and Prof. Brandl has now assured the German Ministry of Education "that the quality of the English which would be acquired by German children from the American teachers will be quite as desirable as that which would be acquired from English teachers." And so "the exchange of teachers between Germany and America will be carried out without further delay." We can console ourselves only by asking helplessly why an official interchange of teachers of English and of German should be in the least necessary, and by expressing our gratification that such as do consider it necessary are able to obtain a satisfactory supply somehow.

WE are very glad that Sir Harry Reichel has reprinted the personal appreciation of the late Otto Salomon that he contributed to the first number of the new organ of the Educational Handwork Association—"An Appreciation by an Old Nääs Student." Some fourteen years ago, when he was already Vice-Chancellor of the University of Wales, Sir Harry, finding there was no one on the governing body of the secondary schools in Wales familiar with the principles of school handwork, devoted two consecutive summer holidays to the study of Sloyd, going through the courses as an ordinary student. He has thus been able to give educational handwork its fitting place in Welsh schools; and he has also done great service to the movement in England by organizing an influential Examination Board, recognized by the chief Education Authorities, to give diplomas to qualified teachers. Sir Harry, with a few skilful touches, places Salomon before us, describing how for him religion and philosophy were inextricably interwoven, and drawing attention to his keen sense of humour and strength of will, to his clearness of vision and whole-hearted devotion to his ideal, and to his skill in wielding the Socratic method and in answering difficult questions so as to leave the impression that "his knowledge was entirely his own, that each problem had been thought out by himself, and that he had dug down by his own unaided efforts to the bedrock of first principle." Above all, Salomon showed by his own example and in all his teaching that "personality and not machinery is the life of education."

## SUMMARY OF THE MONTH.

At the Annual Conference of the Private Schools Association at Bath (April 23), Mr. H. R. Beasley gave an address on "Private Enterprise in Education." Without such enterprise, he said, they would have an official, stereotyped, and monotonous system. The best interests of education would be served by the encouragement of private schools and colleges. If we had a universal State system and the private schools were crushed out by reason of underselling and unfair competition, the future of education would be dark. In other countries—Germany, France, America, and even in far-off Japan—it was found that a State system would not do all that was necessary, and that the best elements of education were found in private enterprise. To-day private enterprise in education was distinctly under a cloud. Hundreds of private schools had been obliged to close their doors not because the schools were at all inefficient, but because of underselling. He believed that the people of England to-day did not know the danger which threatened education. If they would but make common cause with other national associations which might have more numbers and which could not be considered as advocating the interest of a section or class, they would find that the people of this country would ignore the fact that municipal public secondary schools were established, and they would send their children to their schools because in their schools, and only in their schools, did they link together the best influences of home and school. That was the keynote of their position. It was a most remarkable fact that the elementary-school teachers of this country, who had not one penny piece invested in the schools in which they taught, had a very powerful union, while the principals of private schools who had all their capital invested did not think of union, and therefore they found their interests so little advertised as was the case to-day.

In the course of a discussion of the Board of Education's new Register of Recognized Schools, the President of the P.S.A.I. (Dr. Sibly) pointed out that the Royal Commission emphatically recommended that schools that did not wish to be brought under the control of the Board of Education should not be asked to submit to any inspection whatever, except in so far as was necessary to secure sanitary conditions. The wishes of the Royal Commission were being trampled upon, and the country was being hurried in exactly the opposite direction to what the Commissioners recommended. As the result of the discussion, the following resolution was unanimously adopted:—"That, while this meeting advises the members of this Association to seek the assistance which comes of an advisory inspection, it recommends them in the interests of English education generally and in the interests of private enterprise in education in particular, to have nothing whatever to do with the new Register of Recognized Schools, and to submit to no inspection which gives the inspecting body the right to dictate to the proprietor of the school."

THE Education Society of the Teachers' Guild proposes from time to time to conduct investigations into and discuss educational questions, and it has been suggested that many teachers in secondary schools who may not be members of the Guild would be willing to co-operate in such work. As first steps in this direction the hon. secretary of the Society would be pleased (1) to hear of any schools where the teachers of one subject or group of subjects form a committee for the general consideration of method or curriculum pertaining to that subject or group, with the name of any one to whom inquiries could be addressed as to the opinion of such committee on methods of teaching, or desirable reforms in the treatment of such subjects, (2) to receive any suggestions as to questions arising in the course of school work which would well repay consideration. Replies should be addressed to the Hon. Secretaries, Teachers' Guild Education Society, 74 Gower Street, London, W.C.

THE Catholic Education Council has unanimously reaffirmed the three resolutions passed in March, 1906, defining the Catholic position in regard to the education question as follows:—

(1) That no settlement of the education question can be accepted by Catholics which takes away from Catholic parents their right (a) to have for their children Catholic schools, in which the teachers shall be Catholics and shall give definite religious instruction under Catholic control during school hours; (b) to have new Catholic schools recognized

and maintained and enlargement of existing schools sanctioned where the needs of the Catholic population so demand.

(2) That no settlement can be accepted which does not safeguard the Catholic character of Catholic schools, either by retaining the existing proportion and powers of the foundation managers or by some equally effective means.

(3) That no settlement can be accepted which does not provide for the continuance and maintenance of the existing Catholic training colleges and Catholic pupil-teacher centres, and which does not grant facilities for extending the means of giving Catholic training to Catholic teachers.

The Council further unanimously passed the following resolutions:—

(4) That this Catholic Education Council declares that it will not accept any settlement of the education question which places Catholic teachers in a position of inferiority either as regards status or salary to Council school teachers, or which does not make sufficient grants from public funds to maintain Catholic schools on the same level of efficiency as Council schools.

(5) That, inasmuch as the secondary-school regulations hamper religious freedom and penalize Catholics on account of their religion, the Catholic Education Council renews its protest against them, and invites Catholic electors to bring pressure on their members of Parliament to demand their withdrawal.

DR. O'DWYER, Roman Catholic Bishop of Limerick, contributes an interesting article to the May number of the *Irish Educational Review* on the subject of Mr. Birrell's Universities Bill. He says that the Bill is a great disappointment in many respects and hurts the religious sense of Irish Roman Catholics who have been working all these years for an institution in accordance, to some extent at least, with their religious principles. This is one reason for the national attitude of rather quiet expectancy. Another is that the people are awaiting, "with a reserve that does them infinite credit, the authoritative guidance of the Bishops on the Bill that is before the country." Dr. O'Dwyer proceeds to criticize the Bill on the grounds that it makes no provision for religion and that there is a total omission of the Bishops from the governing body. It seems to him that the claim to direct representation of the Bishops on the Senate ought to be pressed as a matter of principle, and he is confident that the intelligent opinion of Irish Roman Catholics will support that claim. He admits that the general plan of constituting the governing body is much better than he had expected, but thinks that it might still be considerably improved. Under the proposed constitution, for instance, there is to be no protection for the religious beliefs of students, and it will be possible to appoint a Protestant to a Chair of History without being able to prevent him from teaching it with a Protestant bias. The Bishop urges strongly that the new University in Dublin should be residential and that the sum proposed for the building and equipment of the new University and college is utterly inadequate. In conclusion, he says that the future status of Maynooth is a point of vital importance. It would seem that the Maynooth is not to be a constituent college of the University, and it is doubtful whether it will be admitted in the humble position of an affiliated college. "Speaking entirely for myself," Dr. O'Dwyer says, "I think that this is intolerable, and the real motive is distrust and dislike of the Irish priesthood."

LADY RÜCKER presided over the annual conference of the Association of Teachers of Domestic Science, which was held at the Finsbury Town Hall (May 9), and largely attended by delegates from all parts of the country. The country (said Lady Rücker) was waking up in all directions to the importance of domestic science. It was one of the most far-reaching results of the Victorian era of scientific discovery that there was need for scientific training in every curriculum. In too many homes it was still true that the woman's privilege of inaccuracy and carelessness was accepted. Why should our rate of infantile mortality be still nearly double that of Norway? It was due to an amount of ignorance which was a blot upon fifty years' higher educational work among women. But those fifty years, in the face of strenuous opposition and misrepresentation, were necessary. Women had had to win the right to be educated at all, and they had had to prove they were worthy of as good an education as men. Now they had to go a step further, and show that the highest education could only be attained by the women who carried research into those fields of activity which must ever be women's work in the world. They must get rid of the horrible idea that household duties could be left to the family duffer, and show instead that the best brains of the country were needed for the work. True,

the work had been despised, very largely because it had been badly done. And their great aim must be to get University recognition of a course of household economics. An ideal course would give the complete science of the efficient management of a house in all its branches—a big institution and a home, large or small. The whole subject would be covered from the purchase of a site to the bacteria of the larder, the chemistry of the kitchen and the chemistry of the washtub, the economic principles underlying its ruling, the psychology and ethics of its moral government, and the culture which would help to enlarge the minds of those who lived in the home. A number of interesting papers were read by experts in the subject.

At the ninth annual Examination for the National Diploma in Agriculture, held at Leeds University, the record number of 102 candidates entered, and of these 99 were present. In Part I. 32 (out of 52) candidates passed; in Part II. 29 passed, 4 with honours. Of these four, two came from the West of Scotland Agricultural College, Glasgow, one from the Royal College of Science, Dublin, and one from the North of Scotland Agricultural College, Aberdeen. Among the passes in Part I. we note three Indians and one Chinaman. One of the Indians (Pandit Ram Gopal), as we recorded in our last issue, had gained an Honour Diploma of membership at his College—the Royal Agricultural College, Cirencester.

THE Diocesan Inspector's Report to the Bishop of London states that the statistics of the Church schools in the diocese of London show that there are decreases of 28 in the number of inspected departments, 7,365 children on the books, 6,523 average attendance, and 7,013 present at examinations. Twelve departments have been closed during the inspection year, and four transferred to the Local Authority. The steady improvement of past years is well maintained. Though 28 fewer departments were inspected than in 1906, the number marked "excellent" has increased by one. Better results have never been reported with regard to the religious teaching in the diocese, notwithstanding that the work has been considerably interrupted on account of building alterations.

THE new buildings of the Bedford Modern School were opened (May 12) by Sir Arthur Rücker. The scheme of reconstruction includes 16 commodious classrooms, a large and well equipped gymnasium, new shops for metal- and wood-work, a library, newly equipped laboratories for physics and chemistry, and a range for Morris tube practice. In an address upon the progress of education, Sir Arthur Rücker said too much stress should not be laid upon pessimistic views. They had been passing through times of great change, and, although there were still many weak points, it was not fair to represent that all the intellect and attention given to education during the last half-century had produced no result. A great advance had taken place. There was a certain want of correlation between educational bodies, but it was not desirable that our educational system should be made too rigid. He should be sorry to see the whole of education placed under the strict domination of the Board of Education or that each University should dominate particular districts, so as to leave the schools no choice; but he thought proper relations might be introduced, not in a rigid way by external authority, but voluntarily and by greater freedom to introduce educational experiment and reform.

THE Regulations for English Secondary Schools for the year beginning August 1 next, just published by the Board of Education (Cd. 4037), are in substance the same as those of last year. Owing to difficulties in interpretation, the regulations as to the provision of free places have been further defined. It is made clear that boys and girls applying for such free places may be required to pass an entrance test of attainments and proficiency, having due regard to the age of the applicants, the subjects in which they have been receiving instruction, and the standard of attainments and proficiency required for the admission of fee-paying pupils. Pupils entering as bursars or as pupil-teachers must not be counted in estimating the number of free places provided. In examinations held for the selection of boys and girls to occupy free places, importance is to be attached to the report of the candidate's own teachers, and the masters or mistresses of the secondary school are to be associated with teachers familiar with elementary-school conditions in conducting the examination. The regulations also make provision

for greater elasticity in the way of adapting the instruction to the requirements of the pupil, though precautions are taken to see that this privilege is used with proper moderation. To meet the difficulty of providing secondary education in rural areas and less populous urban or semi-urban districts, the Board is prepared next year to recognize secondary schools with fifteen instead of sixteen as the normal leaving age, but this concession is made only where local circumstances show that it will be of distinct educational advantage to the district and that a longer school life is not possible under actual conditions.

A COMMITTEE was appointed last year to draw up a scheme for the reconstitution of the Royal Agricultural College, Cirencester, for the approval of the Board of Agriculture and the Local County Authorities, to bring the College into line, not only in constitution, but in the scope and character of its work, with the kindred establishments of modern development. The Committee have completed their task to the satisfaction of the Board of Agriculture, and after the current term the College will be managed by a representative governing body, and will be eligible to obtain grants from the Board of Agriculture and from the County Council of Gloucestershire, and perhaps the adjoining counties. The modifications have involved the resignation of the Principal, the Rev. J. B. McClellan, who has occupied his position with distinction for twenty-seven years, and the voluntary retirement of one who has been so closely identified with the success of the College is the only regrettable incident connected with the change. Prof. Ainsworth Davis, the new Principal, is well qualified to take up the direction of the institution. There is every reason to anticipate the maintenance of the social standing and educational pre-eminence of the College, while the additional provision made for placing facilities at the service of farmers' sons and others in the contributing counties not desirous of taking the full course should enhance its general usefulness and local influence. At all events, the extended scope of the future operations will remedy a defect which has hitherto existed in the western district as compared with most other parts of the country, as under the new regime it will be possible for the County Councils to co-operate with the College in furthering local agricultural education.

THE Education Committee of the London County Council has resolved to recommend the Council to hold open-air schools from June 1 to October 31 (or for a period of five months, commencing as soon as possible after June 1) at Birley House, Forest Hill, the grounds of Shrewsbury House, Shooter's Hill, and Montpelier House, Kentish Town. It is proposed that the schools shall be mixed schools, each providing for 75 children, the total expenditure being estimated at £1,962. "With a view to awakening in the minds of the children attending the schools a true sense of the responsibilities attaching to their inheritance as children of the Empire, and of the close family tie which exists among all British subjects," the Committee have made arrangements to celebrate Empire Day in the schools.

THE Education Committee of Leicestershire have adopted a scheme for the examination of secondary schools in the county, whereby each school can have the alternative of placing its annual examination in the hands of either the Oxford and Cambridge Examining Board or the University of Birmingham. The Education Committee will defray the cost of examining such schools or accept the latter alternative, and these schools will be subject to occasional inspection by the Professor of Education of the University of Birmingham. The same committee have also established ten scholarships for aiding teachers of the administrative county to enter the training college attached to the University, the awards being made on the results of examinations held by the University, and the scholarships being divided between men and women as from time to time may seem best.

THE BISHOP OF HEREFORD, speaking at the annual meeting of the Bristol and District Workers' Educational Association, agreed with the chairman (Mr. A. A. Senington) that a great deal remained to be done to open the way for talent in all grades of life, but at the same time he assured his hearers that in comparing Bristol with what it was forty-five years ago they had good reason to be thankful for the progress that had been made, and he amusingly describing himself as a sort of survivor of the bad old times. After mentioning a number of educational efforts

with which he was associated when in Bristol, his lordship put in a strong plea on behalf of the University scheme. He was not sure, he said, that the citizens generally grasped the extent of the advantages that would accrue to Bristol from a University. He urged that Bristol should maintain her position amongst the great cities by crowning her system of educational institutions with a University for the West of England. In the course of his remarks he emphasized the importance of Churchmen, Nonconformists, and in fact all citizens, uniting to carry the University scheme to a successful issue.

THE new University established by the Legislature of Alberta at the capital of that province will open its first term next September. The site selected for its buildings is a very fine one of 250 acres at Strathcona, on the Saskatchewan River, opposite Edmonton, the provincial capital. The plans, however, have not yet been prepared, and meanwhile the University will have the use of a large school building in Edmonton itself. The scheme of the University's work and buildings is very comprehensive, but in the first term there will only be one combined Faculty, of Arts and Science, giving B.A. and B.Sc. degrees. Dr. H. M. Tory, the President, formerly a professor at McGill University, Montreal, says he expects to begin with forty or fifty students. The province has set apart for the revenue of the University one-fifth of the educational land tax and one-fifth also of the tax on joint-stock companies, and the Legislature will make special grants for building. The Convocation consists of the University graduates resident in Alberta, numbering 364, about half of whom are *alumni* of Toronto University. This body of graduates also elects five of the fifteen members of Senate.

LT.-COL. ALLAN CUNNINGHAM, late R.E., writes: "General regret will be felt among the readers of the mathematical columns of *The Educational Times* at the recent death of Mr. R. W. D. Christie, of Stanley College, Liverpool. Mr. Christie has been a constant contributor to these pages since 1884: he was one of the most prolific setters of problems, and has thereby contributed not a little to the vitality of this portion of the paper. His speciality has lain, of late, in Factorization, in the Pellian equation and in Diophantine problems; and his problems were looked for with interest by students of those subjects, to most of whom he was probably known only in this connexion."

MISS LOUISA STEVENSON, LL.D., the elder of two sisters who made their mark on the social and educational life of Edinburgh, died on May 13 in her seventy-third year. Miss Stevenson was one of the principals in the establishment of the Association for the University Education of Women and a pioneer in the agitation for the medical education of women. It was under her auspices also (says the *Scotsman*) that the Council of that Association further pressed their claims, which resulted successfully, for the admission of women to the Universities themselves. Before the Commission on University Education Miss Stevenson gave evidence which impressed the Commissioners by its clearness and the intimate knowledge and grasp of principles which it exhibited. Miss Stevenson was the first lady to be elected to a parochial board in Edinburgh, and she devoted her energies and influence to improving the nursing arrangements in one of the poorhouses of that city. She took much interest in the Scottish branch of the Jubilee Nurses' Institution and in the colonial nursing scheme, and it was her interest in this now important branch of women's work that induced her to become a member of the Edinburgh Royal Infirmary Board. She was a keen supporter also of the movement for giving the Parliamentary vote to women and other phases of social reform. In 1906 Edinburgh University conferred the degree of LL.D. upon Miss Stevenson, as it had done upon her sister, the late Miss Flora Stevenson, for many years Chairman of the Edinburgh School Board.

## UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

**Oxford.** AFTER the inclement way in which term started—snow and then floods and cricket grounds turned into lakes—the weather which has accompanied the "Eights" has been a real pleasure, and sunshine and summer frocks altered the outward aspect of things.

The floods had proved a serious hindrance to the boats in practice, and from the rowing point of view it would have been an advantage if they could have come a week later, but so long as "Greats" are fixed for the sixth week of term (the one exception of the Final Honour schools) so long will the "Eights," we imagine, remain in the fourth week. There really seems little reason why "Greats" should not fall into line with the other schools.

As far as the "Eights" are concerned, the racing at the top has not been very exciting, and Christ Church are secure of their headship: the innovation of allowing colleges to enter second eights (the members of which are not debarred from rowing afterwards in the Torpids) has resulted in "three divisions" for the first time in History. Five colleges put on second Eights, and there have been two examples of an "over-bump" (by which a boat goes up three places), the first being furnished by Christ Church Second and the second by Magdalen Second.

Among meetings of the month pride of place must perhaps be assigned to Mr. Haldane's meeting in the Town Hall, when he discoursed on his scheme for a reserve of officers and his views of the relation of the University to the Army. It was a really great meeting and had been excellently organized. Opinions differ somewhat as to Mr. Haldane's speech, some considering it most effective, others as rather "playing to the gallery." General Sir Ian Hamilton, who was another of the speakers, had a great reception.

But there have been many other meetings and lectures. We have had Mr. Benjamin Kidd, of "Social Evolution" fame, as Romanes Lecturer. It was an interesting appointment, though possibly Mr. Kidd's name was more widely known at Oxford a few years ago. We have had Mr. Mackail (than whom there is no more finished stylist) on "Sophocles"; we have had the "Licensing Bill," Prof. Price (in an Inaugural Lecture) on "Economics"; Prof. Raleigh, on "Dr. Johnson and Shakespeare"; we have also had "General" Booth explaining the secret of the success of the Salvation Army. Altogether we have had fine mixed feeding for those who find their relaxation in attendance at lectures.

Otherwise there has not been in the University at large much excitement. The Chancellor has not again honoured us with his presence, and details of the exact progress of his fund for the relief of the University have not been recently published. At present the University is largely dependant for extra help on the contributions from the more prosperous colleges. According to the *Oxford Magazine*, which may be taken to be more accurate than some of the critics in the London papers, the contributions of the colleges for University purposes amount to £40,000 a year, Magdalen being the largest contributor with £9,000.

Owing to the weather, we have not had much cricket to look at, and there has been up to date only one "foreign match"—against Lancashire—and very little play in that. There was no match, as there is usually, in Eights week. Mr. Wright is again Captain, but Mr. G. N. Foster (who would naturally be qualified to play against Cambridge) does not appear to be in residence.

(From our own Correspondent.)

**Cambridge.** MR. HALDANE has paid us a visit this term, and explained to us exactly what he expects from the University as a recruiting school for the army.

The suggestions he placed before us were eminently workmanlike, and there is no doubt that many men will embrace the opportunity of entering the reserve of officers on the terms stated. Put briefly, the Secretary's idea is that service in a cadet corps, followed by a course of military education up here, tested by two professional examinations, will qualify the candidate to be posted for further training of four months with a regular unit at home, or possibly in India. After this service, and a further examination, the budding officer will qualify for regular employment. There are many men who will utilize the few months after taking their degree in this military course, and will be ready to serve their country as qualified officers if need should arise.

Our new Chancellor was inaugurated on the 1st of May, and is to be installed on June 17th. The ceremony at Carlton Gardens, though nominally at a meeting of the Senate, was only attended by a few representative people. The proceedings appear to have been dignified, though brief, and we must look forward to the installation as a ceremony that will show the University at its best in the trappings of pomp. The Vice-Chancellor is well able to maintain the dignity of the place on occasions such as this.

The Senate discussed in the early part of the month a report by the Botanic Garden Syndicate. Parenthetically it may be remarked that the botany department is one of the best organized and staffed that we possess in this University. The syndicate asked for an increased allowance of £220 per annum for the upkeep of the gardens and the proper remuneration of the staff there employed. The Financial Board, with characteristic generosity, consented to a grant of £100! A few facts might prove illuminating. Mr. Lynch, the Curator, has worked and slaved for twenty-nine years for the improvement of the gardens, and a rise in his stipend would be a simple act of businesslike prudence; skilled gardeners are now sparsely employed, and recourse is had to the "out-of-works" for economy, or rather for cheapness—economical it cannot be. For a quarter of a century the purchase of new plants has practically cost the University nothing. Mr. Lynch, by his skill in producing new forms of vegetable life, and his acumen in disposing of them at the best market price, has practically struck the item of plant purchase out of the list of expenses of the Garden. We shall next hear of the abolition of some laboratory to endow a new professorship.

The new scheme for the Agricultural Special has met with a tolerably favourable reception. The Professor of Geology objected to his pet subject being relegated to the position of an "option"; but, on the whole, the schedule seems a fair one, and necessitates only a minimum of scientific knowledge before taking the more purely agricultural work. The election of Mr. R. H. Biffen to the chair of Agricultural Botany was a timely recognition of merit which saved to the University an expert whose enthusiasm is only equalled by his ability. It is an open secret that Mr. Biffen has been prompted by patriotic rather than pecuniary motives to devote himself to the building up of our Agricultural Department.

The election to the Professorship of Biology will take place early in June. The name of Mr. Bateson, of St. John's, is freely mentioned in connexion with the new chair.

The retirement of Prof. Marshall from the chair of Political Economy will probably lead to the promotion of Mr. H. S. Foxwell, though a dangerous rival will be Mr. Pigou, of King's, who at present holds the office of Girdlers' Lecturer in Economics. It is understood that Archdeacon Cunningham is not at present contemplating an assault upon this chair, for which, by common consent, he is admirably fitted.

Through the generosity of the Royal Geographical Society two new lecturers are to be appointed for (a) Regional or Physical Geography, and (b) Surveying and Cartography. The contribution of the University will serve to endow the third lecturer, whose province will be Historic and Economic Geography.

Through the energy of Prof. Giles and the liberality of some of his friends, the University has become possessed of a valuable collection of Chinese books.

The undergraduate world is abnormally quiescent. Triposes and Generals absorb the energies of most, and even the cricket team has to do without the services of some of its most useful members at the bidding of the inexorable coach. But there will be opportunity in June to make up for lost time, and the "May" week promises to be longer and livelier than ever.

We are to be honoured by a visit from many distinguished members of the Pan-Anglican Conference, and it is announced that in connexion with that function honorary degrees will be conferred upon a number of bishops.

The report on the General is not yet out. For the present the searcher after the humorous must be content with *Punch*.

THE Principal, Sir Arthur Rücker, was unfortunately absent, through illness, on Presentation Day (May 6), and was therefore unable to deliver his valedictory address. His report (read by the Secretary to the Senate) showed continued progress. Matriculation candidates were 7,356 in 1907-8, compared with 7,112 in 1906-7 and 7,036 in 1905-6. Of the 7,356, however, only 3,277 were admitted. Eighty-five graduates of other Universities, and others similarly qualified, have taken advantage of Statutes 113 and 129, and are now studying in London as internal students, with the view of taking a higher degree of the University. Gifts amounting to £24,667 had been received during the past year. "For three-quarters of a century," said the Principal, "all efforts for the establishment of University education in London were spasmodic, disconnected, and sometimes even avowedly antagonistic. Eight years of an attempt to substitute for this

condition of chaos a common policy and such common government as may be compatible with the free play of individual effort have justified those who supported and carried the great reform which took effect in the autumn of 1900." The presentees included eleven Doctors of Science (eight in Science, one in Engineering, and two in Economics), thirty-three Doctors of Medicine and eight Masters of Surgery, one Doctor of Literature, and one Doctor of Divinity.

The University exhibit at the Franco-British Exhibition is very interesting and comprehensive. It consists mainly of photographs, publications, and charts. An exhibit representing medical education in London, and another illustrating the social and athletic life of the students, have been specially organized. One of the most valuable exhibits is a collection of publications by teachers of the University and their students in the year 1907. A special catalogue of this collection is to be published. The University will publish a special handbook containing a catalogue of the University exhibit. The medical schools have prepared a large and fully illustrated handbook on medical education in London; and the Students' Representative Council has published a students' handbook dealing especially with the social and athletic life of the student. Copies of all these publications will be available for visitors to the exhibition.

THE donors and subscribers to the Women's Birmingham. Hall of Residence Fund have offered to present to the University the hall now being erected on a site in Edgbaston Park Road near to the new University buildings. The offer has been unanimously accepted by the Council, who are inviting the committee representing the donors and subscribers to remain in office with a view to their completing the erection and equipment of the building. The Hall of Residence is very conveniently near to the new buildings, and will provide accommodation for about sixty residents. It will probably be ready for occupation at the end of the year.

The Ingleby Lectures this year are being delivered by Dr. Christopher Martin.

Wales. PRINCIPAL ROBERTS, in his report to the half-yearly meeting of the Court of Governors of the University College, Aberystwyth, said that the Commission appointed by Mr. Asquith had now visited the three Welsh University Colleges, and had inquired fully into the work of each. The present was a time of rapid and decisive forward movements in University education. In Wales they were in the position of having to overtake the neglect of centuries. The oldest State-aided college was only thirty-five years old, and the total grants now made to the three was only equal to the annual grant proposed to be given to Galway, the smallest of the colleges to be included in the new Irish University scheme. If this condition of things was to continue the colleges would obviously not continue to hold a place on the University level, not to speak of advancing, and could not therefore have the status or fulfil the work for which they were designed.

Addressing the Welsh University Guild of Graduates at Bangor, Prof. Edward Edwards, Warden of the Guild, said the founders of the University had a very lofty conception of the functions and duties of the Guild of its own graduates, and intended the Guild should have an important voice in the government of the University through its numerous representatives in the University Court. They looked to the graduates as its best support in popularizing the University and as a connecting link between the University and other Welsh educational bodies, and in shaping and guiding public opinion on questions of general educational policy. He considered that in all these respects the graduates had not fallen short of the charter's noble ideals; for he was sure no body of students anywhere was more loyal to its Alma Mater or did more solid work for the cause of education, and no keener, more enthusiastic, or more thoroughly trained men were turned out anywhere than out of the Welsh University. The Guild had done a good deal and intended doing much more work of a solid and permanent character. Its literary section had done admirable work by publishing reprints of Morgan Llwyd's, Theophilus Evans's, and Maurice Kyffin's works. In the dialect section articles had been contributed supplying very good material for the issue of a large standard dictionary in Welsh on the lines of the "Oxford English Dictionary." Again, a most valuable work had been done, and was being vigorously carried on, in the anthropological section in the way of scientific head measurements, which, though

slow, was work which would ultimately lead to the location of various Welsh tribes. Work was also being done in regard to place-names, which was of the greatest importance as throwing light on early tribal customs and social institutions. Besides all this, the publication of a Welsh mediæval dictionary was to be proceeded with immediately.

#### Irish Universities.

The provisions in the draft charters of the new Universities in Dublin and Belfast for the affiliation of outside colleges, and for the granting of degrees to extern students, will be studied (says the *Irish Independent*) with special interest. In the charters of both the proposed Universities, power is given to affiliate "other colleges or institutions, or branches or departments thereof," but the exercise of this power, otherwise than on the representations of one of the constituent colleges, is subject to the consent of all the constituent colleges. The "manner to be provided by the statutes," in which the Universities are to satisfy themselves of the general character and standing of the colleges proposed for affiliation is a question on the answer to which a great deal will turn. As to extern students, degrees and other academic distinctions may be granted, provided that such students shall not be admitted to medical examinations, and "that the power to admit them to a final examination for an initial degree shall expire after the end of five years from the dissolution of the Royal University, and the power to admit them to previous examinations shall expire after previous periods to be defined in the statutes." Without inclining to the rather extreme views that have been expressed by some graduates of the Royal University about the consequences of depriving poor students in the country of the chance of obtaining a University degree, we believe this provision in the charters of the new Universities should be very carefully considered with a view to its modification.

#### THE EDUCATIONAL LADDER.

CAMBRIDGE UNIVERSITY.—Lightfoot Scholarship: A. A. Seaton, B.A., Pembroke.—Winchester Reading Prizes: (1) W. B. Brierley, Christ's; (2) E. H. P. Muncey, St. John's, and E. G. Selwyn, King's, and M. A. Young, King's, equal.—Stewart of Rannoch Scholarships—In Hebrew (open): (1) K. M. Robathan, Gonville and Caius; (2) E. C. Inman, Gonville and Caius. Honourably mentioned: F. V. Nicholson, Queens'.—In Greek and Latin: Robert W. Howard, Trinity, and Algernon Vere-Walwyn, Peterhouse.—In Sacred Music: The restricted scholarship to J. C. M. Ferguson, Emmanuel, and the open scholarships to W. C. Denis Browne, Clare, and M. H. Spinney, Selwyn, equal.—Le Bas Prize: E. F. Oaten, B.A., LL.B., Sidney Sussex.

Christ's.—Skeat Prize: Alfred Park Senior, Scholar of the College.

St. John's.—Exhibitions (on results of Cambridge Senior Local Examination, December, 1907): F. C. Walker, Wolverhampton Grammar School (Classics); R. O. Street, Bournemouth School (Mathematics).

LONDON: Associated Board of the ROYAL ACADEMY OF MUSIC and the ROYAL COLLEGE OF MUSIC for Local Examinations in Music.—Advanced Grade Gold Medal: Gwendda D. O. Davies, Hull Centre (Pianoforte). Advanced Grade Silver Medal: Dora Garland, Hastings Centre (Violin). Intermediate Grade Gold Medals: Mabel A. J. McBride, Nottingham Centre (Harmony), and Winifred Bradshaw, Southport Centre (Harmony), equal. Intermediate Grade Silver Medal: Cecilia O'Hear, Glasgow Centre (Pianoforte).

LONDON UNIVERSITY.—

University College.—Quain Studentship in Biology (£100 for 3 years): E. J. Salisbury, B.Sc.

OXFORD UNIVERSITY.—Ellerton Theological Essay: Norman Powell Williams, B.A., Fellow of Magdalen; *proxime accessit* (additional prize, 10 guineas) Edward Stephen Gladstone Wickham, B.A., New College.—Cobden Prize: Reginald Vivian Lennard, B.A., Exhibitioner of New College.—Gladstone Memorial Prize: M. L. R. Beaven.—Gaisford Prizes. Greek Prose: Leslie W. Hunter, scholar of New College. Greek Verse: Ronald A. Knox, scholar of Balliol (son of the Bishop of Manchester).—Stanhope Historical Prize: Edward S. Lyttel, University College.—Leathersellers' Exhibitions: M. A. Dell (History); G. P. Furneaux (Chemistry).—Boden (Sanskrit) Scholarship: Mukand Lal Puri, Exeter College.

The following have satisfied the examiners in the examination in the Theory, History, and Practice of Education:—Wilfred Fanshaw, B.A., Queen's; John Maclean, Worcester; Lionel H. W. Sampson, B.A., Hertford; Clement Trenchard, B.A., Christ Church; Ethel Mary Barke, M.A. Dublin, Girtton College; Henrietta E. T. Christie, Somerville College; Jeannie Dow, Royal Holloway College; Marion C. Hargreaves, Victoria University of Manchester; Maria L. Lardelli, Oxford; Margaret F. Moor, Somerville College; Grace G. T. Muir, Somerville College.

MANCHESTER UNIVERSITY.—Dennison Naylor Scholarship: Thomas E. E. Morris, Chetham's Hospital.

EXETER SCHOOL.—House Scholarships: H. N. Smith, Plymouth College; R. E. Santo, Mr. Drew's, The Limes, Shrewsbury; H. Boissier, All Saints' School, Bloxham, Banbury; and H. R. Hall, Exeter School.

#### THE COLLEGE OF PRECEPTORS.

##### MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on May 13. Present: Mr. Eve, in the chair; Prof. Adamson, Dr. Armitage Smith, Mr. Bain, Mr. Barlet, Mr. Baumann, Rev. J. O. Bevan, Mr. Charles, Miss Dawes, Mr. Easterbrook, Mr. Holland, Miss Jebb, Mr. Kelland, Miss Lawford, Rev. R. Lee, Prof. Lyde, Dr. Maples, Dr. Marx, Mr. Millar Inglis, Mr. Morgan, Mr. Rushbrooke, Rev. J. Stewart, Rev. J. Twentymen, Mr. Vincent, and Mr. Walsley.

The minutes of the last meeting were read and confirmed.

The Secretary reported that arrangements had been completed for the examination of pupils in schools in Newfoundland, which the College had been asked to conduct on behalf of the Newfoundland Council of Higher Education. These examinations, which were instituted by the Newfoundland Council fifteen years ago, comprised four grades, corresponding approximately to the four grades of the College of Preceptors Certificate and Lower Forms Examinations. They had been found to be of great value in raising the standard of education in the schools of the colony, and it was now desired to bring them into still closer relationship with the scheme of the College. The examinations this year were to be held at a hundred centres, and the total number of entries exceeded 2,700.

The Board of Education's Regulations for Secondary Schools were the subject of discussion in connexion with a letter received from the head master of a public secondary school, in which attention was called to the restrictions imposed by the Board on the liberty of action of heads of schools by prohibiting them from availing themselves of the facilities for testing the results of their teaching afforded by external examinations. The further consideration of the subject was referred to the Examination Committee.

The Education Committee presented a report expressing cordial approval of the proposal of the University College of Bristol to establish in Bristol a Bureau of Educational Information in connexion with the projected University of Bristol and the West of England. The report was adopted.

The following persons were elected members of the College:—

Mr. T. W. Lewis, A.C.P., Cranfield, Beverley Street, Port Talbot.  
Mr. E. G. Mills, A.C.P., University School, Southport.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHOR.—Reichel's Otto Salomon.

By BLACKIE & SON.—Anchmuty's Dumas' Le Bourreau de Charles Premier; Bagnall and Vivier's Hernani et Ruy Blas; Grierson's Advanced Book-keeping; Rodgers's First Geography; Scott's Earl of Montrose (Blackie's Story Book Readers); Walpole's Letters on the American War.

By the CAMBRIDGE UNIVERSITY PRESS.—Edwards's Altera Colloquia Latina.

By METHUEN & CO.—Ford's School Latin Grammar.

By J. MURRAY.—Hardwich and Costley-White's Old Testament History (from Hezekiah to the End of the Canon).

Supplement to R.U.I. Calendar, 1908.

Yearbook of the Incorporated Society of Musicians, 1908.

#### CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS.

##### SULLY PRUDHOMME ET "LE BONHEUR."

Le samedi, 25 avril, M. le Pasteur Ramette nous entretenait de Sully Prudhomme, et en particulier nous analysait son poème "Le Bonheur."

Sully Prudhomme (1839-1907) semble avoir tenu de son père, un négociant de Paris, la faculté rigoureuse du raisonnement, et de sa mère, personne de complexion nerveuse, la sensibilité du poète. Faut-il dire de lui ce qu'il a écrit de Van Dyck:

C'est ta mère, après Dieu, qui t'a fait ton génie?

Orphelin de père dès l'âge de deux ans, placé de bonne heure comme interne au lycée, il souffre de la privation du foyer et de

la famille. Il s'est toujours, en son âme solitaire et travaillée, quelque peu senti orphelin :

J'écoute en moi pleurer un étranger sublime  
Qui m'a toujours caché sa patrie et son nom.

Suivant tour à tour les deux tendances de son esprit, il s'adonne à l'étude des sciences et à celle des lettres. A l'âge de 18 ans, une crise religieuse, au moment où il est arrêté par une maladie des yeux, est sur le point de faire de lui un moine. La lecture d'ouvrages de critique le plonge dans le doute, sans lui ôter, cependant, le respect de la foi.

Employé pendant dix-huit mois dans les bureaux des grands établissements du Creusot, il cultive le poète-philosophe Lucrèce, dont il traduit, en des vers remarquables, le premier livre du "De Natura Rerum."

La poésie finit par le prendre tout entier et en 1865 paraît son premier volume, "Stances et Poèmes," qui obtient les plus grands éloges du célèbre critique littéraire, Sainte-Beuve. Cinq volumes sortent successivement de ses méditations de 1865 à 1888: "Le Bonheur" clôt la série. Après cela, il n'écrit plus guère qu'en prose, et, entre autres, une étude sur "La Vraie Religion d'après Pascal," ce penseur chrétien vers qui l'attire une secrète affinité.

Ses deuils de famille, suivis la même année de la terrible épreuve nationale qu'a été la guerre franco-allemande, approfondissent les questions que son esprit aime à creuser. Il en fait sortir son poème sur la Justice, et il s'écrie dans ses sonnets sur la France :

. . . Plus je suis Français, plus je me sens humain.

Sa poésie, tirée de la vieille lyre classique à laquelle ses doigts, avec un art prodigieux, font rendre des sons en harmonie avec les pensées de notre temps, sa poésie, toujours si sincère, n'est que l'écho des âpres exigences de sa raison et ses nobles aspirations de son cœur. C'est son cœur qui l'a sauvé du pessimisme et de la désespérance. Les hauts exemples d'héroïsme et de charité, les arts, la musique, sont pour son âme comme des appels de l'au-delà.

Tel fut l'homme qui a écrit ce rêve un peu agité mais austèrement beau, "Le Bonheur," à l'intention de ceux qui éprouvent une inquiétude plus ou moins latente sur "l'avenir d'outre-tombe."

Ce poème comprend trois tableaux: les "Ivresses," la "Pensée," le "Suprême Effort." Le premier nous fait assister, dans un autre monde, où se retrouvent Faustus et Stella (le poète lui-même et son idéal), à la jouissance insouciante: jouissance des sens au milieu des enivrements d'une nature enchanteresse; jouissance esthétique dans la contemplation des formes plastiques ici réalisées par les esclaves du monde antique, que la mort affranchit de toutes les oppressions; jouissance du cœur sous l'effet merveilleux de la pure mélodie dans laquelle Stella chante le bonheur des deux amis maintenant sans mélange. Et ces jouissances les rendent sourds aux voix de la terre montant à travers les espaces.

Le second acte nous montre une nouvelle phase, celle de la recherche fiévreuse succédant à l'insouciante jouissance. Faustus, tourmenté par le mal de l'inconnu, demande aux maîtres de la pensée leur aide pour arracher à l'inconnu son secret. Mais le long effort de la philosophie antique s'achève dans la volupté et le suicide; celui de la philosophie moderne expire dans un appel au néant; les sciences positives elles-mêmes, dans leur explication des faits, ne disent pas d'où vient la flamme qui, vague étincelle chez les bêtes, est flambeau sous le front humain. Désormais donc réduit à ses seules ressources, il apprend par la joie des enfants qui jouent dans la vallée que le bonheur vient d'aimer. Aimer! répètent Stella et Pascal lui-même dont la voix s'est fait entendre aussi à Faustus. Cependant les voix de la terre continuent de monter.

Acte troisième. Enfin les voix de la terre ont atteint les oreilles et le cœur de Faustus. Comment être heureux quand d'autres souffrent? Faustus retournera sur la terre pour sauver les hommes. L'ange de la mort l'emporte avec Stella. Mais voici, il est trop tard: l'humanité a disparu du globe. Trop tard! Oh! douleur! Oh! remords! Il faudrait créer une humanité nouvelle. Redoutable aventure! L'ange tranche la difficulté en les remportant, avec cette consolante parole que Dieu leur a pardonné à cause du regret qu'ils éprouvent et du sublime soupir de leur cœur, et "La charité des sacre habitants du vrai ciel."

Il nous est difficile, dans un compte-rendu aussi sommaire, de rendre pleine justice tant au poète qu'au conférencier. M. le Pasteur Ramette est un maître en son art, et sa chaude parole, sa belle diction ont su captiver un nombreux auditoire dont la reconnaissance s'est traduite en chaleureux applaudissements.

## UNIVERSITY TRAINING OF TEACHERS.

### THREE YEARS, OR FOUR?

FROM several sources (says the *Liverpool Daily Courier*) we hear the suggestion of a four years' course for the University training of teachers. Twenty years ago a two years' course was the normal one in the only colleges then existent—the residential training colleges. With the inception of the day training colleges it was recognized that a three years' course was necessary—necessary, that is, for the student to gain a degree. The direct training, such as it was, had to be taken in fragments during the intervals of academic work, and, indeed, part was taken during the vacation.

The University student occasionally remains for a fourth year, just as in former days the exceptional man would stay at the residential training college for a third year. Are we to see the three years' course develop into four years in the case of the U.T.C.'s? Would such an alteration in system be to the general good? We will run the risk of exposing the obvious, and say that the merit of the system rests on two foundations—the quality and preparedness of the student on entering and the character of the training undergone. Does the suggested course contemplate the student passing direct from his school to the University? If it does, it has our hearty condemnation. Would the suggested course for the first three years run much on the lines of the present degree course and take a post-graduate course in pedagogy for the fourth year? If it would, we see no advantage in it over the present three years' course; indeed, we see comparative defects. It is beside the point to urge that this plan of training is applied to students reading for a secondary schools diploma. Even if the plan is successful in the case of these students, it does not at all follow that it is applicable to the elementary-school teacher.

### LARGE CLASSES.

There are, it seems to us, two very marked differences between the environments of the two teachers—the difference in the age of the pupils met by the respective men and the difference in the sizes of the classes dealt with. The controlling, interesting, and educating of a small class of older scholars is a trifling task compared with the work of educating a class of three times the size made up of younger children. We deplore the size of class which the elementary-school teacher is required to manage, we rejoice that evidences of a tendency towards reducing the numbers are not wanting; but we regretfully admit that for another generation the elementary scholar will be deprived of the blessing of that degree of individual teaching which his more favoured secondary brother enjoys. It is because we know the difficulty of acquiring this gift of controlling large classes, because we have known the failure of the student trained only academically, and have learnt something of his regrets and humiliations when his best efforts meet with failure—it is because of these things that we urge the need of testing and training in practical teaching before the University is entered. The student must give preliminary evidence of his fitness for the work of an elementary-school teacher. It is too late for him to realize a defect four years later, and it is not right to burden the elementary teaching profession with people who have no aptitude for the calling. The University, by its entrance examination, requires a student to show scholastic ability; we want the University to require the prospective teacher, in addition to this, to give proof of his capacity for the work. He should spend a year as a student-teacher after leaving school. He is then young enough to adapt himself to surroundings which he cannot come into sympathy with later, and, if he finds that he has no love for the work, he is young enough to turn his hand to something else.

### PEDAGOGY.

Having given proof of professional fitness he may enter the University. Then comes the question of the length of his stay. For several reasons we should regret the passing of the three years' scheme. We do not consider that its possibilities have yet been fully sounded. The exceptional man can always stay for a fourth year if it is desirable that he should do so. But, if the student has to look forward to a hard-and-fast four years' course as a condition of his entering a U.T.C., we can only say that ways and means are often too predetermined and too narrow to permit it. Cannot the three years' system be improved? A

great advance was made when education was included as a subject for the degree. Cannot this reform go further? The width of training we look for is hardly possible on the present degree lines. The "Arts" and "Science" courses, as they stand, are not likely to develop the best type of teacher.

We should like to see a combined course formed with a resulting diploma in education. This might be called an education diploma, a bachelorship of education, a bachelorship of arts with honours in education, or whatever it might be desired to call it. Our plea is that the man who holds it should be capable in the work he professes. And we think that this capacity would be best developed by a more definite pedagogic training and by the study to a moderate degree of intensity of some six subjects. We want to see the subject of pedagogy brought well into the foreground in the forming of the teacher. Discussions and lectures on pedagogical subjects, observation visits, criticism, and model lessons are excellent so far as they go. But, to bring out their real merit, they must be associated with the student's own practical teaching; and this work does not receive the consideration it deserves. The plan of Septembering the school practice is weak. It is impossible for those responsible for the work to get more than a perfunctory glance at the individual student when all are at work at the same time, and the student cannot receive that criticism, example, and help which he ought to have.

#### THE PRACTICE PERIOD.

Incidentally the fixing of the practice period outside the University session encourages an undesirable attitude (unconscious, no doubt) on the part of the student towards the work. It is something to be got rid of, something to be swept out of the way before the real work of the session commences. And we cannot blame him if he regards most of his pedagogic work as something to be relegated to odd snatches of minutes, and to be performed with more than a half doubt as to its real value in the life which lies before him. Why should not the month of school practice be taken at any part of the session according to the convenience of those responsible for the training? The obvious answer is that the student would suffer through want of contact with the academic lecturer during this period. We doubt if there is much in this point when the period of absence is so short. The man would still meet his fellow-students, and would know the direction in which the work was going, and, although he would meet the lecturer less, we make bold to say that he would gain considerably by the closer and more intimate contact with his training authorities. But during this month a combination of practice and lecture might be effected. Why should not the student during the practice attend one weekly lecture in each subject he is taking? These could be attended on Saturday morning or on afternoons of other days after the close of the elementary school. An occasional lecture which could not be taken at any of these times might be legislated for separately.

#### A SATISFACTORY COURSE.

In the curriculum, independent of the pedagogic course, we should like to see English (chiefly literature and essay writing), a language other than English, elementary mathematics, and a combination of physical and biological science taken by all students throughout the three years of training. One or two additional subjects, determined by the tendency of the students' thought, should be added, and all subjects could with advantage be read up to the intermediate examination standard. A student especially capable in one subject might be allowed to read it up to the ordinary final standard, but he should combine with it the four above-mentioned subjects.

We do not hesitate to say that, if a course were drawn up on lines such as these, a three years' training would be valuable, and in most cases sufficient. The exceptional man could always spend a fourth year at the University, if good were likely to come from it.

At the approaching Oxford Commemoration the honorary degree of D.C.L. will be conferred upon Mr. Lloyd-George, Chancellor of the Exchequer, and Sir Ernest M. Satow, late British Minister at Peking.

CAMBRIDGE UNIVERSITY intends to confer honorary degrees upon the Prime Minister, the Duke of Northumberland, Lord Halsbury, Admiral Sir John Fisher, Sir Hubert Von Herkomer, the Hon. C. A. Parsons, Sir G. O. Trevelyan, Sir J. Henry Ramsay, Sir A. Noble, Sir W. Crookes, and Mr. Rudyard Kipling.

A FELLOWSHIP at Newnham College, Cambridge, has been awarded to Miss Sellers, at present engaged upon historical research work.

# BLACKIE'S LIST

**Magnetism and Electricity and The Principles of Electrical Measurement.** By S. S. RICHARDSON, B.Sc., Associate of the Royal College of Science, London: Lecturer in Physics, Municipal Technical School, Liverpool. Crown 8vo, cloth boards, 5s. net. [Just Published.]

**The Teaching of English.** By A. E. ROBERTS, M.A., Principal Lecturer in English at the Islington Day Training College, and A. BARTER, L.L.A., late Head Mistress of the Braintree Pupil-Teacher School. Price 2s. 6d. net. [Just Published.]

## BLACKIE'S LATIN TEXTS.

General Editor: Dr. W. H. D. ROUSE.

This Series is intended for use during the first two or three years of Latin.

The long vowels are marked throughout. Each volume has a short Introduction dealing with the author and subject of the book. A new and important feature in the Introduction is a brief note on the MSS. and the principles of textual criticism. No other notes are given.

Price 6d. net each Book.

The following Scholars are contributing volumes to this Series:—

Prof. J. P. Postgate.	Mr. S. E. Winbolt.
Prof. J. S. Reid.	Mr. W. H. S. Jones.
Dr. W. H. D. Rouse.	Mr. E. Seymer Thompson.

### A General Vocabulary to Virgil.

Prepared under the Editorship of A. GRAHAM, M.A. Crown 8vo, cloth, 1s.

### A General Vocabulary to Caesar's Gallic War.

Prepared under the Editorship of A. GRAHAM, M.A. Crown 8vo, cloth, 1s.

These Vocabularies have been prepared for use in schools where the pupils are not at first provided with Latin Dictionaries of their own. They contain all the words that occur in the *Aeneid*, *Bucolics* and *Georgics* of Virgil, and *De Bello Gallico* of Caesar. The advantage of these Vocabularies is that they can be used with any edition of these Classics.

### A Latin Course.

By E. H. SCOTT, B.A., and FRANK JONES, B.A. First Course, cloth, 1s. 6d. Second Course, cloth, illustrated, 2s. 6d.

### A First Latin Grammar.

By E. H. SCOTT, B.A., late Head Master of Boys' Secondary School, Barberton, Transvaal; and FRANK JONES, B.A., Assistant Master, King Edward's School, Aston, Birmingham. Crown 8vo, cloth, 2s.

## BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. 77 volumes. To be used in correlation with the study of **English Literature and History**.

Among the leading Authors are:—

Malory.	Gibbon.	Drake.	Thucydides.	Dickens.
Froissart.	Macaulay.	Raleigh.	Plutarch.	Charles Lamb.
Bacon.	Carlyle.	Arson.	Livy.	Kingsley.
Burke.	Prescott.	Hawkins.	Marcellinus.	Swift.
Ruskin.	Josephus.	Cook.	Lucian.	Borrow.

### A First Geography.

With Coloured Pictures and Diagrams on every page. By C. A. E. RODGERS, M.A., F.R.G.S., Assistant Master, Bradford Grammar School, and an Examiner in Geography to the College of Preceptors. Small 4to, cloth, 1s. [Just Published.]

### Advanced Book-keeping.

For Commercial and Accountancy Classes. By WALTER GRIERSON, Author of "Practical Book-keeping for Commercial Classes." Crown 8vo, cloth, 2s. 6d. net. [Just Published.]

### The Longer French Texts.

Printed in large type. Cloth limp, 8d. each. Brief Notes, Questionnaire, Memory List of Useful Phrases and Vocabulary.

### The Little French Classics.

Price 4d. each book. All French authors in prose and verse, from the *Chansons de Geste* to *Daudet* and *Paul Bourget*.

### Récits tirés des Classiques français.

6d. each. Edited by Mme. C. BAGNALL, of Clapham High School, and Mlle. VIVIER.

The Stories of the great Dramatists told in simple French, suitable for Lower and Middle Forms.

Messrs. BLACKIE & SON will be pleased to send a List of Books suitable for the Oxford and Cambridge Locals, 1909, on application.

BLACKIE & SON, Ltd., 50 Old Bailey, E.C.

# Mr. MURRAY'S RECENT BOOKS

## Old Testament History. Period V.

**From Hezekiah to the End of the Canon.** By the Rev. J. M. HARDWICH, M.A., and the Rev. H. COSTLEY-WHITE, M.A., Assistant Masters at Rugby School. With a Map of Palestine. 2s.

This is the fifth (or concluding) portion of the "Old Testament History," other volumes of which are now in active preparation. Each is intended to provide material for one term's work. The following are some of the chief features of the series:—

1. Where possible, the text of the Biblical narrative is used.
2. Historical explanations and general commentary are inserted in their proper place.
3. The chronological order of events has been followed.
4. The period is illustrated by reference to, and quotations from, the contemporary Prophecies and Psalms.
5. Foot-notes are added, but only where difficulties of thought or language seem to demand explanation.

## An Introductory History of England.

**From the Earliest Times till the Year 1832.** By C. E. L. FLETCHER, M.A., Fellow of Magdalen College, Oxford. With Coloured and other Maps, Plans, and Index.

Part I.—From the Earliest Times to the End of the Middle Ages. 5s.

Part II.—From Henry VII. to the Restoration. 5s.

Part III.—In preparation.

"This is Mr. Fletcher's second volume, and it is, if anything, better than his first."—*The Times*.

## MURRAY'S FRENCH TEXTS.

FOR UPPER AND MIDDLE FORMS.

Edited by W. G. HARTOG, B.A., Lecturer in French at University College, London; Oral Examiner to the London County Council and to the Army Qualifying Board.

### La Mare au Diable.

Par GEORGE SAND. With Biography, Foot-notes, and Exercises. 1s. 6d.

### Confessions d'un Ouvrier.

Par EMILE SOUVESTRE. With Biography, Foot-notes, and Exercises. 1s. 6d.

This series will consist of selections from the masterpieces of nineteenth-century French authors. Each volume will contain a series of questions upon the text, grammatical drill upon points which arise in the course of reading, and suggestions for free composition, parsing, dictation, &c. A biographical note (in simple French) descriptive of the career of the author serves as an introduction to each text.

*Other volumes to follow.*

## MURRAY'S ENGLISH LITERATURE SERIES.

A COURSE FOR SCHOOLS AND COLLEGES.

By E. W. EDMUNDS, M.A., B.Sc. Lond., Senior Assistant Master at the Luton Secondary School; and

FRANK SPOONER, B.A. Lond., Director of Education for Bedfordshire.

*Athenæum* (September 14, 1907).—"For inculcating an intelligent and lasting acquaintance with its subject, the present series is likely, in our opinion, to prove the best of its kind."

### The Story of English Literature.

Vol. I.—The Elizabethan Period, 1558-1625. 3s. 6d.

Vol. II.—Seventeenth and Eighteenth Centuries, 1625-1780. 3s. 6d.

Vol. III.—Nineteenth Century, 1780-1880. 3s. 6d.

*Athenæum*.—"In this, the first volume of the 'Story,' Mr. Edmunds has been most successful: it is lucid, eminently readable, and never dull. In addition, the author's criticism, though he lays no claim to originality, is freshly expressed and often suggestive."

### Readings in English Literature.

I.—The Elizabethan Period, 1558-1625.

Junior Course, 2s. 6d. Intermediate Course, 2s. 6d.  
Senior Course, 3s. 6d.

II.—Seventeenth and Eighteenth Centuries, 1625-1780.

Junior Course, 2s. 6d. Intermediate Course, 2s. 6d.  
Senior Course, 3s. 6d.

III.—Nineteenth Century, 1780-1880.

Junior Course, 2s. 6d. Intermediate Course, 2s. 6d.  
Senior Course, 3s. 6d.

*Academy*.—"The terribly uninspiring 'School Reader' of the early Victorian days is happily a thing of the past, but in spite of the many excellent modern collections we have found few as extensive or as representative as the volumes of 'Readings in English Literature.'"

 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.  
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS of MUTUAL LIFE ASSURANCE** without personal liability on highly favourable terms to  
**THE CLERGY AND THEIR RELATIVES.**

**ALL PROFITS BELONG TO THE MEMBERS.**

Accumulated Fund, **£4,242,820.** Annual Income, **£453,897.**

Bonuses Distributed, **£4,256,464.**

**LOW PREMIUMS. LARGE BONUSES.** Notwithstanding the lowness of the Premiums charged, the **BONUSES** are on an **EXCEPTIONALLY HIGH SCALE.**

**NEW AND SPECIAL POLICIES.** Application is invited for the **PROSPECTUS**, and Leaflets explaining two new Policies, with valuable Options.

**1. WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one-half the usual rate—during first ten years.

**2. PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

## SPECIMEN OF RATES FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

## PROFESSOR MEIKLEJOHN'S SERIES.

**A NEW GEOGRAPHY ON THE COMPARATIVE METHOD.** With Coloured Maps and Diagrams, and an Outline of Commercial Geography, and Full Index. By J. M. D. MEIKLEJOHN, M.A. Thirty-seventh Edition. Crown 8vo, 630 pp. ... 4s. 6d.

**THE BRITISH EMPIRE: Its Geography, Resources, Commerce, Landways, and Waterways of the British Dominions Beyond the Seas, with Full Index.** By J. M. D. MEIKLEJOHN, M.A. Eighth Edition (Revised to 1906). Crown 8vo, 360 pp. 3s.

**THE ENGLISH LANGUAGE: Its Grammar, History, and Literature.** By J. M. D. MEIKLEJOHN, M.A. Twenty-eighth Edition, Enlarged, with Exercises and Additional Analysis. Crown 8vo, 486 pp. ... 4s. 6d.

"Exactly suited to the wants of pupil-teachers and of candidates for the Government Certificates."—Miss M. GODDARD, Training College, Warrington.

**THE ART OF WRITING ENGLISH.** A Manual for Students. With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN, M.A. Sixth Edition. Crown 8vo, 340 pp. ... 2s. 6d.

**SHAKESPEARE'S THE MERCHANT OF VENICE.** With an Introduction and Notes. Edited by FRANCIS STORR, B.A. Crown 8vo, 200 pp. ... 1s. 6d.

"There is everything in this book which a student would want for the preparation for an examination. . . . It is the most carefully prepared exhaustive book on the play for school use we have seen."—*The Teacher's Aid.*

**A NEW HISTORY OF ENGLAND AND GREAT BRITAIN.** With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. Twenty-third Edition. Crown 8vo, 740 pp. ... 4s. 6d.

"Your books are simply indispensable to students preparing for the Certificate Examination and to pupil-teachers."—H.M. INSPECTOR.

**A SCHOOL HISTORY OF ENGLAND.** By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A., sometime Adam de Brome Exhibitioner, Oriel College, Oxford. Fifth Edition. Crown 8vo, 470+viii pp. ... 2s. 6d.

**TEST QUESTIONS IN HISTORY.** Selected from Public Examination Papers, Arranged by A. T. FLUX. 8vo ... 1s.

**A NEW ALGEBRA.** As far as the Binomial Theorem. Including a Chapter on Graphs. By G. COLLAR, B.A., B.Sc. (Joint-Author of "A NEW ARITHMETIC"). Crown 8vo, 438+viii pp. ... 4s. 6d.

"We are confident of the book's success."—*The Teacher.* "An able, careful, and attractive work."—*The Educational Times.*

**A NEW ARITHMETIC.** Theoretical and Practical. By G. A. CHRISTIAN, B.A. (Lond.), and G. COLLAR, B.A. (Lond.). Thirteenth Edition. Crown 8vo, 562 pp. ... 4s. 6d.

"We recommend teachers and students to judge for themselves what a powerful auxiliary to success has been given them by the experience and judgment of the able authors."—*The Schoolmaster.*

Complete Catalogue will be sent on application.

MEIKLEJOHN & HOLDEN, 11 Paternoster Square, E.C.

# COLLEGE OF PRECEPTORS' CERTIFICATE EXAMINATIONS.

Set Subjects, 1908.

- CAESAR.—GALLIC WAR, BOOK I.** By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Camb. 1s. 6d. Vocabulary. 1s.
- CAESAR.—GALLIC WAR, BOOK II.** By A. H. ALLCROFT, M.A., and W. F. MASOM, M.A. 1s. 6d. Vocabulary. 1s.
- CICERO.—IN CATILINAM, I.—IV.** By J. F. STOUT, B.A. Camb. 2s. 6d.
- EURIPIDES.—HECUBA.** By T. T. JEFFERY, M.A. Camb. 3s. 6d.

## THE STEREOSCOPE IN EDUCATION.

"It is difficult to discover a subject in school curricula which cannot be helped by means of the Stereoscope," says G. F. DANIELS, B.Sc., in the *School World*.

For class room work the Stereograph is unequalled, and far surpasses anything in the way of illustration that has ever been placed in the hands of the teacher. By its proper use the attention of the class is more easily secured; there is created an incentive for more diligent study; the interest of the dullest boy is aroused; the dormant faculties of the child are stimulated and awakened, and many points that were previously abstract and difficult of comprehension become simple and are easily understood.

"We are much pleased with your set of Stereoscopic Slides to illustrate the teaching of Solid Geometry which we have just purchased, and think they will prove very helpful in enabling a pupil to grasp quickly and thoroughly the principles of the problems illustrated.

"We are glad you have thought of this addition to your other very useful sets of Stereoscopic views—they make the work of teacher and pupil much lighter than it could possibly be without them."—C. E. and B. M. STEVENS, Young Ladies' School, Brighton.

**Solid Geometry through the Stereoscope.** Prepared by EDWARD M. LANGLEY, M.A., of Bedford Modern School.

**Geography through the Stereoscope: Teachers' Manual. Geography through the Stereoscope: Students' Field Guide.** Prepared by PHILIP EMERSON, Principal of Cobbett School, Lyn, Mass., and WILLIAM CHARLES MOORE, Instructor in Geography at State Normal School, Salem, Mass.

The Underwood System of Instruction by means of Stereographs, sometimes called the Laboratory Method, has come to be used in a large array of the best schools of this country, and educational experts have pronounced it the most practical means at hand of teaching the subjects to which it applies.

### CURRENT EVENTS.

M. L. GRAVELINE will address the Société Fixtures. Nationale des Professeurs de Français en Angleterre, at the College of Preceptors, on "La Femme dans l'Histoire de France," on June 27, at 4 p.m.

THE Foundation Day Oration at University College, London, will be delivered by Mr. J. Lewis Paton, M.A., High Master of Manchester Grammar School, on June 4 (evening; not afternoon, as previously arranged).

THE Annual Conference of the Association of Head Mistresses will be held at Manchester High School on June 19 and 20. Mrs. Woodhouse, President.

THE London Geological Field Class will make excursions: June 13, to Sheppey or Herne Bay (Sea Work and River Work); June 20, to Radley (Union of Isis and Thames). Hon. Sec.: J. W. Jarvis, F.G.S., St. Mark's College, Chelsea, S.W.

VACATION Courses for Foreigners will be held at the Lycée de Jeunes Filles de Versailles, August 3-22 and August 31-September 19. Directeur honoraire: M. Emile Bourgeois, Professeur à l'Université de Paris. Apply to Mme. E. Kahn, Professeur Agrégée de l'Université, Lycée de Jeunes Filles, Versailles, 9 Avenue de Paris (Directrice des Cours).

THE Sixteenth International Congress of Americanists will be held under the presidency of Baron Weckbecker at the University of Vienna, September 9-14. The object of the Congress is to promote scientific inquiries into the history of both Americas and of their inhabitants. Further information from Herr Franz Heger, Vienna (Austria), I., Burging 7.

THE University of Oxford has conferred the Honours. honorary degree of D.Sc. upon Prof. William James, LL.D., late of Harvard University, and the honorary degree of D.Litt. upon Prof. T. Northcote Toller, M.A.

THE University of Oxford has conferred the degrees of Mus. Doc. and M.A. upon Sir Walter Parratt, the new Professor of Music.

THE University of Cambridge proposes to confer the honorary degree of LL.D. (June 20) upon the Archbishops of Cape Town and of the West Indies, and the Bishops of Calcutta, Missouri, London, Salisbury, Massachusetts, Southwark, Birmingham, Liverpool, and Uganda.

It is also proposed to confer the honorary degree of M.A. upon Sir E. T. Candy, C.S.I., Teacher of Indian Law, and Mr. A. Henry, Reader in Forestry.

THE University of Wales has conferred the honorary

degree of LL.D. upon the Rt. Hon. D. Lloyd-George, M.P., Chancellor of the Exchequer.

PORTRAITS of Emeritus Professor Robertson and Emeritus Professor McKendrick, and a medallion of Prof. Cleland, have been presented to the University of Glasgow.

PROF. H. POINCARÉ, on resigning the Chair of Astronomy in the École Polytechnique, Paris, has been appointed Honorary Professor.

PROF. HUME BROWN, of Edinburgh University, has been appointed Historiographer Royal for Scotland, in succession to the late Prof. Masson.

THE RIGHT HON. HERBERT HENRY ASQUITH, Hon. D.C.L., K.C., M.P., Prime Minister, formerly Fellow of Balliol College, Oxford, has been elected an Honorary Fellow of that Society.

MR. JAMES R. THURSFIELD, M.A., has been elected an honorary Fellow of Jesus College, Oxford. He was Fellow and Tutor of Jesus 1864-81, and is a well known writer on naval matters.

PROF. SEWARD has been elected an honorary Fellow of Emmanuel College, Cambridge.

THE REV. T. C. TWITCHELL, B.A., Bishop-designate in Polynesia, has been elected a Fellow of King's College, London.

THE schoolmasters participating in the Dick Bequest (counties of Aberdeen, Banff, and Elgin) have presented an illuminated address to Prof. Laurie on his retirement from the position of Visitor and Examiner for the Dick Trust after more than fifty years' service; with a suitable gift to Mrs. Laurie.

**Endowments and Benefactions.** MR. THOMAS WEBB, of Kensington and Tunbridge Wells, has left £5,000 to University College, London, and £5,000 to University College, Cardiff (for physical research); also to the same Colleges, subject to contingencies, his residuary estate in equal shares.

DR. HENRY CLIFTON SORBY, F.R.S., of Sheffield, has left £15,000 upon trust to the Royal Society of London for a Fellowship or Professorship for conducting original researches; £6,500 to the University of Sheffield for a Professorship in Geology; and £500 to the Literary and Philosophical Society of Sheffield.

COLONEL J. E. CUTLER has transferred to the University of Sheffield, for its general purposes, freehold ground rents of the annual value of £49 (= a capital of some £1,300).

THE trustees of the fund (over £1,500) raised by medical graduates in London has been handed over to the trustees of Lord Curzon's Endowment Fund, the interest to be applied to the needs of the Department of Pathology in Oxford University.

THE bronze copy of Mr. Goscombe John's statue of the seventh Duke of Devonshire, Chancellor of Cambridge Uni-

versity, 1862-91, has been presented to the University on behalf of subscribers.

DR. ALDIS WRIGHT, Vice-Master of Trinity, proposes to transfer to the library of the University of Cambridge all the documents in his possession connected with the Revision of the New Testament and the Apocrypha. Mrs. Troutbeck, widow of the late Secretary of the Revision Committee, will complete the series by depositing in the same library the documents connected with the Revision of the New Testament that were, at Dr. Troutbeck's death, deposited in the Chapter Library, Westminster.

THROUGH the generosity of a few prompt subscribers, a notable addition of books has been made to the Chinese department of the Cambridge University Library—51 separate works, numbering 1,203 volumes in all. Several important lacunæ have been filled up.

THE REV. J. D. GRAY, Vicar of Nayland, has given some 4,000 specimens of British plants to the Herbarium of the Botany School, Cambridge University.

A MEMBER of the University of Cambridge has offered £300 a year for five years towards the stipend of the proposed Professorship of Biology, and to increase the gift to £400 a year for such portion of the five years as the Professor may hold a Professorial Fellowship.

THE University of Leeds is still £10,000 short of the £100,000 stipulated for by the Privy Council on recommending the grant of its charter. But Lord Ripon, the Chancellor, boldly appeals to the city of Leeds and the county of York for £30,000.

THE LATE MR. J. W. CROMBIE, M.P., left to Aberdeen University, subject to contingencies, one-fourth of the ultimate residue of his estate for laboratories or educational apparatus or such other educational purposes as the University Court, with consent of his trustees, shall see fit.

LORD BARNARD has given £1,000 to the Agriculture Department of Armstrong College, Newcastle-on-Tyne.

THE Court of Common Council of the City of London has founded at the City of London School a scholarship of £100 a year for three years, tenable at Oxford or Cambridge, in commemoration of Mr. Asquith's accession to the Premiership. Mr. Asquith is an "old boy" of the City of London School.

THE Gilchrist Educational Trust has promised a grant of £50 for two years to the Women's Department, King's College, London, for the special courses in Home Science and Household Economics. (See "Scholarships.")

**Scholarships and Prizes.**

AT Oxford, Scholarships, &c., will be offered for competition as follows:—June 2, Classics, and Law (Brasenose); June 9, Classics (Exeter); June 12, Music (Balliol); June 25, Classics, Mathematics, History, English, Modern Languages (Worcester); June 30, Natural Science (Balliol, Brasenose); December 1, Classics (Exeter, Oriol, Brasenose, Christ Church); December 8, Classics (University, New, Corpus Christi); March 16, 1909, Classics (Magdalen). June 16, Exhibitions (no age limit) in Mathematical and Natural Science (St. John's): apply to Senior Tutor by June 6.

EXETER COLLEGE, Oxford, offers (June 9) an open Classical Scholarship (£60), a Classical Exhibition (£30), and a Divinity Exhibition (£60). Further information from the Rector.

A COMBINED examination for 41 Scholarships and various Sizarships and Exhibitions, at Trinity, Clare, Trinity Hall, Peterhouse, and Sidney Sussex Colleges, Cambridge, will commence December 1. Particulars from any of the Tutors of the several Colleges.

TRINITY HALL, Cambridge, offers two or more open scholarships (not less than £40) to candidates undertaking to enter in due course for the Law Tripos. Examination, June 17. Apply to the Tutor.

ROYAL HOLLOWAY COLLEGE offers ten Entrance Scholarships (£50 to £60) and several Bursaries (not more than £30) tenable for three years. Examination, June 29 to July 4. Names to be entered by May 30. Forms, &c., from the Secretary.

KING'S COLLEGE, Women's Department, offers a scholarship of £30 a year for one year (part of the Gilchrist Trust grant, see "Endowments") to a graduate of an approved University of not more than three years' standing (from December last). Apply to the Vice-Principal, 13 Kensington Square, W., by June 10.

THE International Peace Bureau, Berne (Switzerland), offers a prize of 1,500 francs (£60) for "the preparation of a Manual for Teachers in schools of all kinds, explaining the principles of International Peace and their application."

#### Appointments and Vacancies.

Manchester.

In the preliminary draft of the articles of charters for the proposed new University in Ireland, Dr. D. J. Coffey is nominated President of the Dublin College; Dr. Bertram C. A. Windle, of the Cork College; and Dr. A. Anderson, of the Galway College.

SIR WALTER PARRATT has been appointed Professor of Music in the University of Oxford, in succession to Sir Hubert Parry.

MR. C. FREWEN JENKIN, B.A. Cantab., A.M.I.C.E., has been appointed Professor of Engineering in Oxford University. Prof. Jenkin is a son of the late Prof. Fleeming Jenkin, F.R.S., of Edinburgh University.

MR. W. H. BRAGG, M.A., F.R.S., Professor of Mathematics and Physics in Adelaide University (since 1886), has been appointed to the Cavendish Chair of Physics in the University of Leeds.

PROF. STANLEY DUNKERLEY, D.Sc., M.I.C.E., has resigned the Chair of Engineering in Manchester University through ill-health, after three years' tenure.

THE REV. PROF. SKINNER, M.A., D.D., Westminster College, Cambridge, has been appointed Principal of the College, in succession to Dr. Oswald Dykes, resigned.

THE REV. E. E. NOTTINGHAM has resigned, through ill-health, the Principalship of the York Training College.

MISS H. M. STEPHEN, Warden of the Alexandra Hall of Residence, University College, Aberystwyth, has resigned her post, through ill-health.

MR. H. L. SMITH, B.Sc., A.I.C., has been appointed Lecturer in Chemistry in King's College, London.

MR. J. W. BEWS, M.A., Lecturer in Economic Botany, Manchester University, has been appointed Lecturer in Plant Physiology in Edinburgh University.

MR. A. C. B. BROWN, B.A., Assistant Lecturer in Classics, Manchester University, has been appointed to a Mastership at Marlborough College.

MR. A. H. WHIPPLE, M.A., B.Sc., Director and Secretary of Education at Walsall, has been appointed Director of Education for Blackburn.

MR. F. H. COLSON, M.A., has resigned the Head Mastership of Plymouth College, which he has held since 1889.

MR. L. HANSEN BAY, Head Master of Deacon's School, Peterborough, has been appointed Head Master of Wirksworth Grammar School.

MR. A. J. FREEMAN, P.-T. Centre, Bristol, has been appointed Head Master of Callington Secondary School.

THE REV. J. H. NEWSHAM-TAYLOR, B.A. Oxon., has been appointed Senior Classical Tutor at Llandovery College.

MR. G. MORRIS, M.A., has been appointed Classical Master, and Mr. H. Lonsdale, B.A., French Master, at Maidenhead Modern School.

MR. J. D. SUTHERLAND, M.A., has been appointed Mathematical Master at the Normal High School, Edinburgh.

#### Literary Items.

MESSRS. CHATTO & WINDUS announce a new series of "beautiful books in the choicest types"—the Florence Press books, printed from a new fount designed by Mr. Herbert P. Horne after "the finest types used by the Italian Master-Printers of the Quattrocento and Cinquecento." "The Books may be original works or reprints, but all will be of the highest intrinsic value, and usually works dealing with Italian Art, Literature, and History."

MR. J. H. FOWLER'S paper on "English Literature in Secondary Schools," read before the English Association (January 11), is now published as one of the Association's Leaflets (No. 5).—The English Association's Bulletin No. 4 (May) is also just issued.

MR. MURRAY publishes in pamphlet form the addresses delivered by the Vice-Chancellor of the University of London and by Professors Hobhouse and Westermarck at the Inauguration of the Martin White Professorship of Sociology

(1s. net).—Also the Creighton Memorial Lecture, on "The Wardens of the Northern Marches," delivered by Dr. Hodgkin (1s. net).

MESSRS. PHILIPS'S "Library of Optical Lantern Slides, specially prepared for Educational purposes" (6d. net), is a very ample and varied catalogue of admirable means of illustration of many subjects—Physiography, Geography, History (modern and classical), Botany, Astronomy, Human Anatomy, &c.

THE University of Liverpool has approached the Convocations of Manchester, Leeds, and Sheffield, "with a view to joint action being taken to obtain, at the earliest opportunity, a Parliamentary representative for the four Northern Universities." In Manchester Convocation a motion in favour of the proposal was defeated by 20 votes to 17 (May 8).

THE Bristol City Council has passed with enthusiasm a resolution in favour of the proposal "to establish a University for Bristol and the West of England, and agreeing to give financial assistance to such University in the event of a charter for its establishment being obtained, provided arrangements as to the constitution of the University satisfactory to the Council have been made."

THE KING, accompanied by the Queen, will open the new buildings at Leeds University in July.

LORD ROSEBERY is to be installed Chancellor of the University of Glasgow on June 12.

MR. LLOYD-GEORGE has been adopted as Liberal Candidate for the Lord Rectorship of Glasgow University, in room of the late Sir Henry Campbell-Bannerman.

A LECTURESHIP in Geography is to be established in the University of Glasgow.

A PROFESSORSHIP of Biology is to be established in the University of Cambridge. (See "Endowments.")

THE University of Sheffield has resolved to establish a Faculty of Law.

A TRAINING COLLEGE for Women is to be established at Cambridge for the provision of teachers for the Eastern counties, at an estimated cost of £30,000. Towards this the Board of Education will provide £21,000, the balance to be found by the associated Authorities.

THE READERSHIP IN GEOGRAPHY AT CAMBRIDGE comes to an end at Michaelmas of this year, it having been instituted for only a limited period, owing to the uncertainty of its financial position. The Board of Geographical Studies have been in consultation with the Council of the Royal Geographical Society, and the Council recognizing, in view of the great extent of the ground to be covered, the necessity for increased specialized instruction, have generously offered to contribute to the Geographical Education Fund a sum of £200 a year for three years from Michaelmas, 1908, to be apportioned to two Lectureships—£150 to a Lectureship in Regional, or Physical, Geography, and £50 to a Lectureship in Surveying and Cartography, each Lectureship to bear the name of the Royal Geographical Society. The Readership at present existing will, therefore, be allowed to lapse when its renewal comes up for consideration at Michaelmas, and the Board will contribute £200 a year for three years to the Geographical Education Fund.

### SCHOOL LIFE AND HEALTHY GROWTH.

At the Evening Meeting of the members of the College of Preceptors on Wednesday, May 13, the Rev. J. O. BEVAN in the chair, Dr. HUBERT E. J. BISS, M.A., M.D., D.P.H., read the following paper:—

I took as the title of this lecture the words "School Life and Healthy Growth" because the child is a growing animal, and anything that acts unfavourably on him produces disorder or deformity in some of the functions or structures of his body; whilst for the proper unfolding of his faculties and for the proper development of his frame, his surroundings and conditions of life must be of a fit and health-giving character. As a matter of fact, I nearly used the expression "Physical Development" instead of "Healthy Growth," but I remembered that by a conventional perversion of language these words have come to signify, to the minds of most, either certain dreary Scandinavian acrobatic contortions or those agile feats performed before breakfast with pieces of elastic nailed to the bedroom door, which diligent advertisement has induced people to think are requisite for their temporal salvation. I think it is hardly necessary to say to an audience of practical school teachers like yourselves that these performances are neither normal nor essential to the healthy growth and proper physical development of the normal child. I shall deal presently with the questions of exercise and games, but here I should merely like to remark that healthy growth connotes happiness, and that the trouble expended in cultivating healthfulness is amply rewarded by the corresponding relief from the burden of management. I suppose the name Herbert Spencer is one of the bugbears of the school-teacher's life. I will inflict on you but one quotation from his "Essay on Education." "Vigorous health," he says, "and its accompanying high spirits are larger elements in happiness than any other things whatever; the teaching how to maintain them is a teaching which yields in moment to no other whatever."

Now, though I have been given a roving commission to range over the whole subject of school hygiene, the severe limits of an hour will not allow me to make more than a very partial use of it, and I hope that you will not conceive the idea that because I say very little that is useful there is very little that is useful to be said. If you were given 60 minutes into which to compress the history of England from the accession of Charles I. to the death of Queen Anne, you would be able to appreciate my dilemma.

#### THE GROWTH OF THE BODY.

Let us consider first the growth of the body. The growth of the tissues is the measure of the benefit they obtain from the nourishment (using that word in the widest sense) supplied them. But, important as positive growth is, the significance of proportional growth is greater still, and the relative increase of body and brain, of chest and abdomen, of trunk and limb, are indications on which the child's guardian may found, and should found, the ordering of his life and studies. It is regrettable that we have not in this country that mass of authenticated statistics on these points which alone can tell the proper mean for the rate of growth for children of all ages, varieties of parentage, disposition, and social grade. Figures there are, of course, in abundance in this country, but they are yet mostly very crude, and generally merely represent the result of a single series of observations on the children in a certain town. But what is really called for is full information as to the rate of growth in both sexes, at all ages, and under all circumstances affecting growth. Such figures are not yet compiled, but, lying as they do at the root of all intelligent and accurate child study, it is much to be hoped that those in charge of children will set to work diligently to compile them. Even the figures we have, properly used, may often yield valuable information. For instance, we have, let us say, a lad of twelve, of Anglo-Saxon lineage and born of parents in good circumstances. We expect his height to be 4 ft. 9 in. and his weight 5 stone 10 lb. But he only measures 4 ft. 7½ in. and weighs 5 stone 4 lb. Is this pathological? Is it the result of any defect of nutrition? As stated, we cannot say. He may come of a stock whose shortness of stature is hereditary; or he may have just recovered from a severe attack of scarlet fever, which arrested his growth for the time; or he may have been very small when he was younger, and now he is increasing by leaps and bounds. But, if his parent or master is able to say that a year ago his height was 4 ft. 7 in. and his weight 5 stone 3 lb., then we know that there is some faulty

factor in his health, for, whereas he was normal in height and weight a year ago, and should normally have gained 2 in. in height and 7 lb. in weight, he has only gained  $\frac{1}{2}$  in. in height and 1 lb. in weight. To arrive at this result, however, accurate methodical records of his progression in height and weight must be forthcoming. Now suppose, during this period, he has shown undue brilliancy in class, or that he has been working for a junior scholarship, or that he has developed a great aptitude for the violin, and has been practising three hours a day out of school, we shall probably conclude that the nutrition which should have gone to build up his body has been diverted to feed his brain. And this surely is information fraught with the most momentous consequences to the child himself. By ordering him away to live for six months on a farm, where there are no books and no violins, the balance of nutrition may be restored, and a mental or nervous breakdown, or an attack of tuberculosis or similar disaster, may be averted. To accomplish this beneficent end no more complicated machinery than a foot-rule and weighing apparatus is required, and no greater qualities than common sense and a little foresight.

Let us take another example. A girl of Celtic parentage, with dark hair and eyes, is growing at the rate of two inches a year. At the age of fifteen she only increases an inch, and the next year half an inch, her total height being only 5 ft.  $1\frac{1}{2}$  in. But she weighs 8 stone, and her mental faculties, though bright, are not sufficient to raise her above the middle of her class. Is the fall in the increase of her height a cause for anxiety? Is she becoming stunted, and is there any reason to suspect perverted nutrition? Other things being equal, the answer would be, No. At that age, in a girl of that type, without any other concomitant signs, the reasonable conclusion is that she is approximating to the mean, that she is not going to be tall, and that her growth is ceasing at about the normal period and the normal rate.

Now, though I have given these two examples, I am loth that you should think that they are intended to be anything more than illustrations. Badly as we want statistics of every kind of child, at every age, of every race, under every circumstance of climate and surroundings, even if we had these figures worked out to ten decimal places and purged of every statistical fallacy, the truth remains that every child is to a certain extent a law unto itself. Some children grow with uniform velocity others, by fits and starts; some thrive under the most adverse circumstances, others are affected by every unkind breeze: physical characteristics, in a word, are wellnigh as variable as moral dispositions. With a fuller knowledge of the science of puericulture and with full information about the individual child, far greater accuracy could be obtained in forming an opinion of the causes of departures from the normal in any given case; but even now, with a trustworthy history of a child's development, previous life, and present circumstances, it is possible to do much to regulate their school life on lines which give the greatest play to their natural aptitudes and restrict the opportunities for harm of their natural deficiencies.

#### THE DEVELOPMENT OF THE BRAIN.

The brain is the organ of the mind. Nothing will induce me to discuss here whether the brain secretes thoughts or thoughts secrete the brain; whether the mind is the same as the soul, or whether the soul resides in the pineal gland or is the attribute of the brain as a whole. All are agreed, however, that the brain is the organ through which the mind operates, and that on the development of the brain depends the subtlety and range and force of the mind, as we find them exhibited in the external life of the individual. The object of education is to encourage this development. Now the brain is an organ composed of nervous tissue, which, like all other tissues, requires for its sustenance and growth a due supply of blood. It is by the supply of healthy blood that the elaboration of the brain-tissue takes place, and the channels of communication between its various parts are opened up and established. Different parts of the brain perform different functions, and it is exercise which increases the blood supply of the parts, makes them grow in size and become functionally more active and more closely *en rapport* with each other. A quick-witted person is one in whose brain the paths which the stimuli traverse are well opened and free of access; in a stupid person, the brain-paths are few and little developed. Education, by increasing the blood supply, both nourishes the centres of thought and action in the brain and encourages the growth of passages of facile communication. The brain, in a word, grows physically, and the parts of the brain grow physically also. The full development of the brain in a man is not

attained till between thirty and forty, and, though it seems ungallant to say so, truth compels one to admit that in woman full growth ceases ten years earlier.

From these facts, it needs no particular strain on the imagination to deduce that education is doing useful and healthful work for exactly as long as it is directing a full stream of pure blood to the brain; that it does harm when through fatigue the blood-vessels are no longer delivering a full stream or a pure stream; and, further, that it does even greater harm when it continues to flood the brain with blood which cannot be removed by the veins at a proper rate, so that an accumulation takes place and the organ is congested. Moreover, as has been pointed out before, the direction of the blood-stream to the brain correspondingly diverts it from the rest of the body, and corporal nutrition and growth are perverted. It may be news to some of you that congestion of the brain is capable of being seen by the human eye. Although the brain itself is locked up in its bony case—the skull—there is a delicate prolongation of the brain, known as the optic nerve, which passes from the base of the organ to the back of the eye, and by means of the ophthalmoscope—an instrument which throws light through the clear window in the front of the eye—the termination of this nerve can be seen and its condition as to healthiness judged of.

As the brain depends for its development on the blood supply, it follows that if, through bodily ill-health or debility or malnutrition, the blood be not in a condition of health, not only may brain development be retarded, but the development may take place in a morbid direction and the groundwork of mental trouble be laid for life.

#### SCHOOL CONDITIONS OF HEALTHY GROWTH.

Let us turn now to the school conditions which make for healthy growth of mind and body. Here we find ourselves involved in a mass of considerations which might fruitfully occupy twenty lectures; a few only can be touched upon, and those only with the lightest possible hand. Drains I must not worry you with. They constitute a complicated and not very seductive subject. Moreover, most educated people nowadays understand that good drains are a prime essential of good health, and take care that their drains are "seen to." I would, however, add that every schoolmaster and mistress ought to know the general principles of house drainage, and be able to criticize plumbing work. Builders are only human, and if they know their customer is utterly ignorant, they even now are apt to palm off the most awful atrocities under the sacred name of modern sanitation. Drains suggest the site of the school, and here again, beyond saying that the school should be built on dry ground, which is easily drained, and that it should be capable of enjoying the maximum of sunlight and fresh air, I must not tarry.

#### PLAIN FOOD: PLENTY OF SUGAR AND FAT.

A prime condition of growth is the supply of material to form new tissue: the body, like the appetite of some people, grows by what it feeds on. The food of the growing child is the raw material of his increase in wisdom and stature, and a due proportion of plain healthy food, in which the elements of proteid, fat, carbo-hydrate, salts, and water, are judiciously combined, it is the duty of his guardians to provide.

Jerome Cardan, writing three hundred years ago, made the remark: "Trust a schoolmaster to teach, but not to feed your children." The advice was timely, no doubt, then and for most of three centuries following, but, though food is perhaps stunted now in some of the cheaper boarding schools, from what I know of middle- and upper-class schools the tendency is now rather to provide rich and unsuitable food than to underfeed. I was consulted the other day by a cook in service at a school for little boys, from whom I learned, in course of conversation, that sausages and kidneys were regular breakfast dishes. Though one could not but admire the generosity of the head master, one felt that it might have been better tempered with discretion. For insufficiency in diet there can surely be no excuse. I was recently told by a practical schoolmaster that he fed his whole establishment like fighting cocks on an average of 7s. a week. I do not know if sausages and kidneys entered largely into his dietary scale, but I know that game, poultry, and fish figured prominently. The £14 a year or so that this arrangement implied must bear a very small ratio to the fees charged. The motto, then, for school-catering should be "Nec prodigus, nec avarus." In quality, food should be plain, nutritious, and easily digestible, and if these conditions be observed the child can generally be trusted not to over-eat itself. Few

boys stuff themselves to repletion with mutton, and girls seldom surfeit themselves with oatmeal porridge. For the growing child, two elements in food need to be forthcoming in abundance—namely, sugar and fat. It is not merely an excess of gluttony that leads children to spend their pennies in sweets—rather is it an expression of a bodily craving which the ordinary diet fails to fulfil, just as to natives in some parts of Africa salt is the most delicious treat they can have. In children chocolates and fondants produce that sense of *bien-être*, which, when adult, they find in alcoholic liquors. And, as man obtains relief from the discomforts of his surroundings in a draught of whisky or a couple of glasses of port, the child makes up for the defect he feels in his scholastic entourage with jujubes and other nauseating compounds. In both the craving may take on morbid dimensions, and lead to undue indulgence; but the proper method of weaning the child from tuck is to give him plenty of sugar, fruit, jam, and golden syrup with his meals.

Fat is another element of diet which the child should be plentifully supplied with. Both fat and carbo-hydrate (sugar and starch) form the reserve stores upon which the body draws in exercise. They are easily used up, and in the restless period of childhood their abundant replenishment is called for. Fat, however, is not very digestible in all its forms. Suet pudding has always been a popular school-dish, but it is notoriously heavy; and many children are not partial to the fat of meat. On the other hand, butter is generally much liked, and cream is a seldom failing draw. The dislike of fat is a real difficulty in the case of many children, and it is one that even the most Spartan firmness cannot always conquer or eradicate. Many people carry this dislike throughout their lives, and I am sure that Dickens was one of them. It has frequently struck me that, when he wants to suggest disgust, he speaks of fat as though it were the most loathsome thing even his lively imagination could conjure up. Another fat-hater, I think, must be Mr. Anstey. Who can forget how Mr. Bultitude's stomach turned when a cold sardine floating in oil was served up to him for his first school breakfast, in lieu of the "meat" which he had paid for, and which he looked forward to with such hungry solicitude? By the contrariness of nature, as a rule, the children who hate fat are just those who need it most: lean, neurotic, fastidious little creatures. No pains should be spared in circumventing their dislike. Where butter and cream have both failed, the despised but wholesome margarine may sometimes succeed. At any rate, it is worth trying.

#### OPEN WINDOWS: FRESH AIR.

Ventilation is another factor in growth. From the very word many people have learned to recoil in alarm. Visions of tubes, and valves and hoppers spring instantly to the mind, and the miseries of freezing feet and burning cheeks, icy draughts down the back of the neck, and flapping noises in the chimney, rise to the memory as marking the incursion of some ventilation-crank into the peaceful, stuffy home. Our ancestors knew as little of ventilation—at any rate since they could afford glass in their windows—as they did of hot baths and other necessities of civilized existence; and I think that those folk who have grown up to middle age without knowing the blessings of the open window are more or less inured to the effects of breathing into their lungs the vapours that other people have breathed out of theirs. But for the young a plentiful supply of oxygen and the tonic properties of fresh air are inestimable boons, especially if they are to grow up better men than their sires. I would, however, emphasize the expression just used—the *tonic properties of fresh air*—for there be those who attempt so-called "scientific" systems of ventilation, which after pumping air through cotton wool, straining it through mats, and spraying it with water, drive the residue through the rooms with fans, and think the atmospheric millennium has arrived. People inhabiting institutions so furnished complain of lethargy and sleepiness, just as do those who sit in stuffy rooms—the reason being that their mentors have taken all life and freshness out of the air. The difference is that between the insipid taste of boiled water and the buoyance and sparkle of a draught from the spring. Fresh air is fresh because it is fresh, and it is laid on fresh to every home in illimitable quantities. The open window is the best of all systems of ventilation and the cheapest. Fresh air is the heritage of the growing child, and nothing but driving rain should cause the closure of his window night or day.

#### CLOTHING.

Clothing as affecting growth must be dismissed very curtly, though a whole lecture might well be devoted to it. Any garment

which constricts or presses on any part of the body impedes its proper development; and I pass from the subject with a plea in favour of the sweater as a substitute for the waistcoat, the usual, but apparently ineffective, anathema against stays, and the observation that pure wool is not the ideal underwear for children who perspire freely.

#### SEATS AND DESKS.

The whole design of the school buildings has a far-reaching influence over the growth of the pupil. I have so recently spoken in this room of the construction and design of the schoolroom with a view to obviating eye-strain that I will not go over the ground again, beyond saying that there is hardly a question in school hygiene of more vital moment than that of encouraging the healthy development of the eye by every known means.

I want, at the moment, to speak particularly of the school desk as a factor in development, for to the desk the child is chained for five or six hours a day, and its faulty construction is responsible for much perverted and stunted growth. With desks may be included seats. The objects to be aimed at in the construction of seats and desks are that the child may sit upright comfortably, but cannot lounge comfortably; that contact with the seat shall come where pressure is harmless, and that there be no pressure where it can do harm; that the child can read and write without stooping; and that they shall be adapted to the size of the particular child. In order to effect the last object, it follows that the ideal desk, from the health point of view, is a single one, and that a supply of desks adjustable to various sizes should be at hand to suit children of all dimensions. There are certain practical drawbacks, such as the increased space that single desks take up and the additional strain on the teacher's voice thereby entailed; but the single desk is the ideal. The child should be able to sit erect, head and trunk upright, thighs at right angles to the trunk, knees bent at a right angle, and feet square and flat on the floor. The back of the seat should be curved backward away from the buttocks and come forward to plant a suitable rest in the concavity of the back in the lumbar region and a cross-piece for the shoulders. These provide sufficient support to the back, especially if the hips are received comfortably into the concavity of the upright. The seat should be about two-thirds the length of the thigh, slightly higher in front than behind to prevent sliding forwards, and rounded anteriorly to obviate pressure on the blood-vessels at the back of the lower part of the thigh and knee. The desk itself should be a plain board or box on two side uprights, and situated at such a distance from the child that the near point for work is 12 inches from the eye. In order that this desideratum may be accomplished, the top of the desk should be adjustable to various slopes—for writing, 15° to 20°; for reading, 35° to 40°. Now, in order that the desk may be suitable for all these purposes, and in order that it may be suitable for other school purposes—such as standing up, moving in and out, and so on—and in order that the edge of the desk may not press on the front of the chest, it should also be capable of adjustment to various distances in relation to the front of the seat. Such, then, are the characteristics of the ideal desk and seat.

#### CURVATURE OF THE SPINE.

The deformities likely to be associated with unsuitable desks are lateral curvatures of the spine, round shoulders, flat chests, and the production of eye defects. Lateral curvature of the spine is more common in girls than in boys, but it is seen in the latter not very infrequently. The spine is a bony pillar situated in the centre of the back, and composed of a number of separate, flat, irregular bones, jointed to each other by elastic ligaments. To these bones are attached the muscles of the back and some of those of the upper limbs, and when the muscles are normally developed the pull exercised on each side of the spine is approximately equal. A balance is thus struck, and the spine remains straight. A slight, but inconsiderable, degree of curvature is common enough in healthy persons, owing to the greater use of the right upper limb, but in the young, especially about the age of puberty, when the bones are soft and growth is rapid, the muscles of the back are apt to be unequal to the strain placed on them. Faulty positions at school, sprawling, lolling, leaning on one elbow, inclining the head, and so on, are very apt to lead to one set of muscles being developed less than those which oppose them. One shoulder thus "grows out," as it is termed, and, what is sometimes more noticeable, the hip "grows out." Examination of the back then shows that the spine is curved laterally, and as that structure is

the pivot of the whole body, deformity of the chest, shoulder, hip, neck, and other parts follows unless early and strenuous efforts are made to correct the fault. The point especially to be remembered is that, though this deformity is a bony one, it is due to muscular weakness, and that both prevention and cure depend on strengthening the muscles. Curvature of the spine is greatly aided, too, by long standing in class. Relief from the strain of making weak muscles support growing bones is sought by the child, and he adopts the position of "standing at ease," that is, with the left foot advanced, the left knee bent, and the weight of the body thrown on the right lower limb. Letting down the left shoulder, the head is thrown towards the right to counterbalance the drag, and curvature of the spine towards the left follows as the night the day.

#### ROUND SHOULDERS AND FLAT CHESTS.

Desks which induce the child to stoop forward, especially children with eye defects, conduce to round shoulders and flat chests. Ugly as these deformities are, and ugly as spinal curvatures are, the baneful influence does not stop at mere æsthetic offence. The chest is a box whose contents exactly fit it, and every deformity of the chest leads to corresponding deformity of the important organs it contains. Nowhere does Nature more surely abhor a vacuum than in the chest; and the lungs, which fill up the greater part of its cavity, are applied closely to the inner surfaces of the chest-wall, and suffer correspondingly in development with every phase of distortion or compression to which they are subject. It is a commonplace of medicine that the type of person whose lungs are most likely to become a prey to tuberculosis is that in which the front is flattened, the shoulders rounded, and the shoulder blades tilted out behind.

#### FLAT FEET.

There are many other deformities connected with injudicious school conditions. You have probably all seen pictures of the hideous deformities of the liver associated with wearing corsets, and I hope that, like the pictures of the lower world which used to be shown to children, they have frightened you into abhorring the evil they portray. Flat feet are common in girls, and are not very uncommon in boys. Like spinal curvature, flat-foot is due to muscular weakness. If certain muscles of the legs, which by their tendons hold up the arch of the foot, are not fully up to their work, they prove unequal to the strain and the arch of the foot sinks. Though not dangerous to health, flat-foot is a most ungainly deformity, and it is reckoned to disqualify the possessor for some walks of life. Besides long standing and insufficient exercise, a potent factor in its production is the habit of letting girls wear slippers indoors. Boys generally put on boots after breakfast and do not take them off till tea-time at least; whereas girls, in wet weather especially, run about much of the day in slippers—a habit which, while saving to the nerves and to the carpets, denies them the support of the stout leather during the formative period of the feet. Deformities of the nose and throat, with their consequent troubles in the ear and in the chest, generally result from faulty pre-scholastic conditions, but many of the defects of the eyes are due to bad lighting, bad print, bad sewing materials, bad desks, and night-work. They are too numerous to enter on lightly here.

#### GROWING PAINS.

Certain conditions are associated with rapid or abnormal growth. I have already said that if growth of any part is taking place with more than normal vigour, other parts suffer from starvation of their blood supply. This is especially noteworthy in connexion with the relative development of the body and the nervous system. Irritability, easy fatigue, restless sleep, inability to remain at one task for long or to concentrate the mind—those signs which the observant teacher learns to associate with nervous over-strain—are more frequently found during periods of rapid bodily growth than any other. We have all heard of growing pains, but few of us have clear ideas as to what growing pains are. The tendency of modern medicine is to attribute growing pains to rheumatism, and, as you may know, the close relationship of rheumatism to chorea, or St. Vitus's dance, is well established. Medical belief is that rheumatism and St. Vitus's dance, so common in children and so potent for lifelong evil, are connected with so-called growing pains in a very real manner, and that they are danger signals of ominous import. I cannot illustrate this belief better than by quoting a case I saw recently. A mother brought her little girl, aged four, to see me. She was a thin, pale, nervous child. Her father had died of rheumatic heart disease, and her sister suffered from

St. Vitus's dance. The child was always complaining of flitting pains in the joints and had developed odd little nervous tricks, such as shrugging her shoulders and making grimaces. In the light of her family history, these "growing pains" and nervous tricks assumed a significance which might otherwise have been easily overlooked, and I merely refer to them to warn you not to make little of these apparently trivial pains. There are many conditions of abnormal growth on which one might expand—epilepsy, minor epilepsy, nervous defects, and those most interesting conditions classed as neurotic; all of the highest importance in connexion with the development of the nervous system.

#### REST.

After what has been said about growth, you can see that the more rapid the period of growth, the greater the need of rest. There is no gain in proportion to size so astonishing as that which takes place in the new-born infant in the first three months of his existence—roughly speaking, he doubles in size. Yet this is the period when the child sleeps most. Beyond the moments he devotes to obtaining necessary refreshment, the infant hardly ever has his eyes open. And thereby hangs the tale that the greater the growth, the more the need for rest. The young brain is only stimulated to unnatural growth, with its corresponding dangers, if the rule of rest be not observed. Whereas the risk of the healthy child unduly tiring himself by physical exercise is not great, the risk of his pastor and master unduly tiring his nerve centres by too great eagerness for his mental welfare is of some considerable magnitude. It has been calculated experimentally that the periods for which a child's attention can be fixed without undue fatigue are as follows:—At age 6, 15 minutes consecutively; at ages 7 to 10, 20 minutes; 10 to 12, 25 minutes; 12 to 16, 30 minutes. I fear that these periods are rarely observed, or, indeed, anything approaching them. The immediate result of neglect is want of attention in the less conscientious members of the class, and inaccurate work among the more studious. Moreover, two lessons following one another are sufficient for the average mind; there should always be a spell of play after the double strain. Some subjects notoriously require much more concentration of attention than others; mathematics certainly demand undivided thought, and are at enmity with the natural man. There are a few people who revel in mathematics, but allowing, as this study does, little or no play to the imaginative faculties, its pursuit is a very real strain on the growing mind. Morning, when the brain is fresh, is the time for mathematics; only the more human subjects—history, scripture, and literature—should be tackled after dinner.

Full rest is only obtained in sleep, and here the hours are often unduly short. Children of 4 need 12 hours' sleep, of 7 need 11 hours, of 9 need 10½ hours, of 14 need 10 hours, of 17 need 9½ hours, of 21 need 9 hours, even though at the later ages they usually object to be called children. To get the full benefit of these hours preparation for repose is desirable, and no lessons or frantic romps should be allowed for half an hour previous to retiring. A collateral, but not designed, advantage of the lengthy evening devotions that used to be the fashion in some houses was that they formed a salutary hypnotic preparation for young and ardent brains.

#### GAMES: FORMAL EXERCISES.

To praise games to the present generation of schoolmasters is to paint the lily. Long may their ardour in that good cause continue! Schoolgirls, too, play hockey, swim, and ride with zest and agility. At two schools I know in the summer term girls wield the willow in such workmanlike fashion that I fancy I should funk fielding at point left-handed. If there be food for criticism in our school games, it lies rather in the direction that too much of the quality which Aristotle called *σπουδαιότης*, and Matthew Arnold translated "high seriousness," may be devoted to them, to the exclusion of that same quality in the weightier matters of the law. The risk is greater at the Universities than at school, and the influence of good games, well played, is too momentous a factor in physical and moral growth to tempt a growl from the most carping medical critic. In adopting compulsory games as the best method of organizing exercise, however, have we not left out of sight too much the individual tastes of the children themselves? I mean, have we given sufficient play for that individuality which is the most precious asset in after life? I have in my mind one of Tom Brown's schoolfellows, whom Dr. Arnold treated with a stupid want of consideration, I refer to Martin. Martin's devotion to

natural objects; his love of birds, beasts, and fishes; his relief of the moods and tenses of Nature were not only the greatest factor in the growth of his brain and body, but the discipline his superior knowledge exercised over the other lads when he took them on his expeditions was the finest kind of discipline. I know you will reply that the Martins are few and the Stalkies are heads of a large Co.; but I think Martin ought to have his chance.

I spoke, at the beginning of this lecture, on the craze for physical exercises which has penetrated to this country, chiefly from Sweden. Now though these exercises and others like unto them have a value as remedial agents in the treatment of the weak-backed and weak-kneed, they are infinitely inferior to games as factors in physical development. Their chief virtue lies in the fact that they are generally given in school hours and that thereby the children get more exercise and less schooling. Not infrequently I pass a certain school in the middle of the morning. If it happens to be a little before eleven I see rows of boys standing in ecstatic attitudes, apparently ringing imaginary celestial bells or learning the process of choking with the maximum of discomfort. At eleven these interesting gyrations cease. The lads go in, and the girls come out. Immediately begins the jolliest sight imaginable, as these happy youngsters rush about, playing "touch-last," hide and seek, and all the old favourite games of chase and catch, laughing, shouting, and struggling without a moment's intermission till they are called in to their books. No doubt the kindly managers of this establishment fancy that the boys are receiving the latest benefits of science, whilst the girls, being of less importance, are let off more easily. The contrast this picture presents admirably illumines the central principle on which exercise should be made to hinge. I mean that the psychological correlative of the physiological attitude should be as lively as the state which induces it. Exercise which does not brace and stimulate the mind has not the same health-giving effect as that which wakens the faculties and draws out of them the best exertion. The mind is a strong individualist and requires incentive to make it put its best foot foremost.

Love goes towards love, as schoolboy from his books,  
But love from love, toward school, with heavy looks.

So formal exercises, however well they may be theoretically adapted to train groups of muscles, are dreary businesses at best, and for normal children are quite superfluous when they can gambol in their natural blithesome fashion. Of all the strange exotics which the physical developing cranks would have us adopt, the strangest, perhaps, are so-called "breathing exercises." In children with certain predispositions to disease breathing exercises are very useful adjuncts to treatment, but that the ordinary individual needs to be taught to breathe is to me the most astonishing doctrine of latter-day pseudo-physiology. As long as youngsters can chase rabbits, climb trees, and swim in baths or rivers, we need have little fear of their respiration. I imagine that among the few outlets left for the future attention of those ingenious gentlemen are novel methods of teaching our hearts to beat and our spleens to pulsate.

What I should like to leave with you as my parting word is that school hygiene is not only a definite but a vitally important and perfectly sane science; not to be confounded by the extravagant veneer with which some of its more ardent exponents would overlay it. Its object indeed is well expressed in an ode familiar to us all; it is to secure for its protégés—

Their buxom health of rosy hue  
Wild wit, invention ever new,  
And lively cheer of vigour born;  
The thoughtless day, the easy night,  
The spirits pure, the slumbers light  
That fly the approach of morn.

Dr. Biss having replied to questions from members of the audience, a vote of thanks concluded the proceedings.

PROF. P. SAVJ-LOPEZ, in the *Rassegna Contemporanea*, urges in forcible language the need of a thorough reorganization of the Italian Universities. They are, he declares, quite out of touch with the needs and the ideals of modern life. Every one of the twenty-one Universities of the Peninsula aspires to have Chairs in every branch of learning, and every student is compelled by statute to study so many subjects that, in effect, he studies none. The students' riots, so frequent a feature of University towns, are, in the writer's opinion, mainly the result of the young men realizing the futility of the course of instruction they are compelled to follow.

## THE SCHOOL SYSTEM OF MANNHEIM.

By A. J. PRESSLAND, M.A., The Academy, Edinburgh.

OF late years Mannheim has been prominent in educational circles for its *Sonderklassen*—classes which introduce classification according to ability into the primary schools. These classes have played as great a part in the primary schools as the *Reformschulen* have played in the secondary schools. The main idea was not new; for some large secondary schools had been divided into two divisions, A and B. Promotion took place once a year, in the A division at Easter and in the B division at Michaelmas. A pupil unable to gain promotion in one school was transferred to the division of the same name in the other school, so that the interval between promotions, normally twelve months, became eighteen in exceptional cases.

The application of this principle to the primary schools of Mannheim was due to the inability of good pupils to pass the entrance examination of the secondary schools. Investigation showed that the organization of the primary school was seriously at fault, and the work of remodelling it, undertaken by Dr. Sickinger, has made Mannheim the Mecca of the primary-school reformer.

In many respects Mannheim shows the bustle of the American town, but this statement does not imply that the school system was impulsively scrapped. Extensive inquiries were made in South Germany and Switzerland before a decision was arrived at, and the foundations of the present system are stable beyond all question.

The primary schools of Mannheim comprise the *Volksschule* and the continuation schools. The former is arranged in two divisions—the *Bürgerschule* and the elementary school. Both are *Simultanschulen*—that is, open to children of all religious denominations. The *Bürgerschule* is a fee-paying primary school for clever children—fee ninepence per week. There are eight standards, each representing a year of school life, and the pupil who passes successfully through all eight is exempted from attendance at the continuation school. French is taught in the four senior classes; but, before they reach these classes, pupils who are destined for the secondary schools usually make the transfer. Attendance at the elementary school is free and obligatory between the ages of six and fourteen. After passing through it the pupil is obliged to attend continuation classes for two more years if a boy, for one year only if a girl.

The elementary school has to deal with children of all degrees of mental capacity, and cannot reject at an entrance examination or superannuate, as the *Bürgerschule* does. The outstanding feature of the Mannheim schools is that in this elementary school classification according to ability has been introduced.

The *Hauptklassen*, for the normal child, consist of eight standards. Below them are the *Förderklassen*, of six standards, for the dullards; and below these are the *Hilfsklassen*, of four standards, for the mentally defective; and below the *Hilfsklassen* are the special institutions for the blind, deaf, epileptic, and crippled. There are also special classes for clever pupils, which prepare them to enter the secondary schools after four years at the primary schools. For pupils in their final year of attendance some modification of the syllabus is made, so that their future can be discussed, a warning given of the pitfalls of society, and the duties of a citizen reviewed. The normal career of the Mannheim child may be described as follows:—In the May following its sixth birthday it is brought to school, examined for contagious disease and interrupted development by the school doctor, and turned into Standard I. Two other medical examinations follow at suitable intervals—one to test the pupil's anatomy and the second to test the functions of his eyes, ears, and teeth.

The whole of the work is taken with the same teacher, who sorts out his class and manages to make conditions easier for the weaker members. At the end of a year those who have not gained promotion are kept back to do the work again. After a second year in the class some pupils receive the normal promotion. Others show that they are fit for promotion if conditions are favourable; these are sent to *Förderklassen* II. The remainder become *Förderklasse* I. The *Hilfsklassen* are derived from the *Förderklassen* in the same way that the latter are derived from the *Hauptklassen*.

It is possible, though rare, for the pupil to rise in grade, in which case the original depression was usually due to illness.

But normally the pupil in the Förderklassen remains in his own grade. The Hauptklassen are thus freed from a terror—the overgrown, stupid residue of older pupils who set a bad example to younger members. By removing these pupils to separate classes and altering their syllabus so that it becomes more suitable, a spirit of rivalry is introduced. To this and to the prominent part played by manual training is attributed their improved appearance in the continuation school, where some of them can be placed in practical classes from the commencement.

As a further assistance to poor children, payments are made out of school funds towards clothing and food. Charitable effort organizes day homes, holiday colonies, and town colonies, and the homes of the very poor are visited by lady health visitors. The result is that “the Sonderklassen have showed themselves hygienically valuable for sickly children, for those with defects of sight and hearing, for the badly nourished and the anæmic.”

The number of pupils in the highest classes of the Hauptklassen is 40, in the lower classes 45, and in the Förderklassen 35 is the maximum. In the Hilfsklassen 20 is considered a large class. The ruling principle is: “the more unfavourable the physical and mental capacity of the pupil, the more favourable must be the conditions under which he is taught.”

It is often assumed that with a description of the Sonderklassen an account of the Mannheim schools has been completed. Nothing could be more erroneous. The constitution of the Education Authority, the organization of the secondary schools, the classification of the continuation schools, and the administration of charitable endeavour are alike noteworthy. On the Mannheim Education Authority the teachers have equal voting power with the clergy. Each of the professions has five representatives on the Board of twenty-three, on which the school doctor, the Director of Education, and two parents, mothers of past or present pupils, sit. This representative and expert body controls over 3,300 pupils in the secondary schools—viz., 600 in the nine-class Gymnasium, 650 in the nine-class Realgymnasium, 675 in the Oberrealschule and Commercial Secondary School, 500 in the Reformschule, 900 in the Girls' High School—at none of which schools is there a higher fee than £7. 10s. per annum.

The Board also administers a Volksschule, comprising Bürgerschule—1,150 boys, 1,100 girls; Volksschule—Hauptklassen, 9,200 boys, 9,100 girls; Förderklassen, 1,050 boys, 1,250 girls; Hilfsklassen, 80 boys, 48 girls; and a continuation class of 1,100 boys and 1,200 girls, at which classes are held during business hours.

The Education Authority is not afraid to spend money. Quite recently a new school that will hold 1,370 primary, 720 commercial, and 970 technical pupils has been built at a cost of £75,000, which represents about one-half the normal annual expenditure on education. All this is regarded as insurance. The city fathers believe that increased demands will be made on them in the future if preventive measures are not taken. In the words of one of them: “It is cheaper; if we don't spend the money now we shall have to find five times as much in twenty years.”

In the endeavour to improve the educational facilities of the town great assistance is rendered by Employers' Societies and Trade Unions. Continuation classes are organized to suit the pupils' trades, and masters and senior workmen drop in to hear lectures and have a chat with the teacher, remaining often to discuss the requirements of their trades. One large factory, at which many girls are employed, offers as a reward for good services an occasional free hour if the girl will spend it at a sewing and mending class, and makes no deduction of wages. In the girls' continuation classes housekeeping is taught; but one year is scarcely sufficient for the purpose, so every winter a canvass is carried on and every likely girl is asked to join. In fact, everything is done to produce that miracle, the German Hausfrau who can keep a husband in efficient condition and a family respectable on twenty-five shillings per week.

The girl being thus taught her duty as a wife, the boy is taught his duty as a workman. The increase in attendance at trade courses is giving rise to some apprehension lest it overtake the supply of competent teachers, and the Board is arranging courses for the training of trade teachers with all expedition, so that the attitude of the workman may be unswervingly loyal to the best interests of education.

Twenty years ago the visitor to Heidelberg would see from the Castle Terrace the huge patchwork of the Rhine valley with its variegated allotments. To the south rose the cathedral of Speyer, and, to the north, a trail of smoke indicated the presence

of Mannheim. In the middle distance villages slumbered among orchards. Now each village has outgrown its bounds and red-tiled roofs are encroaching on the plain, while the smoke of Mannheim issues from a forest of chimneys. Here, written on the broad Rhineland, is the story of the rise of German industry. Proud of its achievements, the nation is determined to augment them, and public authority is ready to assist, not in the spirit of the gambler, but with the conviction of the statesman, who, seeing what scientific method has done for the nation, regards it as the harbinger of future victories.

### THE FEDERAL COUNCIL.

THE Federal Council held two meetings in the year ending April 30, and the members of the Council formed the greater part of the conference which met on February 29 to discuss proposals for the constitution of the new Registration Council. The chief matters of interest considered by the Council, besides the Registration of Teachers, have been (1) the Board of Education grants for preparatory courses in secondary schools, (2) curricula of secondary schools, (3) Workmen's Compensation Act, (4) Inhabited House Duty and Income Tax assessments as affecting school buildings and boarding houses, and (5) salaries and pensions of assistant masters in secondary schools; in connexion with which a report has been made from which the following facts are taken (by the *A.M.A.*).

*Salaries.*—Information has been gained as to more than three-fourths of the Local Authorities concerned. In seven counties at least there are scales for both salaries and increments, and in two others methods of providing increments have been approved or are under consideration. In no case does a County Authority appear to have adopted a full Pension Scheme. In no less than twenty-seven county boroughs (since increased to twenty-nine) there are scales of salaries and increments, and in six of these there is also a Pension Scheme.

*Pensions.*—These are few: most of them are to be found in Local Authority schools. Examples are: (1) Birmingham: retiring age sixty; pension  $\frac{1}{6}$  of salary for each year of service; maximum  $\frac{4}{5}$  of salary for last year of service.—(2) Bootle: retiring age sixty; 3 per cent. of annual salary (optional contribution);  $\frac{1}{30}$  of annual salary (taken at average of last three years) for each year of service; minimum of twenty-five years' service; if a contributor retires earlier, his contributions to be returned with 2 per cent. interest.—(3) Manchester: retiring age sixty-five; contribution (obligatory)  $3\frac{1}{2}$  per cent. of salary, the corporation adding  $1\frac{1}{4}$  per cent; accumulations reckoned at  $\frac{1}{4}$  per cent.; lump sum or annuity to be taken at pleasure.—(4) Newcastle-on-Tyne: retiring age sixty-five (or after forty years' service); contribution 2 per cent. of salary, the city adding an equal amount; after ten years' service  $\frac{1}{30}$  of salary (taken at average of last five years), plus  $\frac{1}{60}$  for each completed year of service.—Of endowed schools, Bedford Grammar School (where salaries are very low and a contributory scheme would be ridiculous) has a special scheme with the Scottish Provident: retiring age sixty; pension, £100; or lump sum of £1,200. All premiums are paid by the governing body. All the Haberdashers' (Aske's) Schools have a scheme with the Norwich Union, and about a hundred policies have been taken out with a £10 annual premium. There still exist nearly a hundred policies (in eighteen schools) under the old scheme of the Incorporated Association of Head Masters, and nearly three hundred under a similar scheme of the Head Mistresses' Association. Both these schemes are with the Alliance, which took over the Imperial Life Assurance Company's business. The pension scheme proposed for the Welsh Intermediate Schools has not, so far as appears from returns made, been carried into effect in any instance.

THE educational programme of the British Association (Dublin, September 2-9) is varied and stimulating. Inquiries relating to the work of the Education Section should be addressed to Mr. W. D. Eggar, Eton College, Windsor; Mr. Hugh Richardson, Bootham School, York; or Prof. R. A. Gregory (Recorder), 39 Blenheim Road, Bedford Park, London, W. The Local Secretaries of the Section are Prof. E. P. Culverwell, Trinity College, Dublin, and Mr. George Fletcher, Department of Agriculture and Technical Instruction, Dublin.

## REVIEWS.

## THE CAMBRIDGE ENGLISH LITERATURE.

*The Cambridge History of English Literature.* Edited by A. W. Ward, Litt.D., F.B.A., Master of Peterhouse, and A. R. Waller, M.A., Peterhouse. Vol. II.: *The End of the Middle Ages.* (9s. net, in buckram. Cambridge University Press.)

The editors of this comprehensive and laborious undertaking are pushing it forward with laudable energy: the next volume, covering the Renaissance and the Reformation, is already in the press and may be expected before the year is out. Meantime the second volume takes us from Piers the Plowman down to the end of the fifteenth century. The most striking chapter is the very first, in which Prof. J. M. Manly, of the University of Chicago, presents the results of a fresh and independent examination of the poems grouped under the general title of "The Vision of William concerning Piers the Plowman." "Their early popularity," says Prof. Manly, "has resulted in the confusion of what is really the work of five different men, and in the creation of a mythical author of all these poems and one other; and the nature of the interest of the sixteenth-century reformers has caused a misunderstanding of the objects and aims of the satire contained in the poems separately and collectively. Worst of all, perhaps, the failure of modern scholars to distinguish the presence of several hands in the poems has resulted in a general charge of vagueness and obscurity, which has not even spared a portion of the work remarkable for its clearness and definiteness and structural excellence." Prof. Manly has no space here to set forth his argument in full; he simply outlines the basis of his dissent from the ruling opinions of Skeat and Jusserand; but no doubt he will by and by expound his views in detail, and meantime he furnishes ample ground for a distinct challenge. The evidence is entirely internal, and, while the similarities of the texts have mainly impressed previous students, Prof. Manly acutely investigates the differences—"differences in diction, in metre, in sentence structure, in methods of organizing material, in number and kind of rhetorical devices, in power of visualizing objects and scenes presented, in topics of interest to the author, and in views on social, theological, and various miscellaneous questions." Previous writers, indeed, have noted some of such differences, but have explained them "as due to such changes as might occur in any man's mental qualities and views of life in the course of thirty or thirty-five years, the interval between the earliest and the latest version"—an explanation that Prof. Manly regards as untenable in view of the nature of the differences and of the fact that sometimes the authors of the later versions have failed to understand their predecessors. It might have been anticipated that Prof. Skeat would have written this chapter: now we look to him for an answer to Prof. Manly's criticisms. This one chapter signalizes the critical advance made by the volume.

It is interesting to follow the development of English prose writing, which is traced in three chapters by Miss Alice D. Greenwood. The definite movement that ensured the doom of French "took place in the grammar schools, after the Black Death, when English instead of French was adopted as the medium of instruction"—a reform initiated by John Cornwall and his disciple, Richard Pencrich, according to Trevisa, who himself translated into the vernacular "what may be called the standard works of the time on scientific and humane knowledge." By the time of Caxton "prose is no longer to be merely the vehicle of information, but conscious literature." As for the English poetry of the period, it may be enough to say of John Gower that he is treated by Mr. G. C. Macaulay, and of Chaucer and the English Chaucerians that they are treated by Prof. Saintsbury. Here, again, there is something of a surprise: a separate chapter is devoted to Stephen Hawes, a solitary survivor of the Chaucerian tradition in a new age. The writer, Mr. William Murison, of the Aberdeen Grammar School, justifies the prominence of Hawes, were it only by working out the question of Spenser's indebtedness to him by an enumeration of the more striking points of resemblance. The chapters on Songs and Ballads come from America, the Transition English Song Collections being brought into deserved prominence by Prof. Padelford, of Washington University; and the Ballads being handled by Prof. Gummere, of Haverford College—a subject on which we should have liked a chapter from Prof. Ker. The Scottish language and literature of the time claims four chapters, three by Prof. Gregory Smith, and one—on the earliest Scottish

literature—by Dr. Giles. Prof. Gregory Smith is quite at home in his subjects: he points out clearly how far "Scots" is "Ynglis," and he handles the whole of the matters with distinctive knowledge and ability. Dr. Giles is very careful and canny, and as sober over Wallace as in discussing questions of comparative philology. He is clear enough that Blind Harry was not "born blind"; but he does not point out that the epithet does not imply that Harry was "blind" in the absolute modern English sense. Does he not remember "Blin' Bob," who could see sharply enough when he liked? Generally, however, Dr. Giles's chapter is a conspicuously able contribution. There are also chapters on the Religious movements in the fourteenth century, the Political and Religious Verse to the close of the fifteenth century, and the introduction of Printing and the early work of the Press. A special chapter is also devoted to Education, reviewing the work of the Universities and public schools down to the time of Colet. The Bibliography and the Index fill between them fully a hundred pages. Altogether this volume impresses one more favourably than even the former one, and serves to establish confidence in the value and success of the undertaking.

## TRIGONOMETRY.

*Elementary Trigonometry.* By CECIL HAWKINS, M.A. (4s. 6d. Dent.)

This little text-book illustrates well the trend of what may be termed "progressive" ideas as to the teaching of mathematics. Apart, however, from any consideration of the special views which it advocates, it is intrinsically interesting and valuable. The author first tries to stimulate desire for a knowledge of his subject by showing that it possesses practical utility. To that end the early chapters are devoted to a review of some of the possible applications of trigonometry; as, for example, its use in the calculations incidental to the conduct of field-measuring and other kindred operations. Again, the writer describes a number of the instruments which are of service in the solution of outdoor problems and offers suggestions as to the construction of simple apparatus which will give results sufficiently accurate for many purposes. The earlier part of the work is mainly descriptive of processes, and but little attempt is made to establish their accuracy in detail, the author reasonably relying on his reader's previous acquaintance with elementary geometry and such other truths as may be required. The trigonometrical ratios and the principal propositions connected with them are gradually introduced, whilst the discussion of special uses of each immediately follows the theory.

Referring to this portion of the subject, the preface to the volume directs attention to one of its noteworthy features as follows:—

I have discarded the right-angled triangle with its preliminary definitions only applicable to acute angles, and have adopted definitions applicable to angles of any magnitude dependent on the knowledge of co-ordinates which is now imparted at an early stage. . . . In the proofs of theorems, I have avoided proofs which are only applicable to special cases, and given proofs of a general nature wherever I could do so without making them too hard.

The geometrical demonstrations of the formulæ for the sines and cosines of compound angles deserve special comment. They are, if not actually original, at least unlike those given in most text-books, and are well worth study on account both of their simplicity and of their easy applications to the general angle. The exercises are, as will be anticipated, very numerous, and the answers are furnished. The book is fully illustrated, but the diagrams, though on a useful scale, are somewhat roughly executed, and therefore not altogether satisfactory.

## GEOGRAPHY.

*The International Geography.* By Seventy Authors. Edited by Hugh Robert Mill, D.Sc. Edin., LL.D. St. Andr., &c. (15s. Macmillan.)

The date of first publication was 1899. The results of the various Census Reports for 1900 and 1901 were incorporated in the later editions; and now "the chapters have been thoroughly revised by the editor as well as by the authors or by competent specialists," and "the illustrations have been revised and many of them redrawn, and the lists of standard books improved." The object of the work is "to present in one volume an authoritative summary of the whole of geography as fully as space permits." It is neither a gazetteer nor an encyclopædia, but "a readable account of all countries as regards land and people

in language which is neither technical nor childish." Part I. deals with the principles of geography and their applications in the most general sense; it aims rather to illustrate the principles by their application to actual cases than to present a theoretical disquisition. It occupies 120 pages out of more than 1,000. Part II. surveys the continents and countries of the world in systematic detail, each article involving the application of some or all of the general principles set forth in Part I. The general plan yields in particular cases to the essential requirement of an explanation of the peculiarities of the national life; "but in every case the groundwork is a true description of the country as it is to-day." "With few exceptions, each country is treated by an experienced traveller, a resident, or a native." A glance at the list of seventy contributors shows at once the authoritative character of the work. The distribution of space and the amount of detail accord, as far as may be, with the importance of the various countries, or with the desirability of bringing into stronger relief their nature and people. The Index is judiciously full. There are 489 illustrations. The volume has been prepared and kept up to date with scrupulous care, and may be safely accepted as authoritative within its limits. It will be extremely useful to teachers in supplement of the ordinary class-book, and at the same time an agreeable repertory of geographical information for the general reader.

## GENERAL NOTICES.

### MATHEMATICS.

*The Beginner's Arithmetic.* (Part I., 4d.; Part II., 6d.; complete (cloth), 1s. Heath.)

Used by, and under the guidance of, the competent teacher, the large and varied supply of material contained in this little work is likely to be very helpful in building up a knowledge of elementary arithmetical principles and processes. The text is in large clear type, and fully illustrated.

*Elementary Algebra.* By G. A. Wentworth. (5s. Ginn.)

As a writer on algebra the author is already known to many, and in America probably more so than in England. His present work is arranged for use principally in secondary schools. The care with which the text has been prepared is everywhere evident, and with respect to exercises the writer has endeavoured to provide teachers with an entirely fresh collection large enough to meet their requirements fully. There are in number nearly four thousand exercises. Some useful tables of working formulæ appear in the sections on arithmetical and geometrical progressions, and clear diagrams illustrate the pages on graphical work. The book is well brought out.

*Elementary Solid Geometry.* By Frank Stanton Carey, M.A. (2s. 6d. Edward Arnold.)

The volume, one of a series of mathematical text-books in course of issue by Mr. Arnold, is already familiar to a large number of college students, for it is a new and not a first edition of Prof. Carey's work, and the contents are based on the course of instruction he gives to his own classes. Nevertheless, it will be as well to point out some of the important features of the work and to mention its standard, namely, that required by the first-year University student. The theory of parallel lines and planes is treated with the aid of elements situated at infinity. Ranges and pencils are brought forward early, a plan suggestive of the value of viewing geometry, plane and solid, as a single subject of study. Some useful additions to the usual course on solid geometry have been made by the brief treatment of rotation and translation. The text of the previous edition has been both rewritten and enlarged.

### SCIENCE.

*An Introduction to Electricity.* By Bruno Kolbe, Professor of Physics at St. Anne's School, St. Petersburg. Translated by Joseph Skelton, late Assistant Master at Beaumont College, Old Windsor. (10s. 6d. net. Kegan Paul, Trench, Trübner, & Co.)

The translation is from the second edition of "Einführung in die Elektrizitätslehre" (Berlin: Springer, 1904-5), with many alterations and corrections (both in text and in illustrations) by the author himself. The exposition is quite simple and judiciously progressive. The mathematical equipment assumed is very elementary and the experiments are fresh, readily followed, and reproducible without much difficulty or expense. Incidentally the main points in the historical development of the science are noted, and Prof. Kolbe "has rescued many and luminous experiments from the back numbers of the scientific periodicals, in which they lay buried from the gaze of the general public." The volume will prove attractive not only to the student, but to all persons of fair acquirements and intelligence that wish to understand the elements and history of the subject. There are 160 figures and an index.

*A Text-Book of Light,* by R. Wallace Stewart, D.Sc. Lond., the third volume of "The Tutorial Physics," appears in a fifth impression (fourth

(Continued on page 264.)

# OXFORD UNIVERSITY PRESS.

## COMPLETION OF THE WORK.

### Oxford Treasury of English Literature.

By G. E. HADOW, Tutor in English Literature, Lady Margaret Hall, Oxford; and W. H. HADOW, Fellow of Worcester College, Oxford. 3 Vols., 3s. 6d. each. Vol. III.—**Jacobean to Victorian.**

*Guardian.*—"It would be difficult to name a more complete work of its kind even in the matter of selections, while the literary criticism is illuminating and original."

*Previously Published.*

Vol. I.—**Old English to Jacobean.** Second Edition.

Vol. II.—**Growth of the Drama.**

### The Writing of English.

By PHILIP J. HARTOG, Academic Registrar of the University of London, with the assistance of Mrs. A. H. LANGDON. Second Edition. With a new Introduction. 2s. 6d.

*Athenæum.*—"If parents and schoolmasters will pay heed to the good counsel and practical suggestions in this handy and valuable little work, no future writer on literary studies in our schools will, we think, be able to begin his first chapter—as Mr. Hartog begins his—with the discouraging statement, 'The average English boy cannot write English.'"

### Selections from Dryden.

Chosen and Edited by G. E. HADOW, Tutor in English Literature, Lady Margaret Hall, Oxford. 2s. 6d.

*Liverpool Post.*—"These selections are chosen with acumen, and are finely edited."

### Select English Classics.

Edited, with Introductions, by A. T. QUILLER-COUCH.

**Poetry and Prose.** Thirteen now ready. Paper covers, 3d. each; cloth, 4d. each.

*Athenæum.*—"The series is excellent. The brief introductions by 'Q' are lively and tasteful."

### Oxford Library of Translations.

Extra Fcap. 8vo, 3s. 6d. net per Volume.

**Tacitus: Dialogus, Agricola and Germania.** (Oxford Translation Series.) Translated, with Introduction and Notes, by W. HAMILTON FYFE. With Maps.

NEW VOLUMES IN THE PRESS.

**The Works of Hesiod.** Translated by A. W. MAIR.

**Virgil.** Translated by J. JACKSON.

**Statius Silvae.** Translated by D. A. SLATER.

### The Oxford Book of French Verse. Thirteenth Century to Nineteenth Century.

Chosen and edited by ST. JOHN LUCAS. Second Impression. Fcap. 8vo, 6s. net; on Oxford India paper, 7s. 6d. net.

*Athenæum.*—"The best selection that has been printed in England. The Introduction, in fewer than thirty small pages, gives a rapid and brilliant survey of French poetry from the thirteenth century to the nineteenth."

### Trois Semaines en France.

An Illustrated Reader, with Questions for Conversation and Grammatical Exercises. By D. L. SAVORY, French Lecturer at Goldsmiths' College, University of London; and L. CHOUVILLE, B. ès L., Assistant Master at the Perse School, Cambridge. 2s.

*Journal of Education.*—"The narrative is simple and natural. . . . The questionnaire provides a searching test."

### Old Testament History.

Narrated for the most part in the words of the Bible. Selected and arranged by G. CARTER, Head Master of New College School, Oxford. With Maps. 2s.

*Sunday School Chronicle.*—"The idea is an excellent one, and it is admirably carried out. The editor in his explanatory and connecting notes gives just what is required."

### A Study of Mathematical Education, Including the Teaching of Arithmetic.

By B. BRANFORD, Divisional Inspector to the London County Council. [Shortly.]

### Solutions of the Examples in a Sequel to Elementary Geometry.

By JOHN WELLESLEY RUSSELL, M.A., formerly Fellow of Merton College, Mathematical Lecturer of Balliol and St. John's Colleges, Oxford. 3s. 6d. net.

### Types of Floral Mechanism.

Part I, Types I-XII (Jan. to April). With Diagrams and 39 Coloured Plates. By A. H. CHURCH. 21s. net.

*Educational Catalogue (32 pages) and List of Books set for various Examinations 1908 and 1909, post free.*

London: HENRY FROWDE, Oxford University Press, Amen Corner, E.C.

edition), revised and enlarged by John Satterley, B.Sc., late Assistant in Physics at the Royal College of Science (4s. 6d., Clive).—An *Introduction to Metallurgical Chemistry* for the use of Technical Students, by J. H. Stansbie, B.Sc. Lond., F.I.C., Lecturer in the Birmingham Municipal Technical School (4s. 6d., Edward Arnold), has very deservedly reached a second edition.—*Elementary Practical Chemistry, Part I., General Chemistry*, by Frank Clowes, D.Sc. Lond., Emeritus Professor of Chemistry in University College, Nottingham, and J. Bernard Coleman, A.R.C.Sc., Head of the Chemical Department in the South-Western Polytechnic, Chelsea (2s. 6d. net, Churchill)—a well known work, thoroughly competent and practical—is in a fifth edition.

(1) *A Text-Book in General Zoology*. By Henry R. Linville, Ph.D., Head of the Department of Biology, De Witt Clinton High School, New York City, and Henry A. Kelly, Ph.D., Director of the Department of Biology and Nature Study, Ethical Culture School, New York City. (7s. 6d.) (2) *A Course in Vertebrate Zoology: A Guide to the Dissection and Comparative Study of Vertebrate Animals*. By Henry Sherring Pratt, Ph.D., Professor of Biology at Haverford College and Instructor in Comparative Anatomy at the Marine Biological Laboratory at Cold Spring Harbor, L.I. (7s. Ginn.)

(1) "The treatment of the phyla is in a descending order from the Arthropoda to the Protozoa and in an ascending order from the fishes to man." It is open to question whether the "order of evolution," from the Protozoa upwards, is not preferable; but, at any rate, the exposition will lend itself, without much drawback, to that order. The authors recognize the proper relation of the text-book to the laboratory work. They proceed, as far as may be, on the inductive method. Besides describing the appearance and the structure and functions of the organs of selected specimens, they note, in appropriate connexions, the economic importance of animals, the geographical distribution and the geological history of races, and even points of comparative psychology and of ecology. The last chapter is devoted to a brief sketch of the historical development of the science. These excursions into allied subjects, however, are but trimmings that lend a collateral interest. The essential portion of the work, which appears to have run the gauntlet of criticism by many colleagues, seems to be clear and careful. There are 233 illustrations, mainly of external appearances.—(2) Prof. Pratt's volume is laid out on a plan similar to that of his "Invertebrate Zoology," which came before us a few years ago. "Its principal aim is to furnish a guide to the dissection of types of the most important groups of vertebrates." The types given are the dogfish, the perch, necturus, the frog, the turtle, the pigeon, and the cat. The directions are practical and sufficiently detailed, and numerous exercises are proposed. Both volumes have indexes.

#### MODERN LANGUAGES.

*Oxford Higher French Series*. Edited by Leon Delbos, M.A. (Clarendon Press.)

Half a dozen additional volumes to this excellent series are: (1) *L'Oiseau*, par Jules Michelet, edited by Louis Cazamian, Maître de Conférences à l'Université de Bordeaux (2s. net); (2) *Poésies Choisies d'André Chénier*, edited by Jules Derocquigny, Professor Adjoint à la Faculté des Lettres de Lille (2s. 6d. net.); (3) *Espania et Emaux et Camées*, par Théophile Gautier, edited by C. Edmund Delbos, First Modern Language Master, Upper Canada College, Toronto, late of Loretto School (2s. net); (4) *Poésies Choisies de François Coppée*, edited by Leon Delbos, M.A. (édition classique autorisée par M. Alphonse Lemerre) (2s. 6d. net); (5) *Pages Choisies de Auguste Angellier—Prose et Vers*, edited by Emile Legouis, Professeur à l'Université de Paris (seule édition autorisée) (3s. 6d. net); (6) *Trois Portraits Littéraires*, by Sainte-Beuve, edited by D. L. Savory, M.A., Lecturer in the University of London, Goldsmiths' College, late Assistant Master in Marlborough College (3s. net). Introduction and notes afford ample assistance.

*A New French-English English-French Pocket Dictionary*. Abridged from the larger Dictionary by de V. Payen-Payne, Assistant Examiner in French to the University of London, Principal of Kensington Coaching College. (1s. 6d. net. Cassell.)

Mr. Payen-Payne has performed his difficult task with much judgment. He has retained all words of ordinary every day use, literary or colloquial, and phrases necessary to the beginner, the words omitted being chiefly scientific and technical, many of which are identical in both languages. The get-up is very convenient, substantial, and tasteful.

*Living Greek Language compared with the Ancient*.

By Prof. George Spyridis.

Prof. Spyridis offers a "practical grammatical method for Universities and colleges, and for those wishing to become self-taught, speak it in six months, and read the Gospel in its original text." It is a laborious work, and a wary student of some experience may get a good deal out of it, but it is sadly marred for lack of the critical assistance of an English scholar. It should be drastically revised.

#### ENGLISH LITERATURE.

"The King's Classics." General Editor, Prof. I. Gollancz, Litt.D. (1s. 6d. net. each volume. Chatto & Windus.)

(1) *Chaucer's Prologue, The Romaunt of the Rose, and Minor Poems*, and (2) *Chaucer's The Parliament of Birds and The House of Fame*, done into

modern English by Prof. Skeat, Litt.D., with brief introductions and notes. (3) *Sir William Temple upon the Gardens of Epicurus*, with other seventeenth century Garden Essays; introduction by Albert Forster Sieveking, F.S.A. (4) *The Castle of Otranto*, by Horace Walpole, with Sir Walter Scott's Introduction, and Preface by Caroline F. E. Spurgeon. (5) *The Poets Royal of England and Scotland*, edited by William Bailey-Kemping. These are good specimens of the noteworthy works in widely differing matter and style, not readily accessible in cheap form or in modern English, that are offered in this excellent series in beautiful type and artistic get-up at an extremely moderate price. They are all edited by most competent hands, and each has its frontispiece. The series largely extends the field of the general reader in the most agreeable way.

*The People's Library*. (8d. net a volume. Cassell.)

The April contingent of this excellent series includes (1) *The Little Minister* (Barrie); (2) *The Natural History of Selborne* (Gilbert White); (3) *Uncle Tom's Cabin* (Mrs. Beecher Stowe); (4) *Thoughts of Life and Philosophy* (Marcus Aurelius, Long's translation), with M. Arnold's Essay and Melmoth's translation of Cicero's Essay on Friendship; (5) *Sartor Resartus*, and Essays on Burns and Scott (Carlyle); (6) *The Two Paths*, Lectures on Architecture and Painting, Pre-Raphaelitism, and Notes on the Turner Gallery (Ruskin); (7) *Tales from Shakespeare* (Lamb); (8) *The Pathfinder* (Fenimore Cooper); (9) *Fairy Tales* (Grimm); (10) *The Woman in White* (Wilkie Collins). Also (11) *Barrie's The Little Minister* in the agreeable and flexible leather binding (1s. 6d. net).

*Select English Classics*. Edited, with introduction, by A. T. Quiller-Couch. (3d. each; cloth, 4d. Frowde, Clarendon Press.)

Here is an attractive new series. We have (1) *Shakespeare, songs and sonnets*; (2) *Bunyan, nine extracts*; (3) *Defoe, nine extracts*; (4) *Cowper, verse passages*; (5) *Crabbe, eight selections*; (6) *Hazlitt, nine passages*; (7) *Izaak Walton, nine passages*; (8) *Keats, odes and lyrics (with four sonnets)*; (9) *Matthew Arnold, eleven poems*. The selections are very suitable, and the type and get-up (whether in paper or in cloth) are excellent. The series will no doubt be cordially welcomed in the schools.

#### ART—DRAWING—DESIGN.

*Nelson's New Drawing Course*, by J. Vaughan, Superintendent of Drawing and Manual Instruction under the Glasgow School Board, has reached Stage VI. (15s.)—a most elaborate and thoughtfully planned series, admirably produced. Set VI. contains 10 sheets 25 x 20 in., on the same plan as the previous examples, each sheet forming the basis of about a month's work in drawing from Nature, from objects, &c. Both sides of each sheet present (1) large drawings, for demonstration of principles in class, for setting a standard of execution, and for illustration of ornamental renderings, and (2) small drawings as suggestions for exercises of similar difficulty. Drawing and colouring are excellent. The containing portfolio is artistic and serviceable.

*How to Draw in Pen-and-Ink*. By Harry Furniss. (3s. 6d. net. Chapman & Hall.)

Mr. Furniss is not to be tied down to a methodical exposition in detail, but he deals broadly with main matters generally and on some particular subjects. He is discursive, but always interesting, and he gets many good points inserted by the way. His personal method attracts and impresses. There are numerous effective illustrations, and the author smiles from the frontispiece as if it were all very easy. A charming and suggestive volume.

*Ambidextrous and Free-Arm Blackboard Drawing and Design*. By F. F. Lydon, Art Master at Parmiter's School and East London College, &c. (3s. 6d. Philip.)

This is a second edition, deservedly attained. The directions and the exposition are lucid, and the subject is progressively unfolded with much practical judgment. There are numerous illustrative plates, with full and careful description.

#### RELIGIOUS AND MORAL.

*The Wisdom of the East Series*. Edited by L. Cranmer-Byng and Dr. S. A. Kapadia. (Murray.)

(1) *Brahma-Knowledge* (2s. net), by L. D. Barnett, M.A., Litt.D., Professor of Sanskrit, University College, London, presents an outline of the philosophy of the Vedānta as set forth by the Upanishads and by the Śāṅkara, without any attempt either to justify or to refute the ideas.—(2) *The Sayings of Confucius* (2s. net), by Lionel Giles, M.A. Oxon., Assistant in the Department of Oriental Books and Manuscripts of the British Museum, consists of "a new translation of the greater part of the Confucian Analects," with a considerable and instructive introduction and useful foot-notes. "Confucius is one of the few supremely great figures in the world's history."—(3) *The Conduct of Life; or, The Universal Order of Confucius* (1s. net), by Hu Hung Ming, M.A. Edin., is "a translation of one of the four Confucian books hitherto known as 'The Doctrine of the Mean.'" The idea of moral obligation, here set forth, "forms the basis of human conduct and social order in the scheme of the Chinese civilization," which the editor pronounces "a wonderful success."—(4) *Arabian Wisdom* (1s. net), by John Wortabet, M.D., consists of selections and translations from the Arabic. All these volumes are most instructive additions to an excellent series.

# MACMILLAN'S Books Suitable for Prizes.

## ANTIQUITIES.

- CIVIL WAR AND REBELLION IN THE ROMAN EMPIRE, A.D. 69-70.** By B. W. HENDERSON, M.A. With Maps and Illustrations. 8vo, 8s. 6d. net.
- A GRAMMAR OF GREEK ART.** By PERCY GARDNER, Litt.D. With Illustrations. Extra crown 8vo, gilt top, 7s. 6d.
- A HANDBOOK OF GREEK SCULPTURE.** By ERNEST ARTHUR GARDNER, M.A. New Edition, with Appendix. Extra crown 8vo. Parts I. and II., 5s. each. Complete in One Vol., 10s.
- ANCIENT ATHENS.** By ERNEST ARTHUR GARDNER. With numerous Illustrations, Plans, and Maps. 8vo, gilt top, 21s. net.
- LIFE IN ANCIENT ATHENS:** The Social and Public Life of a Classical Athenian from day to day. By Prof. T. G. TUCKER, Litt.D. Illustrated. Extra Crown 8vo, 5s.
- LIFE IN THE HOMERIC AGE.** By Professor THOMAS DAY SEYMOUR. Illustrated. 8vo, 17s. net.
- ROMAN PUBLIC LIFE.** By A. H. J. GREENIDGE. Extra crown 8vo, 10s. 6d.
- ATLAS OF CLASSICAL ANTIQUITIES.** By T. H. SCHREIBER. Edited by Prof. W. C. F. ANDERSON. 4to, 21s. net.
- A COMPANION TO SCHOOL CLASSICS.** By JAMES GOW, M.A., Litt.D. Illustrated. Third Edition. Crown 8vo, 6s.
- RAMBLER AND STUDIES IN GREECE.** By J. P. MAHAFY, C.V.O. Fifth and Cheaper Edition. Globe 8vo, 5s. net.
- SCHOOLS OF HELLAS.** An Essay on the Practice and Theory of Ancient Greek Education from 600 to 300 B.C. By the late KENNETH J. FREEMAN, Scholar of Trinity College, Cambridge. Edited by M. J. RENDALL, with the assistance of Dr. SANDYS, Dr. HENRY JACKSON, E. D. A. MORSEHEAD, and others. Illustrated from Greek Vases. Second Impression. 8vo, 4s. net.

## COLLECTED WORKS, ESSAYS, MISCELLANEOUS WORKS.

- ENGLISH PROSE SELECTIONS.** With Critical Introductions by Various Writers, and General Introductions to each Period. Edited by Sir HENRY CRAIK, K.C.B., LL.D. In Five Vols. Crown 8vo. Vol. I.—14th to 16th Century, 7s. 6d. Vol. II.—16th Century to Restoration, 7s. 6d. Vol. III.—17th Century, 7s. 6d. Vol. IV.—18th Century, 7s. 6d. Vol. V.—19th Century, 8s. 6d.
- A SHORT HISTORY OF ENGLISH LITERATURE.** By Prof. G. SAINTSBURY. Crown 8vo, 8s. 6d.
- THE ESSAYS OF ELIA.** By CHARLES LAMB. Edited by Canon AINGER. Globe 8vo, 4s. net.
- THE LETTERS OF CHARLES LAMB.** Newly arranged with Additions. Edited with Introduction and Notes, by the late ALFRED AINGER. Two Vols. Globe 8vo, 8s. net.
- H.M.I. SOME PASSAGES IN THE LIFE OF ONE OF H.M.I. INSPECTORS OF SCHOOLS.** By E. M. SNEYD-KYNNERSLEY, formerly H.M.I. North-West Division. 8vo, 8s. 6d. net.
- THE CHOICE OF BOOKS.** By FREDERIC HARRISON. Globe 8vo, 4s. net.
- THE MEANING OF HISTORY.** By FREDERIC HARRISON. Globe 8vo, 4s. net.
- THE PLEASURES OF LIFE.** By Lord AVEBURY. Globe 8vo, 2s. 6d.
- THE USE OF LIFE.** By Lord AVEBURY. Globe 8vo, 3s. 6d.
- GREEK STUDIES.** By WALTER PATTER, M.A. 8vo, 10s. 6d.
- ESSAYS IN CRITICISM.** By MATTHEW ARNOLD. Globe 8vo, 4s. net.
- ESSAYS IN CRITICISM.** Second Series. By MATTHEW ARNOLD. Globe 8vo, 4s. net.
- MISCELLANIES.** By JOHN MORLEY. Three Vols. Globe 8vo, 4s. net each.
- LECTURES AND ESSAYS.** By Canon AINGER. Edited by Canon BEECHING. Two Vols. Crown 8vo, 15s. net.
- ESSAYS IN HISTORICAL CHEMISTRY.** By T. E. THORPE. 8vo, 12s. net. Contains Lives of R. Boyle, J. Priestley, C. W. Scheele, H. Cavendish, J. Watt, A. L. Lavoisier, M. Faraday, T. Graham, F. Wohler, J. B. A. Dumas, H. Kopp, V. Meyer, D. I. Mendelēef, and S. Cannizzaro.
- THE SCENERY OF ENGLAND, AND THE CAUSES TO WHICH IT IS DUE.** By the Rt. Hon. Lord AVEBURY. With numerous Illustrations and Diagrams. Third Edition. Crown 8vo, 6s.
- SCIENTIFIC LECTURES.** By Lord AVEBURY. Third Edition. 8vo, 6s. net.

## HISTORY.

- MODERN EGYPT.** By Lord CROMER. With Portraits and Map. 2 Vols. 8vo, 24s. net.
- A SHORT HISTORY OF THE ENGLISH PEOPLE.** By JOHN RICHARD GREEN, LL.D. With Maps and Tables. Crown 8vo, 8s. 6d. Illustrated Edition in Four Vols. Super royal 8vo, 10s. net each.
- THE EXPANSION OF ENGLAND.** Two Courses of Lectures. By Sir J. R. SEELEY, M.A. Globe 8vo, 4s. net.
- HISTORY OF ROME.** By Dr. MOMMSEN. Abridged. Crown 8vo, 7s. 6d.
- A HISTORY OF ROME TO THE BATTLE OF ACTIUM.** By E. S. SHUCKBURGH, M.A. Crown 8vo, 8s. 6d.
- A HISTORY OF GREECE.** By J. B. BURY. Crown 8vo, 8s. 6d.
- FAMOUS FIGHTERS OF THE FLEET.** Glimpses through the Cannon Smoke in the Days of the Old Navy. By EDWARD FRASER. With Illustrations. Crown 8vo, 3s. 6d.
- A NEW STUDENT'S ATLAS OF ENGLISH HISTORY.** By Dr. EMIL REICH. Small 4to, 10s. net.
- GENERAL HISTORY OF WESTERN NATIONS FROM 5000 B.C. to 1900 A.D.** By Dr. EMIL REICH. Vols. I. and II. 8vo, 15s. net.
- FORTY-ONE YEARS IN INDIA.** By LORD ROBERTS. With 44 Illustrations. Extra crown 8vo, 6s.

## HISTORY—continued.

- A HISTORY OF THE INDIAN MUTINY.** By T. RICE HOLMES, M.A. Second Edition. Extra crown 8vo, 12s. 6d.
- CAWPOPE.** By Sir GEO. OTTO TREVELYAN. Crown 8vo, 3s. 6d. net.
- THE CHRONICLES OF FROISSART.** Translated by Lord BERNERS. Edited by G. C. MACAULAY, M.A. In extra gilt binding, crown 8vo, 3s. 6d.
- A HISTORY OF ETON COLLEGE, 1440-1875.** By Sir H. C. MAXWELL LYTE, M.A. With Illustrations. Medium 8vo, 21s. net.

## SPORT AND TRAVEL.

- THE STORY OF THE GUIDES.** By Col. G. J. YOUNGHUSBAND. Illustrated. 8vo, 7s. 6d. net.
- THE MAN-HATES OF TEAVO.** By Lieut.-Colonel J. H. PATTERSON, D.S.O. With numerous Illustrations. 8vo, 7s. 6d. net.
- AFRICAN NATURE NOTES AND REMINISCENCES.** By F. C. SELOUS. Illustrated. 8vo, 10s. net.
- A HUNTER'S WANDERINGS IN AFRICA.** Being a Narrative of Nine Years spent amongst the Game of the Far Interior of South Africa. By F. C. SELOUS. Illustrated. Fifth and Cheaper Edition. Extra crown 8vo, 7s. 6d. net.
- GREAT BOWLERS AND FIELDERS: THEIR METHODS AT A GLANCE.** By GEORGE W. BELDAM and CHARLES B. FRY. Illustrated by over 475 Action-Photographs. Medium 8vo, 10s. 6d. net.
- GREAT BATSMEN: THEIR METHODS AT A GLANCE.** By G. W. BELDAM and C. B. FRY. Illustrated by over 600 Action-Photographs. Medium 8vo, 10s. 6d. net.
- GREAT GOLFPERS: THEIR METHODS AT A GLANCE.** By GEORGE W. BELDAM. With Contributions by HAROLD H. HILTON, J. H. TAYLOR, JAMES BRAID, ALEX. HEED, and HARRY VARDON. Illustrated by 268 Action-Photographs. Second Impression. Medium 8vo, 10s. 6d. net.
- GREAT LAWN TENNIS PLAYERS.** By G. W. BELDAM and P. A. VAILE. Illustrated by 229 Action-Photographs. Med. 8vo, 10s. 6d. net.

## NATURAL HISTORY.

- CURIOSITIES OF NATURAL HISTORY.** By FRANCIS T. BUCKLAND. In Four Vols. Crown 8vo, 2s. 6d. each; cloth gilt, 3s. 6d. each.
- NATURAL HISTORY AND ANTIQUITIES OF SELBORNE.** By GILBERT WHITE. Edited by FRANK BUCKLAND. Crown 8vo, 3s. 6d. net.
- NATURAL HISTORY OF SELBORNE.** 8vo, 3s. 6d. net; Roxburgh binding, 5s. net.
- LIFE AND HER CHILDREN: GLIMPSES OF ANIMAL LIFE FROM THE ANTERA TO THE INSECTS.** By ARABELLA B. BUCKLEY. With upwards of 100 Illustrations. 18th Thousand. Crown 8vo, 6s.
- A HANDBOOK OF BRITISH INLAND BIRDS.** By A. COLLETT. With coloured and outline Plates of Eggs. Crown 8vo, 6s.
- A YEAR WITH THE BIRDS.** By W. WARDE FOWLER, M.A. Illustrated. Crown 8vo. Prize Edition, 2s. 6d.; cloth gilt, 3s. 6d.
- TALES OF THE BIRDS.** By W. WARDE FOWLER, M.A. Crown 8vo. Prize Edition, 2s. 6d.; cloth gilt, 3s. 6d.
- MORE TALES OF THE BIRDS.** By W. WARDE FOWLER, M.A. Crown 8vo, 3s. 6d.
- SUMMER STUDIES OF BIRDS AND BOOKS.** By W. WARDE FOWLER, M.A. Crown 8vo, 3s. 6d.
- INSECT LIFE.** By J. H. FABRE. Translated. With Illustrations. Crown 8vo, 6s.; Prize Edition, 2s. 6d.
- THE NATURAL HISTORY OF AQUATIC INSECTS.** By Prof. L. C. MIALL, F.R.S. Crown 8vo, 3s. 6d.
- ROUND THE YEAR: SHORT NATURE STUDIES.** By Prof. L. C. MIALL, F.R.S. Crown 8vo, 3s. 6d.

## SELECTIONS FROM THE GLOBE LIBRARY.

### PRESENTATION EDITION.

- Bound in green leather limp, full gilt backs, and gilt edges. Crown 8vo, 5s. net each.
- BOSWELL'S LIFE OF JOHNSON.** Edited, with an Introduction, by MOWBRAY MORRIS.
- BURN'S POEMS, SONGS, AND LETTERS.** Being the Complete Works of Robert Burns. Edited from the best printed and Manuscript Authorities, with Glossarial Index and Biographical Memoir, by ALEXANDER SMITH.
- THE WORKS OF GEOFFREY CHAUCER.** Edited by ALFRED W. POLLARD, H. FRANK HEATH, MARK H. LIDDELL, and W. S. MCCORMICK.
- THE POETICAL WORKS OF WILLIAM COWPER.** Edited, with Notes and Biographical Introduction, by W. BENJAMIN, B.D.
- THE POETICAL WORKS OF JOHN DRYDEN.** Edited, with a Memoir, Revised Texts, and Notes, by W. D. CHRISTIE, M.A.
- THE DIARY OF JOHN EVELYN.** With Introduction and Notes by AUSTIN DOBSON.
- THE MISCELLANEOUS WORKS OF OLIVER GOLDSMITH.** With Biographical Introduction by Prof. MASSON.
- THE POETICAL WORKS OF JOHN KEATS.** Edited, with Introduction and Notes, by WILLIAM T. ARNOLD.
- THE POETICAL WORKS OF JOHN MILTON.** With Introductions by Prof. MASSON.
- PEPYS'S DIARY.** With Introduction and Notes by G. GREGORY SMITH.
- THE POETICAL WORKS OF ALEXANDER POPE.** Edited, with Notes and Introductory Memoir, by Dr. A. W. WARD.
- POETICAL WORKS OF SIR WALTER SCOTT.** With a Biographical and Critical Memoir by F. T. PALGRAVE.
- THE WORKS OF WILLIAM SHAKESPEARE.** Edited by W. G. CLARK, M.A., and W. ALDIS WRIGHT, M.A.
- THE COMPLETE WORKS OF EDMUND SPENSER.** Edited, from the Original Editions and Manuscripts, by R. MORRIS. With a Memoir by J. W. HALES, M.A.
- TENNYSON'S POETICAL WORKS.** Also in extra cloth, gilt edges, 4s. 6d.

"Rivingtons' Handbooks to the Bible and the Prayer Book."—

(1) *St. John*, by the Rev. W. C. E. Newbolt, M.A., Canon and Chancellor of St. Paul's. (2s. 6d. net.) (2) *Acts of the Apostles*, Chapters I–XV., and (3) *Acts of the Apostles*, Chapters XVI–XXVIII., by the Rev. Bernard Reynolds, M.A., Archbishop's Inspector of Training Colleges, (Chief Diocesan Inspector of London, and Prebendary of St. Paul's, and the Rev. G. H. S. Walpole, Rector of Lambeth, Hon. Canon of Southwark, formerly Principal of Bede College, Durham. (2s. 6d. net, and 2s. net.)

The series is "for the use of teachers and students," and both classes may derive much help from the volumes both by direct information and by reference and suggestion. (1) seems more largely addressed to teachers: the outline lessons are very full. The "blackboard sketches" form a pointed feature of all the volumes. Each volume has a useful map of Palestine, and (2) and (3) show maps of the missionary journeys.

#### BOOKS OF REFERENCE.

*The Schoolmasters Yearbook and Directory*, 1908. (7s. 6d. net. Swan Sonnenschein.)

This is the sixth annual issue of a volume that is now indispensable to educationists. The editors are naturally anxious about the proper date of publication, which the Christmas and January conferences practically force some way down the Calendar; but we should imagine that the essential point is to have the book once a year and to have it full and accurate when it comes. The volume is laid out on the usual lines, and evidently great efforts have been made—and successfully made—to bring the information thoroughly up to date.

*The Girls' School Yearbook (Public Schools)*, 1908–9, with Index of Schoolmistresses. (2s. 6d. net. Swan Sonnenschein.)

The volume is a record, at once comprehensive and concise, of all matters of interest to parents, schoolmistresses, and girls in connexion with secondary education. Part II., which deals chiefly with the after-school career of girls, has been carefully revised, considerably rewritten, and enlarged. The information continues to be full, and obviously much trouble has been taken to make it accurate. The work thoroughly deserves success. This is its third annual appearance.

*Paton's Guide to Continental Schools*, 1908.

This is the third annual issue. The volume deals with schools in Switzerland, France, Germany, and Belgium—"only really good schools," so far as can be ascertained—and consists of four divisions: (1) selected lists of schools; (2) brief descriptions of educational centres; (3) boys' schools; and (4) girls' schools. Illustrations of nearly all the institutions, as well as a full outline of information about them, are presented; and a very detailed continental map is prefixed. The compilation ought to be extremely serviceable to English-speaking parents and guardians in search of a continental school, whether for boys or for girls.

*The City of London Directory*, 1908. (12s. 6d. Collingridge.)

Messrs. W. H. & L. Collingridge, of the *City Press*, now issue the thirty-eighth annual edition of the City of London Directory. The work has established itself as an indispensable office guide, containing all sorts of local information that is likely to be needed and disposing the details in the clearest possible arrangement. The Official section is very full; the Streets section is brought carefully up to date—always a very arduous business after the numerous changes of the first three months of the year; the Livery Companies section furnishes the usual special information; the Educational section sets out the advantages and opportunities afforded by the city schools, with much historical detail; and the Biographical section (with portraits) is very interesting as well as ornamental. There is also a carefully corrected map in colours, marking the boundaries of the wards and parishes and recording the street alterations of the past twelvemonth.

*Nelson's Annotated Scotch Code*, 1908. Edited by John Kerr, M.A., LL.D., late H.M. Chief Inspector of Schools and Inspector of Training Colleges. (2s. 6d. net. Nelson.)

This is the tenth annual issue of "the *vade mecum* of Scottish Education." It covers all the grades and forms of schools, and provides all necessary information and explanations regarding school work, many official circulars and other documents on important points being quoted textually. The Continuation Classes Code is incorporated; and the useful memoranda on the teaching of particular subjects recently issued by the Scotch Education Department are reprinted in full. The honoured name of the editor is an ample guarantee for completeness, thoroughness, and accuracy.

*Nelson's Sixpenny Guides*.

Here is a new series of cheap guide-books to the chief holiday resorts of England and Wales, a round dozen of them. The matter is taken from Baddeley's well known "Thorough Guides"; and the tourist will find in them all that he needs to enable him to see everything worth seeing in the localities with intelligence and ease. Each volume has about 80 pages of letterpress in spacious type, a large and detailed map of the district in three colours, and several smaller maps, plans, or illustrations. The get-up is agreeable, and the form is convenient for the pocket.

In the same style is *Nelson's Guide to Paris* (9d., or 1 fr.); and *London* (Guides Nelson) (fr. 1.25, or 1s.), which is in French, and is specially opportune.

#### FIRST GLANCES.

##### MATHEMATICS.

Arithmetic, Advanced, and Elementary Algebra and Mensuration: a Text-Book for Secondary Schools and Students preparing for Public Examinations. By P. Goyen, Chief Inspector of Schools, Otago, New Zealand. 3s. 6d. Macmillan

[“A new edition, entirely rewritten and recast, of a book formerly issued as ‘Higher Arithmetic and Elementary Mensuration.’”]

Arithmetic, Pitman's Correlated. Book I. (Scheme II., Departmental Suggestions). By T. W. Trought, B.A., Head Master, Camden Street Council School, Birmingham, formerly Lecturer at Chester Training College. 3d.

Arithmetic, The "A.L." Methodic. By David Thomas, Assistant Secretary of Education for Carnarvonshire, formerly Senior Assistant Master, Friars School, and Head Master of an Elementary School. Books A, B, C, D (for Grades or Standards I., II., III., IV.). 3d. each book. Answers (to all the four books), 9d.

[Compiled to meet the latest requirements of the Code, and arranged in accordance with the new Syllabus set forth in Schedule VI.]

Dynamics, Elementary. By W. M. Baker, M.A., formerly Scholar of Queens' College, Cambridge, Head Master of the Military and Civil Department at Cheltenham College. 3rd ed. 4s. 6d. George Bell.

[Excellent work. Some minor corrections made. In our March number we noted the publication of a full key to the examples.]

##### SCIENCE.

Chemistry, A Method of Teaching, in Schools. By A. M. Hughes, B.Sc. Lond., Science Mistress of the L.C.C. Secondary School, Eltham, and R. Stern, B.Sc. Lond., Science Mistress of the North London Collegiate School. 3s. net. Cambridge University Press.

[Sound and attractive. 55 figures; other illustrations.]

Chemistry, Practical. By Geoffrey Martin, B.Sc., Ph.D., Lecturer and Demonstrator in Chemistry, University College, Nottingham. 2s. net. Crosby Lockwood & Son.

[Short course of practical work for Army and Matriculation students and for use in Secondary Schools. Judicious experiments, exercises, and directions. Very useful. 72 figures.]

Heat Shadows. By Walter Jamieson, B.Sc. Lond., A.M.I.E.E., Science and Mathematical Master, Provanside Higher Grade School, Glasgow. 6s. net. Blackie.

[“Some new experiments in Conduction and Radiation of Heat.” An attempt to bring quantitative experiments on these points within the scope of young students of elementary physics. Ingenious and interesting.]

Physics, A Second Year's Course in Practical. By James Sinclair, M.A., B.Sc., Head Science Master, Shawlands Academy, Glasgow. 1s. 6d. George Bell.

[Deals with Heat. Adopts some of Mr. Jamieson's results, see above, "Heat Shadows"). Experiments judiciously chosen and clearly set out; numerous exercises (with answers) and figures. Extremely useful.]

##### ENGLISH LITERATURE.

Blackie's English Texts. 6d. each volume.—(1) Border Warfare (Froissart); (2) The Reign of Richard II. (Froissart); (3) Crecy and Poitiers (Froissart); (4) The Hero as Divinity and the Hero as Man of Letters (Carlyle); (5) The Hero as Poet and the Hero as King (Carlyle); (6) Byzantine Churches of Venice (Ruskin); (7) Sesame and Lilies (Ruskin); (8) Britain and Germany in Roman Times (Caesar and Tacitus); (9) The Coming of Arthur (Malory); (10) The Knights of the Round Table (Malory); (11) Plutarch's Life of Julius Caesar; (12) The Siege of Syracuse (Thucydides); (13) The Capture of Mexico (Prescott); (14) Bacon's Essays; (15) Cowley's Essays; (16) England's Rural Life and Christmas Customs (Washington Irving).

[Matter varied and excellent; good type and get-up.]

Clarendon Press.—(1) Selections from Dr. Johnson's "Rambler." Edited, with Preface and Notes, by W. Hale White. (2s. 6d. net.) (2) Mary Wollstonecraft's Original Stories. With Introduction by E. V. Lucas. 2s. 6d. net.

[Beautiful type, and artistic get-up.]

Elzevir Library.—(1) The Fancy and Humour of Charles Lamb. (2) Wit and Imagination of Benjamin Disraeli. (3) Vignettes from Oliver Goldsmith. The Passages selected and arranged by George Sampson. Seeley.

[A charming series, delightfully got up.]

Grant Richards's Penny Classics.—(1) David Copperfield; (2) Tennyson's Poems, 1830–33; (3) Shakespeare's The Merchant of Venice; (4) Ruskin's Sesame and Lilies. 1d. each.

[Each book gives 40 large pages in double columns. "David Copperfield" will take about a dozen books. Type good; paper and (consequently) pictures not so good—but then the price!]

Macmillan's Pocket Classics.—The Use of Life (Lord Avebury). 2s.

[Very agreeable edition. Portrait frontispiece.]

Nelson's Library (7d. each).—(1) Monsieur Beaucaire, and The Beautiful Lady (Booth Turkington). (2) The Octopus (Frank Norris); (3) Woodside Farm (Mrs. W. K. Clifford); (4) The Recipe for Diamonds (C. J. Cutcliffe Hyne).

[Liberally printed and flexibly and agreeably bound.]

Nelson's Sixpenny Classics.—(1) Silas Marner (George Eliot). (2) Notre Dame (Victor Hugo). (3) Kate Coventry (Whyte Melville).

[Liberally printed and flexibly and plainly bound.]

Treasury of English Literature.—Selected and arranged by Kate M. Warren, Lecturer in English Language and Literature at Westfield College (University of London). Section III., Elizabethan Literature. Section IV., Bacon to Milton. 1s. net each. Constable.

[Introduction by Stopford A. Brooke. Excellent selection; spicuously printed and nicely got up.]

EDUCATION.

Board of Education. (1) Regulations for Secondary Schools (from August 1 next) in England. Cd. 4037. 2d. (2) Regulations for the Preliminary Education of Elementary School Teachers (from August 1 next) in England. Cd. 4038. 2½d. (3) List of Training College Students who completed their periods of training on July 31, 1907, and are qualified by examination for recognition as Certificated Teachers. 6d. (4) List of persons who have passed the Certificate Examination of the Board of Education for Teachers in Elementary Schools, 1907. 6d. Wyman.

Cambridge University Local Examinations. Subjects for July and December, 1909. Complete Regulations of 1909 can be obtained June 20 next.

Certificate Examinations of the Board of Education, 1908-9, "The Teacher" Guide to the; with questions set in 1907 and solutions to the papers in mathematics. Compiled by James Bell, B.A., Director of Certificate Classes, Stockport. 1s. net. Pitman.

[Useful explanations and directions.]

Chart of the Centuries from the Norman Conquest. By W. S. Child-Pemberton. Large (on metal ledge), 2s. net; small (scholar's edition), 1d. net.

[Graphical device to help the imagination.]

Johns Hopkins University Circular, 1908. No. 2, Commemoration Day; Enumeration of Classes. No. 3, The Political Science Seminary, 1907-08.

L.C.C. (1) Report on Elementary Day Schools, for year ended March 31, 1907. No. 1143. 7s. 6d. (parcel post free, 8s.). (2) Report on Industrial and Reformatory Schools, for year ended March 31, 1907. No. 1145. 1s. (post free, 1s. 2d.). King.

Normal Tutorial Series.—(1) The Certificate Guide, 1908-09. 6d. net. (2) Notes of Lessons and How to write them, by William Smith, B.A., B.Sc. 3rd edition. 1s. net. (3) Guide to Oxford and Cambridge Locals. 6d. net.

MISCELLANEOUS.

Art and Trade: their Alliance in Foreign Competition. Speech by Sir Swire Smith in support of the Third International Art Congress. Published at the Offices of the Congress (151 Cannon Street, E.C.).

Books for the Bairns. No. 140, The Babes in the Wood. A Fairy-Tale Play. No. 147, A Book of Nonsense. By Edward Lear. Illustrated. "Books for the Bairns" Office (39 Whitefriars Street, E.C.).

Calendar, A Simplified, A Proposal for. By Alexander Philip, LL.B. 6d. net. Kegan Paul, Trench, Trübner, & Co.

[The essential feature is "that one day in each year and the intercalary day in every fourth year shall not be enumerated as days of the week or month." Ingenious.]

Chemical Appointments. Official List of. Compiled by Richard B. Pilcher, Registrar and Secretary of the Institute of Chemistry. Second Edition, revised and enlarged. 2s. net. Institute of Chemistry (30 Bloomsbury Square, W.C.).

Fairy Tales, Aunt Kate's. No. 3, Stories from Hans Andersen. 1d. No. 4, More Stories from Hans Andersen. 1d. Leng.

Letter-Writer, Leng's. New and Revised Edition. 1d.

Natural Sciences, On the Influence of the, on our conceptions of the Universe. Address by Prof. Ladenburg (Chemistry), Breslau. Translated by Dr. C. T. Sprague. 2d. Watts.

Peace, The Principles of. By Joseph Rowntree. Copies on application to the Author, Clifton Lodge, York.

Rome, Wintering in. By A. G. Welsford, M.D., B.C. Cantab., F.R.C.S., D.P.H., &c. With Introduction by G. Sandison Brock, M.D., C.M. Edin., M.D. Rome, Physician to the British Embassy at Rome. Second Edition. 2s. net. Health Resorts Bureau (27 Chancery Lane, W.C.).

[Full and trustworthy. Three illustrations.]

Temperance Reform in the United States. 2d. King.

W.G. Systems, Ltd. Specimens of Squared Paper used in "W.G. Business Barometers" and "W.G. Graphic Charts." [Obviously serviceable in many businesses.]

MATHEMATICS.

16310. (V. RAMASWAMI AIYAR, M.A.)—Prove that a variable tangent to a three-cusped hypocycloid moving with uniform angular velocity meets any fixed tangent in a point whose motion is simple harmonic.

Solutions (I.) by M. T. NARANIENGAR, M.A.; (II.) by V. MADHAVARAO, M.A.

(I.) Let O be the centre of the fixed circle whose radius is 3a. Describe a concentric circle of radius a, and take two points B and P, the first fixed and the second variable. Then, if BD, PN be perpendiculars on the fixed diameter AO, and DC, NQ are measured equal to AD, AN, it will be seen that BC is a fixed tangent, and PQ a variable tangent to the three-cusped hypocycloid.

Now,  $\angle BRP = \angle BAP$ ; therefore R lies on a circle BPR equal to that constructed; so that, if BS be its diameter, SR is perpendicular to BC, and therefore the motion of R is simple harmonic. [Locus of S is evidently a circle with centre D.]

(II.) The tangent at a point of the three-cusped hypocycloid, defined by

$$x = 2a \cos 2\theta + a \cos 4\theta, \quad y = 2a \sin 2\theta - a \sin 4\theta,$$

is

$$x \sin \theta + y \cos \theta = a \sin 3\theta$$

This cuts the tangent, at a fixed point for which  $\theta = \alpha$ , in the point where

$$x = a [\cos 2\alpha + \cos 2\theta + \cos 2(\alpha + \theta)] \dots \dots \dots (1).$$

If  $\psi$  be the inclination of the tangent at the point  $\theta$  to the x-axis,  $\tan \psi = -\tan \theta$ . Also  $d\psi/dt = \omega$  = the uniform angular velocity therefore  $\theta = k - \omega t$ , where k is a constant.

Hence (1) takes the form  $x - a \cos 2\alpha = p \cos 2\omega t + q \sin 2\omega t$ ; p, q being constants. This shows that the motion of the projection of the point of intersection on the x axis is simple harmonic, and hence the motion of the point itself on the fixed tangent is simple harmonic.

16266. (Professor E. B. ESCOTT.)—Find a line which is both tangent and normal to the cardioid.

Solution by the PROPOSER.

It is well known that the evolute of an epicycloid is a similar epicycloid. The evolute of a cardioid is a cardioid with the radius of the base circle  $\frac{1}{3}$  of the radius of the base circle of the given cardioid. Since the tangent is to be normal to the curve, it must be tangent to the evolute. The problem may then be stated: To find the common tangent of the cardioid and its evolute.

The equation of the curve with the centre of the base circle O as origin is

$$x = a(2 \cos \theta + \cos 2\theta),$$

$$y = a(2 \sin \theta + \sin 2\theta).$$

The tangent at the point  $\theta_1$  is

$$y = -\frac{\cos \theta_1 + \cos 2\theta_1}{\sin \theta_1 + \sin 2\theta_1} x + 3a \frac{1 + \cos \theta_1}{\sin \theta_1 + \sin 2\theta_1},$$

or it may be written

$$y = -\cot \frac{3}{2}\theta_1 \cdot x + \frac{3a \cos \frac{1}{2}\theta_1}{\sin \frac{3}{2}\theta_1}.$$

The evolute is

$$x = -\frac{1}{3}a(2 \cos \phi + \cos 2\phi), \quad y = \frac{1}{3}a(2 \sin \phi + \sin 2\phi);$$

and its tangent  $y = \cot \frac{3}{2}\phi_1 \cdot x + a \cos \frac{1}{2}\phi_1 / \sin \frac{3}{2}\phi_1$ .

Since these two tangents must be the same,  $-\cot \frac{3}{2}\theta_1 = \cot \frac{3}{2}\phi_1$ , i.e.,

$$\sin \frac{3}{2}(\phi + \theta) / \cos \frac{3}{2}\phi \cos \frac{3}{2}\theta = 0, \quad \frac{3}{2}(\phi + \theta) = n\pi,$$

$$\phi + \theta = \frac{2}{3}n\pi, \quad \phi = \frac{2}{3}n\pi - \theta.$$

Substituting and equating the constant terms in the equations of the tangents, we have

$$\cos(\frac{1}{3}n\pi - \frac{1}{2}\theta) / \sin(n\pi - \frac{3}{2}\theta) = 3 \cos \frac{1}{2}\theta / \sin \frac{3}{2}\theta.$$

Solving, we have  $\tan \frac{1}{2}\theta = -(3 + \cos \frac{2}{3}n\pi) / \sin \frac{2}{3}n\pi$ .

(a) If  $n = 0$ ,  $\tan \frac{1}{2}\theta = \infty$ ; therefore  $\theta = \pi$ .

(b) If  $n = 1$ ,

$$\tan \frac{1}{2}\theta = \frac{2}{3}\sqrt{3}.$$

- (c) If  $n = 2$ ,  $\tan \frac{1}{2}\theta = -\frac{2}{3}\sqrt{3}$ .
- (a)  $n = 0$ , tangent line is  $y = 0$ . Tangent at cusp.
- (b)  $n = 1$ , tangent line is  $y = -\frac{2}{3}\sqrt{3}x - \frac{2}{3}a\sqrt{3}$ . Co-ordinates of point of tangency,  $(-\frac{1}{3}\sqrt{3}a, \frac{1}{3}\sqrt{3}a)$ . Point at which tangent is normal to the curve,  $(-\frac{1}{3}\sqrt{3}a, -\frac{2}{3}\sqrt{3}a)$ .
- (c)  $n = 2$ . Symmetrical to the last.

**15956.** (W. W. ROUSE BALL.)—The Proposer desires to restate the question as follows:—In 1850 Mr. Kirkman proposed as a problem the determination of 7 arrangements of 15 schoolgirls, each arrangement consisting of 5 sets of triplets, so that no two girls will occur together in any triplet more than once. The question was discussed by numerous mathematicians, notably by the author, Cayley, and Sylvester, and several solutions have been given. The generalized problem consists in finding  $\frac{1}{2}(3m-1)$  arrangements of  $3m$  things, each arrangement consisting of  $m$  sets of triplets, so that no two things will occur together in any triplet more than once. This has been solved for various values of  $m$ , in particular when  $m = 1, 3, 5, 7, 9, 13, 15$ . It seems probable that there is a solution when  $m = 11$ . Can any readers of the *Educational Times* give the solution when  $m = 11$ ?

*Solution by* HENRY E. DUDENEY.

The following solution, with the application of its method to analogous cases, will perhaps be found interesting. The problem, generally, is to enable  $n$  schoolgirls to walk out in triplets on  $\frac{1}{2}(n-1)$  days, so that no two girls shall ever walk twice together. It must be understood that I am only writing of cases where  $n$  is of the form  $6m+3$ .

The girls being represented by the consecutive numbers  $1, 2, 3, \dots, n$ , the possible cyclical differences between these numbers are  $1, 2, 3, \dots, \frac{1}{2}(n-3)$ , and  $\frac{1}{2}(n-1)$ , which latter difference I reserve for the first column in association with  $n$ , repeated. For example, here is my solution for  $n = 9$  :—

9 SCHOOLGIRLS.

		4	1 2 3	1 2 3
1st day	...	9 1 5	3 4 6	7 8 2
2nd day	...	9 2 6	4 5 7	8 1 3
3rd day	...	9 3 7	5 6 8	1 2 4
4th day	...	9 4 8	6 7 1	2 3 5

It will be seen that  $9(n)$  repeats in the column, while the other numbers descend cyclically,  $1, 2, 3, \dots, 8, 1, 2, \dots$ . The differences are, of course, not numerical, but cyclical, so that  $8-2$  in the first line is not 6 but 2, since  $8-6 = 2$ . All the differences above (1, 2, and 3) may occur twice, except the 4, which, if continued, will repeat, for obvious reasons.

Now, the differences  $1, 2, 3, \dots, \frac{1}{2}(n-3)$  will always sum to  $\frac{1}{2}(n^2-4n+3)$  for any value of  $n$ . This sum will be even only when  $n$  is of the form  $24p+3$  or  $9$  (where  $p$  may be 0 or any integer), and my present method only applies to these even cases, such as  $n = 3, 27, 51, \dots$ , and  $9, 33, 57, \dots$ .

I have given the solution in the case of 9 girls. The simple case of 3 girls I write 3 1 2, the differences 1, 2, ...  $\frac{1}{2}(n-3)$  here being 0. I will give the analogous solutions for 27, 33, and 51 girls respectively, and I need only show one line (for the first day), it being understood, as explained above, that  $n$  repeats and all other numbers descend cyclically,  $1, 2, 3, \dots, (n-1), 1, 2, \dots$ .

27 SCHOOLGIRLS.

		13	5 1 4	5 1 4	2 8 6	2 8 6
1st day	...	27 8 21	2 23 24	15 10 11	5 7 25	18 20 12
			11 12 3	11 12 3	10 9 7	10 9 7
			1 16 4	14 3 17	6 22 13	19 9 26

It will be seen that every one of the differences 1, 2, ... 12 occurs twice, and twice only, and that the numbers in the second triplet of a pair with similar differences belong to the cycle of the first triplet of such pair. (Thus, in the previous solution for 9 girls, if we continue cyclically the second column, we get into the third; if we continue the third, we get the second.) These cycles I call complementary, and, in order that they shall not clash, it is necessary that the difference between similarly situated numbers in the paired groups shall always be  $\frac{1}{2}(n-1)$ . Thus, above,  $2+13 = 15$ ,  $23+13 = 36 = 10$ , and  $24+13 = 37 = 11$ . Therefore it is obvious that, when we write out our full solution for the 13 days, no two numbers will ever be found twice together. Also, since the difference 13 is only taken once on each of 13 occasions, there can be no repetition here. Finally, 27, being repeated, is associated with every other number once and once only. The solution thus proves itself.

33 SCHOOLGIRLS.

		16	1 11 12	1 11 12	13 6 7	13 6 7
1st day	...	33 15 31	1 2 13	17 18 29	9 22 16	25 6 32
			10 4 14	3 5 2 3	5 2 15 9 8	15 9 8
			30 8 12	14 24 28	23 26 21	7 10 5
				3 20 11	19 4 27	

This first line, as in the last case, carries its own proof, and the arrangements for the remaining 15 days (that is, 16 in all) may be at once written out.

If the sum of the differences be odd, it is evident that this method will not apply without modification, for this reason: if we take the three differences proper to any triplet, two of them must always sum to the third. Thus, above,  $1+11 = 12$ ,  $6+7 = 13$ ,  $10+4 = 14$ ,  $2+3 = 5$ ,  $9+8 = 17 = 15$ . Therefore the sum of the three differences in every triplet must be even, and the sum of them all even. Such a case as the last ( $9+8 = 17 = 15$ ) will not alter this fact, for  $n-1$  is always even, so that if an odd number be deducted from it, the remainder will be odd; if an even number, the remainder will be even.

Therefore the cases where the sum of the differences is odd (that is, where  $n = 24p+15$  or  $21$ ) require special treatment.

[Rest in Reprint.]

**16405.** (R. F. DAVIS, M.A.)—Solve the equation  $(2x+1)(x^2+1)^2+4x^4=0$ .

*Solutions (I.) by* Lt.-Col. ALLAN CUNNINGHAM, R.E., Prof. E. HERMANDEZ, and C. M. ROSS; (II.) by B. C. WALLIS, F.C.P., B.Sc. (Econ.); (III.) by MARK J. ERDBERG.

(I.) Let  $f(x) = (2x+1)(x^2+1)^2+4x^4=0$ .

Here  $x = -1$  gives  $f(x) = 0$ , so that  $-1$  is one root.

Let  $f_1(x) = f(x)/(x+1)$ ; here  $x = -1$  gives  $f_1(x) = 0$ , so that  $-1$  is a second root.

Let  $f_2(x) = f_1(x)/(x+1)$ ; here  $x = -1$  gives  $f_2(x) = 0$  is a third root. And  $f_2(x)/(x+1) = 2x^2-x+1$ . The roots of the quadratic  $2x^2-x+1 = 0$  are  $x = \frac{1}{4}(1 \pm \sqrt{-7})$ . Hence the five roots required are  $-1, -1, -1, \frac{1}{4}(1 \pm \sqrt{-7})$ .

(II.) Equation is  $2x^5+5x^4+4x^3+2x^2+2x+1=0$ .

By inspection of coefficients  $(x+1)^3$  is a factor which gives

$$(x+1)^3(2x^2-x+1)=0,$$

which gives three roots  $-1$ , and also the roots  $\frac{1}{4}(1 \pm \sqrt{-7})$ .

(III.)  $(2x+1)(x^2+1)^2+4x^4=0$

$$\begin{aligned} &= [(x+1)^2-x^2][(x+1)^2-4x(x+1)^2+4x^2]+4x^4=0 \\ &= (x+1)^6-x(x+4)(x+1)^4+4x^2(x+1)^3=0 \\ &= (x+1)^3[(x+1)^3-x(x+4)(x+1)+4x^2]=0 \\ &= (x+1)^3[(x+1)^3-x(x+1)^2-3x(x+1)+4x^2]=0 \\ &= (x+1)^3(x+1)^2-3x(x+1)+4x^2=0 \\ &= (x+1)^3(2x^2-x+1)=0; \end{aligned}$$

therefore roots of equation are  $-1, \frac{1}{4}(1 \pm \sqrt{-7})$ , the first repeated three times.

**16392.** (C. E. YOUNGMAN, M.A.)—On the cardioid  $r = 2a(1 - \cos \theta)$  the points PQR are such that the cusp is their orthocentre. Prove that the circle PQR has radius  $a(\sqrt{2}+1)$  and that its centre lies on a circle with radius  $a(\sqrt{2}-1)$ , centrally placed on the axis of the cardioid; also that the in-circle of PQR has radius  $a$ .

*Solution by* M. T. NARANIENGAR, M.A.

We know that if the focus of a parabola be the in-centre of an inscribed triangle PQR, then the circum-circle PQR touches the circle having double contact with the parabola at the ends of the latus rectum, and also the tangent at the vertex. For, if  $\alpha, \beta, \gamma$  be the perpendiculars from PQR on the axis or the latus rectum we see that  $p\alpha+q\beta+r\gamma=0$  where  $pqr$  denote the sides of PQR. But  $\alpha, \beta, \gamma$  are proportional to the tangents from P, Q, R to the circle, having double contact with the curve at the points where it is met by the parallel to the axis. Hence  $pt_1+qt_2+rt_3=0$ . Applying Dr. Casey's theorem, this relation expresses the condition that the circle PQR should touch the circle having double contact with the parabola. Evidently in the parabola one of the two circles having double contact is the tangent at the vertex.

Investing the above with respect to a circle of radius  $2a$ , we see at once that (1) the inverse of the parabola is the cardioid  $r = 2a(1 - \cos \theta)$ , (2) the inverse of the tangent at the vertex is a circle of radius  $2a$  passing through the focus, (3) and that the inverse of the circle having double contact with the parabola at the ends of the latus rectum is a circle of radius  $2a\sqrt{2}$ . Thus, the circum-circle of a triangle inscribed in the cardioid so as to have its orthocentre at the cusp, touches the circles (2) and (3) above, which have for their common centre X, the foot of the directrix. Hence, if  $\rho$  be the radius of this circle and O its centre,

$$XO = \rho - 2a = 2a\sqrt{2} - \rho.$$

Therefore

$$\rho = a(\sqrt{2}+1).$$

Also  $XO = a(\sqrt{2}+1) - 2a = a(\sqrt{2}-1)$ ,

i.e., the locus of O is a circle of radius  $a(\sqrt{2}-1)$ , having its centre at X.

The Proposer writes:—As to the in-radius: let P, Q, R on the cardioid invert into P', Q', R' on the parabola, and then let P', Q', R' reciprocate into  $qr, rp, pq$ ; these will be parallel to the sides of PQR. But the parabola becomes the in-circle of  $pqr$ , passing through the

focus; which being itself the in-centre of  $P'Q'R'$  must be the circum-centre of  $pqr$ . Hence in  $PQR$  also the circum-centre lies on the incircle, and  $R^2 - 2Rr = r^2$ ; therefore  

$$r = R(\sqrt{2}-1) = a(\sqrt{2}+1)(\sqrt{2}-1) = a.$$

**16415.** (Professor STEGGALL.)—A, B, C are fixed points on the circle ABPC; the chord AP cuts EC in Q; show that PQ is a maximum when the perpendicular from P on BC meets BC in D so that  $BQ = CD$ .

Solutions (I.) by R. F. DAVIS, M.A.; (II.) by HENRY RIDDELL, M.E.

(I.) If A be a fixed pole, and any radius vector APQ be drawn intersecting given curves in P, Q respectively; then PQ is a maximum or minimum when the normals at P, Q intersect on the line through A perpendicular to APQ.

[For  $r-r'$  is a maximum or minimum when  $dr/d\theta = dr'/d\theta$  or the length of the subnormal is the same.]

In the present case draw the diameter POR so that PAR is a right angle. Then, in the position sought, QR is perpendicular to BC and  $BQ = CD$ .

(II.) Since

$$AQ \cdot QP = BQ \cdot QC,$$

if we assume PQ constant, we have

$$d(AQ)/d(BQ) = (CQ - QB) \cdot AQ.$$

So that in the position at which PQ is maximum the above equation holds, as there is no minimum between B and C. Take a mean position AT cutting BC in S. Draw SR perpendicular to AQ, and we have always

$$RQ \cdot QP = SQ \cdot QD$$

$$\text{or } RQ/SQ = QD/QP.$$

But as the two positions approach

in the limit, we have  $RQ/SQ = d(AQ)/d(BQ)$ , and therefore in the limit  $QD = CQ - QB$ ; therefore  $CD = QB$ .

**10800.** (Professor HUDSON, M.A.)—If two circles can be drawn each to have double contact with an ellipse internally, the points of contact being the ends of conjugate diameters, and to touch one another, prove that the eccentricity of the ellipse must be greater than  $\frac{2}{3}$ .

[Greater than  $\frac{2}{3}$  or  $> \frac{2}{3}$  as probably originally written should read  $\sqrt{\frac{2}{3}}$ .—Ed.]

Solutions (I.) by the PROPOSER; (II.) by A. H. GILLSON.

(I.) Let G be centre of circle touching ellipse centre C, eccentricity  $e$ , at P and Q,  $G'$  centre of circle touching ellipse at  $P'$  and  $Q'$ , also touching former circle, where  $PCP'$ ,  $QCQ'$  are conjugate diameters of the ellipse.

Let TP, TQ,  $TP'$ ,  $TQ'$  be tangents at P, Q,  $P'$ ,  $Q'$ ; and let CT intersect PQ in N.

Now  $TP = TQ$ , being tangents to a circle, and because they are tangents to an ellipse at the ends of conjugate diameters  $CP = CQ$ ; therefore CP, CQ are equally inclined to the axis, therefore CGT is the axis and therefore is perpendicular to PNQ.

So also  $CG'T'$  is the axis, and  $GG'$ , the join of the centres of the circles, passes through their point of contact, which is therefore C.

The radii CG, PG, QG are equal, and each bisects at right angles the opposite side of the triangle CPQ.

Therefore G is the centre of gravity of CPQ, therefore  $CG = \frac{2}{3}CN$ , therefore  $e^2 = \frac{2}{3}$ , therefore  $e = \sqrt{\frac{2}{3}}$ . [Rest in Reprint.]

**16863.** (R. F. DAVIS, M.A.)—If  $\tan^3 \theta = 1 - \sin \theta$ , prove that either  $\tan \theta = \cos \theta$  or  $\tan^2 \theta = -\operatorname{cosec} \theta$ .

Solutions (I.) by Professor NANSON, JAMES BLAIKIE, M.A., and many others; (II.) by F. G. W. BROWN, B.Sc., L.C.P.

(I.) If  $s = \sin \theta$ , the given equation reduces to the quintic

$$s^4 = (1-s)(1-s^2)^2,$$

which is manifestly satisfied if either the cubic  $1-s^2 = -s^3$  or the quadratic  $1-s^2 = s$  is satisfied. But these two equations have no root in common, and give respectively  $\tan^2 \theta = -\operatorname{cosec} \theta$ ,  $\tan \theta = \cos \theta$ . Hence one of these is necessarily true.

$$\begin{aligned} \text{(II.) } \tan^4 \theta &= 1 - \sin \theta = [(1 - \sin \theta) \cos^2 \theta] / \cos^2 \theta \\ &= (\cos^2 \theta - \sin \theta \cos^2 \theta) / \cos^2 \theta = (\cos^2 \theta - \sin \theta + \sin^3 \theta) / \cos^2 \theta \\ &= -(\sin / \cos^2 \theta) + (\sin^3 / \cos^2 \theta) + 1 \\ &= -(\tan^3 \theta / \sin \theta) + \cos \theta \tan^3 \theta + 1; \end{aligned}$$

$$\text{therefore } \tan^3 \theta = -(\tan \theta / \sin \theta) + \cos \theta \tan^3 \theta + (1 / \tan \theta),$$

$$\text{or } \tan^3 \theta + (\tan \theta / \sin \theta) - \cos \theta \tan^3 \theta - (1 / \tan \theta) = 0;$$

$$\text{therefore } \tan^3 \theta + (\tan \theta / \sin \theta) - \cos \theta \tan^3 \theta - (\cos \theta / \sin \theta) = 0;$$

$$\text{or } (\tan \theta - \cos \theta)(\tan^2 \theta + \operatorname{cosec} \theta) = 0;$$

$$\text{hence either } \tan \theta = \cos \theta, \text{ or } \tan^2 \theta = -\operatorname{cosec} \theta.$$

**16401.** (D. EDWARDES, B.A.)—Prove that

$$\int_{-1}^1 \frac{P_n(x)}{(z-x)^{n+1}} dx = \frac{2^n}{2n+1} [z - (z^2-1)^{1/2}]^{n+1},$$

where  $n$  is an integer and  $P_n(x)$  a Legendre's polynomial.

Solution by Hon. G. R. DICK, M.A.

If  $x$  and  $a$  are each less than 1 we have

$$(1-2ax+a^2)^{-1} = P_0(x) + aP_1(x) + \dots + a^n P_n(x) + \dots,$$

where  $P_n$  is Legendre's polynomial: the series is uniformly convergent and may therefore be integrated term by term.

$$\text{Thus } \int_{-1}^1 \frac{P_n(x) dx}{(1-2ax+a^2)^{n+1}} = \int_{-1}^1 (P_0 P_n + a P_1 P_n + \dots) dx$$

$$= \int_{-1}^1 a^n P_n^2 dx$$

$$\left( \text{since } \int_{-1}^1 P_m P_n dx = 0 \text{ except when } m = n \right) = \frac{2a^n}{2n+1}.$$

Therefore, setting  $a = z - \sqrt{(z^2-1)}$  we get

$$\int_{-1}^1 \frac{P_n(x) dx}{(z-x)^{n+1}} = \frac{2^n}{2n+1} [z - \sqrt{(z^2-1)}]^{n+1}.$$

The PROPOSER'S solution is as follows:—

It is easily proved that the integral  $u = \int_{-1}^1 \frac{(x^2-1)^n}{(z-x)^{n+1}} dx$  satisfies the differential equation

$$(z^2-1)(d^2u/dz^2) + z(du/dz) - (n+\frac{1}{2})^2 u = 0,$$

which may be written

$$d^2z(z^2-1)(du/dz)^2 - (n+\frac{1}{2})^2 du^2/dz = 0,$$

the two particular independent solutions of which are therefore

$$[z + (z^2-1)^{1/2}]^{n+1} \text{ and } [z - (z^2-1)^{1/2}]^{n+1}.$$

By Rodrigues' formula,  $P_n(x) = 1/2^n n! \cdot d^n/dx^n (x^2-1)^n$ .

Successive integration by parts thus reduces the proposed integral to depend on  $u$ , the integrated parts vanishing at the limits; and, since it vanishes when  $z$  is infinite, we have

$$\int_{-1}^1 \frac{P_n(x)}{(z-x)^{n+1}} dx = C_n [z - (z^2-1)^{1/2}]^{n+1},$$

where  $C_n$  is a constant. Now

$$\int_{-1}^1 x^m P_n(x) dx = 0,$$

when  $m < n$ , and when  $m = n$ , its value is  $2 \cdot \frac{n!}{1 \cdot 3 \dots 2n+1}$ . Also

$$[z - (z^2-1)^{1/2}]^{n+1} = 2^{-n-1/2} z^{-n-1/2} + \dots$$

Expanding  $(z-x)^{-1}$  in rising powers of  $x$  and equating coefficients of the leading term in  $z^{-n-1/2}$  on either side, we have

$$\frac{1 \cdot 3 \dots 2n-1}{2^n n!} \cdot \frac{2^{-n-1/2}}{1 \cdot 3 \dots 2n+1} = \frac{C_n}{2^{n+1}};$$

therefore

$$C_n = 2^{1/2} / (2n+1).$$

**16411.** (M. T. NARANIENGAR, M.A.)—Similar segments of circles are described on the radii vectors of a curve, show that their envelope is similar to the first positive pedal.

Solution by Professor SANJANA, M.A.

The envelope of semicircles on the radii vectors (SP) is the first positive pedal or locus of foot (H) of the perpendicular from S on the tangent PT. If the segment containing a given angle ( $\alpha$ ) described on SP meet PT in K,  $\angle KSH$  is fixed, and  $SK : SH$  is also fixed. Hence the envelope, which is the locus of K, is a similar curve.

## QUESTIONS FOR SOLUTION.

$$(1+x)^m, 1, (1+x)^{-1}, \text{ and } (1+x)^{-1-m}.$$

**16441.** (Professor SANJANA, M.A.)—Prove that  $3^{111} + 1$  is the product of the factors

$$4; 7; 223; 2,019,210,335,106,439;$$

64,326,272,436,179,833; 112,570,976,472,749,341; and  $12^{46} + 1$  of

$$7; 13; 19; 31; 421; 1,657; 1,801; 19,141; 35,671;$$

$$8,554,703,697,721; 9,298,142,299,081.$$

**16442.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Let

$$\tau_n^2 - 2\nu_n^2 = -1, \quad \tau_n^2 - 2\nu_n^2 = +1.$$

Resolve  $\nu_{66}$  into its prime factors. [This number contains 51 figures.]

**16443.** ("λ, μ.")—Resolve into three linear factors

$$(a + \beta + \gamma)^2 - 9(a^2\beta + \beta^2\gamma + \gamma^2a).$$

**16444.** (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Let  $S_n, S'_n$  denote respectively the sums, each to  $n$  terms, of the two series

$$2^4 + 4^4 + 6^4 + 8^4 + \dots, \quad 1^4 + 3^4 + 5^4 + 7^4 + \dots,$$

$n$  being any even number. Then

$$S_n - S'_n = 4(47 + 591 + 2383 + 6191 + \dots \text{ to } \frac{1}{2}n \text{ terms}) + n.$$

**16445.** (Professor NANSON.)—Salmon has shown that the locus of the focus of a parabola described about a triangle is an octavic, but Hudson has shown (*Reprint*, New Series, Vol. XI., p. 103) that the locus is a quintic. Reconcile these results.

**16446.** (C. E. YOUNGMAN, M.A.)—Given the cusp, the base, and a point P of a cardioide, construct by line and circle the points Q, R at which the tangent at P will cut the curve again.

**16447.** (K. S. PATRACHARI.)—Find the pedal equation of the curve in which the area bounded by the initial line, the curve, and any radius vector OP varies as the cube of the inclination of the tangent at P to the initial line.

**16448.** (A. M. NESBITT, M.A.)—Prove that the equation

$$a^2(b-c) + \beta^2(c-a) + \gamma^2(a-b) = 0,$$

in ordinary trilinear co-ordinates, represents a hyperbola; and find its asymptotes. Show also that it cannot be equilateral.

**16449.** (H. L. TRACHTENBERG, B.A.)—A straight line meets the sides of a triangle in L, M, N. Through L, M, N straight lines are drawn to meet the sides of the triangle again in  $L_1L_2, M_1M_2, N_1N_2$ . Prove that  $L_1, L_2, M_1, M_2, N_1, N_2$  lie on a conic.

**16450.** (Professor NEUBERG.)—Étant donné un triangle ABC, on projette un point M extérieur au plan ABC sur le plan en O; puis on projette O en A', B', C' sur les côtés du triangle ABC. On peut prendre pour coordonnées de M les quantités  $\text{tg OMA}' = \alpha$ ,  $\text{tg OMB}' = \beta$ ,  $\text{tg OMC}' = \gamma$ . Connaissant l'équation  $F(\alpha, \beta, \gamma) = 0$  d'une surface décrite par M, construire la normale en M.

**16451.** (Hon. G. R. DICK, M.A.)—Denoting by I the tangent common to the nine-point circle and the inscribed circle of a triangle ABC, and by  $J_1, J_2, J_3$  the tangents common to the nine-point circle and the three escribed circles respectively, show that the pencil formed by the line joining A to  $(I, J_1)$ , the line joining A to  $(J_2, J_3)$  and the sides AB, AC is harmonic; similarly the pencils formed by the lines joining B and C to the corresponding points and the corresponding pairs of sides.

**16452.** (SARADAKANTA GANGULI, M.A.)—Bisect a triangle by a straight line drawn through a given point in its plane.

**16453.** (Professor COCHEZ.)—Inscrire dans un cercle un trapèze, connaissant sa hauteur et la demi-somme  $2l$  de ses bases.

**16454.** (W. F. BEARD, M.A.)—Two circles X and Y touch one another internally at D; from any point A on the outer circle X tangents are drawn to Y to meet the common tangent at D in B, C; show that the sum of the radii of the in-circles of ABD, ACD is constant.

## OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**11199.** (C. L. PEIRCE, M.A.)—From a cannon the axis of whose bore is on a level with and three feet above the surface of a horizontal plane, a ball weighing 100 lbs. is discharged with a velocity of 1,500 ft. per second. Were it possible to weigh the ball at the instant it left the cannon, find (1) what the ball would weigh, (2) at what distance from the cannon it will strike the plane, and (3) the weight of the ball when its velocity is so reduced that it is rolling on the plane at 264 ft., 176 ft., 88 ft., and 44 ft., respectively, per second.

**11233.** (D. BIDDLE.)—A smooth equilateral triangular plate is suspended at the three angles, so that these can be raised or lowered at discretion, and a particle is placed within the in-circle, whilst the plate is horizontal. Describe the manipulation of the angles requisite to make the particle describe a circle concentric with the in-circle.

**11396.** (G. S. CARR, M.A.)—With a ruler and pencil only within a given  $n$ -gon inscribe another  $n$ -gon to circumscribe a given conic.

**11469.** (G. F. HOWSE.)—The locus of the centres of gravity of triangles inscribed in a central conic and self-polar to a parabola is a straight line.

**11594.** (Professor LEMOINE.)—De combien de manières peut on replier, sur un seul, une bande de  $p$  timbres-poste?

**11818.** (R. W. D. CHRISTIE.)—Given a simple method of resolving any very large integer into three trigonals, and test your solution with a number such as  $822512 = 818560 + 3916 + 36$ .

## NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

## THE LONDON MATHEMATICAL SOCIETY.

Thursday, April 30th, 1908.

Prof. W. Burnside, President, in the Chair.  
Mr. T. J. Garstang was admitted into the Society.

The following papers were communicated:—

"On a General Convergence Theorem and the Theory of the Representation of a Function by a Series of Normal Functions," Dr. E. W. Hobson.

"On the Ordering of the Terms of Polars and Transvectants," Mr. L. Isserlis.

"Oscillating Successions of Continuous Functions," Dr. W. H. Young.

"The Relation between the Convergence of Series and Integrals," Mr. T. J. I'A. Bromwich.

"On the Multiplication of Series," Mr. G. H. Hardy.

"Porisms," Mr. H. Bateman.

"The Influence of Viscosity on Wave Motion," Mr. W. J. Harrison.

Informal communications were made as follows:—

(i.) "On Mersenne's Numbers," (ii.) "On Quartans with numerous Quartan Factors," Lt.-Col. A. Cunningham.

Thursday, May 14th, 1908.

Prof. W. Burnside, President, in the Chair.

The following papers were communicated:—

"On the Invariants of the General Linear Homographic Transformation in Two Variables," Major P. A. MacMahon.

"On the Order of the Group of Isomorphisms of an Abelian Group," Mr. H. Hilton.

"On the Calculation of the Normal Modes and Frequencies of Vibrating Systems (Preliminary Note)," Prof. A. E. H. Love.

"A Question in Probability," Prof. J. E. A. Steggall.

## THE RUGBY PRESS

undertakes every description of Letterpress

PRINTING FOR SCHOOLS.

Estimates furnished. Enquiries solicited.

Address— GEORGE OVER, Printer, Rugby.

**NOW READY**

# A CYCLE OF NATURE STUDY

Suitable for Children under Twelve Years of Age

BEING SUGGESTIONS FOR TEACHERS IN TOWN AND COUNTRY SCHOOLS

BY M. M. PENSTONE,

*Late Head Mistress Home and Colonial School Society's High School for Girls and Training College for Kindergarten Teachers, Highbury, London.*

In Fifty-Two Chapters. With numerous Illustrations. Price **3s. 6d.**

**A SIXTEEN-PAGE PROSPECTUS, SHOWING THE SCOPE AND ARRANGEMENT OF THE ABOVE WORK AND GIVING SPECIMEN PAGES, WILL BE SENT ON APPLICATION.**

London: NATIONAL SOCIETY'S DEPOSITORY, 19 Great Peter Street, Westminster. S.W.

**RELFE BROTHERS, Ltd.,** have the **best** and **most varied** Stock in London  
in **all Bindings**

**PRIZE**

**BOOKS**

Now in Stock and on View. Catalogue on application.

**SPECIAL VALUE IN REMAINDERS.**

**RELFE BROTHERS, LTD., 8 CHARTERHOUSE BUILDINGS, ALDERSGATE, LONDON, E.C.**

NOW READY. Demy 8vo, cloth, price 2s. 6d., free by post.

To Members of the College the price is 1s., or 1s. 6d. free by post.

## THE CALENDAR OF THE COLLEGE OF PRECEPTORS FOR THE YEAR 1908:

*Containing all information respecting the objects and operations of the College, Lists of Officers, Examiners, and Members, the Regulations of the various Examinations, &c., with an Appendix containing the following Examination Papers:—*

- |   |   |
|---|---|
| 1. Papers set at Examination of Teachers for Diplomas, Summer, 1907.      | 5. Papers set at Professional Preliminary Examination, March, 1907. |
| 2. Do. do. do. Christmas, 1907.   | 6. Do. do. do. September, 1907.                                     |
| 3. Papers set at Examination of Pupils for Certificates, Midsummer, 1907. | 7. Papers set at Lower Forms Examination ... Summer, 1907.          |
| 4. Do. do. do. Christmas, 1907.   | 8. Do. do. ... Christmas, 1907.                                     |

\*.\* Nos. 3, 4, 5, and 6 may be had separately, price, free by post, 7d. each set. Nos. 7 and 8, price, free by post, 4d. each set.

**The Diploma Papers are to be had only in the "Calendar."**

# MESSRS. THOMAS NELSON & SONS'

## Publications for the Preparatory School.

NUMBER WORK FOR JUNIOR PUPILS.

### PREPARATORY MATHEMATICS.

By A. CLEMENT JONES, M.A., Ph.D., and C. H. BLOMFIELD, M.A., B.Sc.,  
Mathematical Masters in Bradford Grammar School.

With or without Answers. Price 1s. 6d.

For Preparatory Pupils and Junior Forms in Secondary Schools, providing an Introduction to more formal Mathematics of an exceptionally interesting character.

THE PREPARATION FOR HISTORY.

### HIGHROADS OF HISTORY.

Six Volumes, carefully graduated, for the Lower School.  
Beautifully Illustrated with Reproductions from great Historical Paintings.

*List of the Series.*

Book	Price	Book	Price
I. TALES OF THE HOMELAND ...	10d.	IV. OTHER DAYS AND OTHER	
II. STORIES FROM BRITISH HIS-		WAYS ...	1s. 6d.
TORY ...	1s.	V. TUDOR AND STUART ...	1s. 8d.
III. BRITONS OF RENOWN ...	1s. 3d.	VI. MODERN BRITAIN ...	2s.

THE PREPARATION FOR LITERATURE.

### THE ROYAL TREASURY OF STORY AND SONG.

A New Series of Literary Reading Books designed to prepare the Pupil  
step by step for Imaginative Literature of the best kind.

Beautifully illustrated with Coloured Plates, Black-and-white Pictures, and Marginal Illustrations.

*List of the Series.*

Part	Price	Part	Price
I. DOORS OF GOLD ...	10d.	IV. GOLDEN GIFTS ...	1s. 6d.
II. FAIRY FAVOURS ...	1s.	V. THE ENCHANTED GARDEN ...	1s. 8d.
III. THE HALL OF HEROES ...	1s. 3d.		

[Part VI. in the press.]

### SHORT STUDIES IN ENGLISH LITERATURE.

A New Series of Small Volumes containing Selections from  
Standard Literature.

Each 100 pages, cloth boards, price 6d.

- |   |   |
|---|---|
| 1. SELECTIONS FROM TENNYSON.                | 8. WORDSWORTH'S SHORTER POEMS.                                  |
| 2. COMEDIES FROM LAMB'S TALES.              | 9. PEN PICTURES FROM MACAULAY.                                  |
| 3. EXTRACTS FROM SHAKESPEARE'S<br>COMEDIES. | 10. CARLYLE'S "HERO AS DIVINITY"<br>and ARNOLD'S "BALDER DEAD." |
| 4. STORIES BY NATHANIEL HAW-<br>THORNE.     | 11. TRAGEDIES FROM LAMB'S TALES.                                |
| 5. PEN PORTRAITS FROM CARLYLE.              | 12. EXTRACTS FROM SHAKESPEARE'S<br>TRAGEDIES.                   |
| 6. STORIES BY WASHINGTON IRVING.            | 13. SESAME AND LILIES.  |
| 7. LONGFELLOW'S EVANGELINE.                 | 14. EXTRACTS FROM DUNBAR'S POEMS.                               |

### CAMEOS OF LITERATURE.

A New Series of Modern Literary Studies for Older Pupils.

Each Volume fully illustrated with Reproductions from high-class Prints and Paintings.  
Cloth boards, pott 8vo, price 1s. 6d. each.

- I. **SOME ENGLISH ESSAYS.** Edited by RICHARD WILSON, B.A. Thirty-six Selected Papers, mostly of a Narrative Character, and arranged in Chronological Order.
- II. **THE HARP OF YOUTH.** Edited by W. JENKYN THOMAS, M.A. A Book of Poetry for School and Home.
- III. **THE GLEEMAN.** Edited by RICHARD WILSON, B.A. Containing fourteen Story Poems of considerable length.

Each Volume is provided with Foot-notes and Commentary.

### The Natural Method of Teaching Modern Languages.

MESSRS. THOMAS NELSON & SONS have recently issued an entirely NEW SERIES of School and College Text-books, specially suited to the needs of Teachers who desire to use in their classes books arranged in accordance with the latest and most modern scientific methods of instruction. The following are, in many respects, in advance of any Text-books hitherto published at home or abroad.

By **ALEX CRAN, M.A.**,  
Senior French Master, Royal High School,  
Edinburgh.

BOOK I.

#### ELEMENTARY OBJECT LESSONS IN FRENCH.

Illustrated. 189 pages. Cloth, 1s. 6d.

BOOK II.

#### OBJECT LESSONS IN FRENCH.

Containing a series of somewhat more advanced conversational lessons.

Illustrated. 169 pages. Cloth, 1s. 6d.

BOOK III.

#### ADVANCED OBJECT LESSONS IN FRENCH.

This book completes the series of three books.

Illustrated. 112 pages. Cloth, 1s. 6d.

#### A GRADUATED FRENCH READER FOR BEGINNERS.

A Course of Easy Readings for the First Two Years of Study.

164 pages. Cloth, 2s.

\*\* Complete Catalogue post free on application.

THOMAS NELSON & SONS, 35 and 36 Paternoster Row, London, E.C.  
And at Edinburgh, Dublin, and New York.

# THE EDUCATIONAL TIMES,

AND

Journal of the College of Preceptors.

Vol. LXI.] New Series, No. 567.

JULY 1, 1908.

*Published Monthly, price, to Non-Members, 6d.; by Post, 7d. Annual Subscription, 7s.*

## COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

### GENERAL MEETING.

The Half-Yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, W.C., on Saturday, the 18th of July, 1908, at 3 p.m.

### LECTURES FOR TEACHERS.

On Thursday, 1st of October, JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London, will commence a Course of Twelve Lectures on

#### "THE PRACTICAL TEACHER'S PROBLEMS."

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools. The Syllabus will be published in the August issue of the *The Educational Times*. The Lectures will be given on Thursday Evenings at 7, beginning on October 1st.

The Fee for the Course is Half-a-Guinea. Members of the College have free admission to this Course.

### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will commence on the 31st of August, 1908.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in October.

**Certificate Examinations.**—The Christmas Examination for Certificates will commence on the 8th of December, 1908.

**Lower Forms Examinations.**—The Christmas Examination will commence on the 8th of December, 1908.

**Professional Preliminary Examinations.**—These Examinations are held in March and September. The Autumn Examination in 1908 will commence on the 8th of September.

**Inspection and Examination of Schools.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary*  
Bloomsbury Square, W.C.

## UNIVERSITY OF ST. ANDREWS.

### L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

## UNIVERSITY OF ST. ANDREWS.

### UNIVERSITY HALL.

Warden:

Miss FRANCES H. MELVILLE, M.A.

UNIVERSITY HALL, for Women students, was opened in 1896, under the government of the University of St. Andrews.

The usual Course of Study at University Hall is in preparation for the Degree Examinations of the University of St. Andrews, of which all the Classes and Degrees in Arts, Divinity, Science, and Medicine are open to women on the same terms as to men.

The Sessions of Residence are the two University Sessions, viz. the Winter Session, October to March; the Summer Session (Optional), April to June.

University Hall fees for residence—Winter Session, £30-£50; Summer Session, £15-£25.

Matriculation and Class Fees average £10 for the Winter Session.

Next Winter Session commences October 7. For further information, apply to the WARDEN, University Hall St. Andrews, Fife.

## Diploma Correspondence College, Ltd.

Principal—J. W. KNIFE, L.C.P., F.R.S.L.  
Vice-Principal—S. H. HOOKE, B.A., Hons. Lond.

*Specially arranged Courses for*

LONDON MATRICULATION,  
**B.A., B.D., B.Sc.,**  
A.C.P., L.C.P., &c.

### FREE GUIDES

on application to the SECRETARY.

WOLSEY HALL, OXFORD.

THE ASSOCIATED BOARD  
OF THE R.A.M. AND R.C.M.  
FOR LOCAL EXAMINATIONS IN MUSIC.

PATRON: HIS MAJESTY THE KING.

PRESIDENT: H.R.H. THE PRINCE OF WALES, K.G.

LOCAL CENTRE EXAMINATIONS (Syllabus A). Examinations in Theory at all Centres in March and November; in Practical Subjects at all Centres in March-April, and in the London District and certain Provincial Centres in November-December also. Entries for the November-December Examinations close Wednesday, October 7th, 1908.

SCHOOL EXAMINATIONS (Syllabus B). Held three times a year, viz., October-November, March-April, and June-July. Entries for the October-November Examinations close Wednesday, October 7th, 1908.

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 3d. per set, per year, post free.

Syllabuses A and B, entry forms, and any further information will be sent post free on application to—

JAMES MUIR, *Secretary*.

15 Bedford Square, London, W.C.

Telegrams: "Associa, London."

NOTICE.—The **AUGUST** Number of "THE EDUCATIONAL TIMES" will contain the CLASS LISTS of SUCCESSFUL CANDIDATES at the MIDSUMMER EXAMINATIONS of the COLLEGE OF PRECEPTORS.

## LONDON COLLEGE OF MUSIC.

(Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

Patron: HIS GRACE THE DUKE OF LEBDS.

Dr. F. J. KARR, Mus. Bac. Cantab., Principal.

G. AUGUSTUS HOLMES, Esq., Director of Examinations.

EXAMINATIONS, 1908.

The NEXT EXAMINATION in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 400 Provincial Centres in DECEMBER, when Certificates will be granted to all successful candidates.

The Higher Examinations for the Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma, L.C.M., and Fellowship (F.L.C.M.) also take place in DECEMBER.

Gold and Silver Medals and Book Prizes are offered for competition according to the Regulations.

LOCAL SCHOOL CENTRES.—Full particulars with reference to the formation of these Centres will be forwarded to Principals of Schools upon application.

SYLLABUS for 1908, together with Annual Report, may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best Professors at moderate fees. The College is open 10 a.m. to 9.30 p.m. A COURSE of TRAINING in Pianoforte and Singing for Teachers is held at the College.

VACATION LESSONS for Teachers and others are given at Easter, August, and Christmas.

T. WEEKES HOLMES, *Secretary*.

## LONDON INTER-COLLEGIATE SCHOLARSHIPS BOARD.

MEDICAL ENTRANCE SCHOLARSHIPS AND EXHIBITIONS.

Twenty-three MEDICAL SCHOLARSHIPS and EXHIBITIONS, ranging in value from £20 to £180, and of an aggregate value of about £1,500 for men and women, tenable in the Faculties of Medical Sciences of UNIVERSITY COLLEGE and KING'S COLLEGE, and in the MEDICAL SCHOOLS of KING'S COLLEGE HOSPITAL, ST. GEORGE'S HOSPITAL, WESTMINSTER HOSPITAL, and the LONDON SCHOOL OF MEDICINE FOR WOMEN, will be offered for competition on Tuesday, September 22nd, and following days. Entries will close on Tuesday, September 15th.

Full particulars and forms of entry may be obtained on application to the SECRETARY OF THE BOARD (ALFRED E. G. ATTOR), University College, Gower Street, London, W.C.

## FREE GUIDE

TO

## LONDON UNIVERSITY MATRICULATION

Post free, from **THE SECRETARY,**  
Burlington House, Cambridge;

or from the London Office of University Correspondence College, 32 Red Lion Square, Holborn, W.C.

### UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—Sir H. R. REICHEL, M.A., LL.D.

Next Session begins September 29th, 1908. The College Courses are arranged with reference to the Degrees of the University of Wales; they include most of the subjects for the B.Sc. Degree of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture (including Forestry) and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional fee for ordinary Arts Course, £11. 1s.; for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students; fee, from Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses apply to

JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

### BIRKBECK COLLEGE, BREAMS BUILDINGS, CHANCERY LANE, E.C.

#### DAY AND EVENING CLASSES.

Courses of Study under Recognized Teachers of the University of London for Degrees in Science and in Arts.

**Science.**—Chemistry, Physics, Mathematics (Pure and Applied), Botany, Geology, Zoology.

**Arts.**—Classics, English, French, German, Italian History, Geography, Logic, Economics, Mathematics (Pure and Applied).

Particulars on application.

### DENMARK HILL GYMNASIUM AND PHYSICAL TRAINING COLLEGE FOR TEACHERS.

Full preparation for Public Examinations. British College of Physical Education: English and Swedish systems.

Board of Education: Science.

Swimming and Sports.

For particulars apply—Miss E. SPELMAN STANGER, Trevna, Sunray Avenue, Denmark Hill, London, S.E.

### CHURCH EDUCATION CORPORATION.

#### CHERWELL HALL, OXFORD.

Training College for Women Secondary Teachers.

Principal—Miss CATHERINE I. DODD, M.A. (late Lecturer in Education in the Manchester University).

Students are prepared for the Oxford, the Cambridge, and the London Teacher's Diploma. Special arrangements made for Students to attend the School of Geography.

Exhibitions and Scholarships awarded in December and July.—Apply to the PRINCIPAL.

### ABERDARE HALL, CARDIFF.— RESIDENCE FOR WOMEN STUDENTS OF THE UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.

Principal—Miss KATE HURLBATT.

Fees £42. 10s., £36, and £32 per annum. College tuition fees £10 per annum. Scholarships of £40, £25, and £15, and Exhibitions of £10, awarded on the result of Scholarship Examination of University College, Cardiff, to be held in September. Students prepare for the B.A. and B.Sc. Degrees of the University of Wales, and a Medical School and Department for Secondary, Elementary, and Kindergarten Training are attached to the College. Students with recognized academic qualifications can enter in October or January, for one year's Secondary Training Course. Apply to the PRINCIPAL.

### TRAVELLING SECRETARY

WANTED to organize Auxiliary work in connexion with the London Biblewomen & Nurses' Mission. Experience in speaking at Drawing-room Meetings desirable, also some knowledge of work amongst the poor. Church of England. Apply, in first instance, HON. SUPERINTENDENT, Ranyard House, 25 Russell Square, W.C.

**JEUNE HOMME, 24 ans, Catholique** français, ayant fait ses études complètes, desirerait place PRÉCEPTEUR. Pourrait enseigner Français et Latin à jeunes Garçons.—Mr. E. LUCAS, 20 rue de Montbret, Rouen.

### BEDFORD COLLEGE FOR WOMEN

(UNIVERSITY OF LONDON),

YORK PLACE, BAKER STREET, W.

Principal—Miss M. J. TUKE, M.A.

Lectures are given in preparation for all examinations of the University of London in Arts, Science and Preliminary Medicine, for the Teacher's Diploma, London; and the Teacher's Certificate, Cambridge; and for the Cambridge Higher Local Examination.

There is a special course of Scientific Instruction in Hygiene. Six Laboratories are open to students for Practical work.

Students may attend the Art School who are not taking other subjects at the College.

A single Course in any subject may be attended.

Regular Physical Instruction is given, free of cost, to students who desire it by a fully qualified woman teacher.

Students can reside in the College.

Full particulars on application to the PRINCIPAL.

#### TRAINING DEPARTMENT FOR SECONDARY TEACHERS.

Head of the Department—Miss MARY MORTON, M.A.

Students are admitted to the Training Course in October and January.

Entrance Scholarships. Applications should be sent to the HEAD OF THE DEPARTMENT.

### THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss H. L. POWELL, late Scholar of Newnham College (Hist. Tripos, Class I.), late Head Mistress of the Leeds Girls' High School.

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge.

### ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN INTERMEDIATE AND SECONDARY SCHOOLS, EDINBURGH.

This College provides a year's Professional Training for well educated women who intend to become Teachers. The Course of Training is supervised by the Edinburgh Provincial Committee for the Training of Teachers and is recognized by the Scotch Education Department and by the Teachers' Training Syndicate of the University of Cambridge.

A Bursary of £30 is offered to Students entering in October, 1908.

Prospectus and further particulars from the Principal, Miss M. E. WALKER, 5 Melville Street, Edinburgh.

#### THE INCORPORATED

### FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Recognized by the Board of Education as a Training College for Secondary Teachers.

Chairman of the Committee—Sir W. MATHER.

Treasurer—Mr. C. G. MONTFLORE, M.A.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

### JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Hours for interviews (preferably by appointment):—  
11 a.m. to 1 p.m., and 3 to 5 p.m.  
Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

### THE JOINT SCHOLASTIC AGENCY.

23 Southampton Street, Bloomsbury Square, W.C.

Managed by a Committee of Representatives of the following Bodies:—

HEAD MASTERS' CONFERENCE.  
INCORPORATED ASSOCIATION OF HEAD MASTERS.  
COLLEGE OF PRECEPTORS. TEACHERS' GUILD.  
INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.  
ASSOCIATION OF TECHNICAL INSTITUTIONS.  
ASSOCIATION OF PREPARATORY SCHOOLS.  
WELSH COUNTY SCHOOLS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION. Interviews (preferably by appointment) 12 p.m.–1.30 p.m., and 3 p.m.–5.30 p.m. Saturdays, 12 p.m.–1 p.m.

## Messrs. TRUMAN & KNIGHTLEY, LTD., Educational Agents,

158 to 162 OXFORD STREET,  
LONDON, W.

Telegrams—"TUTORESS, LONDON."

Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

### A.—EMPLOYMENT DEPARTMENT.

#### (i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

#### (ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

#### (iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

### B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

### C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

Book V.—**A Primary Physical Geography.** By JOHN THORNTON, M.A. With 135 Illustrations and 14 Maps. Crown 8vo, 2s.

LONGMANS, GREEN, & CO., LONDON, NEW YORK, BOMBAY, AND CALCUTTA.

# MR. EDWARD ARNOLD'S NEW SCHOOL BOOKS.

## ENGLISH.

**Grammatical English.** By F. W. G. FOAT, D.Lit., M.A., Lecturer in English at the City of London College and Assistant Master in the City of London School. Crown 8vo, cloth, 3s. 6d.

The aim of the book is to supply a general introduction to the subject of English, in the form of practical assistance towards the formation of those habits of mind and the attainment of that permanent attitude of thought which are indispensable alike to the student of grammar and to those who must write and speak correctly in the ordinary business of life.

**Chips from a Bookshelf.** A Reading Book for Junior Forms. Uniform with "In Golden Realms." Edited by H. B. BROWNE. Illustrated with Reproductions of well known Pictures. 1s. 3d.

**Practical Spelling.** Book I., price 2d.; Book II., price 3d. The aim of these little books is to give a graded course of lessons which will enable the young pupil to reproduce correctly the words used by himself when speaking and writing.

**Dramatic Scenes from History.** By FANNY JOHNSON, formerly Head Mistress of the Bolton Girls' High School. Illustrated. Crown 8vo, cloth, 1s. 6d.

The author has endeavoured to cover, as far as space allowed, all the principal epochs in their order, from the Conversion of England (in the dialogue of "Edwin" and "Paulinus") to the England of George III. (in the dialogue of "Boswell").

## MODERN LANGUAGES.

**Petite Grammaire Française.** Par E. RENAULT, Officier d'Académie; Assistant Lecturer at the University of Liverpool. viii + 360 pages. Crown 8vo, cloth, 1s. 6d.

This book is specially written for Junior Classes, easy French words being used whenever possible. Accidence and syntax are treated together, and those parts of grammar are dealt with which a beginner needs.

**The Alphonse Daudet Reading Book.** Récit biographique et Extraits de ses Œuvres. Edited by JETTA S. WOLFF, Author of "Les Français en Ménage," &c. 1s. 6d.

**Les Deux Prisonniers.** By RODOLPHE TÖPFFER. Edited by W. H. HODGES, M.A., St. Lawrence College, Ramsgate. Crown 8vo, cloth, 1s.

**Scènes Infantines.** By KÄTE WEBER, Author of "Vier Kleine Lustspiele für die Jugend." With Vocabulary. Crown 8vo, cloth, 1s. 3d.

Eight short plays, for reading or acting. They are all written in very simple language, suitable for quite young children.

**Herr Peter Squenz.** By ANDREAS GRYPHIUS. Edited, with Introduction, Notes, and Exercises for Retranslation, by SYDNEY H. MOORE. Crown 8vo, cloth, 2s.

This text, which is full of interest from beginning to end, has also been chosen for its great literary value in the hope that it may help the tendency to make Modern Languages as great a factor in the promotion of "humanistic" education as the study of the classics.

**A First Spanish Book.** By H. J. CHAYTOR, M.A., Senior Modern Language Master at King Edward VII. School, Sheffield. With Exercises and Full Vocabulary. 224 pages. Crown 8vo, cloth, 2s. 6d.

## LATIN.

**Compendium Latinum.** By W. F. WITTON, Classical Master at St. Olave's Grammar School. 2s. 6d.

**Simplified Caesar.** A First Latin Reader and Exercise Book. By W. F. WITTON. 1s. 6d.

These two books, together with "Dies Romani" by the same author, contain all that a boy needs for three or four years' work at Latin, beyond a dictionary and a master.

## SCIENCE.

**General Elementary Botany.** By E. DRABBLE, D.Sc., Lecturer in Botany at the University of Liverpool. Crown 8vo, cloth, 2s. 6d.

**Workshop Science.** By R. J. BROWN, M.Sc., Principal of Stockport Municipal Technical School. Crown 8vo, cloth, 1s. 6d.

Lecturer in Zoology, Victoria University, Manchester.

With numerous Line and Half-Tone Illustrations. 6s. net.

*Manchester Guardian*:—"The style is very attractive, and the book is based on a very intimate knowledge of the details of the subject matter and on much experience in original investigation."

LONDON: SMITH, ELDER, & CO.

THE

# School World.

A MONTHLY MAGAZINE OF EDUCATIONAL  
WORK AND PROGRESS.

EACH NUMBER CONTAINS EIGHTY COLUMNS  
OF READING MATTER.

PRICE 6D. VOLUME IX., 1907, 7s. 6D. NET.

The aim of THE SCHOOL WORLD is to provide information of practical and permanent value to Schoolmasters and Schoolmistresses. To this end all important changes and developments affecting any branch of the work of teachers in secondary and other schools are dealt with by leading authorities and experienced teachers.

The Magazine has become indispensable to all who desire to keep in touch with modern and effectual methods of education.

MACMILLAN & CO., Ltd., LONDON.

OPPOSITE THE BRITISH MUSEUM.

# THACKERAY HOTEL

GREAT RUSSELL STREET, LONDON.

NEAR THE BRITISH MUSEUM.

# KINGSLEY HOTEL

HART STREET, BLOOMSBURY SQUARE, LONDON.

These well-appointed and commodious **TEMPERANCE HOTELS** will, it is believed, meet the requirements, at moderate charges, of those who desire all the conveniences and advantages of the larger modern Licensed Hotels. These Hotels have **PASSENGER LIFTS, ELECTRIC LIGHT THROUGHOUT, BATHROOMS ON EVERY FLOOR, SPACIOUS DINING, DRAWING, WRITING, READING, BILLIARD, AND SMOKING ROOMS, LOUNGE. HEATED THROUGHOUT.**

**Fireproof Floors. Perfect Sanitation. Telephones. Night Porters.**

Bedrooms, including attendance, from 8s. 6d. to 6s. *Full Tariff and Testimonials on application.*

**Inclusive Charge for Bedroom, Attendance, Table d'Hôte Breakfast and Dinner, from 8s. 6d. to 10s. 6d. per day.**

ALSO UNDER THE SAME MANAGEMENT.

# ESMOND HOTEL

1 MONTAGUE STREET, RUSSELL SQUARE, LONDON.

This **Temperance Hotel** adjoins the British Museum, and is exceptionally quiet and economical.

Bedrooms, including attendance, from 8s. to 4s. 6d. per night. *Full Tariff and Testimonials on application.* **Night Porter.**

**Telegraphic Addresses:**

THACKERAY HOTEL,  
"THACKERAY, LONDON."

KINGSLEY HOTEL,  
"BOOKCRAFT, LONDON."

ESMOND HOTEL,  
"AGROUP, LONDON."

## Helpful Notes on Nature-Study

(PLANT-LIFE),

Being a Syllabus of Lessons for Schools,

BY

H. E. WARD,

*Instructor in Nature-Study to the Education Committee of the Cheshire County Council.*

**Crown 8vo, 294 pp., net 3s. 6d.**

The work is arranged in Fifty Lessons, in each of which there is sufficient matter to form two or more lessons at the discretion of the Teacher.

On the left-hand page is given the **Subject-matter** of the lessons, together with **Suggestions** and **Hints on Method, Practical Work, Field Work, &c.** On the corresponding right-hand page is given **Additional Matter** for the Teacher's own information, **Comparisons and Contrasts** with other members of the same or different orders and families, &c. This additional matter is, in all cases, placed opposite the paragraph to which it refers.

The book contains a very complete **Glossarial Index**, in which the **pronunciation** of every **Scientific** and **Botanical Name** is given.

**E. J. ARNOLD & SON, Ltd., Leeds and Glasgow.**

## PRIZE DISTRIBUTION,

Midsummer, 1908.

THE

## EDUCATIONAL SUPPLY ASSOCIATION

beg to call attention to their

## NEW ILLUSTRATED CATALOGUE JUST ISSUED,

which they will gladly send post free.

The great feature of the Prize Books stocked by the **EDUCATIONAL SUPPLY ASSOCIATION** is the large range of

**INEXPENSIVE BOOKS in FULL LEATHER BINDINGS and in ARTISTIC HALF BINDINGS.**

*These Books are all suitable for stamping in gold.*

THE EDUCATIONAL SUPPLY ASSOCIATION issues a

**Unique Series of Sixty Volumes.**

**Printed from New-faced Type, On Thin, Strong, Opaque Paper.**

**Bound in Half Calf, Art Linen Sides,**

**AT 2s. 9d. PER VOLUME NET; and**

**Bound in Whole Scarlet Leather, Gilt Back and Top,**

**AT 2s. PER VOLUME NET.**

# Cambridge University Press

**Old Ballads.** Edited by FRANK SIDGWICK,  
Editor of "Ballads and Poems illustrating English History."  
"Popular Ballads of the Olden Time," &c.

Fcap. 8vo,  
1s. 6d.

"The companion volume, published last year, included certain of the popular ballads which deal with historical events, and the present volume almost exhausts the rest of our national stock of ballads, in so far as they can be conscientiously adapted to school purposes. The Introduction is an attempt to put before pupils in simple language an explanation of the fundamental difference between popular literature and the other kind. The teacher will easily be able to enlarge on the subject by suggesting parallels, from Homer to nursery rhymes. The textual notes are for the most part simply explanatory, and as a rule philology goes no further than a hint at derivatives still in common use."  
—Extract from Preface.

**Ballads and Poems illustrating English History.** Edited by FRANK SIDGWICK.

Fcap. 8vo,  
1s. 6d.

"This collection differs from its predecessors in the field by the prominence given to traditional ballads. 'Durham Field,' 'The Battle of Harlaw,' 'The Rose of England,' and several other ballads appear for the first time, as far as we are aware, in a school anthology. Mr. Frank Sidgwick has already given proof of his wide range of knowledge and fine taste in English poetry, and this selection will be deservedly popular."  
—*Journal of Education*.

The Cambridge School History of England  
**History of England for Use In Schools.** By ARTHUR D. LINES, M.A. Complete in

One Volume, or in Three Parts. Part I., To 1509 A.D. Part II., 1509—1714 A.D. Part III., 1689—1901 A.D. A separate Part is also issued containing the period "From the Wars of the Roses to the Death of Elizabeth."

Crown 8vo,  
with 13 Maps  
and 8 Plans,  
4s. 6d.  
Parts, 2s. each.

"Though written primarily as a school history, this volume of some 600 pages may well be recommended to the average reader as a standard book of reference for facts and dates in English history. Proportion, thoroughness, and accuracy of detail are its outstanding features, while for the student the demands of the examiner have been kept steadily in view."  
—*Glasgow Herald*.

**A School Algebra Course.** By F. GORSE, M.A., Head Master of the Intermediate School, Bootle. With or without Answers. Complete in One Volume, or in Three Parts.

The Three Parts (without Answers) are divided as follows:

- Part I. To Simple Simultaneous Equations (including Factors), with Appendix.
- Part II. Factors to Quadratic Equations with Appendix.
- Part III. Surds to the Binomial Theorem, with Appendix.

Crown 8vo,  
8s.  
Parts, 1s. each.

"Altogether the Algebra is one which we have no hesitation in commending to teachers of mathematics on the outlook for a course of exercises on modern lines."  
—*Educational News*.

## The Educational Times.

### Suggestions from America.

THE Americans are justly proud of their educational institutions, and, if they are inclined to regard their public schools with the vague complacency of traditional superiority, perhaps they are not singular in that very natural attitude, and probably the most insistent and most useful critics are found in the ranks of the teachers themselves. At first blush it is somewhat startling to read in the *San Francisco Western Journal of Education* that, when we leave the region of general laudation and "come down to dry school reports and to statistics, we are confronted with a state of affairs that is little less than appalling." What alarms the writer is the remarkable rate of decrease of attendance and the apparent results in social life. "The truth," he says, "is that sixty out of every one hundred children leave school by the end of the sixth grade of the grammar school"—that is, after six years of school attendance, and "ninety per cent. leave by the end of the eighth grade," so that "only ten per cent. get to the high school"—or, as we should say, roughly, the secondary school—"and of these hardly one per cent. get through a higher institution of learning." Whether the figures be taken in New York city with a population of four million or at Los Angeles with only a twentieth of the numbers, the result is "little less than appalling." Inevitably there is a steady decrease in enrolment and a steady increase in the number of children leaving school: the striking thing is the magnitude of the exodus, in spite of compulsory attendance laws and of the excellence of the schools. It would be interesting to inquire how other countries stand in comparison with America.

The children that leave school early would no doubt fall into different classes in different countries according to special circumstances, but in the main the same causes are probably in a large degree operative. In America more than elsewhere the language difficulty causes trouble, so that children of foreign birth or foreign parentage are apt to fall behind and to get discouraged, and eventually to give up school. Other causes are "improper grading, illness, poor behaviour, constant travel from one place to another, or

any or all of similar circumstances," destroying interest in school work and prompting desire for change. Then there are the children of fourteen or thereabouts that go to work, whether from their own desire or from pressure by parents, by lack of means, or by example of their fellows. And what becomes of them all? Some go to work as cash-boy or girl, messenger, or helper in some large business; some, with more hopeful prospects, apprentice themselves to a trade; others "either do not go to work at all, or drift from one job to another on account of general incompetency or laziness." This last class—nearly all boys—"is the most hopeless problem of the day. From it are recruited the companies and regiments of the unemployed, the hoboes, the 'bums,' the hangers-on at the tough dance-halls, the prize-rings, or the saloons; in short, all those who live by their wits or by preying on the public, either as occasional offenders or as out-and-out criminals." Such, according to our writer's analysis, is the position in America. Can any system with such results, he asks, be rightly called anything but "inefficient"? Our immediate interest lies in the question how far such a description would be true in reference to our own system. There are, at least, points of similarity, if not of degree, that are calculated to induce grave reflection. The American description will come home forcibly to those of us that are concerned for the expansion of the system of continuation schools; and perhaps it will be felt also to have not a little bearing upon the general scheme of our elementary education.

There are not lacking theories of remedy. The fundamental thing is to get a clear conception of the object to be attained. Dr. John Dewey has dealt with the problem in his work, "School and Society," where he says this:

The simple facts of the case are that in the great majority of human beings the distinctively intellectual interest is not dominant. They have the so-called practical impulse and disposition. . . . While our educational leaders are talking of culture, the development of personality, &c., as the end and aim of education, the great majority of those who pass under the tuition of the school regard it only as a narrowly practical tool with which to get bread and butter enough to eke out a restricted life. If we were to conceive our educational end and aim in a less exclusive way, if we were to introduce into educational processes the activities which appeal to those whose dominant interest is to do and to make, we should find the hold of the school upon its members to be more vital, more prolonged, containing more of culture.

Prof. Burks, of Albany, and Prof. Hanus, of Harvard, advocate the elective system—"on the face of it, the least

effective remedy offered": it would complicate and overload the time-table, and there would be bewilderment in the choice of subjects. New York looks to special classes—suitable courses in language and number with at least ten hours a week handwork—during the seventh and eighth years, at any rate in industrial centres where there is a marked tendency to leave school early. Others see hope in the German *Realschulen*; but our writer declares it "impossible to found an American school on the German pattern, for many reasons." The weight of opinion favours the Chicago ideal of manual training. "We have found," says Dr. Dewey, "that handwork, in large variety and amount, is the most easy and natural method of keeping up the same attitude of the child in and out of the school. The child gets the largest part of his acquisitions through his bodily activities until he learns to work systematically with his intellect." Moreover, there is "the remarkable effect industrial art has in reducing crime." "On this point the recent census taken by the Board of Education shows that nearly 3,300 boys between the ages of fourteen and sixteen are not working and do not attend school. Almost any experienced policeman will tell you that a large percentage of our criminals, and specially those of very recent times, were under twenty-one years of age when their villainy reached its climax. If these young men had been provided earlier in life with congenial occupation to keep them away from the temptations of the streets, I have no doubt that Chicago's criminal record would be less gruesome."

A general impression also results: that American education is not yet so near finality as to justify an unrestrained enthusiasm for the adoption of American methods in our schools. Flying visits of English teachers to the United States are very well in their way; American schools no doubt in many aspects deserve frank admiration; American educational treatises often present much that is instructive: but, after all, prudence still suggests a critical attitude, with a steady eye upon English idiosyncrasies.

### NOTES.

A WRITER in the *Morning Post* asks and answers the question: What are the final impressions of the visitor who walks through the crowded Hall of Education at the Franco-British Exhibition?

Apart from the beauty of much of the work exhibited, the thought that lingers longest in his mind is perhaps that of the infinite potentialities of organized educational effort, of its many-sidedness and complexity, of its almost exuberant fertility. From the copybook of a London school child to the model of a Sheffield mechanical pile-driver, each exhibit reveals some new grace or possibility of the human spirit as it turns upon itself with deliberation, and questions its capacities. Thirty-eight years ago this country stumbled into universal education, distrustful of its effects, and grudgingly counting the expense. That spirit is dead, or, if it rises, it rises only as a ghost to haunt the debates of the House of Commons on the religious question, which is our legacy from 1870. For the tiny strip of territory which we started to plough when we said that every child should be compelled to receive education has turned into a vast territory, where thousands of workers go joyfully about their appointed tasks. Fearful of the competition of Germany and America, England set out to seek its father's asses, and it has found what is proving to be a kingdom. Every teacher, every member of an education committee, every inspector and social worker who visits this department of the Exhibition will feel, with a shock of pleasure, that, as he labours in obscure places, he is one member of a great army. Moreover, the Exhibition shows the extent to which modern education

covers the whole of life. The public schools may insist that the one avenue to culture is through the literatures (which in practice means the grammars) of Rome and of Greece. But educationists outside them have realized that education is many-sided as life is many-sided, that it is concerned with the health of the body as well as the health of the mind, with craftsmanship as well as literature, with art as well as industrial efficiency. No one will leave the Exhibition without feeling grateful to the organizers whose labours have prepared so rich a feast.

THERE has just been issued a White Paper containing a memorandum on "Special Rating for School Purposes in Quebec and Ontario." In the education debates a suggestion had been made that ratepayers desiring their educational rates to go to the support of denominational schools should be at liberty to earmark the amount for the use of the schools of their choice; in March last Mr. John Redmond pointed out that such a system prevailed in parts of Canada, and Mr. McKenna promised to make inquiry. So here are the results. In Quebec the great majority of the people are Catholics, and all the rest are entered in the rating books as Protestants: no group of ratepayers professing a faith that is neither Roman Catholic nor Protestant can obtain public funds in support of a separate school conducted on their special religious principles. Each of the two denominations, then, manages its own schools, collects the local school tax from its adherents, and receives the Provincial Government grant in proportion to the number of children it educates. In Ontario, again, which is mainly Protestant, a group of not less than five Roman Catholic heads of families can establish and maintain a separate school, allocating to its support their own part of the school tax. In 1906, there were 428 separate Roman Catholic schools in Ontario, and they received 33,540 dollars from the State, 379,117 dollars from the Roman Catholic ratepayers, and the balance of 281,333 dollars from voluntary sources.

JUST six years ago, when the Education Bill of 1902 was under discussion, we quoted from the "Regulations of the Ontario Education Department" certain provisions on the subject of religious instruction in the schools. It may be convenient to reproduce them:

97. Every public and high school shall be opened with the Lord's Prayer and closed with the reading of the Scriptures and the Lord's Prayer, or the Prayer authorized by the Department of Education. . . .

98. The Scriptures shall be read daily and systematically; the portions used may be taken from the book of selections adopted by the Department for that purpose, or from the Bible, as the Trustees by resolution may direct. Trustees may also order the reading of the Bible or the authorized Scripture selections by both pupils and teachers at the opening and closing of the school, and the repeating of the Ten Commandments at least once a week.

99. No pupil shall be required to take part in any religious exercises objected to by his parents or guardians. . . .

100. The clergy of any denomination, or their authorized representatives, shall have the right to give religious instruction to the pupils of their own church, in each school house, at least once a week, after the hour of closing the school in the afternoon. . . . Emblems of a denominational character shall not be exhibited in a public school during regular school hours.

WHEN a new subject applies for space in the school curriculum or an old subject demands more room, the applicant is properly required to justify his proposals and to suggest a method of carrying them into practical effect. The teacher is concerned also for the "results." The Code, indeed, has already laid it down that "moral instruction should form an important part of every elementary-school

curriculum," and should be given systematically as well as incidentally; but the Moral Instruction League does well to explain its requirements in a circular recently addressed to elementary-school teachers. The position taken up by the League is thus described:

(1) We deprecate any test other than a most sympathetic watchfulness on the part of inspectors as to the tone and manners of the children and the general principles animating the whole of the school work. Individual paper examinations would violently injure the usefulness of the moral lesson.

(2) We are of opinion that the time-tables now in vogue might be appreciably lightened by the omission of much of the labour now devoted to spelling and formal grammar, to arithmetic that only remotely bears upon practical life or beneficial intellectual exercise, to such reading books as are unreasonably difficult in style or uninteresting in matter, and such geography as, in spite of recent improvements, still comprises much useless information and a disproportionate mass of statistics.

(3) Nor do we view with approval the practice of introducing special teachers or lecturers for such subjects as temperance, hygiene, thrift, &c. These themes lose in moral value if treated as isolated departments of conduct. The character should be regarded as a whole, and to invest any particular habit with the distinction of an "extra subject" only confuses the child's moral sense. The teacher who, through daily and hourly intercourse, is familiar with the thoughts and sentiments of the scholars is best fitted to deal with the delicate task of training their ethical judgment.

There will probably be little disposition to quarrel with the first two sections, though the second involves much difficulty in practical adjustment. The third seems somewhat transcendental in conception; but, in any case, it is not easy to see why there should be any need for external exponents of the subjects in question.

A CORRESPONDENT of the *International* comments on the fact that the National Liberal Party in the Prussian House of Representatives is pressing the Government to afford better facilities for higher education to elementary scholars, especially with a view to their employment in the Civil Service.

It is urged that nothing can be more to the interest of the State than that its officials should be persons of the highest ability, and that the growth of an hereditary bureaucracy should be checked by the liberal infusion of new blood into the higher Government posts. The Napoleonic dictum of the marshal's baton in the private's knapsack should not be a mere empty phrase. It is also pointed out that it is not sufficient to provide scholarships at the higher colleges and Universities unless poor students are enabled to take advantage of them by providing them with the funds necessary for their subsistence during the time of study.

"The Conservative fears that this would result in unemployment in the upper strata of society are," says the correspondent, "as groundless as they are anti-social. Special abilities are too rare to cause a glut of applicants for advancement, and are likely to grow rarer still as the advancement of science makes greater and greater demands upon the student." The Conservative argument does not necessarily disclose the real grounds of Conservative opposition. But the interest of State is obvious enough; and that is to work up to the realization of Napoleon's dictum.

THE zeal of the London County Council for the schools committed to its charge is quite a remarkable feature of modern educational administration. It is but lately that the Council was credited with the expenditure of some thousands of pounds for the provision of flags to wave over the schools and to fan the sentiment of patriotism. Now we have the privilege to read of the proposed introduction of a vocal adjunct in the form of "about 150 foghorns"—

Norwegian foghorns (whether made in Norway or used in Norway, or how otherwise Norwegian, we do not know and are not informed). The prospect is lively. But the instruments are to be used only "in cases of necessity." Thus, they are to be used "as fire alarms." Public schools, we dare say, are not essentially fireproof and may at times have been burned down, or at any rate may have caught fire; but we confess we have no vivid recollection of any such calamity within the jurisdiction of the County Council, nor have we reason to estimate the probability of such an event as worth a foghorn. Again, the foghorns are to be used "in cases of fog, in instances where the ordinary school-bell has failed." Now, without inquiring into the persistence or the distribution of London fog, there is no denying the occasional visitation of fog, or the appropriateness of a foghorn to "the case of fog": the only difficulty arises from the suggestion that the foghorn would come in effectively when "the ordinary school-bell has failed." We are not able to put a just estimate on the importance of the ordinary school-bell, or to imagine why it should "fail"—except, in a friendly way, to give the foghorn an innings. However, as ratepayers, we rejoice to know that, if it should unhappily fail, the provision of the County Council will have obviated the misfortune by having the foghorn ready to operate; and presumably foghorns have not, like bells, the weakness to "fail" when their services are needed.

## SUMMARY OF THE MONTH.

THE report of the conference in Manchester between representatives of various denominations on the religious education difficulty is signed by the Bishop of Manchester (Dr. Knox) and Messrs. H. W. Chell and R. Fletcher, Church of England representatives; Monsignor Tynan, Canon Richardson, and Mr. J. Thompson, Roman Catholics; and the Rev. Dr. Adeney, Principal of Lancashire Independent College, the Rev. Dr. John Hope Moulton (Principal of Didsbury Wesleyan Training College), the Rev. Dr. A. Goodrich, and the Rev. J. Kirk Maconachie, for the Free Churches. It is laid down in the resolutions:

1. That denominations which have built schools for denominational elementary education, if those schools are no longer used for such education, have a right to retain them for denominational purposes on refunding the unexhausted value of any building grants received from the State.

2. That the principle of equity embodied in resolution 1 regarding schools built by denominations is hereby affirmed regarding all forms of school property, whether such schools be private ownership schools, family trust estate schools, &c.—i.e., they shall revert to their owners if they cease to be carried on according to the terms and conditions under which they were founded.

3. That it is not necessary that, even in single-school areas, teachers should be prohibited from giving religious instruction, provided that such safeguards can be found as shall secure their appointment from being in any way affected by their religious convictions.

4. That (a), in single-school areas, only teachers possessing a recognized qualification to give religious teaching shall be eligible for appointments involving religious teaching, and such teachers shall give only undenominational teaching; (b) if the Local Education Authority, by agreement with the trustees, makes use of an existing denominational school, it must pay an adequate rent for the use of the school building and must provide facilities during school hours for the denominational teaching required by the trust deeds, at the cost of the denomination; (c) failing such agreement, the Local Education Authority shall provide its own building and shall allow the denominations to give denominational instruction at their own cost to children whose parents desire it; (d) for the building of such a school a substantial proportion of the cost shall be provided from the Exchequer; (e) an existing school having thirty children in average attendance shall be a necessary school; (f) a single school area is defined as one in which there is only one school within reasonable distance of children bound to attend school.

5. That, in all districts where more than one school is educationally desirable, a Council school or schools shall be provided, and denominations shall have liberty to provide denominational schools, provided that fifty children shall always be considered a sufficient number to constitute a necessary school.

A Minority Report has been issued by the Rev. J. Hirst Hollowell (Rochdale), the Rev. C. Peach (Manchester), and Mr. J. Saxon (Manchester), three of the Free Church representatives. The Minority Report declares:

1. That in single-school areas where the populations are so small that, on educational and financial grounds, there can be only one school, the resolutions would leave things in a worse and more confused state than now, while in the multiple-school areas, which, of course, include the great bulk of the population, the resolutions are, in some respects, more unfair than Mr. Balfour's Act of 1902.

2. That the signatories are entirely opposed to the teachers of the State being called upon to give denominational instruction, which they could be under three of the resolutions, both in town and country.

3. That they object to teachers being required to "possess a recognized qualification to give religious teaching" as a test on appointment. To show that they are not opposed to reasonable facilities for general or special religious instruction, the Rev. J. Hirst Hollowell and his fellow-signatories point out that they proposed a scheme (which was rejected) to the effect that the Local Education Authority should give facilities for the use of the school building for voluntary religious instruction, denominational or undenominational, at the cost of those applying for it, such teaching to be given by persons other than the teachers of the school.

At a special meeting of the Archbishops and Bishops of Ireland, held at St. Patrick's College, Maynooth (June 16), Cardinal Logue in the chair, a statement on the Universities Bill containing the following points was adopted and ordered to be published:

Having given our best and most anxious consideration to the Universities Bill now before Parliament, we are of opinion that in setting up a new University in Belfast and another in Dublin, with constituent and affiliated colleges, it has been constructed on a plan which is suited to the educational needs of the country, and likely to lead to finality on the Universities question.

While we must regret, as one of the evils incidental to the present system of legislation for Ireland, that the provisions of this Bill, which regard the University of Dublin and its colleges, are not framed in accordance with the religious convictions and sentiments of this Catholic nation, we freely recognize the limitations which existing Parliamentary conditions impose upon the Government, and desire to render their task in trying to solve this grave question as easy as possible.

Within the fundamental conditions, within which, as we are informed, the Government has to act, we believe that a good deal more than is proposed in this Bill might and ought to be done to meet the legitimate requirements of the Catholics of Ireland, and as a consequence to promote the efficiency of the new University. It will readily occur to most people, for instance, that the head masters of secondary schools should, on account of their close connexion with University work, be represented on the governing body of the provincial colleges and the University, these schools being scheduled by the Commissioners of Intermediate Education.

A most important, and indeed vital, question is that of the status and condition of the college to be established in Dublin. We have seen with dismay that it is not to be residential, and, if this determination is persevered in, we feel that the consequences for the University and the College may be disastrous. From a moral and religious, as well as from an educational, point of view, we should regard it as indefensible to throw hundreds of young men on the streets of Dublin and, side by side with the splendid provision which is made at the cost of the Irish nation for the Episcopalian Protestants in Trinity College, it would reduce our students to a position of intolerable inferiority.

THE most critical of the amendments to the Irish University Bill, moved in the Standing Committee of the House of Commons, by Dr. Butler, was decisively defeated. It proposed that a two years' course of study at a constituent college be a necessary preliminary to taking a degree at the new Universities. In effect, the amendment, if carried, would have excluded Maynooth College (Roman Catholic) and Magee College, Londonderry (Presbyterian), unless the students attended the Dublin University in the first case and the University of Belfast in the second. Mr. John Redmond said he had received a copy of a statement drawn up by all the Roman Catholic Bishops of Ireland, in which they said they could not send their arts students to Dublin, and consequently the result of Mr. Butler's amendment would be to deprive them of the opportunities of gaining University degrees. Mr. Birrell resisted the amendment. He said, if they

allowed unworthy suspicions to enter, and refused to trust the Senates of the new Universities, they had better tear up the Bill. Nobody could approach Maynooth and examine its studies and its professors without discovering that the students there were securing an excellent education of a University standard. On a division the amendment was rejected by 32 votes to 16.

THE Board of Education have received from the German Embassy, through the Foreign Office, particulars of the International Congress of Historical Science, which is to be held this year in Berlin from August 6 to 12. The work of the Congress will be carried on in general and sectional meetings. There are eight sections:—(1) Oriental History; (2) History of Greece and Rome; (3) Political History, mediæval and modern; (4) History of Civilization and the History of Thought, mediæval and modern; (5) Legal, Social, and Economic History; (6) Ecclesiastical History; (7) History of Art; (8) Sciences subsidiary to History (Archives, Libraries, Chronology, Diplomatic, Epigraphy, Genealogy, Historical Geography, Heraldry, Numismatics, Palæography, Study of Seals). Many distinguished Continental historians will take part in the Congress, and the Committee contains such distinguished names as those of Professors Eduard Meyer, Adolf Harnack, Friedrich Delitzsch, Ulrich von Wilamowitz-Moellendorf, and Schmoller. At some of the general meetings lectures will be given by such well known authorities as Prof. Maspero, Prof. Cumont, Sir Frederick Pollock, Sir William M. Ramsay, and Prof. Monod.

THE eleventh annual Conference of the National Association of Head Teachers was held in the Municipal Technical College, Halifax, Mr. R. M. John, Birmingham, presiding. The annual report stated that there were now 65 local associations, with a membership of over 4,700. The Chairman said that the smoke of the battle of creeds was still resting over the land, and the real issues of education were hidden from view. The crucial question was this: Could not the admitted grievances be redressed without breaking up the system initiated in 1902? This question was not so prickly when grappled by the teachers within the school as it was made to appear outside by the champions of dogma, who forgot that it was the heart which made the theologian, and not the theologian the heart. Moral teaching might not satisfy all Christians; but where it could be shown that denominational religious teaching might be taught without violating to any serious extent the principle of popular control and management of the schools, and of the teachers' freedom from sectarian tests, for the sake of peace concessions might be made whereby Local Authorities would be empowered to allow exceptional schools scheduled as such within the national system. The Conference unanimously confirmed its opinion "that the time has arrived for the abolition of the half-time system, and that the age of school exemption should be raised to fourteen years." Other resolutions were adopted declaring that an adequate grant should be made by the Local Government Board towards the expenses of medical inspection and treatment of children attending public elementary schools, urging the Local Education Authorities that have not already done so to make provision, if they deem it necessary, for the feeding of school children and for the recovery of the cost from parents; that, while of school age, no child should be allowed to work more than twenty hours per week, and on school days only between 5 and 8 p.m.; and that certain trades—laundries, barbers, farriers, &c.—should be absolutely forbidden to children of school age.

THE representatives of German Churches spent a day of their visit at Cambridge as the guests of the Divinity Faculty of the University. They were entertained at luncheon in the hall of Trinity, the Master (Dr. Butler) presiding. Prof. Stanton, Dr. Ward (Master of Peterhouse), and the Rev. E. S. Roberts (Vice-Chancellor) made speeches of welcome, and of acknowledgment of the British debt to German scholarship—the latter two gentlemen speaking in German. Dr. Butler said he had to content himself with a language "better known to many of you than to many of us": as a distinguished Foreign Secretary had said when pressed by an ambassador to speak French, "Je voudrais si je pouvais." Prof. Rade, of Marburg, speaking in English, expressed the debt of German scholars to the indefatigable genius of Westcott and Hort. Another Cambridge man whose name was still better known, and as dear to Germany as to England, was Charles Kingsley, who, with Wichern, had done more than any other to stimulate the German Churches to an interest in social reform. Prof. von Soden, of Berlin University,

said that he had particular cause to reverence Lightfoot and Westcott and Hort as leaders in the study which aimed at reconstructing, with the utmost certainty possible, the *ipsissima verba* of the sacred Scriptures. He had long sought such an opportunity as this to offer, not only for himself, but for many future readers of the New Testament, warm thanks to the theological faculty and librarians of Cambridge for the assistance they had always extended to the young fellow-workers whom he had sent to examine the treasures of the University. There were two things in particular which Germany might learn from that University, which acted on the principle that students should be furnished with universal scientific culture instead of specializing with a view to professional equipment from the beginning as in his own country, and which strove by sport to keep in full harmony their strength of mind and body. That was what Germans admired and tried to imitate. Prof. D. Rietschel, of Leipzig, also spoke. The Mayor of Cambridge (Mr. H. G. Whibley) afterwards gave a garden party in the Botanical Gardens.

THE World's Drawing Exhibition and Congress, which is to be opened at South Kensington this month, will be attended by more than a thousand delegates. Foreign Governments are granting cheap fares to teachers, and in the United Kingdom cheap fares have been conceded by all the railway companies but one. The subscriptions amount as yet only to £2,000 of the £5,000 required.

THE University College (London) Union Society held a reception at the College (June 4), when the foundation oration was delivered by Mr. J. Lewis Paton, High Master of the Manchester Grammar School, on the subject of "The University and the Working Classes." Mr. Paton pointed out that hitherto Universities had stood aloof from the life of the common people. Literary culture was the appanage of the leisured classes: it was for those who could afford it, not for those who had the capacity to receive it. It was still the privilege of the gentleman, in the social acceptance of the term. He had nothing to say derogatory of the scholarship system, for in the main it did secure the open career for talent. The pity of it was that the movement of the scholarship system was all in one direction—that the poor boy who won his way with scholarships lifted himself out of the class to which he belonged by birth. He was educated out of his class, and in this way the working class was continually being drained of those who would otherwise be their natural leaders, directing their social and political activities, and leavening their life with a higher idealism. The scholarship system took the poor boy to the University, but it did not bring the University down to the poor; it enabled the promising boy to rise, but did not raise the class to which he belonged. The taint of "getting on" affected the whole of the scholarship system. He acknowledged to the full the great work done by the University Extension Lectures, but no occasional lecture could create the sense of fellowship which was the atmosphere for true education to grow in. He personally had found quite as much disinterested love for liberal culture among the poor as he had among those better off seeking for honours. A University which was national in name would gain immensely in inward power when she became national in reality. The training now given was crippled in its efficiency by the caste conditions imposed by society. Speaking with due deference, he believed there was not a single faculty which would not gain in practical efficiency if the students daily rubbed shoulders and interchanged ideas with thoughtful young men of the artisan class of their own age, who saw life from a different angle. Cecil Rhodes saw what a vast benefit it would be to Oxford to open her gates to men of different Colonies and other races. No one now questioned the gain in healthy-mindedness and breadth of outlook which this innovation had brought to Oxford. To know the social problem one must rub shoulders with the working man. Manual labour should form part of every man's training, as domestic labour should form part of every girl's—a doctrine as old as the Rabbis and as recent as Ruskin.

At the Pan-Anglican Congress Prof. Sadler took part in a discussion on "The Training of Teachers. Professional and Voluntary." He said that the education most indispensable to the character of a nation was that given in the home. It was in the home that habit was earliest formed; it was there that ideals were first implanted; there that thoughts were first turned to things unseen. No more blighting curse could fall upon Christian

civilization than the moral atrophy of the home. The true work of the State in making the good life more possible was not to supersede the home, but to help it to higher efficiency in its task of shelter and nurture. After the home, in its influence upon character, was the tone of the workshop or factory in which young people earned their bread. A man's daily occupation was the school in which he learnt most that coloured his outlook on life, and that employers and foremen should use their great power in making the conditions of labour healthy and free from all removable temptations to intemperance and uncleanness was the most urgent need in national education after that of making home-life pure and sound. The highest part of a teacher's training, Dr. Sadler continued, was the fostering of a sense of vocation. The vital power of all education lay in reality of conviction and in the readiness to sacrifice personal interests for the sake of those who claimed help and guidance, and whose claim was sacred because it was in essence a spiritual claim. The finest kind of training deepened the sense of vocation, but, in order to encourage this sense of vocation to bear fruit, should they not see to it that every teacher might look forward in middle life to freedom from harassing pecuniary cares and to a quiet competence in old age after long years of service?

ONE of the departments of the Hungarian Exhibition at Earl's Court illustrates the progress and present position of education in Hungary. Starting with a section devoted to kindergartens and elementary schools, all the grades of education up to the Universities, and colleges of University standing, are explained by suitable exhibits. A very interesting feature is the model State farming school, in which all branches of farm work are taught to pupils between the ages of twelve and fifteen. Nursery gardening instruction forms part of the curriculum at these schools also, and attention is paid to home and industrial work. The age at which education in Hungary is compulsory is in the kindergarten from three to six and in the ordinary elementary school from six to twelve, while evening classes are given to pupils between the ages of twelve and fifteen. A minimum collection of implements used in all elementary schools is on view, embracing a wide selection of objects—from chemical, mechanical, and electrical appliances to natural history specimens. The training college section contains excellent specimens of woodwork and equally fine articles of lace and embroidery. Another feature is the attention paid to hygiene. Every boy, when he enters, has his height measured and his strength tested. These details are entered in a register, which is kept as a record of his physical growth during his school years.

THE Thirty-fourth Annual Conference of the Incorporated Association of Head Mistresses was held (June 19 and 20) at the Manchester High School, the President, Mrs. Woodhouse (Clapham High School), in the chair. About 165 members were present. The President, in her inaugural address, alluded to many forms of educational activity distinguishing the city of Manchester, and said the past year had been an *annus mirabilis* in respect to women's work and women's interests generally. It had never before been so useful for all who were called to positions of responsibility and influence to make themselves familiar with such aspects of the social problem as are fundamentally educational. The coping stone of education was appreciation of the fact that both the *raison d'être* and the means of personal culture, of self-realization in the true sense, lie in serving others. Mrs. Woodhouse looked forward to a curriculum for school children between the ages of seven and twelve based on three main branches of instruction: (1) development of physical power, manual dexterity, and constructional skill, (2) English literature, and (3) Nature study. In the curriculum for girls between fourteen and eighteen or nineteen there was danger lest the more immediate connexion between the subjects taught and the lives, present and future, of the pupils should not be shown. Although the old Register had been closed, the question of training still occupied the minds of the profession. Papers on "Home Science and Economics" were read by Miss Bramwell, B.Sc. (L.C.C. Eltham Secondary School), Miss Burstall, M.A. (Manchester High School), Miss Gilliland, M.A. (Haberdashers' Aske's Acton Girls' School), and Miss Leahy, M.A. (Croydon High School).

On the second day of the Head Mistresses' Conference, the following resolutions were carried:—

That head mistresses of approved secondary schools in the Colonies, India, and the Dependencies, may be invited by the Executive Committee

to become Correspondents of the Association and to receive its literature on payment of a subscription of 10s., and that correspondents who are in England at the time of the Conference shall be entitled to attend the meetings.

That this Conference disapproves of external examinations for girls under fifteen years of age, and invites all members of the Association to co-operate in discouraging pupils to enter for them. (One dissentient.)

That, in all public external examinations after the age of fifteen, acting teachers in every case be associated with the University or other external authorities. (Unanimous.)

That in the opinion of this Conference, the length of the Easter holidays, or of the Easter and Whitsuntide holidays combined, in girls' secondary schools, should be not less than four weeks, and should always include Easter.

That this Conference observes with regret the delay in the constitution of the Teachers' Registration Council, for which the reasons alleged by the President of the Board of Education in answer to questions in the House of Commons do not appear to be adequate. The deputation of representative teachers referred to included representatives of technical education, and proposed the constitution of a Council on which representation should be given (1) to the Association of Teachers in Technical Institutions and (2) to the Association of Technical Institutions. The Conference is unable to understand the hesitation of the Board, unless it is intended that teachers of special subjects—*e.g.*, music, drawing, classics, science, and modern languages—should *as such* be represented on the Council.

That, in view of the fact that the Prime Minister has declared that without the overwhelming support of the women of the country the Government would not consent to embody in the contemplated Electoral Bill a proposal for their enfranchisement, the Association of Head Mistresses assembled in Conference at Manchester desires to place on record its strong conviction that the grant of the Parliamentary Franchise to women is both just and expedient. (Overwhelming majority.)

Papers on "Instruction in Holy Scripture in Public Secondary Schools" were read by Mrs. Bryant, D.Sc., and Miss Hanbidge, M.A. (Central Foundation School), and, in the absence of Miss Otley (Worcester High School), by Miss Douglas. On Friday night, members of the Conference were received by the Victoria University of Manchester in the Whitworth Hall; and on Saturday afternoon, the Dean of Manchester entertained members to tea. A visit was paid to the cathedral, where a short service was held, and the Dean delivered an address.

SPEAKING at the Pan-Anglican Congress, Mr. A. G. Fraser, Principal of Trinity College, Candy (son of Sir Andrew Fraser, Lieut.-Governor of Bengal), indicated some of the dangers of the secular education system in India and Ceylon supported by the Government. In Ceylon, as in India, the Christian schools and colleges were hurried by the secular requirements of the Government code. At his college they were bound to train their students in English, Latin, and Greek, and sometimes in French, and present them for examination in mathematics and in these tongues, when the students were unable to read or reply to letters from their parents in the vernacular. It was not clerks nor European underlings whom the educational missions wished to turn out, but national Christian leaders. It was right to have colleges on the Government plan, but the Church should be free to supplement the Government colleges and carry out her own policy. He would like to see the Church placing staff corps here and there—groups of able men who had leisure and power to think out the Church's problems. They would work towards the end of producing an intelligent apologetic in face of the native religions. They would give cohesion to the missions and continuity of policy. There was also needed devolution in the Church's educational work. They wanted to put the natives more and more into power—the men who knew the country and were less likely to make mistakes than foreigners were. It was a superfluous question to ask whether the natives were fit for responsibility; they were going to have it. No one ever learnt to walk before he tried, and the natives would learn by their mistakes. Mr. Fraser asked the Church at home to give India colleges that were small enough and staffs that were large enough to allow of personal contact between the teacher and the taught.

At a meeting of the Bristol Chamber of Commerce (June 17), a communication was read from the Committee of Educational Inquiry and Research at University College, stating that they had secured for educational purposes a valuable collection of chemical products—industrial, agricultural, and medical—covering the whole range of the chemical industries and illustrating all the processes of manufacture. The President remarked that the Committee, with a view to the future disposal of the col-

lection, desired to have the opinion of the Council of the Chamber as to its educational value from a commercial standpoint. Abroad, such museums existed in many places, and were highly valued by the commercial community. It would help the Committee in coming to a decision if they could have the views of commercial men as to the value of such exhibits as those mentioned to those engaged in commercial research in Bristol and the South-West of England, and he should therefore be glad to have the trend of opinion of the members present on the subject. After careful consideration it was decided to inform the Committee of Educational Inquiry and Research that, in the opinion of the Council, such a collection of chemicals would be of the utmost value. It would be useful in promoting commercial research, and, if it were made accessible to business men, prove of immediate benefit to those engaged in many branches of manufacture.

At the annual meeting of the Eastern Branch of the Scottish Association of Secondary Teachers, held in Edinburgh, Mr. Hutchison, the retiring President, said the desolating effects of the issue of the new Register would make Saturday, May 16, 1908, long remembered in the schools as a sort of St. Bartholomew's Day. Taking the case of his own school—Boroughmuir Higher Grade School—a week ago they were a comparatively happy, healthy, and active family. Wrath and resentment, however, burst out fiercely on receipt of the intelligence that, in spite of all diplomas, henceforth they were to be arbitrarily divided into three different grades or levels. The result of this new Register was that in large schools discord and jealousy had been sown throughout the staffs; while the worldly-wise would move speedily to a smaller staff to increase their chances of the higher title. Speaking with care and moderation, and looking simply to the facts as he knew them, the Register was not required. He protested against the institution of this public register of teachers on the grounds (1) that it was an unwarrantable exaltation of the power that controls the taxes over the power that controls the rates; (2) that it was an insidious attack on the freedom and integrity of the Universities by claiming the power to cancel at will the current values of their teaching diplomas; (3) that educationally he believed it was unsound in conception and unjust in operation; and (4) that, by limiting indirectly the freedom of head masters in the loyal disposal of their staffs, it must inevitably prove detrimental to the efficiency of secondary education in Scotland.

ONE of the chief interests of the proposed Milton Exhibition at Christ's College will consist in portraits of the poet. The two most important cannot be traced, but Mr. Lewis Harcourt is lending from Nuneham his replica of the Onslow portrait, made by Van der Gucht when the original was in Lord Onslow's possession. The celebrated drawing from Bayfordbury, which was once in the possession of Jacob Tonson, and is also believed to have been in the possession of Jonathan Richardson, is being lent by Mr. H. Clinton Baker. It has never before been seen by the public. Dr. Williamson is lending his large collection of prints and engravings, numbering considerably over a hundred, and these will be supplemented by engravings from other collections, notably from that of Mr. Shipley, so that it is expected that over a hundred and fifty will be shown. There will also be two remarkable drawings by Vertue, both of which were at one time at Strawberry Hill, and some miniatures, including one that belonged to Milton's second wife, and has never before been exhibited. An important feature of the exhibition will be the collection of early editions of Milton's works gathered from various libraries in Cambridge.

#### UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

THE visitors can hardly complain of the Clerk of the Weather, who did his best to make our annual festivities a success. Never has Cambridge been so full, and rarely has so much been crowded into the fortnight of June that still goes by the name of the May week.

Ignoring chronological order, we must first deal with the inauguration of the Chancellor. The proceedings began with a formal levee held in the Fitzwilliam Picture Galleries. The Heads of Houses, professors, doctors, and other members of the Senate filed past the new Head of the University and were

greeted with a cordial hand-shake instead of the formal bow of his predecessors in office. The same afternoon saw the conferment of honorary degrees upon such representative men as the Prime Minister, the late Lord Chancellor (Lord Halsbury), Sir John Fisher, Sir Hubert von Herkomer, Sir William Crookes, and Mr. Rudyard Kipling. The boys in the gallery gave hearty cheers for most of the distinguished men, as in duty bound, but Sir John Fisher and Mr. Rudyard Kipling were the special favourites of those who are permitted to express their feelings in the Senate House. The Public Orator was more subdued, but quite as effective as ever. Some of his points were specially neat—for instance, the saying of Jowett about our present Prime Minister, "Asquith is so direct, he will go far," was put thus: "It directo, longius ibit"; also as to Mr. C. A. Parsons, of turbine fame:

Experto credite quantus

Par pontum properet, quo turbine torquat undas.

Last of all, there were presented two Cambridge Professors, who received honorary degrees as a fitting testimony to long years of valued and unselfish work—Prof. Marshall and Prof. Liveing.

From the Senate House we adjourned to the gardens of King's College to enjoy the hospitality of the Fellows of that Society. The band of the Royal Engineers repeated the Installation March (composed by Sir C. Villiers Stanford), which had already been rendered in the Senate House yard at the installation of the Chancellor.

The evening saw yet another function—a grand reception at the Lodge of Trinity College, when most of the new doctors put in an appearance. The two attractions of this function were the emerald tiara of Lady Tullibardine (Mrs. Butler's sister) and the conversation of Mr. Rudyard Kipling. It is fortunate that Trinity possesses in the Master and Mrs. Butler a host and hostess who can with such dignity and grace entertain our visitors from the outside world.

An interesting point to note is that Sir Hubert von Herkomer has kindly offered to paint a portrait of the Chancellor for presentation to the University, and there is no doubt about the response which will be made to so graceful a suggestion.

The times are full of lists of all sorts. Many a happy parent has seen the name of the budding scion of his house figuring on those formal-looking notice boards, and a few perchance have looked in vain for what they sought. The Mathematical Tripos seems to have created some excitement in the sub-editor's department of some of the halfpenny dailies, and many Cambridge people were able to identify our leading mathematicians for the first time by means of the woodcuts of the press. It is, perhaps, worth noticing that there were 28 First Classes in the Mathematical Tripos as against 58 in the Natural Science, and 3 in the Mechanical Science Triposes, although the number of candidates in the last-mentioned examination was very considerable.

One of the first official acts of the new Chancellor was to open the extension of the Cavendish Laboratory. The occasion was signalled by a reception at which Professor and Mrs. Thompson entertained most of the leading Cambridge people. The latest scientific novelties were on view, and courteous demonstrators tried to enlighten the curious ignorance of the inquisitive guests. It was a great success.

Allusion has been made to the retirement of Prof. Marshall. His place has been taken by Mr. Pigou, of King's, an appointment which was suggested as probable in these notes last month. Prof. Pigou has youth on his side, and but for that would probably not have been successful against the very strong field he had against him.

An attempt was made lately to grant continued exemption to the Whewell Professor from the condition as to residence which is required from practically all the occupants of chairs. The proposal met with some opposition, and was eventually negatived by a substantial majority. It cannot be too plainly stated that the statutory duties of most professors are trivial and elementary. To their credit, be it said, many professors work like slaves, but we cannot hope for support from the ideal commercial benefactor until we set our house in order on business lines.

The authorities have taken in hand the subject of motor cars: those who wish to drive these dangerous machines must first satisfy their college tutors as to their physical and pecuniary fitness. Two fatal accidents in the neighbourhood of Cambridge have brought the matter into prominence, but the results of the inquests in each case showed that the respective drivers were exercising care and skill far above the average.

The balls as usual have been crowded and successful. The Hawks Ball, which has established a reputation for itself as the

opening festivity of the May week, this year fully justified expectations. The other big functions were the dances given by Trinity and the Freemasons, while smaller and hardly less enjoyable balls were given by half-a-dozen colleges on their own premises.

The races saw Trinity Hall still at the head of affairs, though at one time they were pressed by Jesus, which had a remarkably well trained crew. Among the lower boats the most successful were King's II. and Magdalene, which made five bumps each. Under the regime of Mr. Donaldson, Magdalene is rapidly regaining its position, and in a few years it will rival many of the larger and more important colleges.

Mr. William Bateson, of St. John's, has been elected to the new Professorship of Biology. This had long been a foregone conclusion. Speculation is rife as to the selection of a Professor of Chemistry to succeed Dr. Liveing; and the names of Mr. Rubemann, Mr. C. T. Heycock, and Dr. Fenton are freely mentioned—their qualifications, briefly stated, being: Mr. Rubemann, learning; Mr. Heycock, teaching power; and Dr. Fenton, brilliance in research work.

It is very noticeable how many of our leading athletes have succeeded in getting their names into the Tripos lists this year. Among others we may mention C. B. Barry (the golfer), Twelfth Wrangler; W. G. Lely (captain of the Rugby Football Team for next season), First Class Classical Tripos; D. C. R. Stuart (President of the Rowing Club) and J. W. Buchanan (the cricketer), Law Tripos; T. A. Godby and F. C. Tudsberry (football), E. W. Powell (rowing Blue), and A. E. D. Anderson (quarter-mile Blue), History; H. J. Goodwin (cricket Blue) and A. E. Herman (football), Mathematical Tripos.

Before the end of the first week of July, the men will be coming back for the real work of the vacation. At the time these notes are penned, Cambridge is quiescent and the May week only a memory.

THE Bill "to make further provision with respect to the University of Durham," introduced by Mr.

Hills, member for Durham City, proposes to appoint a body styled the University of Durham Commissioners, and consisting in the first instance of the Duke of Northumberland, the Bishop of Exeter (sometime Vice-Chancellor of the University of London), Lord Barnard, Sir Francis Mowatt, Sir W. S. Church, M.D., Mr. John Scott Fox, K.C., Chancellor of the County Palatine of Durham, the Rev. Dr. J. R. Magrath (Provost of Queen's College, Oxford), and Dr. Joseph Larmor (Lucasian Professor of Mathematics at Cambridge). Their powers are to make statutes regulating the constitution of the University and the powers and duties of its authorities and constituent bodies and the disposition of its property in accordance with a scheme scheduled as an appendix to the Bill. The other clauses are chiefly concerned with details, except that provision is made for the affiliation to the University in the faculty of science of the Technical College of the borough of Sunderland, subject to its satisfying the conditions specified by the Senate of the University. A "Council of the Durham Colleges" is to be set up, which is to carry on University College and Bishop Hatfield's Hall as residential colleges, due regard being paid to the original purpose of the endowment and to its connexion with the Cathedral Church of Durham. The two canonries of Durham annexed to professorships of Divinity and Greek in the University shall remain so annexed, the appointments being made, as now, by the Bishop of Durham. The Newcastle division of the University is to consist of the University College of Medicine and Armstrong College, Newcastle, but no Council is set up for this division.

At a meeting of the Court of the University, Dr. Hopkinson, who presided, said that the University had had under consideration

with the Authorities of the County of Cheshire the possibility of establishing a course which would lead to degrees in Agriculture. The Board of Agriculture had been asked for their assistance, and if it were granted it would help to establish a valuable extension of the work of the University. The Council had decided to revert to the old method by having a Chair of Clinical Medicine and also one of Systematic Medicine, instead of having the two combined as was the case until recently. There had been an increase in the number of students entering the University. It had not been large, but it had been steady, and that was perfectly satisfactory.

A resolution from Convocation declared that it was high time

that a common understanding was arrived at between the University of London and the Northern Universities as to the mutual recognition of matriculation certificates on terms of equivalence. The Vice-Chancellor said a concordat with Oxford and Cambridge had been established. If there was delay in the case of London it was not the fault of the Northern Universities, who had declared themselves perfectly ready to enter into an agreement. The Convocation also forwarded a resolution declaring that it was desirable, in the interests of matriculated students, who were unable, for financial and other reasons, to take the three years' course for B.A. or B.Sc. degrees, that a five years' course of evening classes should be established. This was referred to the Senate, with a suggestion that information should be obtained from the Universities of Liverpool, Leeds, and Sheffield.

Sir Frank Forbes Adam reported that a deputation from the University had succeeded in inducing Mr. Asquith to let the Government grant remain at £12,000, instead of being reduced to £10,000 as had been proposed. There was every reason to think that Mr. Asquith's successor as Chancellor of the Exchequer would at least keep the grant at the higher figure, even if he did not increase it.

**London—Queen's.** THE sixtieth anniversary of the foundation of Queen's College, 43 and 45 Harley Street, was celebrated (May 25). Canon G. C. Bell, the Principal, having read his report, the Bishop of London, the Visitor, congratulated the College on attaining its diamond jubilee and on its most flourishing condition, to which all those who knew the work done there could testify. He expressed his genuine sympathy with them in the losses they had sustained through the death of Profs. Gadsby and Hall Griffin, and said that, with regard to the happier loss of their Head Mistress, Miss Luard, he had to confess that he had something to do with the taking of her from them. The fact that she was the first lady Principal at Whitelands was an honour to Queen's College, and he was sure they all wished her great success in the work she was undertaking. The Bishop of London afterwards addressed the students on the subject of prayer. Canon Bell thanked the Bishop for his address, and a formal vote of thanks, proposed by Canon Benham and seconded by Mr. Maurice Powell, President of the Council, was carried.

**Jews' College.** DR. ADLER, the Chief Rabbi, presided at the distribution of prizes to the students of the Jews' College, Queen Square House, Guilford Street, Bloomsbury. Having presented the Rabbinic diploma to the Rev. Barnett I. Cohen, B.A., and the prizes to the students, he said that to be lifelong teachers they must be lifelong students; eloquence might be praised, but it was character that influenced men. Sir Philip Magnus, M.P., in proposing a vote of thanks to the principal, said that during the past few weeks he had been subject to a vast amount of hostile criticism owing to the part he had taken on the education question. He had been told that a Jewish M.P. should do all in his power to help his own race, provided it did not clash with the interest of the State. He agreed with that, for it applied to every Jew. He opposed the present Education Bill because, in his opinion, it would be harmful to the citizens of this country. He held that religious teaching was an essential part of elementary education, and that children should be taught their religion by ordinary school teachers and in school hours. This was in the interest of all religious communities. The highest function of elementary education was the bringing up of moral citizens, and if they were to give sound moral teaching it must be accompanied by religious instruction. Several gentlemen protested against the introduction of politics at the meeting, but the chairman ruled that, upon such an important subject, a statement ought to be made.

**Edinburgh.** THE University Court has rejected the scheme presented by the Scottish Association for the Medical Education of Women. In their opinion, there is no sufficient evidence that the Association has, since it intimated to the Court the fact of its being deprived of accommodation at Minto House, made any serious attempt in conjunction with its staff of teachers to continue the present system of teaching. In the circumstances, the Court—as they do not possess, and see no definite prospect of acquiring, resources for providing separate accommodation for the medical education of women—can do nothing. Further, they do not see their way to approve of mixed classes in the Faculty of Medicine.

### THE EDUCATIONAL LADDER.

**CAMBRIDGE UNIVERSITY.**—Tyrwhitt's Hebrew Scholarships: (1) A. E. Talbot, B.A., Emmanuel; (2) F. J. Padfield, B.A., Gonville and Caius. Mason's Prize for Biblical Hebrew: J. H. Bentley, B.A., St. John's, and A. E. Talbot, B.A., Emmanuel, equal. Wiltshire Prize (Geology and Mineralogy): W. C. Smith, scholar of Corpus; *proxime accessit* A. H. Noble, scholar of Queens'. Harkness Scholarship (Geology): T. O. Bosworth, B.A., scholar of St. John's. John Winbolt Prize (Civil Engineering): L. B. Turner, B.A., King's; honourably mentioned, E. T. Busk, King's. Gladstone Memorial Prize (History): J. E. S. Green (Peterhouse) and T. D. Purser (Trinity).

Mr. Selig Brodetsky (Jews' Free School; Central Foundation School, Cowper Street, E.C.; and Trinity) and Mr. A. W. Ibbotson (Solihull Grammar School; King Edward's School, Birmingham; and Pembroke) are bracketed Senior Wranglers. Mr. Hubert Minson (City of London School and Christ's) is Third Wrangler. Mr. Thomas Knox Shaw (Owen's School, Islington; Blundell's; and Sidney Sussex) is fourth. Miss Marjorie Long (North London Collegiate School and Girton) is equal to the Fourth Wrangler; Miss J. F. Cameron (B.A. Edin., Newnham) equal to Tenth; and Miss L. Warren Jones (Blackheath High School and Girton) equal to Twentieth.

We note with pleasure the success of two esteemed contributors to our mathematical columns: Mr. G. N. Watson, B.A. (Part II., Class I., Division 2), and Mr. W. Telfer (bracketed twenty-fourth Wrangler).

**Pembroke.**—Classical Exhibition: N. J. Symons, The Crypt School, Gloucester.

**CHARTERHOUSE.**—Entrance Scholarships: The following is the order of candidates, of whom ten at least will be elected: J. S. Arthur, A. R. Gordon, C. L. Ferguson, R. J. P. Rodakowski, C. N. H. Lock, G. L. Thorp, H. O. Lee, G. K. G. Keen, H. P. Devenish, C. O. B. Dickinson, D. N. Barbour, C. C. A. Monro, J. L. Hopkinson, G. H. Walker, the Hon. D. O'Brien, C. E. Lucette, J. D. Macleod, G. Greenish, L. A. Westmore, F. R. Hardie, and O. D. Atkinson.

**CHELTENHAM COLLEGE.**—Scholarships: I. S. O. Playfair, Cheltenham College, formerly at Mr. Johns's, Winton House, Winchester; A. D. Roberts, Cheltenham College, Junior Department; B. H. Waddy, Cheltenham College, formerly at Messrs. Chater's and Hoffgaard's, Fretherne House, London; J. C. O'G. Anderson, Cheltenham College, formerly at Mr. Mallam's, Dunchurch Hall, Rugby; W. D. Churcher, Cheltenham College, formerly at Mr. Marshall's, Belsize School, Hampstead; and S. P. M. Morgan, Cheltenham College, formerly at Mr. Carey's, Mournie Grange, Kilkeel. Honorary: F. H. Saville, Cheltenham College, Junior Department; G. K. P. Hebbert, Cheltenham College, formerly at Mr. Church's, Eilerslie, Fremington; A. L. Pemberton, Cheltenham College; V. T. Pemberton, Cheltenham College; A. V. D. Wise, Cheltenham College, formerly at Mr. Wise's, Oakfield, Rugby; A. H. G. Cox, Mr. Auden's, Glyngarth, Cheltenham; F. H. Tate, Cheltenham College; R. W. Copland, Mr. Foster's, Stubbington, Fareham; F. L. Eardley-Wilmot, Mr. Haskoll's, Pelham House, Folkestone; R. Jesson, Mr. Johns's, Winton House, Winchester; D. G. McGregor, Cheltenham College; G. L. Reid, Dr. Williams's, Summerfields, Oxford; E. T. Roberts, Mr. Vickers's, Scaitcliffe, Englefield Green; W. Scott Watson, Cheltenham College; W. H. Steavenson, Cheltenham College; and G. H. Ward, Cheltenham College. Old Cheltonian Scholarships: E. G. James, Cheltenham College, formerly at Mr. Dobie's, Moorland House, Heswall; and V. T. Pemberton, Cheltenham College. Special Army Scholarships: I. S. O. Playfair (Southwood scholar), Cheltenham College, formerly at Mr. Johns's, Winton House, Winchester; G. K. P. Hebbert (Dobson scholar), Cheltenham College, formerly at Mr. Church's, Eilerslie, Fremington; and A. L. Pemberton (Jex-Blake scholar), Cheltenham College. House Exhibitions: N. C. Aldridge, Mr. Mills's, Highfield School, Liphook; F. L. C. Hodson, Miss Knapp's, Ormond House, Dursley; and T. W. Manley, Cheltenham College.

**DUBLIN, TRINITY COLLEGE.**—Fellowship: R. W. Tate, M.A. Madden Prize and £50: Harry Thrift, B.A. Fellowship Prize (£50): Hugh Canning, B.A. Fellowship Prize (£20): J. C. Wasson, M.A. Mathematical Scholarships: Gerald R. E. Foley, William Bartley, F. T. T. Tree, D. H. Cole, T. W. H. Kingston. Classical Scholarships: S. H. Wright, W. G. E. Burnett, H. O. Holmes, J. G. Acheson, W. L. Murphy, H. G. Livington, John Tobias, H. A. Cox, Ellen K. Bryau (non-

Foundation). Marshall Porter Prize: H. de Beauvoir Bewley. Experimental Science Scholarships: James Austin and T. A. Wallace. Modern Literature Scholarships: Christabel F. Godfrey, Mary C. Michell, Phœbe Talbot-Crosbie, Vera Matheson (all non-Foundation), John W. Eaton.

DULWICH.—School scholarships—Senior (under sixteen): Classics, D. C. Thompson and A. L. Attwater; Mathematics, G. J. Heath; and Science, S. C. Bate. Junior (under thirteen): G. P. S. Jacob and W. E. Grey. School prizes—Sixth Form: Compositions in Greek Prose, Greek Verse, and Latin Prose, R. Stanton; Latin Verse, C. B. Coxwell. Remove: Greek and Latin Prose, J. Wann and C. Cullis respectively. Classical Upper Fifth: Latin Prose, J. S. Mann.

ELTHAM COLLEGE.—Medals: Royal Humane Society Medal, R. H. Whittall; Cookney Medals (for industry and good conduct), P. P. M. C. Plowden (Open Scholar of Balliol, Oxford), H. Smith (Entrance Scholar of Charing Cross Hospital), and H. N. Bennett; Mathematical Silver Medal, J. B. Odam; Classical Silver Medal, H. W. Howe; Gold Medal (the highest distinction of the school, and only given for "marked distinction"), T. K. E. Batterbury.

LONDON INTER-COLLEGIATE SCHOLARSHIPS BOARD.—Entrance Scholarships and Exhibitions awarded on the results of an examination held on May 13 and following days:

Tenable at University of London, University College.—Andrew's Languages and English History (£30): Louise W. Stone, Stroud Green High School. Science (£30): B. A. Keen, Southend Technical School. Campbell Clarke (£40 for three years): Eileen O'Rourke, City of London School. West (£30): N. L. Mackie, Bancroft's School, Woodford.

King's College, London.—Two Clothworkers' Exhibitions (£30 and £20 for two years): (1) W. Allard, (2 and 3) L. C. Budd and W. Legg (equal).

East London College.—Four Drapers' Science for Men (£40 each for three years): C. D. West, Strand School; J. W. T. Walsh, Hampton Grammar School; W. E. Hawkins, St. Dunstan's College, Catford; G. L. Matthews, Hampton Grammar School. Two Drapers' Science for Women (£40 each for three years): Winifred M. Parker, Mary Datchelor School, Camberwell; Kathleen Balls, City of London School. Two Drapers' Art for Men (£40 each for three years): A. E. Birch, Colfe's Grammar School; H. A. Auty, the Modern School, Leeds, and Battersea Polytechnic.

LONDON UNIVERSITY.—

University College.—Entrance Scholarships: See under London Inter-Collegiate Scholarships Board. Slade Scholarships (£35 for two years): A. W. F. Norris and F. C. Britton.

MARLBOROUGH.—Scholarships—Senior Classical: (1) J. F. Huntington, Middle v.; (2) J. L. Bulmer, Lower v. i.; (3) J. B. Kirkpatrick, Lower v. i.; hon. mentioned, A. Wedgwood, Middle v. Ireland Scholarship—D. E. Hodge, Lower v. i. Author's Scholarship—E. A. Pam and C. W. P. Jeppe, equal vi. Junior Classical—(1) A. J. Hopkinson (House Scholarship), Temple Grove, Eastbourne; (2) G. F. Squire, Cathedral Choir School, Oxford; (3) H. W. Roseveare, Ryde; (4) H. F. A. Turner, Matlock; (5) B. K. B. Hall, Exeter School; (6) C. H. Sorley, King's College Choir School, Cambridge; (7) R. J. Shackle, Shell a, Marlborough College. Modern School Senior—G. W. Bain, Mod. v. i. Modern School Junior—D. J. St. C. Mullaly, Mod. Upper i.; hon. mentioned, W. A. Kohn, Mod. v. i.

MERCHANT TAYLORS'.—Sir Thomas White Scholarships at St. John's College, Oxford: S. R. K. Gurner and D. G. A. Allen. Andrew Exhibition at St. John's College, Oxford: R. H. A. Newsome. School Exhibition for Hebrew and Divinity: K. M. Robathan. Parkin Exhibition for best Mathematician leaving for Cambridge: C. G. B. Stevens. Richard Hilles Exhibition for Mathematics: V. T. Ellwood. School Tercentenary Scholarship: G. L. Prestige.

OXFORD UNIVERSITY.—Gladstone Memorial Prize: M. L. R. Beaven, scholar of Exeter. Rolleston Memorial Prize: Cecil Clifford Dobell, B.A., Trinity College, Cambridge. Honourably mentioned: W. K. Spencer, B.A., and Charles H. G. Martin, B.A., both of Magdalen College. English Poem on a Sacred Subject: St. John W. L. Lucas, M.A., University College. Abbott Scholarship: Alan H. M. Salmon, Exhibitioner Elect of Worcester. Hertford Scholarship: Patrick H. Shaw Stewart, scholar of Balliol. *Proxime accessit*, Druce R. Brandt, Exhibitioner of Balliol. Highly distinguished: John D. Denniston, scholar of New College. Honourably mentioned: Eric A. Barber,

scholar of New College; Lionel G. M. Glover, scholar of Trinity; and Roderick McKenzie, scholar of Trinity.

Exeter.—Open Scholarship in Classics: George Leicester Marriott, Denstone College. Exhibition in Classics: Eric Muncaster, King Edward's School, Birmingham, Michell Exhibition: Frederick B. Bedale, Exeter College (formerly of Weymouth College).

Jesus.—Research Fellowship, tenable three years: Mr. A. H. Church, M.A., Jesus.

RUGBY.—Entrance Scholarships—(1) T. S. Morris, from Friar's School, Bangor (Benn Scholar); (2) W. L. Bateson, from Lockers Park, Hemel Hempstead; (3) T. N. Ackroyd, Rugby School; (4) J. C. Dunkin, from Rottingdean, Brighton; (5) B. W. Lindsay, from Clevedon, Somerset; (6) I. F. L. Elliot, Rugby School; (7) R. T. F. D. Roberts, from Intermediate County School, Towyn; (8) K. K. Bonnerjee, from Bilton Grange, Rugby; (9) D. E. E. Richardson, from South Lodge, Lowestoft; (10) C. N. Solly, from Mostyn House, Parkgate, Chester; (11) M. O. Marshall, from St. Winifred's, Kenley.

TONBRIDGE.—Entrance Scholarships: the two new £100 Judd Scholarships for boys under fourteen: G. E. C. Cressy (from Mr. A. L. Bickmore, Tonbridge) and E. Hale (from Rev. C. R. Carter, Maidenhead). The under-fifteen Judd Scholarship: E. C. Wood (Foundation Scholar in the school).

### INTERNATIONAL MORAL EDUCATION CONGRESS.

THE preparations for holding the first International Moral Education Congress, which will meet in the University of London from the 25th to the 29th of September, are being actively carried forward. An appeal by the Hon. Treasurer (Lord Avebury) and the British Vice-Presidents includes the following statement:—

The Congress has an essentially practical object in view—that of improving the moral education offered in schools. To attain this object the organizers have appealed for support to educationists and to educational officials the world over. Almost all the educational leaders of Europe, without distinction of religion or party, and a large number of the highest educational officials in many countries, have responded to this appeal, and have welcomed the holding of the Congress. The accession of these administrators is of special importance, since only the co-operation of Governments can ensure the realization of the suggestions which may be expected from the conference.

This is the first of a proposed series of international congresses dealing with the problems of moral education. Accordingly, this Congress restricts itself in the main to a general survey of school problems from a moral point of view. Matters of school organization, of methods of training and teaching, of discipline, of direct and indirect moral instruction, of the relation of moral education to religious, intellectual, æsthetic, and physical education, will be discussed; and everything is being done to get the ablest specialists to read papers, most of which will afterwards appear in the report, and should supply invaluable data for the furtherance of moral education all over the world.

Donations, which are urgently needed, may be sent to Messrs. Roberts, Lubbock, & Co., 15 Lombard Street, E.C.; to the Hon. Treasurer, Lord Avebury; or to the General Secretary, Gustav Spiller, 13 Buckingham Street, Strand. Further information about the Congress will be gladly supplied by the General Secretary.

A comprehensive survey of the problem of Moral Education in schools will be exhibited in a series of short papers on the main points of practical interest. The lines of inquiry are generally indicated in the following "Questions," which have been widely circulated, and to which answers are requested by August 1:—

I.—*School and Home*.—(1) (a) What is being done in the educational establishment or establishments with which you are acquainted, and (b) what do you recommend being done, to bring about an effective co-operation between school and home? (2) To what extent is such co-operation necessary or useful? (3) What do you think are the relative advantages in this respect of boarding schools and day schools?

II.—*Discipline, Moral Training*.—(4) What is being done in the educational establishment or establishments with which you are acquainted, or what do you recommend being done, in the matter of (a) developing and respecting the individuality and the sensibilities of the child, (b) encouraging friendly rather than distant relations between teacher and child, and (c) emphasizing methods of suasion and effective organization rather than the infliction of punishments (more especially corporal punishments) and the distribution of rewards? (5) To what extent do you find corporal punishment resorted to, and what do you think are its moral effects? (6) What exactly do you find to be the effect on discipline and on moral training of sound methods of teaching, of the careful

preparation of teachers, of small classes, of a moderate demand only on teachers and pupils, of tasteful school decorations, and of school organization generally? (7) (a) What, outside the usual course, is being done, and (b) what do you recommend being done, by the educational establishment or establishments with which you are acquainted, to encourage the child in acting rightly (self-government of pupils, special tasks allotted to pupils, guilds of honour, &c.)? (8) Would you name about a dozen books which you consider specially suitable ethically for children in primary schools?

III.—*Moral Instruction, Direct and Indirect.*—(9) What is being done in the educational establishment or establishments with which you are acquainted in regard to separate and in regard to indirect moral instruction? (10) In giving direct moral instruction, what form do your lessons take? (11) What are your reasons for favouring (a) separate, (b) indirect, or (c) both separate and indirect moral instruction? (12) Within the educational establishment or establishments you know (a) is moral instruction definitely aimed at? (b) are there any ethical subjects, such as hygiene, temperance, purity, or kindness to animals singled out for special treatment? (c) is there a deliberate attempt to utilize for ethical purposes one or more subjects in the curriculum? (13) How far, within your knowledge, does the teaching of civics tend to develop high-minded citizens? (14) Do you think it important in our times for the school to communicate to the young a clear idea and a distinct ideal of life and duty, and if so, do you think that separate instruction in morals is necessary or unnecessary for this? State your reasons.

IV.—*School Habits, Personality of Teacher.*—(15) What is your opinion regarding the contention that school habits (attention, industry, punctuality, order, courtesy, &c.) always, as a rule, or often, become general and permanent habits, and are therefore powerful factors in moral education? (16) What is your opinion regarding the contention that the habits of thought and feeling acquired through the study of special subjects (mathematics, history, logic, &c.), always, as a rule, or often, become general and permanent habits of thought or feeling? (17) If you are doubtful as to the contentions in (15) and (16), do you think that, by applying special educational methods, (a) "school habits" and (b) limited habits of thought and feeling acquired in the study of special subjects, may be made to become general habits? (18) What value, from the point of view of the moral training of children, do you place on the personality of the head teacher and the assistant teacher? Do you think that the personality of those who teach may be developed, at least to some extent, in the training colleges for teachers?

V.—*Training Colleges, Continuation Schools, &c.*—(19) What part in moral education does and should the training college for teachers play? (20) Do the necessities of moral education demand that all teachers—primary, secondary, and University teachers—should pass through training colleges? (21) Is there any need, and, if so, what need, to prepare intending teachers in giving moral instruction? (22) (a) What is being done, and (b) what do you recommend being done, with regard to moral education in the polytechnic, commercial, or continuation school or schools with which you are acquainted?

VI.—*Universities.*—(23) (a) What is being done in the University or in the Universities with which you are acquainted, and (b) what do you recommend being done, to promote the growth of moral character and moral insight in the students?

Mrs. Bryant, D.Sc., Litt.D., is President of the Executive Committee, and Prof. J. W. Adamson, of King's College, London, is Vice-President.

## THE COLLEGE OF PRECEPTORS.

### MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on June 20. Present: Mr. E. A. Butler (Vice-President), in the chair; Prof. Adams, Prof. Adamson, Dr. Armitage-Smith, Mr. Bain, Mr. Barlet, Rev. J. O. Bevan, Rev. J. B. Blomfield, Rev. A. W. Boulden, Mr. Brown, Mr. J. L. Butler, Mr. Easterbrook, Mr. Eve, Mr. Hawe, Mr. Kelland, Mr. Ladell, Dr. Maples, Dr. Marx, Mr. Milne, Miss Punnett, Mr. Rule, Mr. Rushbrooke, Mr. Starbuck, Rev. J. Stewart, and Mr. Storr.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the number of entries for the Midsummer Certificate and Lower Forms Examinations was about 5,520.

The Diploma of Associate was granted to Mr. W. J. Nevins, who had satisfied the prescribed conditions.

It was resolved that the Council should recommend the General Meeting to make a contribution towards the expenses of the International Congress on Moral Education to take place in September next.

Professor Adams was appointed to deliver the Autumn Course of Lectures on the Practice of Teaching, to commence in October next.

Saturday, July 18, was fixed as the date of the next Ordinary General Meeting of the members of the College.

The representatives of the College presented a report of the proceedings of the Federal Council of Secondary School Associations.

The Examination Committee presented a Report recommending: (a) That no change be made in the existing regulations under which candidates at the Certificate Examinations are allowed to obtain Certificates of a lower class than that for which they are entered; (b) That a detailed syllabus of geography for the Third Class Examination be drawn up, to be co-ordinated with the syllabuses already published for the First and Second Class examinations; (c) That a letter be addressed to the Board of Education pointing out the inconvenience caused to heads of schools by the Board's Regulations for Secondary Schools with regard to the entry of pupils of such schools for external examinations.—The Report was adopted.

The By-Laws Committee presented a Report recommending the following alterations in Section V. of the By-Laws:—(a) That candidates to fill the places of the twelve members of the Council retiring by rotation at the end of any year should be nominated by individual members of the College, and that the Council as a body should not nominate unless the number nominated by individual members of the College should fall short of the required number. (b) That the length of notice of nomination should be shortened from 30 to 24 days before the election. (c) That when electing members of the Council members of the College should be allowed to vote for any number from 1 to 12. (d) That notice of amendments to propositions discussed at General Meetings should not be required, except in the case of propositions relating to By-Laws. The Committee submitted an amended form of Section V., which embodied the proposed alterations and which had been approved by Counsel as being in conformity with the provisions of the Charter, and they recommended that the Council should propose the amended form for adoption at the next General Meeting of the members of the College.—The Report was adopted.

The draft Report of the Council to the General Meeting was considered, and was referred to the President, Vice-Presidents, and Dean for final revision.

The following persons were elected members of the College:—

Mr. W. A. Newsome, B.A. Lond., 25 Brownswood Road, Finsbury Park, N.

Mr. J. S. Rathbone, A.C.P., 6 Springfield Road, Guildford.

The following books had been presented to the Library since the last meeting of the Council:—

By E. ARNOLD.—Arnold's Effective Arithmetics, Books I.—VI.; Arnold's Sesame Readers (5 Books); Arnold's Literary Reading Books (Chips from a Bookshelf); Foat's Grammatical English; Moore's Gryphius' Herr Peter Squenz; Renault's Petite Grammaire Française; Van der Heyden's Algebraic Examples, Books I. and II.; Weber's Scènes Infantines; Witton's Simplified Caesar, and Compendium Latinum.

By G. BELL & SONS.—English Odes, edited by E. A. J. Marsh.

By A. & C. BLACK.—Lyde's School Text-Book of Geography, and Child's Geography of England and Wales.

By the CAMBRIDGE UNIVERSITY PRESS.—Davies's Sophocles' Trachiniae; Smith's Chaucer's Prologue and Knight's Tale.

By MACMILLAN & CO.—Baker's Pensées, Maximes et Réflexions de Pascal, La Rochefoucauld and Vauvenargues, and Word- and Phrase-Book to the same; Fynes-Clinton's Molière's L'Avare, and Word- and Phrase-Book to the same.

By MARLBOROUGH & CO.—Marlborough's Self-Taught Series (Arabic, Danish, Dutch, Egyptian, French, German, Modern Greek, Hindustani, Hindustani Grammar, Italian, Japanese, Japanese Grammar, Norwegian, Portuguese, Russian, Spanish, Swedish, and Turkish); Marlborough's Series of Foreign Commercial Correspondence (French, German, Italian, and Spanish); Travellers' Practical Manual of Conversation in English, French, German, and Italian; Ahn's French Grammar; Camphuis's Rules of French Grammar at a Glance; De Beauvoisin's French Verbs at a Glance, and First Book of Les Aventures de Gil Blas; De Marney's Toujours Prêt; Dudevant's French Reader; Franck's German Letter-Writer; Hahn's Interlinear German Reading Book; Louis's Poésies de l'Enfance; Meissner's German Language; Standing and Thimm's French Technical Words and Phrases; Thimm and von Knoblauch's German Technical Words and Phrases.

By J. MURRAY.—Martin's Practical Arithmetic Examples, Part I.

By the OXFORD UNIVERSITY PRESS.—Cestre's Quintet's France et Allemagne.

By the INSTITUTE OF CHEMISTRY.—Register of Fellows, Associates, and Students, 1908; Official Chemical Appointments, 1908.

Calendar of the Cape of Good Hope University.

N.U.T. Report, 1908.

### PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.

The following is a list of successful candidates at the Examination held in May, 1908:—

Class I.

Abbott, Miss M. H.

Class II.

Hodson, C. T.

Digitized by Google

## MR. MURRAY'S LIST.

**READY IN JULY.**

**PRICE 2s. 6d.**

### Limen. A First Latin Book.

By W. C. FLAMSTEAD WALTERS, M.A., Professor of Classical Literature in King's College, London, and R. S. CONWAY, Litt.D., Professor of Latin in the University of Manchester.

*Extract from the Preface.*—"We have tried to provide the Grammatical Staple of a three or four years' Course for boys who begin Latin when they are about eleven years old; and also, if some of the exercises be omitted, a two years' Course for those who cannot begin till thirteen or fourteen. In either case we mean our *Limen* to mark what used to be called the Fourth Form Standard—in other words, to enable the average boy or girl in the average school to matriculate in any British University, so far as Latin is concerned; and to fit a bright boy or girl in a large school to begin a more specialized course of Classics. In order to make this possible, we have sacrificed a good deal of lumber—information, that is, relating to all that is abnormal and unusual in Accidence and Syntax, but we venture to hope that we have sacrificed nothing else."

By JOHN THOMPSON, M.A., Head Master of the High School, Dublin.

### An Elementary Greek Grammar for Schools.

Crown 8vo. Part I.—Accidence, 1s. 6d. Part II.—Syntax, 1s. 6d. Complete with indexes, 3s.

The object of the present book is to give in a form suitable for beginners the elements of Greek Grammar. Owing to the great importance of the appeal to the eye in the case of young students, special attention has been paid to the type and arrangement of the printed matter. Attic Greek only has been included, and the usages of poetry distinguished throughout from those of prose. Unnecessary and unusual forms have been left out, and the author has endeavoured to state all the requisite facts both of accidence and syntax in the clearest possible manner. At the same time advantage has been taken of the developments of modern scholarship, so that the work may be thoroughly up to date.

### Greek Grammar Accidence and Syntax for Schools and Colleges. 6s.

### A NEW SYSTEM IN CHEMISTRY TEACHING.

By J. B. RUSSELL, B.Sc. (Lond.),

Formerly Senior Science Master at the Grammar School, Burnley.

#### THE TEACHER'S BOOK.

### Notes on the Teaching of Elementary Chemistry.

With a Sequence of Experiments on Air and Combustion. 3s. 6d.

#### THE PUPIL'S BOOK.

### Notes on Elementary Chemistry.

For the Use of Schools.

In this book an attempt has been made to solve the chief difficulty a teacher of chemistry has to contend with, *i.e.*, that of a text-book forestalling the practical work. A filing arrangement is used instead of the ordinary method of binding, and each lesson is printed as a detachable Section, which should not be filed by the pupil until he has written his own record of the work done.

### The Service of the State.

Four Lectures on the Political Teaching of T. H. Green. By J. H. MUIRHEAD, LL.D., Professor of Philosophy in the University of Birmingham. 3s. 6d. net.

THE PROBLEM OF THE 'SEVENTIES—THE IDEA OF THE GOOD—THE STATE AS WILL AND IDEA—IDEALISM AND POLITICS.

## Murray's French Texts.

FOR UPPER AND MIDDLE FORMS.

Edited by W. G. HARTOG, B.A., Lecturer in French at University College, London; Oral Examiner to the London County Council and to the Army Qualifying Board.

NOW READY.

### La Mare au Diable.

Par GEORGE SAND. With Biography, Foot-notes, and Exercises. 1s. 6d.

### Confessions d'un Ouvrier.

Par ÉMILE SOUVESTRE. With Biography, Foot-notes, and Exercises. 1s. 6d.

This series will consist of selections from the masterpieces of nineteenth-century French authors. Each volume will contain: Notes (which are given *only* when necessary to clear up obscurity, and are printed at the bottom of the page); a series of questions upon the text; grammatical drill upon points which arise in the course of reading; suggestions for free composition, parsing, dictation, &c., and a biographical note (in simple French) descriptive of the career of the author.

 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.  
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS** of **MUTUAL LIFE ASSURANCE** without personal liability on highly favourable terms to  
**THE CLERGY AND THEIR RELATIVES.**

**ALL PROFITS BELONG TO THE MEMBERS.**

Accumulated Fund, **£4,242,820.** Annual Income, **£453,897.**  
 Bonuses Distributed, **£4,256,464.**

**LOW PREMIUMS.** Notwithstanding the lowness of the Premiums charged, the **BONUSES** are on an **EXCEPTIONALLY HIGH SCALE.**

**NEW AND SPECIAL POLICIES.** Application is invited for the **PRO-SPECTUS**, and Leaflets explaining two new Policies, with valuable Options.

**1. WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one-half the usual rate—during first ten years.

**2. PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

**SPECIMEN OF RATES FOR £1,000, WITH PROFITS.**

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

**NOTE.**—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby **£10,000** a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

Messrs. **BLACKIE & SON, Ltd.**, desire to draw special attention to the following important text-book which they have just issued.

*The most recent Observations and Conclusions of Scientific Geographers.*

## **GEOGRAPHY** STRUCTURAL; PHYSICAL; COMPARATIVE.

A TEXT-BOOK FOR SENIOR STUDENTS.

By **J. W. GREGORY, D.Sc., F.R.S.**, Professor of Geology in Glasgow University.

With an Entirely new series of **COLOURED MAPS.** Large 8vo. Price 6s. net.

**T**HE main purpose of this book is, as Professor Gregory states in his preface, to put before the student "the most important facts concerning the Structural Geography of the Earth, and the evolution of our present continents from older lands."

This text-book marks a new departure both in aims and in method. It furnishes the student with such knowledge of the entire surface of the Earth as will ensure his acquisition of the desired sense of "geographical perspective." It keeps constantly before him the "Conception of the Surface of the Earth as the product of interacting physical forces," and so compels him to regard it intelligently as, naturally, "the scene of social activities." While avoiding a detailed and therefore too lengthy discussion of the facts on which they are based, it places before the reader the most recent observations and conclusions of scientific geographers, the data supplied by the most recent explorations and discoveries, and the conclusions to be drawn therefrom. These are put before the reader with the simplicity, clearness, and effectiveness which might be expected from a teacher of Professor Gregory's eminence.

The book is furnished with a very large number of **Illustrations** specially drawn to make clear the meaning of the terms used in it and of the theories propounded. It is furnished also with no less than forty pages of **coloured maps**, many of them of a kind not hitherto to be found in text-books of Geography.

**Write for full particulars to BLACKIE & SON, Ltd., 50 OLD BAILEY, E.C.**

# A SELECT LIST OF BOOKS

FOR

## SECONDARY SCHOOLS.

### **The School Arithmetic.**

An Edition of the *Tutorial Arithmetic* for School use. By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School. 3s. 6d.

"The best arithmetic for schools on the market."—*Mathematical Gazette*.

### **Geometry, Theoretical and Practical.**

By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. Part I.—Contains the matter of Euclid, I., III. (1-34), IV. (1-9). With or without Answers. 2s. 6d.

Part II.—(Euclid, II., III. 35-37, IV. 10-16, VI.) 2s.

"One of the best books on modern lines."—*Oxford Magazine*.

### **Plant Biology.**

By F. CAVERS, D.Sc., F.L.S., A.R.C.S., Professor of Biology at the Hartley University College, Southampton. 3s. 6d.

"The very best of the multitudinous works of this class that have passed through our hands."—*Guardian*.

### **Life Histories of Common Plants.**

By F. CAVERS, D.Sc., F.L.S., A.R.C.S., Professor of Biology at the Hartley University College, Southampton. 3s. [In the Press]

A book for beginners, containing a simple account of the laws of Plant Life and of Common British Plants.

### **The New Matriculation Heat. The New Matriculation Light. The New Matriculation Sound.**

By R. W. STEWART, D.Sc. 2s. 6d. each volume.

These volumes provide a complete school course of co-ordinated theoretical and practical work in Elementary Heat, Light, and Sound.

### **Magnetism and Electricity, The School.**

By R. H. JUDE, M.A., D.Sc. 3s. 6d.

"A useful text-book, that seems much sounder as regards fundamental conceptions than most elementary works on electricity."—*Oxford Magazine*.

### **An Introductory Course of Chemistry.**

By H. W. BAUSOR, M.A. 2s. 6d.

A text-book for beginners written on modern lines.

### **Groundwork of English History.**

By M. E. CARTER, Somerville College, Oxford, First Class Honours in Modern History. 2s.

Contains the salient facts of English History. It is specially suitable as a first text-book of history following after the historical primer.

### **The Matriculation English Course.**

By W. H. LOW, M.A., and JOHN BRIGGS, M.A., F.Z.S. 3s. 6d.

"The matter is clearly arranged, concisely and intelligently put, and marked by accurate scholarship and common sense."—*Guardian*.

### **An Anthology of English Verse.**

With Introduction and Glossary. By A. J. WYATT, M.A., and S. E. GOGGIN, B.A. 2s.

"Thoroughly representative of all that is best in English verse. The introduction is a masterpiece."—*Educational News*.

### **The Matriculation French Course.**

By ERNEST WKEKLY, M.A. *Third Edition, Enlarged*. 3s. 6d.

This book, though written primarily to meet the requirements of London University Matriculation Examination in French, is generally suitable as a school text-book, and as such has met with a wide adoption.

### **The Tutorial Latin Grammar.**

By B. J. HAYES, M.A., and W. F. MASOM, M.A. *Fourth Edition*. 3s. 6d.

"Sensible, correct, and well arranged."—*Journal of Education*.

*Complete Catalogue of the University Tutorial Series, and Lists of Books for Oxford and Cambridge Locals, College of Preceptors, and London University Examinations, post free on application.*

University Tutorial Press, Ltd.,

W. B. CLIVE, 157 Drury Lane, London, W.C.

## CURRENT EVENTS.

**Fixtures.** THE Half-yearly General Meeting of the members of the College of Preceptors will take place on Saturday, July 18.

THE Assembly of the College Faculties in the University of London, University College, will be held July 2 at 3 p.m., when the Dean of the Faculty of Arts (Prof. A. F. Pollard) will report on the work of the session, and the results of the University, Scholarship, and Class Examinations will be announced. Scholars and Medallists will be presented to the Right Hon. Sir Edward Fry, F.R.S., Fellow of the College, who will deliver an address.

At the North London Collegiate School for Girls the Prizes will be distributed on July 3, at 3.30 p.m., by Mrs. H. Montagu Butler, the Master of Trinity in the chair.

A FREE public Exhibition will be held on July 3 and 4 at the L.C.C. Central School of Arts and Crafts, Southampton Row, W.C., of selected works submitted by candidates in connexion with the art scholarships and exhibitions awarded by the London County Council. Tickets of admission on application to the Executive Officer, Education Offices (Room 165), Victoria Embankment, W.C.

THE Autumn Meetings of the Incorporated Association of Assistant Masters in Secondary Schools will be held on September 9 and 10 at the Mathematical School, Rochester.

THE University of Montpellier has organized "un véritable semestre d'études que les étrangers pourront faire dans les meilleures conditions de profit et d'agrément"—November 3 to March 15. Three series of courses: (1) Enseignement pratique du français; (2) Étude historique du français et des langues romaines; (3) Cours généraux—les mœurs et la société françaises, histoire et géographie de la France, &c. Particulars from M. le Professeur Coulet, 39 Boulevard des Arceaux, Montpellier.

A VACATION COURSE "zur Ausbildung in der deutschen Sprache und Literatur" will be held at the Kantonschule, Zug (Switzerland), August 3-29. Particulars from Prof. J. Hug, Zug.

THE University of Oxford has conferred the following honorary degrees:—

D.C.L.: H.H. Maharaja Sir Chandra Shum Shere Jung Bahadur Ranas, G.C.S.I., Prime Minister of Nepal; Right Hon. Lloyd-George, Chancellor of the Exchequer; Right Hon. Sir Ernest M. Satow, G.C.M.G., LL.D. Cantab., late British Minister in Pekin; Right Hon. Charles Stuart Parker, M.A., Hon. Fellow of University College; Sir Robert Hart, Bart., G.C.M.G., late Inspector-General of Customs in China.

D.Litt.: Dr. Ulrich von Wilamowitz-Moellendorff, Professor of Classical Philology, Berlin University; Frederic Seebohm, LL.D. Edin., Litt.D. Cantab.; Benjamin Bickley Rogers, M.A., Hon. Fellow of Wadham College (translator of Aristophanes).

D.Sc.: Dr. F. Raymond, of the Hôpital de la Salpêtrière, Professor in the University of Paris; J. J. Harris Teall, M.A., F.R.S., Director of H.M. Geological Survey; James Ward, Sc.D. Cantab., Fellow of Trinity and Professor of Mental Philosophy in Cambridge University.

In a Convocation to be holden on July 1 it will be proposed to confer the honorary degree of D.D. upon the Archbishops of York and Melbourne, the Bishops of Durham, Winchester, Bristol, Ely, Lahore, and Carpentaria, and Bishop Montgomery; and the honorary degree of D.Litt. upon the Bishop of Calcutta, Metropolitan of India.

THE University of Oxford has, by decree of Convocation, conferred the degree of M.A. upon Mr. C. Frewen Jenkin, B.A., Trinity College, Cambridge, Fellow of New College, and Professor of Engineering Science in the University.

THE University of Cambridge has conferred the following honorary degrees:—

LL.D.: Right Hon. H. H. Asquith, D.C.L., K.C., M.P., Prime Minister; the Duke of Northumberland, K.G.; Right Hon. Earl of Halsbury, ex-Lord Chancellor; Admiral of the Fleet Sir J. A. Fisher, G.C.B., O.M., First Sea Lord of the Admiralty; Sir Hubert von Herkomer, C.V.O.; Dr. Ulrich von Wilamowitz-Moellendorf, Professor of Classical Philology, Berlin University.

Litt. D.: Sir James Henry Ramsay, Bart.; Mr. Rudyard Kipling.  
Sc.D.: Hon. C. A. Parsons, C.B., M.A.; Sir Andrew Noble, Bart., K.C.B.; Sir William Crookes; Prof. Horace Lamb, M.A., Manchester University; Prof. G. Liveing, M.A., Cambridge University; Mr. Alfred Marshall, M.A., late Professor of Political Economy, Cambridge University.

THE University of Durham has conferred the following honorary degrees:—

D.C.L.: The Duke of Devonshire, the Earl of Carlisle, Sir Herbert Maxwell, Sir Charles Elliot, the Archbishop of Melbourne, Prof. William James (Harvard), Mr. A. B. Kempe, Prof. Page, Mr. J. Redmayne Murray.

D.Sc.: Mr. Clement Stephenson, Prof. Weighton, Prof. Louis, M.A., Mr. H. S. Squance, Mr. K. C. Bayley.

THE University of Manchester has authorized Viscount Morley, on the occasion of his installation as Chancellor, to confer the following honorary degrees:—Litt.D.: Mr. A. J. Evans, Mr. Farrar, Prof. Bemont. D.Sc.: Prof. Baldwin Spencer, Emeritus Prof. Gamgee.

Manchester University has also conferred the honorary degree of M.A. upon Mr. William Burton (one of the foremost authorities on pottery); and the honorary degree of M.Sc. upon Mr. William Kirkby.

Prof. Boyd Dawkins has been appointed an honorary Professor of the University.

THE University of Liverpool proposes to confer the following honorary degrees:—

LL.D.: Sir John Brunner, Principal Macalister, and Prof. Vinogradoff.

D.Sc.: Dr. Francis Darwin and Prof. J. L. Todd.

D.Eng.: Hon. C. A. Parsons.

THE University of Sheffield has conferred the honorary degree of D.Litt. upon the Duke of Norfolk, and proposes to confer the degree of D.Sc. upon Prof. W. M. Hicks, the degree of Doctor of Engineering upon Prof. W. Ripper, and the degree of Doctor of Metallurgy upon Prof. J. O. Arnold.

THE University of Glasgow, on the occasion of the installation of Lord Rosebery as Chancellor, conferred the honorary degree of LL.D. upon the Duke of Argyll, the Earl of Elgin, and Lord Newlands.

THE University of St. Andrews has resolved to confer the honorary degree of LL.D. upon the Hon. Sir Joseph H. Carruthers, ex-Premier of New South Wales, on July 1.

PROF. MARSHALL, of Cambridge, has been elected a Corresponding Member of the French Academy of Moral and Political Sciences (Political Economy Section), in succession to the late Lord Goschen.

PROF. SIR GEORGE DARWIN (Cambridge) and Prof. E. B. Tylor (Oxford) have been elected Corresponding Members of the Austrian Academy of Sciences.

M. HENRI BECQUEREL (Paris), Dr. S. Weir Mitchell (Philadelphia), Prof. F. Helmert (Berlin), and Prof. S. Kitasato (Tokio) have been added to the foreign member list of the Royal Society.

THE following gentlemen have been elected to Fellowships at New College, Oxford, for seven years:—Dr. J. S. Haldane, re-elected; Mr. A. F. Welden and Mr. L. G. Wickham Legg, Lecturers of the College; Dr. H. P. Allen, Organist of the College; and Mr. G. L. Cheeseman, formerly scholar of the College.

MR. OWEN MORGAN EDWARDS, M.A., late Fellow and Lecturer in Modern History of the College, has been elected to an Honorary Fellowship at Lincoln College, Oxford.

MR. F. A. POTTS, M.A., has been elected to a Fellowship at Trinity Hall, Cambridge.

A MEDALLION of the late Mrs. Craigie (John Oliver Hobbes) will be unveiled (July 1) at University College, London, by Lord Curzon; and the Scholarship Fund will be presented to the College.

ENDOWMENTS AND BENEFACCTIONS. GONVILLE AND CAIUS COLLEGE, Cambridge, has established a new Corporate Fellowship, called the *Monro Fellowship*. Mr. Thomas B. Wood, M.A., Drapers' Professor of Agriculture, has been elected first *Monro Fellow*.

The College has also offered to the University of Cambridge £1,000 for the *Squire Law Library*; the sum to be called the *Charles Monro Fund*, and the annual income to be devoted to the purchase and binding of foreign books.

In memory of the late Mr. C. H. Monro, M.A., Fellow of Gonville and Caius and translator and editor of portions of Justinian's "*Digest*," who recently bequeathed a large sum to the College.

THE Drapers' Company have made a grant of £22,000 to Oxford University for a new *Electrical Laboratory*.

THROUGH the generosity of a prominent Manchester citizen and in order to encourage research requiring a knowledge of Russian, a travelling studentship, tenable for two years, is to be offered to students of the University of Manchester or of other Universities. The studentship will be of the value of £40 for the first year and of £125 for the second year, and residence in Russia will be a condition of the appointment.

A *Dreschfeld Memorial Entrance Scholarship in Medicine* (open to men and women) has been established in Manchester University. It will be of the value of £30, tenable for one year, and will be awarded on the results of the *Matriculation Examination* in July of each year, the *Joint Matriculation Board* being asked to report on the work of candidates.

MR. J. P. GRIFFITH, Rathmines Castle, Dublin, has given £100 towards the building fund of University College, Bangor.

MR. JACQUES BLUMENTHAL, Queen's House, Cheyne Walk,

Chelsea, has left £2,000 to the Royal Academy of Music, £3,000 to the Royal College of Music to found scholarships, and £500 to the Royal Normal College and Academy of Music, Norwood.

UNIVERSITY COLLEGE, Oxford, has received from the family and friends of the late Sir Edwin Arnold £625, to commemorate the name and work of Sir Edwin and to encourage the study of Oriental languages and literature. The election of a scholar will take place early in Michaelmas Term, the scholarship being awarded to a selected candidate for the Indian Civil Service.

MR. F. SEEBOHM has presented to the newly instituted Maitland Library of Legal and Social History (All Souls College, Oxford) a manuscript survey of the Honour of Denbigh, drawn up in 1335.

MR. PIERPONT MORGAN has given £500 to the funds of the World's Drawing Congress, in view of the large number of American teachers coming to attend it and of the importance of their exhibit.

A COMBINED examination for 23 medical Scholarships and entrance scholarships and exhibitions of an aggregate total value of about £1,500, tenable in the Faculties of Medical Sciences of University College, King's College, and in the medical schools of King's College Hospital, St. George's Hospital, Westminster Hospital, and the London School of Medicine for Women, will be held in London by the London Inter-Collegiate Scholarship Board on September 22 and following days. Full particulars and entry forms may be obtained on application to the Secretary of the Board, University College, Gower Street, W.C., or to the Dean (or secretaries) of the medical schools concerned.

Two Entrance Scholarships in Arts, and two in Science, £50 each, instituted by St. George's Hospital Medical School, London, and tenable by St. George's students at University College or at King's College, will be open to competition in September next.

ST. THOMAS'S HOSPITAL MEDICAL SCHOOL offers an Entrance Scholarship for University Students, £50 (Anatomy and Physiology)—examination, July 21 and 22; and two Entrance Scholarships in Science (Standard: Preliminary Science, London), £150 and £60—examination, July 27-29.

KING'S COLLEGE, London, offers two Worsley Scholarships (free tuition and £20 a year for five years) for the training of medical missionaries for India, in October. Conditions from the Secretary.

THE Royal Historical Society will award the Alexander Prize (Silver Medal) March 31, 1909. Candidates may select their own subject in European or English Colonial History, but must submit it to the Literary Director. Apply to the Hon. Sec., 7 South Square, Gray's Inn, W.C.

SIR WALTER HILLIER, K.C.M.G., Professor of Chinese, King's College, London, and formerly British Consul-General in Korea, has been appointed Adviser to the Chinese Government.

DR. B. P. GREENFELL, Fellow of Queen's College, has been appointed Extraordinary Professor of Papyrology in the

University of Oxford; and Dr. A. S. Hunt, his colleague in papyrus discovery, Lecturer in the same subject.

MR. SYDNEY C. COCKERELL has been appointed Director of the Fitzwilliam Museum, Cambridge University.

MR. WILLIAM BATESON, M.A., F.R.S., Fellow and Steward of St. John's College, Cambridge, and son of the late Master (Dr. Bateson), has been elected to the new Chair of Biology in Cambridge University.

MR. A. C. PIGOU, M.A., King's College, Girdlers' University Lecturer in Economics, has been elected to the Chair of Political Economy at Cambridge, in succession to Prof. Marshall, resigned.

PROF. LIVEING has resigned the Chair of Chemistry in the University of Cambridge, which he has held since 1861.

PROF. WESTLAKE has resigned the Chair of International Law in the University of Cambridge.

DR. FAIRBAIRN has resigned the Principalship of Mansfield College, Oxford, after twenty-three years' service.

DR. JAMES WILLIAMS, D.C.L. Oxon., Hon. LL.D. Yale, Sub-Rector of Lincoln College, has been elected to the new All Souls Readership in Roman Law in the University of Oxford.

DR. W. G. PROTHERO, Litt.D., LL.D., Hon. Fellow of King's College, Cambridge, Fellow of the British Academy, and editor of the *Quarterly Review*, has been appointed Creighton Lecturer in the University of London for 1908-9.

At the University of London, University College, Mr. H. Deans has been reappointed to lecture on "Railway Engineering"; Mr. A. T. Walmisley to lecture on "Waterways, Docks, and Maritime Engineering"; and Mr. W. N. Blair to lecture on "Roads, Street Paving, and Tramways," during next session; and Dr. C. Spearman has been reappointed Reader in Experimental Psychology.

MR. H. J. MACKINDER, M.A. Oxon., has resigned the Directorship of the London School of Economics and Political Science, which he has held since 1903.

At Liverpool University, Prof. Kuno Meyer has been appointed to the new Chair of Celtic, and Mr. F. P. Barnard, M.A., F.S.A., to the new Chair of Mediæval Archæology.

THROUGH the sudden and lamented death of Prof. William Cassie, M.A., Trinity College, Cambridge, hon. secretary to the Physical Society, the Chair of Physics in Holloway College is vacant.

MR. R. N. RUDMOSE BROWN, B.Sc. Aberd., has been appointed to the new Lectureship in Geography at Sheffield University.

Mr. Brown was on the staff of the Scottish Antarctic Expedition, and was recently engaged on a scientific investigation into the Burma pearl fisheries. He is the younger son of the late Dr. Robert Brown, the well known scientist and journalist (*Standard*).

At the Jews' College, London, Prof. Adolph Buckler, Assistant to the Principal, has been appointed Principal, in succession to Dr. Michael Friedländer, appointed Emeritus Principal; and the Rev. Samuel Daiches, Ph.D., Lecturer on the Bible, Talmud, and Shulchan Aruch.

DR. GERALD LEIGHTON, M.D., F.R.C.S., has been appointed Professor of Pathology and Bacteriology, and Dr. D. A. Farquharson, M.B., M.Ch., Professor of Physiology, in the Royal (Dick) Veterinary College, Edinburgh.

THE Professorship of English and Philosophy, Presidency College, Calcutta, has been rendered vacant by the sudden death of Prof. George Robertson Watt, M.A., a month after his arrival in India.

MR. F. S. DELMER, Principal Instructor in English, Kriegsakademie, Berlin, has been appointed Professor of English in the University of Berlin.

MR. FRANK MORLEY FLETCHER, Inspector of Schools of Art in the Southern district of England, has been appointed Director of the College of Art, Edinburgh.

MR. GEORGE LOWSON, M.A., B.Sc., LL.D., Rector of Stirling High School, has been elected President of the Educational Institute of Scotland.

MR. M. O. B. CASPARI, M.A. Oxon., Lecturer in Greek, Birmingham University, has been appointed University Reader in Ancient History at University College and Bedford College (University of London).

MR. V. A. MUNDELLA, Northern Polytechnic, London, has been appointed Principal of Sunderland Technical College.

THE REV. E. G. SEALE, M.A. T.C.D., assistant master, Highgate School, has been appointed Head Master of Cork Grammar School.

A HEAD MASTER (Graduate) is required for the Royal Latin School, Buckingham (£275 initial). Apply to Henry Small, Clerk to the Governors, Town Hall, Buckingham, by July 7.

THE REV. W. F. BURNSIDE, M.A. Cantab., assistant master, Cheltenham College, has been appointed Head Master of St. Edmund's School, Canterbury.

MR. J. H. SHARPE, B.A. Lond., Assistant Master, has been promoted Head Master, Simon Langton Schools, Canterbury.

MISS LATHAM has resigned the Principalship of St. Mary's College, Paddington.

MR. F. R. STODGON, M.A. Cantab., has been appointed Classical Master at Bromsgrove School.

#### Literary Items.

THE Association of Head Mistresses have thoroughly revised and brought up to date their instructive pamphlet on "The True Cost of Secondary Education for Girls." It is published by the Educational Supply Association (42 Holborn Viaduct, E.C.) at 3d. post free.

MESSRS. CASSELL publish Part I. of a new work, entitled "The Nature Book," to be completed in 24 fortnightly parts (7d. each). The scope of the work is comprehensive; the articles are written by experts in popular style; and the illustrations are numerous and excellent. The work will include a number of Rembrandt photogravures and a series of coloured plates from pictures by famous artists. An admirable beginning!

MESSRS. CONSTABLE announce for early publication a Life of "Dorothea Beale, of Cheltenham," by Mrs. Elizabeth Raikes.

MESSRS. A. & C. BLACK announce a new translation of Diego Histado de Mendoza's "Lazarillo de Tormes," by Sir Clements Markham, from the first edition (Burgos) in the Duke of Devonshire's private collection.

THE National Association of Head Teachers have adopted *The Teacher* as their official organ, so that *The Teacher* will henceforth incorporate *The Head Teacher*.

A COMPLETE series of moral lesson books, based on all the sections of the syllabus of the Moral Instruction League, are in active preparation and will shortly be published by Messrs. Nelson.

THE magnificent Christmas number of the *Australian Traveller* describes "Australia to-day, for the Immigrant and Tourist."

THE *World's Work* for June is mainly occupied by a capital description of the Franco-British Exhibition, with profuse and excellent illustrations. The Education Department, however, is rather sketchily dealt with.

THE first and second numbers of the "Paedagogisch Tijdschrift voor het Christelijk Onderwijs" (Hilversum: G. M. Klemker) give good promise of usefulness.

OF the 511 degrees conferred by the New General York University at its seventy-sixth annual commencement, about 50 were taken by women. "Among these was a Portia, who was made a Master of Laws. Paradoxically, 11 learned young women became Bachelors of Laws."

PROF. KARNACK announced, at the Evangelical Social Congress at Dessau, where the reform of girls' education was much discussed, that, after next winter, girls will be allowed to matriculate at the Prussian Universities.

THE Directors of the Hungarian Exhibition (Earl's Court) have decided to allow children free admission when accompanied by adults. Special arrangements are made for schools.

MR. CLOUDESLEY BRERETON, Divisional Inspector to the L.C.C., has been invited as the foreign guest for the year to attend the Annual Congress at Cleveland of the National Education Association of America and to read a paper on "Vocational Education." It is estimated that the Congress will be attended by 50,000 educationists, representing all grades of education.

DR. VERA DANTSCHAKOFF, who figured at the latest Congress of the Anatomical Society in Berlin, has been officially recognized as a professor in Moscow University. She is said to be the first lady that has obtained an appointment as a University teacher in Russia.

"WE have lately become convinced," says President Eliot, of Harvard, "that accurate work with carpenters' tools, or violin, or pencil, trains well the same nerves and ganglia with which we do what is ordinarily called thinking."

"THE biggest battle of all the ages," says the *Western*

*Journal of Education* (San Francisco), "is the one just beginning against consumption. Waterloo, Gettysburg, Mukden are harmless kindergarten plays when compared with the carnage wrought every month by the foul fiend, Tuberculosis. The civilized world is getting together for a campaign against it—for it is preventable, preventable by those who have and use the proper knowledge. Now the scattering of knowledge is the special monopoly of us school teachers; wherefore it behooveth us to sit up and observe intelligently what the world is doing in this particular."

### THE TEACHERS' REGISTER.

In the House of Commons (June 17), Sir P. MAGNUS (London University), on behalf of Mr. Butcher (Cambridge University), asked the President of the Board of Education whether the Government proposed to give any compensation to those teachers who had expended time and money in qualifying for Column B of the Teachers' Register and were placed upon it before its abolition.

Mr. RUNCIMAN (Dewsbury): As the lines of the new Register for Teachers are not yet determined it would be premature for me to offer any opinion as to the proper course to adopt, in whatever respect, as regards teachers who have been registered on the Register which is already in existence, and which is not, I think, yet abolished.

Sir P. MAGNUS asked whether the funds arising from payments made for admission to the Teachers' Register were wholly expended on the maintenance of the Register. If not, in whose hands were these funds, and how was it proposed to deal with them.

Mr. RUNCIMAN: The balance, amounting to £2,971, was handed over by the late Council to the Board of Education. It would be premature to determine its further application until the new Council has been constituted.

Sir P. MAGNUS asked how the Board proposed to deal with the schools whose schemes required that the head master or assistant masters, or any of these, should have been placed on the Register.

Mr. RUNCIMAN: The requirement referred to has already been removed from 11 schemes and is in process of being removed from 67 others. Only 46 schemes remain in which the requirement exists, and in these it can easily be removed on application from the governors. Meanwhile, it is improbable that any inconvenience will be occasioned, especially as the point only arises on the change of the head master or the head mistress of the school.

### TEACHERS' REGISTRATION COUNCIL.

Questions stood in the names of Mr. Butcher, Sir P. Magnus, and Sir W. Anson (Oxford University), asking for the reasons of the delay in the constitution of the Teachers' Registration Council.

Mr. RUNCIMAN: I have nothing at present to add to the answer I gave on this point on June 1 last, except to say that the communication there referred to has not yet reached the Board of Education and that the Board are therefore not yet in a position to take the requisite steps, as then explained, towards deciding the questions relating to the representative nature of the Council as proposed by the deputation of certain educational bodies. Even if, as suggested in the question, the secondary and elementary teachers are agreed upon the subject, the Board have to bear in mind that the Council is required by the Act to be representative of the teaching profession, and not merely of teachers in elementary and in secondary schools. The representatives of the educational associations referred to were not agreed, on being asked the question, as to the particular methods by which the interests of teachers other than those in elementary schools and in secondary schools should properly be safeguarded in the constitution of the new Teachers' Registration Council. The Board are anxious to avoid any possible delay and are hoping to receive in a few days the communications from the representatives which the deputation promised would shortly be submitted.

Sir P. MAGNUS: Can the right hon. gentleman say what educational interests have not yet agreed to the constitution of the proposed Council? Have not the National Union of Teachers and the various educational associations representing head

masters of secondary schools, head mistresses, and assistant masters and mistresses, and the heads of private schools already agreed to the constitution of this Council?

Mr. RUNCIMAN: I pointed out in my reply that certain questions which were addressed to the deputation which waited on the Board in reference to the matter have not yet been answered, and these questions refer to teachers who do not come into the categories mentioned by the hon. gentleman.

Sir P. MAGNUS: Is the formation of this Council to be delayed until every teacher of swimming, or dancing, or music has agreed to its constitution?

Mr. RUNCIMAN: I do not know what justification the hon. gentleman has for sneering at teachers who are not secondary or elementary teachers in the technical sense of the word. It is perfectly obvious that the interests of the teachers engaged in technical education will have to be considered.

Sir W. ANSON asked what were the terms of engagement of the Registrar and other officers of the Registration Council under the Order in Council of March, 1902; and whether any, and what, provision was being made for those officials who, after several years' service, were thrown out of employment in consequence of the dissolution of the Registration Council on March 31, 1908.

Mr. RUNCIMAN: The agreement between the Teachers' Registration Council and the Registrar provided, *inter alia*, that the engagement should be terminable by either party on giving six calendar months' notice in writing. The agreements with the remainder of the staff of the Council provided for three months' notice. The officers of the Council were not in the service of the Board, and I cannot, therefore, admit that any responsibility, direct or indirect, rests upon the Board of finding them further employment. The Board have, however, been able to offer two of the clerks some temporary employment in the office, and it is possible that they may be able to utilize the services of another of the Council's officers from time to time in inspectorial work.

### CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS.

ALEXANDRE DUMAS FILS.

Par M. H. E. BERTHON.

LE 30 mai dernier, M. Berthon, professeur au "Taylorian Institute" d'Oxford, parlait, devant un auditoire nombreux et choisi, d'Alexandre Dumas fils comme auteur dramatique. M. Minssen occupait le fauteuil.

Et tout d'abord le conférencier s'étonne de la faillite à peu près complète du théâtre anglais depuis Shakespeare, et constate la remarquable renaissance dramatique qui se manifeste depuis une vingtaine d'années. Il ne saurait expliquer le premier phénomène ni en démêler les raisons, mais il est certain qu'après Shakespeare l'Angleterre s'est mise à l'école de la France. Sheridan s'inspire de Molière. Après lui vient une longue période où l'on ne s'inspire plus, mais où l'on imite, où l'on pille tout simplement. Puis à la renaissance, à la rénovation, ce n'est pas la tradition nationale que l'on suit, mais bien la tradition française. On ne développe plus la formule de Shakespeare, mais celle de Scribe, de Dumas, d'Augier, de Sardou. C'est là un fait curieux, presque incompréhensible. M. Berthon considère rapidement en quoi diffère la formule dramatique française de celle de Shakespeare, ce qui la rend plus pratique, plus à la portée de talents ordinaires, et conclut que la raison de son triomphe est dû à la *concentration*. Au lieu d'éparpiller l'intérêt dans un vaste tableau des époques ou des races, le drame français le concentre sur l'état d'âme des personnages, leur conscience, leur volonté. L'action en est ramassée sur un moment de leur vie, un problème de conscience, sur une crise morale qui demande une solution, sur une lutte. Ils ne sont plus les jouets des circonstances, ils sont les maîtres de leur destinée. Ils ne subissent pas la loi des événements, ils leur font la loi. Il y a donc triple lutte: contre les circonstances, contre une volonté hors de soi, contre soi-même; triple résultat: au dépens de la vie et de l'honneur (drame), de l'amour propre (comédie ou vaudeville). Mais, quel que soit le résultat, c'est la volonté au service de l'intelligence. Ce n'est plus lors un simple spectacle, un plaisir pour les yeux ou une caresse pour l'oreille, c'est un appel direct à l'intelligence et au cœur. C'est avant tout un théâtre d'idées, idées qui n'entravent ni effusion lyrique ni diffusion épique, et

qui frappent l'esprit non pas tant par des mots que par l'action. Telle est la formule autour de laquelle a évolué le théâtre français depuis Corneille, et qui aujourd'hui a triomphé partout en Europe.

➤ Au point de vue de la renaissance du théâtre anglais et de sa dette envers la France, trois auteurs dramatiques sont surtout à considérer : Dumas, Augier, Sardou. Le conférencier prend le premier, Dumas fils, non point pour donner un compte-rendu de ses pièces, mais bien un exposé de ses idées et de sa méthode; et pour leur compréhension il conseille la lecture de : 1° "Le Demi-monde," "La Question d'argent"; 2° "Denise," "Les Idées de Mme Aubray"; 3° "L'Etrangère," "La Femme de Claude," comme en marquant les périodes d'évolution.

Dumas nous fait cette déclaration : "Toute littérature qui n'a pas en vue la perfectibilité, la moralisation, l'idéal, l'utile en un mot, est une littérature malsaine, née morte." Voilà donc son but clairement, catégoriquement défini. Il croit, avec Rousseau et Mme de Staël, à la perfectibilité de l'homme; il croit que l'instrument de cette perfectibilité est la littérature; il va s'y employer de toutes ses forces, en indiquant les conditions et les moyens. Ce qui frappe chez lui c'est la part pour ainsi dire exclusive qu'il fait aux questions sociales entre les sexes. L'argent, la propriété, la question sociale proprement dite, ne sont pour lui que des problèmes de second ordre relativement au premier qui lui semble toujours plus universel, plus menaçant, primant tous les autres et duquel ils dépendent. Pour résoudre la question il s'en prend d'abord aux lois, faites seulement pour les forts; aux mœurs, plus cruelles encore. Voilà le mal. Quel sera le remède? L'intervention de la loi en faveur des faibles, négligeant peut-être trop, dans sa confiance en l'efficacité des lois, la réforme du cœur humain. Dumas a obtenu la loi sur la divorce. La société en est-elle devenue meilleure? La passion reste éternelle, et aucun article du Code ne met à l'abri de ses ravages. Et puis ses héros sont des oisifs, et partout son milieu exclusif. On lui en a fait un reproche, reproche dont le conférencier montre le bien-fondé. Ses personnages sont toujours les mêmes et ne donnent qu'une faible idée de la variété humaine. On peut presque les compter, et le conférencier les analyse, tant hommes que femmes. En somme, son univers est spécial et restreint, et il semble avoir un peu pris la partie pour le tout. En outre, ses personnages, êtres de chair et de sang tout d'abord, ont fini par ne plus être que des abstractions, et Dumas, comme beaucoup d'autres artistes contemporains, a commencé par le réalisme et fini par le symbolisme. C'est lui qui a introduit le réalisme au théâtre; puis, à force d'observer les faits, il s'est trouvé obsédé par l'idée; et il arrive un moment où il ne demande plus à la vie qu'une confirmation de ses idées, à l'art un moyen pour les démontrer. C'est le système de la *pièce à thèse*. Certes, on ne peut pas toujours peindre ce qui est sans finir par songer à ce qui devrait être. Mais alors l'individualité disparaît. Il n'y a plus place pour la nature humaine. Ce ne sont plus les caractères qui préparent le dénouement, c'est le dénouement qui crée les caractères. Et si, comme il le dit, le dénouement est un total mathématique, les volontés humaines qui forment ce total ne sont plus que des chiffres, des symboles.

Telle est la triple évolution qui s'est faite chez Dumas : il a commencé par l'observation, continué par l'abstraction, fini par le symbolisme. Cet exemple n'est pas unique; c'est un signe des temps. Tels George Eliot, Flaubert, Zola. C'était hardi. Aussi s'est-il fait un beau tapage autour des pièces de Dumas. A force d'art, il est parvenu à les faire passer.

De nos jours la littérature s'enorgueillit d'une découverte, celle de la charité chrétienne. Mme Aubray la faisait présager avant que les leçons de l'Évangile, traduites du russe et du suédois, nous aient mis sur la voie. Et l'on se refusait à trouver dans Dumas, auteur réputé immoral, la charité, la pitié, le pardon, jusqu'à ce que Lemaître nous eût démontré que toutes ces beautés existaient depuis longtemps dans ses ouvrages. Certes on ne peut lui rapporter tout le développement de la pensée contemporaine, mais il faut lui rendre cette justice qu'il y a eu sa grande part. Et puis, par un côté surtout, il est bien dans la note de notre génie national. Il a pour lui son mérite dramatique, car même alors que le moraliste se trompe, l'homme de théâtre subsiste. Il nous tient jusqu'au bout frémissants et enchaînés. Pourquoi? parce que c'est de volontés que vit le théâtre, et que précisément celui de Dumas débordait de volonté. Il a foi dans ses idées, et il fait passer en nous sa conviction. Ses personnages vont droit à leurs fins. C'est là sa force. Il ne laisse jamais oublier le drame à travers la théorie. Et ce mélange de profondeur dans le fond et d'habileté dans la forme en font un des auteurs les plus puissants du XIX<sup>e</sup> siècle.

## THE FRANCO-BRITISH EXHIBITION.

### THE EDUCATIONAL SECTION.

WHAT the Educational Section of the Franco-British Exhibition has done (says the *Morning Post*) is to bring together into manageable compass types of the best work which is being done by different bodies and institutions in different parts of Great Britain and to link them to one another in such a way that the visitor can judge each in relation to the system of which it forms a part, and is inspired by a sense of the value both of unity in the objects aimed at and of variety in the methods taken to attain them. The plan of the exhibition is to give selected specimens of the work done by a large number of different Educational Authorities, and to allow all the educational activities of certain others to appear in a continuous series. At one end of the room are the exhibits sent in by the great public schools, and by Oxford and Cambridge, comprising things new and old, photographs of buildings, facsimiles of charters, and publications of the University Presses. They are interesting and picturesque, but one must look somewhere else for signs of the straining for development and the ferment of ideas. The right hand of the room, which is bisected by a gangway running down the centre, is largely occupied with the exhibits from Manchester and London, the left with those from Scotland, Essex, and Warwick, while the lower half of the room contains specimens of the work of a large number of different authorities which are not represented in such great detail.

Of the larger exhibits the most remarkable is that of Manchester, which includes types of every educational activity of the city, elementary and higher elementary schools, secondary and evening schools, schools of art and technology, institutions for training teachers, and the University. The curious can visualize "the educational ladder" as it exists to-day in one of the greatest municipalities by inspecting the exceedingly interesting chart of educational facilities offered by Manchester. This diagram is one of several. Indeed, one of the merits of the exhibition is that it does not simply offer a text, but supplies a commentary as well. A good example is offered by the elaborate educational statistics which supplement and interpret the charts on the end wall of the hall. The figures of children attending elementary and public secondary schools have long been easily accessible. But the same is not true of the students at technical and agricultural colleges, endowed secondary schools, and the Universities. Until these figures were got out by the Committee controlling the Educational Section of the Exhibition we really had no material for knowing how Great Britain compared with other countries in the matter of, say, University education, and the time and trouble spent in extracting them have produced a really valuable result. From the few authorities whose activities are represented *in extenso* one naturally turns to examine particular exhibits. They are well set out on screens and tables, but as they are designed to explain the work done in about a hundred and sixty different institutions, and are representative of every grade and variety of education, it is difficult to do full justice to any one group. The collection which is most easily appreciated is, perhaps, that which represents the work done by typical technical schools, for the organization of which the Council of the Association of Technical Institutions was largely responsible. Weaving from Lancashire, engineering work from Birmingham, boots and shoes from Northamptonshire, and some beautiful metallurgical work from Sheffield are a few of the exhibits which attract immediate attention.

Near to these comes the arts and crafts group, which gives examples of manual training as it is carried on in the elementary school, with the object not so much of giving practical industrial training as of stimulating the brain through the hand. Then there are the very interesting screens, showing what is, perhaps, the most pregnant development of the last thirty years, the work done by public schools and colleges for girls. Nor is the medical side of education overlooked. Scotch Authorities, in particular, have recently been to the fore in seeking to lay for elementary education a firm foundation of general health, and Govan and Glasgow are conspicuous—the one with its school baths, the other with an elaborate investigation into the effect of housing conditions upon the physical growth and mental capacity of children, which shows that their weight and stature varies very closely with the number of rooms inhabited by their families and the extent to which overcrowding does or does not prevail. Bradford has sent a record of the very important experiments carried out by it with a view to ascertaining the exact effect of

underfeeding in retarding the "educability" of children—experiments which have already been described in these columns and which prove beyond a doubt (will other Education Authorities please note?) that there is, in the case of the poorest children, a wide margin of potential capacity which judicious medical aid can call into activity.

It is proposed to organize a visit of French school children and teachers for one week to the Franco-British Exhibition. In the British Education Section there will be one week during the month of July called the "Children's Week," when French and British children will take part in daily educational exercises, separately and jointly, according to a programme to be arranged for each day. These exercises will comprise—(1) Illustration of oral teaching in French and British schools by question and answer in subjects with which the children are familiar; recitations; geography of France and the British Isles; freehand drawing and such subjects as the teachers may select, in which the children will have to say or do something, the object being to show the mental faculties in activity. (2) Physical exercises in the grounds and gardens of the British Education Section laid out especially for the purpose. These exercises will illustrate the training of the bodily powers, and will comprise drill, gymnastics, and games in which the French and British children may jointly take part, as well as those exercises typical of the customs of either country. (3) To illustrate the history of both countries, for educational purposes, there will be *tableaux vivants*, representing certain events of the greatest historical value. (4) As a grand finale, a *tableau vivant* formed by French and British children combined will be displayed to symbolize the glory of peace and goodwill among the nations, and especially of the "Entente Cordiale." One feature of the symbolic group will be the delivery by a child of each nation of poems especially composed for the purpose in French and in English.

**MODERN LANGUAGES IN SECONDARY SCHOOLS.**

A REPORT recently issued by the Modern Language Association on the conditions of modern language instruction in secondary schools (says the *Morning Post*) furnishes a valuable account of the difficulties which militate against efficiency in a branch of education which is of ever-increasing importance. The report is based upon returns of 119 schools, which represent over 16,500 pupils, and which are drawn, with scarcely a dozen exceptions, from secondary local schools, grammar schools, county schools, intermediate schools, high schools, and municipal schools. Within these very comprehensive limits, therefore, it must be taken as containing information which is of a truly representative character, and as giving a bird's-eye view of the conditions of modern language teaching in four-fifths of the English secondary schools. The only modern languages of which it takes account are French and German, which alone, if the Welsh taught in the schools of the Principality be omitted, have a recognized place in the curriculum. The relative importance attached to each of these two subjects is shown by the following table, which proves the excessive and, as some will think, lamentable preponderance of French over German:—

Schools.	Number.	Pupils taught	
		French.	German.
Boys .....	52	6,782	1,862
Girls .....	40	5,291	765
Mixed ...	27	4,595	597
Total .....	119	16,668	3,224

**UNFORTUNATE POSITION OF GERMAN.**

It is no doubt easier to obtain French teachers than it is to obtain German teachers, and, difficulties of pronunciation apart, a child, particularly if he has worked at Latin, usually finds that French, at any rate in its earlier stages, is more easily grasped than German. Most boys who are learning both languages simultaneously could read La Fontaine's "Fables" with comparative fluency long before they could stumble through two sentences of Grimm's "Märchen." But it is none the less unfortunate that German should occupy the place of Cinderella in modern language teaching. The genius of the language, and particularly of its poetry, has such an affinity with that of England; the commercial relationships between the two countries are so close; the interest, sometimes almost the suspicious interest, taken by Germans in English institutions is, despite the "Entente," so

much more genuine than that of France, that it is a matter of urgent importance that the rising generation in this country should understand Germany through the medium of the German language and of the German mind. In the class of boys' school represented in this report which is typical of the majority of English schools, French and Latin are taught first, German and Greek being sometimes added later, and often only as alternatives. In the girls' and mixed schools French comes first and Latin second, while German receives a disproportionately small share of attention, and Greek is quite exceptional. In short, French is throughout the predominant language, and in a few cases the only language taught. Latin comes second, and German and Greek third in somewhat singular juxtaposition. In view of the part which Latin has played in building up European institutions, it may be wise to prefer Cicero to Demosthenes, but one wonders what Matthew Arnold would have thought of postponing Goethe to Racine.

**THE CURSE OF ECONOMY.**

But, while all modern language teaching is hampered by such great difficulties as at present, it seems almost an irreverence to criticize the precise place which different languages are given in the school curriculum. The principal disadvantage under which the teaching of all of them labours is the inadequacy of the financial provision which is made for them, and which results in preposterously large classes, in underpaid and overworked staffs, in insufficient classroom accommodation, and in the continued use of old-fashioned books and apparatus. It is obvious that in modern languages, above all other subjects, in which, unlike the classical subjects (long since Anglicized beyond recognition), accuracy of pronunciation is one of the objects to be aimed at, beginners' classes should in all cases be small in order to make possible the concentration of the teacher's attention on individual students. Yet at present the vast majority of classes are far too large to admit of sufficient linguistic instruction. Nearly a quarter of them contain more than twenty-five pupils, nearly half of these contain more than thirty, and some contain as many as fifty. The position of the teacher is almost equally unsatisfactory. The salaries of assistant modern language teachers have tended to rise owing to the increasing demand for persons qualified to teach by the so-called "Reform method," and there has been an accompanying though not corresponding rise in the standard of qualification. But, though the salary is less inadequate than it was, it is still not much more than that of the better-paid artisan, and, above all, there is the all-important fact that, except in special cases, the position of an assistant teacher, as such, offers no prospect of a permanent livelihood. As only a small minority of assistant teachers can become head masters this is a serious consideration, with which only a few authorities like the London County Council have found courage to deal. The following table of the average salary of a modern language teacher, which assumes a non-resident basis, and which leaves out of account the great public boarding schools, shows how serious the situation is:

	Initial salaries of		L.C.C.
	Assistant Masters.	Assistant Mistresses.	
Highly qualified .....	£160	£110	Assistant masters £150, rising to £300.
Well qualified.....	£125	£90	Assistant mistresses £120, rising to £220.
Minimum qualifications	£80	£80	—

Moreover, owing again to want of money, the hours are so long as to impose an excessive strain upon the teacher and to leave him no time for study out of school hours. Scholastic agents place the average hours for school work alone among modern language teachers at 26 per week, a system of organized overwork which appears monstrous when placed side by side with the practice of the French secondary schools, where the maximum hours of class work in the *lycées* is at present 17, and in the *collèges* 18. The result is that in England the unfortunate teacher is exhausted by the routine of instruction, and has no time to refresh his mind or to keep abreast with the work that is being done on the subject. It should be the object of reformers to aim at a maximum of not more than 20 hours' teaching per week. Twenty-six hours may not have been excessive under the old regime, but with the introduction of improved methods of teaching they impose an intolerable strain. Our methods have outrun our organization, and the results are often disastrous to the health of the teacher, and consequently to the efficiency of the

instruction in modern languages which he gives. It is surely time that the law intervened to protect assistant teachers by giving them a definite status and prospects, and that the Board of Education used its influence to induce the governors of secondary schools to realize that a competent teacher is a very valuable and delicate machine, which depreciates rapidly unless it is handled with sympathy and consideration.

## REVIEWS.

### "MYTHISTORIA."

*Thucydides Mythistoricus.* By Francis Macdonald Cornford, Fellow and Lecturer of Trinity College, Cambridge. (10s. 6d. net. Edward Arnold.)

By "mythistoria" Mr. Cornford means "history cast in a mould of conception, whether artistic or philosophic, which, long before the work was even contemplated, was already wrought into the very structure of the author's mind." What history, as distinguished from mere annals, can escape the definition? How can the historian step out of his environment when he takes his pen in hand? The term, however, is probably to be regarded less in general application than in special reference to Thucydides. Thucydides had the scientific mind, no doubt, and what he expressly addressed himself to do was to record the events of the Peloponnesian War and the gist of the speeches on the opposing sides—observed actions and alleged motives (official)—with the greatest possible accuracy of investigation, expressly excluding "the mythical" even at the risk of dullness. Mr. Cornford is probably right in taking the sense of "the mythical" as used by Thucydides to be chiefly "inventive embellishment," such as Herodotus employed. He also points out that Thucydides tacitly repudiates the popular superstition and dogmatic philosophy of the day. But there was one thing that Thucydides did not guard against, because he was not aware of it—for it "was the framework of his own thought, not one among the objects of reflection," "a residuum wrought into the substance of his mind and ineradicable because unperceived"—namely, "his philosophy of human nature, as it is set forth in the speech of Diodotus, a theory of the passions and of their working which carried with it a principle of dramatic construction," which transformed his reasoned purpose. Between his first sentence and his last Thucydides had many years in which to modify his original design; and, while he started with the deliberate intention of avoiding "the mythical," Mr. Cornford finds that he ended, without knowing it, as "Mythistoricus." It will be noted that Mr. Cornford in no way impeaches the trustworthiness of Thucydides: his view is "quite consistent with the literal truth of every statement of fact in the whole of his work." His object is to bring into relief an essentially artistic aspect of the work of Thucydides—to show how it came about "that even his vigilant precaution allowed a certain traditional mode of thought, characteristic of the Athenian mind, to shape the mass of facts, which was to have been shapeless, so that the work of science came to be a work of art."

The First Part of the volume—say three-tenths of the whole—deals with Thucydides as "Historicus," discussing the causes of the war and examining Thucydides' conception of history. Thucydides does not provide either party with a sufficient motive for fighting; and Mr. Cornford rejects as inadequate the current views that war (1) was promoted by Pericles from personal motives, (2) was racial, or (3) was political. He agrees with Thucydides that the war was forced upon the Spartans. But Pericles had no reason to desire war: why then did he go to war? Because the anti-Megarian policy was forced upon him by his commercial supporters in the Piræus. The whole of this argument is worked out with conspicuous ability. In the examination of Thucydides' conception of history and in the contention that it stands in striking contrast with the modern conception there are weighty elements of truth; but the distinction between "causes" and "grievances" (*aitiai*), and the psychological argument supervening, seem to us to be over-driven, under the influence of the main thesis of the volume.

The Second Part considers Thucydides as "Mythicus," and deals with the element of artistic unity not accounted for by the original design. There is first the stroke of "luck" at Pylos, certainly a remarkable combination of unexpected circumstances, though not without parallel in military history. But, if the occupation was really designed, why does Thucydides convey the impression of sheer luck? He is not moralizing, he is not

actuated by malignity to Athens or to Demosthenes or any other individual: "he really saw an *agency* called 'Fortune' at work"—he is illustrating the contrast of human foresight (*γνώμη*) and non-human Fortune (*τύχη*): he has gone over to "the mythical." Again, as to Cleon, "it is evident that the historian saw him, not purely, or even primarily, as an historic person, but as a type of character"—"an impersonation of insolent Violence and Covetousness." Cleon is "dramatized"; and "we have left the plane of pedestrian history for the 'more serious and philosophic' plane of poetry." So Thucydides' conception of Alcibiades is "mythical." And "the external form of the History shows some conscious imitation of tragedy, but it also resembles the Aeschylean drama in technical construction and in psychology"—a comparison worked out in great elaboration. To Mr. Cornford it even seems "just possible that Thucydides thought there might be some touch of madness in Pericles which explained his violence against Megara": "Megacles' descendant is urging the Athenians into a war sooner than revoke a violent decree against the descendants of his victims." Thucydides' attention, like that of his contemporaries, was occupied with such "mythical causes," "and so diverted from those factors in the economic situation which might have enabled him to read the origin of the war in the light of the Sicilian expedition." "Can we wonder that the origin of the Peloponnesian War is somewhat obscure?" Mr. Cornford's speculations are very ingenious, brightly presented, and full of interest; but his imagination has soared away from his judgment. We are afraid it is he, rather than Thucydides, that is the victim of "the mythical."

### WILLIAM DUNBAR.

*The Poems of William Dunbar.* With Introduction, Notes, and Glossary by H. Belyse Baildon, M.A. Cantab., Ph.D. Freib. i.B., Lecturer in English Language and Literature, University College, Dundee, University of St. Andrews. (6s. net. Cambridge University Press.)

Dr. Baildon's laudable object was to bring the poems of Dunbar "within easy reach of all serious students and lovers of what is best in our literature," the library editions (of the Scottish Text Society, of Prof. Schipper, and of David Laing) being rather costly, inaccessible, and not furnished with elucidations suitable to the general reader or to the college student. The text presents many and great difficulties, which the labours of previous editors have done much to overcome, but which still leave scope for Dr. Baildon's independent judgment. Dr. Baildon has wisely distinguished by a special mark his own suggestions in disputed cases. "In accordance with the express wish of the Syndics of the Cambridge University Press, the editor has made no omission from the text adopted"—a sensible decision, but a decision that confines the book as a whole to mature readers: the freedom of fifteenth-century expression does occasionally offend the conventional reserve of the twentieth. The introduction sketches with general adequacy the life of the poet, the sources of the text, the characteristics of the language, and the technique of the versification. We should doubt whether the preservation of the guttural sounds (as in "night," "loch," &c.), and the correct use of the letter *h*, in N.S. are "probably due to the influence of Gaelic, where the gutturals are numerous"; and when Dr. Baildon says that "in N.E. even the most 'correct' speakers aspirate the *h* in words like *hospital*, *humble*, and so on, whereas they ought to be silent, as in *heir*, &c.," we are puzzled by the indistinctness of his statement and reference. If *Menzies* "is pronounced *Moenis* or 'Menyis,'" it is also pronounced *Mayngiz* (with the ringing sound of *ng*). But it is very difficult to treat the peculiarities of the language in brief exposition: it needs exceptional care of expression and strict external criticism.

The leading points given by Dr. Baildon will certainly be very helpful. The notes are tolerably full and very serviceable, though unequal in quantity and in quality. "As with the *glaiakis* he wer ourgane" (3.12) seems plain enough, but the unnecessary (and misleading) note interprets it "as though he were charmed or fascinated by some spell." In the same piece (3.52-3), the heroine "strangely mingles endearment with apparent disparagement": yet the strangeness is all in the commentator's temporary lack of perspicacity. Again (57.26-7):

Quhair evir Schir Gold maid his regreess  
Of him I will no Largess cry :

"no editors seem to think these lines require comment," says Dr. Baildon. Well, of course, they don't require comment. But

Dr. Baildon makes what he would call in other commentators "a departure from the obvious," and takes the meaning to be (what it clearly is not) "wherever Sir Gold make his return (progr-ess or departure), I will not shout 'Largess' (that is, thanks)." The glossary is full and useful. The volume is very welcome, and generally it will be of great service, especially to such as have no convenient access to the library editions, but in many points of detail it needs some revision; and we regret that Dr. Baildon is no longer with us to revise it himself—with the aid of a competent critic with intimate knowledge of the language and of the ways of the Scots of the period.

#### AN AMERICAN SANSKRITIST IN INDIA.

*Letters from India.* By Alfred William Stratton. With a Memoir by his Wife, Anna Booth Stratton, and an Introductory Note by Prof. Bloomfield. (10s. 6d. Constable.)

Dr. Stratton was a Canadian of English and Irish descent, born at Toronto in 1866. He showed at an early age a keen interest in classical studies, and, after graduating at Toronto University, he got his first decided impulse to Sanskrit studies from a friend in Hamilton (where he was an assistant classical master), who "is a self-taught Sanskritist and has an enthusiastic interest in many phases of Orientalism." He spent three years (1892-95) at Johns Hopkins University, learning and teaching Sanskrit and Greek; and taught and studied three or four years in the University of Chicago. In 1899 he went to India, to succeed Dr. Stein as registrar of the Punjab University and principal of the Oriental College at Lahore. He died at Gulmarg, in Kashmir, in 1902.

The interest of the book lies in the simple and strenuous career of an ardent student, and in an "unintentional chronicle of North-Western India and Kashmir, written in a position of vantage by a leading educator and an unbiased yet sympathetic observer of Hindu life and character." Mrs. Stratton has set forth the story of her husband's life mainly in a series of his letters. The method no doubt introduces a good deal of matter that is of limited interest, yet the manner of presentation of merely personal or family concerns contributes traits to the portrait of the writer. One gets the impression of an unassuming, serene, kindly man, not without glints of quiet humour; an earnest and accomplished scholar, and an assiduous and business-like administrator. "I like the Hindus," he writes, "their looks and their ways, and their simple good-heartedness." But then he was not officially concerned with politics or public administration, an experience that seems peculiarly liable to engender dislike and distrust. Again and again he enters protests against misrepresentations of Indian character apparently resulting from ignorant misunderstandings. Holiday trips to the north give occasion to descriptions of the country and the people: two summers in Kashmir, and a visit to the Yusufsai country. The running account of his literary and official work, with incidental commentary, will offer many points of interest to scholars and others concerned for Oriental studies and for Indian education. Especially interesting will be the letters containing a fragmentary account of his search for manuscripts and oral traditions relating to the ritual of sacrifices of the Kāthas. At the time of his death, an edition of the *Kāthaka Grhya Sūtras*, with extracts from the commentary of Devāpala, was well under way; and, in 1903, all the material bearing upon the work was placed in the hands of Prof. Bloomfield of Johns Hopkins University. "In short," writes Pundit Mukund Ram, in an account of the scope of the intended work, "his ideas of extending this sort of research and of improving the Sanskrit Scriptures were doubtless so vast and generous that there would have grown a very important department of such research under his care by this time had Heaven spared him; which, to our misfortune, has not been allowed." There are ten full-page illustrations, besides a frontispiece portrait.

#### THE "SENSE" OF GEOMETRICAL LINES.

*Algebraic Geometry.* By W. M. Baker, M.A. (6s. George Bell.)

In most respects this is a good little treatise and gives abundant evidence that it is the production of an author thoroughly acquainted with the general needs of the junior student and capable of presenting the theory of his subject in an interesting and helpful manner. Many of the leading theorems are studied from more than one point of view, and the writer in a number of instances does not hesitate to make use of the valuable principles and notation of the differential calculus. The general excellence of the work makes the repeated appearance of an actual error of

principle the more to be regretted and the more surprising. It has often been necessary to deprecate in these columns the fact that writers on elementary trigonometry so frequently ignore the *sense* of lines when dealing with acute-angled triangles; they forget the important part that directed magnitudes are to play before many of their pages have been turned over, and, regardless of the intellectual confusion they are creating, they prepare for the careful student the task of reconstructing what he has lately learned, as soon as the idea of *sense* is forced into prominence. Yet there is some shadow of excuse (however faint) for the writer on trigonometry who may somewhat unwisely argue that, at the stage reached, he is still dealing with the absolute magnitudes of elementary geometry. The writer on Cartesian co-ordinate geometry has, however, no such plea at his disposal: it is impossible to justify failure on *his* part to recognize from the very beginning the fundamental inaccuracy of writing about the line *AB* (say) when it is the line *BA* that is under consideration, and of naming *positive* angles as though they were to be measured in the negative direction. Doubtless the method that has to be employed in the process of drawing the diagrams is responsible for much, but that only increases the care requisite in order to obtain accuracy for the text.

## GENERAL NOTICES.

### CLASSICS.

*The Myths of Greece and Rome: their Stories, Signification, and Origin.*

By H. A. Guerber. (Harrap.)

Mr. Guerber retells with charming simplicity the Greek and Roman myths from the beginnings of imaginative speculation down to the adventures of Ulysses and Aeneas. For these myths "have inspired so much of the best thought in English literature that a knowledge of them is often essential to the understanding of what we read," and "they have a great æsthetic value, presenting, as they do, a mine of imaginative material whose richness and beauty cannot fail to appeal even to the colder sensibilities of this more prosaic age." At the same time, Mr. Guerber has taken great care "to avoid the more repulsive features of heathen mythology," his book being intended for the instruction and the delight of young readers, as well as for adult students. Numerous quotations from classical (translated) and English poetry are interspersed. The final chapter analyses myths by the light of philology and comparative mythology, and furnishes the philological explanation of the stories related in the volume. There is a genealogical table of mythical relationships, a map showing the distribution of myths, an index to the poetical quotations, a glossary, and a general index. Also 64 full-page illustrations, chiefly after modern painters of note. The volume is artistically got up.

"Cambridge Patristic Texts." General Editor: A. J. Mason, D.D., Master of Pembroke College, Cambridge. — *The Confessions of Augustine.* Edited by John Gibb, D.D., Professor of Church History at Westminster College, Cambridge, and William Montgomery, B.D. (7s. 6d. net. Cambridge University Press.)

It seems strange that "the most famous volume in the whole library of the Fathers" should not till now have been re-edited, with annotations, in England since Pusey's edition of 1838, and only once even in Germany (by Carl von Raunur, in 1856). The present editors furnish adequate elucidation both of the language and of the thought of Augustine, drawn from an ample knowledge of his times and especially of the literature and the philosophy by which his mind and character were formed. The "Confessions," indeed, were written for the simple Christian folk around him, and touch but lightly upon the author's philosophical studies, yet these are properly reviewed in an extensive and able introduction. We cannot doubt that the editors take the true view of the much disputed relation of the "Confessions" to the "Dialogues." The text of Knöll's edition for the Vienna Academy (1896), now accepted as authoritative, has been followed; and the notes are judicious as well as scholarly. There are indexes (1) of Subjects, (2) of Scripture texts, and (3) of Latin words. The volume thoroughly justifies its place in a series of conspicuous merit and of great utility.

The Clarendon Press series of "Oxford Translations" has been reinforced by an excellent rendering of the *Dialogus, Agricola, and Germania* of Tacitus, with useful introduction and notes, by W. Hamilton Fyfe, Fellow of Merton College (3s. 6d. net).

Messrs. Macmillan have added to "The Golden Treasury Series" Mr. E. D. A. Morshead's scholarly verse translation of four plays of *Aeschylus*—"The Suppliant Maidens," "The Persians," "The Seven against Thebes," and "Prometheus Bound" (2s. 6d. net). The other three plays, if we mistake not, were given in a previous volume of the series.

The two Lectures delivered before the University of Oxford (June 3 and 4) by Prof. von Wilamowitz-Moellendorf—*Greek Historical Writing* and *Apollo*—are published in a handsome pamphlet by the Clarendon Press (2s. net). They are masterly examples of popular exposition, as

well as of learned investigation and historical method. The translation is by Dr. Gilbert Murray.

The *American Journal of Philology* contains (Vol. XXIX. 1) an elaborate article on "Virgil's Georgics and the British Poets," by Wilfred P. Mustard. The British poets, from Chaucer to Tennyson, are ransacked for references to the Georgics.

## SCIENCE.

*The Mathematical Theory of Electricity and Magnetism.* By J. H. Jeans, M.A., F.R.S., Professor of Applied Mathematics in Princeton University. (15s. net. Cambridge University Press.)

In this handsome volume Prof. Jeans limits himself to doing a piece of useful work for students, though it "has not been one of much interest," inasmuch as "the nature of the book did not permit of much newness or originality of treatment." He expounds the mathematical theory of electro-magnetism within the range of work that every student of physics may be expected to have covered with reasonable thoroughness before proceeding to the study of special branches or developments of the subject. The mathematical analysis required in the treatment is adapted to the fairly probable equipment of the student. The handling is considerably more elementary than Maxwell's. On a general view, the distribution of space for the different parts of the subject is unusual; but this apparent derangement of balance is due to the shrewd notion of introducing the questions of mathematical analysis in the places where they are first needed for the development of the physical theory, "in the belief that in many cases the mathematical and physical theories illuminate one another by being studied simultaneously." Numerous examples are given, mainly from Cambridge examination papers. It is unnecessary to say that the treatment is masterly throughout.

*Avogadro and Dalton: the Standing in Chemistry of their Hypotheses.*

By Andrew N. Meldrum, D.Sc. With a Preface by Prof. Japp. (Edinburgh: James Thin. London: Simpkin, Marshall, & Co.)

Dr. Meldrum deals with Avogadro first. He insists that Avogadro's hypothesis is neither a "law" nor a "truth," but simply a hypothesis, and doughtily contends that, in virtue of the multitude of its fruitful issues, it is the very basis and corner-stone of chemistry. "The chief issues of the hypothesis are the molecular theory, including the modern theory of solution, the atomic hypothesis, the doctrine of valency, and the periodic system of the elements"—the last a perpetual source of speculation and experiment. Strangely enough, Dr. Meldrum needs to enter on a long inquiry to find out what are the essentials of Dalton's theory, and then he reviews the systems of Berzelius, Gmelin, Gerhardt and Laurent, and Cannizzaro in the course of working out the true relation of Dalton's theory of chemistry to the modern theory. Dr. Meldrum champions Avogadro and the molecular theory. His argument is scrupulously fair in conduct and expression, and he shows a familiar grasp of the fundamental literature of the subject as well as of the scientific matters in question. It is an exceptionally able monograph.

## MODERN LANGUAGES.

"The New Mediæval Library."—(1) *The Book of the Duke of True Lovers.* (2) *Of the Tumbler of Our Lady, and other Miracles.* (3) *The Chatelaine of Vergi.* (5s. net each. Chatto & Windus.)

(1) is now for the first time translated from the fifteenth-century French of Christine de Pisan, with introduction and notes, by Mrs. Kemp-Welch, the ballads being rendered in the original metres by Laurence Binyon and Eric R. D. Maclagan. The story is probably a thinly veiled romance of the Court, and is certainly full of interest and charm. There are seven fine illustrations. (2) records nine miracles, only the first story having previously been rendered into English. Again it is Mrs. Kemp-Welch that translates from the Middle French MSS., anonymous and by Gautier de Coinci, with introductory note; and there are eight excellent illustrations. (3) "The Chatelaine of Vergi" is also translated from the Middle French by Mrs. Kemp-Welch, and the charming introduction is by Prof. Brandin, Ph.D., of University College, London. The original text (édition Regnault) is appended. There are five fine photo-gravures. This is really a second edition, thoroughly revised both in translation and in text. The whole series furnishes a delightful introduction to certain aspects of mediæval life and thought. The get-up is chastely artistic.

*First Steps: The Student's Elementary Text-Book of Esperanto.* By Leslie P. Beresford, LL.D., M.A. (2s. International Language Publishing Association, London.)

A very handy little book, giving elementary explanations concisely and clearly, with exercises followed by notes and key.

A second edition of *Der Deutsche Aufsatz in der Prima des Gymnasiums*, revised by the author, Dr. Otto Apelt, Director des Gymnasiums zu Jena (geh. M. 3.20, Teubner), is "ein historisch-kritischer Versuch" of an extremely interesting character, reviewing materials and methods of German composition on the highest gymnasial benches—in German, Roman, and Greek literature and history, and in a wide range of miscellaneous subjects. A judicious, instructive, and charming volume.

A sixth edition of Dr. Karl Krause's *Deutsche Grammatik für Ausländer jeder Nationalität*, "mit besonderer Rücksicht auf ausländische Institute in Deutschland und deutsche Institute im Auslande," revised by Dr. Karl

Nerger of Rostock, is now issued [geh. M. 3.60, J. U. Kern's Verlag (Max Müller), Bröslau]. The exposition is comprehensive and careful, with plenty of examples, but without exercises.

*Dutch Self-Taught*, with phonetic pronunciation, by Captain C. A. Thimm, appears in a second edition, revised by Carel Thieme, Examiner in Dutch for the London Chamber of Commerce. (2s., wrapper; 2s. 6d. cloth. Marlborough.)

## ENGLISH LITERATURE.

*The Oxford Treasury of English Literature.* Vol. III.: *Jacobean to Victorian.* By G. E. Hadow, Tutor in English Literature, Lady Margaret Hall, Oxford, and W. H. Hadow, Fellow of Worcester College, Oxford. (3s. 6d. Clarendon Press.)

The method of the volume follows the principle of the two preceding volumes. As before, there is no attempt to cover the whole ground, or even to notice every great or notable author: the illustrations are grouped round the points of interest from which the chief literary movements have radiated, and only such authors are cited as "best represent their age or whose influence on contemporaries or successors is most clearly apparent." The brief critical and historical sketches introducing the chapters are very suggestive for guidance; and if one sometimes dissents from an opinion—how, for example, can one admit that Thackeray was "faultless in style"?—or doubts whether a passage is the best representative available, that matters very little on the general view. Any reader that works through the three volumes will obtain a broad and vivid sense of the wealth and the movement of English Literature.

*The People's Library.* (8d. each volume. Cassell.)

The May contingent consists of the following works:—(1) *Hypatia* (Charles Kingsley); (2) *Mr. Midshipman Easy* (Captain Marryat); (3) *It is Never too Late to Mend* (Reade); (4) *Handy Andy* (Lover); (5) *Shirley* (Charlotte Brontë); (6) *Tales, Poems, and Sketches* (Bret Harte); (7) *The Pilgrim's Progress* (Bunyan); (8) *Voyages of Discovery* (Captain Cook); (9) *Lectures and Essays* (Huxley); (10) *Heroes and Hero-Worship*, &c. (Carlyle).

*Sisley's Biography Books.* (6d. each. Sisley's, Ltd.)

The series is intended to include lives of all the world's greatest men and women. The first issue consists of six volumes, simply and pleasantly written, and tastefully got up, each with a frontispiece: (1) *Mary Queen of Scots*, by Helen Williams; (2) *Lord Nelson*, edited by Owen Ellison; (3) *Napoleon the Great*, edited by Owen Ellison; (4) *Charles Dickens*, by Owen Ellison; (5) *John Constable*, by M. Y. Bankart; and (6) *Richard Wagner*, by Edith Robarts. The series ought to prove popular.

## ENGLISH GRAMMAR AND COMPOSITION.

*Old English Grammar.* By Joseph Wright, Ph.D., D.C.L., &c., and Elizabeth M. Wright. (6s. net. Henry Frowde, Oxford University Press.)

Like Prof. Wright's "Historical German Grammar," the first volume of which we noticed recently, this work belongs to "The Student's Series of Historical and Comparative Grammars," of which Prof. Wright is the general editor, and the treatment follows similar lines. It is the student, not the specialist, that the authors keep in view; and "the student who thoroughly masters the book," they justly think, "will not only have gained a comprehensive knowledge of Old English, but will also have acquired the elements of comparative Germanic grammar." Of course the volume is not exhaustive, "yet it is by far the most complete Grammar that has hitherto been written in our own language, and the first to deal with the subject in a strictly scientific manner." The Syntax will be dealt with in another volume, which is already in active preparation, and will probably be ready for press before the year is out. The book is a most laborious and able treatise, and it is very carefully printed and substantially bound.

*The Writing of English.* By Philip J. Hartog, Academic Registrar of the University of London, sometime Lecturer in the Victoria University, Manchester. With the assistance of Mrs. Amy H. Langdon. (2s. 6d. Clarendon Press.)

We gladly welcome a second edition of this pointed and stimulating, if miscellaneous and discursive, treatise. The contrast between the actual performance of French children and English children, though "English children seem to have no less aptitude than French for writing well," is a dramatic stroke, touching the nerve of English *amour propre* with usefully startling effect, whatever deductions may be necessary on a coldly critical estimate. To our mind the most telling part of the book is the description of Mr. Hartog's own experiments in the teaching of composition: they should be laid to heart by every teacher of the subject. "They were lessons in thought-training, not in grammar, still less in spelling or punctuation." That is to say, they go to the root of an essential preliminary to effective teaching of English (or of anything else). One must first "take care of the sense"; and, if "the sentence will take care of itself," well and good: if not, then one must look to the sentence—and there is a great deal to be done with the sentence. Mr. Hartog thinks it is "of extreme importance that we should not create a specialist class for English composition alone." That depends on the object in view. If the subject is not carried farther than the preliminary stage "thought-training," he may be right; if it is to be carried much farther, we have not the smallest doubt that he is disastrously wrong. If English is to be taught as thoroughly as Latin or

Greek—and the whole of our prose literature, not excluding the most belauded examples, shows how urgently such thoroughness is needed—then the thing cannot be done otherwise than by specialists. When Mr. Hartog proceeds beyond the Exercises of his Appendix to treat of the writing of literary English, he will soon discover the importance of the specialist.

#### HISTORY.

*History of Ancient Civilization.* By Charles Seignobos, Doctor of Letters of the University of Paris. (5s. net. Fisher Unwin.)

The volume appears to be a popular condensation of Dr. Seignobos's "Histoire de la Civilisation." The editor, who is modestly content to give his initials only, has usually followed the order of the two-volume edition and drawn supplementary matter from the three-volume edition. Starting with prehistoric and legendary times, he offers a broad outline of the development of civilization among the Egyptians, the Assyrians and Babylonians, the Aryans of India, the Persians, the Phoenicians, the Hebrews, the Greeks, and the Romans down to the time of Theodosius I., the end of the fourth century of our era. The task of compressing intelligently into a readable narrative the essential facts and their historical relations is all but impossible within the narrow limits prescribed. The volume, however, will be serviceable to such as wish merely a broad general view; and, in the case of the nations that receive larger treatment, especially the Greeks and the Romans, particular developments are often set forth effectively, if succinctly. Still, there is need for revision of details: the editor has indeed appended some useful modifications in foot-notes, but more are required. The statement that "all the provinces belonged to the Emperor as the representative of the Roman people" is modified by the explanation that "a few provinces, the less important, remained to the Senate, but the Emperor was always master in these as well"; but the loose expression leads to inevitable confusion in the description of administrative functions. It is quite misleading to say that "there were always at Rome at least two pretors as judges"; but non-expert writers on the law of Rome, drawing statements from summary histories without appreciating their bearings, have accustomed us to such startling assertions. There is a useful appendix of references for supplementary reading, but no index.

*The English as a Colonizing Nation.* By J. Hight, M.A., Lecturer on Political Economy and Constitutional History, Canterbury University College. (2s. 6d. Whitcombe & Tombs.)

This is Book IV. of a series of Public School Historical Readers more especially designed for the use of Australasia, and accordingly Mr. Hight has entered in fuller detail in the chapters on Australia and New Zealand. On the whole, it is a useful book, though here and there, where the writer draws his information from current books innocent of original research or special study, he fails to avoid common blunders: the enumeration of "the chief benefits India has gained from British rule" is amazingly uncritical. There are numerous sketch maps and illustrations (some of them rather poor), and the volume is well got up and strongly bound.

#### RELIGIOUS AND MORAL.

The Cambridge University Press reissues *The New Testament in Greek* "according to the text followed in the Authorised Version, together with the variations adopted in the Revised Version," edited by F. H. A. Scrivener, M.A., D.C.L., LL.D., at a reduced price (crown 8vo, 3s. 6d. net; India paper, 5s. net). Both of the editions are extremely handy and agreeable.—The same Press publishes *The Verba Christi Testament* (ruby 48mo, 1s. net, cloth), the special feature of which is that the words of our Lord are printed in red. Convenient, clear, and delightfully got up.

Mr. Frowde publishes, for the Egypt Exploration Fund, an extremely interesting *Fragment of an Uncanonical Gospel from Oxyrhynchus*, edited, with translation and adequate commentary, by Bernard P. Grenfell, M.A., D.Litt., F.B.A., &c., and Arthur S. Hunt, M.A., D.Litt. (1s. net). The fragment consists of a single vellum leaf, and the writing (45 lines) covers only a little more than two inches square. The verso is photographed for frontispiece.

*The Problem of Moral Instruction*, the Presidential Address of Prof. J. S. Mackenzie, Litt.D., to the Moral Instruction League, has been reprinted by the League from the *International Journal of Ethics* (April, 1908), and is now issued as a pamphlet. It is a very able and thoughtful address, facing the difficulties in the way of a satisfactory solution and showing that they are not by any means insuperable. Certainly it is one of the most capable and effective statements of the League's case, and many will be glad to have it in such a handy form.

Messrs. Longmans issue a second and cheaper edition of *Religious Education: How to improve it*, by the Rev. C. L. Drawbridge, M.A. (1s. net). It reviews the organizations and agencies of religious teaching with critical frankness and thoughtful suggestion, and it is brightly and forcibly written.

Mr. Murray publishes a third edition of *The Licensed Trade*, by Edwin A. Pratt (1s. net). One of the chapters ("Prohibition Abroad") has been rewritten, with a view to dealing with "the wave of prohibition" throughout the Southern States of America, and two new chapters have been added, on "Discretionary Powers of Licensing Justices" and "The Business Side of Temperance Agitation." Some appendices

(Continued on page 304.)

## OXFORD UNIVERSITY PRESS.

### **The Shakespeare Apocrypha.**

Being fourteen Plays at some time attributed to Shakespeare. By C. F. TUCKER-BROOKE, Senior Demy of Magdalen College, Oxford. 5s. net and (India paper) 7s. 6d. net.

*Daily Mail.*—"This collection will be invaluable to Shakespearean students. It has never been made before, and it has been done now admirably, and once for all. Mr. Brooke's Introduction is wonderfully interesting."

### **The Writing of English.**

By PHILIP J. HARTOG, Academic Registrar of the University of London, with the assistance of Mrs. A. H. LANGDON. Second Edition. With a new Introduction. 2s. 6d.

*Athenaeum.*—"If parents and schoolmasters will pay heed to the good counsel and practical suggestions in this handy and valuable little work, no future writer on literary studies in our schools will be able to begin his first chapter with the statement, 'The average English boy cannot write English.'"

### **A Book of Verse for Boys and Girls.**

Compiled by J. C. SMITH.

Part I. 64 pages. Paper Covers, 3d. Cloth, 4d.  
Part II. 160 pages. Paper Covers, 6d. Cloth, 8d.  
Part III. 288 pages. Paper Covers, 1s. Cloth, 1s. 3d.

The Three Parts together in Cloth, 2s.

### **Oxford Book of French Verse.**

Thirteenth Century to Nineteenth Century. Chosen by ST. JOHN LUCAS, University College, Oxford. Second Impression. 6s. net and (on Oxford India paper) 7s. 6d. net.

*Athenaeum.*—"The best selection that has been printed in England. The Introduction gives a rapid and brilliant survey of French poetry."

## THE OXFORD GEOGRAPHIES.

By A. J. HERBERTSON, M.A., Ph.D.,  
Reader in Geography in the University of Oxford.

### **The Preliminary Geography.**

Second Edition. 160 pages, with 72 Maps and Diagrams. 1s. 6d.

*Preparatory Schools Review.*—"Where a class-book of geography is first introduced, this should be the book. There is nothing else so good."

### **The Junior Geography.**

Second Edition. 288 pages, with 166 Maps and Diagrams. 2s.

*School World.*—"Is good everywhere. The sketch maps are most interesting and most instructive."

### **The Senior Geography.**

Second Edition. 370 pages, with 117 Maps and Diagrams. 2s. 6d.

*School World.*—"The relation of cause and effect is continually insisted upon, and the lesson driven home by the frequent insertion of educative maps and plans and cross sections."

### **The Position and Prospects of the Study of Economic History.**

By L. L. PRICE, Fellow of Oriel College, Oxford. 1s. net.

### **A Study of Mathematical Education, Including the Teaching of Arithmetic.**

By B. BRANFORD, Divisional Inspector to the London County Council. 4s. 6d.

Select List of Educational Works, List of Books set for various Examinations, and Complete Catalogue (144 pages) post free.

London: HENRY FROWDE, Oxford University Press, Amen Corner, E.C.

have been omitted to make room for fresh ones of more importance. We noticed the first edition in our September number last year.

*The Origins of Religion, and other Essays*—a dozen in all—by Andrew Lang, are gathered together in No. 34 of the Rationalist Press Association's "Cheap Reprints" (6d., Watts). With one exception, all the essays are reprints from published books of the author; the exception being a critical review of theories of the origins of religion. There are several illustrations.

Messrs. Watts also issue for the Rationalist Press Association a popular edition of *The Churches and Modern Thought*, by P. Vivian (1s. net). We noticed the work in our February number this year. The criticism is destructive, but Mr. Vivian writes earnestly, thoughtfully, and with considerable knowledge, and represents a large class that deserve an express and serious answer.

#### HOW TO EARN A LIVING.

*A Handbook of Employments.* By Mrs. Ogilvie Gordon, D.Sc. Lond., Ph.D. Munich, F.L.S. (1s. net. Aberdeen: The Rosemount Press.)

An elaborate compilation "especially prepared for the use of boys and girls on entering the trades, industries, and professions." After introductory matter, the volume divides into three parts: (1) Industrial occupations, with short periods of training; (2) Apprenticeship trades and occupations requiring long periods of training; and (3) Professional callings. Each of these divisions is treated in much detail—a prolonged and laborious business. The introductory remarks on the author's proposal for the establishment of local bureaux by the Local Education Authorities and School Boards in the larger cities merit particular attention.

*The Fingerpost: a Guide to Professions for Educated Women.* (1s. 6d. post free. Central Bureau for the Employment of Women, 9 Southampton Street, Holborn, W.C.)

This is a considerable volume containing over 70 articles, which present in a very readable form the chief facts relating to occupations open to educated women. The articles are grouped according to general subject; there are nine under the head of "Teaching." They are all written by experts in the various professions and may be trusted to afford sure guidance.

*Every Way of Earning a Living.* By Alfred Barnard; with introduction by Hamilton Edwards. (6d. net. Amalgamated Press, 2 Carmelite House, Carmelite Street, E.C.)

A very large amount of information is disposed in three sections—General, Civil Service, and Emigration—about a great number of ways of making a livelihood. The work should be very suggestive and helpful to young folk that are puzzling to know "what to be": and it may afford serviceable hints to such as have gone into some calling or trade and want to know how to make further progress. The facts appear to have been diligently compiled and they are clearly set out.

#### MISCELLANEOUS.

Messrs. Philips publish a *Meteorological Calendar*, consisting of 52 weekly sheets, "for recording daily observations regarding the barometer, thermometer, rainfall, direction of wind, weather, &c.," with suggestions for keeping the observation sheets (2s. net). The Calendar has been very carefully constructed and conveniently and clearly disposed. It will be found extremely handy for recording and preserving observations.

In connexion with the Franco-British Exhibition several academic publications have been issued. A volume on *Medical Education in London*, "being a guide to the schools of the University of London in the Faculty of Medicine, with notes on the general facilities for clinical study and research in the Metropolis," has been issued by the Conference of Deans of the Metropolitan Schools of Medicine. The information is very full and lucid, and there are numerous excellent illustrations. The volume is published by Messrs. Ash & Co., Southwark, S.E.—The University of London has issued (1) a *Handbook*, containing general information and a catalogue of the University exhibit at the Exhibition, and (2) a *Catalogue* of the collection of publications by teachers of the University and their students in the year 1907 included in the University exhibit.

*The University of London Students' Handbook*, prepared by the Students' Representative Council and edited by Walter W. Seton, M.A., the Secretary to University College, presents a comprehensive and compendious view of the social and athletic life of the University. We hope the brochure will be widely circulated. It will do much to impress the extent and variety of the social interests and the vitality of the student spirit.

*The Freedom of Women* (6d. net, Watts) is a vigorous "argument against the proposed extension of the suffrage to women," by Ethel B. (Mrs. Frederic) Harrison. It states "the case of that great mass of English women who do not wish to be thrust, against their will and better judgment, into active politics." Mrs. Harrison's discussion of the subject deserves attention on both sides in the struggle. Her last word is "that, in taking the vote, women will be selling their birthright for a mess of pottage."

#### FIRST GLANCES.

##### MATHEMATICS.

*Algebraical Examples, Book I.* By A. F. van der Heyden, M.A., Mathematical Master at the Middlesbrough High School, formerly Fellow of the University of Durham. 1s.; with Answers, 1s. 6d. Edward Arnold.

[Up to and including elementary quadratic equations. Useful types of questions; carefully graduated.]

*Arithmetic, Correlated, Pitman's.* By T. W. Trought, B.A., Head Master, Camden Street Council School, Birmingham, formerly Lecturer in Mathematics, &c., at Chester Training College. Book I., Answers. 1s. net. Book II., 3d.

*Arithmetic Examples, Practical, Part I.* Compiled by J. L. Martin. 6d. Murray (School Library).

[Based upon Consterline and Andrew's "Practical Arithmetic." "Suitable for Standard V. in town schools and Standards V. and VI. in rural schools." Answers to be published separately.]

*Arithmetic Papers, Modern, The Public School.* Compiled by R. Wenlock, F.R.G.S., Assistant Master, Barry County School, Glamorgan-shire. 4d.; with answers, 6d. Author: 4 Harbour Road, Barry, Glam.

[Papers A to Z, 8 questions in each. Varied and useful compilation from papers set at recent public examinations, together with original problems and model solutions to an original paper.]

*Arithmetics, Adaptable, Blackie's.* (1) Book I., Simple Rules, 4d. (2) Teacher's Hand-book to (1), 1s.

*Arithmetics, Alert, Nelson's.* By Henry Wilkinson, Head Master of Askew Road Boys' School, Gateshead. Pupil's Books, I. and II., 3d. each. Teacher's Books, I. and II., 4d. each. Nelson (Royal School Series).

[Practical examples. Illustrations.]

*Arithmetics, Effective, Arnold's.* Books I.-VI. I.-V., 2d. each; VI., 3d.

*Arithmetics, Practical, Longmans'.* By W. Knowles, B.A., B.Sc. Lond., Senior Form Master, Technical Day School, Borough Polytechnic Institute, S.E., and H. E. Howard, Head Master, St. Luke's School, Kingston-on-Thames. Teacher's Series, Book V., 1s. 6d. Pupil's Series, Book VI., 5d.

[A course of arithmetic correlated with geometry and practical work, based on the scheme of C. T. Millis, M.I.Mech.E., Principal of the Borough Polytechnic Institute.]

*Geometry, Elementary, A Sequel to: Solutions of the Examples in.* By John Wellesey Russell, M.A., formerly Fellow of Merton College, Mathematical Lecturer of Balliol and St. John's Colleges, Oxford. 3s. 6d. net. Clarendon Press.

[Very useful and suggestive.]

*Geometry for Schools: The Theorems.* Collected and arranged by E. Fenwick, M.A., LL.D. Camb., B.Sc. Lond., Head Master of Bourne-mouth School, formerly Senior Mathematical Master of Wellingborough Grammar School. 1s. 6d. Heinemann (School Series).

[Essentially a class-book; riders, examples, and explanations other than those necessary for the formal demonstration of the Theorems have been rigorously excluded.]

*Graphs: applied to Arithmetic, Mensuration, and Statics.* By G. C. Turner, B.Sc. Lond., Lecturer in Mathematics and Mechanics at the Goldsmiths' College (University of London). 6s. Macmillan.

[Numerous worked-out examples; abundant exercises; answers; 316 figures.]

*Logarithmic and other Tables for Schools.* By Frank Castle, M.I.M.E. 6d. Macmillan.

[Very serviceable and handy.]

*Mathematical Education, A Study of; including the Teaching of Arithmetic.* By Benchara Branford, M.A., Divisional Inspector to the London County Council, formerly Lecturer in Mathematics in the Victoria University. 4s. 6d. Clarendon Press.

[Based upon twenty years' experience of school and college education ranging through all grades.]

*Mensuration (Plane and Solid), The Normal.* By H. E. J. Curzon, M.A., B.Sc., late Mathematical Tutor at the Training College, Exeter. 1s. 6d. net. Normal Press.

[Clear exposition; numerous examples; answers.]

##### SCIENCE.

*Electrical Engineering, Elementary.* By John H. Shaxby, B.Sc., Demonstrator and Assistant Lecturer, University College, Cardiff. 3s. net. Blackie.

[Primarily for students engaged during the day in practical work. Avoids mathematics as far as possible, and presupposes no knowledge of the theory of magnetism and electricity. Thoughtful and clear. Exercises. 120 figures. Practical and very serviceable.]

(Continued on page 306.)

# OXFORD AND CAMBRIDGE LOCAL EXAMINATIONS, 1909.

Special Subjects Books issued by J. M. DENT & CO.

## OXFORD.

### ENGLISH.

- MACAULAY'S LAYS OF ANCIENT ROME.** With Introduction and Notes by OLIPHANT SMEATON, M.A. 1s. [*Preliminary.*]
- THE TALISMAN.** By Sir WALTER SCOTT. With Introduction and Notes by HENRY WILLIAMS, M.A. 1s. *Temple English Literature Series.* [*Preliminary.*]
- THE TALISMAN.** By Sir WALTER SCOTT. Edited, with Notes, &c., by G. L. TURNBULL, M.A. Illustrations. 1s. 6d. [*Preliminary.*]
- THE TEMPEST.** Edited by OLIPHANT SMEATON, M.A. With Eight Illustrations by WALTER CRANE. 1s. 4d. [*Juniors and Seniors.*]  
"It can be affirmed with every confidence that this issue of Shakespeare's 'Tempest' has no superior as a school edition of this well known play."—*Educational News.*
- MACBETH.** Edited by GEORGE SMITH, M.A., LL.D. With Five Illustrations by T. H. ROBINSON. 1s. 4d. [*Juniors.*]
- KING HENRY V.** Edited by W. H. HUDSON, M.A. With Eight Illustrations by DORA CURTIS. 1s. 4d. [*Juniors.*]
- THE LAY OF THE LAST MINSTREL.** By Sir WALTER SCOTT. Edited, with Notes, Glossary, and Illustrations by J. W. YOUNG, M.A., Head Master Pupil Teachers' School, Bradford. 1s. 4d. [*Juniors.*]
- QUENTIN DURWARD.** By Sir WALTER SCOTT. Edited, with Notes, Introduction, Glossary, and Examination Questions, by J. WILSON, M.A. 1s. 4d. [*Juniors and Seniors.*]
- KING HENRY V.** Edited by W. H. HUDSON, M.A. With Eight Illustrations by DORA CURTIS. 1s. 4d. [*Seniors.*]
- QUENTIN DURWARD.** By Sir WALTER SCOTT. Edited, with Notes, Introduction, Glossary, and Examination Questions, by J. WILSON, M.A. 1s. 4d. [*Seniors.*]
- UTOPIA.** By Sir THOMAS MORE. Edited, with Introduction, Notes, and Glossary, by A. J. GRIEVE, M.A. 1s. 4d. [*Seniors.*]

A New Work on the most Modern Lines.

# A RATIONAL GEOGRAPHY.

By ERNEST YOUNG, B.Sc.,

Head Master of the Lower School of John Lyon, Harrow.

In Three Parts, with numerous Maps and Diagrams, cloth, crown 8vo, 1s. 6d. each.

Part I.—CLIMATE.—THE BRITISH ISLES, EUROPE.

Part II.—TIDES, WINDS, CURRENTS, LATITUDE AND LONGITUDE.—AMERICA, AFRICA.

Part III.—MAP DRAWING, MAP PROJECTION, SURVEYING.—ASIA, AUSTRALASIA.

HINTS ON TEACHING GEOGRAPHY. By the same Author. 6d. net.

This is a new work on the most modern lines, and so arranged that it meets the requirements of all the ordinary Preliminary and Junior University Local Examinations. Though primarily intended to meet the requirements of the Board of Education's Syllabus for three out of the Four Years' Course in Geography, it is at the same time admirably adapted for candidates taking the Cambridge Examinations of 1908.

"An interesting and useful addition to school geographies. The 'modern lines' are well observed. There is plenty of cause and effect; there are useful sketches; there are questions for oral work and exercises for note-books; and there is a sufficiency of matter for reproduction by the expectant examinee."—*The School World.*

"An ideal series of manuals."—*Secondary School Journal.*

"There is much that is fresh and suggestive in this practical book, and we have great pleasure in directing the attention of teachers to the series."—*The Educational News.*

## HYGIENIC EFFECTIVE ECONOMIC

FOR "WEIGHTING" AND LAYING THE

# DUST

(See Official Memorandum on the Cleansing and Disinfecting of Schools)

# "FLORIGENE"

Regd.

(Awarded BRONZE MEDAL of the ROYAL SANITARY INSTITUTE)

**ODOURLESS or POWERFUL**

**GERMICIDAL DISINFECTANT FLOOR FLUID**

(See Important Bacteriological Report by Eminent Authority)

On all Wood, Linoleum, Stone, and other Floors in

# SCHOOLS, LABORATORIES,

ART GALLERIES, LIBRARIES, MUSEUMS, &c.

**DURING THE VACATION**

if possible. Three times a year only, as

**EACH APPLICATION**

lays the dust and dirt for 2 to 4 months.

"FLORIGENE" is an aid to the PREVENTION OF THROAT IRRITATIONS AND DISEASES.

It purifies the atmosphere, secures cleanliness and comfort, and is a **great time and labour saver.**

It is not sticky, and is easily and quickly applied by the unskilled.

**NO SCRUBBING OR SPRINKLING OF FLOORS** necessary, but Floors may be washed if preferred.

**BOOKS, FURNITURE, APPARATUS, etc.,** seldom require dusting or cleaning.

The additional cost (if any) of the "Florigene" dressing is very small compared with the hygienic, labour saving, and other important advantages.

For further particulars, Bacteriological and other Expert Reports, and Testimonials, write:

THE "DUST-ALLAYER" Co.

Offices: 165 QUEEN VICTORIA STREET, LONDON, E.C.

Contractors to H.M. GOVERNMENT, etc.

**Hydrostatics, Intermediate.** By William Briggs, LL.D., B.Sc., &c., and G. H. Bryan, Sc.D., F.R.S. 3s. 6d. Clive (University Tutorial Series).

[“Contains as much Hydrostatics as can be conveniently learned without the use of the Calculus.” Thoroughly good exposition; numerous examples and examination papers; answers. 114 figures. Excellent text-book.]

**Mechanics and Physics, Theoretical and Practical.** By A. H. Mackenzie, M.A., B.Sc., A.R.C.Sc., Head of the Physics Department, Cockburn High School, Leeds. 1s. Macmillan.

[“A Preliminary Science Course for Artisans in Evening Schools.” Wholly experimental; clear directions; numerous exercises; 57 figures. Aply conceived and worked out.]

**Physics, A School Course in: Light and Sound.** By F. C. Endecott, Science Master at Lutterworth Grammar School, formerly of Bedford Modern School. 2s. 6d. Blackie.

[Consists of lecture notes, notes on practical work, questions and exercises, and blanks for pupils' notes. Vain fear of “telling the scholar too much.” Practical exercises good and varied. Answers accompany in separate pamphlet.]

**Physics, Practical, A Third Year's Course in: Light.** By James Sinclair, M.A., B.Sc., Head Science Master in Shawlands Academy, Glasgow. 1s. 6d. George Bell.

[Simple and clear instructions. 54 experiments; well devised exercises on each; answers appended; numerous diagrams. The three courses form an excellent practical series, both for pupils and for teachers.]

**Steam and other Engines.** By J. Duncan, Wh.Sc., A.M.I.Mech.E., Head of the Department of Civil and Mechanical Engineering at the Municipal Technical Institute, West Ham. 5s. Macmillan.

[For students of engineering; explains the principles of science applicable to heat engines, and describes the essential constructional details of typical engines. Numerous exercises; answers; 338 figures. Clear, able, suitable.]

#### FRENCH.

Blackie's “Little French Classics.”—(1) *Le Lépreux de la Cité d'Aoste* (De Maistre), edited by Maurice Labesse, B.A., University of Poitiers. (2) *A Little Book of French Poetry*, for reading and recitation, edited by Miss B. Scott. (3) *Premières Méditations Poétiques—Poèmes Choisis* (Lamartine), edited by Alfred T. Baker, M.A., Ph.D., Professor of French Language and Literature, University of Sheffield. (4) *Poésies Choisis* (Alfred de Vigny), edited by Prof. Baker. (5) *Le Coup de Pistolet* (Mérimée), edited by J. E. Michell, M.A., Ph.D., Assistant Master, Westminster School. (6) *La Princesse Feuille-Morte* (René Morax), edited by A. P. Guiton, B. ès Sc., Assistant Master, Berkhamsted School. 4d. each.—In Supplementary Series: *Théâtre de la Jeunesse* (Souvestre), edited by W. Herbert Hill, M.A., formerly of Dundee High School. 8d. [Well chosen, edited, printed, and got up.]

Blackie's “Récits tirés des Classiques Français.”—(1) *Le Cid* et *Horace* (Corneille); (2) *Athalie* et *Andromaque* (Racine). By C. Bagnall, B. ès L., Senior French Mistress, Clapham High School, and H. Vivier. 6d. each.

[Stories of the plays interestingly retold in easy French.]

Dent's “Les Classiques Français.”—*Oraisons Funèbres de Bossuet*, préface de René Doumic.

[Six oraisons. Handy and tasteful get-up.]

Hachette's Popular French Authors.—*Waterloo* (Hugo: from *Les Misérables*), edited by A. Barrère, Officier de la Légion d'Honneur, Professor of French Language and Literature, Royal Military Academy, Woolwich. 4d.

[Vocabulary, with notes and idioms; retranlations.]

Nelson's French Texts.—*Mon Petit Troit* (André Lichtenberger), edited by Alex Cran, M.A., Ph.D., D. ès L. Bruss., Senior French Master, Royal High School, Edinburgh. 1s. 6d.

[Vocabulary; continuous passages for retranlation.]

Rivingtons' New Intermediate French Texts.—(1) *Waterloo* (H. Beyle-Stendhal: from *La Chartreuse de Parme*); (2) *L'Evasion du Duc de Beaufort* (Alexandre Dumas): both edited by W. G. Hartog, B.A., Lecturer in French, University College, London. 1s. each.

[Notes; exercices oraux et écrits.]

Rivingtons' New Junior French Texts.—(1) *Seulette* (Mme. E. de Pressensac); (2) *Tresor des Fèves et Fleur des Pois* (Nodier): both edited by W. G. Hartog, B.A. 1s. each.

[Notes, exercices, vocabulaire.]

#### GERMAN.

Blackie's German Plays for acting in School or at Home.—(1) *Grossväterchen und Grossmütterchen*. Von Kate Weber. (2) *Froschkönig* (dramatisiertes Märchen). Von Henny Koch. (3) *Das Märchen vom Dornröschen*. Von Henny Koch. 4d. each.

[Suitable; amusing; good for practice in German.]

Blackie's Little German Classics.—*Der Kriegsfreiwillige von 1870-1871* (Otto Delfs). Edited by J. M. Morrison, M.A., Master in Modern Languages, Aberdeen Grammar School. 6d.

[Able and instructive edition.]

Ginn's International Modern Series.—*Das Verlorene Paradies* (Ludwig Fulda). Edited by Paul H. Grumann, Professor of Modern German Literature, University of Nebraska. 2s.

[Notes; Fragen; vocabulary. “Fulda's plays are particularly rich in colloquial German.” Careful and useful edition.]

Heath's Modern Language Series.—*Elementary Texts*: (1) *Easy German Stories* (Hedwig Levi). Edited by Mrs. Luise Delp, Senior German Mistress (Visiting) at the Sydenham and East Putney High Schools for Girls. 1s. 3d. (2) *Das Peterle von Nürnberg* (Viktor Blüthgen). Edited by Wilhelm Bernhardt, Ph.D. 1s. 6d.—*Intermediate Texts*: *Das Fahlein der Sieben Aufrechten* (Gottfried Keller). Edited by W. G. Howard and A. M. Sturtevant. 1s. 6d.

[Good and interesting matter. (1) 10 stories, notes, vocabulary. (2) A Middle Age romance, charmingly told; notes, vocabulary, retranlation; 3 illustrations (Nürnberg). (3) Picture of Swiss life and love story; original somewhat abbreviated and otherwise adapted; notes and vocabulary; portrait.]

Teubner's Deutsche Schulausgaben (Herausgegeben von Direktor Dr. H. Gaudig und Dr. G. Frick).—*Torquato Tasso* (Goethe). Edited by Dr. G. Frick. Geb. Mk. '60.

[A few useful foot-notes, brief; historical and literary “Anhang,” suggestive as well as informatory.]

Rivingtons' Direct Method Elementary German Texts (edited by D. L. Savory, M.A.)—(1) *Das Gespensterschiff* (Hauff); (2) *Die Geschichte des jungen Herrn Anton* (Seidel); (3) *Krambambuli* (Marie von Ebner-Eschenbach). 1s. 6d. each.

[Good reading. Matter divided into sections, each followed by Fragen and Grammatisches; vocabulary; illustrations. Carefully edited, well printed, and substantially bound.]

#### EDUCATION.

Assistant Masters in Secondary Schools, Incorporated Association of. Annual List of Members.

Board of Education.—(1) Report for 1906 on the Victoria and Albert Museum, the Royal Colleges of Science and Art, the Geological Survey and Museum, and on the work of the Solar Physics Committee. Cd. 3978. 1s. 3½d. (2) Regulations for the Preliminary Education of Elementary-School Teachers (from August 1 next). Cd. 4038. 2½d. (3) Scheme of the Conventional Signs used in Official Maps, showing Schools and Colleges and other Educational facilities existing in Local Education Authorities' areas. 2d. (4) Supplementary List of Training College Students who completed their Training on July 31, 1906, and have since qualified by examination for recognition as Certificated Teachers. 1d. Wyman.

Cambridge University. (1) Local Examinations, 1907: The Fiftieth Annual Report of the Syndicate, with Supplementary Tables for December, 1907, and Lists in order of merit of the Senior and Junior Students who obtain the Mark of Distinction in each subject. 2s.; post free, 2s. 4d. London: Cambridge University Press Warehouse (Fetter Lane, E.C.). (2) Higher Local Examinations: Regulations for the Examinations in December, 1908, and in June, 1909.

City and Guilds of London Institute; Department of Technology. (1) Report of the Council, 1908. (2) Programme for Session 1908-9. 9d. Murray.

Clark College Record (Worcester, Mass., U.S.A.), April, 1908.

[Mainly an account of the chief steps of progress, in view of the approach of the College's seventh year.]

Daughters, For our: a Plea for the Co-education of our Boys and Girls. By Mrs. Ennis Richmond, Principal of St. Leonard's School for Boys and Girls, Baldock, Herts. 3d. Letchworth: Wheeler, Odell, & Co. London: Street, 42 Albemarle Street, W.

[Reasoned and moderate.]

Education Riddle Answered: How to solve the Problem—by means of a new policy (non-party and unsectarian). By J. K. C. Publishers, Addison House, Woodfield Road, Westcliff-on-Sea.

Johns Hopkins University Circular. No. 4 (April), The Collegiate Instruction, 1908. No. 5 (May), The Economic Seminary, 1907-8.

London University and Union Society: Annual Report, 1906-07.

[Shows much useful activity.]

L.C.C.—(1) Conference of Teachers, January 2-4, 1908: Report of Proceedings. No. 1139. 1s.; post free, 1s. 3d. (2) Report by the Educational Adviser on German Experiments in connexion with Open Air Schools, and a Joint Report of the Medical Officer and the Executive Officer on the Bostall Wood Open Air School (July 22-October 19, 1907). P. S. King & Son.

[(1) Interesting and instructive papers and discussions on Nature Study, the Teaching of Botany, Commercial Education, Manual Work in the Lower Standards, and Educational Experiments in Elementary Schools.]

United States and Canada, Education in the: Report of a Tour with the Mosely Commission of Teachers 1906-7. By G. P. Dymond, M.A. Lond., Principal of the Hoe Grammar School, Plymouth. 6d. To be obtained from the Secretary, Hoe Grammar School, Plymouth.

**MATHEMATICS.**

**16390.** (Professor NEUBERG.) — Soient A'B'C'D' et ABCD deux tétraèdres polaires réciproques par rapport à une sphère de centre O. Démontrer que

$$\frac{\text{vol OB'C'D'}}{\text{vol OBCD}} = \frac{\text{OC'D'A'}}{\text{OCDA}} = \frac{\text{OD'A'B'}}{\text{ODAB}} = \frac{\text{OA'B'C'}}{\text{OABC}}$$

*Solutions (I.) by A. M. NESBITT, M.A.; (II.) by M. T. NARANIENGAR, M.A.*

(I.) If A', B', C', D' have for co-ordinates (x<sub>1</sub>y<sub>1</sub>z<sub>1</sub>), (x<sub>2</sub>y<sub>2</sub>z<sub>2</sub>), (...), (...), the equations to BCD, CDA, ..., will be

$$xx_1 + yy_1 + zz_1 = c^2, \quad xx_2 + \dots = c^2 \dots \dots \dots (1, 2),$$

and two similar (3), (4).

Now if big letters denote co-factors of corresponding small letters in the determinant | x<sub>1</sub> y<sub>1</sub> z<sub>1</sub> w<sub>1</sub> | ≡ ∇, the co-ordinates of B with signs changed are

$$c^2 X_2/W_2, \quad c^2 Y_1/W_2, \quad c^2 Z_3/W_2,$$

so that six times the tetrahedron OBCD

$$= \begin{vmatrix} X_2 & Y_2 & Z_2 \\ X_3 & Y_3 & Z_3 \\ X_4 & Y_4 & Z_4 \end{vmatrix} \times c^6/W_2 W_3 W_4.$$

But the determinant | X<sub>2</sub> Y<sub>3</sub> Z<sub>4</sub> | = w<sub>1</sub>∇<sup>2</sup>, so that the above reduces to c<sup>6</sup>w<sub>1</sub>∇<sup>2</sup>/W<sub>2</sub>W<sub>3</sub>W<sub>4</sub>. Also six times the tetrahedron OB'C'D' is at once seen to be W<sub>1</sub>; therefore the Proposer's first ratio becomes W<sub>1</sub>W<sub>2</sub>W<sub>3</sub>W<sub>4</sub>/c<sup>6</sup>.w<sub>1</sub>∇<sup>2</sup>; and, since w<sub>1</sub>, w<sub>2</sub>, ... are all unity, the four ratios are clearly equal.

(II.) Let a, a' denote OA, OA', and θ, θ' their inclinations to the planes of BCD and B'C'D'. Also let p, p' denote the perpendiculars from O on BCD and B'C'D', and V, V' the volumes of ABCD and A'B'C'D'.

Then evidently p.a' = p'.a = R<sup>2</sup>, where R is the radius of the sphere, and θ = θ', since OA, OA' are respectively perpendicular to B'C'D' and BCD. Hence

$$V = \frac{1}{3} (\text{area } \triangle BCD)(p + a \sin \theta) = \frac{1}{3} \Delta (R^2 + aa' \sin \theta)/a' \dots \dots \dots (1),$$

$$V' = \frac{1}{3} (\text{area } \triangle B'C'D')(p' + a' \sin \theta) = \frac{1}{3} \Delta' (R^2 + aa' \sin \theta)/a \dots \dots \dots (2);$$

therefore  $V : V' = a : a' \Delta : a' \Delta'$ .

But OB'C'D' : OBCD = p'Δ' : pΔ = a'Δ' : aΔ.

Thus OB'C'D' : OBCD = V' : V, &c.

**16420.** (Rev. F. H. JACKSON, M.A.)—Transform

$$1 + ax + a^2x^2 + a^3x^3 + \dots$$

$$\text{into } \frac{1}{1-x} + \frac{(a-1)x}{(1-x)(1-qx)} + \frac{(a-1)(a-q)x^2}{(1-x)(1-qx)(1-q^2x)} + \frac{(a-1)(a-q)(a-q^2)x^3}{(1-x)(1-qx)(1-q^2x)(1-q^3x)} + \dots,$$

with easily obtained conditions for convergence. Similarly transform

$$\text{Gauss's series, } \frac{x}{1-q} + \frac{x^2}{1-q^2} + \frac{x^3}{1-q^3} + \dots$$

$$\text{into } \frac{x}{(1-q)(1-x)} - \frac{qx^2}{(1-q^2)(1-x)(1-qx)} + \frac{q^2x^3}{(1-q^3)(1-x)(1-qx)(1-q^2x)} - \dots$$

The numerator of the n-th term being q<sup>n(n-1)</sup>x<sup>n</sup>.

*Solution by S. T. SHOVELTON, M.A.*

If in the identity

$$(1-a_1) + a_1(1-a_2) + a_1a_2(1-a_3) + \dots + a_1a_2 \dots a_n(1-a_{n+1}) = 1 - a_1a_2 \dots a_{n+1},$$

we put

$$a_r = \frac{(a-q^{r-1})x}{1-q^{r-1}x},$$

we obtain

$$\frac{1-ax}{1-x} + \frac{(a-1)x(1-ax)}{(1-x)(1-qx)} + \dots + \frac{(a-1)(a-q) \dots (a-q^{n-1})x^n(1-ax)}{(1-x)(1-qx) \dots (1-q^n x)} = 1 - \frac{(a-1)(a-q) \dots (a-q^n)x^{n+1}}{(1-x)(1-qx) \dots (1-q^n x)}.$$

If |q| < 1 and |ax| < 1 the limit of the right-hand side is unity; therefore, &c.

$$\text{Again, let } f(x) = \frac{x}{1-q} + \frac{x^2}{1-q^2} + \frac{x^3}{1-q^3} + \dots$$

$$\text{Then } f(x) - f(qx) = x + x^2 + x^3 + \dots = \frac{x}{1-x} \text{ if } |x| < 1.$$

If in the above equation we put a = 0, we obtain

$$1 = \frac{1}{1-x} - \frac{x}{(1-x)(1-qx)} + \frac{qx^2}{(1-x)(1-qx)(1-q^2x)} - \dots;$$

$$\text{therefore } \frac{x}{1-x} = \frac{x}{(1-x)(1-qx)} - \frac{qx^2}{(1-x)(1-qx)(1-q^2x)} + \dots \dots + (-1)^n \frac{q^{n(n-1)}x^n}{(1-x)(1-qx) \dots (1-q^n x)} \dots$$

$$\text{But } \frac{1}{(1-x)(1-qx) \dots (1-q^n x)} = \frac{1}{(1-q^n)} \left\{ \frac{1}{(1-x) \dots (1-q^{n-1}x)} - \frac{q^n}{(1-qx) \dots (1-q^n x)} \right\};$$

$$\text{therefore } \frac{x}{1-x} = \phi(x) - \phi(qx),$$

$$\text{where } \phi(x) = \frac{x}{(1-q)(1-x)} - \frac{qx^2}{(1-q^2)(1-x)(1-qx)} + \frac{q^2x^3}{(1-q^3)(1-x)(1-qx)(1-q^2x)} - \dots;$$

therefore f(x) - φ(x) = f(qx) - φ(qx) if |x| < 1 and |q| < 1.

By continued application of this equation, we obtain

$$f(x) - \phi(x) = f(q^n x) - \phi(q^n x),$$

and this is seen to be zero by letting n become infinite; therefore

$$f(x) = \phi(x).$$

The solution by the PROPOSER is as follows:—

Both transformations are examples of the following generalization of Mortmort's theorem,

$$\sum_{n=0}^{\infty} u_n x^n = \frac{x}{(1-x)} u_1 + \frac{x^2}{(1-x)(1-qx)} \Delta u_1 + \frac{x^3}{(1-x)(1-qx)(1-q^2x)} \Delta^2 u_1 + \dots,$$

in which Δu<sub>n</sub> = u<sub>n+1</sub> - u<sub>n</sub> = (D-1)u<sub>n</sub>, Δ<sup>2</sup>u<sub>n</sub> = (D-1)(D-q)u<sub>n</sub>,

$$\dots \dots \dots \Delta^n u_n = (D-1)(D-q) \dots (D-q^{n-1}) u_n,$$

shortly to be published, *Messenger of Mathematics*, 1908.

**16419.** (S. NARAYANA AIYAR.)—Integrate

$$(a) \int \frac{\cos(\phi_0 + \phi_1 + \phi_2 + \dots + \phi_n)}{\rho_0 \rho_1 \rho_2 \dots \rho_n} d\theta,$$

$$(b) \int \frac{\sin(\phi_0 + \phi_1 + \phi_2 + \dots + \phi_n)}{\rho_0 \rho_1 \rho_2 \dots \rho_n} d\theta,$$

where φ<sub>p</sub> = tan<sup>-1</sup> sin θ / (p + cos θ) and ρ<sub>p</sub> = √(1 + 2p cos θ + p<sup>2</sup>).

*Solution by S. T. SHOVELTON, M.A.*

Denoting the two integrals by C and S, we have

$$C + iS = \int \prod_{p=0}^{n-1} \frac{e^{i\phi_p}}{\rho_p} d\theta.$$

$$\text{Now } \frac{e^{i\phi_p}}{\rho_p} = \frac{(p + \cos \theta) + i \sin \theta}{(p + \cos \theta)^2 + \sin^2 \theta} = \frac{1}{p + e^{-i\theta}}$$

$$\text{and } \prod_{p=0}^{n-1} \frac{1}{p + e^{-i\theta}} = \prod_{p=0}^{n-1} \frac{(-1)^p}{p! (n-p)!} \cdot \frac{1}{p + e^{-i\theta}};$$

therefore

$$C + iS = \prod_{p=0}^{n-1} \frac{(-1)^p}{p! (n-p)!} \int \frac{d\theta}{p + e^{-i\theta}} = \prod_{p=0}^{n-1} \frac{(-1)^p}{p! (n-p)!} \left[ \frac{\log(pe^{i\theta} + 1)}{ip} \right] = \prod_{p=0}^{n-1} \frac{(-1)^{p-1}}{p! (n-p)!} \left[ i \log \sqrt{(p^2 + 2p \cos \theta + 1)} - \tan^{-1} \frac{p \sin \theta}{1 + p \cos \theta} \right],$$

whence the values of C and S are obvious.

**16381.** (E. J. EBDEN, B.A.) — ABC is any plane triangle. (A) Through A, B, C lines are drawn trisecting the angles CAB, ABC, BCA respectively. Let (A, B) denote that trisector of the angle CAB which is nearest to the side opposite the angle B, ...; show geometrically (or otherwise) that the triangle determined by the points

(B, A), (C, A); (C, B), (A, B); (A, C), (B, C) ..... (1, 2, 3)

is equilateral.

(b) Let the exterior angles be trisected. Let AB, AC be produced, and let the trisectors of the exterior angle at B nearest to BC, and to AB produced be denoted by (B', A) and (B', C) respectively; then the triangle determined by the points

(A, C), (B', C); (A, B), (C', B); (B', A), (C', A)

is equilateral. So also the triangles determined by producing BA, BC; CA, CB respectively, and applying the same construction, are equilateral.

(c) The triangle determined by the points

(B', A), (C', A); (A', B), (C', B); (A', C), (B', C)

by producing AB, AC; BA, BC; CA, CB respectively is equilateral.

(d) The property (a) holds good when one vertex is at infinity, and the triangle degenerates into a finite straight line and two parallels drawn in the same direction through its extremities.

The lines trisecting the vertical angle at infinity are represented by two lines drawn parallel to the infinite sides from the points of trisection of the finite side.

*Solution by M. SATYANARAYANA.*

(a) To show that XYZ, the triangle formed by the points (B, A), (C, A); (C, B), (A, B); and (A, C), (B, C), is equilateral.

From triangle BPC,

$$BP \sim CP = 2R \sin A \left\{ \left[ \sin \frac{2}{3}B / \sin \frac{2}{3}(B+C) \right] \sim \left[ \sin \frac{2}{3}C / \sin \frac{2}{3}(B+C) \right] \right\} \\ = [2R \sin A \sin \frac{1}{3}(B+C)] / \sin \frac{1}{3}(B+C).$$

Also  $BZ \sim CY$

$$= [(2R \sin C \sin \frac{1}{3}A) / \sin \frac{1}{3}(A+B)] \sim [(2R \sin B \sin \frac{1}{3}A) / \sin \frac{1}{3}(A+C)] \\ = 2R \sin \frac{1}{3}A \left\{ \left[ \sin(A+B) / \sin \frac{1}{3}(A+B) \right] \sim \left[ \sin(A+C) / \sin \frac{1}{3}(A+C) \right] \right\} \\ = 2R \cdot 4 \sin \frac{1}{3}A \sin \frac{1}{3}(2A+B+C) \sin \frac{1}{3}(B+C) \\ = 2R \sin \frac{1}{3}(B+C) \sin A / \sin \frac{1}{3}(B+C);$$

therefore

$$BP \sim BZ = CP \sim CY;$$

therefore

$$ZP = PY.$$

Similarly

$$QZ = QX, \quad RX = RY.$$

Now

$$\angle YZX = 180^\circ - \angle BZQ - \angle QZX - \angle PZY \\ = (A+B+C) - \frac{1}{3}(A+B) - \frac{1}{3}(A+C) - \frac{1}{3}(B+C) \\ = \frac{1}{3}(A+B+C) = 60^\circ.$$

Similarly

$$\angle ZYX = \angle YXZ = 60^\circ.$$

Hence XYZ is equilateral.

(b) To prove that  $X_1Y_1Z_1$  is equilateral.

As in the previous case  $AZ_1 \sim AQ_1 = CQ_1 \sim CX_1$ ; therefore

$$Q_1X_1 = QZ_1, \dots,$$

$$\angle Z_1X_1Y_1 = 180^\circ - \angle Q_1X_1Z_1 - \angle R_1X_1Y_1 - \angle CX_1R_1;$$

$$\text{but } \angle Q_1X_1Z_1 = \frac{1}{3}(180^\circ - \angle X_1Q_1Z_1) = \frac{1}{3}[(A+B+C) - \frac{2}{3}A - \frac{1}{3}(3C+A+B)] \\ = \frac{1}{3}B, \quad \angle R_1X_1Y_1 = \frac{1}{3}C,$$

$$\text{and } \angle CX_1R_1 = \frac{1}{3}(A+C) + \frac{1}{3}(B+A) = \frac{1}{3}(2A+B+C);$$

therefore

$$\angle Z_1X_1Y_1 = \frac{1}{3}(A+B+C) = 60^\circ.$$

Similarly

$$\angle X_1Y_1Z_1 = \angle Y_1Z_1X_1 = 60^\circ.$$

(c) To show that  $X_1Y_1Z_1$  is equilateral.

In this case  $BZ' + BP_1 = CY' + CP_1$ ;

therefore

$$P_1Z' = P_1Y', \dots,$$

$$\angle X_1Y_1Z_1 = \angle P_1Y_1Z_1 + \angle AY'X_1 - \angle AY'C;$$

but  $\angle P_1Y_1Z_1 = \frac{1}{2}[(A+B+C) - \angle BP_1C]$

$$= \frac{1}{2}\{(A+B+C) - [180^\circ - \frac{2}{3}(A+C) - \frac{2}{3}(A+B)]\} \\ = \frac{1}{2}(2A+B+C).$$

Similarly

$$\angle AY'X_1 = \frac{1}{2}(2C+B+A),$$

because  $Y'A$  and  $X_1B$  produced form the sides of an isosceles triangle,

and  $\angle AY'C = 180^\circ - \frac{1}{3}(B+C) - \frac{1}{3}(A+B) = \frac{1}{3}(2A+B+2C)$ ;

therefore

$$\angle X_1Y_1Z_1 = \frac{1}{2}(A+B+C) = 60^\circ.$$

Similarly

$$\angle Y_1Z_1X_1 = \angle Y'X_1Z_1 = 60^\circ.$$

(d) This easily follows from (a) or (b).

11759. (Professor RAMASWAMI AIYAR, M.A.)—Find loci in space for the movable points A, B, C, D, such that  $AB \cdot CD = AC \cdot BD$ .

*Solution by M. T. NARANIENGAR, M.A.*

If  $AB \cdot CD = AC \cdot BD$ ,

$$AB : AC = BD : CD.$$

Hence A and D must lie on a circle having B and C for inverse points. Thus, if O be the centre of this circle,

$$OC \cdot OB = OA^2 = OD^2.$$

Therefore the circle is orthogonal to the circles BCA, BCD. We may therefore regard A, B, C, D as the intersections of an orthogonal circle with two coaxial circles. In space the locus may be conceived as the common section of two spheres and an orthogonal sphere, &c.

*Note on the Nine-Point Circle.*

*By W. GALLATLY, M.A.*

Let  $A'B'C'$  be the mid-point triangle of ABC, P any point on the nine-point circle. Draw MPQ perpendicular to BC, noting that  $A'Q$  is parallel to the Simson-line of P with regard to  $A'B'C'$ . Draw diameter TOT' parallel to  $A'Q$ .

(1)  $\angle PA'M = \angle AOT$ .

For, since OQ is a parallelogram,  $A'Q$  is equal and parallel to OR. Also  $A'L$  is equal and parallel to OA. Therefore the triangles AOR,  $LA'Q$  are equal in all respects,

$\angle ARO = \angle LQA' = \text{a right angle}$  and  $\angle AOT = \angle LA'Q = \angle PA'C$ ,

since  $\text{arc LQ} = \text{arc PH}_1$ .

(2) The Simson-lines of T and T' with respect to ABC pass through P. Draw chord Tt perpendicular to BC. Join HT, cutting arc LQ in q, so that  $Hq = qT$ .

The Simson-line of T passes through q, and is parallel to At.

Draw chord qp parallel to PQ.

Then, since  $\angle PO'H_1 = 2\angle PA'H_1 = 2\angle AOT$ , and the radii are as 1 : 2,

therefore  $\text{arc PH}_1 = \text{arc LQ} = \text{arc AT}$ .

16471. (V. DANIEL, B.Sc.)—A line CPQR... is drawn from one angle of a triangle, as in the figure, each  $(n + 2)$ -th portion terminated by the  $n$ -th portion, and is such that the ratio in which each portion of the line divides the angle from which it starts is alternately  $\tan^2 \alpha$  or  $\cot^2 \alpha$ ,  $\alpha$  being a constant. If  $\theta_n$  denote the  $n$ -th angle so divided, and  $\phi_n$  its complement, show that

- (1)  $\phi_\infty = 0$ ,
- (2)  $p_n \sin \theta_n = p_{n-1} \sin(\theta_n \cos^2 \alpha) - p_{n-2} \sin(\theta_n \sin^2 \alpha)$ ,

where  $p_r$  is the perpendicular from C on the  $r$ -th portion of the line. Will any solver contribute a method of determining the co-ordinates of the limiting point?

16472. (R. F. DAVIS, M.A.)—XYZ is a triangle whose circumcentre is O and orthocentre H; and the images of X, Y, Z in YZ, ZX, XY are A, B, C respectively. The celebrated Dutch problem (first proposed about 1899), "Given A, B, C to find X, Y, Z," which leads to an equation of the seventh degree has been recently discussed by Mr. C. E. McVicker, M.A., in the March, 1908, number of the *Educational Times*. Prove geometrically that, if A'B'C' be the triangle having A, B, C for the middle points of its sides; then (1) there are six triplets of similar triangles

- OXB, CXA, OCA',
- OXC, BXA, OBA',
- OYA, CYB, OCB',
- OYC, AYB, OAB',
- OZA, BZC, OBC',
- OZB, AZC, OAC'.

(2)  $OA.OA' = OB.OB' = OC.OC' = OA.OB.OC/OX$ .

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

8076. (ÂSĀTOSH MUKHOPĀDHĀY, F.R.A.S.)—The normal plane of a curve constantly touches a quadric; investigate the nature of the quadric in order that the curve may be rectifiable.

8360. (D. BIDDLE.)—A liqueur is ordered to consist of four spirits A, B, C, D, in the proportions 1, 2, 3, 10. When an eighth part is drawn off from the full vessel and consumed, it is found that B has been omitted, and that an excess of D has taken its place. Without necessarily refilling the vessel, introduce B, and rectify the proportions of the several spirits, with the least possible loss of material, and at the least possible extra expense, the relative cost of A, B, C, and D being  $1, \frac{1}{2}, \frac{1}{3}, \frac{1}{6}$ , and allowance being made for the difference in cost between the interchanged B and D.

8364. (D. EDWARDS.)—Two circles of radii  $r_1, r_2$  touch internally a parabola, and touch each other at the focus; prove that

$$r_1^{-1} + r_2^{-1} = 4l^{-1}$$

where  $l$  is the latus rectum of the parabola.

8535. (ARTEMAS MARTIN, LL.D.)—A given right cone is cut by a plane, so that the section is an entire ellipse; find its average area.

8598. (Professor NILKANTHA SARKAR, M.A.)—An equilateral triangle ABC is drawn on a sphere, and any point P is taken within it; (1) find the constant relation between PA, PB, PC; and (2) prove that their sum is less than two-thirds of the perimeter of the triangle.

8670. (R. KNOWLES, B.A.)—Prove that the sum of the series

$$1 + \frac{5.2}{1.2} \left(\frac{1}{2}\right)^1 + \frac{5.2.11.8}{1.2.3.4} \left(\frac{1}{2}\right)^2 + \frac{5.2.11.8.17.14}{1.2.3.4.5.6} \left(\frac{1}{2}\right)^3 + \dots \text{ ad inf.} \\ = \frac{1}{2} (4^3)(1 + 7^{-1}).$$

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, June 11th, 1908. — Prof. W. Burnside, President, in the Chair.

Mr. F. M. Saxelby was elected a member.

The President announced that the Council had awarded the De Morgan Medal for 1908 to Dr. J. W. L. Glaisher for his researches in Pure Mathematics.

The following papers were communicated:—

- "Relations between the Divisors of the First  $n$  Natural Numbers," Dr. J. W. L. Glaisher.
- "Electrical Resonance," Prof. H. M. Macdonald.
- "A Form of the Eliminant of Two Binary Quantics," Mr. A. L. Dixon.
- "Perpetuant Syzygies of the  $n$ th Kind," Mr. H. Piaggio.

NOW READY.

Demy 8vo, cloth, price 2s. 6d., free by post.  
To Members of the College the price is 1s., or 1s. 6d. free by post.

# THE CALENDAR

OF

## THE COLLEGE OF PRECEPTORS

FOR THE YEAR 1908 :

CONTAINING

All information respecting the objects and operations of the College, Lists of Officers, Examiners, and Members, the Regulations of the various Examinations, &c., with an Appendix containing the following Examination Papers:—

1. Papers set at Examination of Teachers for Diplomas, Summer, 1907.
2. Do. do. do. do. Christmas, 1907.
3. Papers set at Examination of Pupils for Certificates, Midsummer, 1907.
4. Do. do. do. do. Christmas, 1907.
5. Papers set at Professional Preliminary Examination, March, 1907.
6. Do. do. do. do. September, 1907.
7. Papers set at Lower Forms Examination ... ... Summer, 1907.
8. Do. do. do. do. ... ... Christmas, 1907.

\* Nos. 3, 4, 5, and 6 may be had separately, price, free by post, 7d. each set. Nos. 7 and 8, price, free by post, 4d. each set.

The Diploma Papers are to be had only in the "Calendar."

FRANCIS HODGSON, 89 FARRINGTON STREET, LONDON, E.C.

# Messrs. BELL'S NEW BOOKS

## MASON'S NEW ENGLISH GRAMMARS.

Revised, in accordance with modern requirements, by

**A. J. ASHTON, M.A.,**

Senior English Master, Kelvinside Academy, Glasgow; and Examiner in English to the College of Preceptors.

Now ready. Crown 8vo, 125 pages, 1s.

## MASON'S JUNIOR ENGLISH GRAMMAR.

This new edition of MASON'S ENGLISH GRAMMARS has been augmented and revised so as to embody the results of the advances that have been made in the teaching of English Grammar since these grammars were last revised by Mr. MASON. The new edition will consist of three Courses—Junior, Intermediate, and Senior—and will be printed in good bold type, and strongly bound in cloth. The Intermediate and Senior Volumes are in active preparation.

Third Edition, Revised and much Enlarged. Reset throughout. Crown 8vo, 656 pages, 5s.

### AN INTRODUCTION TO ENGLISH LITERATURE.

By HENRY S. PANCOAST.

For this new edition the first half of the book has been practically rewritten, and the chapters dealing with the Early and Middle English periods have been considerably enlarged. Greater space has also been given to the literature of the Queen Anne and Victorian periods, and separate lives of Bunyan, Dryden, Steele, Cowper, and others have been added.

### ENGLISH READINGS.

A New Series of Selections from the Works of the Great Writers. Edited for use in Schools.

**BURKE.—SELECTIONS.** Chosen and edited with a full Introduction, by BLISS PERRY, editor of the "Atlantic Monthly." xxvi+298 pp. 16mo. 2s. 6d.

**BYRON.—SELECTIONS.** Edited, with Introduction and Notes by P. I. CARPENTER, Assistant Professor in the University of Chicago. lviii+412 pp. 16mo. 2s. 6d.

**COLERIDGE.—PROSE SELECTIONS.** Selections chosen and edited, with Introduction and Notes, by HENRY A. BEERS, Professor in Yale University. xxix+146 pp. 16mo. 2s.

**DRYDEN.—ESSAYS ON THE DRAMA.** Edited by WILLIAM STRUNK, JUNR., Assistant Professor in Cornell University. xxxviii+180 pp. 16mo. 2s.

**SWIFT.—PROSE SELECTIONS.** Edited by FREDERICK C. PRESCOTT, Assistant Professor in Cornell University. xliii+229 pp. 16mo. 2s. 6d.

**TENNYSON.—THE PRINCESS.** Edited, with Notes and Introduction by L. A. SHERMAN, Professor in the University of Nebraska. lxi+185 pp. 16mo. 2s.

**THACKERAY.—ENGLISH HUMOURISTS.** Edited, with an Introduction and Notes, by WILLIAM LYON PHELPS, Professor in Yale University. xii+360 pp. 16mo. 2s. 6d.

Crown 8vo. With the Original Map. 2s.

### JOSEPH HALL.—MUNDUS ALTER ET IDEM

(An Old World and a New).

Edited for School Use with Introduction, Notes, and Vocabulary by H. J. ANDERSON, M.A., Inspector of Training Colleges in Cape Colony, late Classical Master at Hillhead Public School, Glasgow.

This edition of Bishop HALL'S famous satire is intended for use as a reader in the awkward period which immediately precedes the reading of difficult authors, and will be found an admirable preparation for them.

### BELL'S ILLUSTRATED CLASSICS.

Pott 8vo. With many Illustrations. With or without Vocabulary. Price 1s. 6d. each.

NEW VOLUMES.

**VERGIL.—AENEID. Book X.** Edited, with Introduction and Notes, by L. D. WAINWRIGHT, M.A., Assistant Master at St. Paul's School. Ready.

**VERGIL.—AENBID. Book IX.** Edited, with Introduction and Notes, by L. D. WAINWRIGHT, M.A. Preparing.

Crown 8vo. 1s.

**COTHURNULUS. Three Short Historical Latin Plays for Beginners.** With Vocabulary. By EDWARD VERNON ARNOLD, Litt.D., Professor of Latin at the University College of North Wales, formerly Fellow of Trinity College, Cambridge.

A COMPLETE HISTORY READER FOR LOWER FORMS.

Crown 8vo. 254 pages. With 66 Illustrations. 1s. 6d.

**A JUNIOR HISTORY OF ENGLAND.** By E. NIXON, Late Head Mistress of Junior School, Specialist in History, Ladies' College, Cheltenham.

This History is intended to follow the reading of a simpler one, and to be a preparation for the study of much fuller books. It aims at giving an idea of the development of the Constitution and growth of the Empire, while telling of those who have lived, fought, and died for King and Country.

Now Ready. 5s. net each.

### BELL'S CONTOUR CHARTS.

An aid to the Reading of Ordnance Survey Maps.

Full Prospectus on application.

## Cambridge Local Examinations, 1909.

## Messrs. Bell's Editions of Books Set.

**SHAKESPEARE.—JULIUS CAESAR.** Edited, with Introduction and Notes, by T. DUFF BARNETT, B.A. 2s. (Bell's English Classics.) Notes, separately, 1s.

**CAESAR.—DE BELLO GALLICO. Books IV. and V.** Edited, with Introduction and Notes, by the Rev. A. W. URCOTT, M.A., and A. REYNOLDS, M.A. With Illustrations. 2s. 6d. Also separately, 1s. 6d. each. (Bell's Illustrated Classics.)

**Translation.** By W. A. McDEVITTE. Books I.-IV. 1s. Books V.-VII. 1s. (Bell's Classical Translations.)

**VERGIL.—AENEID. Book XI.** Professor Conington's Edition. Abridged. 1s. 6d. (Cambridge Texts with Notes.)

**Translation.** By A. HAMILTON BRYCE. 1s. (Bell's Classical Translations.)

**LIVY, Book XXII.** Edited by L. D. DOWDALL, M.A. 2s. (Public School Series.)

**Translation.** By J. B. BAKER. 1s.

**PLAUTUS.—TRINUMMUS.** Edited, with Notes, by W. WAGNER, Ph.D. 4s. 6d. (Public School Series.)

**Translation.** 1s. By HENRY T. RILEY. (Bell's Classical Translations.)

**XENOPHON.—ANABASIS. Book II.** Edited, with Introduction and Notes, by E. C. MARCHANT, M.A. Illustrated. 1s. 6d. (Bell's Illustrated Classics.)

**Translation.** By the Rev. J. S. WATSON. 1s. (Bell's Classical Translations.)

**PLATO.—APOLOGY AND CRITO.** Edited, with Notes, by Prof. WAGNER. 2s. 6d. (Bell's Classical Translations.)

**SOPHOCLES.—ANTIGONE.** Edited, with Introduction and Notes, by G. H. WELLS, M.A. Illustrated. 2s. 6d. net. (Bell's Classical Translations.)

**Translation.** 1s. (Bell's Classical Translations.)

**MOLIERE.—LE BOURGEOIS GENTILHOMME.** Edited by M. GASC. 6d. (Bell's Modern Translations.)

**Translation.** 1s. (Bell's Modern Translations.)

London: GEORGE BELL & SONS, York House, Portugal St., Kingsway, W.C.

JUST PUBLISHED. **AN IMPORTANT NEW SCHOOL ARITHMETIC.**

# A SCHOOL ARITHMETIC. By H. S. HALL, M.A., AND F. H. STEVENS, M.A.

Complete, with Answers, 4s. 6d.; without Answers, 3s. 6d.

Or in two parts—Part I., with Answers, 2s. 6d.; without Answers, 2s. Part II., with Answers, 2s. 6d.; without Answers, 2s. Answers, 1s. Key in preparation.

THIS work follows closely the recommendations of the Mathematical Association. Some of the principal features are as follows:—

- (i.) British and Foreign Weights and Measures are introduced and illustrated side by side.
- (ii.) Algebraical methods are used whenever they seem conducive to clearness and simplicity.
- (iii.) Decimals and the Metric System are discussed together.
- (iv.) Special attention has been bestowed on the sections dealing with Decimal Approximation.
- (v.) The principles of Ratio, Proportion, and Percentage are introduced in a simple manner in connection with Fractions, and are more fully developed in later sections.
- (vi.) Though the Unitary Method is dealt with in an early chapter, it gives way later to more direct and scientific methods in all questions depending on Proportion.
- (vii.) A chapter is given explaining all that is necessary for a clear understanding of Simple Graphs. In subsequent chapters graphical methods are frequently used for the purpose of illustration—especially in connection with Proportion and Variation.
- (viii.) The use of Four-Figure Logarithms is fully explained. Tables of Logarithms and Anti-Logarithms are supplied, together with a large variety of examples for practice in logarithmic work.

**H.M.I.**

Some Passages in the Life of one of H.M. Inspectors of Schools. By **E. M. SNEYD-KYNNERSLEY**, formerly H.M.I. North-west Division. 8vo, 8s. 6d. net.

A highly entertaining book, containing a large number of good stories told by a *raconteur* of exceptional ability.

## CAMBRIDGE LOCAL EXAMINATIONS, 1909.

### RELIGIOUS KNOWLEDGE.

- THE GOSPEL ACCORDING TO ST. MATTHEW.** Greek Text. With Introduction and Notes. By Rev. Canon SLOMAN, M.A. 2s. 6d. [*Preliminary, Junior, and Senior.*]  
**THE ACTS OF THE APOSTLES.** Greek Text. With Notes. By T. E. PAGE, M.A. 3s. 6d. [*Junior and Senior.*]  
**THE ACTS OF THE APOSTLES.** Authorised Version. With Notes. By T. E. PAGE, M.A., and Rev. A. S. WALPOLE, M.A. 2s. 6d. [*Junior and Senior.*]

### COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

#### LECTURES FOR TEACHERS.

On Thursday, 1st of October, JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London, will commence a Course of Twelve Lectures on

#### "THE PRACTICAL TEACHER'S PROBLEMS."

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools. The Lectures will be given on Thursday Evenings at 7, beginning on October 1st.

For Syllabus, see page 332.

The Fee for the Course is Half-a-Guinea.

Members of the College have free admission to this Course.

#### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will commence on the 31st of August, 1908.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in October.

**Certificate Examinations.**—The Christmas Examination for Certificates will commence on the 8th of December, 1908.

**Lower Forms Examinations.**—The Christmas Examination will commence on the 8th of December, 1908.

**Professional Preliminary Examinations.**—These Examinations are held in March and September. The Autumn Examination in 1908 will commence on the 8th of September.

**Inspection and Examination of Schools.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., Secretary

Bloomsbury Square, W.C.

### UNIVERSITY OF ST. ANDREWS.

#### L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

### LONDON COLLEGE OF MUSIC. (Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

Patron: His GRACE THE DUKE OF LEEDS.

Dr. F. J. KERN, Mus. Bsc. Cantab., Principal.

G. AUGUSTUS HOLMES, Esq., Director of Examinations-EXAMINATIONS, 1908.

The NEXT EXAMINATION in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 400 Provincial Centres in DECEMBER, when Certificates will be granted to all successful candidates.

The Higher Examinations for the Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma, L.C.M., and Fellowship (F.L.C.M.) also take place in DECEMBER.

Gold and Silver Medals and Book Prizes are offered for competition according to the Regulations.

LOCAL SCHOOL CENTRES.—Full particulars with reference to the formation of these Centres will be forwarded to Principals of Schools upon application.

SYLLABUS for 1908, together with Annual Report, may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best Professors at moderate fees. The College is open 10 a.m. to 9.30 p.m. A COURSE of TRAINING in Pianoforte and Singing for Teachers is held at the College.

VACATION LESSONS for Teachers and others are given at Easter, August, and Christmas.

T. WERKES HOLMES, Secretary.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

**G.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

## GUY'S HOSPITAL MEDICAL SCHOOL.

(UNIVERSITY OF LONDON.)

The WINTER SESSION commences on Thursday, October 1. ENTRANCE SCHOLARSHIPS of the combined value of £410 are awarded annually, as also numerous Prizes and Medals.

All Hospital appointments are made strictly according to merit. The Dental School provides the full curriculum required for the L.D.S. Examination.

A Handbook of information for those about to enter the Medical Profession will be forwarded on application.

For Prospectus of the School, with particulars of new scheme for payment of composition fees, course of study advised, regulations for residence in the College, and of the Clubs Union, &c., apply personally, or by letter, to the DEAN, Guy's Hospital, London Bridge, S.E.

## LONDON HOSPITAL MEDICAL COLLEGE.

(UNIVERSITY OF LONDON.)

The WINTER SESSION COMMENCES on October 1. The Hospital is the largest in England: 922 beds are in constant use: in-patients last year, 14,288, out-patients, 228,279; accidents 18,702; major operations, 4,121.

APPOINTMENTS.—Ninety qualified Appointments are made annually; more than 150 Dressers, Clinical Clerks, &c., every three months.

SCHOLARSHIPS and PRIZES.—Thirty-seven Scholarships and Prizes are given annually. Seven Entrance Scholarships will be offered in September. Enlargement of the Hospital and College.

Athletic Ground, Residence, &c.  
For Prospectus and full information apply personally, or by letter, to  
MUNRO SCOTT, Warden,  
Mile End, E.

## ROYAL COLLEGE OF PHYSICIANS OF EDINBURGH, ROYAL COLLEGE OF SURGEONS OF EDINBURGH, AND FACULTY OF PHYSICIANS AND SURGEONS OF GLASGOW.

Copies of Regulations for the Triple Qualification of this Board (L.R.C.P.E., L.R.C.S.E., and L.F.P. & S.G.), containing dates of Professional Examinations for year 1908, Curriculum, &c., may be had on application to JAMES ROBERTSON, Solicitor, 54 George Square, Edinburgh, Inspector and Treasurer for Edinburgh; or from ALEXANDER DUNCAN, B.A., LL.D., Faculty Hall, 242 St. Vincent Street, Glasgow, Inspector and Treasurer for Glasgow.

## ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

(UNIVERSITY OF LONDON.)

The WINTER SESSION will begin on Thursday, October 1st, 1908.

Students can reside in the College within the Hospital walls, subject to the Collegiate regulations.

The Hospital contains a service of 744 beds. Scholarships and Prizes of the aggregate value of nearly £900 are awarded annually.

The Medical School contains large Lecture Rooms and well appointed Laboratories for Practical Teaching, as well as Dissecting Rooms, Museum, Library, &c.

The Club Ground of the Students' Union (10 acres) is at Winchmore Hill, within easy reach of the Hospital.

The New Buildings, recently completed, give increased accommodation to Medical and Surgical Out-patients, and Eight Special Departments, as well as Reading and Luncheon Rooms for the Students' Union and Residential Quarters for the House Surgeons and House Physicians.

For further particulars apply, personally or by letter, to the DEAN OF THE MEDICAL SCHOOL, St. Bartholomew's Hospital, E.C.

A Handbook forwarded on application.

## BADGES, HAT BANDS, CAPS

AT WHOLESALE PRICES.

Write—SCHOOLS AGENT, 1 Arundel Villas, Chelmsford Road, South Woodford, N.E.

## THE MIDDLESEX HOSPITAL MEDICAL SCHOOL.

### A SCHOOL OF THE UNIVERSITY OF LONDON.

The Medical School of the Middlesex Hospital has been largely rebuilt and equipped to meet the most recent educational requirements.

#### HOSPITAL APPOINTMENTS.

In addition to Clerkships and Dresserships, Sixteen Resident Appointments are annually open to all General Students. Also Medical, Surgical, and Obstetric Registrars are appointed annually.

#### SCHOLARSHIPS AND PRIZES.

Scholarships and Prizes to the value of £860 are awarded annually.

Full particulars may be obtained on application to

H. CAMPBELL THOMSON, M.D., F.R.C.P.,  
Dean of the Medical School,  
Middlesex Hospital, London, W.

## THE ROYAL DENTAL HOSPITAL OF LONDON AND LONDON SCHOOL OF DENTAL SURGERY,

LEICESTER SQUARE, LONDON, W.C.

The WINTER SESSION, 1908-9, will commence on Thursday, October 1st.

The Royal Dental Hospital was founded in 1858 at Soho Square, and in March, 1874, was removed to Leicester Square. The increased demands made on it by the public and the rapid growth of the Medical School necessitated the erection of an entirely new building. The new Hospital was opened in March, 1901, and is complete in every detail with modern appliances, and the School portion of the building thoroughly equipped for teaching purposes. The clinic of the Hospital is unrivalled. In 1907 104,745 operations were performed.

The following SCHOLARSHIPS and PRIZES are open for competition.

The ENTRANCE SCHOLARSHIP, of the value of £20, awarded in October.

The SAUNDERS SCHOLARSHIP, of the value of £20. The STORER-BENNETT RESEARCH SCHOLARSHIP, of the value of £50.

The ALFRED WOODHOUSE SCHOLARSHIP, of £30. The ROBERT WOODHOUSE PRIZE, of the value of £10.

#### INSTRUCTION IN MECHANICAL DENTISTRY.

The instruction in Mechanical Dentistry as required for the Dental Curriculum can be obtained at this Hospital.

Further particulars concerning Fees, Scholarships, &c., can be obtained on application to

THE DEAN.

## CHARING CROSS HOSPITAL MEDICAL COLLEGE.

(UNIVERSITY OF LONDON.)

The WINTER SESSION, 1908-9 will be opened on Thursday, October 1st, by the delivery of the Seventh Biennial Huxley Lecture on "Recent Advances in Science and their Bearings on Medicine and Surgery," in the Out-Patients' Hall at the Hospital, at 4 p.m., by Sir PATRICK MANSON, K.C.M.G., M.D., F.R.C.P., F.R.S.

The College is complete in all Departments. SPECIAL TEACHERS for all Preliminary and Intermediate Subjects. EIGHT ENTRANCE SCHOLARSHIPS are awarded annually of the aggregate value of £430. Twenty-two Hospital and Teaching APPOINTMENTS are made yearly.

For Prospectus and details of fees apply to—  
Mr. F. C. WALLIS, Dean.

## KING'S COLLEGE, LONDON.

(UNIVERSITY OF LONDON.)

The General Education at King's College, London, is conducted in several distinct but connected Faculties and Departments, viz.:

1. THE FACULTY OF THEOLOGY.—(1) Morning Course; (2) Evening Course.

## KING'S COLLEGE, LONDON.

(UNIVERSITY OF LONDON.)

### DEPARTMENT FOR TRAINING TEACHERS FOR SECONDARY SCHOOLS.

*Theory, Practice, and History of Education:*  
J. W. ADAMSON, B.A., Professor of Education (Head of the Department).

#### Ethics:

Rev. A. CALDECOTT, D.Lit., D.D., Professor of Mental and Moral Philosophy.

#### Psychology:

C. S. MYERS, M.A., M.D., Professor of Psychology.

The Department is recognized by the Board of Education as a Training College for Secondary Teachers. The Course, which includes practical work in Secondary Schools, extends over one academic year, beginning in October or January. It is suitable for those who are preparing to take the Teacher's Diploma, University of London, or the Certificate of the Teachers' Training Syndicate, University of Cambridge.

The fee is £20 for the year, if paid in advance, or 8 guineas per term (three terms in the year).

Two Scholarships, of £20 each for one year, tenable from October 1, 1908, are offered to suitable Candidates (men) who are Graduates of a British University.

Application should be made to Prof. ADAMSON, King's College, Strand, W.C.

## KING'S COLLEGE, LONDON.

### CLASSES FOR THE LONDON UNIVERSITY MATRICULATION AND PROFESSIONAL PRELIMINARY EXAMINATIONS.

Individual Tuition in all subjects required for the Examinations. Fee for Half-yearly Course £3. 3s. Students may join at any time at proportional fees.

Apply to the SECRETARY, King's College, Strand, W.C.

# UNIVERSITY OF EDINBURGH.

**Chancellor:** The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.  
**Rector:** The Right Hon. R. B. HALDANE, K.C., M.P., LL.D., &c.  
**Principal and Vice-Chancellor:** Sir WILLIAM TURNER, K.C.B., D.C.L., LL.D., D.Sc., M.B., &c.  
**Secretary of Senatus:** Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Winter Session** begins about the beginning of October, and closes towards the end of March; the **Summer Session** extends from the beginning of May to the end of July.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Arts Degrees**, the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c.; and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. Education in Military subjects is given in connexion with the Scheme of allotment of Army Commissions to Graduates of the University. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering, and in Public Health**, and the Degree of B.Sc. in **Agriculture** and in **Forestry**. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and in Hebrew, Arabic, and Syriac. The Degree of Bachelor of Divinity (B.D.) is conferred. The **Law Faculty**, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and History, Roman Law, and Political Economy, and Lectureships in International Private Law and Administrative Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.), and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and a University **Certificate in Tropical Diseases** is also conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 41 Professors, 53 Lecturers, and over 50 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £18,500. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, Law, and Music, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music, the training for Degrees in Medicine being afforded by well equipped extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS of the FACULTIES, or from the CLERK of SENATUS; and full details are given in the University Calendar, published by JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 4d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Arts and Science Preliminary papers and Bursary papers, 1s.; Medical Preliminary papers, 6d.; Degree papers: Arts, 1s.; Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each.

August, 1908.

By authority of the Senatus,

L. J. GRANT, Secretary of Senatus.

## THE ASSOCIATED BOARD OF THE R.A.M. AND R.C.M. FOR LOCAL EXAMINATIONS IN MUSIC.

PATRON: HIS MAJESTY THE KING.

## THE HAMILTONIAN SYSTEM.

**A Short and Easy Method of Learning a Foreign Language by a Close Interlinear Translation.**

"This System differs from the ordinary literal translations, in giving a truly literal translation placed word for word under the words of the original, which are only so far changed in order as seemed essential to the sense. The aim is to be strictly literal, and the student is at once saved all trouble about the meaning of each word."

—Mr. RICHARD A. PROCTOR, in *Knowledge*.

Limp cloth, price 1s.

**CÆSAR'S GALLIC WAR. Book I.** With Text as well as Interlinear Translation.

**Books I. to VI.** Price 4s. 6d.

**VIRGIL'S ÆNEID. Books I. to IV.** Price 3s. 6d.

**EUTROPIUS.** Limp cloth, price 1s. 6d.

**FLORIAN'S FABLES.** Limp cloth, price 1s.

**PERRIN'S FABLES.** Limp cloth, price 1s. 6d.

Each Book contains the Text as well as the analytical, interlinear, and literal Translation.

Full List of the Series on Application.

**FRANCIS HODGSON, 89 Farringdon St., E.C.**

The Educational Times.

It is now about half a century since the question of the Registration of Teachers was taken up in an active and practical spirit by the College of Preceptors, and it is over a quarter of a century since the first Registration Bill was laid on the table of the House of Commons. The past half-a-dozen years have witnessed the trial and the failure of a system of which it was difficult ever to predict any large measure of success. Last year the whole matter went back to the melting-pot, and the new Act laid down the form and contents of a new Register and the character of the body to be constituted to work it. And now the question is how to construct an organization that shall satisfy adequately the requirements of the Act as "a Registration Council representative of the teaching profession." In our May number (page 220) we printed the scheme adopted by the representatives of the teaching bodies that met at the College of Preceptors to formulate proposals. We cannot find space for the full, but somewhat diffuse, account of the correspondence and consultation between their spokesmen and the Board of Education just published by the Board (Cd. 4,185): one can get a copy from Messrs. Wyman (Fetter Lane, E.C.) for 2½d. It will probably suffice if we bring together the essential points.

As the Minister of Education has been closely pressed in the House of Commons, and some sharp criticism has been passed on the Board of Education for apparent delay, it seems desirable that the position of the Board should be quite clearly understood. A "Prefatory Note by the Board of Education" explains. After stating the objections of secondary-school teachers to the abolition of the old Register, the "Note" proceeds:

The elementary [?] school teachers accordingly undertook to endeavour to come to an agreement with the other branches of the teaching profession as to the lines on which a new Register satisfactory to the profession could be produced; and the latter half of Section 16 (1), providing for the constitution of a new Registration Council, was inserted in the Bill [now the Act of 1907] in the House of Lords at the instance of combined representations from members of some of the different branches of the profession on that understanding. It was undertaken, at that time, by those representatives that they would, on the passing of the Act, call together representative gatherings of teachers with a view to arriving at an agreed basis for the new Registra-

tion Council, which would then be laid by them before the Board of Education with a view to the ultimate establishment of a Council agreed upon by the teaching profession, so that there should be no element of bureaucratic dictation or control, but so that the teaching profession itself should arrange the body which was virtually to control the public registration of all persons desirous of becoming teachers in any public sense. The analogy of the Medical Council was constantly referred to.

Evidently, then, we must keep in view the desire of the Board of Education, based on the Board's reading of the intention of Parliament, that the teaching profession should formulate its own ideas of the new Registration Council and that there should be "no element of bureaucratic dictation or control." So far, so good.

Now it will be remembered that the Conference at the College of Preceptors (February 29) included delegates from a dozen educational associations—namely, the Head Masters' Conference, the Head Masters' Association, the Head Mistresses' Association, the Assistant Masters' Association, the Assistant Mistresses' Association, the Preparatory Schools Association, the College of Preceptors, the Private Schools Association, the National Union of Teachers, the Teachers' Guild, the Association of Technical Institutions, and the Association of Teachers in Technical Institutions—and that these delegates unanimously passed a resolution that the new Registration Council should consist of twenty-five members—that is to say, one representative of each of these twelve bodies, four further representatives of the various classes (heads and assistants, masters and mistresses) of the N.U.T., six members nominated by the Crown (experienced teachers representing the Universities, three to be women), and not more than three co-opted members. "You will see," wrote Dr. Gow (the Chairman) to Sir Robert Morant, "that the meeting was really representative of the teaching profession, and it was unanimous." And all the Associations represented formally assented to the resolution.

A deputation of nine Conference delegates, headed by Dr. Gow, met Sir Robert Morant at Whitehall on May 13. Immediately the question arose whether the suggested Council "could be considered to be, as required by Section 16 of the 1907 Act, 'representative of the teaching profession.'" The Board's Memorandum proceeds:

The Secretary asked whether the Register was to be confined to England and Wales or to include Scotland and Ireland as well. Dr. Gow replied that they had contemplated the former alternative.

The Secretary drew attention to the fact that the composition proposed for the Council (which was to be twenty-five members) would

make it consist of five members representing elementary education, eight representing secondary schools, two representing technical institutions, six representing Universities, one representing the Teachers' Guild, with three co-opted members. Of the five elementary, two were to be men and two women, and one might be either; of the eight secondary, three must be men and two must be women, and three might apparently be either; of the two technical, apparently neither could be a woman; of the six University members, three were to be women.

The discussion that took place on these points made it clear that, while of the twenty-five members as many as eight were to represent secondary schools, no representation at all had been contemplated for such important sections of the teaching profession as teachers in kindergartens (practically all women), none to teachers of art of either sex, for these are by no means represented by the heads of technical institutions—indeed, their interests are often (in their view) adversely affected in the management of technical institutes; none to one of the most important branches of teaching, viz., the teaching staffs of training colleges both for elementary and for secondary-school teachers; and apparently no representation at all to the very large number of women teachers of technical subjects, e.g., the rapidly growing branch of teachers of physical exercises, of teachers of domestic subjects, both in schools and training schools, and so forth. Even the men teachers of technical subjects, a very large body of a very varied character, seemed but meagrely represented in the two members for technical institutions, as compared with the nine members for secondary schools, which, as being so much more homogeneous a branch of the educational profession, could have been effectively represented by a small number far more easily (it would seem) than could the very heterogeneous sections of technical teachers. It appeared also that no provision had been made for the representation of teachers of music. The Secretary remarked on the very great difficulty that would be involved in distributing only six seats on the Council amongst the ten Universities, and in determining which should be the three Universities to be represented only by a woman member.

The discussion did not reach any definite solutions, and the deputation proposed to communicate further with the Board.

Accordingly, a further explanation was addressed to the President of the Board on June 27. In the opinion of the delegates, it is impossible or impracticable to provide satisfactory representation for the many unorganized groups, and that such provision as is possible "is made by giving one place to a representative of the Teachers' Guild, six to Crown nominees, and three to co-opted members." "The main lines are obviously drawn between elementary, secondary, and technical education. In each of these there are head teachers and assistant teachers, and these again are divided into men teachers and women teachers." The allotment of representation is not mathematically accurate, but it is substantially just; and "it is obvious that the great majority of teachers are included in one or other of the twelve divisions above named, and might, if they chose, belong to one of their existing organizations." The delegates have no thought of excluding any group, "if and when satisfactory regulations can be made for the admission of such teachers"; and the Council, they suggest, would consider any scheme for admission submitted by any applicant group, adequate safeguards being inserted in the Order. "Finally, the delegates desire respectfully to point out that the suspension of the Register has already caused grave loss and injury to all training schools for secondary teachers, and that the abolition of it could not fail to be regarded as a breach of faith on the part of the Board of Education."

Sir Robert Morant replied on July 8. The burden of his letter was that the delegates had not touched "the very essence of the problem," and had thus failed to give his Board guidance. As to "the most difficult points in the problem—namely, the suitable and equitable treatment of special and quasi-special groups of teachers"—how are the different "groups" to be treated, or seats allotted them, "whether amongst the three 'co-opted' places or in the 'additional' members, who, you suggest, may be brought in

hereafter by sub-committees"? Again, *how many* of such sub-committees of experts (or containing some experts) are to be established by the Order, and how are they to be constituted, "for this crucially important purpose"? How is it to be secured that the regulations for admission are to be "satisfactory" to the body of teachers in each case affected? What is the nature of the "safeguards" contemplated? As to the final paragraph of the delegates' letter, Sir Robert points out in a separate communication of even date that "the Register, as such, had little effect in increasing the number of intending secondary-school teachers seeking training, and that the only really effective means for encouraging" such training is "an increased demand for trained as against non-trained teachers on the part of Local Education Authorities and governors of such schools."

To further this, this Board have now taken very substantial steps:—(1) They have instituted a system of direct Exchequer grants to aid training colleges for secondary-school teachers. The sum for this purpose has already been shown in the published estimates; the Regulations will be issued in a few days. (2) They have inserted the following article in their Conditions of Grant to the 843 grant-aided secondary schools: "Where the Board think fit, they may, on consideration of the teaching staff as a whole, require that a certain proportion of all new appointments shall consist of persons who have gone through a course of training recognized by the Board for the purpose." It will be seen that by this action the Board of Education have certainly taken the most *thoroughly practical* steps for increasing the recognition of training for secondary-school teaching staffs (which is the point that you urge most strongly; and that it is to the teaching profession, therefore, that the country must mainly look for the *further* stimulus which, in your view, will result from the establishment of a satisfactory Register of Teachers.

Is not the Board demanding rather more than is quite reasonable in the circumstances? The Conference has submitted a working basis on the available materials, providing in outline a means of admitting further groups when they assume the consistency of "groups." The delegates may possibly be able to give more definite guidance on some of the points submitted by Sir Robert Morant, but a quite satisfactory representation for classes that do not organize themselves in their own interests seems impossible. The thing must develop with the spread of organization; and surely the course for the Board is to proceed at once with a scheme as complete as the existing facts warrant. The Board, in fact, is prepared to do so "as soon as they receive adequate assurances from the teaching profession that the composition of the proposed Council is considered to satisfy the condition of Section 16 of the Act, namely, that the Council must be representative of the teaching profession." Such assurances should be forthcoming from all sections of the profession with promptitude and decision.

## NOTES.

It seems now to be tolerably certain that the Education Bill will be pressed forward in autumn, and that the Government, while insisting on its principles, will prove reasonably accommodating on details. Mr. Runciman spoke to his constituents at Dewsbury as follows:—

When the autumn session came round they would proceed with the committee stage of the Education Bill. He did not think they would adhere to every detail of the Bill, and, as he said in the House of Commons, he thought any Government who told the country from the very first that every detail of their measure must go through would be rash and unintelligent. He did not adhere to every detail of that Bill, but he adhered to every principle in the Bill. He was glad to think that there had been a much better feeling about this question of

education. He had continued to do what he could to improve the feeling on the subject. He wanted to wipe out the bitterness if he could, and if he could succeed in making any progress in that direction, he should be well satisfied; but it was difficult to get rid of bitterness so long as people persistently misunderstood each other. The Government bore no enmity to the Established and the Roman Catholic Churches; but, quite emphatically, there could be no settlement of this question so long as they persistently adhered to every artificial privilege which they possessed. There could only be a settlement on one basis, and that was the basis of religious equality.

One must hope that the negotiations of the leaders of different ecclesiastical bodies will clear away the "persistent misunderstandings"—whatever they are—to which Mr. Runciman refers. Meantime it is something to the good that he should be able to report "a much better feeling." The principle of religious equality, we take it, is now beyond profitable controversy.

THE Assistant Masters' Association has briskly followed up the adverse judgment in *Wright v. Zetland*—the Richmond case. The Endowed Schools (Masters) Bill, promoted by the Association, was introduced for the Government by Earl Beauchamp on July 7. Its object is "to put the status of assistant masters in ordinary endowed schools on a definite and satisfactory basis." It provides that "any master in the school, by whomsoever appointed, and whether appointed before or after the passing of this Act, shall be deemed to be in the employment of the governing body for the time being of the school"; that, subject to special provisions in any scheme and to special agreement of parties, the dismissal of a master "shall not take effect except at the end of a school term, and except after at least two months' notice of dismissal has been given to him by or on behalf of the governing body of the school"; but that nothing in the Act or in any scheme "shall prevent the dismissal of a master without notice for misconduct or other good and urgent cause assigned at the time of dismissal." The provisions seem perfectly reasonable, and nobody of sound judgment and good feeling will have the least objection to offer. It is most satisfactory to note that a resolution to be proposed at the Rochester meeting will express the gratitude of the Association to the Head Masters' Association "for their most effective co-operation in endeavouring to obtain greater security of tenure for assistant masters in secondary schools." As the *A.M.A.* says, "if the law had been what this Bill will, as we confidently hope, make it, there could have been no Grantham case and no Richmond case. It removes at once the most harassing and the most general of the grievances against which both head and assistant masters have constantly protested." Our contemporary adds a prudent caution: "It must be understood that attempts to amend the Bill, even with the best intentions, would be as dangerous to our best interests as the most sinister of wrecking projects." The better is sometimes the enemy of the good, and Parliamentary time is too precious to be trifled with.

ELSEWHERE we reproduce the summary results of an inquiry by a Branch secretary of the Assistant Masters' Association as to how far Local Authorities assist their secondary teachers to attend Modern Language Holiday Courses abroad. Of 27 counties investigated, 13 either have given or now offer such grants, ranging in value from

£6 to £14, while London offers as many as 60 exhibitions of £10 each. Of the boroughs, Leeds, Bradford, Huddersfield, and perhaps two or three more, appear to be the only ones that give any such assistance at all. The inquiry, however, unfortunately does not cover the whole country; and evidently it would be unsafe to infer that the same proportion of contribution is made in the counties and boroughs not investigated. The money is certainly well applied. English teachers of modern languages, unless they have lived in the several countries for some considerable period, are at an inevitable disadvantage. They cannot generally have adequate opportunities of hearing the languages spoken and of speaking the languages with people to the manner born. The holiday courses undoubtedly offer excellent occasion for both experiences; but it might be enough to require a certain length of visit to the countries, without insisting specifically on attendance at a course. The bill for salaries is naturally regarded with a critical eye, and very properly so; yet the additional outlay on this laudable object would rarely fail to prove a profitable investment. We hope to see the practice universally followed.

WRITING to the *Times* (July 15), Dr. Rashdall said he believed "a decided majority of college tutors [at Oxford] are in favour of taking steps to prevent the waste of public money upon the sons of well-to-do parents." A laudable conclusion, one would suppose. But next day Dr. J. A. Stewart wrote:

If "well-to-do parents" means "parents who could easily keep their sons at Oxford without scholarship aid," then it must be said that the tutors referred to in Dr. Rashdall's letter have not got hold of what can possibly be the cause of any serious waste of public money; for the sons of such parents holding scholarships are very few indeed. Scholarships are mainly held by the sons of hard-working professional men—a class on which the University has always relied, and must continue to rely, for its best blood; and these men cannot, as a rule, keep their sons at Oxford without scholarship aid.

Dr. Stewart goes on to say that "if there is serious waste of public money on scholarships, it is not because they are held by 'the sons of well-to-do parents,' but because so many of them are held by men who are not good enough: there are too many scholarships." He thinks some £12,000 a year—one-third of the sum now paid yearly by the colleges to scholars—is "public money wasted." "If one-half of this £12,000 were made available for University purposes and the other half for helping the upkeep of exhibition funds to be administered by the colleges for the benefit of their poor men, whether scholars or commoners, a really substantial reform would be effected." There should be little difficulty in ascertaining the facts approximately enough for practical purposes. Dr. Stewart holds that "we want for our scholarships, not poor men, but able men, whether poor or rich." Able men, certainly; and men that do not require pecuniary assistance ought not to get it, and ought to have the spirit to decline it.

THE Chinese Board of Education has been wakened up by the noise of the Japanese guns, and has proceeded to business with a directness and energy that would do credit to the Furthest West. It has issued ten regulations, concise and pointed, sanctioning them by rewards as well as by punishments. Every capital city shall have at least one hundred primary schools and a minimum of five thousand

students; every prefecture and district shall have at least forty schools and a minimum of two thousand students. Prefects and magistrates that fail to obtain the required number of schools and students within their jurisdiction shall be punished; officials that succeed in persuading well-to-do people to found schools shall be rewarded. Every child of seven years of age shall attend school: if any child of school age fail to attend, its parents shall be punished for their neglect of civic duty. It is one thing to issue a ukase and quite another thing to get it executed, especially when the details involve so much complexity—at any rate, as we understand educational administration. Still, with those Japanese guns ringing in the ears of the nation, and with rewards and punishments in official prospect, a new educational era may be dawning in China. We have already noted the recent remarkable influx of Chinamen into Western educational institutions. The immediate object is to prepare for dealing, as occasion may arise, with Japan. One must hope that the results will tend rather to peaceful development.

In this connexion, it is interesting to note that the Peking correspondent of the *Times* reports that China is going to devote some two millions and a half sterling—"the unexpended balance of the Boxer indemnity," restored by the United States Government—on education. The correspondent writes:

China realizes that her pressing need is education. China also appreciates the services rendered to the State during recent years by Chinese educated in America. She therefore intends to apply the main portion of the amount available to the education in American schools and Universities of selected Chinese students. It is estimated that at the beginning of next year the proportion of the general annuity assignable to the bonds restored to China will be £94,000, increasing to £99,500 in 1911, to £122,500 in 1916, and to £176,750 in 1932, at which figure it remains till 1940, when the debt will be extinguished. With the main portion of these sums China proposes to send a hundred students annually to America to receive an education for four to eight years, until the number reaches four hundred, which number at least will be maintained throughout the currency of the indemnity.

As the correspondent adds, "the scheme will be heartily welcomed as one of far-reaching importance."

A CORRESPONDENT of a contemporary, after drawing attention to "the wholesale boycotting of the men of science by those who have the duty of advising the fount of honour" in the Birthday lists, returns to the charge with undiminished vigour.

This time it is the turn of the representatives of the higher education. What course could be more insulting to the University of Leeds, or to University men generally, than the occurrence of Wednesday last? His Majesty goes down to Leeds to open a new wing of the University. That University enjoys a reputation which has been built up during the past quarter of a century by the labours of a most distinguished staff of literary and scientific workers, headed by a Principal and Vice-Chancellor of great distinction, a learned man, of fine presence, an ornament to classical studies and to his own Alma Mater at Oxford. This culmination to his many years of service was signalized by the conferring of knighthood upon the entirely worthy mantle-maker who happened this year to be Lord Mayor of Leeds. Who cares?

Just so: who cares? After all, the worthy mantle-maker is the representative of the local community. And the worthy principal probably has a mind above knighthoods. Still, so long as honours are going, it is only right that they should be distributed with some discretion. The correspondent should agitate for an Advisory Council, "representative of all branches" of national service.

## SUMMARY OF THE MONTH.

In a letter to the President of the Board of Education, on the subject of the Training College Regulations issued last year, the Bishop of St. Albans announces that, as a temporary *modus vivendi*, and for the coming year only and without prejudice on either side, the General Council of the Church of England Training Colleges are prepared to accept the provisional arrangement discussed between Mr. Runciman and the Archbishop of Canterbury, whereby the College Authorities shall not be bound to offer the facility of the Conscience Clause to more than 50 per cent. of the vacant places in any college this year, but that up to that number any one on the list of registered candidates, who qualifies educationally for admission, not being a member of the Church of England, shall have the benefit of the Conscience Clause. Mr. Runciman has drawn up modifications of the regulations accordingly.

THE Board of Education, convinced that a large number of the questions that have to be determined by the principals of women's colleges are such as are best treated by a woman, and believing that experience has clearly shown that there is no lack of capable women who can most effectively undertake the responsibilities of the headship of a residential college, both on its administrative and its instructional sides, have decided that future vacancies shall be filled by the appointment of women, unless the Board approve beforehand a deviation from what must henceforth be regarded as the normal principle.

"In addition to the *modus vivendi* for the admission of students [says the *Guardian*, July 15], the Regulations for the training of teachers issued last week present several features of interest. So far as the Church is concerned, the most important are the requirement that henceforth vacancies in the headships of women's training colleges are to be filled by women, unless the Board previously approve of some deviation from this, and the rules for religious instruction. On many grounds it is desirable that ladies should be the principals of women's colleges, but the extent to which this will affect the trust deeds of the twenty-one women's colleges of the Church of England may be a matter for consideration. In future any student who, on admission to a college, states that he is a member of the denomination with which the college is connected will be considered to have waived his right to claim exemption from religious instruction. If the student fails to make such a declaration, he may retain the right to claim exemption until the opening of the coming term, when he must either formally claim or formally waive it. The colleges are entitled to enforce reasonable regularity of attendance at religious worship and instruction where no exemption is claimed. In the case of students belonging to a different denomination from that of the college, arrangements should be made for their regular attendance at religious observance or instruction in connexion with the denomination of which they are members."

THE *Times* summarizes the course of proceedings, in the Educational Section of the forthcoming meeting of the British Association. The President, Prof. L. C. Miall, will deal in his address with a subject of perpetual controversy, "Useful Knowledge." His treatment of the subject will give prominence to the relation between useful knowledge and discipline. In the general proceedings of the section an opportunity will be afforded to members of expressing their views on the fundamental objects of education in a discussion on forms of education and their relative values, to be introduced by Dr. G. Archdall Reid and Prof. E. P. Culverwell, of Trinity College, Dublin. In accordance with their usual practice, which might usefully be followed in some of the other sections, the educationists will not listen to a number of papers on small points, but will devote themselves almost entirely to the discussion of a few subjects of wide interest and importance. Under the title "Tests of Educational Efficiency" will be discussed the place and method of inspection and examination of school work, with Mr. T. P. Gill, the Secretary of the Department of Agriculture and Technical Instruction for Ireland, as the opener. Miss C. P. Tremain, the head of the Secondary Training Department in the Alexandra College, Dublin, and Mr. C. MacGregor, of the Training Centre, Aberdeen, are expected to take part in another discussion on "Training in Teaching," with particular reference to the actual teaching prac-

tice obtained by students in training colleges. But perhaps the most interesting feature of the proceedings will be a discussion on various aspects of education in relation to rural life. Prof. Miall and Prof. J. A. Thomson will deal with the subject from the point of view of Nature study; Miss Lilian J. Clarke and Prof. Houston will show how school gardens may provide opportunities for direct teaching in Nature knowledge, as well as promote interest in rural occupations; the Bishop of Kildare will indicate the possibilities in Irish primary schools in this connexion; Mr. C. H. Bothamley, Secretary to the Somerset Education Committee, will describe what is being done for rural education in some of the English counties; and Dr. W. J. M. Starkie, Resident Commissioner for National Education in Ireland, and Mr. George Fletcher will state their views on the subject generally. Among the contributors of special papers, Mr. R. Blair, the Executive Officer of the London County Council, will describe the functions and operations of Local Education Authorities, and Mr. Burgwin will deal with schools for defective children. Prof. J. A. Green, of Sheffield, will urge the desirability of what may be termed educational research as distinct from scholastic philosophy, the object being to arrive at definite educational principles as the result of experiment; and contributions bearing on the same subject are expected from Prof. J. J. Findlay and Mr. C. Sandiford. Finally, under the title "The Outlook; a Grand Experiment in Education," Prof. H. E. Armstrong will consider the educational requirements of the present day and of the future, with reference in the latter connexion to present provisions.

THE Association of Technical Institutions held its summer meeting at the Franco-British Exhibition, Sir Horace Plunkett, past president, in the chair. Dr. Friedel, head of the Information Bureau of French Education, gave an interesting address on the French educational system. He said that in France, ever since the Revolution, schools were a State institution, and no power, except that of the public authorities, was allowed to interfere in education. He described the French educational system from its infant school—*l'école maternelle*—to the University. On primary education they had developed in late years a higher primary education, which was very flourishing. Side by side with general instruction they had practical instruction, which was the introduction to industrial or commercial life, while in the *écoles pratiques* education of a practical character came still more to the front. Some years ago the Minister of Commerce was allowed to take over the higher primary schools, in which the professional character was predominant, and this was at present a burning question in France. They had also 3,500 special professional courses, some of which were organized by particular trades. These stood outside the frame of official public instruction. The most interesting development of higher education in France was that at the Universities pupils could get special instruction in their various technical pursuits, including agriculture and watch-making, so that technological education now went from the elementary stage right up to the University. Municipalities did a great deal for their Universities: they gave money, founded chairs, built laboratories, and endowed all kinds of institutions connected with the Universities. Sir Philip Magnus, past president, proposing a vote of thanks to Dr. Friedel, said that nothing impressed one more than the great advantage that had resulted during the last twenty or twenty-five years from the free intercourse which had taken place between Frenchmen and Englishmen on various occasions, and particularly in connexion with such exhibitions as that held there at the present time. Years ago the two countries had systems of education which differed very much the one from the other, but they had gradually been growing together, so that they felt that human nature, after all, was one, whether in France or in England; that the problems they had to solve were very similar, and that they were endeavouring to solve them in much the same way. Both countries were still considering under what circumstances, if any, it was possible to give a boy that instruction in a school which would enable him to enter a wage-earning occupation. The question was a difficult one, and we had not solved it; but we looked to France for aid in an effort to do so.

MR. H. J. TIFFEN, Secretary of the West Lancashire and Cheshire Branch of the I.A.A.M., has been inquiring how far assistance is given by Local Authorities to enable secondary teachers to attend Modern Language Holiday Courses abroad. He has received replies from 23 Branches of his Association

referring to 27 counties and to about 50 borough or district authorities. He thus summarizes the results (in the A.M.A. for July):

Of the 27 counties, 13 either have given or now offer such grants, ranging in value from £6 to £14. These counties include Staffordshire, Derbyshire, Herefordshire, Essex, Surrey, Kent, Yorkshire (W.R.), Berkshire, Devon, Glamorgan, Westmorland, and Cumberland, while London offers as many as 60 exhibitions of £10 each. To these may be added, on information drawn from other sources, Durham, Cambridgeshire, Middlesex, and Sussex, while Nottinghamshire is considering the question of making grants in the coming year. By the boroughs far less has hitherto been done, and only three or four, notably Leeds, Bradford, and Huddersfield, at present give any assistance at all. The courses encouraged are usually those for French and German; but in some cases also for Spanish, and by most counties certain conditions are laid down to ensure that the grants be not misapplied. Smaller grants are also made in some districts to encourage attendance at courses such as those held in August at Oxford for teachers of geography. It is impossible to guarantee the absolute accuracy of these returns, as the information is collected from various sources. They may, however, suffice to show that a good deal is already being done in this way, and perhaps also they may be of use in inducing other Authorities to take the question into consideration.

Mr. Tiffen (8 Verulam Street, Liverpool) will be glad to receive any information in correction or amplification of these returns.

THE July Cambridge Local Examinations were held at 112 centres in the United Kingdom and 7 centres abroad, the total number of candidates being 6,328. The regulations for 1909 may be obtained from Dr. Keynes, Syndicate Buildings, Cambridge. The following are among the more important changes announced: Senior and junior candidates will not be awarded a certificate unless they pass in English or another language, ancient or modern; fresh schedules for Chemistry are issued; senior and junior candidates will be allowed to take unprepared translation in Latin and Greek as an alternative to set books. Spoken French and German will be included in the subjects for the Preliminary examination, as well as for the examination of senior and junior candidates. In response to a request received by the Syndicate from Natal and the Transvaal, Dutch will form a subject for the junior as well as the senior examination.

A COMPANY called the "University and City Association of London, Limited," has been registered (July 6), with a capital of £25,000 in £1 shares. Its objects are: to accept from the London County Council the fabric of Crosby Hall; to provide for the re-erection of the same; to acquire from the Town and Gown Association, Limited, a certain leasehold site held for an unexpired term of about seventy-one years from the London County Council, at an annual ground rent of £140; to erect and maintain certain halls of residence adjoining the said re-erected Crosby Hall as part of a Collegiate Foundation; to acquire from the Town and Gown Association aforesaid the leasehold block of buildings known as More House, Cheyne Walk, Chelsea, held for an unexpired term of seventy-one years at an annual ground rent of £260; to carry on and maintain the same or part thereof as Fellows' residences or otherwise, &c. How the project is to fit in with the other teaching institutions of London does not yet appear.

THE scheme formulated to establish a course of lectures for Midland journalists in connexion with Birmingham University has been formally approved at a meeting of journalists. It provides in the first year for a course of lectures by Prof. Masterman on "Modern History and the Elements of Political Philosophy," a course on "Economics" by Profs. Ashley and Kirkaldy, and a course on "English Literature" by Prof. Churton Collins. Students who take the full course, or such portions of it as are agreed, and satisfy the requirements of the University authorities, will be entitled to a certificate setting forth the fact. A sum of £100 per annum would have to be found before the Senate would be prepared to go on with the project. The Committee thought that it would be beneath the dignity of the profession to appeal to the outside public for the money until an attempt to raise it in the profession had failed.

MR. W. H. MILL, Chairman of the Edinburgh School Board, speaking at a local prize distribution, said that, while they felt that in many respects they were going to be benefited by the Scottish Education Bill, the School Boards had somewhat of a

feeling of soreness over several matters that had been brought before the Government in connexion with it. He wished to protest as strongly as he could, not only on behalf of himself and his own Board, but also on behalf of the other Scottish Boards—and he knew he spoke in their name—against the fact that through the Bill the School Boards were to be put more and more under the powerful influence of the Department in London, with a result, he believed, which would not be beneficial to Scottish education. Those who knew something about the management of education in Scotland knew that for many years the small School Boards in Scotland had had practically to submit to the dictation of the Department in London in regard to almost every item of business that came before them. The larger Boards had been able to do something themselves, but for the future almost everything down to the merest penny that they spent was to be subject to the approval of the Department, with the result, he believed, that initiative would be taken from them. He believed that one of the results would be the causing of men at present on School Boards to retire from them. Referring to the suggestion in Leith School Board that the members should resign as a protest against the Bill, Mr. Mill said that, if such a movement were likely to take place among the larger School Boards, he would be the very first to resign as a protest.

THE Commission of the General Assembly of the Presbyterian Church in Ireland (says the *Times*) has drawn up a statement on the Irish Universities Bill. The Commission, which has Assembly power on this question, states that it has observed with gravest concern that in the progress of the Irish Universities Bill through Committee of the House of Commons the sectarian character and tendencies of the constitution of the proposed new University and college for Roman Catholics, so strongly condemned at the special meeting of the General Assembly in April last, have been seriously increased, all amendments designed to make the new institutions less denominational having been systematically rejected. As a result, if the measure as amended in Committee passes into law, a denominational University, with denominational constituent colleges, will, in contravention of the settled policy of religious equality in Ireland during the past forty years, be irrevocably established in this country. In particular the Commission draws attention to the fact that, notwithstanding all protests in Committee, the provision in the Bill remains unaltered which empowers the governing body of the new University in Dublin, as soon as it is launched upon its career, to affiliate Maynooth; and it further points out that the authorization given in the Bill to grant to professors and lecturers in Theology or Divinity the use of college buildings and classrooms erected at public expense, or to allow denominational chapels to be placed inside the college precincts upon ground provided by public money, is in direct opposition to the undenominational character of the new seats of learning claimed for them when the Bill was first introduced into Parliament. The Commission strongly condemns the arrangement by which the declaration requiring professors in the Queen's Colleges to "carefully abstain from teaching or advancing any doctrine or making any statement derogatory to the truths of revealed religion, or injurious or disrespectful to the religious opinion of any portion of their class" will be reduced to a mere form. In the judgment of the Commission the power, now conferred by the Bill upon County Councils in Ireland of levying a rate for the purpose of paying the fees of selected students at constituent or affiliated colleges, is liable to serious abuse. Protest is raised against the grave injustice done to Magee College, Londonderry, in the proposal to deprive it of the University privileges it has enjoyed for twenty-six years in the Royal University, and the Commission deeply regrets the refusal of the Government to provide adequate financial support for the new Northern University—the only institution dealt with in the Bill in which its professed non-sectarian principle is preserved. The Commission accordingly appeals with all earnestness to the friends in Parliament of undenominational education and of genuine academic efficiency and culture to make a united and strenuous effort when the Bill shall be reported to the House of Commons to have removed from it all denominational provisions.

DR. WALTER HEADLAM, Fellow of King's College, Cambridge, died at the early age of forty-two. He was one of the most distinguished Greek scholars of the age. We noticed recently his remarkable "Book of Greek Verse."

AN attractive Oxford figure is lost by the death of Mr. Louis Dyer, who, although by birth an American (son of the Hon. Dr. Dyer, Chicago), followed up a distinguished career at Harvard by entering Balliol, having as contemporaries Lord Milner and Lord Middleton. After taking his degree he spent some years at his old American University, teaching Greek and Latin, after which he settled in Oxford with his wife, the eldest daughter of the late Mr. A. Macmillan, the publisher. He was a man of fine scholarship and of singular charm of personality, and will be missed by a wide circle of friends.

ARCHDEACON CHEETHAM died at Rochester (July 19) in his eighty-second year. He was educated at Oakham Grammar School and at Christ's College, Cambridge, of which he was an Honorary Fellow. From 1863 to 1882 he was Professor of Pastoral Theology in King's College, London. A keen student of ecclesiastical history, Dr. Cheetham was co-editor with the late Sir William Smith of Smith and Cheetham's "Dictionary of Christian Antiquities," and afterwards himself edited the "Dictionary of Christian Biography." To both of these works he contributed numerous able and scholarly articles. His "History of the Christian Church during the First Six Centuries," which was published in 1894, at once established itself as the text-book of the subject. His next work, "The Mysteries, Pagan and Christian," was published in 1897, and his "Sketch of Mediæval Church History" in 1899. His literary work was brought to a close only last year by the publication of "A History of the Christian Church from the Reformation to the Present Time."

MR. JAMES HARDIE, M.A. Glas., Head Master of Linton House School, Notting Hill Gate, died on June 21 in his sixty-second year. Linton House was established in 1877, and has always maintained a high reputation, many of the boys gaining scholarships at Eton, Charterhouse, Winchester, St. Paul's, and other public schools. On two occasions Old Boys took the first Balliol Scholarship. Mr. Hardie was for many years a manager of a group of schools under the London School Board. He was also greatly interested in the welfare of the Presbyterian Church of England, being an active member of the Instruction of Youth and College Committees. He further found time during fifteen years to superintend a Sunday school carried on by Trinity Presbyterian Church, Notting Hill, of which church he was treasurer. He was fond of outdoor sports, was a good rifle shot, winning a prize at Wimbledon and competing for the Queen's Prize. He was also a keen trout fisher and an ardent golfer. In 1901 he was captain of the West Middlesex Golf Club.

THE death of Dr. Otto Pfeleiderer, Professor of Theology in Berlin University, at the age of sixty-nine, removes one of the leading German theologians. He studied under Baur at Tübingen, and passed some time in theological colleges of England and Scotland. He became Professor at Jena in 1870, and was called to Berlin in 1875. In 1875 he published a couple of volumes on Paulinism; in 1886-88, "A Philosophy of Religion on the Basis of its History," in three volumes; in 1890, "The Development of Theology in Germany since Kant"; in 1894, the Gifford Lectures (delivered at Edinburgh University), on "The Philosophy of Religion"; besides collections of essays on similar subjects. The views he expressed in his Gifford Lectures caused so much alarm in Presbyterian circles in Scotland that Principal Rainy and two other theological professors delivered a series of lectures in reply. Dr. Pfeleiderer was prominent in philosophy as well as in theology.

MR. HOBHOUSE, in a printed reply to a question by Sir William Collins, M.P., states that the amounts paid out of public funds, other than out of rates, to the several Universities, as such, in England and Wales, during the last financial year, were as follows:—Grants in aid: University of London, £8,000; Victoria University of Manchester, £2,000; University of Birmingham, £2,000; University of Wales, £4,000; University of Liverpool, £2,000; Leeds University, £2,000; Sheffield University, £2,000. Shares of the annual grant from the vote of Parliament are given as follows in Scotland:—Glasgow University, £12,180; Aberdeen University, £8,400; Edinburgh University, £15,120; St. Andrews University, £6,300. These sums are exclusive of

any grants received from the grant in aid of University colleges which are paid to certain Universities in respect of their work as colleges, of sums received from the Board of Education in respect of their work as training colleges, evening schools, or technical institutions, and of money received from the Board of Agriculture and Fisheries for instruction in agriculture.

The desire of the Welsh members to secure an increase of the grants made to the Welsh University has very naturally been stimulated by the progress of the Irish Universities Bill. A deputation of Welsh members waited upon the Chancellor of the Exchequer, and Sir Herbert Roberts stated the needs of the University. It was pointed out that, under the Irish University Bill, the city of Belfast would receive a larger grant than was accorded to the whole of Wales. The Chancellor of the Exchequer, in reply, said that in his opinion a case had been made out for an increased grant for Welsh University education. In the interests of the Welsh colleges, however, he thought that a decision with reference to the amount of the grant should be postponed until the close of the financial year, when he would be in a better position to do justice to the demands they had made. He suggested that the Welsh members should appoint a committee of their number who should invite a representative of each of the Welsh colleges to confer with them on the report which had been made by the Departmental Committee. When that had been done, he would be glad to discuss the subject again with them.

#### UNIVERSITIES AND COLLEGES.

Oxford and Cambridge. In the *Oxford and Cambridge Review* Mr Archibald Venn draws a statistical comparison between the two Universities in regard both to Matriculations and to the distinctions won by their *alumni*. Taking the historic period, 1572 to 1875; 94,920 matriculated at Oxford, and 84,682 at Cambridge, and there were 480 Oxford bachelors and 463 Cambridge. At present the teachers of professorial rank in the principal provincial colleges number 165 from Oxford and 170 from Cambridge; in membership of the Royal Society Cambridge predominates with 132 to 56 Oxonians; and Parliament now claims 109 of its members from Oxford and 87 from Cambridge. During the last century the holders of the offices of Prime Minister, Lord Chancellor, and Chancellor of the Exchequer have on 31 occasions been educated at Oxford and on 24 at Cambridge. Summing up, Mr. Venn says that "Cambridge displays, and for centuries has displayed, a marked professional reputation, as evidenced in the legal and medical world, combined with scientific accomplishment, and that Oxford has displayed—latterly especially so—a relative superiority in active social and literary life."

LORD REAY presided over the Assembly of the London. Faculties of University College (July 2), when the results of the University Scholarship and Class Examinations were announced, and scholars and medallists were presented to Sir Edward Fry, an old and distinguished Fellow of the College. Prof. Pollard, Dean of the Faculty of Arts, read a report on the work of the session, in which he pointed out the great improvements made recently. The most important, or the most original, was the creation of a series of Arts Seminar Libraries to provide for the arts student what the laboratory did for the science and engineering student, to provide for him a place wherein those original materials upon which his studies must be based could be tested and used. These training libraries, occupying ten continuous rooms, were unrivalled in any British University, and they were the most important means the University possessed for the development on the arts side of schools of post-graduate research. The efforts of the college departments to realize academic ideals had during the past session been as strenuous and successful as ever. The number of students was 1,302, as against 1,191 at this time last year. Sir Edward Fry said the report of the Dean was remarkable as showing the great extension of the College, and contrasted the times of sixty years ago, when he was a student with J. S. Mill, Browning, and others that had made themselves great names. Lord Reay, in proposing a vote of thanks to Sir Edward Fry, said the College represented a cosmopolitan field of modern research, and was prepared to give attention to any branch of knowledge for which there was a call.

DURING the session about 750 students have been in attendance, including 130 in the preliminary stage. Of the rest, nearly one-third are in the Faculty of Arts, which is a circumstance worth noting by those who speak of the University as a "glorified technical school." The Science students number over four hundred—if we include commerce and all the branches of applied science, such as engineering and medicine. The medicals are a small body—only about three dozen. The decline in the School of Medicine is more than balanced by an increase among the Engineers, who now number over 180.

#### THE EDUCATIONAL LADDER.

BATH COLLEGE.—Scholarships—Boarders: R. S. F. Cooper, Bath College Junior School; L. B. Frere, E. W. Hickie, and C. G. Martin, Bath College; A. L. W. Neave, Bath College Junior School; R. M. West, St. Winifred's, Kenley. House Exhibition—B. E. Morgan, Highfield School. Day Boys: A. S. T. Reilly and W. H. Royal, St. Christopher's; R. G. B. Perkins, Bath College.

BIRMINGHAM UNIVERSITY.—Ascough Scholarship: W. C. Till. Priestley Scholarships: A. E. Everest, H. Hawley, H. N. Lowe. Bowen Scholarships (Metallurgy): A. Hague, M. T. Murray. Wiggin Scholarships: J. Parrington, D. Ewen. Bowen Scholarships (Engineering): E. A. Allcut, F. H. R. Lavender, R. D. Gifford. University Research Scholarships: A. J. Grove, G. W. Todd, R. H. Whitehouse.

BLUNDELL'S (Tiverton).—Foundation Scholarship: G. M. Paddison (Blundell's School). Entrance Scholarships: S. E. Coyte (Plymouth College Preparatory School), W. T. Sergeant (Glen-gorse, Meads, Eastbourne), R. Newport-Tinley (Branksome, Godalming), C. H. Morgan (Penarth County School), E. C. Catterall (Southdown College), G. D. Lane (Elliesslie, Fremington), W. N. Spicer (Oxford Preparatory School), B. E. F. Hall (Yarlet Hall, Staffs), T. F. Stocker (Clarence School, Weston-super-Mare). Exhibitions: D. R. Hardwick (St. Andrew's, Newquay), C. H. Martin (Junior School, Westward Ho!), C. R. Hay-Webb (Old Ride, Bournemouth).

BRADFELD.—Foundation Scholarships (90 guineas a year): F. J. M. Chubb (Mr. T. C. Weatherhead, King's College Choir School, Cambridge); D. W. L. Jones (Mr. R. M. Hugh Jones, Colet House, Rhyll); M. C. Joynt (Mr. A. M. Kilby, Lindisfarne, Blackheath). Warden's Exhibition (50 guineas a year): M. L. Jacks (Mr. C. C. Lynam, Oxford Preparatory School, Oxford). Simonds Exhibition (45 guineas a year): E. Latty (Mr. A. B. Beaven, Greyfriars, Leamington). General Exhibitions (30 guineas a year): H. J. Denham (Rev. C. F. S. Wood, Ovingdean Hall, Brighton); B. T. Coller (Mr. L. C. Vaughan-Wilkes, St. Cyprian's, Eastbourne); F. H. Postlethwaite (Bradfield College); S. G. Anderson (Mr. W. H. P. Hayman, The Abbey School, Beckenham); M. D. Colbourne (Mr. W. H. P. Hayman, The Abbey School, Beckenham); E. Obermer (Mr. J. C. Morgan-Brown, St. Edmund's School, Hindhead, Haslemere).

BRIGHTON COLLEGE.—Scholarships—Long: K. M. Dawson (Mr. Jones, Colet House, Rhyll); Newton: F. W. Pattinson (Mr. King, Hoylake). Exhibitions—J. A. Pugh, G. B. Harrison, and H. M. Lewis (Brighton College), W. H. Royal (Mr. Trask, St. Christopher's, Bath), N. J. R. Wright (Rev. C. W. L. Bode, Bechmont, Sevenoaks), T. E. Bourdillon (Mr. Darling, Castle School, Sevenoaks), G. Y. S. Farrant (Mr. Battle, Sir Roger Manwood's School, Sandwich).

CAMBRIDGE: GIRTON COLLEGE.—Gilchrist Fellowship of £100: Miss D. Tarrant (Classical Tripos, Part I, 1907, Class I., Division I.; Part II., 1908, Class I., Philosophy). Pfeiffer Studentship, about £75: Miss B. E. Smythe (Mediaeval and Modern Languages Tripos, 1905, Class I.). Studentship of £40, tenable at the College: Miss M. D. Brock (Classical Tripos, Part I., 1907, Class I., Division 3; Part II., 1908, Class II.). Fourth Year Scholarships and Exhibitions: Sir Arthur Arnold Scholarship, augmented to £50, Miss M. Long (Mathematical Tripos, Part I., 1908, equal to Fourth Wrangler); £40, to Miss I. M. Massey (Mediaeval and Modern Languages Tripos, 1908, Class I., distinction in French and in German); Exhibitions of £20 each, to Miss K. Field (Mathematical Tripos, Part I., 1908, Senior Optime, equal to 44); Miss D. L. Henry (Mathematical Tripos, Part I., 1908, Senior Optime, between 40 and 41); Miss E. H. Pratt (Mediaeval and Modern Languages Tripos, 1908,

Class II.). Thérèse Montefiore Memorial Prize: Miss D. B. Pearson (Natural Sciences Tripos, Part I., 1907, Class I.; Part II., 1908, Class I., Physics). Agnata Butler Prizes for Classics: Third year student, Miss A. Shillington (Classical Tripos, Part I., 1907, Class I., Division 3; Part II., 1908, Class I., History); second year, Miss H. Barnard (Intercollegiate Examination in Classics, 1908, Class I.). Pioneers' Prize for History: Miss E. E. Power (Intercollegiate Examination in History, 1908, Class I.). Fanny Metcalfe Memorial Prize: Miss M. Seaton (Intercollegiate Examination in Modern Languages, 1908, Class I.).

CAMBRIDGE HIGHER LOCAL EXAMINATIONS.—Lowman Memorial Prize: W. N. Berkeley, St. Anne's, Abbots Bromley. Fletcher Prize: G. K. Hugh Jones, 48 Ingleby Road, Ilford. Prize of £3. 3s. each: C. Stewart, High School, Bedford; D. L. Beck, King Edward's School, Birmingham; B. E. Clayton, Charlcombe Manor, Bath; R. H. King and L. G. Thompson, Dulwich High School; A. Yoxall, St. Paul's Girls' School, Brook Green, W.; F. E. Harmer and E. O'Rourke, City of London School for Girls. Prizes of £2. 2s. each: W. L. Ward, High School, Bedford; P. M. Stopford, St. Paul's Girls' School, Brook Green; W. M. Hanford, Girls' Grammar School, Bradford; C. M. Garlick, Wyggeston High School, Leicester.

CAMBRIDGE UNIVERSITY.—F. M. Balfour Studentship in Biology: C. C. Dobell, B.A., Scholar of Trinity. Frank Smart Studentship (Botany), £100 for 2 years, Sydney Mangham, B.A., Emmanuel. Burnley Studentship, K. J. Saunders, B.A., Emmanuel. Prendergast Greek Studentship, A. W. Gomme, Scholar of Trinity. Charles Oldham Classical Scholarship, D. S. Robert, Scholar of Trinity. Craven Studentship, H. Mattingley, B.A., Craven Scholar, Caius; Grants from the Craven Fund, J. P. Droop, B.A., Trinity, and S. Gaselee, King's. Scholarships in Law, Oswald Hughes Jones, St. John's, and Leonard Danvers Smith, St. John's. Raymond Horton Smith Prize, Thomas Renton Elliott, M.A., Trinity; honourable mention, J. M. Hamill, M.A., Trinity, and H. Beckton, M.A., Clare.

*Corpus Christi*.—Exhibitions, R. C. Lyle, £30; C. Elwell, £20; E. S. P. James, £20.

*Emmanuel*.—Scholarships, £70, G. E. K. Brauholtz; £60, A. B. Adams, B.A., R. H. Moody, B.A.; £40, F. B. Clogg, B.A., W. G. Lely, B.A., A. R. Marshall, B.A., R. H. Snape, B.A., C. F. Taylor, B.A., T. G. Edwards, C. Gimson, B. M. Jones, G. W. W. Milroy, K. M. Ward; Thorpe Scholarship, £30, W. J. Lyon; Sizarships, A. C. Dyer, J. W. Lesley. Exhibitions, £30, A. C. Bescoby, B.A., H. S. Staley, B.A., W. Stiles, B.A., A. Cohen, P. Madge; £20, J. Ramsbottom, B.A., G. W. Bryant, C. M. Drennan, R. P. M. Gower, S. M. Hattersley, G. T. Reeve; Choral Exhibitions, £15, W. J. Lyon, H. G. Hooper; Supplementary Exhibitions, £10, W. G. Lely, C. F. Taylor, A. T. Hill, B. M. Jones, G. W. W. Milroy.

*Gonville and Caius*.—Mr. Zachary Nugent Brooke, B.A., of St. John's College, has been elected to a Drosier Fellowship.

*Jesus*.—Marsden Scholarship, £80, G. B. Redman, B.A.; Lillistone Scholarship, £70, H. V. Edmunds, B.A.; Kay Scholarship, £50, W. Telfer, B.A.; Choral Exhibition, £30, E. B. Grassett.

*King's*.—Eton Foundation Scholarships: G. L. Herman, G. N. M. Bland, and J. H. Mozley (Classics). Open Foundation Scholarships: A. V. Rooth (Classics), H. H. Mathias (Natural Sciences), A. D. Schloss (Honorary Classics), H. E. E. Howson (Classics), G. E. Toulmin (History). Vintner Exhibition (one year): W. B. Alexander (Natural Sciences). Price Exhibition (one year): N. Compton Burnett (History). Honorary Exhibitions (one year): U. R. Evans (Natural Sciences) and C. M. Spielmann (Mechanical Science). Exhibition (one year): G. G. Johnstone (Natural Sciences).

*Magdalene*.—Exhibition of £20 for Modern History, E. R. Hopewell, Lancing; Exhibition of £20 for Classics, W. L. Winterbothan, Malvern.

*Selwyn*.—Scholarships: Mathematics, H. G. V. Civil, £40; W. J. R. Perry, £40; Classics, J. O. Rubie, £40; W. E. Williams, £30.

*St. Catharine's*.—S. G. Hare and G. Ward-Price, of the second year, who passed in Class II. of the Historical Tripos, Part I., have been promoted to scholarships. Special grants have been made to the following:—For Theology, J. G. Lister, B.A., fourth year; for Mathematics, R. Davies, second year (who is also a prizeman); for History, S. Slefrig, first year. Corrie Greek Testament Prizes: J. G. Lister and A. J. Mortimore.

*St. John's*.—Reading Scholarship, W. W. Kilby, Reading

School; Exhibitions in Mathematics, C. J. Seed, Bradford Grammar School, and A. H. G. Kerry, Oxford High School; Exhibition in Natural Science, C. H. Carlton, Doncaster Grammar School; Exhibition in Modern Languages, L. C. Kirk, King Henry VII. School, Sheffield.

*Trinity*.—Sizarships, A. E. Heath, D. Lever, and G. Saunders; Exhibitions, A. S. Hoskin and W. D. C. L. Purves.

*Trinity Hall*.—Foundation Scholarships: Classics, R. Affleck, £50; H. Leakey, £40; V. H. Seymour, £30. Law: V. W. E. Evans, £40; G. M. Loly, £40. History: A. W. M. Bull, £30; R. E. Gomme, £30; H. E. Wynn, £30. Natural Science: G. T. Spinks. Open Scholarships for intending students in Law: R. E. Burrell, £40; G. C. Pratt, £40; A. D. W. Skinner, £40.

CANTERBURY: KING'S SCHOOL.—Junior King's Scholarships: F. L. Sidebotham, D. Hussey, E. F. Housden (for Mathematics), E. J. Hodgson (for Mathematics), C. K. Mowll, J. C. Page—all of King's School. Probationer King's Scholarships: T. E. Bourdillon (Mr. Darling, Clare House, Tonbridge), R. K. Pagett, (Mr. Rudd, Stoneycote, Leicester), P. D. Baker, J. S. Worters, F. C. Gentry, C. H. Gore (Junior King's School). Entrance Scholarships: R. G. Crosse (King's School), R. F. Mason (for Mathematics, Warminster Grammar School), A. Seymour (Mr. Pearce, Merton Court, Sidcup), R. K. Pagett (Mr. Rudd, Leicester), E. F. Smart (King's School), T. E. Bourdillon (Mr. Darling, Tonbridge). House Scholarships: C. E. A. Pullan (Mr. Kilby, Blackheath), E. C. Catterall (Mr. Bewlay, Eastbourne).

DURHAM UNIVERSITY.—Entrance Scholarships—Classics and Mathematics: J. G. Taylor, £70; W. H. E. Moore, £40; G. Brunner, £35; Alice C. Dawson, £35; E. J. W. Nesbit, £35; W. Rigby, £35; A. M. Sharp, £35; T. P. Clarke, £30. Theology: D. W. Bentley, £35; John H. Davies, £30; Lawrence Finch, £30; and Harold K. Page, £35.

ETON.—Foundation Scholarships—P. M. Roberts, R. A. L. Fell, C. E. Harman, P. A. Heseltine, D. F. C. Bacon, H. G. C. Streatfield, P. E. Hobhouse, R. O. Ackerley, D. J. Darley, K. A. S. Chapman, P. Malcolm, A. L. Huxley, W. E. Berridge, M. E. Impey, R. E. F. Courage, G. S. Rawstorne, V. W. G. Ranger, O. R. Ord, E. Hale, C. C. A. Monro.

GIGGLESWICK.—Scholarships: G. W. I. Greenish (Mathematics), Mr. Godby's, Ilkley; N. V. Brasnett (Classics), Dulwich Preparatory School; V. R. Stewart (Science), Haslington Secondary School; L. D. R. Huggard (Latin and French), Mr. Pitkin's, Earlywood School, Ascot; A. Angus (Mathematics), Tynemouth School; E. Atkinson (Classics), Giggleswick School.

LIVERPOOL UNIVERSITY.—Fellowships: University Fellowship in English Literature, James William Holme; Charles Beard Fellowship in History, William Garmon Jones; Oliver Lodge Fellowship, Charles Albert Sadler; Holt Fellowship in Pathology, George Lissant Cox; Holt Fellowship in Physiology, William Gibbs Lloyd; Robert Gee Fellowship in Anatomy, Norman Bradly; John Garrett International Fellowship, Maximilian Nierenstein; Thelwall Thomas Fellowship, John Alexander Murray Bligh. Scholarships: University Scholarships in History, John Edward Gately and Ralph Flenley; in Architecture, Harold Osmond Burroughs; in Mathematics, Arnold William Gunstone; in Chemistry, Albert Buckley Harris; in Law (Honours LL.B. Examination), Thomas Baxter Milne; in Law (second year), James Thorougood Peet; in Law (first year), Hubert Joseph Baynes Martin; in Engineering, Harry Parry; Thomas Hornby Scholarship, Richard Joseph Hogan; Korbach Scholarship, Hilda Mary Helsby; Holt Travelling Scholarship in Architecture, Louis Sydney Henshall; Sydney Jones Travelling Scholarship in Architecture, Cyril Norman Hampshire; Edward Whitley Travelling Scholarship in Architecture, Frederick Ernest Crutchley; Isaac Roberts Scholarships, Frederick William Robinson and Jean Stuart Shaw; Special Scholarships (final B.Sc. examination), Percy Laithwaite; Senior Lyon Jones Scholarship, Wallace Robert Wade; Junior Lyon Jones Scholarship, Robert Gordon Barlow; Bickersteth Scholarship in Surgical Pathology, Frank Alexander Gallon Jeans; David Rew Memorial Scholarships, Peter James Cottle and John Allen Rutherford. Studentships: Gilchrist Studentship in Modern Languages, William Wright Roberts; Studentships in Education, Blanch Brew, Susannah Dean, Elizabeth Rigby Gardner, and David Henry Griffiths; *proxime accessit*, Elsie Ward.

LONDON BRANCH OF THE ALLGEMEINER DEUTSCHER SPRACHVEREIN.—On the results of the First Annual Examination in German (March 26) the following awards have been made:—

Travelling Scholarship (10 guineas): J. W. Roberts, Manchester Grammar School. First Prizes (2 guineas each in books): Miss M. Brandebourg, Portsmouth High School; A. E. C. T. Dooner, Tonbridge School; D. McKillop, Manchester Grammar School; A. Ryder, Victoria College, Jersey; Miss O. J. Flecker, Ladies' College, Cheltenham; Miss M. K nitzer, Wycombe Abbey School. Second Prizes (1 guinea each in books): W. G. Glendinning, Queen's College, Belfast; N. B. Jopson, Merchant Taylors' School, Crosby; A. G. A. Hellmers, Dulwich College; M. C. A. Korten, Dulwich College; W. Schaible, City of London School. Fifty-six other candidates received certificates, eighteen of them with credit.

LONDON: INCORPORATED INSTITUTE OF HYGIENE.—Miss M. J. Cleary (Rawtenstall)—Certificate; Miss C. S. Evans (Dolgelly)—Certificate, with honours, in Food and Cooking, and in Home Nursing and First Aid; Wm. T. Fellows (Portsmouth)—Diploma; Miss E. Grange (March, Camb.)—Certificate, with honours in School Hygiene; Miss L. Hargreaves (Liverpool)—Certificate, with honours, in School Hygiene; Miss B. N. Hedderman (South Island of Aran, Galway)—Certificate; Miss H. Hodkinson (Macclesfield)—Certificate; Miss B. M. Holmes (Andover)—Certificate; Mrs. S. E. Kay (Shipston-on-Stour)—Certificate; Miss Lily M. E. Lemmon (Manchester)—Diploma; George Markham (Steeple Claydon, Bletchley)—Diploma, with honours in School Hygiene; Miss E. Mattinson (Leeds)—Diploma and Certificate, with honours, in Hygiene of Motherhood and in Feeding and Rearing of Children; Mrs. McGregor (Hampstead)—Diploma; Miss D. F. Norris (Darwen)—Certificate; Miss I. L. Owen (Bruton)—Certificate; Miss Alice Rhoden (Lee)—Diploma; Miss E. M. Schwemmer—Certificate, with honours, in Hygiene of the Home and in Feeding and Rearing of Children; Mrs. Drummond Ward (Hastings)—Certificate; Miss C. B. Williams (Coleshill, Birmingham)—Certificate; Miss E. M. F. Youens (High Wycombe)—Diploma.

LONDON: NORTH LONDON COLLEGIATE SCHOOL.—Catharine Muirhead and Kate Jacobs have gained Entrance Scholarships, £60 a year for three years, at the Royal Holloway College; Mary Creadson, the Pfeiffer Scholarship in Science, £48 a year for three years, at Bedford College; Winifred Moll, a St. Dunstan's Exhibition in Science, £60 a year for three years. The highest honour this year falls to Ethel Steuart—the J. A. Chessar Memorial Entrance Scholarship for Classics, of £88 a year for four years. The School Scholarships have been awarded as follows:—Clothworkers' Leaving Scholarship to Margaret Heslop; Platt Endowment Scholarships, each of £20, to Irene Davis for English, to Evelyn Hewer for Mathematics, and also to Gladys Jackson, Bridget Shannon, Lilian Swinburn, Ida Burnett, and Annie Byatt; Clothworkers' Scholarships to Madeline Giles and Dorothy Sabin; and the Mensbier Scholarship for Modern Languages to Cecil Baines.

LONDON UNIVERSITY.—Entrance Exhibitions (on June Examination), £40 a year for 2 years each: Henry Cooper, University College; Cecil W. Gilham, East London College; Norman H. Jones, Woolwich Polytechnic; Alfred C. Mason, University College, Reading; Arthur V. Nicolle, Mercers' School, E.C. A City Parochial Foundation Scholarship of £25 a year for 4 years: Henry G. Richardson, London School of Economics and Birkbeck College. St. Dunstan's Exhibitions for Women (awarded by the St. Dunstan's Educational Foundation on the results of the Exhibitions Examination): Winifred M. Parker, Mary Datchelor Girls' School, for Science subjects; and Gladys M. B. Schlesselman, St. Paul's Girls' School, for Arts subjects.—In the general Matriculation Examination (Pass List) there are 183 names in the First and 1,224 in the Second Division.

University College.—Andrews Scholarships: Entrance scholarships, £30 each: Languages and History, Louise W. Stone, High School, Stroud Green; extra scholarship, J. D. Whyte, Dulwich College; Science, B. A. Keen, Southend Technical School. Campbell Clarke Scholarship, £40 a year for 3 years: Eileen O'Rourke, City of London School for Girls. West Scholarship in English, £30: N. L. Mackie, Bancroft's School, Woodford Green. For students of one year's standing, £30 each: Classics, R. E. M. Wheeler; Modern Languages, Winifred O. Hughes; Mathematics and Science, D. McDonald; Science (additional scholarship, £25), R. L. Horton. For student of 2 years' standing (£25), Irene C. Dukes. Carey Foster Research Prize: E. R. Martin. Chadwick Scholarship and Medal in Municipal Engineering, £100, A. S. Quatermaine; proxime accessit with additional medal (silver), G. E. R. Slade (subject to confirmation by the Chadwick trustees). Ellen Watson Memorial Scholar-

ship, £15: E. N. da C. Andrade, B.Sc. Fielden Research Scholarship in German, £50: W. E. Collinson. Gladstone Memorial Prize (£10), for an Essay on "Titus Oates and the Popish Plot": R. C. F. Dolley. Archibald P. Head Memorial Medal: A. S. Quatermaine. Heimmann Silver Medal: V. von Beck. Hollier Scholarships (£60 each): Greek, T. J. Cash; Hebrew, E. Drukker. (Ethel M. Steuart and T. J. Cash are reported by the examiners to be "so equally matched that we find it impossible to decide between them." As Miss Steuart is proceeding to Cambridge, the benefits of the scholarship fall to Mr. Cash.) Jews' Commemoration Scholarship, £15 a year for 2 years: H. Cooper. John Stuart Mill Scholarship in Philosophy of Mind and Logic, £20: Gladys M. Broughton, for essay on "Kant's Conception of Subject and Object." Malden Medal and Scholarship, £20: Mary E. Norris. Mayer de Rothschild Scholarship in Mathematics, £42: F. Jackson. Physics Research Studentships: £60, J. D. Pack; £40, E. R. Martin. Quain English Essay Prize (£60), for essay on "The History of the Lyric," Gerald Gould, B.A. Quain Law Professor's Prizes: £15, Coleman Phillipson; £5, M. McQuirk, for essays on "The Effect of War on Contracts and on Joint Stock Companies in Territories of Belligerents." Science Scholarship awarded by his Majesty's Commissioners for the Exhibition of 1851: T. P. Hilditch, B.Sc. Slade Scholarships in Fine Art, £35 a year for 2 years: F. C. Britton and A. W. F. Norris. Melville Nettleship Prize for Figure Composition: C. R. Webb. Tufnell Scholarship in Chemistry, £80 a year for 2 years: P. May. Sharpey Research Scholarship in Physiology: G. G. Mathison, M.B., B.S. Joseph Hume Scholarship in Jurisprudence: R. J. Walker.

In connexion with the new courses on School Hygiene, organized to meet the recent requirements of the Board of Education, the following certificates in School Hygiene have been awarded: Victoria E. M. Bennett, Dora E. L. Bunting, Kate G. Cash, G. F. Daniell, Marian Fitzgerald, E. K. Hanson, Annie Ethel Heckford, Dorothy King, C. Lamb, J. Lewis, Mabel Paine, C. J. Ridout, Sophia Seekings, A. Skinner, Florence Wetherell.

King's College.—Special Intermediate Examination of the University of London:—Special Prizes: Barry (Divinity), Martin Collett; Trench (Greek Testament), E. G. G. Edmonds; McCaul (Hebrew and Old Testament), E. G. G. Edmonds and A. M. Wheatley; Leitner, C. F. Tonks; Carter (English Verse), A. T. Coldman; Knowling Prize, C. F. Tonks; Plumtre Prize, S. B. Smith; Professor's Prizes (Philosophy third year), O. B. How; Professor's Prizes (Philosophy second year), J. G. Gilman and C. F. Tonks. Faculty of Arts:—Scholarships and Exhibitions: Inglis Scholarship (English Literature), V. V. Smith; Inglis Scholarship (History), F. Barton; French Professor's Scholarship, W. Walker. Special Prizes: Jelf Medal, J. A. Dodd; Drew Gold Medal, C. N. French; Barry (Divinity), C. H. Firbank; Warr Memorial Prize (Classics), Lilly Victoria Traies; Early English Text Society, Eleanor Plumer; Early English Text Society, William Thomas; Stephen Essay, Eva Daisy Lewthwaite; Gladstone Prize, Frank Barton; Brewer Prize for History, Sidney Childs; Psychology, Douglas Langridge; French (Professor's), William Thomas; English (Professor's), Arthur Lloyd Smith and George Herbert Ward; English, Winifred Elsie Vera Bindley; English, Margarita Eliza Defries and Sybil Rose. Division of Architecture.—Special Prizes: Architectural History, L. Careras, bronze medal; Studio, A. J. Ashdown, bronze medal; Advanced Construction, A. Koerner, silver medal; Work of the Finishing Trades, W. J. Price, bronze medal. Faculty of Science.—Scholarships and Exhibitions: Daniell Scholarships (first Scholarship), H. R. Lyell; Daniell Scholarships (second Scholarship), G. S. W. Marlow; Sambrooke, C. W. Bartram and Vincent Collier. Special Prizes: Jelf Medal, Content Nyrain; Tennant (Geology), J. P. Warren; Barry (Divinity), H. L. Porter; Psychology (General), T. H. Pear; Psychology (Experimental), S. Dawson; Carter Gold Medal, Constance Woodward. Society of Apothecaries.—Scholarships and Exhibitions: Warneford Entrance, A. S. Wakeley; Second Year Scholarships, C. H. Attenborough; Third Year Scholarships, S. Ritson and H. L. Martyn; Rabbeth Scholarship, A. S. Wakeley. Engineering Faculty.—Scholarships and Exhibitions: Clothworkers' Exhibitions, (1) £30 for two years, William Allard; (2) £20 for two years, Leonard Charles Budd; Sambrooke, Will Legg.

Westfield College.—Entrance Scholarships, tenable for 3 years: Amy Sanders Stephens Scholarship, £50 a year, G. Margaret B. Schlesselman (St. Paul's Girls' School); Lucy Fowler Memorial Scholarship, £50 a year, Eileen O'Rourke (City of London School); College Scholarship, £50 a year, Lawrie E.

Wilson (Blackheath High School); College Scholarship, £50 a year, Winifred Mary Fisher (Sydenham High School); Exhibition, £20 a year, Edith R. Jacob (North London Collegiate School); Special Scholarship of £50 a year, Lottie K. Hamilton (Bath High School); Scholarship of £50 a year, for 3 years, offered to a pupil at St. Paul's School and tenable at Westfield College, Kathleen L. Longuet-Higgins.

*Bedford College for Women.*—Reid Entrance Scholarship in Arts: Miss Irene Davis (North London Collegiate School). Supplementary Scholarship in Arts (£30): Miss J. A. Birch (Notting Hill High School). The Pfeiffer Entrance Scholarship in Science: Miss E. E. Hewer (North London Collegiate School). Arnott Entrance Scholarship in Science: Miss E. M. Read (West Ham Municipal School). Scholarships for the Course of Secondary Training beginning in October: Miss M. M. Wells, B.Sc. (University College of Wales, Aberystwyth), and Miss M. E. Charles, B.A. (Royal Holloway College). Early English Text Society's Prize: Miss M. W. Cooke and Miss H. M. Gill, equal. A grant for Research in Chemistry has been made by the Reid Trustees to Miss G. M. Price for Session 1908-9.

**MANCHESTER GRAMMAR SCHOOL.**—Foundation Scholarships: S. Adler, Southall Street Municipal School, Manchester; J. P. Ainscough, North Manchester Preparatory School; F. E. Allen, Gardner Street Council School and Langworthy Road Council School, Salford; W. S. Booth, St. Matthew's School, Stretford; R. Cohen, Manchester Jews' School; J. E. Crawshaw, Mauldeth Road Municipal School, Withington; H. G. Dehn, South Manchester School, West Didsbury; M. Ellison, St. John's School and St. Luke's School, Cheetham; B. Enright, Gardner Street Council School, Salford; B. Hewitt, Collegiate School, Levenshulme; C. Hignett, Russell Scott Memorial School, Denton; H. Kaiserman, St. John's School, Cheetham; A. Macarborski, Southall Street Municipal School, Manchester; H. L. Malan, Bedfield Street Council School, Heywood; W. S. Manwaring, Gardner Street Council School, Salford; W. H. Owen, St. John's School and St. Luke's School, Cheetham; P. Reeve, Rusholme High School for Boys; D. L. Richardson, Alfred Street Council School, Harpurhey; W. Roberts, Gardner Street Council School, Salford; F. O. Sparrow, Grecian Street Council School, Salford; H. N. Stokoe, Model National School, Newry; F. J. Taylor, Crab Lane Elementary School, Blackley; A. N. Turner, Gardner Street Council School and Strawbury Road Council School, Salford; and H. B. Wilson, St. John's School, Cheetham.

**MANCHESTER UNIVERSITY.**—Gartside Travelling Scholarship, R. E. Slade; Karling Fellowship in Physics, Dr. Hans Geiger. Langton Scholarship, A. Jones and D. Knoop, equal. Faulkner Fellowship in Arts, Sarah Elizabeth Jackson (Classics). Beyer Fellowships in Science, (1) D. M. S. Watson (Geology); (2) H. C. Greenwood (Chemistry) and M. R. Turner (Chemistry), equal. Graduate Scholarships: Classics, Effie Watson; Modern Languages, H. G. Wright, Minnie Josephine Bell; Mathematics, G. A. Evans, Eleanor Beatrice Harvey; Physics, W. A. Harwood; Chemistry, G. S. Hibbert, A. G. Lobley, L. H. Harrison; Botany, T. G. B. B. Osborn; Geology, H. L. Hawkins; Law, C. F. Entwistle. Derby Scholarship, S. Chapman; Mercer Scholarship, R. Storey; Victoria Scholarship in Classics, Ethel Bailey; Bradford Scholarship in History, Martha Ashton and Jessie M. Parish, equal.

The Teachers' Diploma has been awarded to Amy C. Harvey, Adelaide Horrocks, C. W. Knott (First Division); Mary Cooper, M. H. Elisher, B. Laycock, Annie Leah, Margaret C. Paull, Grace E. Picton, and Ethel N. Price (Second Division).

**NATIONAL AGRICULTURAL EXAMINATION BOARD.**—At the ninth examination for the National Diploma, held at Leeds, April 27-30, the record number of 102 candidates entered (from 28 educational institutions)—54 for Part I., 48 for Part II. Of the 54 in Part I., 32 passed; and in Part II. 29 diplomas were awarded, 4 with honours.

**OXFORD: ST. HILDA'S HALL.**—Scholarships of £35 each, Miss Noel, R. Dolling (St. Hilda's Hall and St. Stephen's High School, Clewer) and Miss Eileen M. Haslam (The Laurels, Rugby); Scholarship of £30, Miss Henriette C. E. Massé (St. Paul's School); highly commended, Miss A. Mildred Veitch (Exeter High School).

**OXFORD: MANCHESTER COLLEGE.**—Frances Power Cobbe Memorial Prize: Miss Eileen McCutchan, Trinity College, Dublin.

**OXFORD UNIVERSITY.**—Welsh (drawing) prize, for the encouragement of the study of human anatomy: S. B. White, Keble. Fellowship granted by the Gilchrist Trustees to the

Association for the Education of Women in Oxford: E. M. Wakefield, Somerville College (First Class in the Final Honour School of Natural Science). Miss Wakefield will continue her studies at Munich. Aubrey Moore Studentship: Laurence W. Grensted, B.A., Scholar of University College.

*Diplomas in Geography.*—With distinction: Ellen J. Rickard, Somerville College, and Eva G. R. Taylor, B.Sc. Lond. Ordinary: G. E. L. Carter, B.A., non-coll.; Eva Dodge, M.A. Vict., Cherwell Hall; May Hockley, Oxford home student; Alice E. Lee; Lydia M. Livermore, Oxford home student; R. L. Thompson, B.A. Keble College. Certificates in Regional Geography: G. C. Strahan, Keble College, and Edith J. Wilford, St. Hugh's Hall. Certificate in Surveying: J. H. L. Yorke, B.A. Oriol.

The Leathersellers' Company have elected Vyvyan Hope, exhibitor of St. John's College, to Mr. Robert Rogers's exhibition, and Samuel Rupert Sidebottom, demy of Magdalen College, to Mrs. Ann Elliott's Exhibition.

*Balliol.*—Mr. Hugh McKinnon Wood, B.A., Scholar of the College, has been elected a Tutorial Fellow. Mr. R. N. G. Thomas has been appointed to a Lectureship in Physical Chemistry. Brackenbury Scholarship (Natural Science): C. A. Vlieland, Exeter School.

*Brasenose.*—Natural Science: Junior Hulme Scholarship, J. H. Mackie, Ruabon Grammar School; Somerset Scholarship open *pro hac vice*, H. Ball, Rugby.

*Christ Church.*—Scholarship in History: Edward M. Schill, Charterhouse; proxime accessit Eric W. Sheppard, Trent College. History Exhibition: John H. Nicholson, Scarborough School; proxime accessit Julius W. Saunders, Marlborough.

**RADLEY.**—Scholarships: L. A. Westmore, J. N. Hetherington, H. M. S. Cotton, N. Hugh Jones, O. H. C. Shellswell, and R. Lesson. Exhibitions: P. Malcolm, H. G. C. Fenton, G. M. Boumphrey, L. G. R. Bell, and R. Brennan.

**WINCHESTER COLLEGE.**—The following are the first twenty in order of merit of the candidates in the recent examination for scholarships and exhibitions: R. B. Gibson, R. C. Lowe, C. A. Macartney, C. F. A. Warner, T. D. Overton, S. J. Paget, L. A. Pinsent, M. E. Antrobus, T. H. Sheepshanks, B. A. Medley, R. E. E. Chaplin, G. E. A. Grey, A. G. Bewley, C. G. Fowler, J. S. Baines, T. A. Shone, K. G. Campbell, F. P. Crawhall, E. F. Jacob, E. P. Donaldson. They will be admitted in the above order to scholarships, as vacancies occur, between now and next Easter, and there will be fourteen vacancies in September. J. S. Baines and T. A. Shone on the list have been elected to exhibitions. Sheepshanks is a son of the Bishop of Norwich. The Bishop now has four sons who have gained this distinction. This, it is believed, is a "record."

## THE CAMBRIDGE SUMMER MEETING.

[From a Cambridge Correspondent.]

THE University Extension Movement, though it works quietly and is little noticed by the man in the street, must rank as one of the most important of the agencies through which, during the past generation, the two older Universities have striven to meet new needs without lowering old ideals, have increased at once their public helpfulness and their own vitality, and spread, so to speak, both their fruits and their roots.

The Summer Meeting now being held at Cambridge provides a fitting occasion for recalling that the movement has now a history stretching back over thirty-five years, and that it is carrying the leaven of University culture to a host of provincial towns. During the session 1906-7 Cambridge alone furnished 112 courses of lectures to 95 centres. The great majority of these courses consisted of twelve or more lectures. In 1907-8 nearly a fourth of the lectures were subdivisions in a systematic course of study stretching over four years. Generally the lectures are preceded or followed by "classes" in which the lecturer criticizes exercises and essays written by the students, and himself answers questions which are put forward, orally or in writing, by the students themselves. Excellence in these exercises and in the examinations held at the ends of the courses entitles the student, at the end of a session, to a Sessional Certificate and, at the end of a four years' course at certain centres, to an "affiliation" certificate, which excuses the holder from the previous examination and makes it possible for him to take the B.A. in two years instead of three. The average attendance at some courses is little over 30 students, but at not a few it runs into hundreds, and at

one centre (Middlesbrough) it has in two successive sessions been over five hundred. The courses held in the evening are, as a rule, most largely attended; naturally so, for the movement "seeks to provide the means of higher education for persons of all ranks and both sexes engaged in the regular occupations of life."

"Persons of all ranks and both sexes" also attend the summer meeting, but this gathering is planned to meet the wishes of those persons when they are, for a month or a fortnight as the case may be, liberated from their "regular occupations" and free to give the whole day to lectures and educative excursions and sight-seeing. The meeting has hitherto been held in August, but this year, to suit those whose holidays expire in the middle of that month, it is being held a fortnight earlier. It is divided into two parts, and students may take tickets for the whole meeting for the first half, which this year terminates on July 30, or for the second half, which begins on August 1. July 31 is an inter-divisional day, which is given up wholly to excursions, in which students of either part may join, and half-day excursions also take place about the middle of each part. Lectures are further varied by visits to colleges, organ recitals, debates, conferences, and social gatherings—the last-named including this year a reception by the Master of Trinity and Mrs. Montagu Butler at Trinity College Lodge one evening during the first half, and another by the Vice-Chancellor and Mrs. Roberts at the Senate House one afternoon during the second half.

The lectures themselves are planned so that they may, in the main, reflect light on each other and focus the students' attention on some great period of history; but, even in the lectures, variety is provided by sub-courses on theology, education, science, and social questions. This year the central subject is "Ancient Greece: its History, Literature, and Art, and its Influence on the World." After listening in the Senate House to an inaugural address by Dr. Butler, Master of Trinity, who welcomed the students in genial, happy terms and discoursed in pleasant and suggestive fashion on "Universities," the students settled down to a course of six shrewd, erudite, illuminating lectures by Prof. Ridgeway on "The Making of Greece," supplemented by one from Dr. Arthur Evans on the excavations recently conducted by him in the wonderful island of Crete, which for centuries has "kept the keys" of many archaeological problems. And, within the same fortnight, they had short courses on "The University of Cambridge," by Dr. Breul; on "Greek Vase Paintings," by Miss Jane Harrison; on "Homer," by Mr. Langdon-Davies; on "The Greek Old Testament," by Prof. Swete; on "Greek Religion," by Mr. Kaines Smith; on "Greek Historians," by Mr. F. M. Cornford; on "Greek Architecture," by Mr. A. B. Cook; and on "The Oracle of Delphi," by Dr. Verrall. Prof. Churton Collins, Prof. R. C. Bosanquet, Prof. A. J. Grant, and Mr. Yule Oldham gave two lectures each on subjects connected with the main course, and amongst the lecturers on what we may call "side" subjects were Prof. Seward, Mr. D. J. Carnegie, Dr. R. D. Roberts, Mr. Sandbach, and Prof. J. Cox, the last of whom gave three lectures on "Radium."

Amongst "central" subjects to be taken up in the second half are "Greek Art and National Life" (six lectures) and "The Peloponnesian War" (two lectures), by Mr. S. C. Kaines Smith; "Ancient Tragedy for Modern Audiences," by Prof. R. G. Moulton (six lectures and a two-hours' recital from Aeschylus); "Hellenism and Hebraism," by Mr. Laurie Magnus; "The Art of Pheidias," by Prof. Waldstein; "The Influence of Aristotle," by the Rev. P. H. Wicksteed; "The Supremacy of Athens" (two lectures) and "Greek Slavery," by Prof. Grant, and "Some Aspects of Greek Thought," by Prof. Jackson (three lectures); and there will also be lectures by Dr. W. H. D. Rouse and Mr. Ian C. Hannah. Amongst the sub-courses there will be six lectures by Prof. J. H. B. Masterman on "Modern England," six by Prof. S. J. Chapman on "Socialism and Individualism," nine by Mr. E. A. Parkyn on "Hygiene," and three by the Dean of Ely on the First Epistle of Peter. Mr. Albert Mansbridge (Secretary of the Workers' Educational Association, which sends up many working men to the meeting) will lecture on "Problems in Working-Class Education," Mr. J. A. R. Marriott on "The Problem of Capital and Labour," and Mr. G. P. Bailey on "Wireless Telegraphy."

The number of lectures delivered per day varies. There are always three between breakfast and lunch, and, unless when a social gathering or debate at the Union takes its place, there is one after dinner, at 8.30. In the afternoon there may be two, one, or none at all, according to the arrangements made for organ recitals, excursions, and visits to colleges.

## SECONDARY SCHOOLS IN ENGLAND.

### RETURNS OF PUPILS AND STAFFS.

THE Board of Education have just issued the following circular (590):—

The Board of Education have for some time past had under serious consideration the nature and extent of the statistics with regard to secondary schools annually published by them as part of the volume of "Statistics of Public Education in England and Wales." They are of opinion that the collection and arrangement of such information as is contained in this volume is one which a Central Educational Authority is bound to treat as of the first importance in order that the country as a whole may have an opportunity of estimating the growth of its educational system and the need for further growth, so far as these can be brought to the test of numerical expression, and that within the same limitation each Local Education Authority may be enabled to compare its own efforts and their results with the standards reached over a wider field and under similar or different conditions.

Hitherto the facts given in the annual volume with regard to secondary schools have been somewhat meagre, as was inevitable during a period of pioneer work, in which the foundations of an educational organization have had to be laid. It is felt, however, that the time has now come to take a wider survey of what has been done and of what remains to be done, and to analyse in some detail certain important aspects of English secondary education, such as the number of pupils of various ages receiving their education in secondary schools, the occupations of their parents, and the careers to which their education serves as an avenue; the extent to which the length of their school life is sufficient to secure that the cost and pains which that education entails shall not be wasted, and the number and qualifications of the teachers by whom the schools are staffed.

Statistics of this character can of course only be prepared upon the basis of returns obtained on a uniform system from the schools themselves; and the Board are well aware that, while the obligation to render such returns has always been regarded as one of the conditions upon which State aid is afforded to schools, it is none the less often felt as a very sensible addition to the already heavy duties of the head masters and mistresses by whom it is to be fulfilled. The Board are anxious that this burden should, as far as possible, be minimized. It has been represented to them that unnecessary labour has sometimes been caused in the past by concurrent demands from themselves and from Local Education Authorities for returns of similar character but relating to slightly different dates and periods. They have been in communication with representative associations of the Local Education Authorities and of the head masters and mistresses of secondary schools, with a view both to securing uniformity in this respect and to effecting a general improvement of the statistics at the cost of as little labour as possible to those concerned; and as a result they have come to the conclusions—(a) that it will be a generally convenient arrangement for all English educational, as distinct from financial, statistics, to be taken for the normal school year running from August to July; (b) that age limits and classifications by age should ordinarily be established with reference to age on July 31; and (c) that where it is desirable that anything of the nature of a census of pupils upon a single day should be taken, the day chosen should be October 1, which is, in any event, one of the days on which the number of pupils must be calculated for the purposes of grant under the Regulations for Secondary Schools. They would also take this opportunity of suggesting that much of the work of preparing statistical information is of a clerical nature, and does not demand for its detailed performance the highest educational qualifications, and that consequently it may be found by Authorities and governing bodies a real economy to adopt the practice, which already prevails in many schools, of providing head masters and mistresses with reasonable clerical assistance, in order that returns may be prepared and other routine work performed rather under their supervision than with their own hands.

The Board themselves propose—at any rate, as an experiment—to make a substantial contribution to the lightening of the burden by limiting their demand for returns, so far as the statistics of pupils and staffs now immediately under consideration are concerned, to the raw material of facts upon which the

statistics will be based, and by undertaking in their own office the whole of the very heavy labour of abstracting and tabulating these facts in a statistical form. As much of this information has been hitherto supplied by schools in summaries, the compilation of which has entailed considerable labour, the Board confidently hope that the result of the new arrangement will be at once appreciably to diminish the labour at present imposed upon the schools and to furnish more complete and enlightening statistics. They also anticipate that the more complete information now to be obtained from year to year will enable them to dispense with nearly all the heavy returns which now have to be asked for, often at very short notice, upon the occasion of a full inspection. All secondary schools upon the Grant List in England will, therefore, be furnished, in addition to the class registers of attendance now supplied, with two other registers. One of these will be an admission register to be kept as an official record in accordance with Article 21 of the Regulations for Secondary Schools, 1908. . . . The other register will contain particulars with regard to the members of the school staff. . . .

### CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—Ed. E.T.]

#### MODERN LANGUAGES IN SECONDARY SCHOOLS.

To the Editor of "The Educational Times."

SIR,—On reading the very interesting article on "Modern Languages in Secondary Schools" which appears in your issue of July 1, I feel impelled, as a secondary-school master and a teacher of modern languages, to send a few lines in emphatic protest against the plaintive and exaggerated statement of the case which characterizes that article. I feel convinced that the majority of assistant masters take a much less pessimistic view of the profession, and I think that a correspondence on the subject, if you could afford space for it, would be interesting and helpful in the highest degree. According to your article, the capable teacher is a kind of martyr, shamefully treated by a society to which he is indispensable, being forced to teach "preposterously large classes" and hampered by "old-fashioned books and apparatus," being under-paid and scandalously over-worked. Surely, Sir, all this is more hysterical than true? The class of twenty-five, for instance, is far from being "preposterously large." Certainly a much smaller class can be much better taught. But most modern language teachers would agree that such a class is quite workable; and the advantages of smaller classes are being more and more recognized. Again, every one admits that assistant teachers are not fairly remunerated for their work and that education suffers most regretfully by losing talent that would be drawn to it and kept if a position of permanent comfort were offered to the assistant. But it is absurd to represent the salary of a teacher receiving £160 for forty weeks of twenty-six hours as "not much more than that of the better paid artisan," who receives, say, £120 for fifty weeks of at least forty hours. What seems to me most regrettable, however, in your article, is the complaint that these twenty-six hours a week constitute "a system of organized overwork," exhausting the teacher and leaving him no time for private reading and recreation. The teacher's work does not occupy him during a longer time than that of the boys or girls does them. Nevertheless, the latter, as yet ignorant of the art of "buying up the moments," do not lack time for ample indulgence in games and hobbies. It is only those who love not their calling who do not find time to pursue it efficiently. Moreover, in all activities of any worth, "il faut payer de sa personne." And how many other professions are there which offer twelve weeks' vacation in the year?

Let us, by all means and incessantly, strive to improve the conditions of English teaching and to raise the status of the profession; for in no other department of our national life is reform so urgently needed. But let us keep ourselves from all kinds of demonstrative complaining. Education was not invented, and schools do not exist, for the sake of the teacher. If any one prefers the life of the artisan, is he not free to live it? Moreover, "Gémir, pleurer, prier est également lâche." I am, Sir, &c.,  
AN ASSISTANT MASTER.

## 1908. COLLEGE OF PRECEPTORS. (Incorporated by Royal Charter.) BLOOMSBURY SQUARE, LONDON, W.C.

### Lectures for Teachers ON THE SCIENCE, ART, AND HISTORY OF EDUCATION.

#### THE PRACTICAL TEACHER'S PROBLEMS.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The Second Course of Lectures (Thirty-sixth Annual Series) will commence on Thursday, October 1st, at 7 p.m.

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

#### SYLLABUS.

I. (Oct. 1.) *The Teacher's Library*: three main sections, books needed by teacher as (a) human being, (b) knowledge-monger, (c) educator; (a) and (c) too often neglected; special value of books used by teacher during childhood: the upper and lower limit of professional books under (c); possibility of excess in educational theory: plea for greater recognition of newer class of literary presentations of educational problems: teaching "the inarticulate profession": practical help that may be had from such books: how to use educational periodicals.

II. (Oct. 8.) *How to get some good out of Psychology*: need for a change in the point of view: rational and experimental psychology: need of both by the teacher: danger of pedantry in both: place of the proposed middleman between the psychologist and the practical teacher: the teacher must be allowed to direct the psychologist (not the psychologist the teacher) as to the results to be sought: list of things the teacher wants to know, compared with the list of things the psychologist wants to tell him: teacher must not confine himself to child-psychology, his profession demands the treatment of his fellow adults as well.

III. (Oct. 15.) *How to deal with Officials*: an example of the teacher's need of adult psychology: the difference between the human being and the official: the invariable third: official questions and answers: how to interpret them: the official mind and how to approach it: an instructive bit of law: the official art of compromise: manipulation of conflicting official regulations: the whole question reviewed from the point of view of the teacher as himself an official.

IV. (Oct. 22.) *How to deal with Parents*: generally wrong attitude of teachers towards parents: *in loco parentis* theory: "foster parent": getting at parents through children and *vice versa*: parents' antagonism to school authority has definite relation to their social rank: special difficulties of different classes of teachers: conflicting influences of fathers and mothers: genuine co-operation between school and home: golden mean between parental indifference and interference.

V. (Oct. 29.) *How to Learn*: the other side of teaching: absence of the desire to know: how to rouse it: even when desire is present there is difficulty enough: kinds of learning: reproduction: the dynamic view: constructive learning: rhythm of learning: concentration and diffusion: fallacies about thoroughness: temporary and permanent learning.

VI. (Nov. 5.) *Class Management and Teaching*: ordinary psychology deals with the individual: teacher needs collective psychology as well: relation of class to crowd or mob: minimum number to constitute a class: sympathy of numbers: class leaders: difference between class teaching and private coaching: advantages and difficulties in having to teach several persons at the same time: the average pupil: the type: the composite: the ghostly class.

VII. (Nov. 12.) *How to combine Lecturing and Teaching*: teachers' general disapproval of lecturing: nature of lecturing as opposed to teaching: newer methods of teaching history, geography, and geometry are demanding a certain amount of lecturing: dangers of lecturing in schools as compared with colleges: the pupils' share in the process of lecturing: the art of listening: intermittent hearing: the lecturer's relation to the text-book.

VIII. (Nov. 19.) *Written work in School*: absolute necessity for a good deal of written work in school: note-taking: exercise writing: essays: drudgery of correction: the sword of efficient correction in (a) quantity, (b) quality: co-operative correction: psychological dangers of correction: the norm of correction: spelling and dictation exercises: analysis of most common errors and their causes.

IX. (Nov. 26.) *Verbal Illustration*: nature of illustration in general: distinction from exposition: mental backgrounds: relativity of illustration to the materials at command: exemplification: enumeration: nature of analogy and its place in illustration: the metaphor and other illustrative figures: how to find suitable verbal illustrations: source books of illustration.

X. (Dec. 3.) *Graphic Illustration*: the actual object and the model as means of illustration: the value of the picture as illustration, especially as compared with a verbal description: different illustrative values of a picture according as it is used for intellectual, moral, or aesthetic teaching: the diagram as compared with the picture: dangers that lurk in diagrammatic illustration: certain weaknesses in our space sense: supremacy of the straight line in illustration.

XI. (Dec. 10.) *How to deal with Dullness*: nature of dullness: its relativity to time and subject: the temporary dunce: the permanent dunce: the all-round dunce: the specialized dunce: the scale of dullness: the "defective point": subjective and objective dullness: stage at which objective dullness is welcomed by the pupil: the tyranny of "problems," and the legitimate claims of the relatively dull.

XII. (Dec. 17.) *The Problem of Examinations*: various functions of examinations: teacher as examiner: how to prepare an examination paper: allocation of marks: how to make the best of the external examiner: the personal equation: the use of "old examination papers": preparation of "set books": "the index" in revision of examination work: how to prepare pupils for an external examination with the minimum educational damage.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.

## SARLL'S EXAM. BOOK-KEEPING.

SARLL'S Text-book Sales nearly 250,000.

### SARLL'S MODERN BOOK-KEEPING.

Founded on Sarll's DOUBLE ENTRY. Consists of four GRADUATED COURSES—Introductory, Theory, Practice, Trial Balances—followed by forty EXAM. PAPERS with full or outline KEYS. An Elementary and Intermediate Text-Book for ALL EXAMS. The results of a LIFETIME. 410pp., 3s. 6d. [Now ready.]

### SARLL'S BOOK-KEEPING FOR NEW CODE.

Stage I., Introductory; II., Practical; III., Theory or Journalising. Each 48 pages. Price 4d. Outline Keys, MS. Books, 2d. each.

### SARLL'S PRACTICAL BOOK-KEEPING.

Fourteenth (greatly improved) Edition. *Teachers' Aid* says: "There is no cheaper and safer guide." Consists of GRADUATED EXERCISES with full, and Exam. Papers with outline, Keys. 128 pages, 1s. MS. Books, superior, 1s. Cheap, 4d.

### SARLL'S DOUBLE-ENTRY BOOK-KEEPING.

Fifteenth Edition. 256 pages, 2s. Consists of GRADUATED EXERCISES with full, and Exam. Papers with outline, Keys. *Practical Teacher* says: "We heartily recommend it as the best and cheapest manual we have seen." A School Edition, without Keys. 128 pages, 1s. Superior MS. Books, 1s. Cheap, 4d.

### SARLL'S TWENTIETH CENTURY EXAM. BOOK-KEEPING.

Containing Papers by the leading Examining Boards, with outline Keys. In Two Parts, at 6d. each. Part I., Junior Papers, College of Preceptors, University Local, Scotch Leaving Certificates, &c. Part II., Senior Papers, Society of Arts, London Chamber of Commerce, Lancashire and Cheshire Union, West Riding, &c.

*Sarll's Supplementary Keys.*

#### 1. TO SARLL'S PRACTICAL.

Exercises fully worked, 2s.

#### 2. TO SARLL'S DOUBLE-ENTRY.

Exercises fully worked, 3s.

### CURRENT EVENTS.

**Fixtures.** THE Third International Art Congress for the Development of Drawing and Art Teaching and their Application to Industries will be held in London, August 3-8.

THE World's Drawing Exhibition, which was opened at South Kensington on July 27, will not close before August 15. Delegates are expected from forty-nine countries.

A VACATION Course in Practical Physics is to be held at Cambridge, August 3-22. The organizer of the Course is Mr. F. S. Scruby, Aldenham School, Herts.

COURSES of Lectures on Education, specially designed for teachers (men and women) will be held at the Cambridge Training College for Women Teachers, August 14-21.

THE Edinburgh Vacation Courses (English, French, and German) run, in two divisions, from July 29 to August 13, and from August 14 to 28. Programmes, &c., from the Hon. Secretary, Prof. Kirkpatrick, LL.D., Edinburgh University.

THE International Congress of Historical Science will be held at Berlin, August 6-12. Programmes from Dr. Caspar, Kaiser-Allee 17, Berlin W. 15.

VACATION Courses in German language and literature, the geography of Germany, German history in the nineteenth century, and current problems of economics (with special reference to the social question in Germany), will be held at the Handelshochschule, Leipzig, August 10 to September 12, and September 14 to October 10. Apply to Herr C. F. Strothbaum, Arndtstrasse 68, Leipzig.

AN Exhibition (including international sections for Meteorology and Terrestrial Physics, Ceramics, and Agricultural Machinery) will be held at Faenza, August 15 to October 15, to commemorate the tercentenary of the birth of Torricelli. Apply to Conte Cav. Carlo Cavina, President of the Executive Committee, Faenza.

THE University of Aberdeen has conferred Honours. the honorary degree of LL.D. upon Sir Harvey Adamson, M.A., C.S.I., member of the Council of the Viceroy of India; the Earl of Cromer, G.C.B.; Brigadier-General Sir James Ronald Leslie Macdonald, K.C.I.E., C.B., commanding at Lucknow.

PROF. HENRY JACKSON, Litt.D., LL.D., has been appointed a member of the Order of Merit (O.M.)

THE University of Dublin has conferred the following honorary degrees:—

D.D.—Rev. G. Adam Smith, LL.D., &c., United Free Church College, Glasgow.

LL.D.—Sir James J. Digges-La Touche, K.C.S.I.; Right Hon. Sir Horace Plunkett, K.C.V.O.

M.D.—Sir Thomas R. Fraser.

D.Litt.—Right Rev. Dom Cuthbert Butler, O.S.B.; R. W. Macan, Master of University College, Oxford; Prof. Maurice A. Gerthwohl; Prof. R. A. Williams.

\* \* \*

THE University of Durham has conferred the following honorary degrees (corrected list):—

D.C.L.: Duke of Devonshire (in absence); Most Rev. Henry Lowther Clarke, Archbishop of Melbourne; Earl of Carlisle; Sir Herbert Maxwell, Bart.; Sir Charles Eliot, K.C.M.G., Vice-Chancellor of Sheffield University; Prof. Frederick Page, Newcastle; Prof. George Redmayne Murray, Newcastle; Mr. Alfred Bray Kempe, Chancellor of the Diocese of Newcastle.

D.Sc.: Mr. Clement Stephenson, of the Royal Agricultural Society; Prof. Robert Lunan Weighon, Newcastle; Prof. Henry Louis, Newcastle.

D.Litt.: Prof. William James, Harvard.

M.A.: Mr. K. C. Bayley, Durham; Mr. H. S. Squance, Sunderland.

\* \* \*

THE University of Manchester, on the installation of Viscount Morley as Chancellor, conferred the following honorary degrees:—

LL.D.—Sir Frank Forbes Adam, Chairman of the University Council; the Right Hon. Arthur James Balfour, M.P.; Mr. Edward John Broadfield; Mr. Andrew Carnegie; the Right Hon. Lord Courtney of Penwith; the Right Hon. Lord Curzon of Kedleston; Sir Edward Donner, Bart.; the Right Hon. R. B. Haldane, M.P., Secretary of State for War; Sir Henry Fleming Hibbert; Sir William Henry Houldsworth, Bart.; Sir William Mather.

D.D.—Rev. Dr. Andrew Martin Fairbairn.

D.Litt.—Sir Edward Maunde Thompson; Arthur John Evans; William Farrer; Prof. Henry Jackson.

D.Sc.—Emeritus Prof. Arthur Gamgee; James Cosmo Melvill.

\* \* \*

THE University of Liverpool has conferred the following official degrees:—

M.Sc.—F. J. Lewis, R. Newstead.

M.Ch.—Damar Harrison.

M.Dent.Ch.—J. Ainsworth Woods.

The University of Liverpool, on behalf of the University of Lehigh, U.S.A., has conferred the honorary degree of M.Sc. upon Mr. Horace Field Parshall. The Vice-Chancellor pointed out that there is no precedent for such action on the part of the University of Liverpool.

\* \* \*

The University of Birmingham has conferred the following official degrees:—

D.Litt.—Michael Macmillan.

M.A.—Rose Sidgwick, Prof. K. Wichmann.

D.Sc.—J. D. Coates, C. K. Tinkler, G. S. West.

M.Sc.—O. F. Hudson, E. J. Kippes, Warner Lulofs, T. J. Murray.

B.Sc.—Donald Myer Levy.

M.D.—Robert Arthur Lister.

B.Dent.Ch.—W. T. Madin.

M.Com.—Frank Tillyard, S. S. Dawson.

\* \* \*

THE University of Sheffield has conferred the honorary degree of D.Litt. upon Alderman George Franklin, Prof. C. H. Firth (Oxford), and Prof. Henry Jackson, O.M. (Cambridge); and the honorary degree of D.Met. upon Colonel Vickers, C.B. Also the following official degrees:—

M.A.—W. M. Gibbons, Prof. J. A. Green.

M.Sc.—Prof. Alfred Denny, Prof. L. T. O'Shea.

M.Ch.—Prof. Rutherford, John Pye-Smith, Prof. Richard Favell.

M.Met.—Assistant-Prof. Andrew McWilliam.

B.Eng.—Frederick Boulden, Ellis Herbert Crapper, Joseph Husband, Joseph Wood Kershaw, and William George Hibbins.

B.Met.—Fred Kitson Knowles and John Henry Wreaks.

\* \* \*

MCGILL UNIVERSITY has conferred the honorary degree of LL.D. upon Sir C. P. Clarke, Director of the Metropolitan

Museum of New York, formerly Director of the South Kensington Museum.

\* \* \*

THE University of Bombay has conferred the honorary degree of LL.D. upon Mr. F. G. Selby, M.A. Oxon., C.I.E., the new Director of Public Instruction, Bombay.

\* \* \*

KNIGHTHOODS have been conferred upon Dr. J. A. H. Murray, LL.D., D.C.L., D.Litt., the Lexicographer, and Prof. A. G. Greenhill, M.A., F.R.S., of the Ordnance College, Woolwich.

\* \* \*

THE following gentlemen have been elected Fellows of King's College, London:—Prof. Percy Edward Newberry, Mr. Francis John Waring, Prof. Norman Dalton, Mr. Alfred Boyce Barrow, Prof. John William Adamson, Prof. William Beacroft Bottomley, Prof. Albert Carless, and Mr. Wm. Braginton.

\* \* \*

THE REV. WALTER BOYCE, M.A. Cantab., Head Master of King Edward VII. Grammar School, King's Lynn, has received the honour of M.V.O. (4th class).

\* \* \*

THE REV. CANON FOWLER, Vice-Principal of Hatfield Hall, Durham, has had his portrait in oils (by Mr. Ralph Hadley, of Newcastle) presented to him, in recognition of his connexion with Durham University for over fifty years. He proposes to hand over the portrait to the University for Hatfield Hall.

\* \* \*

THE French Academy of Science has elected Dr. Herbert Hall Turner, F.R.S., Savilian Professor of Astronomy at Oxford, Correspondent in the Astronomy Section.

\* \* \*

ON the occasion of the one hundredth anniversary of the foundation of the Physico-Medical Society of Vienna, the following appointments were made:—Sir Victor Horsley to be Honorary Ph.D. To be Corresponding members of the Society:—Dr. J. Loeb, Professor of Physiology at the University of California; Dr. C. S. Minot, Physician and Educator of Boston, U.S.A.; Dr. E. Rutherford, F.R.S., of Manchester University; and Dr. C. S. Sherrington, of Liverpool University.

—♦♦♦—

CAPTAIN GEORGE GILMOUR, of Birkenhead, has given £10,000 to endow a Chair of Spanish in the University of Liverpool.

\* \* \*

THE Oxford University Endowment Fund having now reached a total of over £100,000, Mr. W. W. Astor has given a second donation of £10,000.

\* \* \*

MR. W. W. ASTOR has given £1,000 in support of the excavations at Sparta conducted by the British School in Athens.

\* \* \*

THE Clothworkers' Company have voted a donation of £1,000 to the University of Cambridge Endowment Fund.

\* \* \*

THE Trustees of the Oxford University Endowment Fund have set apart £250 a year for three years to endow a Lectureship in Political Theory and Institutions; granted £50 a year for three years to the Maitland Seminar Library; announced that they are reserving £12,000 for a storage room for the Bodleian Library; and expressed their ap-

proval of the principle of establishing a Lectureship in Japanese language, history, and institutions.

SIR JAMES WHITEHEAD, Bart., has offered some £5,000 to Appleby Grammar School for scholarships, &c. "Clear, distinct handwriting is to be a *sine qua non*."

At the distribution of prizes at the North London Collegiate School (July 2), Mr. W. Latham, M.A., K.C., Chairman of the Governors, stated that the Clothworkers' Company were prepared to give £10 to each girl that passed the Oxford and Cambridge Local Examinations and desired to graduate B.A. at Trinity College, Dublin, Oxford and Cambridge being unavailable for the purpose. [But is Trinity College, Dublin, still available? If not, however, there are Universities elsewhere.]

THE original manuscripts of the late Prof. Bain's principal psychological works have been deposited in the library of the University of Aberdeen by Mrs. Bain; and his private MS. records of his classes, 1860-80, by his trustees.

At Oxford University scholarships, &c., are offered as follows:—Classics: December 1, at Balliol; Exeter, Oriel, Brasenose, and Christchurch; Queen's, St. John's, Hertford, and Keble. December 8, at University and New; Corpus; Trinity and Wadham. December 14, at Lincoln. Mathematics: December 1, at Balliol, Queen's, and Corpus; Merton, Exeter, New, and Hertford. Natural Science: December 1, at Balliol, Christchurch, and Trinity; December 8, at University. History: December 1, at Balliol and New; Queen's; St. John's, Hertford, and Keble. December 8, at Lincoln; and at Trinity. Hebrew: December 1, at Wadham.

ST. HILDA'S HALL, Oxford, offers two open Scholarships, £40 and £35, in April, 1909. Apply to the Principal.

ST. JOHN'S HALL, Highbury, offers (1) two Peache Entrance Scholarships, £50 a year each, and one Peache Entrance Exhibition, all tenable for two years. Examination September 4. Apply to the Principal by September 1. (2) An Alfred Roberts Entrance Exhibition, £21 a year for three years. No examination. Preference to a son of a clergyman. Apply to the Principal by September 7. (3) An Organist Exhibition, £30 a year for three years. Vacant May, 1909. Apply (with evidence of qualifications) to the Dean of the Hall, the Rev. C. S. Wallis.

DR. HENRY ALEXANDER MIERS, M.A., D.Sc., F.R.S., &c., Fellow of Magdalen College, Oxford, Waynflete Professor of Mineralogy in Oxford University, and Vice-President of the Chemical, Geological, and Mineralogical Societies, has been appointed Principal of the University of London as from October 1, upon the resignation of Sir Arthur W. Rücker.

THE REV. G. A. COOKE, M.A. Oxon., Chaplain to the Duke of Buccleuch at Dalkeith and Canon of St. Mary's Cathedral, Edinburgh, has been elected Oriel Professor of the Interpretation of Holy Scripture in Oxford University, in succession to the Rev. Prof. T. K. Cheyne, resigned.

THE Regius Professorship of Ecclesiastical History at Oxford is vacant through the death of Canon Bigg.

MR. L. R. FARNELL, M.A., D.Litt., Fellow of Exeter College and University Lecturer in Classical Archaeology, Oxford, has been appointed Wilde Lecturer in Natural and Comparative Religion (for three years) at Oxford.

MR. W. JACKSON POPE, F.R.S., Professor of Chemistry and Head of the Chemistry Department, Municipal School of Technology, Manchester, has been appointed Professor of Chemistry in Cambridge University, in succession to Prof. Liveing, resigned.

At the University of London, University College, Mr. Henry M. Hobart, B.Sc., M.I.C.E., has been appointed to the new Lectureship in Electrical Design; Mr. Leslie Wilkinson, A.R.I.B.A., Assistant in the Department of Architecture, in succession to Mr. A. G. James, resigned; Mr. R. E. Middleton, Lecturer in Municipal Engineering for the session 1908-9; Dr. A. W. Stewart, Lecturer in Stereo-Chemistry for the session 1908-9; Mr. W. F. Stanton, Demonstrator in the Department of Applied Mathematics, under Prof. Karl Pearson; and Mr. H. S. Bion, Demonstrator in the Department of Geology, under Prof. Garwood.

PROF. J. M. THOMSON has been elected Vice-Principal of King's College, London.

At King's College, London, Mr. E. J. Urwick has been appointed Tooke Professor of Economic Science and Statistics; and the Rev. W. R. Matthews, Assistant Lecturer in Philosophy.

IN connexion with the Course on Home Science and Economics, which will commence in October at the King's College Women's Department, 13 Kensington Square, the Council have made the following appointments on the staff:—General Biology, Prof. Dendy; Bacteriology and Microscopy, Prof. Hewlett and Dr. Taylor; Applied Chemistry, Mr. H. L. Smith, B.Sc., in consultation with Prof. Jackson; Physics, Dr. W. Wilson; Psychology, Mr. W. Brown, M.A.; Chemistry (first year), Mrs. McKillop, M.A.; Lecturer in Biology (first year), Miss Hill, B.Sc.; Special Lecturer in Economics, Miss Atkinson, M.A.; Lecturer in Sanitary Science and Hygiene, Miss Alice Ravenhill, F.R.San.I.

At Liverpool University, Dr. J. Hill Abram, one of the physicians of the Liverpool Royal Infirmary and a Lecturer in the Clinical School, has been appointed Professor of Therapeutics; Mr. S. W. Perrott, M.A.I. Dubl., M.Inst.C.E., Professor of Civil Engineering in the University of New Brunswick, has been appointed to the new Chair of Civil Engineering; and Mr. B. R. Hawker, M.A. Cantab., has been appointed Tutor in the Department of Education.

Prof. Salvin-Moore has resigned the Directorship of the Liverpool Cancer Research Committee, and accordingly vacates the Professorship of Experimental Cytology (in September).

MR. J. CADMAN, D.Sc., has been appointed Professor of Mining in Birmingham University, in succession to Prof. Redmayne.

MR. W. F. TROTTER, M.A., LL.M., Lecturer, has been promoted Professor, of Law in Sheffield University.

PROF. TAYLOR retires from the Chair of Ecclesiastical History in Edinburgh University on September 1.

DR. JAMES WALKER, D.Sc., Ph.D., F.R.S., Professor of Chemistry in University College, Dundee (since 1894), has been appointed Professor of Chemistry in the University of Edinburgh.

\* \* \*

MR. ALFRED EDWARD TAYLOR, M.A., Frothingham Professor of Philosophy, McGill University, Montreal, has been appointed Professor of Moral Philosophy in the University of St. Andrews, in succession to Prof. Bosanquet.

\* \* \*

MR. GILBERT NORWOOD, M.A., Fellow of St. John's College, Cambridge, Assistant Lecturer in Greek in Manchester University, has been appointed Professor of Greek in Cardiff University College.

\* \* \*

DR. SUTHERLAND SIMPSON, M.D., D.Sc. Edin., Lecturer in Experimental Physiology in the University of Edinburgh (for the past seven years), has been appointed Professor of Physiology, and Dr. Andrew Hunter, M.D. Edin., Professor of Bio-Chemistry, in Cornell University, Ithaca, N.Y.

\* \* \*

DR. FRIDTJOF NANSEN, Sc.D., LL.D., D.C.L., Ph.D., the Arctic explorer, recently Norwegian Minister in London, has been appointed Professor of Oceanography in the University of Christiania.

\* \* \*

MR. F. W. BAIN, M.A. Oxon., has been appointed Principal of the Deccan College, Poona, in room of the Hon. F. G. Selby, C.I.E., M.A. Oxon., who has become Director of Public Instruction, Bombay.

\* \* \*

MR. A. D. C. AMOS has been appointed District Inspector of Schools under the Birmingham Education Committee.

\* \* \*

MR. W. D. SADLER, Assistant-Secretary to the Northamptonshire Education Committee, has been appointed Director of Education and Secretary to the Walsall Education Committee.

\* \* \*

MR. H. TUNALEY, Chief Adviser on Drawing to the Board of Education, has been appointed Inspector of Drawing in Training Colleges.

\* \* \*

THE HON. W. PEMBER REEVES, High Commissioner for New Zealand, has accepted the Directorship of the London School of Economics and Political Science.

\* \* \*

MR. G. PRICE WILLIAMS, M.A., Ph.D., Assistant Lecturer in German, Liverpool University, has been appointed a Junior Inspector under the Board of Education.

\* \* \*

AN Assistant Lecturer in French Language and Literature is required at Cardiff University College. Apply to the Registrar by September 1.

\* \* \*

A LECTURESHIP in Geography is open in Glasgow University (£200 a year).

\* \* \*

MISS K. NOAKES, Somerville College, Oxford (Classical Honours), has been appointed Junior Demonstrator in Education in Manchester University.

\* \* \*

MR. W. E. BECK, M.A. Lond., L.Th. Dunelm., has been appointed Tutor at St. Aidan's College, Birkenhead.

THE REV. H. WALKER, M.A. Cantab., Vice-Principal, has been promoted Principal, of the York Training College.

\* \* \*

MR. J. A. RICHEY, Balliol College, Mr. R. B. Ramsbotham, Magdalen College, and Mr. D. G. Schulze, Merton College, Oxford, have been appointed to the Indian Educational Service, and to be Inspectors of Schools in Eastern Bengal, Assam, and Burma, respectively.

\* \* \*

AT the Aberdeen Training Centre, Miss Margaret M'Gregor, M.A. Edin., Lecturer in Islington Day Training College, has been appointed Mistress of Method; Miss Strachan, Directress of Needlework, to be assisted by Miss Souter (who is also to assist in the Method Department); Miss Ruby Clark, Assistant Instructress in Physical Training; and Mr. David Thomson, B.Sc., Instructor in Woodwork.

\* \* \*

THE Council of the Girls' Public Day School Trust have made the following appointments of head mistresses, to take effect from next term:—Miss Ethel Gavin, M.A. Dublin (Classical Honours, Girton College), Head Mistress of Notting Hill High School, to be Head Mistress of Wimbledon High School; Miss Amy T. Steele, M.A. London, Head Mistress of Portsmouth High School, to be Head Mistress of Notting Hill High School; Miss Ada F. Cossey (Mathematical Honours, Newnham), assistant mistress at Croydon High School, to be Head Mistress of Portsmouth High School; and Miss Mabel Hodge, M.A. Dublin (Mathematical Honours, Girton), second mistress at Notting Hill High School, to be Head Mistress of Bromley High School.

\* \* \*

MISS C. EDITH LEWER, B.A. Lond., chief assistant mistress Francis Holland School (Church of England High School for Girls), Graham Street, S.W., has been appointed Lady Warden of Queen's College, Harley Street, in place of Miss Harper, resigned.

\* \* \*

MISS EVELYN MINOT, Head Domestic Science Mistress, Clapham High School, and Examiner for the Teachers' Diploma in Domestic Subjects, has been appointed Teacher of the Domestic Arts in the Women's Department of King's College, London (Kensington Square).

\* \* \*

FRAULEIN K. REIN, daughter of Prof. Rein, of Jena, has been appointed a tutor at Cherwell Hall Training College, Oxford.

\* \* \*

MISS ELEANOR PHILLIPS has been appointed Head Mistress of the Clifton High School for Girls, in succession to Miss Burns, resigned.

\* \* \*

MISS PURDIE, late Head Mistress, Exeter High School, has been appointed Head Mistress of the L.C.C. Secondary School, Sydenham Hill Road, S.E.

\* \* \*

MISS MAY TWEEDY, Nat. Sci. Trip. (Camb.), has been appointed Demonstrator in Physiology at Bedford College for Women (University of London).

\* \* \*

MR. G. READDIE, M.A., Head of the Department of English and Modern Languages, Technical School, Sunderland, has been appointed Principal of the new Day Training College, Sunderland.

\* \* \*

MR. R. DELANEY, Khedivial Training College, Cairo, has been appointed Principal of the new Cheshire Training College for Teachers.

MR. J. A. HOPE JOHNSTON, M.A. Edin., B.A. Cantab., assistant master, Tonbridge School, has been appointed Head Master of Highgate School.

MR. J. R. BROWN, M.A. Cantab., Science Master, Bury Grammar School, has been appointed Head Master of West Suffolk County School.

MR. W. D. RAYNOR, Head Master of P.-T. Centre, St. Austell, has been appointed Head Master of the Secondary School, St. Austell.

MR. J. H. SHARP, B.A. Lond., assistant master, has been promoted Head Master, of Simon Langton's School, Canterbury.

MR. R. E. YATES, B.A. Oxon., assistant master, High School, Nottingham, has been appointed Head Master of the Grammar School, Amersham.

THE REV. G. C. ALLEN, D.D., is resigning the Head Mastership of Cranleigh School after 16 years' service.

DR. ANDREW WILSON has retired from a Mastership in the Royal High School, Edinburgh, after thirty-two years' service.

MR. JAMES FORSYTH, M.A., Head Master of Goodhope School, Lockerbie, has been appointed Head Master of Aberlemno Public School, in succession to Mr. James Stewart, retired.

MR. ALEXANDER BLACKLAW, B.A. Lond., Head Master of Milton House School, has been appointed Head Master of James Gillespie's School, Edinburgh.

MR. THOMAS N. HEPBURN ("Gabriel Setoun"), first assistant, St. Leonard's School, succeeds Mr. Blacklaw as Head Master of Milton House School.

MR. W. LINDSAY THOMPSON, M.A., B.Sc. Glas., of Allan Glen's School, Glasgow, has been appointed Rector of Hawick Higher Grade School. He is a son of Mr. David Thompson, Inspector of Schools for Dumfries, Wigtown, and Kirkcudbright.

**Literary Items.** MESSRS. METHUEN promise immediately two additions to their series of "Text-books of Science": "Examples in Elementary Mechanics," by W. J. Dobbs, and "First Year Physics," by C. E. Jackson. Also "Junior Latin Prose," by H. N. Asman, in their series of "Junior School Books."

MESSRS. SAMPSON LOW, MARSTON, & Co. are publishing cheap editions of the late R. D. Blackmore's romances in new form and with bindings of recent design.

MESSRS. GEORGE PHILIP & SON have been appointed sole agents in this country for Gannett, Garrison, and Houston's "Commercial Geography" and Johnson's "Mathematical Geography." These able works are published in America by the American Book Company.

MESSRS. DENT are about to add to their "Modern Language Series" three sound charts: "The Sounds of English," "Les Sons du Français," "Deutsche Laute." These

charts (30 inches square) have been drawn up by Prof. Rippmann. Other additions to the same series will be "A Phonetic French Reader," by S. A. Richards, B.A., and "Eisenhans," a second-year German reader, by Prof. Rippmann.

THE Oxford University Press will shortly publish, in Sir C. P. Lucas's "Historical Geography of the British Colonies," a volume on the History of Canada, by Prof. H. E. Egerton. Mr. J. D. Rogers, who wrote "Australasia" for the same series, will deal with the Geography of Canada in another part, also to be issued shortly.

VISCOUNT MORLEY OF BLACKBURN was installed Chancellor of the University of Manchester (July 9).

"My imagination is stirred by the thought that the new type of University represented by the Manchester University was founded by a homely man of business living in Manchester—John Owens—who, with a prescience of the wants of his age which seems truly remarkable, has done for the new age what kings and princes and guardians of the Church did when they established the great and venerable foundations of Oxford and of Cambridge."

THE Administrative Staff of the Technological Branch of the Board of Education has now removed from South Kensington to the new Offices of the Board in Westminster, the entrance to which is in Charles Street out of Parliament Street. All correspondence should henceforth be directed to the Secretary, Board of Education, Whitehall, with the exception of letters for the Victoria and Albert Museum, the Royal College of Art, and the Solar Physics Observatory, which should continue to be addressed to the Offices of the Board of Education, South Kensington.

THE Governors of University College, Bristol, have unanimously approved the draft Charter for establishing a University of Bristol, and it will at once be presented to his Majesty in Council.

THE numerous prizes awarded by the Society of Gallia, at Reading, were distributed (June 27) by the Duchess de Frias, Farnborough.

COPIES of the Book Lists of the National Home-Reading Union for next session (commencing in September) may now be had by teachers desiring to form reading circles in connexion with the Union, on application to the Secretary, Miss A. M. Read, 12 York Buildings, Adelphi, London, W.C.

IN celebration of the tercentenary of Milton, the Master and Fellows of Christ's College, Cambridge (the poet's college), entertained some eighty or ninety guests (July 10), to whom Prof. Mackail discoursed on Milton, and who afterwards witnessed a performance of "Comus" in the New Theatre.

DR. ELIZABETH A. GOTTHEIMER, who has been appointed Lecturer on Social Politics at Mannheim Commercial University, is said to be the first woman that has been elected to a post in a German University.

THE Victorian League (2 Wood Street, Westminster) has prepared a shilling packet of twelve picture cards illustrating the early history of the Dominion of Canada, and arranged for the sending of it at cheap postal rates from children in English schools to children in Canadian schools. The League is also issuing collecting cards to aid the fund for the preservation of the battlefields.

### THE GERMAN CONTINUATION SCHOOL.\*

By THOMAS HANNAN.

[From the *Scotsman*.]

ONE of the most interesting developments of German education is the continuation school. *Fortbildungsschule* is the German term, and the system is, I believe, in advance of anything which prevails elsewhere with the object of improving the education of those who have left the elementary day school for ordinary employment.

#### HISTORY OF THE MOVEMENT.

The history of the movement is a valuable lesson in itself. For its origin we have to go back to the sixteenth century, and the movement was begun as an effort on the part of the Church to dispel the ignorance which then prevailed as to the truths of religion. Classes were formed, to meet in the churches on the Sunday afternoons, and to receive instruction from the pastors. They were exactly what we understand by "Sunday schools," but in the course of time secular subjects were added to the subjects taught; and this was found to be a great advantage. As the elementary system of day schools came into existence and made for itself a thoroughly assured position, these Sunday schools came to be useful adjuncts to the system. Saxony led in the origin and development of these continuation schools.

The next stage in the history of their development is associated with the industrial developments of the closing years of the eighteenth century. Those who were observing the signs of the times in Germany, and who were anxious that the country should advance rather than lag behind, advocated an improvement in the opportunities of obtaining a serviceable education. Bavaria, Prussia, and Saxony found to their hands an organization which seemed capable of becoming the means of doing what they wanted; and those States proceeded to make use of the Sunday schools. Additional instruction was given in reading, writing, and arithmetic; and attendance was made compulsory in some States. When compulsion was introduced, everything was done to make it real and effective. As a rule, young men were compelled to attend until the age of eighteen years; while in the case of Bavaria a curious form of compulsion existed in the fact that a man could not be married until he produced a certificate that he had attended a regular course of instruction at a Sunday school.

These schools continued to flourish during the half-century which followed the initiation of the changes just described, and the schools were well attended, even when the element of compulsion was lacking. But at last a change of feeling arose, and led to a slackening of interest. There were probably several factors in this change of feeling, but a powerful influence was the introduction of compulsory attendance at day schools in the case of children. The double compulsion became irksome to the working classes, who wished to see their children wage-earners as soon as possible, and to employers, who found themselves debarred from employing juvenile labour under a certain limit of age, and limited in the use of that labour between the day school period and manhood. Thus continuation schools fell into great unpopularity, and in one State after another the compulsory laws were abrogated. In 1859 Saxony followed the lead of other States in this direction, and in the course of a few years the system almost ceased to exist.

The resuscitation of the system was one of the results of the great war of 1870. When it was over, the Empire began to apply itself to the arts of peace. In Saxony attendance at continuation schools, evening or Sunday schools, was again made compulsory early in the year 1873; and that compulsion has remained a feature of the system ever since. The organization now exists in most, if not all, of the German States. There is an *Imperial law*, as distinguished from the local laws, on the subject. The Imperial law assumes that the schools will exist and that young workers will attend them. It then provides that all employers of labour shall give their workers who are under the age of eighteen years such opportunities of attendance as the Local School Authorities may consider necessary. But under this law, so far, it is left to the option of the individual whether to attend or not. The law, however, provides, further, that any District Council, or body superior to a District Council, may make it compulsory for the young workers within their

area to attend a continuation school, or a school of equal or higher standing, until the age of eighteen years.

#### "COMPULSION IS THE RULE."

In Saxony the law of compulsion is made absolute over the whole State, but in other parts of the Empire, the District Councils have the option of adopting compulsion or not according to their judgment. Generally speaking, compulsion is the rule; and provision is made for the enforcement of the law, as regards pupil, parent, and employer. Where absence is proved to be the fault of parent, guardian, or employer, a fine of thirty marks—that is, thirty shillings—may be imposed by the proper authority. In this respect the Saxon law is more severe than the Imperial, which fixes a penalty of twenty marks. If the fine be not paid, imprisonment for three days may follow.

#### SUNDAYS—AND OTHER DAYS.

I have already drawn attention to the fact that the continuation classes meet on Sundays in many cases. If Sunday be chosen, then care must be taken that the classes do not interfere with Church attendance. In Saxony two out of about every seven continuation schools meet on Sunday, and of those which meet on Sunday nearly half meet on another day as well. In this school they have classes for iron-workers on Tuesdays from 2.30 till 6.30 in the afternoon. It may easily be understood that this arrangement interferes to some extent with the organization of work and business; but the Germans seem to have overcome any objection on this point, no doubt through being convinced of the preponderating advantages in other directions. But the system is administered with a good deal of tact and skill where the hours of labour are trenched upon. Leipzig, I understand, is an example of this. I did not see any school work in this city, but I was told that the employers are consulted in many ways. At the beginning of each half-year a meeting of teachers and such employers as choose to attend is held. The programme of studies is considered, and representatives of the employers are chosen to act on the School Committee as advisers. Throughout the year the employers are kept informed of the progress of the pupils who are in their employment, and the result is that the antagonism which was felt by many employers has been gradually overcome and often a feeling of sympathy established, which manifests itself in gifts of apparatus and other useful things. So marked is this co-operation in Saxony that in some cases the trades carry on continuation classes themselves. . . .

#### PHYSICAL FATIGUE OF SCHOLARS.

One of the great difficulties which the promoters of these schools had to overcome was the argument of physical fatigue. It was argued that young people, after a full day's work, were not in a condition to endure an evening's study. This difficulty seems to be largely overcome, partly by the holding of classes in the afternoon in certain cases, and partly by the system of associating the individual school with the individual trade, if not with the individual workshop. In the large towns separate classes exist for various trades, and the classes are arranged for the days and hours when the young people can most easily be spared from their employment. All this demands careful arrangement, and the smooth working of the system at present has been evolved from the mistakes and friction and failure of the past. Boys who are in the same workshop, or who are in rival workshops of the same trade, find themselves in the same class; and the principle of emulation comes fully into play, giving an intellectual stimulus to a mechanical art and causing the pupil to forget that he is tired. No boy likes to be called *Schafskopf* ("Sheep's-head," "Fathead"), which is a term liberally applied to a stupid fellow, I understand, by his companions.

But, in addition to these considerations, it has to be remembered that only a certain number of hours per week are compulsory. In Dresden the number is four, but the Local Authority may fix the number of hours as high as six, and the minimum is two hours per week on an average over the year. I understand that only a little over 10 per cent. of the educational districts go above the minimum; but this low proportion is due to the country districts, which, as elsewhere than in Germany, labour under educational disadvantages, and, on account of the pressure of field work in summer, have to do most of the educational work in winter. In the towns a great variety of opportunity is given, and the classes are spread over a longer portion of the year.

#### FINANCES.

It is difficult at present to separate the finances of the continuation schools from those of the general system worked by the district. The teachers of the continuation classes are also, in

\* The third of an instructive series of papers on "Public Schools in Germany."

most cases, teachers in the day schools. They are paid separately for their continuation school work, at rates which vary a great deal, but are never high—sometimes only about 40 or 50 marks per year for one hour per week, and sometimes double that rate.

It will probably be possible to present a complete financial statement of the total cost of the system in Dresden by the year after next. In spite of the success of the system in that city, or perhaps because of it, the authorities are not content to go on as at present. They are working out a scheme by which the continuation schools will have their own buildings and their own teachers; and I was told that the reformed scheme would probably be in working order next year. Such a scheme will entail a great deal of additional expenditure, and doubtless one feature of the scheme will be a still greater distribution of the continuation work over the whole day. Whether that will entail difficulty in the withdrawal of young workers from their occupations during the day remains to be seen; but I think it may be safely anticipated that the arrangements arrived at will have the support and concurrence of employers. . . .

#### EXAMPLE OF COLOGNE.

Cologne has a most carefully organized system of continuation schools, and has about thirteen hundred teachers in its day schools on whom it can draw for the staffing of its continuation work. Dr. Brandenburg, the *Schulrath*, told me that their system of technical schools for trades is not properly introduced yet, but they have at present classes for tailors, shoemakers, and clockmakers. The continuation schools of the city are attended by about six thousand boys and young men. There are no continuation schools for girls. Attendance is compulsory between the ages of fourteen and seventeen years. The classes are held from seven till nine every evening, and each pupil must attend two nights per week. In addition, drawing classes meet every Sunday morning from 9.15 till 11.15, the assumption being that church is attended before 9. Religious instruction at these classes is given once or twice a month, but attendance at this instruction is voluntary. The compulsion exerted here is very stringent. Employers who keep pupils back from their classes may be fined up to 150 marks, or £7. 10s.; while, if the pupil does not attend, he or his parent may be fined up to 20 marks, or £1. I asked Dr. Brandenburg if much difficulty was experienced in enforcing compulsory attendance, and his answer was that attendance was "fairly willing"—which I assumed to be quite satisfactory, considering the high standard of obedience which is expected by the German official mind. He seemed to attach the greatest value to the penalties as a means of persuasion.

#### HIGHER CONTINUATION SCHOOLS.

There are three classes of continuation school above the ordinary or compulsory kind, and the attendance at one of these superior schools exempts from attendance at the ordinary kind. But admission to the higher school depends on attainments, and so another incentive is brought into play for the success of the day school. The highest of these three classes is the "Higher Commercial Continuation School," possessing a lower and a higher division. The lower division has a fixed three years' course, and the higher has a two years' course, which is optional. In each stage there are compulsory subjects and optional subjects. In the lower division the compulsory subjects are:—First year—German, writing, arithmetic, French, and English. Second year—correspondence and business management, arithmetic, single entry book-keeping, shorthand, French, and English. Third year—Correspondence and business management, arithmetic, double-entry book-keeping, geography and knowledge of goods, French, and English. One of these headings is significant—the German always teaches geography with special reference to the goods which are required by the part of the world being studied.

In the higher division, one of the three alternative conditions of admission to which is a certificate of one year's voluntary military service, the subjects are:—First year—correspondence (with instruction in business management and law), single and double-entry book-keeping, commercial arithmetic, French correspondence and conversation, and English for beginners and also with conversation. Second year—science of economy, book-keeping (systems and more difficult cases), commercial arithmetic, French correspondence and conversation, and English correspondence and conversation.

In the other two classes of continuation school above the ordinary grade, foreign languages are omitted, and the other subjects are of the nature of a preparation for the classes which I have just described.

#### THE ORDINARY GRADE.

In the ordinary classes a great deal of attention is given to reading, writing, and arithmetic. In one of the papers in my possession a long list of reading-lesson subjects is given following upon careful directions as to the method to be adopted by the teacher to make the lessons useful and interesting. The following are a few of the subjects culled from a list of fifty:—"Bread," "The Slater's Realm (Work, &c.)," "In a Hat Factory," "A Pair of Factory Shoes," "The Division of Labour," "The Electric Bell," "Phthisis and its Treatment," "The Care of Health in Town and Workshop," "The Constitution of the Empire," "The German Fleet," "The Blessing of Sunday."

The reason for the elaborate directions to teachers lies in what at first threatened to make the system a comparative failure. This was the tendency to make the continuation school too much like the day school from which the boy had just received his release. The idea is to continue the education, but to make it less theoretical and more in relation to the pupil's daily life and work. He is regarded as in some sense a man and a citizen, and his work is now mapped out for him on that principle. A great deal more might be written about the working of the system. But what I have written is probably sufficient to show that the system has proved its usefulness and established a firm hold on the German nation.

### CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS.

#### LA FEMME DANS L'HISTOIRE.

Par M. GRAVELINE.

Le 27 juin, M. Graveline nous parlait de "La Femme dans l'Histoire." M. le docteur Emil Reich était au fauteuil. Nous ne pouvons malheureusement que résumer en peu de mots cette conférence intéressante et bien documentée, à laquelle M. Graveline a su donner une attrayante toute particulière.

À l'ouverture de la séance, le docteur Reich prononça quelques paroles pleines de bon sens sur les femmes en général, et posa ce problème: "Pourquoi les femmes ont-elles eu une si grande influence dans l'Histoire de France?" C'est ce problème que M. Graveline s'est efforcé de résoudre.

M. Graveline commença par citer un dicton allemand: "Dieu fit d'abord l'homme, puis la femme, puis le tabac... pour le consoler." Galants toujours, ces messieurs! Voltaire l'était plus. Il compare la femme à une rose mousseuse, "une fleur jolie, agréable, mais remplie d'épines." On pourrait encore trouver là quelque chose à redire. Un auteur américain a dit "qu'un Français auprès d'une femme belle, gracieuse ou spirituelle, cesse d'être homme." Serait-ce là la solution du "pourquoi" du président? Le fait est que, dans l'Histoire, on reste étonné de ce fait que les Français semblent toujours s'être laissés mener "par le bout du nez" par les femmes. A toutes les pages on rencontre la femme, toujours la femme. Elle est la cause de tout; elle fait la paix, elle fait la guerre. Cela commence à l'époque gallo-romaine avec Eponine, épouse de Sabinus, un bel exemple d'amour et de dévouement conjugal. Puis c'est Clotilde, femme de Clovis, qu'elle convertit, dit-on, au christianisme. Frédégonde et Brunehilde, ces démons enjuponnées, ne trouvent pas grâce devant M. Graveline, qui les passe rapidement et s'arrête à Mathilde, la femme du Conquérant, à qui l'on doit la fameuse tapisserie de Bayeux. Puis il nomme Blanche de Castille, la vertueuse mère de Louis IX, Marguerite de Provence, et en arrive à Isabeau de Bavière, charmante créature qui fut la cause du malheureux traité de Troyes. Mais voici apparaître Jeanne d'Arc, femme extraordinaire, la plus extraordinaire de l'Histoire. Il la détaille dans tous ses actes jusqu'au sacre de Charles VII à Reims. Sa récompense? Un bûcher à Rouen où elle fut brûlée comme sorcière à l'instigation de l'évêque de Beauvais!

Puis c'est Marguerite d'Angoulême, Diane de Poitiers, Catherine de Médicis, cet autre démon en jupons, dont les jouets favoris étaient les oubliettes, le poison, la torture. Elle fit mourir, au moyen de gants empoisonnés, Jeanne d'Albret, la vertueuse mère d'Henri IV, et fut la cause du massacre de la Saint-Barthélemy.

Puis viennent Marie Stuart, la Duchesse de Longueville, Madame de Motteville, Madame de Sévigné dont les lettres sont si populaires; Madame de Maintenon qui influença tant le règne de Louis XIV; Mesdames de Montespan, de Pompadour, Dubarry; puis la malheureuse Marie-Antoinette, une des plus

tristes figures de l'Histoire de France; les impératrices Joséphine et Marie-Louise, et Madame de Staël qui eut une si grande influence littéraire.

Le XIX<sup>e</sup> siècle nous donne la romantiste George Sand, la reine Marie-Amélie et l'impératrice Eugénie. Et le conférencier se demande quelles seront les femmes d'aujourd'hui qui légueront leur nom à la postérité. Peut-être Mesdames Sarah Bernhard, Curie, Chaminade et Gyp!

M. Graveline conclut par un fragment de poésie de Victor Hugo: "Le Doigt de la Femme," commençant ainsi:

Dieu prit sa plus pure argile,  
Et son plus pur kaolin,  
Et fit un bijou fragile,  
Mystérieux et calin.

Il fit le doigt de la femme.

et se terminant par ces mots:

Le diable alors s'éveilla.  
.....  
Dans l'ombre où Dieu se repose,  
Il vint noir sur l'orient,  
Et tout au bout du doigt rose  
Mit un ongle . . . en souriant.

L' "épine" de Voltaire!

M. le docteur Emil Reich, après avoir complimenté le conférencier, ajouta quelques mots à propos de Jeanne d'Arc et de la place de la jeune femme en France.

## COLLEGE OF PRECEPTORS.

### HALF-YEARLY GENERAL MEETING.

THE ordinary half-yearly General Meeting of the members of the Corporation was held at the College on Saturday, July 18.

The Secretary having read the advertisement convening the meeting, Sir PHILIP MAGNUS was appointed Chairman.

The Report of the Council was laid before the meeting and was taken as read, a copy having previously been sent to every member. It was as follows:—

#### REPORT OF THE COUNCIL.

The Council beg to lay before the members of the College the following Report of their proceedings during the past half-year:—

1. During the past half-year a course of twelve lectures on "The Application of Psychology to the Work of the School" has been delivered by Prof. J. Adams, M.A., B.Sc., F.C.P. A course of twelve lectures on "The Practical Teacher's Problems" will be given by Prof. Adams in the autumn.

2. The Christmas Examination of Teachers for the College Diplomas was held in the first week in January, and was attended by 514 candidates—316 men and 198 women. During the past half-year the Diploma of Fellow has been conferred on one candidate, that of Licentiate on 24, and that of Associate on 155, who had satisfied the prescribed conditions.

3. The number of candidates entered for the Midsummer Certificate and Lower Forms Examinations is 5,520. The Professional Preliminary Examination was held in the first week in March, and was attended by 295 candidates.

4. During the past half-year the Council have conducted the inspection and examination of five schools by visiting examiners.

5. The examination of pupils in schools in Newfoundland, which the Council have undertaken to conduct at the request of the Newfoundland Council of Higher Education, was held at a hundred centres on June 22 to 29. These examinations, which were instituted by the Newfoundland Council fifteen years ago, comprise four grades corresponding approximately to the four grades of the College Certificate and Lower Forms Examinations, and it is now desired to bring them into closer relationship with the scheme of the College.

6. At the members' meetings held during the past half-year the following lectures have been given:—"Suggestions from America to British Educationists," by F. Charles, B.A.; "Science in Correlation with Geography and Mathematics," by T. Percy Nunn, M.A., D.Sc.; "School Life and Healthy Growth," by Hubert E. J. Biss, M.A., M.D. At a meeting held in connexion with the first International Moral Education Congress, an address on "Moral Education" was delivered by Sir Edward Busk. Reports of the lectures have been published in *The Educational Times*.

7. A winter meeting of teachers was held at the College on January 7 to 15. Short courses of lectures were given by Prof. Adams, on "The Psychological Bases of Education"; by Prof. Findlay, on

"Method and School Management"; by Prof. Adamson, on "The Teaching of English"; by Prof. Pollard, on "The Teaching of History"; by Dr. Herbertson, on "The Teaching of Geography"; by Mr. S. Barlet, on "The Teaching of a Modern Foreign Language"; by Dr. R. J. Collie, on "Preventable Physical Defects of School Children" and on "Healthy and Unhealthy Brain Action"; and by Dr. Aikin, on "The Use of the Voice." Single lectures were also given by Mr. P. A. Barnett, Mr. J. Harrison, and Mr. E. D. A. Morshead. The lectures throughout were attended by large audiences. The cost to the College, beyond the amount of the fees received, was about £80, which was supplied from the interest on the money invested on account of the Teachers' Training Fund.

8. During the past half-year fifteen new members have been elected, notice has been received of the withdrawal of seven, and the names of twelve members have been removed from the list. The Council regret to have to report the death of the following members:—Mr. J. B. Dashwood, A.C.P., Mr. C. Filer, A.C.P., Mr. J. E. Greenhill, Rev. H. Lister, F.C.P., and Rev. O. J. Vignoles.

9. The Council have expressed their general approval of proposals for the constitution of the future Registration Council, which were adopted at a Conference convened by Dr. Gow on the 29th of February. It was recommended that the Registration Council should consist of six Crown nominees, five representatives of the National Union of Teachers, three co-opted members, two representatives of Technological Associations, and one representative of each of the following:—Head Masters' Conference, Head Masters' Association, Head Mistresses' Association, Assistant Masters' Association, Assistant Mistresses' Association, Private Schools Association, Preparatory Schools Association, Teachers' Guild, College of Preceptors. The Council regret that the Board of Education have delayed their decision upon these proposals, which have been approved by all the Associations interested.

10. In order to enable members to take a larger share in the conduct of the business of the College, the Council recommend certain alterations in Section V. of the By-Laws, which relates to the proceedings at general meetings, including the election of members of the Council. They also recommend alterations in Section I., clause 3, and in Section VI., clause 7. These alterations are embodied in an amended form of the sections concerned which will be submitted for the consideration of the members at the next half-yearly general meeting.

11. The Federal Council has held one ordinary meeting during the past half-year, and has considered the questions of the incidence of taxation on school boarding-houses, and of salaries and pensions for assistant masters in secondary schools. The Head Masters' Conference has withdrawn from representation on the Council, and a small Committee has been appointed to consider the constitution and functions of the Federal Council.

In reference to paragraph 9, the DEAN said he thought they ought to express their obligation to Sir Philip Magnus for the part he had taken in the discussions on the subject of the Registration of Teachers. In conjunction with two other distinguished University representatives in Parliament, he had persisted in urging on the Government to take in hand the formation of a Registration Council, and it was greatly to be regretted that as yet no such Council had yet been established.

The CHAIRMAN said he was much obliged to the DEAN for referring to the small part he (the chairman) had been able to take in urging upon the Government the importance of re-establishing the Registration Council which came to an end a short time since. A memorandum had recently been issued by the Board of Education containing an account of the circumstances which led up to the abolition of the Registration Council which had been constituted under the Education Act of 1899. The clause of the Education (Administrative Provisions) Act of 1907, which provided for the formation of a new Registration Council, was as follows:—"Any obligation to frame, form, or keep a register of teachers under paragraph (a) of Section 4 of the Board of Education Act, 1899, shall cease: Provided that it shall be lawful for His Majesty by Order in Council to constitute a Registration Council representative of the teaching profession, to whom shall be assigned the duty of forming and keeping a register of such teachers as satisfy the conditions of registration established by the Council for the time being, and who apply to be registered." The Board of Education had received communications from a number of representative educational bodies urging that a new Council should be formed, representative of the teaching profession, to consist of members as agreed upon at a meeting of representatives of associations of teachers which was held on the 29th of February last. The difficulty that the Board of Education appeared to feel in acceding to the wish of the organized bodies of teachers, as expressed at this conference, was that the Board were not satisfied that the proposed constitution of the Council would make it truly representative of the teaching profession. And what the Board had asked the members of a deputation that had been received

by Sir Robert Morant to do was to bring up proposals for the constitution of a Registration Council which should be representative of the teaching profession as a whole—not only of persons representing associations who were technically teachers, but also of representatives of teachers of special subjects. He need hardly say that considerable difficulty would arise if the attempt were made to form a Council which should not only be representative of the teachers in our elementary and secondary schools, but which should also represent teachers engaged in giving instruction in a great number of separate subjects for which special teachers were employed; and unless some way could be found of getting over this difficulty, he feared that it was unlikely that, for some time at least, a Registration Council would be called into existence. He would desire to emphasize the words of the Clause in the Act of Parliament, which, it seemed to him, did not lend much weight to the view put forward by the Board of Education, because it stated that there should be a Registration Council representative of the teaching profession, to whom should be entrusted the duty of forming and keeping a register of such teachers as satisfy the conditions of registration established by the Council for the time being, and who apply to be registered. Therefore it was quite clear that it was not necessary that the Registration Council should itself consist of representatives of every class of teachers, but that the different classes of teachers desiring to be registered should make an application to the Council, and that the Council, when constituted, not before, should then satisfy itself with regard to the conditions under which registration was to be carried out. He did not propose to consider all the difficulties which had been raised by the Board of Education and were set forth in the Board's Memorandum; but they were difficulties which he thought might possibly be overcome. He would like, however, to refer to the concluding words of the Memorandum as indicating that there was room for hope that this Registration Council might yet come into existence: "The Board are prepared to proceed at once to further steps for bringing a new Registration Council into existence, so soon as they receive adequate assurances from the teaching profession that the composition proposed for it by the Conference is considered to satisfy the condition of Section 16 of the Act that the Council must be representative of the teaching profession." He (the chairman) could only urge, therefore, that the bodies of teachers desiring that this Council should come into existence should at public meetings, or by direct communication with the Board of Education, assure the Board that, after having considered all the objections that had been raised, and satisfied themselves as to the means by which those objections might be met, they believed that the proposed Registration Council, with such modifications as might yet be agreed upon, might be regarded as truly representative of the teaching profession.

Mr. SOUTHEE said he had always taken the greatest interest in the question of the registration of teachers, and would be glad to know where he could see the memorandum referred to by the Chairman. He was himself one of the earliest private-school teachers to be registered, and he supposed he might consider himself to be on the Register still; or would it be necessary for him to make a fresh application to the new Registration Council when it was formed? He desired cordially to support the line the Council had taken in the matter.

Mr. RADFORD expressed his doubts as to whether they had anything to hope from the action of the Board of Education with regard to registration.

The Report of the Council was adopted.

The DEAN then presented his report, which had been printed and circulated among the members attending the meeting. It was as follows:—

THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Midsummer Examination of candidates for Certificates took place on the 30th June to the 4th July at 151 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Abingdon, Alford, Ashbourne, Athlone, Balham, Bath, Belfast, Benthams, Birmingham, Birr, Blackheath, Blackpool, Boxmoor, Brecon, Brighton, Bristol, Bruff, Bury St. Edmunds, Buttevant, Cardiff, Carlisle, Carmarthen, Carnarvon, Charleville, Cheltenham, Chichester, Clapham, Coleraine, Congleton, Cork, Croydon, Devonport, Dumfries, Durham, Ealing, East Grinstead, Eccles, Edinburgh, Exeter, Eye (Suffolk), Falmouth, Felixstowe, Ferndale, Folkestone, Forest Hill, Goole, Gos-

berton, Goudhurst, Grove Ferry, Guernsey, Hastings, Hatfield, Hawk-hurst, Herne Bay, Highgate, Highworth, Horsmonden, Huddersfield, Inverurie, Ipswich, Kinturk, Kirky Stephen, Knighton, Launceston, Leeds, Leek, Liverpool, London, Lostock Gralam, Maidstone, Malvern Link, Manchester, Mansfield, Margate, Market Bosworth, Melton Mowbray, Merthyr Tydfil, Middlesbrough, Middleton, Mountmellick, Muswell Hill, Newcastle-on-Tyne, Newton Abbot, Nottingham, Penarth, Pentre, Plymouth, Porth, Portsea, Portsmouth, Quorn, Redditch, Richmond (Surrey), Rivington, Rochester, Ruthin, Rye, Scorton, Seaford, Shebbear, Sheffield, Skegness, Southampton, Southend, Southport, Southsea, South-wold, Spalding, Stockton (Warrington), Stonyhurst, Streatham Hill, Stroud, Sunderland, Taplow, Taunton, Thurles, Tonbridge, Totland Bay, Upper Norwood, Wellington (Salop), Welshpool, Westcliff-on-Sea, West Hartlepool, West Norwood, Weston-super-Mare, Weybridge, Wigton, Winslow, Worcester, York. The Examination was also held at Gibraltar, Constantinople, Abonema (S. Nigeria), Krugersdorp (S. Africa), Colombo (Ceylon), Rangoon (Burma), Wei-hai-wei (N. China), Nassau (Bahamas), and British Guiana.

The total number of candidates examined (not including 127 examined at Colonial Centres) was 4091—2693 boys and 1398 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined during the year ending Midsummer, 1908 (not including those who attended the supplementary examinations in March and September), has been 9642.

The following table shows the proportion of the candidates at the recent Midsummer Examination who passed in the class for which they were entered:—

	Examined.	Passed.	Percentage.
First Class [or Senior] ...	502	224	45
Second Class [or Junior] ...	1842	936	51
Third Class .....	1360	1038	76

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered, nor of those (387 in number) who entered for certain subjects required for professional preliminary purposes.

The number of candidates entered for the Lower Forms Examination (not including 69 examined at Colonial Centres) was 1128—525 boys and 603 girls. Of these 996 passed, or 88 per cent.

At the Professional Preliminary Examination for First and Second Class Certificates, which was held on the 3rd to 5th of March, in London and at seven Provincial Centres, viz., Birmingham, Bristol, Cardiff, Leeds, Liverpool, Manchester, and Newcastle-on-Tyne, 292 candidates presented themselves.

Practical Examinations to test Ability to Teach were held in February and May. At these Examinations 4 candidates presented themselves, and 4 obtained Certificates.

The report was adopted.

Dr. MAPLES moved, on behalf of the Council, the first of the resolutions standing on the agenda paper:

I. That Section V. of the By-laws be amended so as to read as follows:—

1. The Secretary shall between December 1st and 7th in every year give notice in writing to every Member of the College of the date of the January General Meeting. He shall at the same time forward a form of nomination upon which a Member may nominate twelve Members as Members of Council and three Members as Auditors, and upon this form a copy of the by-law next following shall be printed. Upon the nomination form shall also be printed a list of the names of the twelve Members of the Council and the three Auditors whose period of office will expire at the next January General Meeting, the names of those who have given to the Secretary in writing notice of their unwillingness to be re-elected being indicated.

2. Any Member may nominate not more than twelve Members as Members of the Council and not more than three Members as Auditors, and the name of every candidate so nominated, if received by the Secretary twenty-four days at least before the election, will be included in the list prepared and issued by the Secretary in accordance with the by-law next following.

3. The Secretary shall prepare a list of the persons nominated as above, with the title of any office of emolument held in the College by the Candidate. A printed copy of this list shall be sent to every Member of the College at least fifteen days before the time of election.

4. In the event of a sufficient number of Members not having been nominated for election, as either Members of Council or Auditors in accordance with the provisions of the preceding by-laws, the Secretary shall summon a special meeting of Council to be held immediately before the half-yearly General Meeting, and the Council at that meeting shall nominate so many, and only so many, Members as Members of Council or Auditors as shall, with the numbers nominated in accordance with the preceding by-laws, complete the number required to be elected.

5. The elections shall be made at the January General Meeting, and shall be conducted as follows:—A list of all the Candidates nominated as above, whether under by-law 2 or by-law 4, shall be given to each Member present. The Chairman of the meeting shall appoint two Scrutators. Each Member shall erase from his list the names of those Candidates for whom he does not wish to vote, adding or substituting others at pleasure, but leaving not more than twelve names for Members of Council and three for Auditors. Each Member present shall then give his list assigned to one of the Scrutators, his name being at the same time written down by the Secretary. The Scrutators shall reject all such voting lists as do not fulfil these conditions. Those Candidates for the Council, not being more than twelve in number, and those Candidates for the Auditorship, not being more than three in number, whom the Scrutators report to have the highest number of votes, shall be named by the Chairman of the meeting in the numerical order of the votes obtained by them, and shall be declared by him to be duly elected. In the event of an equality of votes, the Chairman shall give a casting vote or votes so as to provide for the election of the necessary number as Members of Council and

**Auditors.** Provided nevertheless that should the necessary number of Members of Council and Auditors not have been elected as above, the meeting shall forthwith proceed to elect such a number as will with the number previously elected make the numbers elected twelve and three respectively.

6. Every proposition intended for discussion at a Special General Meeting shall be in writing signed by the requisitionists, and shall be printed, and a copy thereof shall be sent by the Secretary to every Member of the Corporation, with the notice convening the Meeting; and the same rules for discussing, and voting on, such propositions, shall be followed as are provided in the case of Ordinary General Meetings.

7. Every proposition, unless made by the Council, for enacting, reversing, annulling, or amending any by-law, whether made by the Council or a General Meeting, shall be in writing, signed by at least six Members of the Corporation of at least twelve calendar months' standing, and sent to the Secretary thirty days before the Ordinary or Special General Meeting at which such proposal is intended to be discussed. Such propositions shall be printed, and a copy thereof sent by the Secretary to every Member of the Corporation at least fifteen days before such meeting.

8. All other propositions intended to be brought before an Ordinary General Meeting shall be in writing, signed by the persons who make them, and shall be sent to the Secretary at least thirty days before such meeting. Such propositions shall be printed and a copy thereof sent by the Secretary to every Member of the Corporation at least fifteen days before such meeting.

9. Amendments on any proposition relating to a by-law of which notice has been given to the Members, as hereinbefore provided, may be brought forward at the meeting before which such proposition is intended to be discussed, provided notice of the amendments be sent to the Secretary not less than seven days before such meeting, and provided such amendments are, in the judgment of the Chairman of the meeting, pertinent to the original proposal. The Chairman shall have absolute authority to decide this question. All such amendments shall be read aloud by the Secretary at the commencement of the meeting.

10. Amendments on any other proposition, of which notice has been given to the Members, as hereinbefore provided, may be brought forward at the meeting before which such proposition is intended to be discussed, provided such amendments are, in the judgment of the Chairman of the meeting, pertinent to the original proposal. The Chairman shall have absolute authority to decide this question.

11. All questions at a General Meeting shall be decided by a show of hands, unless a ballot be demanded by six of the Members present, in which case the voting shall be by ballot.

He stated that the principal object of the proposed alterations was to interest the members of the College in the work of the Council, and to enable the general body of the members to exercise a real influence on the election of members of the Council. Under the present By-laws the "house list" recommended by the Council was almost invariably elected year after year, and the ordinary members had little, if any, opportunity of influencing the elections. It was hoped that under the altered conditions embodied in the amended form of Section V. members would be led to take more interest in the election of members of the governing body of the College. With regard to clause 10, under the existing regulations it had practically been impossible for any amendment to be made in any proposition brought forward for discussion at a General Meeting. This entailed manifest practical inconveniences, which the proposed alteration would remove.

The DEAN stated that the new By-laws had been very carefully considered by the Council, and counsel's opinion had been obtained, through the College solicitor, as to their conformity with the provisions of the Charter.

The CHAIRMAN having replied to inquiries as to the precise effect of the proposed alterations, the first resolution was adopted unanimously.

The following resolutions recommending verbal alterations of the existing By-laws were then adopted:—

II. That Section I., clause 3, of the By-laws be amended so as to read as follows:—

This paper must be delivered to the Secretary, and read at the next meeting of the Council: after which it shall be hung up in the Office of the College, and remain there until the Candidate is voted for. Such voting shall take place at the ordinary meeting of the Council held next after the meeting at which the nomination paper was read. No Candidate shall be declared elected unless he or she receive the votes of at least three-fourths of the members of the Council present.

III. That Section VI., clause 7, of the By-laws be amended so as to read as follows:—

At the first meeting of the Council after the first Ordinary General Meeting of the year of the Members of the Corporation, the Treasurer, Dean, Moderators, Examiners, Inspectors, and Revisers shall be elected, and shall hold office until the first meeting of the Council after the first Ordinary General Meeting of the Members of the Corporation in the ensuing year.

The TREASURER then moved the following resolution:—

IV.—That the General Meeting authorize a contribution of five guineas towards the expenses of the International Congress on Moral Education which is to take place in September, 1908.

The CHAIRMAN informed the meeting that the Council had received an invitation to send representatives to the Congress, and had appointed Profs. Adams and Adamson to act in that capacity. It was now proposed that the general meeting should authorize a contribution towards the expenses of the Congress. The resolution was adopted.

A vote of thanks to the Chairman concluded the proceedings.

## ADJOURNED MEETING OF THE COUNCIL.

AN adjourned meeting of the Council was held on July 18. Present: Sir Philip Magnus (President) in the chair; Prof. Adams, Prof. Adamson, Dr. Armitage-Smith, Rev. Canon Bell, Rev. J. B. Blomfield, Mr. Brown, Mr. E. A. Butler, Mr. Eve, Mr. Kelland, Rev. R. Lee, Dr. Maples, Dr. Marx, Mr. Millar-Inglis, Miss Punnett, and Mr. White.

The Secretary reported that the Midsummer Certificate and Lower Forms Examinations had been held on June 30 to July 4 at 151 centres and schools.

Prof. Adams and Prof. Adamson were appointed to represent the College at the International Congress on Moral Education to take place in September.

The following books had been presented to the Library since the last meeting of the Council:—

- By DR. BELA ERÖDI.—Education in Hungary.  
By the DEPARTMENT OF THE INTERIOR, CANADA.—Atlas of Canada.  
By the GENERAL MEDICAL COUNCIL.—Minutes of the General Medical Council, January 1–June 3, 1908.  
By A. & C. BLACK.—Black's Geographical Pictures (Packet No. 1); Frazer's English History from Original Sources, 1485–1603.  
By BLACKIE & SON.—De Communes' Warwick the King-Maker (Blackie's English Texts); Gregory's Geography: Structural, Physical, and Comparative; Labesse's About's Le Turco; Thouaille's Second Course in Colloquial French.  
By W. B. CLIVE.—Matriculation Directory, June, 1908.  
By GINN & Co.—Ravenhill and Jewett's Good Health.  
By MACMILLAN & Co.—Beak's Indexing and Précis Writing; Buller's Washington Irving's Rip Van Winkle, and other Sketches; Dowse's Book of Poetry Illustrative of English History, Part I.; Fowler's Stories from Hawthorne's Wonder Book; Hall and Stevens's School Arithmetic; Tout's Cavendish's Life of Cardinal Wolsey.  
By METHURN & Co.—Asman's Junior Latin Prose; Draper's Jean Valjean; Ingham's La Bouillie au Miel; Jackson's First-Year Physics; Patterson's L'Histoire de Pierre et Camille.  
By G. PHILIP & SON.—Young's Rational Geography, Part III.  
By RIVINGTONS.—Hartog's De Muistre's Les Prisonniers du Caucase; Sandeau's Chez les Sauvages, Souvestre's Le Mari de Madame de Solange, Le Roi de la Montagne d'Or, and Réciets de Guerre et de Révolution; Robeson's Graduated French Exercises.  
Calendars of Edinburgh University and the Royal University of Ireland.

## REVIEWS.

### "THE GOOD DUKE."

*Humphrey, Duke of Gloucester.* A Biography. By K. H. Vickers, M.A., Exeter College, Oxford, Lecturer in Modern History at University College, Bristol; Organizer and Lecturer in London History for the London County Council. (15s. net. Constable.)

"No man," says Mr. Vickers, "has left a greater mark on the progress of English thought than this Duke Humphrey." It is a strong claim, and it is the Duke's highest title to honourable remembrance, though his life was largely spent in war and politics. Humphrey de Lancaster was born in 1390, the fourth son of Henry of Bolingbroke and Mary Bohun, co-heiress of the princely inheritance of the Earls of Hereford and Essex. His father's accession to the throne made him a prince in the line of succession; but during his father's life he does not appear to have taken any definite part in public affairs. His brother's accession brought him a step nearer to the throne, and, when he was created Earl of Pembroke and Duke of Gloucester in 1414, he attained prominence in the State. He was now twenty-three, and "his entire absence from all political functions, and his inactivity, whilst his brothers, little older than himself, had taken an active part in the management of public affairs, suggest the impression that he was not destined for a political career." His first practical experiences were gained in Henry V.'s French war, in which "Humphrey saw not so much a policy as an idea, an idea which he worshipped to the day of his death." Without following his campaigns in detail, we may quote Mr. Vickers's estimate of his military qualities:

Gloucester was an able man and a brave soldier, but he would never have become even a passable commander. Within circumscribed limits he had no equal: there was no captain in the English army who could have surpassed him before Cherbourg, but under no circumstances could he have taken the position which his great brother holds in military history. The natural bent of his mind was inclined to the interests of the moment, and he could never have planned out a campaign, or nursed his men up to a supreme effort, as did Henry on the march to Agincourt. Courage, military skill, and the power to appreciate any situation which confronted him he had in plenty, but in him determination was swallowed up in rashness, and ability fled before constitutional unsteadiness. As a leader of a forlorn hope, or in the performance of a definite piece of

work, he was pre-eminent, but his natural characteristics removed any chance of his being in any sense a general. In his military life, even as later in his stormy political career, he displayed great ingenuity and cleverness; but here, as ever, he lacked that vivifying touch of determination which alone could have moulded the incidents of his life into one concentrated policy.

The estimate is just: the expression of it is a very fair sample of Mr. Vickers's style—clear and readable, but artless and tending to redundancy.

In the end of 1419 Gloucester exchanged the tented field for the Council Chamber: he was launched for the first time into home politics, as "guardian and lieutenant of England," with emphatic instructions to "carry out all matters of governance with the assent of and after deliberation by the Council, and not otherwise." The power of the middle classes was expanding: there were all the outward signs of a great industrial revolution. "It was to the growing powers in England that Humphrey appealed for sympathy and encouragement, to those who were gradually working out the progress of England towards freedom from aristocratic control, to those who were content to ignore the quarrel of prince with prince and noble with noble, while they quietly based the future strength of the kingdom on a wealth born of trade and private exertions." He became "the good Duke" of the middle classes. His first regency was uneventful. The death of Henry V. ended it, and the minority of Henry VI. started the political rivalry of Gloucester and Beaufort—"the one central theme running through every aspect" of Gloucester's future public life. Mr. Vickers signalizes three great influences that had now come "to mould his character and dictate his line of action":

The crusading zeal of his brother Henry had wedded him to the idea of French conquests, without giving him the intellectual force to organize or help such a project. The flight of Jacqueline [of Brabant] to England had thrown in his way one who, appealing to the desire for foreign dominion and roving knight-errantry he inherited from his ancestors, was to draw him away from his ordered line of policy and show up all the weaknesses of his character. The opposition of Beaufort had compelled him to face a new set of circumstances, and had aroused those factious instincts that had hitherto lain dormant. These three facts dominated all his future life. His policy was formed by them, and henceforth he followed whithersoever they led. Little he cared that they did not agree, that to follow one enterprise he must sacrifice the other two endeavours on which he had set his heart. His ruling passion was ambition, but he did not know how to satisfy it. Thus his future life will be found to be consistent in so far as it is governed by one overwhelming desire, but totally inconsistent in detail.

And so, naturally, "the world of politics was the scene of Gloucester's greatest failure." Mr. Vickers narrates fully and perspicuously the ups and downs of the political game, the strange romance of the two wives of Gloucester, and the conflicting stories of the cause of the Duke's death (1447). He cannot make a hero of Humphrey—a man whose heart always ran away with his head. Humphrey was sadly lacking in judgment, in mental balance and stability, in character. Still, there remains a strong impression of his kindness and generosity and personal charm, and Mr. Vickers admits "that Humphrey had many knightly qualities" and did "many actions which may be regarded as creditable, if not great."

Yet "no man has left a greater mark on the progress of English thought than this Duke Humphrey." He was a true child of the Renaissance, "cast far more in the Italian than in the English mould." "In no other Englishman of the time do we find the same love of the ancient classics which characterized Gloucester": his "originality lay in the fact that he looked to the works of the greater and early Romans for his mental food, and therein showed the distinction which lay between the old and new learning." "There was no teacher to point the way for Humphrey, and we must fall back on his inherent originality to explain the phenomenon" of his ardent patronage of the scholars of the new methods. Mr. Vickers reviews his relations to the Italian humanists of his day—"perhaps the most interesting page in his history"—how he corresponded with them, got them to send over books to him, and brought several of them to England to assist him in his studies. "In England, Gloucester was the acknowledged leader in the world of letters, the centre round which native scholar and poet alike revolved, and his patronage was extended to all who took an interest in intellectual pursuits"; and Mr. Vickers devotes a very instructive chapter to the English scholars and poets of Gloucester's following. He sets forth Gloucester's princely benefaction to the University of Oxford—"quite three hundred

volumes"; and he is no doubt right in concluding that "his patronage of Oxford was only one branch of his scholarly activities," for "a large proportion of the books which once belonged to Humphrey, and are still extant, did not form part of his gift to Oxford." Gloucester's tastes in literature were very catholic; and "he not only understood the meaning of the new doctrines, but he paved the way towards their fuller appreciation by the nation as a whole."

Here, then, is a laborious and able study of a remarkable character, interesting as a soldier, as a politician, and as a devotee of learning. The importance of the military and political aspects of his career is overshadowed by his industry in collecting the records of the new learning and his liberality in disseminating the knowledge they contained. Students of history and of literature will combine to thank Mr. Vickers for this most interesting and valuable monograph on the good Duke Humphrey.

#### DR. HAYWARD'S NEW ESSAY.

*Education and the Heredity Spectre.* By F. H. Hayward, D.Lit., M.A., B.Sc. (2s. net. Watts.)

Dr. Hayward's essays are always welcome: they are always characterized by ability, earnestness, and independence. Whether one agrees or vehemently disagrees, one is prodded mercilessly out of comfortable indifference. "The main contentions of the present essay are: (1) that the normal conscience is not a ready-made and unalterable 'faculty,' born good or born bad, as biometricians and others would almost imply, but that (2) moral instruction is necessary for its development, this instruction, whether 'direct' or 'indirect,' being *genuine and significant*." It is "a protest against an entire series of academic ideas that are distracting and deceiving thousands of teachers and depriving their work of much of its value." Accordingly, there is a double battle, together with the usual championship of Herbart.

We must say at once that we doubt gravely the utility and the wisdom of tilting at the biometricians. Not that we are concerned for Dr. Hayward's fate in case Prof. Karl Pearson were to turn upon him and rend him; for when one goes into a fight one of course expects hard knocks, and Prof. Pearson's hand is known to be tolerably heavy. But what is the good of the controversy, from the point of view of the teacher? Whatever the truth or the falsity of the conclusions of the biometricians, it may be taken for granted that they will not effect in our time any essential alteration in our attempts to educate the young: in any event, the teacher will do his best with his material, whether "born good or born bad." Moreover, as we understand the somewhat obscure matter, the biometricians do not contemplate laying any embargo upon teaching. If they say generally that teachers will be successful only so far, yet they cannot lay down the precise limit in any given case, and the teacher will of course go on as far as he finds he can reach—just as he has always done and is doing. At present biometrical science is necessarily tentative: the basis of facts is inevitably limited by the short period of inquiry, by the small number of competent inquirers, and by the restricted extent of the field of inquiry. But so far as the work has gone, it cannot be questioned by any critic that has not equipped himself for his arduous task. Dr. Hayward's jeers at plants and peas as objects of experiment furnishing lessons for human application do seem ill advised. Is not the secret of the success of Canadian farmers to be largely found in their careful selection of wheat grains? Do we not know that within the last century the proportion of sugar per unit of beetroot has been quintupled by reason of skilful selection of seed? Is not the same principle assiduously applied in the breeding of cattle? Even Dr. Barnardo's successful exports of East End children were (though Dr. Hayward does not say so) very carefully selected. Indeed, the argument appears to be decisively in favour of like results in the case of human beings, if human ignorance and perversity did not militate so overwhelmingly against its application. Certainly, in respect of the physical organism. "But," says Dr. Hayward, "far more important than the supposed heredity of a nation is the circle of thought, the atmosphere of ideas, the culture-inheritance into which the individuals of that nation are born." That may or may not be so—it is a comparative estimate; but, if it is so, it does not upset the doctrine of Prof. Pearson, who asks: "If man's physical characters are inherited even as those of the horse, the greyhound, or the water-flea, what reason is there for demanding a special evolution for man's mental and moral side?" Prof. Pearson admits, of course, that "intelligence can be aided and be trained"—which ought to be

enough for Dr. Hayward as an educationist; and when he says that "no training or education can create it—it must be bred," he seems to recognize that the very influences that Dr. Hayward contrasts with heredity go to the eventual, if slow, betterment of the "stock." Does Dr. Hayward contend, against Prof. Pearson, that training or education can "create" intelligence? If so, it is high time he were Minister of Education with a free hand. However, there seem to be misunderstandings, which we do not essay to locate; and we must leave Dr. Hayward to settle the matter with the professed biometricians, believing in the meantime that the biometricians have not the slightest notion of limiting in any way the circle of thought or the atmosphere of ideas, and, consequently, the scope of the teacher's influence upon the pupil. Indeed, we are much mistaken if Dr. Hayward ought not to have been as prompt to annex the biometricians as he is to annex Mr. Keatinge. There are certainly no inquirers that are more anxious than they to improve the quality of the materials that teachers expend their energies in fashioning, and thus to lighten pedagogic labour and to promote pedagogic efficiency.

Throughout the essay, Dr. Hayward lays heavy stress upon "ideas and ideals." In the third chapter—"The Vindication of Herbart"—he points out that "it was precisely Herbart who emphasized the power of ideas." It was Herbart "who showed that 'apperception' was the essential process of the mental life, and 'apperceptive interest' the central concept of education, linking the instruction of the teacher on the one side with the pupil's will and character on the other." By all means, let us insist upon ideas and ideals; but there is no real antagonism between this position and that of the biometricians, nor need there be any conflict between the advocates of ideas and the practitioners of "drawing out." You can draw out and you can fill in. The human boy's mind is to be recognized as an exceedingly complex machine, capable of being affected in very different ways: and strict adherence to one particular mode of handling it is quite certain to prove lamentably inadequate. We are not operating in a region of exact science. Dr. Hayward's fifth chapter is a charming causerie upon a charming and vital book—Prof. Adams's "Herbartian Psychology." Then comes the controverted question of moral instruction, over which Dr. Hayward again wrestles with Prof. Findlay and Mr. Lewis Paton. One sentence, referring generally to "our educational writers," concentrates matter for serious consideration: "They would hound out of a school a teacher who advised boys to steal whisky and drink it; immoral instruction, immoral ideas, they admit to be dangerous; but deliberately to array the same machinery on the side of virtue they allege to be bad pedagogics." There is a poser, requiring specific answer. Do we not all require a wider outlook, a larger recognition of the complexity of the business, and a trained discretion in the application of principles—diverse principles in different situations?

#### MATHEMATICS FOR SCHOOL.

*A School Course of Mathematics.* By David Mair.  
(3s. 6d. Clarendon Press.)

This is a work constructed on somewhat unusual lines, and as such invites very careful consideration by those engaged in educational work connected with mathematics. The writer, in his preface, states the basis of the claim which any mathematical subject must establish if it is to justify its selection for purposes of study. Mathematical knowledge, in order to be valuable from the educational standpoint, must, we are told, be desirable either for its own sake or because the acquisition of it involves an intellectual training that is valuable. The author maintains that the two qualifications are in general possessed by the same portions of the science, and his estimate is probably to a great extent accurate. With a few exceptions, the subjects from which he has chosen matter for discussion are those included in an ordinary mathematical training, and the selected portions are excellently treated. The scheme of the writer requires them to be taken up not separately, but in close combination, the complete course being supposed to be developed gradually in a natural sequence by a series of discussions between master and class. Further, the method is heuristic, and within reasonable time limits the class is intended to discover for itself as much as possible. There can be no doubt that a pupil who has gone through the course intelligently will be equipped with a general mathematical machinery of the first quality. The text-book is perhaps likely to prove more particularly suitable for a boy who is privileged to pursue an ideal course of study, learning mathe-

matics (as he does all else) for its own sake, and not with a view to passing examinations for which candidates have to satisfy the requirements of a cut-and-dried syllabus. When any principle is being developed by Mr. Mair, problems widely different in detail, but involving the same fundamental ideas, are brought together for discussion. It is not to be supposed that the pages of the volume contain *in extenso* the discussions which are requisite for the complete course. In the earlier chapters the matter is dealt with far more fully than in the later ones, where the text is meant to be essentially suggestive. Some of the chapters treat in a most interesting and profitable manner the following subjects: Position in the plane and in space, the science of measurement in its relation to two and to three dimensional problems, the principles of copying full size and to scale, practical problems of varied type, many bearing on applied mathematics, &c. The treatise certainly deserves, and will probably occupy, a permanent place amongst standard text-books.

## GENERAL NOTICES.

### CLASSICS.

*Homeri Opera.* Recognovit brevique adnotatione critica instruxit Thomas W. Allen, Collegii Reginae apud Oxonienses Socius. Tomus III (Odysseae libros I–XII continens); Tomus IV (Odysseae libros XIII–XXIV continens). (2s. 6d. each, paper; 3s. each, cloth. Oxonii: e typographeo Clarendoniano.)

After prolonged and arduous labours in many Continental libraries, Mr. Allen at length presents in these volumes the ripest fruits of textual study of the "Odyssey." He makes due acknowledgment of the "Academiae Oxoniensis munificentia," which facilitated his investigation of the manuscripts; and all classical scholars will add their gratitude to the University. "Vnde fit ut Odysseae codicum qui plusseptuaginta exstant exceptis tribus omnium varietates si non in unoquoque versu tamen in praecipuis locis lectori praebeamus." Probably no other living scholar could have more fitly undertaken or more successfully carried through the work. This edition must remain unchallenged for an indefinite period. The typography is admirable.

"Gildersleeve-Lodge Latin Series" (edited by Prof. Basil L. Gildersleeve, Johns Hopkins University, and Prof. Gonzalez Lodge, Columbia University). — (1) *Heath's Practical Latin Course for Beginners.* By Frank Prescott Moulton, M.A. With a Selection of Extracts from Ovid by J. T. Phillipson, M.A., Head Master of Christ's College, Finchley. (2s. 6d.) (2) *Writing Latin: Book I.* (Second Year Work). By John Edmund Barsa. (1s. 6d.) (3) *Writing Latin: Book II.* (Third and Fourth Year Work). By John Edmund Barsa. (2s. 6d.) (Heath; G. G. Harrap & Co.)

The names of the general editors furnish a strong guarantee for the series. In (1), exposition of grammar and appropriate exercises (with the necessary vocabulary and explanations) run together, and the arrangement of the materials greatly simplifies and facilitates the progress of the student. Reading lessons—Caesar more or less adapted—are introduced at a reasonably early stage, and useful prose selections, as well as Mr. Phillipson's judicious excerpts from Ovid, are added. An outline of the formal grammar and the rules of syntax are resumed in an appendix. There is also a full vocabulary. (2) provides "a rational and systematic treatment of the difficulties which assail a beginner"; "the development of topics has aimed to bring together things naturally associated in the mind, and therefore often confounded." (3) continues the same plan on subjects of greater difficulty. Both (2) and (3) contain plenty of exercises, and each has an ample vocabulary. The series has been very carefully planned and executed, and it promises excellent results.

We gladly welcome a second edition of *The Republic of Plato*, translated into English by A. D. Lindsay, M.A., Fellow of Balliol College, Oxford (2s. 6d. net, Dent). The text has been revised and the introduction has been enlarged, and the publishers have furnished forth the volume in very agreeable style. This is pre-eminently the student's translation. Moreover, the new form should commend it strongly to the general reader.

### MATHEMATICS.

*New Practical Arithmetic: Years I.–VII.* in separate volumes. By W. J. Stainer, B.A. Loud. (Years I.–VI., 3d. each; Year VII., 4d. Teacher's volumes, 8d. net each. George Bell.) *Meiklejohn's Modern Arithmetic.* Books I.–VI. (2d., 2d., 3d., 3d., 4d., 4d.; Answers to each Book, 3d. Meiklejohn & Holden.) *The "A. L." Methodic Arithmetic,* Parts I.–III. By David Thomas. (3d., 4d., 4d.; Answers, 9d. Complete work, 1s. 6d.; with Answers, 2s. E. J. Arnold.)

Each of the above compilations is useful, and each has, besides the good qualities possessed by all, some individual features worth noting. Mr. Stainer's work closely follows the suggestions of Scheme II. issued by the Board of Education. It covers a seven years' course in the elementary school and has for its main object the training of children "to think clearly and systematically" about number, the author wisely

placing the power to do this before the acquirement of skill in the use of processes but imperfectly grasped by the pupils. The ideas of algebra are introduced, though no hard-and-fast line divides algebra from arithmetic, and the name of the former does not appear. The value of squared paper for purposes of practical illustration is suggested, it being usefully pointed out that the ease and small expense with which this article is obtained renders unnecessary the use by one child of what has been handled by another. The teacher's volumes contain (1) hints for teaching, (2) abundance of exercises, (3) the answers to the same. The pupils' books comprise the exercises only.

Prof. Meiklejohn's "Modern Arithmetic" will, when complete, also furnish a seven years' course. Six out of the seven volumes are before us, and the issue of the seventh, which is in progress, will not (we assume) be long delayed. Some of the points on which the author lays special and salutary stress are the analysis and pictorial representation of numbers during the early stages of study, the employment of the unitary method of reasoning, and the clear distinction between the two-fold use of the single process of division, namely, for measuring and for sharing. Further, in dealing with the metric system, the writer bases instruction and practice on examples given in French primary schools.

"The 'A. L.' Methodic Arithmetic" differs in scope from the treatises above considered. It is designed to meet the requirements of the higher classes of elementary schools and the lower forms of secondary schools; also it should serve the purpose of candidates for county scholarship and Local Examinations. Facility is afforded for the revision of earlier work. Care is taken to show how work may be roughly checked, and we need scarcely dwell on the value of checking, both as an aid to the ensuring of accuracy and as a means of saving time and labour. Importance is attached to the logical treatment of vulgar fractions, and we are glad to find that in the simplification of complicated fractional expressions the author gives the whole expression at each successive step and requires careful attention to be paid to the correct use of the sign of equality.

*A First Year's Course in Geometry and Physics.* By Ernest Young, B.Sc. (Complete, 2s. 6d.; Parts I. and II. in one volume, 1s. 6d.; Part III., 1s. George Bell.)

We have before us the complete work. Parts I. and II. dealing with elementary geometry have already been noticed in these columns. Part III. is a good introduction to the subject of physics. The pupil is made acquainted with a number of useful facts and first principles and taught how to perform a variety of simple experiments. Plenty of problems culled from the question papers set at preliminary and junior public examinations are proposed as exercises for the pupils.

#### SCIENCE.

*The Theory of Light: a Treatise on Physical Optics.* By Richard C. Maclaurin, M.A., LL.D., formerly Fellow of St. John's College, Cambridge, Professor of Mathematics and Mathematical Physics, Wellington, New Zealand. In three Parts. Part I. (9s. net. Cambridge University Press.)

Prof. Maclaurin now presents the first of three volumes of a treatise that is intended to give a systematic and reasonably complete account of the theory of physical optics. The present volume "embodies in a modified form the substance" of a series of papers contributed by him in recent years to the proceedings of the Royal Society. The first chapter is devoted to a systematic and searching examination of the scope and the method of inquiry, which will be specially suggestive to students, for whom, indeed, it is mainly intended: "it is not easy to exaggerate the importance of understanding clearly what we are really aiming at." After a review of preliminary ideas, the work treats systematically of the propagation of light in different media, transparent and absorbing. "A special feature of the work is the careful comparison between theory and experiment at every stage"—and a most valuable feature it is. The exposition is lucid, vigorous, and fresh, and will be extremely useful to students. The foundation for the superstructure of the succeeding volumes is well and truly laid. There are 134 figures.

*Magnetism and Electricity, and the Principles of Electrical Measurement.* By S. S. Richardson, B.Sc., A.R.C.Sc. Lond., Lecturer in Physics, Municipal Technical School, Liverpool. (5s. net. Blackie.)

Mr. Richardson furnishes "a sound and systematic course of study in the main principles of electricity and electrical measurement." A preliminary first year's course is for the most part presumed; and the work aims at meeting the needs of students preparing for the Board of Education Examinations Stage II. (Day and Evening), the University Intermediate (Pass and Honours), or other examinations of a similar standard. The exposition is very carefully progressive and clear; experiments are described in illustration and confirmation of principles; numerous examples are worked out; and numerous exercises are appended to chapters, the numerical answers being given at the end of the book. The work is thoughtful and practical, and will prove a great boon to students. There are 254 figures.

*The Complete School Chemistry.* By F. M. Oldham, B.A., Senior Chemistry Master at Dulwich College. Illustrated by F. C. Boon, B.A., Assistant Master at Dulwich College. (4s. 6d. Methuen.) ("Text Books of Science.")

The book is "complete" in the sense of containing all that is usually taught in schools on its subject. It provides "a general elementary

course suitable for candidates for the London Matriculation and Army Entrance Examinations"; and, if it thus teaches rather more than is absolutely necessary for either, yet a course of sound instruction would include the excess in both cases. The experiments (over 200 in all) are placed in the foreground of each chapter; then follows the theoretical work in continuous and systematic exposition; and there is an abundance of worked-out examples and of practical exercises. Questions and examination papers are appended. There are 126 figures. The work is thorough, judicious, and practical.

#### ENGLISH LITERATURE.

"The Types of English Literature." (Edited by Prof. William Allan Neilson, of Harvard University).—*The Popular Ballad.* By Francis B. Gummere, Professor of English in Haverford College. (6s. net. London: Constable. Boston and New York: Houghton, Mifflin, & Co.)

We are well accustomed to the treatment of English Literature in chronological periods. The idea of Prof. Neilson's new series, of which the present is the first volume, is "to attempt the division of the field along vertical instead of horizontal lines"—"to devote each volume to the consideration of the characteristics of a single formal type, to describe its origins and the foreign influences that have affected it, and to estimate the literary value and historical importance of all the chief specimens that have been produced in England and America." In the list of other volumes "in preparation," we have, for example, "The Pastoral," "The Allegory," "The Essay," "The Masque," "The Novel," "Literary Criticism," and so forth. The principle is excellent, and the names connected with the volumes already announced give hopeful promise of effective treatment. Prof. Gummere, who has long been known as a diligent student of the Ballads and has sat at the feet of F. J. Child, gives his colleagues a vigorous lead. In four chapters, with appropriate subdivisions, he discusses the definition and the origins of the Ballad, classifies and comments on the Ballads, examines their sources, and estimates their worth. We cannot regard his elaborate argument for the "popular" origin as yet convincing, though one must, of course, admit "improvisation under choral conditions," and take account of the practices adduced from Siberia, the Faroe Islands, and elsewhere. At the same time, it is very full and instructive. The treatment throughout is comprehensive and scholarly. But what of Mr. Hardy's "account of the mother *Durbyfield* singing ballads which daughter Tess . . . disdains"?

*The Foreign Debt of English Literature.* By T. G. Tucker, Litt.D., Professor of Classical Philology in the University of Melbourne. (6s. net. George Bell.)

Prof. Tucker makes but modest claims in respect of this work. He calls his chapters "unpretentious," and says they "are intended to offer to the ordinary student, who has not yet given the matter any particular thought, a first assistance in realizing the interdependence of literatures." If they are as clear as the inevitable compression permits, fairly adequate as epitomes, and readable, then "their purpose is served." It does not need much consideration to grant Prof. Tucker's claims in full; and yet, as he has gone so far, one cannot but wish that he had gone further. The best chapters are those on Greek and Latin literature; the chapters on the literary currents of the Dark Ages, and on French and Italian literature, though independent, seem less fresh and suggestive. The final chapter summarizes minor influences—Spanish, German, Celtic, and Hebrew. We should have liked more definite explanations of the mode and degree of the more important influences exerted. However, the summaries of foreign literatures, together with such indications of their impression on English writers as are vouchsafed, will no doubt have the effect of putting readers on inquiry. Nine synoptical tables, referring to the various literatures either generally or in some special aspect, will be very helpful for comparison and reference. The style is fluent and agreeable. The chief limit to the usefulness of the book will be the extent of the reader's inacquaintance with the writers and the writings under discussion; but that is not the author's affair.

#### MODERN FOREIGN LANGUAGES.

*Real Sistema Británico: Novísima Gramática Simplificada de la Lengua Inglesa.* Por C. J. MacConnell, Catedrático Londinense. (5s. net. David Nutt.)

Mr. MacConnell has prepared a "curso completo, gradual, ordenado en lecciones teórico-prácticas" on the English language "para colegios y especialmente para los estudiantes que no puedan contar con el auxilio del maestro." The first section handles at considerable length the troublesome matters of orthography; the second section treats the parts of speech in fullness of detail; the third section deals with commercial correspondence by exemplary documents (in English on one page, in Spanish on the opposite page); and there are useful supplementary points in an appendix. In the strictly grammatical section the exposition is very thorough, and it is illustrated and enforced by an ample series of judicious exercises. Englishmen may learn Spanish from the volume, as well as Spaniards English. It is a very substantial and sound work, and it is excellently printed and got up.

*Per Istrada Aperte: New Practical Method of Learning the Italian Language.* By P. J. van den Berg. Part I. (3s. net. Oxford: Parker.)

Mr. van den Berg takes a passage of a sentence or two, decomposes it.

giving the equivalent of each of the words in it, and then works up this material in a brief conversational repetition. The grammar is thus spontaneously evolved, while the fundamental principle of getting to know more and more words is going forward. The full development of the method will require two more volumes. Although each group, or passage, handled exemplifies some rule of grammar, there is all but inevitably some sacrifice of system; but, on the other hand, the student is at once led to work in the living language with a certain inspiring actuality. There is no English in the volume, except the vocabulary equivalents. The plan is good so far as it goes, and it is carefully and elaborately worked out, but we should think that the collateral use of a formal grammar would be greatly helpful for a scholarly grasp of the language. There are a good few misprints—made in Holland.

#### MISCELLANEOUS.

The Great Eastern Railway Company issues a new handbook, *East Coast Holidays*, by Percy Lindley, furnishing all necessary information, and giving special prominence to some less known districts. There are numerous illustrations. (Published at 30 Fleet Street, E.C.)

The University of London (South Kensington, S.W.) has just published *The Libraries of London: a Guide for Students* (6d. net; post free, 9d.), prepared on the instruction of the Senate by Reginald A. Rye, Goldsmiths' Librarian. It will be extremely useful in "making known to Londoners in general and to students of the University in particular the character of the numerous libraries in London and the facilities which they offer to readers."

B. G. Teubner's *Verlag auf dem Gebiete der Mathematik, Naturwissenschaften und Technik, nebst Grenzwissenschaften* (Leipzig und Berlin: B.G. Teubner) makes a very considerable volume—a detailed catalogue that will interest scientific, and especially mathematical, students. It impresses the immense enterprise of the famous publishing house. There are ten full-page portraits of eminent mathematicians, of whom Cantor and Helbert are perhaps the best known in this country—excepting always Galileo, who has the just honour of the frontispiece.

#### FIRST GLANCES.

##### CLASSICS.

*Compendium Latinum*. By W. F. Witton, M.A., formerly Scholar of Gonville and Caius College, Cambridge, Classical Master at St. Olave's Grammar School. 2s. 6d. Edward Arnold.

[For boys starting about twelve or thirteen and working only some three or four years. Study of syntax the central idea.]

*Erasmus, Altera Colloquia Latina* from. By G. M. Edwards, M.A., Fellow and Lecturer of Sidney Sussex College, Cambridge. 1s. 6d. Cambridge University Press.

[Capital selections; judicious notes; vocabulary.]

*Greek Reader, A*. By W. H. D. Rouse, Litt.D., Head Master of the Perse Grammar School, Cambridge, and Cambridge University Teacher of Sanskrit. 2s. 6d. net. Blackie.

[Pieces of simple verse; simple narratives and dialogues in prose; pieces bearing on the daily life of the Greeks. Very good selection.]

Hall, Joseph: *Mundus Alter et Idem* (An Old World and a New). Edited for School use by H. J. Anderson, M.A., Inspector of Training Colleges in Cape Colony, late Classical Master, Hillhead High School, Glasgow. 2s. George Bell.

[Good collateral reading. Introduction, notes, index of proper names, and full vocabulary. Very carefully and capably edited.]

##### MATHEMATICS.

*Arithmetic, A School*. By H. S. Hall, M.A., and F. H. Stevens, M.A. 4s. 6d. Macmillan.

[“Suited to modern requirements, and in accordance with the recommendations of the Mathematical Association.” Essentials; many special features. Answers.]

*Arithmetic, Practical, The Teaching of, to Junior Classes*. By J. L. Martin, Head Master of the Aderoft School, Trowbridge. 2s. 6d. Harrap.

[“A manual for teachers.” Numerous diagrams.]

*Arithmetics, The Oxford Elementary*. By H. A. Jamieson, M.A., Head Master of the Mathematical Department, Ayr Academy. Books I., II., III., 2d. each; Teachers' Books, I. and II., 6d. net each. Frowde; Hodder & Stoughton.

*Cambridge Tracts in Mathematics and Mathematical Physics*. No. 8, *The Elementary Theory of the Symmetrical Optical Instrument*. By J. G. Leathem, M.A., Fellow and Lecturer of St. John's College and University Lecturer in Mathematics, Cambridge. 2s. 6d. net. Clay (Cambridge University Press Warehouse).

*Groups of Finite Order, An Introduction to the Theory of*. By Harold Hilton, M.A., Lecturer in Mathematics at Bedford College, formerly Fellow of Magdalen College, Oxford, and Assistant Mathematical Lecturer, University College, Bangor. 14s. net. Clarendon Press.

[Numerous exercises; hints for solution appended.]

##### FRENCH.

Blackie's Longer French Texts.—(1) *Le Zouave* and *La Montre de Gertrude* (Deslys); (2) *Contes à Ma Sœur* (Jeanne D'Arc, La Souris Blanche, Les Petits Souliers) (Moreau): both edited by Louis A. Barbé, B.A. (3) *Les Aventures du Dernier Abencerrage* (Chateaubriand), edited by Albert Noblet, B. es A., Assistant Master at Quernmore School. (4) *Le Roi des Montagnes* (About), edited by James P. Park. (5) *Le Bourreau de Charles Premier* (Dumas), adapted from “Vingt Ans Après,” by K. C. Auchmuty, M.A., Bele School, Sunderland. 8d. each.

[A new and excellent series of continuous readings from modern French literature, liberally printed and agreeably and substantially got up. Adequate notes, questionnaire, phrase-lists, vocabulary.]

Dent's Short French Readers (Modern Language Series). Edited by W. Osborne Brigstocke. (1) *Un Episode sous la Terreur* (Balzac). Edited by C. F. Shearson, M.A., The High School, Exeter. (2) *Histoire d'un Merle Blanc* (A. de Musset). Edited by A. P. Guitou, B. es Sc. Paris. (3) *Le Monde où l'on se bat* (4 extracts from Voltaire, De Vigny, Mérimée, Thierry). Edited by B. E. Allpress, B.A., late Scholar of Girton College, Graham Street School, S.W. (4) *Poncinet* (ed. Laboulaye). Edited by F. W. Odgers, M.A., Royal Naval College, Greenwich. 4d. each.

[Each reader is divided into sections (from a dozen to a score), and each section is followed by “exercices” founded upon it. Brief foot-notes. Readings varied and excellent. Type and get-up very agreeable.]

Ginn's International Modern Language Series.—(1) *Les Prisonniers du Caucase* (X. de Maistre), edited by C. Wesley Robson, A.B. 1s. 6d. (2) *Carmen* and other Stories (Mérimée), edited by Edward Munley, Englewood High School, Chicago. 3s. (3) *Polyeucte, Martyr* (P. Corneille), edited by George N. Henning, Professor of Romance Languages, The George Washington University. 2s.

[(1) Short introduction and notes; questions and exercises; vocabulary. (2) Short biographical and literary introduction; sufficient notes; vocabulary. (3) Full introduction; useful notes; sujets de compositions, &c.—Good examples of a very agreeable and useful series.]

Murray's French Texts. Edited by W. G. Hartog, B.A. Lond., Lecturer in French at University College, London. (1) *La Mare au Diable* (G. Sand). (2) *Confessions d'un Ouvrier* (Souvestre). 1s. 6d. each.

[For upper and middle forms. Biography, foot-notes, exercises. Excellent reading, good type, substantial get-up.]

Rivington's Direct Method French Texts. General Editor, W. G. Hartog, B.A.—Beginners' Texts: (1) *Nouvelles et Anecdotes*; (2) *La Belle au Bois Dormant* et *Le Chat Botté*; (3) *Historiettes*; (4) *Huit Contes* (par Mlle. Marie Minssen); (5) *Hansel et Gretel*; (6) *Le Roi de la Montagne d'Or*.—Junior Texts: (1) *Les Prisonniers du Caucase* (X. de Maistre).—Intermediate Texts: (1) *Le Mari de Madame de Solange* (Souvestre). 1s. each volume.

[Good matter; notes, exercises (oral and written, in French), passages for retranslation, questionnaires, illustrations. Agreeable and useful series; good type; strong get-up.]

##### GERMAN.

*Course, A First German*. By J. B. Joerg, B.A. Lond. and Bonn, Head of the Army Classes and Senior Modern Language Master, Dulwich College, and J. A. Joerg, Head of the Modern Side, Dulwich College. Illustrated by K. M. Roberts. 1s. 6d. Cassell.

[Judicious arrangement of grammar, exercises, *Fragen*, &c. Method “a middle course between the old system and the new one.” Materials ample. Vocabulary. Practical and efficient.]

*Dichtung, Kurzer Leitfaden der deutschen*. By A. E. Cop, German Instructor at the Church of England Girls' Grammar School, Melbourne. 2s. 6d. George Bell.

[Concise, but clear and well proportioned. Very serviceable. Map of Germany.]

*Lehr- und Übungsbuch der deutschen Sprache*. Von Dr. E. Bardeys. Vierte, verbesserte Auflage von Prof. Dr. O. Weise. M. 2 Teubner.

[“Vollständige Elementargrammatik.” Specialty “liegt besonders in der grossen Menge und in der Art und Weise der gestellten Ausgaben.” Deservedly successful.]

*Picture Vocabulary, Rippmann's—German: Second Series*. 1s. 4d. Dent. (“Modern Language Series.”)

[“An attempt has been made to classify the common objects of civilized life, so that the words may be learnt in a systematic way.” Interesting experiment, laboriously and ingeniously worked out.]

*Reader, A German, for Middle Forms*. Compiled by W. Scholle, Ph.D., Lecturer in French, Aberdeen University, and George Smith, M.A., LL.D., Principal of Aberdeen U.F.C. Training College and Examiner in Education, Aberdeen University. 2s. 6d. Blackie.

[Progressive and varied (Erzählungen und Sagen; Deutsche Geschichte, Geographie, Literatur, u.s.w.). Vocabulary. Attractive and useful.]

Messrs. SISLEY'S Great New Educational Enterprise.

# CYCLOPÆDIA MAGAZINE

**IS something new in encyclopædias, and something new in magazines as well.** Nothing at all like it has ever been published before, and it is the outcome of long thought and much labour in developing an original idea. That idea is to produce month by month a work of reference which shall be as informative and as accurate as the best encyclopædia, but as bright and interesting as the best magazines of to-day.

¶ Unlike most encyclopædias, however, it will be **thoroughly abreast of the times**, and this is ensured by the plan of monthly publication, which will enable its editors to include in each issue facts and knowledge that are actually red-hot and absolutely fresh. For instance, the newest discoveries in Science or Nature; the current developments in Art or Literature; the latest ideas of Inventive Genius; the most recent thought of great minds, and biographies of those men and women who are at the moment in the public eye, will have their place in each issue of *The Cyclopædia Magazine*. **Every item of information being revised up to the very moment of going to press, the knowledge imparted to the reader can never be obsolete**, as so much of the contents of most encyclopædias is before the volume or volumes reach the public. *The Cyclopædia Magazine* must always be up-to-date, always correct.

¶ It will form a **complete encyclopædic record of the world's progress in Science, Art, Literature, Invention, Travel, Exploration and Research, Military and Naval Affairs, Politics, Religious and Social Movements, Music, and the Drama.** The arrangement of the information it contains is strictly alphabetical, and identical with that of the best encyclopædias; it is printed in clear, readable type, and of course each monthly part is intended to be carefully preserved for reference and bound in one volume at the end of a year. It will be **fully illustrated by photographs, engravings, portraits, plans, maps, and diagrams.**

¶ There is practically no subject under the sun which will not be dealt with month by month in *The Cyclopædia Magazine*. Its scope is world-wide, and every article in its pages will be authoritative as well as up-to-date and written in attractive style, clearly and brightly. **There will not be a dull page in it, though it will teem with facts and be a storehouse of educational information.** It will be found indispensable to the man or woman who wishes to be well informed and perfectly *au courant* with contemporary knowledge, which can be assimilated easily without loss of time and at a minimum outlay.

## Unique Half-Price Offer to the First 10,000 Subscribers

¶ The regular subscription to *The Cyclopædia Magazine* has been fixed at Five Shillings per annum, payable in advance. This is a most moderate sum for such a wonderful mine of useful, up-to-date knowledge; but, in order to make their new enterprise very widely known and appreciated, the publishers are prepared to make **A SPECIAL REDUCTION OF ONE-HALF THE SUBSCRIPTION** to the first 10,000 sent in on the attached coupon. For this half-price subscription of only Half-a-crown (2/6), *The Cyclopædia Magazine* will be sent to any address in the World, for a whole year, without any charge for carriage. **THIS LIBERAL OFFER** can only remain open **FOR A SHORT TIME and TO THE FIRST 10,000 SUBSCRIBERS** who send direct to us on the coupon below. Afterwards the full subscription of Five Shillings must be charged. It is important, therefore, if you wish to **SAVE HALF-A-CROWN** on your year's subscription to *The Cyclopædia Magazine*, that you should act promptly. If you send **IMMEDIATELY ON THE SPECIAL COUPON** below these lines, you will be certain to secure this unique money-saving privilege. Delays are proverbially dangerous, so you would be wise to subscribe at once, while it is fresh in your memory.

¶ Unlike the too prevalent "instalment" systems of payment, the subscriber under our plan knows exactly what his liability is. You are not asked to pay so much down, with an indefinite number of instalments to come; but once this small yearly subscription is paid, *The Cyclopædia Magazine* will reach you regularly every month for twelve months without any further trouble or expense to you. Think what our offer means—**ONLY AN OUTLAY AT THE RATE OF 2½d. A MONTH**—and make certain of being among the 10,000 fortunate people who will receive *The Cyclopædia Magazine* at this half-price subscription, by filling up the attached coupon and sending it with remittance immediately.

### "EDUCATIONAL TIMES" HALF-PRICE SUBSCRIPTION COUPON

To be cut off and enclosed in an envelope, with remittance, addressed to

MESSRS. SISLEY'S LTD., Publishers of *The Cyclopædia Magazine*,  
9 DUKE STREET, CHARING CROSS, LONDON.

I avail myself of your special offer to send **THE CYCLOPÆDIA MAGAZINE** once a month for twelve months, carriage paid, for half the usual subscription of 5/-, and I enclose postal order, value **TWO SHILLINGS AND SIXPENCE**, for same.

ENGLISH LITERATURE.

“A.L.” Masterpieces of Standard Literature (Edited by Alfonso Gardiner).—No. 1, The Cloister and the Hearth (Charles Reade), prepared by Miss E. M. Boyce, L.L.A. 1s. E. J. Arnold.

[New series of Continuous Readers. Well printed and strongly bound. Introduction; notes (with illustrations); glossary. Frontispiece (Erasmus). Excellent. “All references which might hurt the susceptibilities of Roman Catholics have been excluded.”]

Bell’s English Texts for Secondary Schools (General Editor: A. Guthkelch, M.A.). First Year: The Wonder Book and Tanglewood Tales (Hawthorne): a selection, edited by H. Hampshire, 1s. Second Year: (1) A Legend of Montrose (Scott), abridged and edited by F. C. Luckhurst, Assistant Master, Sir Walter St. John’s School, Battersea, 1s.; (2) The Cloister and the Hearth (Charles Reade), abridged and edited by the Rev. A. E. Hall, B.A., Assistant Master, Bancroft’s School, 1s. Third Year: The Ancient Mariner, and Selected Old English Ballads, edited by A. Guthkelch, M.A., 1s. Fourth Year: English Odes, selected and edited by E. A. J. Marsh, M.A., Assistant Master, Hanley Secondary Schools, 1s.

[Capable edited and nicely got up. Introductions and brief notes. Very agreeable series.]

Longmans’ Class-Books of English Literature.—(1) Robinson Crusoe (Defoe), edited by T. W. Silverdale, Senior Inspector of Schools. 1s. 4d. (2) A Christmas Carol (Dickens), edited by E. Gordon Browne, M.A., Assistant Inspector of Elementary Schools, Liverpool Education Committee. 1s. (3) Tanglewood Tales (Hawthorne), edited by Guy Kendall, M.A. 1s. (4) Gods and Heroes of the North, by Alice Zimmern. 1s. (5) Quentin Durward (Scott), with short biography by Andrew Lang, and introduction and notes by J. Thornton, M.A. 1s. (6) A Wonder Book (Hawthorne), with introduction and notes by Ada Perry. 1s.

[(1) Biographical introduction; brief but useful notes; questions; good illustrations. (2) (3) (5) and (6) Adequate introduction and notes. (4) Brief explanatory notes; illustrations. Liberal type and strong binding. Excellent series.]

Macmillan’s English Literature for Secondary Schools (General Editor, J. H. Fowler, M.A.). First Year: Stories from a Wonder-Book for Girls and Boys (Hawthorne), edited by J. H. Fowler, M.A. Second Year: A Book of Poetry illustrative of English History, Part I. (A.D. 61–1485), edited by G. Dowse, B.A., Assistant Master in Pre-ton Grammar School. Third Year: The Life of Cardinal Wolsey, by George Cavendish, his Gentleman Usher, edited by Mary Tout, sometime Jones Fellow in History in the University of Manchester. Fourth Year: (1) The Age of the Antonines (Gibbon’s History, Chapters I.–III.), edited by J. H. Fowler, M.A. (2) Seventeenth Century Prose, selected and edited by Elizabeth Lee. 1s. each.

[Sufficient introductions; brief notes; glossary (where needed); questions, &c. Excellent series.]

Rulife Brothers.—The Heroes (C. Kingsley). 1s. 6d.

[Notes, brief and pointed, by F. Gorse, M.A. Good illustrations. Substantially and tastefully got up.]

Yonge, Charlotte M. (1) The Prince and the Page, a Story of the Last Crusade. (2) The Little Duke: Richard the Fearless. (3) The Lances of Lynwood. 1s. net each. Macmillan.

EDUCATION.

Board of Education. (1) List of Persons who have passed the Preliminary Examination for the Elementary School Teachers’ Certificate, 1908. 6d. (2) Regulations for the Training of Teachers for Elementary Schools (from August 1, 1908). Cd. 4169. 7d. (3) Code of Regulations for Public Elementary Schools in England (excluding Wales and Monmouthshire), with Schedules. Cd. 4158. (3d.) (4) Scheme for a new Teachers’ Registration Council. Cd. 4185. 2½d. (5) Regulations for the Training of Teachers for Secondary Schools. Cd. 4184. 1d. (6) Regulations for the Training of Teachers of Domestic Subjects (from August 1). Cd. 4173. 1½d. Wyman.

Carnegie Foundation for the Advancement of Teaching. Bulletin 2: The Financial Status of the Professor in America and in Germany. Johns Hopkins University Circular. No. 6 (June); Register of the University, 1907–8. No. 8 (July), Programme of Courses for 1908–9; Conferring of Degrees; Notes in Mathematics.

EDITORIAL NOTE.

In reply to a correspondent, we wish to say that we sincerely regret that the varied interests of these columns, and of the contributors considered collectively, render it absolutely impossible to comply with all the wishes of each contributor. These are, however, duly noted.

A Proof of Feuerbach’s Theorem.

By M. T. NARANIENGAR, M.A.

Geometrical Method.

(I.) Lemma.—Let IL be drawn perpendicular to OD and OX perpendicular to AD’. Make DD’’ = DD’. Then D’I<sup>2</sup> = D’O.D’D’’ ..... (1),

$$D’X.D’I = D’O.D’L ..... (2),$$

therefore

$$D’I : D’X = D’D’’ : D’L ... (3).$$

Hence LX is parallel to D’I.

Again, if N be the nine-point centre, and XN meets ID’’ in P, DN = ½R and is parallel to OA, and NX is parallel to OD. Thus

$$NX = DD’ - DN = PX - PN = LD’’ - PN;$$

therefore PN = DN - DL = ½R - r.

(II.) Draw NR parallel to OF to meet IF’’, then, as before,

$$NR = ½R - r.$$

Now, AI touches the circle OID’’;

therefore ∠AID’’ = ∠IOD’’.

Similarly, ∠CIF’’ = ∠IOF’’;

therefore, by addition,

$$\begin{aligned} \angle AID'' + \angle CIF'' &= \angle D''OF'' = \pi - \angle B \\ &= \angle AIF' + \angle CID'. \end{aligned}$$

Hence

$$\angle D'IF'' = \angle D'IF' = \pi - \frac{1}{2} \angle PNR.$$

Thus I is at the circumference of a circle of which N is the centre and radius = NP or NR; that is, NI = ½R - r.

[Rest in Reprint.]

16386. (A. M. NESBITT, M.A.)—If every element in the r-th row of a determinant of order n be 1/r<sup>2</sup>, except that in the principal diagonal which is 1 + 1/r<sup>2</sup>, then, if n be indefinitely increased, the limiting value of the determinant will be 1 + π<sup>2</sup>/6.

Solution by the PROPOSER.

Denote 1/n<sup>2</sup> by φn. Then the determinant

$$\begin{vmatrix} 1 + \phi n & \phi n \\ \phi(n-1) & 1 + \phi(n-1) \end{vmatrix}$$

is

$$1 + \phi(n-1) + \phi n;$$

the determinant

$$\begin{vmatrix} 1 + \phi n & \phi n & \phi n \\ \phi(n-1) & 1 + \phi(n-1) & \phi(n-1) \\ \phi(n-2) & \phi(n-2) & 1 + \phi(n-2) \end{vmatrix}$$

is

$$1 + \phi(n-2) + \phi(n-1) + \phi n, \dots$$

Hence the proposed determinant of order n is

$$1 + \sum_{r=1}^{n-1} (1/r^2).$$

Making n infinite, the required result follows.

16441. (Professor SANJANA, M.A.)—Prove that 3<sup>111</sup> + 1 is the product of the factors

$$4; 7; 223; 2,019,210,335,106,439;$$

and 12<sup>46</sup> + 1 of

$$7; 13; 19; 31; 421; 1,657; 1,801; 19,141; 35,671; 8,554,703,697,721; 9,298,142,299,081.$$

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

These two large numbers may be factorized (to the extent asked for) by the property of the Trin-Aurifeullian

$$T = (y^2 + 1)/(y + 1) = (y - 3\eta + 1)(y + 3\eta + 1),$$

where  $y = 3\eta^2$ .

(i.)  $N = (3^{111} + 1) = (3^3 + 1) A \cdot B = 4 \cdot 7A \cdot B,$   
 where  $B = \frac{(3^{37} + 1)}{3 + 1} = 112,570,976,472,749,341 ;$   
 $A = \frac{3^{111} + 1}{3^{37} + 1} \cdot \frac{3 + 1}{3^3 + 1} = \frac{1}{2} \cdot T.$

Now take  $y = 3^{37} = 3(3^{18})^2$ , so that  $\eta = 3^{18}$ .  
 Then  $T = (3^{37} - 3^{18} + 1)(3^{37} + 3^{18} + 1) = L \cdot M$ , suppose,  
 and  $A = \frac{1}{2}T = L(\frac{1}{2}M).$   
 Reuschle's *Neue Zahlentheoretische Tabellen*, &c. (1856) give 223 as a factor of  $(3^{111} + 1)$ , and it is found (on trial) to divide into L. Hence  
 $A = 223(\frac{1}{2} \cdot \frac{1}{3}L)(\frac{1}{2}M),$   
 whence  $A = 223 \cdot 2,019,210,335,106,439 \cdot 64,926,272,436,179,833,$   
 which completes the factorization asked for. Lastly, the three large factors of A, B shown above have no more factors <10,000; this is known from a Table of Haupt-Exponents of 2, 3, 5, 6, 7, 10, 11, 12 for all primes <10,000, computed by the writer and Mr. H. J. Woodall.

(ii.)  $N = (12^{15} + 1) = (1728^{15} + 1)$   
 $= \left( \frac{1728^{15} + 1}{1728^5 + 1} \cdot \frac{1728^5 + 1}{1728^3 + 1} \right) \frac{1728^3 + 1}{1728 + 1} (12^{15} + 1) = (T_5 \cdot 1/T_1) T_1 (12^{15} + 1),$   
 suppose.

The factorization of  $(12^{15} + 1)$  may be taken from Bickmore's Table in *Messenger of Mathematics*, Vol. xxv. (1895), p. 44, as being  
 $12^{15} + 1 = 13(7 \cdot 19) 19141(31 \cdot 421 \cdot 35671).$

$T_1$  is also given in Bickmore's Tables quoted, but is here required in a special form. Take  $y_1 = 1728 = 12^3 = 3(2 \cdot 12)^2$ , so that  $\eta_1 = 2 \cdot 12$ . Then

$T_1 = \frac{1728^3 + 1}{1728 + 1} = (12^3 - 6 \cdot 12 + 1)(12^3 + 6 \cdot 12 + 1) = L_1 \cdot M_1$ , suppose,  
 $= 1657 \cdot 1801.$

Next take  $y_5 = 1728^5 = 12^{15} = 3(2 \cdot 12^7)^2$ , so that  $\eta_5 = 2 \cdot 12^7$ . Then  
 $T_5 = \frac{1728^{15} + 1}{1728^5 + 1} = (12^{15} - 6 \cdot 12^7 + 1)(12^{15} + 6 \cdot 12^7 + 1) = L_5 \cdot M_5$ , suppose.

Hence  $\frac{T_5}{T_1} = \frac{L_5 \cdot M_5}{M_1 \cdot L_1} = L' \cdot M'$ , suppose.

On actual trial it is found that  $M_1$  divides into  $L_5$ , and  $L_1$  into  $M_5$ ; and, on effecting the divisions algebraically, it is found that  $L', M'$  may be written in forms  $L' = L_5 \div M_1 = (P' - Q')$ ,  $M' = M_5 \div L_1 = (P' + Q')$ , where  $P' = (12^{12} + 2 \cdot 12^9 + 12^6 + 2 \cdot 12^3 + 1)$ ,  $Q' = 6(12^{10} + 12^7 + 12^4)$ .

The author's Haupt-Exponent Table quoted gives the divisor 181, and shows no more divisors <10,000; and, a Table of Solutions of the congruence  $(y^{15} + 1)(y + 1) \div (y^3 + 1)(y^5 + 1) \equiv 0 \pmod{p}$ , compiled by the writer, shows that there are no more divisors <15,000. Effecting the divisions, &c.,

$T_5 + T_1 = L' \cdot M' = (181 \cdot 47,263,556,341)(9,298,142,299,081).$   
 This differs from the Proposer's result only in that the large factor  $L'$  has been here partially factorized.

16336. (M. V. ARUNACHALAN, M.A.)—Solve  
 $\frac{2(1-ab)x}{x+1} = \frac{(1-a^2)(x+y)}{y+1}, \quad \frac{2(1-ab)y}{y+1} = \frac{(1-b^2)(x+y)}{x+1}.$

Note by the Proposer.

Professor M. T. Naraniengar, M.A., seems to have given a solution (May, 1908) to my question No. 16336 as proposed originally. This solution does not hold for the altered question. The following seems to be a nice solution of the equations:—

The given equations are  
 $\frac{2(1-ab)x}{x+1} = \frac{(1-a^2)(x+y)}{y+1} \dots\dots\dots (1),$   
 $\frac{2(1-ab)y}{y+1} = \frac{(1-b^2)(x+y)}{x+1} \dots\dots\dots (2).$

From (1) we get  
 $\frac{4(1-ab)x}{(x+1)^2} = \frac{2(1-a^2)(x+y)}{(x+1)(y+1)}.$   
 $\therefore \frac{(1-ab)[(x+1)^2 - (x-1)^2]}{(x+1)^2} = \frac{(1-a^2)[(x+1)(y+1) - (x-1)(y-1)]}{(x+1)(y+1)}.$   
 $\therefore (1-ab)(1-u^2) = (1-a^2)(1-uv) \dots\dots\dots (3),$

where  $\frac{x-1}{x+1} = u, \quad \frac{y-1}{y+1} = v.$   
 Similarly  $(1-ab)(1-v^2) = (1-b^2)(1-uv) \dots\dots\dots (4).$

From (3) and (4) we have  
 $\frac{1-u^2}{1-a} = \frac{1-v^2}{1-b^2} = \frac{1-uv}{1-ab} \dots\dots\dots (5).$

Hence the values of  $u, v$ , and therefore of  $x$  and  $y$ .  
 N.B.—Professor Naraniengar, in a note recently received, draws attention to the restricted validity of his solution.—(Ed.)

11896. (G. S. CARR, M.A.)—With a ruler and pencil only within a given  $n$ -gon inscribe another  $n$ -gon to circumscribe a given conic.

Solution by HENRY RIDDELL, M.E.

This is a well known problem, which may be solved by drawing a figure inscribed in the given conic, and having its sides passing through the poles of the sides of the given  $n$ -gon, and finally drawing tangents at the vertices of the figure thus formed.

This problem is Example I., on page 267, of Russell's *Pure Geometry* (1905).

Note.—In my brief discussion of this question I have, perhaps too hastily, assumed that the ruler constructions are familiar. I may certainly assume this in finding the pole of a given line with respect to the conic, but I observe that the ruler construction necessary to obtain the double point of a pair of homographic sets of points on a conic is not so well known. If  $(A, B, C, \dots)$  and  $(A_1, B_1, C_1, \dots)$  be two homographic ranges on a conic, the joins of  $AB'$  and  $A'B$ , of  $AC'$  and  $A'C$ , of  $BC'$  and  $B'C$ , &c., all meet in pairs upon a line called the homographic axis, which in turn meets the conic in the double points of the two ranges. The construction for the double point is therefore perfectly obvious. I may assume that the ruler construction of a tangent at any given point in a conic is quite familiar.

16403. (Professor R. W. GENESE, M.A.)—Prove the following deductions from a theorem by Abel, viz.,

(1)  $\phi(x+a) = \phi(x) + a\phi'(x+b) + \dots + \frac{a(a-nb)^{n-1}}{n!} \phi^n(x+nb) + \dots$   
 (2)  $\phi(x) = \phi(x+b) - b\phi'(x+2b) + \dots + \frac{(-nb)^{n-1}}{n!} \phi^{n-1}(x+nb) + \dots$

Solutions (I.) by Hon. G. R. DICK, M.A., and Prof. E. HERNÁNDEZ; (II.) by S. T. SHOVELTON, M.A.

(I.) The theorem referred to was given by Abel in *Crelle's Journal*, Vol. I. See his collected works published by the Norwegian Government, Vol. I., page 102. It is

$(x+a)^n = x^n + \frac{n}{1} a(x+b)^{n-1} + \frac{n(n-1)}{1 \cdot 2} a(a-2b)(x+2b)^{n-2} + \dots$   
 $\dots + \frac{n(n-1)\dots(n-\mu+1)}{1 \cdot 2 \dots \mu} a(a-\mu b)^{n-1}(x+\mu b)^{n-\mu} + \dots a(a-nb)^{n-1}.$

If then  $\phi(x)$  is an analytical function  $= \sum_0^{\infty} c_n x^n$ , we have

$\phi(x+a) = \sum_0^{\infty} c_n \left[ x^n + na(x+b)^{n-1} + \frac{n(n-1)}{1 \cdot 2} a(a-2b)(x+b)^{n-2} + \dots \right]$   
 $= \phi(x) + a\phi'(x+b) + \frac{a(a-2b)}{1 \cdot 2} \phi''(x+2b) + \dots$   
 $+ \frac{a(a-nb)^{n-1}}{1 \cdot 2 \dots n} \phi^{(n)}(x+nb) + \dots$

The first theorem stated. For the second, since

$\frac{\phi(x+a) - \phi(x)}{a} = \phi'(x+b) + \frac{a-2b}{1 \cdot 2} \phi''(x+2b) + \dots,$

we have, proceeding to the limit,

$\phi'(x) = \phi'(x+b) - \phi''(x+2b) + \dots + \frac{(-nb)^{n-1}}{n!} \phi^{(n)}(x+nb) + \dots;$

or, writing  $\phi$  for  $\phi'$ ,

$\phi(x) = \phi(x+b) - \phi'(x+2b) + \dots + \frac{(-nb)^{n-1}}{n!} \phi^{(n-1)}(x+nb) + \dots$

(II.) The expansion of  $e^{az}$  in powers of  $ze^{bz}$  is, by Burmann's Theorem,  
 $e^{az} = 1 + a(ze^{bz}) + a(a-2b) \frac{(ze^{bz})^2}{2!} + \dots + a(a-nb)^{n-1} \frac{(ze^{bz})^{n-1}}{n!} + \dots$

For  $z$  write  $d/dx$ , and let both sides of the equation operate on  $\phi(x)$ : the result is

$\phi(a+x) = \phi(x) + a\phi'(x+b) + \dots + \frac{a(a-nb)^{n-1}}{n!} \phi^n(x+nb) \dots (1).$

From (1) we have

$\frac{\phi(x+a) - \phi(x)}{a} = \phi'(x+b) + \dots + \frac{(a-nb)^{n-1}}{n!} \phi^n(x+nb) \dots$

Let  $a$  approach the limit zero, and the result is

$\phi'(x) = \phi'(x+b) - b\phi''(x+2b) + \dots + (-1)^{n-1} \frac{(nb)^{n-1}}{n!} \phi^n(x+nb) + \dots$

which, on integrating, gives the second result.

16398. (R. J. WHITAKER, B.A.)—ABCD is a quadrilateral. P, Q are points in AB, CD respectively, such that AP : PB = CQ : QD. PR, QS are drawn parallel to CD, AB respectively, meeting BC, AD in R, S. Prove that RS is parallel to BD. Geometrical proof wanted.

Solutions (I.) by V. DANIEL, B.Sc.; (II.) by Hon. G. R. DICK, M.A.; (III.) by W. F. BEARD, M.A.

(I.) Draw CYO parallel to BA, XAO parallel to CD.

Join XY and let it cut CD in Z.

Then  
ZD:AX = DY:YA = DC:OA.

Therefore  
ZD:ZC = XA:XO = XB:XC.

Therefore XYZ is parallel to BD.

Now, if the construction named be made, we have

XR:RB = YS:SD, evidently.

Therefore RS is parallel to BD, since XY is.

[Rest in Reprint.]

11244. (A. J. PRESSLAND, M.A.)—Prove that the median and pedal triangles of any triangle have a common escribed parabola, whose focus is on the minimum ellipse of the median triangle.

Additional Geometrical Solution by W. F. BEARD, M.A.

Let A'B'C' be the given triangle; ABC, DEF its median and pedal triangles.

Required to prove (i.) that a parabola may be drawn to touch the sides of ABC, DEF, and (ii.) that the focus of this parabola lies on the minimum ellipse through A, B, C.

Let EF, FD, DE meet BC, CA, AB respectively at X, Y, Z.  
Join AX cutting the circle ABC at S.  
Draw SK, SL, SM, SP, SQ, SR perpendicular to BC, CA, AB, EF, FD, DE respectively.  
Join PK, PQ, KL, CD, CS.

(i.)  $\angle BEX = \angle BC$  because B, C, F, E are on a circle;  
=  $\angle ABC$ , ,, CF is parallel to AB;  
and  $\angle CBE = \angle ACB$ , ,, BE ,, AC;  
therefore  $\angle BXE = \angle ACB - \angle ABC = \angle ACB - \angle DCB$  (because AD is parallel to BC),  
=  $\angle DCA$ .  
Also  $\angle SXB = \angle XAD$ , because AD is parallel to BC,  
=  $\angle SCD$ , ,, D, A, C, S are on a circle,  
therefore  $\angle SXP = \angle ACS = \angle LKS$ , because L, C, K, S are on a circle;  
but  $\angle SXP = 180^\circ - \angle SKP$ , ,, S, K, P, S ,, ,,

Therefore PKL is a straight line.

Again,  $\angle SPQ = \angle SFQ$ , because S, P, F, Q are on a circle,  
=  $\angle SCD$ , ,, S, F, C, D ,, ,,  
=  $\angle SPK$ , proved above.

Therefore PKQ is a straight line.

Similarly MR lies on the same line.  
Thus a parabola may be described with S as focus and PKQL as tangent at the vertex to touch the sides of the triangles ABC, DEF.

(ii.) Since AX passes through the focus S, it follows that BY and CZ must also pass through S. In the triangles BXE, ACD,  
 $\angle BXE = \angle ACD$  (proved),  $\angle BEX = \angle B = \angle ADC$ ;

therefore the triangles are similar; therefore  
 $BX/BE = AC/AD$ ; similarly  $AY/AD = BC/BE$ .

Therefore  $BX \cdot AY = AC \cdot BC$ ; therefore  $BX/BC = AC/AY$ ;  
therefore  $(XBC \infty) = (Y \infty CA)$ ;  
therefore  $A(XBC \infty) = B(Y \infty CA)$ ;  
therefore  $A(SBCB') = B(SA'CA)$ .

Therefore if a conic is described through A, B, C to touch B'C', C'A' at A, B, it must pass through S.

Thus S lies on the minimum ellipse through A, B, C.

Investigation of the equation of the envelope which a straight line has when the constants R and S in its equation

$$x/R + y/S = 1$$

are subject to the condition

$$(pR)^m + (qS)^m = c^m,$$

where c is a constant, a line of given length, while p and q are mere numbers.

By GEORGE SCOTT, M.A.

Differentiating, as is usually done in seeking an envelope,  
 $x/R^2 + y/S^2 dS/dR = 0$ ,  $p^m R^{m-1} + q^m S^{m-1} dS/dR = 0$ ;  
therefore  $x/p^m R^{m+1} = y/q^m S^{m+1}$ .

Combining this with the equation of the straight line, we have

$$p^m R^m + q^m S^m = p^m R^{m+1}/x = q^m S^{m+1}/y;$$

or

$$xc^m = p^m R^{m+1}, cy^m = q^m S^{m+1};$$

therefore  $R = (c/p)^{m/(m+1)} x^{1/(m+1)}$ ,  $S = (c/q)^{m/(m+1)} y^{1/(m+1)}$ ,  
 $R^m = (c/p)^{m^2/(m+1)} x^{m/(m+1)}$ ,  $S^m = (c/q)^{m^2/(m+1)} y^{m/(m+1)}$ ,

and

$$p^m R^m = c^{m^2/(m+1)} (px)^{m/(m+1)},$$

also

$$q^m S^m = c^{m^2/(m+1)} (qy)^{m/(m+1)}.$$

Hence  $(pR)^m + (qS)^m = c^{m^2/(m+1)} [(px)^{m/(m+1)} + (qy)^{m/(m+1)}]$

Therefore since  $c^{m^2/(m+1)}/c^m = c^{[m^2/(m+1)]-m} = c^{m/(m+1)}$ ,

$$(px)^{m/(m+1)} + (qy)^{m/(m+1)} = c^{m/(m+1)}.$$

Making  $m = 1$ , we have for the envelope

$$(px/c)^{\frac{1}{2}} + (qy/c)^{\frac{1}{2}} = 1,$$

the equation of a parabola referred to two tangents as axes of co-ordinates, the lengths of which are  $c/p$  and  $c/q$ . Making  $p = q = 1$  and  $m = 2$ , we have the known equation of the hypocycloid  $x^{\frac{2}{3}} + y^{\frac{2}{3}} = c^{\frac{2}{3}}$ .

If  $c/p = (a^2 - b^2)/a$ ,  $c/q = (a^2 - b^2)/b$ , and  $m = 2$ , we have the evolute of the ellipse whose semi-axes are  $a$  and  $b$ , namely,

$$(ax)^{\frac{2}{3}} + (by)^{\frac{2}{3}} = (a^2 - b^2)^{\frac{2}{3}}.$$

Remark.—As an ellipse approaches nearer and nearer to a circle, the normal approximates to the arm of the elliptic compasses that would describe the ellipse; now the envelope of this arm is a hypocycloid, and the ellipse's evolute approaches to this; therefore the late Professor MacCullagh was justified in asking at a Fellowship Examination, then conducted in Latin, "Quale est centrum circuli?" and accepting the answer, "It is the shape of a hypocycloid."

QUESTIONS FOR SOLUTION.

16478. (Rev. F. H. JACKSON, M.A.)—Show that

$$\frac{\mathfrak{J}_n(abc) \mathfrak{J}_n(a/bc) \mathfrak{J}_m(ab/c) \mathfrak{J}_m(ac/b)}{\mathfrak{J}_n(abc) \mathfrak{J}_n(a/bc) \mathfrak{J}_m(ab/c) \mathfrak{J}_m(ac/b)} = \frac{q^n}{\theta^2(0)} \left\{ \left( \frac{\mathfrak{J}_n(ab) \mathfrak{J}_n(a/b) \mathfrak{J}_m(ac) \mathfrak{J}_m(a/c)}{\mathfrak{J}_n(ab) \mathfrak{J}_n(a/b) \mathfrak{J}_m(ac) \mathfrak{J}_m(a/c)} \right)^2 - 16q \sin^2(-i \log b) \sin^2(-i \log c) \right. \\ \left. \times \left( \frac{\mathfrak{J}_n(q^{\frac{1}{2}} ab) \mathfrak{J}_n(q^{\frac{1}{2}} a/b) \mathfrak{J}_m(q^{\frac{1}{2}} ac) \mathfrak{J}_m(q^{\frac{1}{2}} a/c)}{\mathfrak{J}_n(q^{\frac{1}{2}} ab) \mathfrak{J}_n(q^{\frac{1}{2}} a/b) \mathfrak{J}_m(q^{\frac{1}{2}} ac) \mathfrak{J}_m(q^{\frac{1}{2}} a/c)} \right)^2 \right\} \dots (A),$$

where  $J_n(x)$  denotes the  $q$  analogue of Bessel's Function

$$J_n(x) = \frac{x^n}{[2][4] \dots [2n]} \left\{ 1 - \frac{x^2}{[2][2n+2]} + \frac{x^4}{[2][4][2n+2][2n+4]} - \dots \right\}$$

in which

$$[n] = (q^n - 1)/(q - 1),$$

$$\mathfrak{J}_n(x) = \frac{x^n}{[2][4] \dots [2n]}$$

$$\times \left\{ 1 - \frac{x^2}{[2][2n+2]} q^{2n+2} + \frac{x^4}{[2][4][2n+2][2n+4]} q^{4n+8} - \dots \right\}$$

being derived from  $J$  by inversion of  $q$ ; thus

$$J(1/q, x) = q^{n^2} \mathfrak{J}(q, x),$$

$e^2(0)$  denotes the square of Jacobi's  $\theta$  Function, and

$$q_0^2 = \prod_{m=1}^{\infty} (1 - q^{2m})^2, \quad a = \frac{i\sqrt{q}}{(q-1)},$$

while  $b$  and  $c$  are arbitrary, as also are  $m$  and  $n$ .

16474. (Hon. G. R. DICK, M.A.)—Solve the equation

$$(1-x^2) \frac{du}{dx} + n(1-2xu+u^2) = 0,$$

and show that when  $n$  is a positive integer a particular integral is  $u = P_{n-1}(x)/P_n(x)$ , where  $P_n \dots$  are the Legendrian polynomials.

16475. (Professor E. HERNÁNDEZ.)—On a

$$\begin{pmatrix} b & a & 0 & 0 & \dots & 0 & 0 & 0 \\ 2c & b & a & 0 & \dots & 0 & 0 & 0 \\ 0 & c & b & a & \dots & 0 & 0 & 0 \\ \dots & \dots & \dots & \dots & \dots & \dots & \dots & \dots \\ 0 & 0 & 0 & 0 & \dots & c & b & a \\ 0 & 0 & 0 & 0 & \dots & 0 & c & b \end{pmatrix}$$

et

$$2 \frac{(-1)^m}{a^m} \begin{pmatrix} 0 & a & 0 & 0 & 0 & 0 & \dots & 0 & 0 & 0 & 0 & 0 \\ b & 0 & a & 0 & 0 & 0 & \dots & 0 & 0 & 0 & 0 & 0 \\ 0 & b & 0 & a & 0 & 0 & \dots & 0 & 0 & 0 & 0 & 0 \\ 2c & 0 & b & 0 & a & 0 & \dots & 0 & 0 & 0 & 0 & 0 \\ 0 & c & 0 & b & 0 & a & \dots & 0 & 0 & 0 & 0 & 0 \\ \dots & \dots & \dots & \dots & \dots & \dots & \dots & \dots & \dots & \dots & \dots & \dots \\ 0 & 0 & 0 & 0 & 0 & 0 & \dots & c & 0 & b & 0 & a \\ 0 & 0 & 0 & 0 & 0 & 0 & \dots & 0 & c & 0 & b & 0 \end{pmatrix}$$

pour la somme des puissances  $m^{\text{ièmes}}$  des racines des équations  $ax^2+bx+c=0$  et  $ax^4+bx^2+c=0$  respectivement, les deux déterminants étant du degré  $m$ .

16476. (CONSTANCE I. MARKS, B.A.)—In a game of cribbage arrange the pips for a hand or crib of twenty-three, and find the probability of holding cards with such an arrangement. Is more than one solution of the problem possible?

16477. (The late R. W. D. CHRISTIE.)—Prove that an infinite number of solutions can be obtained from

$$3^2 + a^2 = b^2,$$

e.g. 3, 4, 5; 3,  $\frac{3}{2}$ ,  $\frac{5}{2}$ ; 3,  $\frac{7}{5}$ ,  $\frac{25}{13}$ ; &c., ad inf.

16478. (Professor E. B. ESCOTT.)—Certain numbers have common factors, when their digits are permuted cyclically. Example: 259 = 7 × 37, 592 = 16 × 37, 925 = 25 × 37. Find for what numbers this property is true.

16479. (W. J. GREENSTREET, M.A.)—

(1) Solve:—  $\Sigma (b-c)x = 0$ ;  $\Sigma (b^2-c^2)yz = 0$ ;  
 $\Sigma (b-c)yz + \Sigma a(b^2-c^2) = 0$ .

(2) Find the condition that  $a \cos x + b \sin x = cx$  may have  $2n+1$  real roots at least ( $a, b, c$ , positive).

16480. (M. S. NARAYANA, M.A.)—Sum the series:—

(1)  $1 - 3(1 + \frac{1}{3}) + 5(1 + \frac{1}{3} + \frac{1}{9}) - 7(1 + \frac{1}{3} + \frac{1}{9} + \frac{1}{27}) + \dots$  to infinity.  
(2)  $\log \cosh \theta + \log \cosh \frac{\theta}{2} + \log \cosh \frac{\theta}{4} + \dots$  ad inf.

16481. (Professor SANJANA, M.A.)—Find the sum of the series

$$1 + x \frac{\sin 2\theta}{\sin \theta} + x^2 \frac{\sin 3\theta}{\sin \theta} + \dots + x^{n-2} \frac{\sin (n-1)\theta}{\sin \theta} + x^{n-1} \frac{\sin n\theta}{\sin \theta} + x^n \frac{\sin (n-1)\theta}{\sin \theta} + \dots + x^{2n-3} \frac{\sin 2\theta}{\sin \theta} + x^{2n-2}.$$

16482. (V. RAMASWAMI Aiyar, M.A.)— $P, P'$  are corresponding points of a curve and its  $n$ -th pedal with respect to an origin  $O$ ;  $C, C'$  the centres of curvature at  $P, P'$ ; and  $M, M'$  the projections of  $C, C'$  on  $OP, OP'$ . Show that  $OP'/OM' = n + OP/OM$ .

[NOTE.—If through  $P'$ ,  $P$  parallels be drawn to the join of  $M'$  and  $M$  meeting  $OP, OP'$  respectively in  $Q, Q'$ , then  $PQ = n \cdot OM$  and  $Q'P' = n \cdot OM'$ ; whence a construction for the centre of curvature at any point of the  $n$ -th pedal, or the  $-n$ -th pedal of any curve, knowing, &c.]

16483. (Professor S. SIRCOM.)—Give a general description of the cubic surface:—

$$x^2 + (x-y-1)x^2 - 2(3yz-8)x + (x+y-1)(4x^2-4yz+3y^2-16x+8y+16) = 0$$

and determine its real right lines.

16484. (Professor NEUBERG.)—Une sphère est rapportée à trois rayons rectangulaires  $Ox, Oy, Oz$ . Un plan tangent quelconque rencontre ces rayons en  $A, B, C$ . Trouver l'enveloppe de la sphère passant par les points  $O, A, B, C$ .

16485. (A. W. H. THOMPSON.)—Let two conics  $S, S'$  (plane or spherical) intersect in  $A, B, C, D$ , and let  $P, P'$  be any two points on  $S, S'$  respectively. Then the ratio of the anharmonic ratios of the two pencils  $(P.ABCD), (P'.ABCD)$  we shall call the anharmonic ratio of the conics  $S, S'$ . The anharmonic ratio of two quadric cones, having a

common vertex is the anharmonic ratio of the spherical conics, formed by the intersection of the cones with a sphere whose centre is the common vertex.

$S, S'$  are two conics in different planes but intersecting each other in two points on the common line of intersection of the two planes. Show that the locus of a point  $P$  such that  $(P.S, S')$  (i.e., the anharmonic ratio of the cones standing on  $S, S'$  with common vertex  $P$ ) is constant, is a quadric through  $S, S'$ .

[This appears to be the three-dimensional analogue to Chasles's property of a conic.]

16486. (H. L. TRACHTENBERG, B.A.)—Three conics are described touching the circum-circle of a triangle  $ABC$ : the first touches the sides  $AB, AC$  at  $B, C$ ; the second  $BC, BA$  at  $C, A$ ; the third  $CA, CB$  at  $A, B$ . If  $L_1, L_2, L_3$  are the points of contact with the circum-circle, prove that  $AL_1, BL_2, CL_3$  are concurrent in the symmedian point.

16487. (S. NARAYANAN.)—Find the locus of foci of parabolas which have their vertices at the centre of a given ellipse and which cut off a constant area from that ellipse.

16488. (DEVA RAO M. KELKAR, B.A., L.T.)—The opposite sides  $DA, CB$  of a cyclic quadrilateral meet in  $E$ . If the straight line joining  $E$  with the point of intersection of the diagonals of  $ABCD$  meet  $AB$  in  $G$ , show that  $AD \cdot AE : BC \cdot BE = AG : BG$ .

16489. (C. E. YOUNGMAN, M.A.)—Two circles  $(A), (B)$  touch externally at  $C$ , between  $A$  and the other centre of similitude  $D$ . If  $A$  and  $D$  be fixed points, prove that the common tangent of  $(A)$  and  $(B)$  is longest when  $AB = 2CD$ .

16490. (Professor NANSON.)—Find the condition that the three involutions determined by three pairs of points on the same base may have one focus in common.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10828. (Professor SYLVESTER.)—On a clay model of a hyperboloid of one sheet straight lines are to be drawn passing from a given point  $P$  to a given point  $Q$  situated at the other end of the diameter passing through  $P$ . Show that the number of such lines cannot be less than three, and find the length of the shortest course for that number.

10875. (Professor CROFTON, F.R.S.)—If there be any closed convex boundary of length  $L$ , and  $\theta$  be its apparent magnitude at any point  $(x, y)$ , and, if an endless string of length  $\gamma$  be passed round it, and kept stretched by a moving pencil which thus traces out an external boundary; prove that the value of the integral  $\iint \sin \theta dx dy$  extended over the annulus between the two boundaries is  $L(Y-L)$ . [If the given curve be an ellipse, the outer one, as is known, is a confocal ellipse.]

11237. (J. L. MACKENZIE, B.A., B.Sc.)—A small ball is dropped from a point at a level  $h$  inches above the highest point of a sphere of radius  $r$  inches. If the coefficient of restitution is  $e$ , find the chance that the ball will clear the sphere at the first rebound.

11270. (Professor B. O. PIERCE.)—If, in an indefinitely extended plane plate, which has one straight edge, there is a doublet of strength  $\mu$  at a distance  $a$  from this edge, and if the edge be taken as axis of  $y$ , and a line drawn through the doublet perpendicular to the edge as axis of  $x$ , the flow function is

$$\psi_1 = \frac{\pm 4a\mu xy}{[(x-a)^2 + y^2][(x+a)^2 + y^2]} \quad \text{or} \quad \psi_2 = \frac{\mp 2\mu x(x^2 + y^2 - a^2)}{[(x-a)^2 + y^2][(x+a)^2 + y^2][(x+a)^2 + y^2]}$$

according as the axis of the doublet coincides with the axis of  $x$  or is parallel to the axis of  $y$ . In the latter case there is no flow across the circumference which passes through the doublet and has the origin as centre.

11344. (D. BIDDLE.)—A sphere of radius  $r$  has projecting from its centre to a distance  $l$  beyond its surface a light straight pole. Find the locus of the extremity of the pole as the sphere oscillates on a horizontal plane; also the area enclosed.

11614. (H. J. WOODALL.)—Prove that, in any spherical triangle,  $\tan c = (\cot A \cot a + \cot B \cot b) / (\cot a \cot b - \cos A \cos B)$ .

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XIII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

# CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.  
 President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.  
 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.  
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS of MUTUAL LIFE ASSURANCE** without personal liability on highly favourable terms to  
**THE CLERGY AND THEIR RELATIVES.**

**ALL PROFITS BELONG TO THE MEMBERS.**

Accumulated Fund, **£4,242,820.** Annual Income, **£453,897.**

Bonuses Distributed, **£4,256,464.**

**LOW PREMIUMS. LARGE BONUSES.**

Notwithstanding the lowness of the Premiums charged, the **BONUSES** are on an **EXCEPTIONALLY HIGH SCALE.**

**NEW AND SPECIAL POLICIES.**

Application is invited for the **PROSPECTUS**, and Leaflets explaining two new Policies, with valuable Options.

**1. WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

**2. PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

**SPECIMEN OF RATES FOR £1,000, WITH PROFITS.**

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby **£10,000 a year is saved to the Members.**

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

## THE LATEST SELF-FILLING PEN, 1908 MODEL.

### SPECIAL OFFER.

One of the leading manufacturers of Gold Fountain Pens challenges to demonstrate that their Pens are the very best and have the largest sale, that no better article can be produced.

They offer to give away 25,000 of the latest Self-Filling and Self-Cleaning Perfection Fountain Pens, worth **15s.**, for **5s. 6d.**, as an Advertisement. Every part guaranteed for 2 years.

The Self-Filling and Self-Cleaning Perfection Fountain Pen is a marvel of Simplicity; it deserves to be popular. It is non-leakable, fills itself in an instant, cleans itself in a moment—a press, a fill. The massive 14-carat Gold Nib is iridium pointed and will last for years, and improves in use. Fine, medium, broad, or J points can be had.

It deserves to be popular, and is certain to be the Pen of the future. Every Pen is guaranteed, and money will be returned if not fully satisfied. Any of our readers desiring a really genuine article cannot do better than write to the Makers,

**RED LION MANUFACTURING CO., LTD.,**  
 71 High Holborn, London, W.C.,

and acquire this bargain.

The Exquisite Gold-Mounted Self-Filling Perfection Pen, in Plush Case, for **8s. 6d.** No other Pen like it for Reliability, Steady Flow, and Smooth Writing.

## EDUCATIONAL WORKS

By **A. K. ISBISTER, M.A., LL.B.**

(Late Dean of the College of Preceptors.)

Sixteenth Edition, with Map. 12mo.

**CESAR'S COMMENTARIES on the GALLIC WAR.**

- BOOKS I.-V. With Notes, Critical and Explanatory, a Vocabulary of all the Words in the Text, and *Easy Reading Lessons for Beginners* ..... price 3s. 6d.
- BOOKS I.-VII. do. do. .... 4s. 6d.
- Do (without the Reading Lessons) ..... 4s. 0d.
- Twenty-fifth Edition.
- BOOK I. (with Vocabulary, Reading Lessons, &c.) ... 1s. 6d.

Fourteenth Edition. 12mo, price 3s. 6d.

**XENOPHON'S ANABASIS, Books I. to III.** With Notes, Vocabulary of all the Words in the Text, and a *Series of Easy Reading Lessons for Beginners*. Designed as a First Greek Reading Book in Schools.

New Edition. 18mo, price 9d.

**THE ELEMENTS OF BOOK-KEEPING**, by SINGLE and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

4to, 1s. each.

**ENGRAVED ACCOUNT BOOKS.** Ruled and Interleaved for copying, adapted to the above.

- No. I. Business Forms. 1. Bills of Parcels and Book Debts. 2. Invoices. 3. Account Sales. 4. Receipts. 5. Promissory Notes and Drafts. 6. Bills of Exchange.
- No. II. Day-Book and Cash-Book.
- No. III. Ledger, Index, and Balance Sheet.

LONDON: LONGMANS & CO., PATERNOSTER ROW, E.C.

# A SCHOOL ARITHMETIC.

By **H. S. HALL, M.A.**,  
and **F. H. STEVENS, M.A.**

Complete, with Answers, 4s. 6d.; without Answers, 3s. 6d.  
Or in two parts—Part I., with Answers, 2s. 6d.; without Answers, 2s. Part II., with Answers, 2s. 6d.; without Answers, 2s. Answers, 1s. Key in preparation.

# Cambridge University Press

## Elementary Algebra for Secondary Schools

By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham. Crown 8vo. 6s.

The author's aim has been to prepare a text-book that may be of use in all but the highest classes of a secondary school. The subjects included are, for the most part, those which are common to all text-books of elementary algebra; but a few, such as indeterminate equations of the first degree, the remainder theorem and simple partial fractions, are introduced at an earlier stage than usual. The applications of graphs are confined to the illustrations which they afford of the methods of solving simultaneous equations and of the theory of quadratic equations and expressions. In the solution of simultaneous quadratic equations, they are especially useful, as they serve to show the geometrical meaning of every step in the process employed.

## Modern Geometry

By C. GODFREY, M.A., Head Master of the Royal Naval College, Osborne, and A. W. SIDONS, M.A., Assistant Master at Harrow School. Crown 8vo. 4s. 6d.

The present volume is a sequel to the "Elementary Geometry" written by the same authors. It covers the schedule of Plane Geometry required for the Special Examination in Mathematics for the Ordinary B.A. Degree at Cambridge; and represents what the authors take to be a useful course for any student of Mathematics, whether he intends to read for Mathematical Honours or to take up Physics or Engineering. For those who ultimately make a special study of Geometry, this book would serve as an introduction to more advanced treatises.

## BOOKS SUITABLE FOR COLLEGE OF PRECEPTORS EXAMINATIONS Midsummer and Christmas, 1909

### The Pitt Press Shakespeare for Schools

With Introduction, Notes, and Glossary, by A. W. VERITY, M.A.

#### Shakespeare.—The Tempest

Sixth Edition. 1s. 6d.

"Mr. A. W. Verity possesses learning, literary insight, and a facile pen. He has a knowledge of boys and sympathy with their difficulties; moreover, when writing for them he seldom loses himself in his subject to the extent of forgetting his audience. Consequently, as has been shown in these columns on more than one occasion, he is an almost ideal editor of school texts."—*Guardian*.

#### Shakespeare.—Julius Caesar

Tenth Edition. 1s. 6d.

"Another of Mr. Verity's admirable school editions of Shakespeare's plays."—*Guardian*.

### The Pitt Press Series

#### Chaucer.—The Prologue and The Knight's Tale

Edited, with Introduction, Notes, and Vocabulary, by M. BENTINCK SMITH, M.A. Fcap. 8vo, 2s. 6d.

Portions of the Introduction have been written with a view to the teacher rather than the pupil, the editor's aim being to give, in a concise form, the materials which the teacher requires to have at his disposal if the taught are to obtain an adequate conception of Chaucer's importance in the history of English literature and language. A short bibliography containing a list of authorities has been appended.

#### Macaulay.—The Lays of Ancient Rome, and other Poems

Edited by J. H. FLATHER, M.A. 1s. 6d.

"Is in thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macaulay himself. . . . The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done."—*School World*.

#### Scott.—The Lay of the Last Minstrel

Edited by J. H. FLATHER, M.A. Second Edition. 2s.

"One of the very best edited school-texts ever placed before the public."—*Guardian*.

### The Cambridge School History of England

#### History of England for Use in Schools

By ARTHUR D. INNES, M.A., formerly Scholar of Oriol College, Oxford. Crown 8vo, with 13 Maps and 8 Plans, 4s. 6d. Also in Three separate Parts, 2s. each. (Part I, to 1509 A.D.; Part II, 1509-1714; Part III, 1689-1901.)

A separate Part is also issued covering the period "From the Wars of the Roses to the Death of Elizabeth" (1399-1603). Price 2s.

"Though written primarily as a school history, this volume of some 600 pages may well be recommended to the average reader as a standard book of reference for facts and dates in English history. Proportion, thoroughness, and accuracy of detail are its outstanding features, while for the student the demands of the examiner have been kept steadily in view."—*Glasgow Herald*.

BOOK	EDITOR	PRICE s. d.
Gospel according to St. Matthew	Rev. A. CARR	net 1 6

"The most approved results of recent Biblical criticism are embodied in the splendid notes; but, independent of its intrinsic value, there are three artistic maps incorporated in the text. An edition as remarkable for its elegance as for its high utility."—*School World*.

A Catalogue of New and Standard Books for Schools will be sent on application.

LONDON: CAMBRIDGE UNIVERSITY PRESS WAREHOUSE, FETTER LANE. C. F. CLAY, Manager.

# CLASS LISTS

## OF CANDIDATES WHO HAVE PASSED THE CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS.—MIDSUMMER, 1908.

The list of successful candidates at the Colonial Centres will be published in the October number of "The Educational Times."

[Throughout the following Lists, bracketing of names implies equality.]

### PRIZES.

#### General Proficiency.

- FIRST CLASS [or SENIOR].**  
 1. Condrup, C. O. (Isbister Prize.)  
 2. Ellis, H. G. (Pinches Prize.)  
 3. Perkins, L. C.  
 4. James, G. D.
- SECOND CLASS [or JUNIOR].**  
 1. Quinton, C. J.  
 2. Radford, G. D.  
 3. Childs, R. J.  
 4. Steed, H. D.
- THIRD CLASS.**  
 1. Grover, S. A.  
 2. Watts, T.  
 3. Mathews, Miss S. E.  
 4. Holmes, C. W. D.

#### English Subjects.

1. Ellis, H. G.  
 2. (Dixon, Miss R. J. / Hamson, Miss May)

#### Mathematics.

1. Perkins, L. C.  
 2. Gibbs, E. W.

#### Modern Foreign Languages.

1. Ableidinger, Miss M.  
 2. Gorrity, F.

#### \*Classics.

1. (Daphtary, C. K. / Gardiner, J. T.)

#### Natural Sciences.

1. Condrup, C. O.  
 2. Course, P. R.

#### Taylor Jones Prize for Scripture History.

- Dixon, Miss R. J.

#### Pitman Medals for Shorthand.

1. Hynes, J. E. (Silver Medal.)  
 2. Wells, F. G. (Bronze Medal.)

\* H. C. Sheldon was disqualified for the First Prize for Classics, having obtained it at a previous Examination.

The following is a List of the Candidates who obtained the FIRST and SECOND PLACES in each Subject on FIRST CLASS PAPERS. (Only those who obtained Distinction are included.)

<p><b>Scripture History.</b></p> <p>1. Dixon, Miss R. J. Ladies' College, Wellington, Salop.                      2. (Ellis, H. G. / Sheldon, H. C.) Devonport P.-T. Centre. Ruthin Grammar School.</p> <p><b>English Language.</b></p> <p>1. Durante, J. Christian Brothers' College, Gibraltar.                      (Dixon, Miss E. J. / Evans, Miss E. T.) Ladies' College, Wellington, Salop.                      Guise, E. S. Redditch Secondary School.                      2. (Gullick, Miss E. K. / Hamson, Miss May) Private tuition.                      Seddon, F. L. English High School for Girls, Pera, Constantinople.                      Synons, A. Queen Elizabeth's Grammar School, Ashbourne. Private tuition.</p> <p><b>English History.</b></p> <p>1. Ellis, H. G. Devonport P.-T. Centre.                      2. Dixon, Miss R. J. Ladies' College, Wellington, Salop.</p> <p><b>Geography.</b></p> <p>1. Wakeley, H. E. Devonport P.-T. Centre.                      (Burrows, W. A. / Condrup, C. O.) Private tuition. Tollington School, Muswell Hill, N.                      2. Ivens, L. F. St. Aloysius' College, Hornsey Lane, N.                      (Seager, H. L. E.) University School, Rochester.</p> <p><b>Arithmetic.</b></p> <p>1. Hynes, J. E. Xaverian College, Manchester.                      2. Waller, F. W. Tollington Park College, N.</p> <p><b>Algebra.</b></p> <p>1. Geary, A. Market Bosworth Grammar School.                      2. Taylor, F. C. New College, Herne Bay.</p> <p><b>Geometry.</b></p> <p>1. SEPTEMBER 1, 1908.

Published Monthly, price, to Non-Members, 6d.; by Post, 7d. Annual Subscription, 7s.

## COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

### LECTURES FOR TEACHERS.

On Thursday, 1st of October, JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London, will commence a Course of Twelve Lectures on

#### "THE PRACTICAL TEACHER'S PROBLEMS."

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools. The Lectures will be given on Thursday Evenings at 7, beginning on October 1st.

For Syllabus, see page 378.

The Fee for the Course is Half-a-Guinea.

Members of the College have free admission to this Course.

### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will commence on the 28th of December, 1908.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in October.

**Certificate Examinations.**—The Christmas Examination for Certificates will commence on the 8th of December, 1908.

**Lower Forms Examinations.**—The Christmas Examination will commence on the 8th of December, 1908.

**Professional Preliminary Examinations.**—These Examinations are held in March and September. The Spring Examination in 1909 will commence on the 2nd of March.

**Inspection and Examination of Schools.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. E. HODGSON, B.A., Secretary.

Bloomsbury Square, W.C.

## UNIVERSITY OF ST. ANDREWS.

### L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

## LONDON COLLEGE OF MUSIC. (Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

Patron: HIS GRACE THE DUKE OF LEEDS.

Dr. F. J. KERN, Mus. Bac. Cantab., Principal.

G. AUGUSTUS HOLMES, Esq., Director of Examinations  
EXAMINATIONS, 1908.

The NEXT EXAMINATION in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 400 Provincial Centres in DECEMBER, when Certificates will be granted to all successful candidates.

The Higher Examinations for the Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma, L.C.M., and Fellowship (F.L.C.M.) also take place in DECEMBER.

Gold and Silver Medals and Book Prizes are offered for competition according to the Regulations.

LOCAL SCHOOL CENTRES.—Full particulars with reference to the formation of these Centres will be forwarded to Principals of Schools upon application.

SYLLABUS for 1908, together with Annual Report, may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best Professors at moderate fees. The College is open 10 a.m. to 9.30 p.m.

A COURSE of TRAINING in Pianoforte and Singing for Teachers is held at the College.

VACATION LESSONS for Teachers and others are given at Easter, August, and Christmas.

T. WEEKES HOLMES, Secretary.

## Diploma Correspondence College, Ltd.

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—Sir H. R. BICHSEL, M.A., LL.D.

Next Session begins September 29th, 1908. The College Courses are arranged with reference to the Degrees of the University of Wales; they include most of the subjects for the B.Sc. Degree of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture (including Forestry) and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional fee for ordinary Arts Course, £11. 1s.; for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students; fee, from Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses apply to

JOHN EDWARD LLOYD, M.A.,

Secretary and Registrar.

### THE INCORPORATED

### FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Recognised by the Board of Education as a Training College for Secondary Teachers.

Chairman of the Committee—Sir W. MATHER.

Treasurer—Mr. C. G. MONTFIORE, M.A.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

### TRAINING COLLEGE FOR TEACHERS.

Principal—Miss B. LAWRENCE.

### KINDERGARTEN AND SCHOOL.

Head Mistress—Miss A. YELLAND.

Students are trained for the Examinations of the National Froebel Union and other Examinations.

TWO SCHOLARSHIPS of £20 each, and two of £15 each, tenable for two years at the Institute, are offered annually to Women Students who have passed certain recognized Examinations.

Prospectuses can be obtained from the PRINCIPAL.

### ABERDARE HALL, CARDIFF.— RESIDENCE FOR WOMEN STUDENTS OF THE UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.

Principal—Miss KATE HURLBATT.

Fees £42. 10s., £36, and £32 per annum. College tuition fees £10 per annum. Scholarships of £40, £25, and £15, and Exhibitions of £10, awarded on the result of Scholarship Examination of University College, Cardiff, to be held in September. Students prepare for the B.A. and B.Sc. Degrees of the University of Wales, and a Medical School and Department for Secondary, Elementary, and Kindergarten Training are attached to the College. Students with recognized academic qualifications can enter in October or January, for one year's Secondary Training Course. Apply to the PRINCIPAL.

- COLLEGE OF PRECEPTORS' DIPLOMAS.

Address—THE PRINCIPAL,  
Burlington Correspondence College,  
CLAPHAM COMMON, LONDON, S.W.

Messrs. **TRUMAN & KNIGHTLEY, LTD.**

Educational Agents,

158 to 162 OXFORD STREET,  
LONDON, W.

Telegrams—"TUTORESS, LONDON."  
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

**A.—EMPLOYMENT DEPARTMENT.**

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

**ENGINEERING AND TECHNICAL OPTICS.****NORTHAMPTON POLYTECHNIC INSTITUTE,**  
CLERKENWELL, LONDON, E.C.**ENGINEERING DAY COURSES IN MECHANICAL, ELECTRICAL, and HOROLOGICAL ENGINEERING.**

Full Day Courses in the Theory and Practice of the above will commence on Monday, 5th October, 1908. ENTRANCE EXAMINATIONS on Wednesday and Thursday, 30th September and 1st October, at which FOUR ENTRANCE SCHOLARSHIPS will be offered. Courses of Instruction are provided for the ENTIRE MEDICAL CURRICULUM for the Degrees of the Universities, for the Diplomas of M.B.C.S., I.R.C.P., and for the Government Medical Services.

A PRELIMINARY SCIENTIFIC COURSE will commence on October 2nd.

SIX ENTRANCE SCHOLARSHIPS in Natural Science, £145 to £52. 10s., competed for in September. Complete Handbook on application to the DEAN.

## KING'S COLLEGE, LONDON. (UNIVERSITY OF LONDON.)

### EVENING CLASS DEPARTMENT.

Courses are arranged for the Intermediate and Final Examinations for the B.A. and B.Sc. Degrees of the University of London. Students taking the full Course pay Composition Fees and rank as Internal Students of the University.

EVENING CLASSES are also held for Mechanical and Electrical Engineering, Architecture and Building Construction, Drawing, Mathematics, Physics, and all Science Subjects.

For full information and Prospectus apply to the Dean (Mr. R. W. K. EDWARDS) or to the SECRETARY, King's College, Strand, London, W.C.

## KING'S COLLEGE, LONDON. (UNIVERSITY OF LONDON.)

The General Education at King's College, London, is conducted in several distinct but connected Faculties and Departments, viz.:-

1. THE FACULTY OF THEOLOGY.—(1) Morning Course; (2) Evening Course.
2. THE FACULTY OF ARTS, including (1) General Literature, Secondary Teachers' Training Course, Day Training College, and Oriental Studies; (2) The Department of Architecture; (3) Division of Laws, Day and Evening Classes.
3. THE FACULTY OF SCIENCE.—(1) Natural Science Division (Day and Evening Classes); (2) Medical Division (Preliminary and Intermediate Studies); (3) Department of Bacteriology; (4) Department of Public Health.
4. THE FACULTY OF ENGINEERING (including Mechanical, Electrical, and Civil Engineering). Day and Evening Classes.
5. THE FACULTY OF MEDICINE (Advanced Medical Studies at King's College Hospital).
6. THE WOMEN'S DEPARTMENT (at 13 Kensington Square).
7. KING'S COLLEGE SCHOOL (Wimbledon Common).
8. THE CIVIL SERVICE DEPARTMENT.—(1) Evening Classes for the Civil Service; (2) Day Classes for Female Appointments in G.P.O.
9. STRAND SCHOOL, suitable for Commerce, the Professions, and the Civil Service.

A separate Prospectus is prepared for each of these Faculties and Departments, and will be forwarded on application to the SECRETARY, King's College, Strand, W.C.

## KING'S COLLEGE, LONDON. (UNIVERSITY OF LONDON.)

### FACULTY OF ENGINEERING AND APPLIED SCIENCE AND DIVISION OF ARCHITECTURE.

SESSION 1908-9 COMMENCES WEDNESDAY, SEPTEMBER 30TH.

#### Professors:—

Engineering ... ..	David S. Capper, M.A., M.Inst.O.E., M.I.M.E. H. M. Waynforth, A.M.Inst.C.E., A.M.I.M.E. M. Curry, M.Inst.C.E.
Electrical Engineering	E. Wilson, M.I.E.E.
Natural Philosophy ...	H. Wilson, D.Sc.
Architecture ... ..	E. Elsey Smith, A.R.I.B.A.
Chemistry ... ..	J. M. Thomson, F.R.S., F.I.C. H. Jackson, F.I.C.
Mathematics ... ..	S. A. F. White, M.A. J. B. Dale, M.A.
Metallurgy ... ..	A. K. Huntington, A.R.S.M., M.I.M.E.
Geology & Mineralogy	H. G. Seeley, F.R.S.

Large Staff of Lecturers and Demonstrators.

#### EVENING CLASSES

are held for Mechanical and Electrical Engineering, Architecture and Building Construction, Drawing, Mathematics, Physics, and other Science Subjects.

For Prospectuses and all information apply to the SECRETARY, King's College, Strand, W.C.

## KING'S COLLEGE, LONDON. (UNIVERSITY OF LONDON.)

### DEPARTMENT FOR TRAINING TEACHERS FOR SECONDARY SCHOOLS.

Theory, Practice, and History of Education:  
J. W. ADAMSON, B.A., Professor of Education (Head of the Department).

#### Ethics:

Rev. A. CALDECOTT, D.Lit., D.D., Professor of Mental and Moral Philosophy.

#### Psychology:

C. S. MYERS, M.A., M.D., Professor of Psychology.

The Department is recognized by the Board of Education as a Training College for Secondary Teachers. The Course, which includes practical work in Secondary Schools, extends over one academic year, beginning in October or January. It is suitable for those who are preparing to take the Teacher's Diploma, University of London, or the Certificate of the Teachers' Training Syndicate, University of Cambridge.

The fee is £20 for the year, if paid in advance, or 8 guineas per term (three terms in the year).

Two Scholarships of £20 each for one year, tenable from October 1, 1908, are offered to suitable Candidates (men) who are Graduates of a British University.

Application should be made to Prof. ADAMSON, King's College, Strand, W.C.

## KING'S COLLEGE, LONDON.

### CLASSES FOR THE LONDON UNIVERSITY MATRICULATION AND PROFESSIONAL PRELIMINARY EXAMINATIONS.

Individual Tuition in all subjects required for the Examinations. Fee for Half-yearly Course £3. 3s. Students may join at any time at proportional fees.

Apply to the SECRETARY, King's College, Strand, W.C.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Hours for interviews (preferably by appointment):—

11 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

## THE JOINT SCHOLASTIC AGENCY.

23 Southampton Street, Bloomsbury Square, W.C.

Managed by a Committee of Representatives of the following Bodies:—

#### HEAD MASTERS' CONFERENCE.

- INCORPORATED ASSOCIATION OF HEAD MASTERS.
- COLLEGE OF PRECEPTORS. TEACHERS' GUILD.
- INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.
- ASSOCIATION OF TECHNICAL INSTITUTIONS.
- ASSOCIATION OF PREPARATORY SCHOOLS.
- WELSH COUNTY SCHOOLS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments.

The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION. Interviews (preferably by appointment) 12 p.m.—1.30 p.m., and 3 p.m.—5.30 p.m. Saturdays, 12 p.m.—1 p.m.

#### JUST PUBLISHED.

offered in numbers at very Low Prices; with an Addendum consisting of Recently Purchased Classical Books, Lexicons, &c.

Gratis and post free from H. G. GADNEY, Second-hand Bookseller, 2 and 3 Turl Street, Oxford.

## THE HAMILTONIAN SYSTEM.

A Short and Easy Method of Learning a Foreign Language by a Close Interlinear Translation.

"This System differs from the ordinary literal translations, in giving a truly literal translation placed word for word under the words of the original, which are only so far changed in order as seemed essential to the sense. The aim is to be strictly literal, and the student is at once saved all trouble about the meaning of each word."  
—Mr. RICHARD A. PROCTOR, in *Knowledge*.

Limp cloth, price 1s.

CAESAR'S GALLIC WAR. Book I. With Text as well as Interlinear Translation.

Books I. to VI. Price 4s. 6d.

VIRGIL'S AENEID. Books I. to IV. Price 3s. 6d.

EUROPIUS. Limp cloth, price 1s. 6d.

FLORIAN'S FABLES. Limp cloth, price 1s.

FERRIN'S FABLES. Limp cloth, price 1s. 6d.

"Calendar."

FRANCIS HODGSON, 89 FARRINGTON STREET, LONDON, E.C.

# MR. EDWARD ARNOLD'S NEW SCHOOL BOOKS.

## ENGLISH.

**Grammatical English.** By F. W. G. FOAT, D.Lit., M.A.,  
Lecturer in English at the City of London College and Assistant  
Master in the City of London School. Crown 8vo, cloth, 3s. 6d.

The aim of the book is to supply a general introduction to the subject of English, in the form of practical assistance towards the formation of those habits of mind and the attainment of that permanent attitude of thought which are indispensable alike to the student of grammar and to those who must write and speak correctly in the ordinary business of life.

**Chips from a Bookshelf.** A Reading Book for Junior Forms.  
Uniform with "In Golden Realms." Edited by H. B. BROWNE.  
Illustrated with Reproductions of well known Pictures. 1s. 3d.

**Practical Spelling.** Book I., price 2d.; Book II., price 3d.

The aim of these little books is to give a graded course of lessons which will enable the young pupil to reproduce correctly the words used by himself when speaking and writing.

**Dramatic Scenes from History.** By FANNY JOHNSON, formerly  
Head Mistress of the Bolton Girls' High School. Illustrated.  
Crown 8vo, cloth, 1s. 6d.

The author has endeavoured to cover, as far as space allowed, all the principal epochs in their order, from the Conversion of England (in the dialogue of "Edwin" and "Paulinus") to the England of George III. (in the dialogue from "Boswell").

## MODERN LANGUAGES.

**Petite Grammaire Française.** Par E. RENAULT, Officier  
d'Académie; Assistant Lecturer at the University of Liverpool.  
Crown 8vo, cloth, 1s. 6d.

This book is specially written for Junior Classes, easy French words being used whenever possible. Accidence and syntax are treated together, and those parts of grammar are dealt with which a beginner needs.

**The Alphonse Daudet Reading Book.** Récit biographique  
et Extraits de ses Œuvres. Edited by JETTA S. WOLFF, Author of  
"Les Français en Ménage," &c. 1s. 6d.

**Les Deux Prisonniers.** By RODOLPHE TÖPFFER. Edited by  
W. H. HODGES, M.A., St. Lawrence College, Ramsgate.  
Crown 8vo, cloth, 1s.

**Scènes Infantines.** By KÄTE WEBER, Author of "Vier Kleine  
Lustspiele für die Jugend." With Vocabulary. Crown 8vo, cloth,  
1s. 3d.

Eight short plays, for reading or acting. They are all written in very simple language, suitable for quite young children.

**Herr Peter Squenz.** By ANDREAS GRYPHIUS. Edited, with  
Introduction, Notes, and Exercises for Retranslation, by SYDNEY  
H. MOORE. Crown 8vo, cloth, 2s.

This text, which is full of interest from beginning to end, has also been chosen for its great literary value in the hope that it may help the tendency to make Modern Languages as great a factor in the promotion of "humanistic" education as the study of the classics.

**A First Spanish Book.** By H. J. CHAYTOR, M.A., Head  
Master of Plymouth College. With Exercises and Full Vocabulary.  
224 pages. Crown 8vo, cloth, 2s. 6d.

## LATIN.

The two following books, together with Mr. Witton's "Dies Romani," contain all that a boy needs for three or four years' work at Latin, beyond a dictionary and a master.

**Compendium Latinum.** By W. F. WITTON, Classical Master at  
St. Olave's Grammar School. 2s. 6d.

**Simplified Caesar.** A First Latin Reader and Exercise Book.  
By W. F. WITTON. 1s. 6d.

## SCIENCE.

**General Elementary Botany.** By E. DRABBLE, D.Sc.,  
Lecturer in Botany at the University of Liverpool. Crown 8vo,  
cloth, 2s. 6d.

**Workshop Science.** By R. J. BROWN, M.Sc., Principal of Stock-  
port Municipal Technical School. Crown 8vo, cloth, 1s. 6d.

# Messrs. BELL'S NEW BOOKS

MESSRS. BAKER AND BOURNE'S NEW WORK.

JUST PUBLISHED. Crown 8vo, 1s. 6d.

## ELEMENTARY MENSURATION.

By **W. M. BAKER, M.A.**, and **A. A. BOURNE, M.A.**

The intention of the authors has been to make the subject of Mensuration accessible to those who know no mathematics except elementary Arithmetic, though the book will doubtless prove useful also to the more advanced.

The object might have been partially attained by the plan, usual in beginners' books on Mensuration, of giving formulæ without proofs. In the present book this "rule of thumb" method has been avoided as far as practicable. With very few exceptions the formulæ are accompanied by easy proofs. It is hoped that through such treatment formulæ will be more intelligently grasped and more easily retained. Although the character of the book is elementary, its range is fairly complete, and it will be found useful for all examinations where elementary Mensuration is required.

## MASON'S NEW ENGLISH GRAMMARS.

Revised, in accordance with modern requirements, by

**A. J. ASHTON, M.A.**,

Senior English Master, Kelvinside Academy, Glasgow; and Examiner in English to the College of Preceptors.

## AN INTRODUCTION TO ENGLISH LITERATURE.

By **HENRY S. PANCOAST.**

For this edition the first half of the book has been practically rewritten, and the chapters on the Early and Middle English periods have been much enlarged. Greater space has also been given to the Queen Anne and Victorian periods.

London: GEORGE BELL & SONS, York House, Portugal Street, W.C.

# Mr. Pendlebury's New Arithmetics.

FIFTH EDITION NOW READY.

## PENDLEBURY'S NEW SCHOOL ARITHMETIC

By CHARLES PENDLEBURY, M.A.; Assisted by F. S. ROBINSON, M.A., Assistant Master at St. Paul's School.

*This book is published in the following forms:—*

Complete, with or without Answers, 4s. 6d.	Part II., with or without Answers, 2s. 6d.
Part I., with or without Answers, 2s. 6d.	The Answers may be had separately, 6d. net.
KEY to Part II., 8s. 6d. net.	

In this book the Metric System of Weights and Measures is given a prominent position; Graphical Illustrations are used freely, and the general use of Graphs is treated in a separate section. Approximations and Decimalisation of Money are also treated fully. Algebraical Symbols are used where convenient, and stress is laid on the practical side of the subject. There are sections on Mensuration and on Logarithms.

*Athenæum.*—"The new sections on graphs, mensuration, and logarithms add considerably to the value of the book, which in this form is unrivalled."

SECOND EDITION.

## PENDLEBURY'S NEW SCHOOL EXAMPLES IN ARITHMETIC.

EXTRACTED FROM THE ABOVE ARITHMETIC.

With or without Answers, 3s.; or, in Two Parts without Answers, Part I., 1s. 6d.; Part II., 2s.

SECOND EDITION.

### PENDLEBURY'S JUNIOR ARITHMETIC.

Price 1s. 6d.; or, with Answers, 2s.

This book carries out the recommendations of the Mathematical Association. Graphical Illustrations have been employed wherever suitable, and the Metric System has been introduced at an early stage, and the new order of multiplication has been adopted throughout. It will be found specially suitable for the middle and lower forms of Secondary Schools, and is adapted especially for the use of candidates for the Oxford and Cambridge Local Examinations, Scotch Leaving Certificate Examinations, County Council Scholarships, College of Preceptors' Examinations, &c.

SECOND EDITION.

### PENDLEBURY'S NEW SHILLING ARITHMETIC.

Price 1s.; or, with Answers, 1s. 4d.

This book is identical with the "Junior Arithmetic," save that all treatment of the first four rules, except for a range of revision exercises, has been omitted.

### PENDLEBURY'S EXAMPLES FROM A JUNIOR ARITHMETIC.

Price 1s.; or, with Answers, 1s. 6d.

### COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, LONDON, W.C.

### Lectures for Teachers

ON THE

### SCIENCE, ART, AND HISTORY OF EDUCATION.

#### THE PRACTICAL TEACHER'S PROBLEMS.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The Second Course of Lectures (Thirty-sixth Annual Series) will commence on Thursday, October 1st, at 7 p.m.

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

#### SYLLABUS.

I. (Oct. 1.) *The Teacher's Library*: three main sections, books needed by teacher as (a) human being, (b) knowledge-monger, (c) educator: (a) and (c) too often neglected: special value of books used by teacher during childhood: the upper and lower limit of professional books under (c): possibility of excess in educational theory: plea for greater recognition of newer class of literary presentations of educational problems: teaching "the inarticulate profession": practical help that may be had from such books: how to use educational periodicals.

II. (Oct. 8.) *How to get some good out of Psychology*: need for a change in the point of view: rational and experimental psychology: need of both by the teacher: danger of pedantry in both: place of the proposed middleman between the psychologist and the practical teacher: the teacher must be allowed to direct the psychologist (not the psychologist the teacher) as to the results to be sought: list of things the teacher wants to know, compared with the list of things the psychologist wants to tell him: teacher must not confine himself to child-psychology, his profession demands the treatment of his fellow adults as well.

III. (Oct. 15.) *How to deal with Officials*: an example of the teacher's need of adult psychology: the difference between the human being and the official: the invariable third: official questions and answers: how to interpret them: the official mind and how to approach it: an instructive bit of law: the official art of compromise: manipulation of conflicting official regulations: the whole question reviewed from the point of view of the teacher as himself an official.

IV. (Oct. 22.) *How to deal with Parents*: generally wrong attitude of teachers towards parents: *in loco parentis* theory: "foster parent": getting at parents through children and *vice versa*: parents' antagonism to school authority has

definite relation to their social rank: special difficulties of different classes of teachers: conflicting influences of fathers and mothers: genuine co-operation between school and home: golden mean between parental indifference and interference.

V. (Oct. 29.) *How to Learn*: the other side of teaching: absence of the desire to know: how to rouse it: even when desire is present there is difficulty enough: kinds of learning: reproduction: the dynamic view: constructive learning: rhythm of learning: concentration and diffusion: fallacies about thoroughness: temporary and permanent learning.

VI. (Nov. 5.) *Class Management and Teaching*: ordinary psychology deals with the individual: teacher needs collective psychology as well: relation of class to crowd or mob: minimum number to constitute a class: sympathy of numbers: class leaders: difference between class teaching and private coaching: advantages and difficulties in having to teach several persons at the same time: the average pupil: the type: the composite: the ghostly class.

VII. (Nov. 12.) *How to combine Lecturing and Teaching*: teachers' general disapproval of lecturing: nature of lecturing as opposed to teaching: newer methods of teaching history, geography, and geometry are demanding a certain amount of lecturing: dangers of lecturing in schools as compared with colleges: the pupils' share in the process of lecturing: the art of listening: intermittent hearing: the lecturer's relation to the text-book.

VIII. (Nov. 19.) *Written work in School*: absolute necessity for a good deal of written work in school: note-taking, exercise writing, essays: drudgery of correction: the surd of efficient correction in (a) quantity, (b) quality: co-operative correction: psychological dangers of correction: the norm of correction: spelling and dictation exercises: analysis of most common errors and their causes.

IX. (Nov. 26.) *Verbal Illustration*: nature of illustration in general: distinction from exposition: mental backgrounds: relativity of illustration to the materials at command: exemplification: enumeration: nature of analogy and its place in illustration: the metaphor and other illustrative figures: how to find suitable verbal illustrations: source books of illustration.

X. (Dec. 3.) *Graphic Illustration*: the actual object and the model as means of illustration: the value of the picture as illustration, especially as compared with a verbal description: different illustrative values of a picture according as it is used for intellectual, moral, or aesthetic teaching: the diagram as compared with the picture: dangers that lurk in diagrammatic illustration: certain weaknesses in our space sense: supremacy of the straight line in illustration.

XI. (Dec. 10.) *How to deal with Dullness*: nature of dullness: its relativity to time and subject: the temporary dunce: the permanent dunce: the all-round dunce: the specialized dunce: the scale of dullness: the "defective point": subjective and objective dullness: stage at which objective dullness is welcomed by the pupil: the tyranny of "problems," and the legitimate claims of the relatively dull.

XII. (Dec. 17.) *The Problem of Examinations*: various functions of examinations: teacher as examiner: how to prepare an examination paper: allocation of marks: how to make the best of the external examiner: the personal equation: the use of "old examination papers": preparation of "set books": "the index" in revision of examination work: how to prepare pupils for an external examination with the minimum educational damage.

**The Fee for the Course of Twelve Lectures is Half-a-Guinea.**

\*.\* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.

# From Messrs. METHUEN'S NEW LIST

## A HISTORY OF GREAT BRITAIN: From the Coming of the Angles to the Year 1870.

By E. M. WILMOT-BUXTON, Author of "Makers of Europe." With 20 Maps. Crown 8vo, 3s. 6d.

This book attempts to break through the conventional lines on which History class-books are laid down. With very few exceptions these books make the reign the chapter-limit, and take each event in chronological order. In this book each chapter will be found to deal with one great movement, which is traced in cause, events, and result. Another feature is the close connexion which has been maintained throughout with European History.

## A SHORT HISTORY OF GREECE, to the Death of Alexander the Great. By WALTER S. HETT, B.A., Assistant Master at Brighton College. With Maps. Crown 8vo, 3s. 6d.

This book is intended primarily for the use of students reading for the Oxford and Cambridge Higher Certificate, and secondarily as an introduction to a wider study of the subject.

## A SCHOOL LATIN GRAMMAR. By H. G. FORD, M.A., of Bristol Grammar School. Crown 8vo, 2s. 6d.

The author has endeavoured to simplify both accidence and syntax. Both in the accidence and syntax what is essential for beginners is carefully separated, by a system of typing or paging, from what they may neglect. The book may thus be used by boys of all forms.

## A JUNIOR LATIN PROSE. By H. N. ASMAN, M.A., B.D., of Owen's School, Islington. Crown 8vo, 2s. 6d.

The "Junior Latin Prose" is written primarily, though not exclusively, with a view to the Junior Locals. It contains explanation of, and exercises on, the chief rules of Syntax, with special attention to points which cause difficulty to boys, and concludes with exercises in Continuous Prose.

## EXAMPLES IN ELEMENTARY MECHANICS, Practical, Graphical, and Theoretical.

By W. J. DOBBS, M.A., Author of "Elementary Statics." With 51 Diagrams. Crown 8vo, 5s.

[Text-books of Science.]

This book is intended for use at Schools and Technical Institutes, for Army and Navy Candidates, and Students of Engineering. It consists of some 1400 examples in Elementary Statics and Kinetics, and is designed for use without an accompanying text-book.

## AN ORGANIC CHEMISTRY for Schools and Technical Institutes. By A. E. DUNSTAN, B.Sc. (Lond.), F.C.S., Head of the Chemical Department, East Ham Technical College. With many Illustrations. Crown 8vo, 2s. 6d. [Text-books of Science.]

This new book, which has not been prepared to meet the requirements of any particular examining body, is intended for the use of the higher forms of schools taking the Special Science Course, and as a first year text-book in Technical Institutes.

## FIRST YEAR PHYSICS. By C. E. JACKSON, M.A., Senior Physics Master, Bradford Grammar School. With 51 Illustrations and numerous Examples. Crown 8vo, 1s. 6d. [Text-books of Science.]

This book deals with such subjects as may reasonably be included in a first year course of Physics for Secondary Schools—the processes of measurement and the elementary principles of Hydrostatics and Mechanics. It is an attempt on the part of the author to provide a text-book which shall be a useful supplement to the lessons of the classroom and at the same time direct the experimental work of the laboratory.

## JUNIOR ENGLISH. By F. J. RAHTZ, M.A., B.Sc., Lecturer in English at the Merchant Venturers' Technical College, Bristol. Author of "Higher English." 1s. 6d.

This book is intended for the Lower Forms (First and Second Years) of Secondary Schools. It deals with grammar, the construction of phrase and sentence, analysis, parsing, expansion, condensation, composition, paraphrasing, and many other exercises in the use of English.

## ENGLISH LIFE 300 YEARS AGO: Being the first two chapters of Mr. G. M. Trevelyan's "England under the Stuarts." Edited by J. TURRAL, B.A., Head Master of the Blackpool Secondary School. Crown 8vo, 1s.

This little book will be a welcome and useful addition to the prose books for the year in the English Literature of Middle and Upper Forms of Secondary Schools.

## A PRELIMINARY GEOMETRY. By NOEL S. LYDON, of Owen's School, Islington, Author of "A Junior Geometry." With 159 Diagrams. Crown 8vo, 1s.

This book is intended for the use of beginners. The treatment of the subject is mainly experimental and practical, and the ground covered is sufficient to enable the pupil to pass to the study of a formal course of theorems.

## METHUEN'S SIMPLIFIED FRENCH TEXTS

Edited by T. R. N. CROFTS, M.A. 1s. each.

Simple translation books which provide complete stories instead of a succession of little anecdotes. Vocabularies have been added, in which the chief idioms are explained.

**L'Histoire d'une Tulipe.** Adapted by T. R. N. CROFTS, M.A.

**Abdallah.** By E. LABOULAYE. Adapted by Mrs. J. A. WILSON.

**La Chanson de Roland.** Adapted by H. RIEU, M.A.

**Mémoires de Cadichon.** Adapted by J. F. RHOADES.

**Le Docteur Matheus.** Adapted by W. P. FULLER, M.A.

**L'Equipage de la Belle Nivernaise.** Founded on Daudet's "La Belle Nivernaise." Adapted by T. R. N. CROFTS, M.A.

**La Bouillie au Miel.** Adapted by P. B. INGHAM, B.A.

**Jean Valjean.** Adapted by F. W. M. DRAPER, B.A.

**L'Histoire de Pierre et Camille.** Adapted by J. B. PATTERSON, M.A.

**La Bataille de Waterloo.** Adapted by G. H. EVANS, M.A.

**Remy, Le Chevrier.** Adapted by E. C. CHOTTIN, B. ès L.

## METHUEN'S SIMPLIFIED GERMAN TEXTS

Edited by T. R. N. CROFTS, M.A. 1s. each.

A series of German texts, uniform with the French texts above.

**Der Müller am Rhein.** Founded on Brentano's Märchen "Von dem Rhein und dem Müller Radlauf." Adapted by Miss A. F. RYAN.

**Undine und Huldbrand.** Founded on Fouqué's "Undine." Adapted by T. R. N. CROFTS, M.A.

**Die Geschichte von Peter Schlemihl.** Founded on Chamisso's "Peter Schlemihl's wundersame Geschichte." Adapted by R. C. PERRY, M.A.

**Die Nothelfer.** Founded on "Die Vierzehn Nothelfer," by W. H. Eiehl. Adapted by P. B. INGHAM, B.A.

## BOOKS FOR THE LOCAL EXAMINATIONS

### SET BOOKS

**A Historical Geography of the British Empire.** By H. B. GEORGE, M.A. Second Edition. 3s. 6d. [Oxford Local.]

**The Student's Modern and Historical Atlas of the British Empire.** Demy 8vo, 4s. 6d.

It is the Historical Atlas best adapted to use with Mr. George's "Historical Geography of the British Empire." Prospectus free.

**The Gospel according to St. Matthew.** Edited by E. WILTON SOUTH, M.A. With Three Maps. Crown 8vo, 1s. 6d.

**The Acts of the Apostles.** Edited by A. E. RUBIE, D.D. 2s.

**The First Book of Kings.** Edited by A. E. RUBIE, D.D. 2s.

### GENERAL BOOKS

**A Junior English Grammar.** By W. WILLIAMSON, B.A. With numerous Passages for Parsing and Analysis, and a Chapter on Essay Writing. Fourth Edition. 2s. [Junior.]

**A Junior French Grammar.** By L. A. SORNET and M. J. ACATOS. Second Edition. 2s. [Junior.]

**A Junior French Prose.** By R. R. N. BARON, M.A. Third Edition. 2s. [Junior.]

**A Junior Geometry.** By NOEL S. LYDON, of Owen's School, Islington. With 276 Diagrams. Sixth Edition. 2s. [Junior.]

**Elementary Experimental Science.—PHYSICS,** by W. T. CLOUGH, A.R.C.S.; **CHEMISTRY,** by A. E. DUNSTAN, B.Sc. Sixth Edition. 2s. 6d. [Junior.]

**Elementary Experimental Chemistry.** By A. E. DUNSTAN, B.Sc. Second Edition. 2s. [Junior.]

**Largest Stock of Second-hand  
School, Classical, Mathematical,  
& Scientific Books in London.**

**MACMILLAN & CO.'S NEW BOOKS.**

**A SCHOOL ARITHMETIC.** BY **H. S. Hall, M.A.,**  
AND **F. H. Stevens, M.A.**

Complete, with Answers, 4s. 6d.; without Answers, 3s. 6d. Or, in Two Parts—Part I., with Answers, 2s. 6d.; without Answers, 2s. Part II., with Answers, 2s. 6d.; without Answers, 2s. Answers, 1s. KEY in Preparation.

This work follows closely the recommendations of the Mathematical Association.

*THE ATHENÆUM*.—"We consider that the book, which covers thoroughly the whole of Arithmetic and a good deal of what is usually called Algebra, marks a distinct advance in mathematical teaching, and is worthy of the high reputation of the authors."

PART II. AND COMPLETE BOOK JUST PUBLISHED.

**A Modern Arithmetic with Graphic and Practical Exercises.**

By **H. SYDNEY JONES, M.A.** Parts I. and II., with or without Answers, 2s. 6d. each. Complete, with or without Answers, 4s. 6d.

**Practical Arithmetic and Mensuration.** By **F. CASTLE, M.I.M.E.** 2s.

**A New Algebra.** By **S. BARNARD, M.A.,** and **J. M. CHILD, B.A., B.Sc.** Volume I., containing Parts I., II., and III. 2s. 6d. [Shortly.]

Part I.—A generalized Arithmetic in which letters are employed to represent Natural Numbers and the idea of Algebraic Form is introduced.

Parts II. and III.—Zero and Negative Numbers and Fractions are considered. These two new classes of numbers are defined so that the expressions  $a-b$  and  $a/b$  may always have a meaning.

**The International Geography.** By SEVENTY AUTHORS. Edited by **H. R. MILL, D.Sc.** With 489 Illustrations. New Edition. Complete, 12s. net.

The following Sections are issued separately, with Exercises and Examination Papers in the Text:—Preliminary Section: PRINCIPLES OF GEOGRAPHY, 1s. 6d.; I. BRITISH ISLES, 1s.; II. EUROPE, 2s. 6d.; III. ASIA, 2s.; IV. AUSTRALIA, 1s. 6d.; V. NORTH AMERICA, CENTRAL AMERICA, AND THE WEST INDIES, 2s.; VI. SOUTH AMERICA, 1s. 6d.; VII. AFRICA, 2s.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.

# BLACKIE & SON'S LIST

## Magnetism and Electricity and The Principles of Electrical Measurement.

By S. S. RICHARDSON, B.Sc., Associate of the Royal College of Science, London; Lecturer in Physics, Municipal Technical School, Liverpool. Crown 8vo, cloth boards, 5s. net.

The object of this book is to provide a sound and systematic course of study in the main principles of Electricity and Electrical Measurement. It is written to meet the requirements of students who have already, in a first year's course, made some acquaintance with the elementary descriptive parts of the subject, and are commencing the study of Electricity in its more quantitative aspects—either as a branch of pure Physics or as a preparation for a course of Applied Electricity.

## Elementary Electrical Engineering.

By JOHN M. SHARBY, B.Sc., Assistant Lecturer, University College of South Wales, Cardiff. Copiously Illustrated. 3s. net.

Written to meet the needs of practical students, as an aid to class work, and for private reading.

## Trigonometry: Theoretical and Practical.

Embodying Graphic and other Solutions by R. C. BRIDGETT, M.A., B.Sc., F.C.S., and WILLIAM HYSLOP, M.A., B.Sc. A practical Trigonometry on experimental lines, covering the whole ground of a school or ordinary college course. Based throughout on the new and more scientific methods, with logarithm table and answers. 4s. 6d.

## Experimental Trigonometry.

By E. C. BRIDGETT, M.A., B.Sc., F.C.S. An Introductory course in Trigonometry on experimental lines. Containing many exercises and examination papers. 1s.

## Elementary Geometry of the Straight Line, Circle, and Plain Rectilineal Figures.

By CECIL HAWKINS, M.A., Senior Mathematical Master at Haileybury College. Crown 8vo, cloth, with or without Answers, 3s. 6d.

## A Text-book of Organic Chemistry.

English Translation from the German of A. BERNTHSEN, Ph.D. Edited by J. J. SCDBOROUGH, Ph.D., D.Sc., F.I.C. New Edition. Revised to date. 674 pp., crown 8vo, cloth, 7s. 6d. net.

## Systematic Inorganic Chemistry from the Standpoint of the Periodic Law.

A Text-Book for Advanced Students. By R. M. CAVEN, D.Sc., and G. D. LANDER, D.Sc. Crown 8vo, cloth, 6s. net.

## A Brief Survey of British History.

By G. TOWNSEND WARNER, M.A. With Tables, Summaries, Maps, Notes, &c. 1s. 6d.  
"The best English History for younger pupils. Used in all leading Preparatory Schools, and the Royal Naval College, Osborne."

## A Brief Survey of European History.

By ARTHUR HASSALL, M.A. An excellent general sketch of European History from Charlemagne to the present time. Crown 8vo, cloth, 4s. 6d.

## Landmarks of European History.

By F. H. M'DOUGALL, M.A. Oxon., late Assistant in the Tewfikieh School and Training College, Cairo. With many Coloured and Sketch Maps, Index, &c. 3s. 6d.

## Heroes of the European Nations.

From Early Greece to Waterloo. By A. R. HOPE MONCRIEFF. 1s. 6d.

## Readings in English History.

From Original Sources. Edited by R. B. MORGAN, B.Litt., and E. J. BARRY, B.A. Illustrated. Vol. I., B.C. 54 to A.D. 1154, 2s. Vol. II., 1154 to 1485, 2s. 6d. Vol. III., 1485 to 1688, 2s. 6d. (just ready).

## Combined Course of Literary Reading and Composition.

Illustrated from Famous Pictures. Edited by LEWIS MARSH, M.A. 2s.

## English Poetry for the Young.

Selected by S. E. WINHOLT, M.A. A chronological selection of English poetry, clearly printed and well bound in cloth. 1s.

## The Plain Text Shakespeare.

The greater Plays. Text only. No Notes. In limp cloth cover. Price 4d. each.

## The Teaching of English.

By A. E. ROBERTS, M.A., Principal Lecturer in English at the Islington Day Training College, and A. BARTER, L.L.B., late Head Mistress of the Baintree Pupil-Teacher School. Price 2s. net. [Just Published.]

Much pioneer work lies before the English teacher, and the present book is an attempt to suggest some of the lines along which he may proceed. No space has been devoted to the teaching of reading and writing as mechanical processes, since these subjects have been frequently treated of in books in school method. The emphasis has been laid on the teaching of literature and of composition.

*The most recent Observations and Conclusions of Scientific Geographers.*

# GEOGRAPHY STRUCTURAL; PHYSICAL; COMPARATIVE.

A TEXT-BOOK FOR SENIOR STUDENTS.

By J. W. GREGORY, D.Sc., F.R.S., Professor of Geology in Glasgow University.

With an Entirely new series of COLOURED MAPS. Large 8vo. Price 6s. net.

THE main purpose of this book is, as Professor Gregory states in his preface, to put before the student "the most important facts concerning the Structural Geography of the Earth, and the evolution of our present continents from older lands."

## A First Geography.

With Coloured Pictures and Diagrams on every page. By C. A. E. RODGERS, M.A., F.R.G.S., Assistant Master, Bradford Grammar School, and an Examiner in Geography to the College of Preceptors. Small 4to, cloth, 1s. [Just Published.]

## Advanced Book-keeping.

For Commercial and Accountancy Classes. By WALTER GRIERSON, Author of "Practical Book-keeping for Commercial Classes." Crown 8vo, cloth, 2s. 6d. net. [Just Published.]

## The Longer French Texts.

Printed in large type. Cloth limp, 8d. each. Brief Notes, Questionnaire, Memory List of Useful Phrases and Vocabulary.

## The Little French Classics.

Price 4d. each book. All French authors in prose and verse, from the *Chansons de Geste* to *Daudet* and *Paul Bourget*.

## Récits tirés des Classiques français.

6d. each. Edited by Mme. C. BAGNALL, of Clapham High School, and Mlle. VIVIER.

The Stories of the great Dramatists told in simple French, suitable for Lower and Middle Forms.

## A Latin Course.

By E. H. SCOTT, B.A., and FRANK JONES, B.A. First Course, cloth, 1s. 6d. Second Course, cloth, illustrated, 2s. 6d.

## A First Latin Grammar.

By E. H. SCOTT, B.A., late Head Master of Boys' Secondary School, Bamberton, Transvaal; and FRANK JONES, B.A., Assistant Master, King Edward's School, Aston, Birmingham. Crown 8vo, cloth, 2s.

## BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. 72 volumes. To be used in correlation with the study of English Literature and History.

Among the leading Authors are:—

Malory.	Gibbon.	Drake.	Thucydides.	Dickens.
Froissart.	Macaulay.	Raleigh.	Plutarch.	Charles Lamb.
Bacon.	Carlyle.	Anson.	Livy.	Kingsley.
Burke.	Prescott.	Hawkins.	Marcellinus.	Swift.
Ruskin.	Josephus.	Cook.	Lucretius.	Borrow.

Messrs. BLACKIE & SON will be pleased to send full lists of Books suitable for Oxford and Cambridge Local Examinations, 1909, post free on application.

**BLACKIE & SON, Ltd., 50 Old Bailey, E.C.**

The Educational Times.

Examination and Inspection.

PERSONS not yet beyond middle age can remember the Revised Code and payment by results. That system, associated with the first enthusiasm for competitive examinations, never gained the approval of elementary teachers, and gave way to arrangements leaving more to the individual discretion of inspectors. In higher schools the belief in examinations as a test of efficiency has been more persistent, but now that Matthew Arnold's famous dictum, "Organize your secondary education," is being put into practice, a different set of criteria are in the ascendant, and the reign of the inspector has begun in connexion with another group of schools. The true test of the efficiency of a school is, no doubt, to be found in its success in preparing its pupils for life. If we could express with mathematical accuracy the character of the material on which a school begins its work, and formulate in the same way the qualifications of its pupils when they leave school and a few years later, the problem would be solved. But here we are faced by the infinite complications involved in all questions dealing with human nature. Neither the data nor the results admit of being precisely recorded, even in a limited field. At best we can get inductions, based on the incidental experience of more or less competent observers. The present writer remembers a conversation in the hunting field with a distinguished General, in which the merits of the young officers trained in a particular school were the subject of considerable eulogy; and in a few years similar *obiter dicta* may be expressed by naval officers on the value of the new system of training for the navy. Such opinions are necessarily vague and are not altogether free from the "personal equation" of which even astronomical observers are bound to take account. Failing a complete solution, it will be well to examine the relative values of inspection and examination tests.

To begin with inspection. It does not, or should not, claim to deal with much more than the machinery employed to produce results. An Inspector can judge of the school buildings and furniture; he can criticize the qualifications, and to a certain extent the methods, of the teachers

and the apparent receptivity of their classes; he can form an opinion on the time-table, the system of promotion, and the books in use—in a word, he can pass a *prima facie* judgment on the action of the school authorities, including the governing body, and the *Zweckmässigkeit* (to use a German word) of the general arrangements. The obvious objection to be raised against inspection as a test is that it stakes too much on the judgment of a single person and that his fancies in favour of particular methods may seriously interfere with the value of his report. Another point is that there are but few of the best type of inspectors available. No doubt the best would be successful schoolmasters still in the prime of life; but it would be impossible to offer to such men—even if they were willing, on other grounds, to give up teaching—inducements to place their services at the disposal of the authorities. The policy of the Board of Education has been to create an inspectorate by taking young men of fair attainments and moderate experience and employing them at first under supervision. The Universities have no organized inspectorate, but employ the best available talent among dons and retired schoolmasters. No doubt such a system lacks permanence and method; but it is, on the whole, acceptable to the profession, and it is quite free from the taint of officialism. To sum up, the chief use of inspection is, on the one hand, to put governing bodies through their paces and to keep isolated schools in touch with the best traditions of the profession, and, on the other hand, to let the public know how far each school fulfils the most obvious conditions of efficiency.

Examination has a different function. It deals with results at different stages of the school career. Such results are, no doubt, a function of two independent variables—the skill of the teachers and the ability and receptivity of the pupils. The silk purse may be knitted with consummate skill, but the result can hardly be satisfactory if the material is largely intermixed with hog's bristles. A common objection is that examinations, especially public examinations on a large scale, tend to encourage "cram"—a much abused word. "Cram" may include everything from careful revision of subjects judiciously studied to the attempt to induce a pupil to retain by force of memory collocations of words the drift of which has never been thoroughly understood.

Many teachers will remember as their most profitable lessons those of the few days a month before the end of term when they were directing the preparation of their classes for examination, answering questions, and filling up gaps in their knowledge—in fact, the very opposite of “the dull drilled lesson learned and conned by note.” There is an amusing story of the great Prof. de Morgan, showing how the function of revision may be misunderstood. His practice was, after every lecture, to give mathematical problems to his students to be solved before the next lecture. One day, just before the end of term, no solutions were forthcoming. “I see what you have been doing,” said the Professor, indignantly, “you have been cramming for my examination; but I will set you an examination in which all your cram shall avail you nothing.”

Of course, some subjects lend themselves more readily than others to examination. Mathematics and all forms of translation can be examined in such a way as to bring out trained aptitude rather than mere memory and drill. In other subjects, such as history and geography, which are being more and more taught in a way to cultivate the reasoning powers, there are obvious difficulties. Reasoning is impossible without data; you cannot discuss the climate of Chili and the persistence of the nitrate beds without knowing where Chili is. A certain amount of topographical drill is therefore essential, just as grammatical accuracy is necessary for doing Latin prose or for translating an unseen passage of Latin. The examiner must then try and test not only the reasoning power of the examinees, but also their knowledge of facts, especially if he has to deal with comparatively early stages of education. Lastly, the public generally believe in examinations as an impartial and carefully graduated test, and the public are not far wrong.

The conclusion, then, is that both inspection and examination have their proper functions. Each can discover merits and defects which the other is liable to overlook. Possibly a single expert from without, acting partly as inspector and partly as examiner in close co-operation with the teachers, might be the most competent person to pronounce judgment on a school; but the ordinary principle of the division of labour makes this extremely difficult, and it is better to be content with a combination of examination, which is already, in a sense, a fine art, and of inspection, which it is hoped will soon come to be equally perfected.

### NOTES.

MR. BIRRELL deserves the highest personal congratulation on carrying his thorny Irish Universities Bill. It is not too much to say, with a Dublin contemporary, that, “in conducting it through the House of Commons and Committee, he showed not only courage but the most admirable temper, patience, courtesy, and firmness.” Now we can only hope that the institutions will be conducted and taken advantage of in the way that Mr. Birrell intended. Let the new institution in Dublin be truly a University and truly national; let it be, in the fervent words of a distinguished Irishman, “a University racy of the soil, instinct with the genius and in sympathy with the highest aspirations of the Irish race.” President Hamilton is exultant at Belfast:

his heart is filled “with joyful anticipations of the dawning of a new era not only for Queen’s, but for Belfast, for Ulster, for education, for the advancement of knowledge over the world.” He is certainly to be permitted a high note on the crowning of his long and laborious efforts for Queen’s. No doubt these new Universities, like older places of higher education, will soon learn to clamour for more money. If they touch the heart and the imagination of the Irish people, they will find little difficulty in strengthening their funds from local generosity; and if they prove their educational worth, they will meet with ready recognition along with other educational suppliants at Westminster. Meantime, the important thing is to justify to the world the confidence of Parliament.

THE International Art Congress has steadily gathered momentum, and its third meeting, at the University of London, has far outstripped previous records. The papers and discussions treated important questions, theoretical and practical, all over the range of the subject. They ought to leave a strong impression both on professional and on public opinion. Though admitting eventually that art education in this country had made immense progress within his life-time, the Earl of Carlisle, the President, did not exactly flatter us upon our achievements. Nor did he mince his words in characterizing the Government’s neglect of the Congress. “The indifference of the Government to Art teaching,” he said, “is illustrated by their very marked neglect of this Congress: I attribute it, and I hope members of the Congress will attribute it, rather to extreme stupidity than to any intentional rudeness.” Sir Swire Smith, too, chastised the Government in the columns of the *Times*. The Exhibition in connexion with the Congress, showing the methods of instruction adopted in applying art to industry by the manufacturing nations of the world, is (he said) “by far the most important of the kind that has ever been held in any country, and lessons may be learned from it of far-reaching effect, not only upon the education of our people, but upon the development of our industries in their competition with the world”; and “yet, in spite of the international character and importance of the Congress—especially to this country—the British Government has appointed no official representative to it, although thirty-seven foreign Governments have done so.” Probably enough, the reason lies in some official tangle of red-tape; it cannot be that the Government is insensible to the importance of the occasion or careless of the questions under discussion. But the result is unfortunately open to an adverse construction.

WHEN the Principals of the four Universities of Scotland interviewed Mr. Asquith last winter with a request for a substantial increase of State endowment, Mr. Asquith properly intimated to them that there must first be an investigation of the facts. Mr. Lloyd-George has now announced the appointment of a Treasury Committee to make the investigation. There can be very little doubt that the results will satisfy the Treasury that the expansion of academic work and the dawn of improved methods justify a liberal response, however the actual response may be limited by the other multifarious claims on the public purse. The

Scottish Universities are also looking to the Scottish Education Bill. Clause 14 of that Bill provides for payment to the Universities "of such sums in respect of yearly maintenance expenditure as the Secretary for Scotland may determine after consideration of the results of such investigations as he may from time to time direct to be made." It is very probable that the Secretary for Scotland, once he gets his Bill through, will be content to make the initial payment from the Scottish Education Fund upon the conclusions of the Treasury Committee, without setting up a special investigation by the Scottish Office. But the Clause places the Universities under inquiry "from time to time," just as the University Colleges have to submit to inquiry as a condition of their receipt of the Treasury grants. There is not the least likelihood that such visitations will unduly control or hamper the action of the Universities of Scotland any more than they gratuitously vex the University Colleges of England; and even Universities are none the worse for knowing that the eye of the external critic is upon their operations.

PRINCIPAL MACALISTER, of Glasgow University, speaking recently at Edinburgh, remarked that "what struck one who had spent the best part of his life in England was to find that in Scotland education was regarded as one of the primary national interests. It was one of the interests that for three or four hundred years had been realized to be at the root of civic and national prosperity." Naturally, he went on to consider the origin of the difference he had observed between England and Scotland on the point:

The parent and the pupil in Scotland were sources of the impulse towards educational improvement in a manner which was absolutely unknown in England. His observation was that the English parent was perfectly content if left alone. In fact, he rather resented the fuss that was made about him. The ambition in Scotland was the ambition to be better educated. If they had only that motive power in England he was perfectly sure that the war between sects and denominations which so greatly troubled legislators in the South would very soon come to an end. The spirit which moved the parent and the pupil towards the improvement of primary education in Scotland had extended also to the Universities. One of the great refreshments to his spirit in coming to Glasgow was to find that there was so strong a movement there which only required to be led and guided to become effective towards the democratization, in the truest sense of the word, of University education. By democratization he meant not only that every citizen of the kingdom should have the opportunity of a University education, but that every citizen, regardless of his incapacity in mathematics or in Latin and Greek, should, within the limits of his power, have the opportunity of excelling in University education.

That Principal MacAlister's observation is accurate will scarcely be disputed. It might be well, then, to probe the matter still further, and to find out why it is that English and Scottish parents should regard education in such surprisingly different ways. If one could only put one's finger on the taproot of the difference, some practical results of a very remarkable character might be confidently expected to develop.

PROF. KIRKPATRICK, speaking on "Our Edinburgh Vacation Courses," referred to the teaching of German, and declared that it was lamentable that the subject was "so miserably neglected in this country."

In Russia and France, and in many other countries, German was one of the principal staples of education, and they all knew that German was absolutely indispensable to the classical scholar, the man of science, the man of literature, the man of business. None of these people could

possibly get on without a knowledge of both French and German. They often heard it said that these "horrid Germans" were cutting them out in science and in business. The reason was simply this, that Germans were more industrious, more persevering; and, instead of setting up hostile tariffs in this country to block out the "horrid Germans," it would be infinitely better if the British youth would learn the German tongue. He could not understand why the educational authorities of their schools did not insist upon the teaching of French and German. It seemed to him that their schools and their educational authorities had killed German, which was one of the things they were most in need of.

Wherever the blame may lie, there can be no doubt of the propriety of Prof. Kirkpatrick's insistence on the need of German.

THE following incredible statement, being in all the newspapers, must be true:—

The twin sons and two daughters of a gardener at Dartmouth have been refused admission to a local school because they were hatless. The father declines to allow his children to wear hats or caps, and while the dispute between him and the head master remains unsettled the children are being kept at home.

Hitherto we had imagined that it was the head, and not the hat, that was the object of a teacher's concern; but there may be greater thoroughness in looking after both than in limiting attention to one. On the other hand, a citizen that supplies four children at once to a school might appear to deserve some little consideration on matters of principle and conviction. Can it be that the Blue Coat boys have persistently shown a bad example as a hatless brigade? When Miss Beale was a schoolgirl and fainted in church, and found as she revived that some kindly hand was removing her bonnet, she "clung to it desperately, because she would not have her head uncovered in church." But Miss Beale was an exceptional personage, and school—*ad hoc*—is scarcely on a par with church. The Dartmouth head master seems, however, to be fortified by classical authority—not Greek or Roman, perhaps, but still in a sense classical. Do we not remember that, when M. Jourdain was precipitately starting to dance a minuet—not quite bareheaded even, but in his nightcap—his Maitre à danser decorously interposed: "Un chapeau, monsieur, s'il vous plaît"? It is not easy to imagine what would have eventuated if M. Jourdain had been as intractable as this recalcitrant paterfamilias. We remember a servant girl telling how a former mistress used to beat her vigorously and sometimes to "knock her 'sensible." The natural man does feel that there ought to be some swift summary provision for knocking a perverse head sensible—at all risks to the hat.

THE first contingent of the thousand school teachers from the United States and Canada who are to visit this country during the autumn and winter months to study English educational methods, will arrive on September 15. The Education Committee of the London County Council are preparing a special handbook for their use, which will also serve as a guide to the educational institutions of London. The Committee have also arranged that the visitors shall be allowed to attend all classes, lectures, &c., and a similar privilege has been conceded by the University of London. The London Teachers' Association and the National Union of Teachers will officially welcome the visitors, and many members have already arranged to act as guides. As meeting places and bureaux of information, the London Teachers' Association have assigned rooms in their offices in Fleet Street, and the National Union in their offices in Russell Square. Provincial centres are making similar arrangements, and the desire of all is to return the hospitality which the English teachers received on their visit to America.

## SUMMARY OF THE MONTH.

THE following resolutions on the religious education of the young were passed at the Lambeth Conference, and were afterwards recommended to the Church in an encyclical letter :

In the judgment of the Conference it is our duty as Christians to make it clear to the world that purely secular systems of education are educationally as well as morally unsound, since they fail to co-ordinate the training of the whole nature of the child, and necessarily leave many children deficient in a most important factor for that formation of character which is the principal aim of education.

It is our duty as Christians to maintain that the true end of Bible-teaching is a sound and definite Christian faith, realizing itself in a holy life of obedience and love, and of fellowship in the Church of Christ through the sanctifying grace of the Holy Ghost, and no teaching can be regarded as adequate religious teaching which limits itself to historical information and moral culture.

It is our duty as Christians to be alert to use in all schools every opportunity which the State affords us for training our children in the faith of their parents, and to obtain adequate opportunities for such teaching in countries where they do not already exist.

There is urgent need to strengthen our Sunday-school system, and the Archbishop of Canterbury is respectfully requested to appoint a Committee to report to him on the best methods of improving Sunday-school instruction, and on the right relations between Sunday-schools and the various systems of catechizing in church.

It is of vital importance that the Church should establish and maintain secondary schools, wherever they are needed, for children of the English-speaking race in all parts of the Anglican Communion; and the Conference earnestly supports the plea which reaches it for the establishment of such schools.

The Conference draws attention to the pressing need of the service of men and women who will consecrate their lives to teaching as a call from the Great Head of the Church.

The religious training of teachers should be regarded as a primary duty of the Church, especially in view of the right use to be made of the light thrown on the Bible by modern research; and teachers should be encouraged in all their efforts to associate themselves for the promotion of their spiritual life.

The Church should endeavour to promote and cultivate the spiritual life of the students in secondary schools and Universities, and should show active sympathy with all wisely directed efforts which have this end in view.

The Conference desires to lay special stress on the duty of parents in all conditions of social life to take personal part in the religious instruction of their own children, and to show active interest in the religious instruction which the children receive at school.

PREBENDARY REYNOLDS, Inspector of Church Training Colleges, states in his recent report that there are two objects in view at the present moment: (1) to maintain in all its fullness the opportunity for Church teachers to be trained as Church teachers and so to maintain the atmosphere of the colleges, and (2) to remove every obstacle hindering Nonconformists from obtaining all the advantages the Church can possibly give them. These objects, he says, are in no way incompatible. There are, however, three points to which attention should be directed on the general question:—

(1) The multiplication of colleges, day and other, is becoming so extravagant that soon the various colleges will have difficulty in filling up their numbers; they will be touting for students, which will degrade the whole subject of training. This is a matter into which competition should not enter; we do not want the cheapest article. There are various reasons which have produced this emulation, but the result will be damaging to all and will threaten a lowering of the standard that all will regret. In the present year, however, there are many who cannot get into college.

(2) The supply is already greater than the demand; never before have there been so many excellent teachers who have not been placed. This seriously affects teachers themselves, and all colleges will suffer alike, especially as certain educational authorities advertise the fact that they save from £1,000 to £2,000 a year from the rates by not employing trained teachers.

(3) A conscience clause by all means; but the Church ought not to be asked to train atheistical teachers—those who are enemies not only to us, but to all the sects. Certain applicants have stated that they have "no views," others avow themselves unbelievers. We must draw the line here. No teacher ought to be allowed to teach if he is an unbeliever; he may ruin a child's faith in a lesson on botany or history; and none of our opponents want that. Religion is an inseparable part of education; and, whatever the subject may be, an atheistical teacher is *hostis humani generis*, and our Nonconformist friends are quite as interested as we are in keeping him from contact with our children.

It has been resolved by the Board of Education to encourage the education of workpeople under the scheme promoted at the Universities of Oxford and Cambridge by increasing the grant from 5s. to 8s. 6d. per student attending the University classes. Liberal education is in this way recognized, as well as commercial and technical. The particular organization which will in this way benefit is the Workers' Educational Association, and thus the principle is fast being officially observed by the Government of encouraging the education of labour by means of the Universities. It is understood that this result has been brought about largely by the activity of some of the prominent Labour members, though many of them are, in the view of the supporters of the scheme, singularly lukewarm in helping it. Further developments in the connexion between the Universities and the Association are proceeding. A representative Labour Committee have met the Vice-Chancellor of Cambridge University and the heads of various colleges, and it is likely that at Cambridge will be found the same educational opportunities for the workmen as at Oxford. The movement is also extending to Scotland, where a conference will be held, probably next year, to establish a separate association.

THE Board of Education has issued (Cd. 4184) Regulations for the Training of Teachers for Secondary Schools. Funds have long been available for the purpose of assisting the training of elementary-school teachers, but there has hitherto been little official recognition of the necessity of making some systematic provision for the professional training of men and women intending to teach in secondary schools. Now, however, a Parliamentary grant of £5,000 has been made available from the Exchequer for this purpose, and the regulations under which the fund will be dispensed are of great interest. The Board has decided that the course of training must be taken after graduation or its equivalent and be confined to purely professional work. It is to be an indispensable condition for recognition as an efficient training college that there shall be access for the students, under proper conditions, to secondary schools which are thoroughly suitable for demonstration and practice, and not less than one-half of the staff must have been successful teachers for a reasonable time in secondary schools. Grants will be paid to colleges, in which the number of recognized students is not less than ten, at the rate of £100 in respect of every complete group of five recognized students, subject to the condition that the grant does not exceed one-half of the total sum paid for salaries on account of services in training the students. It is satisfactory to find so complete an appreciation of the imperative need that the staff responsible for the training of secondary school teachers must possess high academic qualifications and be, in addition, experienced and successful teachers. There has been in the past an uneasy feeling that much of the training available for secondary-school teachers was divorced too completely from schoolroom practice and over much concerned with theoretical and historical matters, and these regulations of the Board of Education will serve to inspire greater confidence in the value of the training provided in assisted colleges.

THE Regulations (Cd. 4187) for Technical Schools, Schools of Art, and other Forms of Provision of Education other than Elementary in England and Wales for the year 1908-9 do not show many changes, and those introduced are in the direction of greater efficiency and more elasticity. The limit imposed in previous years to the number of hours of instruction which may be counted for the purposes of grant has been relaxed—a fact that will encourage local education authorities to plan prolonged and well organized courses of evening instruction and help to remove a reproach that much of the work in evening classes has been scrappy, unrelated to local industries, and not part of a co-ordinated scheme. Greater encouragement is being given to vacation courses for teachers, and the sensible advice contained in the prefatory memorandum as to the necessity of securing due recreation for teachers during the progress of the holiday work deserves the careful study of the organizers of such courses. It is now laid down by the Board that there shall in future be a principal or head teacher in those institutions where, in the past, unrelated classes in charge of separate teachers responsible only to the managers have been held. The new regulation will, if the right type of head teacher is appointed, lead to a greatly improved state of things. Students will be able to receive much needed advice in planning suitable courses of study to assist them in their industrial pursuits, and the work of succeeding sessions will form part of a complete scheme. The

changes as a whole are conceived in a broad spirit and should assist to develop still further the excellent work that is being done in technical and other schools.

A NOTE to the Code of Regulations for Public Elementary Schools in Wales (including Monmouthshire) [Cd. 4170] states: "In last year's Code, a definite place in the curriculum of the school was provided for the Welsh language. Welsh was consequently introduced into many schools in which it had not been taught before. It is already possible to trace a twofold effect on the children—an increased interest in their work generally and a greater appreciation of good English. Careful attention is now paid in the training colleges to the teaching of Welsh, and it should not be difficult in the future, as it has been in the past, to secure bilingual teachers. It was not thought necessary, in last year's Code, to state that Welsh-speaking infants should be taught through the medium of their mother tongue. But the inspectors of the Board report that, in several schools, the infants are taught through the medium of a language they do not understand, or that they are taught to read and write two languages at the same time. The result is unintelligent reading; the children get into the habit of repeating words without attaching any meaning to them. The Board have therefore introduced a provision that infants should be taught through the medium of Welsh where Welsh is their mother tongue. It might be advisable, however, that they should receive two or three lessons a week in conversational English by the direct method: but the writing and the reading of a second language should come gradually, after the infant stage. Very general experience shows that the result will be a more speedy and a more perfect acquisition of English."

THE Report of the Departmental Committee appointed by the Board of Agriculture and Fisheries to inquire into and report upon the subject of agricultural education in England and Wales states:

During the past twenty years—the period covered by the Report—the foundations of a national system of agricultural education have been laid in England and Wales. In view of the strong support now given to agricultural education by the University of Oxford, it is in the national interest that the State should make an annual grant to the University similar to that made to other Universities with fully equipped agricultural departments. Future expenditure on higher education should provide for the better equipment of existing institutions rather than for an increase in their number. In developing the existing facilities, attention should be first given to securing a highly qualified staff. Many institutions employ too few teachers or relegate the teaching of important subjects to junior members of the staff. It is of special importance that high qualifications should be secured in the teachers of such subjects as agriculture, agricultural chemistry, and agricultural botany. The staff of the higher institutions should include men who are not only capable teachers of, but recognized authorities on, these subjects. Further developments in agricultural education will be difficult until a greater supply of well qualified teachers is available. This is a subject which demands the serious consideration of the Board of Agriculture. The facilities for agricultural instruction of a lower grade are unorganized, unsystematic, and wholly inadequate. The type of institution which appears to be exceptionally adapted to the needs of this country is the Winter Agricultural School. This school should aim at providing courses of study during the winter months for lads of from seventeen to twenty who have already gained some practical acquaintance with agriculture or horticulture. In the course of the next ten years from fifty to sixty of these schools should be provided in England and Wales. As a means of reaching and influencing those engaged in farming or gardening, the itinerant instructor is of great importance.

The Report deals with the work of the County Councils, agricultural education in other countries, existing facilities, practical results, Universities and University colleges, short winter courses at University and agricultural colleges, special courses for rural teachers, special agricultural schools, winter agricultural schools, local winter classes, dairying, poultry-keeping, bee-keeping, horticulture, cider-making, farriery, veterinary education, forestry, farm institutes, scholarships, finance, and national organization.

AN influential deputation, representing various branches of science, waited upon the Prime Minister to ask for an inquiry into the administration of the Natural History Museum at South Kensington. The deputation, which was introduced by three members of Parliament sitting for University constituencies—Sir William Anson, Sir Henry Craik, and Mr. Rawlinson—included Prof. Sedgwick (Cambridge), Prof. Bourne (Oxford), Prof. Cossar Ewart (Edinburgh), Prof. Wilkinson (Manchester),

Prof. Graham Kerr (Glasgow), Mr. Francis Darwin (Cambridge), and Dr. Marr (Cambridge). Prof. Bourne said the Natural History Museum would not be upon a satisfactory footing until it was placed under the control of a body of trustees separate from that which was responsible for the control of the British Museum at Bloomsbury. The duties, financial and general, of the trustees should be analogous to those of the governing body of an endowed school, and their relations to the management of the museum should be analogous to the relations of governors to the head management of a public school.

THE results of the intermediate examinations conducted by the Royal Society of Arts in the present year show that a total of 10,038 candidates sat in the "Intermediate" stage—an increase upon last year's figures, which were 9,752. More than one-third were tested in shorthand, which heads the list, and nearly as many in book-keeping. In French there were 1,144 papers worked. It is specially noticeable at these and similar examinations that during the last three years the growth in the number of candidates in French has shown a remarkable increase. Typewriting attracted 683. Other subjects in which the examinations were conducted are arithmetic, English, commercial history and geography, economics, précis-writing, German, Italian, Spanish, Portuguese, Russian, Danish and Norwegian, Swedish, Hindustani, Japanese, harmony, and the rudiments of music. The London Education Committee submitted 2,414 candidates, and of these six are awarded medals and six receive money prizes. Five women and four men receive medals in shorthand, and two women and one man take medals for typewriting. Candidates range from eleven years of age to sixty-seven—the elderly candidates being nearly all students of languages. Mr. J. H. Duffy, a Portsmouth candidate, thirty-three years of age, achieves the distinction of receiving two medals, two money prizes, and two first-class certificates, his subjects being arithmetic and précis-writing.

IN the summer course for teachers held at Scarborough during the last week in July and the first fortnight in August, the theory of education, handwork, and art needlework formed the chief items in the programme. Prof. Adamson, of King's College, London, and Miss Catherine I. Dodd, M.A., Principal of Cherwell Hall, Oxford, undertook the lectures on education. Miss Dodd worked out the ideal curriculum for children up to the age of ten, in which romantic literature and out-of-doors observational work figured largely.

THE increasing readiness of young Ireland to respond to the stimulus created by a generous system of education is illustrated by the facts set forth in the last published report of the Intermediate Education Board. Last year 11,821 students presented themselves for examination, 8,165 boys and 3,656 girls, these figures showing an increase of 375, or 4.8 per cent. under the first head, and of 479, or 15.1 per cent. under the second, being a total increase of 854 or 7.8 on the corresponding numbers in 1906. A glance at the figures for the past ten years shows not only that this growth has been steady upon the whole, but that the number of those who passed the examinations has been similarly increasing. Furthermore, the percentages of students examined in the different grades are indicative of the same progress. The readiness of students to come forward for examination in all grades and the steadiness of the percentage returns prove that the educational influences at work continue to operate strongly, and that no declension has occurred in a general anxiety to make full use of the advantages rendered available. Nor is this all. The number of students competing for prizes affords evidence of no small degree of application and industry on their part, while the variety of subjects taken up by the candidates and the degrees of proficiency exhibited must strike all who inspect the figures in detail as being particularly remarkable and significant. Such are optional subjects, and their selection by so considerable a number of students of both sexes throughout the country demonstrates the existence of widely diffused and expanding intellectual powers and of the determination to exercise them in the acquisition of cultured as well as general education.

THE new Regulations promulgated by the Prussian Ministry of Education place the higher girls' schools in Prussia upon an equal footing with the corresponding class of boys' schools under the direct control of the Government provincial School Boards

or Supervising Committees. The teachers at girls' schools will in future be required to possess qualifications similar and equal to those demanded of the teaching staff at boys' schools. The course is to last ten years instead of nine, and education will begin at the age of six. The scope of the curriculum will develop upon existing lines, but nine and twelve years respectively have been fixed as the minimum ages at which instruction in French and English is to begin. Up to and including twelve years of age all pupils will go through the same general course, but upon reaching the third form from the top at the age of thirteen, those girls who may desire to qualify for a University career will begin to be taught Latin, and, after passing through two special forms, these pupils will be divided according to their own tastes into a modern or professional side and a classical side. Each year the pupils will be removed into a higher division until, at the minimum age of nineteen years, they will be admitted to the matriculation examination at a University. Women students will be allowed to matriculate at Prussian Universities at the beginning of the coming winter term. Those pupils, on the other hand, who do not aspire to qualify for a University career will continue the ordinary school routine until they reach the tenth or highest form at the minimum age of fifteen. Upon passing their leaving examination, the girls, if they desire to complete their education, will then once more be divided according to their tastes or future vocations in life. Those who wish to become school teachers and governesses will be specially trained for another four years, the last of which will be devoted to practical instruction until the minimum age of twenty for the final certificate examination is reached. For those girls, on the other hand, who have no special career in view a special two-years' "finishing" course will be instituted, during which the pupils will not only receive advanced tuition in music, languages, and similar subjects, but will also be trained in the practical duties of the household and of everyday life. The pupils of the higher girls' schools, therefore, will, as they progress, be drafted into girls' finishing schools, school-teachers' seminaries, or University seminaries. These courses are to be optional, and each school will, as far as possible, provide its own finishing and training classes.

ON its educational side (says the *Times*), the Hungarian Exhibition at Earl's Court may easily justify its existence, if it arouses in British minds—or, perhaps, reawakens—the desire for some intimate knowledge of one of the most interesting of European nationalities. If an English schoolmaster really desired his boys to retain in after life some definite impressions of the romantic State which has maintained its national Constitution for more than a thousand years, he might do worse than turn them loose for an afternoon's ramble at the Earl's Court exhibition. In the Prince's Hall the State Department of Public Education has organized a very complete and most interesting display representing all grades of scholastic work. A student of education may trace, by means of these exhibits, the progress of the Hungarian child from the kindergarten and the elementary school to the University. Apart from the actual handiwork of the scholars and the educational appliances and apparatus, there is an imposing series of photographs showing the young people at work or at play, at various stages of their scholastic career. It is obvious that in effectiveness and method, and in completeness of organization, educationists in this country may well learn something from the example of Hungary. Scientific and artistic instruction appears to have been carried to a high pitch of perfection; and there is a particularly attractive group of drawings, paintings, statues, and art objects from the Royal Hungarian College of Art. A considerable array of the works of English authors which have been translated into the Hungarian language shows that the Magyars are students not only of Shakespeare, but of many of the modern masters of English poetry and prose.

WE regret to announce the death of Mr. J. C. Buckmaster, formerly Organizing Master of the Science and Art Department, South Kensington, in his ninetieth year. In his earlier years he taught in Battersea Training College and in the newly established Trade Schools at Wandsworth and Poplar. Later, he accepted an appointment as one of the officials of the South Kensington Museum, under the late Lord Playfair, and when the Science and Art Department began its propaganda he was selected to explain its objects throughout the country and to promote the formation of science and art classes. On his visit to Scotland he had conferred upon him the Honorary Fellowship of the Educational

Institute (1893). On his retirement, in 1893, Mr. Buckmaster devoted himself in the most strenuous way to the public life of his locality. A magistrate, a district councillor, chairman of the Local Education Authority, a manager of several schools, he threw himself into all his voluntary work with a zeal and vigour which were the envy of younger men.

WE have also to regret the death of the distinguished Professor of Moral Philosophy at Berlin, Dr. Friedrich Paulsen. He was born in 1846 at Langenhorn, in Schleswig, and studied philosophy at Bonn and Berlin after he had decided to give up theology. He belonged to the school of Fechner, and his own views are thoroughly expounded in his "Einleitung in die Philosophie." Other works from his pen are "Ethik," "Immanuel Kant," "Parteilpolitik und Moral," and "Das deutsche Bildungswesen in seiner geschichtlichen Entwicklung," an English translation of which we notice in another column.

## UNIVERSITIES AND COLLEGES.

PROF. KUNO MEYER, of the University of Liverpool, has accepted an invitation to give a course of lectures next session at University College on Celtic languages and their literatures. The course has been arranged by the generosity of a private benefactor, and is intended to prepare the way for the institution of a permanent lectureship or professorship in Celtic.

The King's College, London (Transfer), Bill received the Royal Assent on August 1. The Imperial College of Science and Technology has been admitted as a school of the University of London in the Faculties of Science and Engineering. The Royal Army Medical College has been admitted as a school of the University of London in the Faculty of Medicine for officers of the Royal Army Medical Corps. A Conjoint Committee of fifteen members—representatives of the University, the London County Council, and the London Chamber of Commerce—has been appointed to consider a scheme for the promotion of commercial education, chiefly in relation to schools. An examination for a certificate in Religious Knowledge has been instituted, and will be held once in each year, commencing on the second Monday in January.

THE general balance sheet of the University of Manchester up to July 31 last shows total assets of £1,157,093 against £1,112,415 for 1907, and £1,075,684 for 1906—a steady if not very great increase. In this amount the fixed capital—College site, buildings, equipment, &c.—is put at £429,714, as against £416,677 for the previous year. The increase in the valuation is due to the items of £4,749 for the new Engineering Laboratory buildings, and £8,241 for the New Union and Refectory buildings. The actual expenditure for the year was £67,400, and the income £67,462 as against an income the previous year of £68,358, and £67,425 the year before that. The grants from Local Government bodies are the same as before, save that no Oldham grant of £150 appears, but Bury figures with £200. The other grants are: Manchester £4,000, Lancashire £1,000, Bolton £100, Cheshire £300, Salford £300, and Stockport £100. Some of these are not heroic, but they "show willing." The John Owens Trust Fund capital account stands at £39,879. The Government Grant is entered as £13,500, with £1,200 for special purposes, as against £14,000 and £1,200 for the year ended July 31, 1907. Reading the names of those who have made bequests and gifts, one is struck by the immense amount that individuals have contributed for the benefit of the public. The fees of the students are about a third of the income on general fund account, and amounted during the year to over £21,000.

THE Cape, it seems (says *South Africa*), is to be entitled to have its existing five colleges recognized as affiliated to the University, subject to the Council's approval. A point worth noting is the decision of the Conference that the examinations of the University shall be conducted in English, "with the exception of the examinations in Dutch language and literature, in which the questions will be set in English and in Dutch, and the answers may be written in either language." . . . Special arrangements are suggested in examinations for such scholarships, exhibitions, and prizes as the University may have at its disposal, the examiners in these

cases to be "as far as possible" such as have not had any of the candidates under their recent tuition. It is proposed that the various Governments contribute to the funds of the University in the proportion of the representation of the several Colonies already mentioned—a proportion, it may be observed, which is curiously like that agreed upon by the Pretoria Conference for the representation of the various States at the forthcoming National Convention. It was agreed that Cape Town and the present Cape University buildings should be the administrative centre of the new "University of South Africa." It is added, by the report which we have considered, that the number of independent institutions in South Africa preparing students for University degrees is greater than need requires, and the suggestion is made that the co-operation or union of the present University colleges should be promoted, and the future multiplication of such colleges discouraged. This is undoubtedly a correct view, and economy and efficiency in University work will doubtless be best secured by a policy of judicious centralization.

### THE EDUCATIONAL LADDER.

**ABERDEEN UNIVERSITY.**—John Murray Medal and Scholarship (to most distinguished medical graduate of the year): J. Watt, M.A.

#### CAMBRIDGE UNIVERSITY.—

*Gonville and Caius.*—Entrance Scholarships, 1908: J. M. Creed (Wyggeston School, Leicester), £80 for Classics; H. M. Fuchs (Brighton College), £80 for Natural Science; I. D. Ross (Kingswood School, Bath), £60 for Mathematics; W. S. Roberts (Eton College), £60 for Classics; E. H. Wood (Hartley College, Southampton), £60 for Modern Languages; G. H. Stevens (Hartley College, Southampton), £40 for Mathematics; P. S. Williams (Harrow School), £40 for Classics; N. Maxwell (Eastbourne College), £40 for Classics; F. M. Davis (Harrow School), £40 for Natural Science; O. M. Tweedy (Clifton College), £40 for Modern Languages; K. M. Robathan (Merchant Taylors' School, London), £40 for Hebrew. Entrance Exhibitions, 1908: A. J. Turner (Camberwell Grammar School), £30 for Natural Science; F. W. W. Baynes, £30 for Classics. Choral Entrance Exhibition: A. R. O. Swaffield, Radley College. Musical Scholar: H. D. Statham, Gresham's School, Holt.

*Sidney Sussex.*—Blundell Exhibition: L. L. Rees-Mogg, Blundell's School.

**CIRENCESTER: ROYAL AGRICULTURAL COLLEGE.**—Honour Diploma of Membership: G. N. Sowerby. Certificate of Associateship: Mom Chow Bhunsri. First Scholarship: R. W. Carr. Second Scholarship: W. G. Wright. Third Scholarship: Hari Krishna Lal.

**DENSTONE COLLEGE.**—Leaving Exhibitions: £30 per annum, G. E. Jackson; £20 per annum, H. M. Butler. The Provost's Modern Languages Exhibition of £5: F. C. Stocks and M. J. W. Hick.

**EDINBURGH UNIVERSITY.**—Falconer Fellowship in Palaeontology and Geology: William Thomas Gordon, M.A., B.Sc. Baxter Scholarship in Physical Science: William Watson, M.A., B.Sc. Baxter Scholarship in Natural Science: James Couper Brash, B.Sc. Mackay Smith Scholarship in Chemistry: Adam Wilson Moodie. Science Research Scholarship: Robert Charles Wallace, M.A., B.Sc.

**FRAMLINGHAM COLLEGE.**—Ransome Exhibition: G. H. Truscott. Goldsmith Scholarship: S. R. Richardson. Lucas Prize: H. E. Roe. Goldsmith Prizes: A. W. Rash, A. R. C. Buchanan, and J. G. Drew. Elocution Medal: S. W. Griffin.

**HEATH GRAMMAR SCHOOL.**—Rawson Exhibition (£30), A. H. Stocks. County Borough Scholarships: H. Murray and J. H. Midgley, both of Trinity School. £12 Waterhouse Scholarship: A. Orcheton, Parkinson Lane School. £6 Waterhouse Scholarship: C. Peckett, Trinity School. £12 Foundation Scholarship: D. C. Riley, Parkinson Lane School. £6 Foundation Scholarship: J. E. Ashworth, Trinity School.

**LONDON: CITY OF LONDON SCHOOL.**—Classical Senior Open Scholarships: H. C. Oakley, E. A. P. Day, F. N. Reed, C. M. Dodwell, H. Quinney. Classical Junior Open Scholarships: L. H. Spero, G. Robbins, V. R. Slater, M. Posener. Science

Senior Open Scholarships: D. Lewis, R. F. Clark, A. E. Thomas. Modern Senior Open Scholarships: W. H. Bennett, M. G. Whitten, H. V. Berry, D. Houseman. Modern Junior Open Scholarships: J. R. Avery, P. Krolik, L. G. Clowes, W. H. Easty. Cuthbertson Memorial Scholarship: W. M. Hastwell. John Carpenter Scholarship: A. G. Gauld. Sir David Salomon's Scholarship: W. L. Williams. Beaufoy Scholarship: P. M. W. Williams. Thomas Symonds Exhibition: T. Fry. Grocers' Exhibition: H. W. Todd. Warren Stormes Hale Scholarship: J. L. Battery. Goldsmiths' Scholarship: C. G. Carpenter. Times Scholarship and Tegg Scholarship: W. B. Pickard. Salters' Scholarship: R. I. Schwarzman. Jews' Commemoration Scholarship: C. N. Spero. Mortimer Exhibition: R. W. James. Fishmongers' Scholarship: S. Smith. Lionel Van Oven Scholarships: A. Willett, E. Caws, B. M. Schonberg, and F. A. D. Stahlschmidt. Price Prize: S. I. Levy. Travelling Scholarships: E. C. C. Hamblin and W. E. Swale. Dr. Conquest's Gold Medal: H. W. Todd. Sir James Shaw's Classical Prize (Medal and Books): H. W. Todd. Beaufoy Mathematical Prize (Medal and Books): P. M. W. Williams.

**LONDON: MERCHANT TAYLORS' SCHOOL.**—Entrance Scholarships: E. V. Poore, V. A. B. Wright, E. A. Roe, B. Hill, and M. B. S. Spencer.

**LONDON: ROYAL COLLEGE OF MUSIC.**—Council Exhibitions: Pianoforte, Joseph A. Taffs, £10; Singing, Joseph K. Ireland, £10, Tydfil Brown, £10; Violin, Nora Ford, £10, Evelyn M. Pickup, £10. London Musical Society's Prize for Singing, Jane F. Fyans; Messrs. Hill and Sons' Violin Prize, Thomas Peatfield (scholar); Messrs. Brinsmead and Sons' Prize of a Pianoforte, William D. Murdoch (scholar); specially commended, Ellen C. Edwards (scholar).

**LONDON: ST. PAUL'S SCHOOL.**—Exhibitions—Classical: £70 per annum for 4 years, G. D. Cole and E. G. Mächtig; £40 per annum for 4 years, L. Hodgson; and £30 per annum for 4 years, A. L. Johnston and W. H. Morant. Mathematical: £70 per annum for 4 years, with the Keen Scholarship of £26 for 1 year, A. Bate. Science: For 4 years, £50 per annum, C. G. Hutchison; and £40, A. E. Bullock. The Winterbotham Scholarship (to the highest classical scholar in his last school year), H. F. Jolowicz.

**LONDON UNIVERSITY.**—Scholarships have been awarded on the results of the Scholarships Examination, held at the University in July, to students who have passed an Intermediate Examination, or the Preliminary Scientific Examination, Part I., as follows:—University Scholarships of £50 a year, tenable for one year: Thomas J. Cash, University College (Granville Scholarship), for Classics; Catherine Andersson, private study, and Hubert B. Kemmis, University College, for French; Margaret F. Richey, private study, for German; Irene C. Dukes, University College, Ella M. Marchant, Royal Holloway College, and Edna Smallwood, Birkbeck College, for English; Kate G. Cash, University College (Derby Scholarship), and Dorothy A. Bigby, University College, for History; Natalie A. Ertel, University College, and Douglas W. Langridge, King's College, for Elementary Psychology and Logic; Cecil N. French, King's College (Sherbrooke Scholarship), and George J. Lamb, East London College, for Mathematics; James C. Chapman, King's College, and Stanley G. Nottage, University College, the Neil Arnott Scholarship (Physics) and a University Scholarship for Physics divided; George F. Morrell, Pharmaceutical Society's School (Neil Arnott Scholarship), and Ferdinand B. T. Thole, East London College, for Chemistry; Josephine E. Carter, University College, for Zoology. Gilchrist Scholarships for Women of £40 a year, tenable for two years: Louisa Soldan, Bedford College for Women, for German (qualified also for a University Scholarship); Sarah M. Baker, University College, for Chemistry (qualified also for a University Scholarship).

**MAN, ISLE OF: KING WILLIAM'S COLLEGE.**—Henry Bloom Noble Scholarship, £50 a year: J. B. Gell. Rebecca Noble Scholarship, £15 a year: C. Sansbury. Special Caine Scholarship, £15 a year: A. M'Gain. Free Board and Education Scholarship: J. H. Caine.

**MANCHESTER HIGH SCHOOL FOR GIRLS.**—Entrance and Junior Scholarships, some being on the Hulme Foundation: L. Beard, Miss Knight's School, Longsight; H. H. Bertwell, Seymour Park Council; M. M. Bradock, St. Margaret's, Whalley Range; I. M. Challoner, Manchester High; E. A. Garnett, Miss Petschler's,

Withington; D. Hancock, Plymouth Grove Municipal; D. M. Horne, Miss Knight's, Longsight; K. A. Jacques, St. Mark's, Cheetham Hill; G. Milne, Culcheth Municipal, Newton Heath; J. de Picciotto, Cheetham Collegiate; V. Richman, National, Didsbury; R. Rosenthal, St. John's, Cheetham; C. E. Sedgeley, Ducie Avenue Municipal; R. Shaer, St. John's, Cheetham; R. Thomas, Birley Street Municipal; L. Tunnicliffe, Derby Street Council, Rochdale; H. Whittenbury, Manchester High; N. M. Whittle, St. John's, Cheetham. C. Linz is recommended to the authorities of the Jews' School, Cheetham, for the Abigail Behrens Memorial Scholarship.

MANCHESTER UNIVERSITY.—Platt Biological Scholarship: Joseph Mangan. Dauntsey Entrance Medical Scholarships: T. P. Kilner and A. G. Bryce. John Henry Agnew Scholarship: W. P. Marshall, B.A. Platt Biological Exhibition: Ellen Bevan. Early English Text Society's Prize: A. F. Lund. Dalton Natural History Prize: T. G. B. Osborn and H. L. Hawkins, equal. Certificate in Electrical Engineering: F. M. Jones. Higher Commercial Certificate: R. C. K. O'Connor.

NEWNHAM COLLEGE.—Classical Scholarship: Miss D. F. Tait, Aberdeen University. The following scholarships of £50 a year for three years have been awarded on the results of the Cambridge Higher Local Examination: Clothworkers' Scholarship, Miss E. Ferguson (Croydon High School), for Mathematics; Goldsmiths' Scholarship, Miss M. D. Ball (King Edward's High School, Birmingham), for Natural Science; Cobden Scholarship, Miss C. Stewart (Bedford High School), for History; Winkworth Scholarship, Miss B. E. Clayton (Bath High School), for Mathematics and Natural Science. Mary Stevenson Scholarship (£35 a year): Miss L. D. Kendall (King Edward's School, Birmingham), for Modern Languages. A College Scholarship (£35 a year): Miss C. K. Hugh-Jones (Blackheath High School), for Classics. Gilchrist Scholarship (£50 a year for three years, tenable at either Girton or Newnham): Miss G. H. Nicolle (St. Paul's Girls' School, London), for Mathematics. Miss Nicolle has elected to hold it at Newnham College. Mathilde Blind Scholarship: Miss J. M. G. Alexander (Royal Academy, Irvine), for Modern Languages.

OXFORD UNIVERSITY.—Liddon Studentship: John Leslie Johnston, Magdalen; grant awarded to K. E. Kirk, Caspard Scholar of St. John's.

*Ereter.*—Exhibition (Theology): J. Keown Boyd, Merchant Taylors.

*Kelle.*—Mr. John R. H. Weaver, Commoner, has been elected Honorary Scholar. He has published in the "Anecdota Oxoniensia" an edition of John of Worcester's Chronicle.

RAMSGATE: ST. LAWRENCE COLLEGE.—Entrance Scholarships: £50, R. C. S. Browne, C.M.S. Home, Limsfield; £40, F. G. Breed, C.M.S. Home, Limsfield; £25, K. S. Mackenzie, Southborough; £25, R. D. Shaw, C.M.S. Home, Limsfield; £25, C. S. King, Catherington House School; £25, E. F. Carter, Castle Park School, Dalkey. Scholarship Nominations: £15, R. T. Venn, Burgh Heath Preparatory School, Epsom; £15, W. C. Cassels, C.M.S. Home, Limsfield; £15, G. Tilley, St. Lawrence College; £15, W. O. Littlewood, St. Lawrence College Junior School; £15, G. Manwaring, C.M.S. Home, Limsfield; £15, D. M. Matheson, St. Lawrence College Junior School.

SHERBORNE.—Akroyd Science Scholarship, £75 a year for 3 years, tenable at any University: C. T. Sanctuary. Entrance Scholarships: R. E. Hodgson, B. Scott, and C. F. H. Puckridge. Exhibitions: C. L. Gray Edwards, W. M. C. Currie, E. B. Gordon, J. C. Lott, and G. S. King. The scholarship open to members of the school has not yet been awarded.

STRATFORD-UPON-AVON: KING EDWARD VI. SCHOOL.—Leaving Scholarships of £50 a year for three years: Shakespeare Scholarship, J. S. Culverwell; Charles Flower Scholarship, F. E. Dickinson.

WIMBLEDON: KING'S COLLEGE (LONDON) SCHOOL.—Salter Exhibition (£80 for four years): L. C. Reid. Forest Scholarship (£30 for three years): R. O. Hobhouse. Sambrooke Scholarship (£25 for two years): D. H. Beattie. Mathematical Scholarship (£30 for three years): L. C. Reid. Leopold de Rothschild Scholarship: E. F. Sayers. Jelf Medal: L. C. Reid.

YORK: ELMFIELD COLLEGE.—Hugh Bourne Scholarship, £25: F. W. Atkin. Adams Scholarship, £10: J. C. Spence. Stewart Scholarship, £10: C. D. Holroyd.

## FROM GINN & COMPANY'S LIST.

### GOOD HEALTH.

By F. G. JEWETT.

Revised for use in English Schools by ALICE RAVENHILL, F.R.San.I., Lecturer London University Extension Board. Designed for pupils from ten to twelve years of age; treating of hygiene rather than anatomy or physiology, special emphasis being laid upon personal hygiene. Fully Illustrated. 171 pages. Price 1s. 6d.

### THE MOTHER TONGUE.

By G. L. KITTREDGE and S. L. ARNOLD.

BOOK I.—Specially Revised for use in English Schools by JOHN W. ADAMSON, B.A., Professor of Education, King's College, London. **LESSONS IN SPEAKING, READING AND WRITING ENGLISH.** xiv+294 pages. Illustrated. Price 1s. 6d.

*Opinions of His Majesty's Inspectors:—*

"I should be very glad to see it in use in all our schools."  
"I do not know of any better method of teaching English than that so carefully developed in 'The Mother Tongue.'"

"The most practical text-book I know for teaching the Mother Tongue."

BOOK II.—**ELEMENTARY ENGLISH GRAMMAR, WITH LESSONS IN COMPOSITION.** xxii+417 pages. Price 3s.

BOOK III.—**ELEMENTS OF ENGLISH COMPOSITION.** xx+431 pages. Price 4s. 6d.

### THE DEVELOPMENT OF MODERN EUROPE DURING THE LAST TWO HUNDRED YEARS.

An Introduction to Current History. By JAMES HARVEY ROBINSON and CHARLES A. BEARD. These Volumes will meet the demand for a history of recent times which shall explain the social and economic as well as the political development of our own age, and shall also prepare the student to understand the great problems of the world in which he finds himself.

Vol. I.—**The Eighteenth Century, The French Revolution, and the Napoleonic Period.** 374 pages. 6s. 6d.

Vol. II.—**Europe since the Congress of Vienna.** 433 pages. 6s. 6d.

### AN INTRODUCTION TO THE HISTORY OF WESTERN EUROPE.

By J. H. ROBINSON. Gives a clear and interesting account of the all-important movements, customs, institutions, and achievements of Western Europe since the German barbarians conquered the Roman Empire. 714 pages, with Maps and Illustrations. Price 7s. 6d. Also in Two Volumes, dividing at the Sixteenth century. Price 4s. 6d. each.

### GENERAL HISTORY.

By P. V. N. MYERS. A Complete Outline in One Volume of the World's History from that of the Eastern Nations to the present time. Accepted and recommended as the best brief course in General History. Half-morocco. 30 Maps. Over 160 Illustrations. 794 pages. Price 7s. 6d.

Part I.—**A Short History of Ancient Times.** 388 pages. Price 4s. 6d.

Part II.—**A Short History of Mediaeval and Modern Times.** 438 pages. Price 4s. 6d.

### PRINCIPLES OF PHYSICS.

By A. P. GAGE. Revised by A. W. GOODSPEED. A thorough Revision of GAGE'S "Principles of Physics," made in accordance with the latest developments in Physical Science. 547 pages. Illustrated. Cloth. Price 6s. 6d.

### THE BLAISDELL PHYSIOLOGIES.

**THE CHILD'S BOOK OF HEALTH.** A First Book of Hygiene, presenting easy lessons for Junior Classes. 1s.

A SUPERVISOR OF SCHOOLS says:—"A book to be read by every boy and girl of ten years and upwards."

**HOW TO KEEP WELL.** Simple, teachable, and replete with Suggestions for Teachers. Price 2s.

**OUR BODIES, AND HOW WE LIVE.** Simple in style, with no attempt at scientific discussion. Adapted for the Higher Standards. Price 3s.

**HOW TO TEACH PHYSIOLOGY.** Handbook for Teachers. Price 6d.

BOOKS SENT ON APPROVAL TO TEACHERS.

Complete Catalogue post free on application.

GINN & COMPANY, St. Martin's Street, London, W.C.

# MESSRS. RIVINGTONS LIST

## ELEMENTARY ALGEBRA.

By W. G. BORCHARDT, M.A., B.Sc., Assistant Master at Cheltenham College. Complete, 3s. 6d.; with Answers, 4s. 6d. Or in Two Parts:—  
Part I., 2s. 6d.; with Answers, 3s.  
Part II., 2s.; with Answers, 2s. 6d.

In use at Harrow School, Marlborough College, Shrewsbury School, Goldsmiths' College (New Cross), Edinburgh, Glasgow, Aberdeen, St. Andrews, Manchester, Rochdale, Birmingham, Liverpool, Birkenhead, Wigan, Blackburn, Lancaster, Newcastle, Sunderland, York, Leeds, Hull, Huddersfield, Sheffield, Derby, Nottingham, Bradford, Halifax, Wakefield, Leicester, Newcastle (Staffs.), Chester, Coventry, Leamington, Wolverhampton, Cheltenham (Dean Close School), Bath College, Bristol, Cornwall, Bromsgrove, Bedford, Oxford, Cambridge, Canterbury (The King's, S. Edmund's, and Simon Langton Schools), Cardiff, Mountain Ash, Brighton, Hastings, Felsted, Epsom, Madras, Melbourne, Sydney, New Zealand, Natal, &c.

## ALGEBRAICAL EXAMPLES.

Taken from the Algebra. With or without Answers, 3s. Or in Two Parts:—  
Part I., 1s. 6d.; with Answers, 2s.  
Part II., 2s., with or without Answers.

## ARITHMETICAL TYPES AND EXAMPLES.

With Oral Examples. By W. G. BORCHARDT, M.A., B.Sc. This book is issued in four ways—  
Types and Examples in One Volume, with Answers, 3s. 6d.  
Types and Examples in One Volume, without Answers, 3s. 6d.  
The Examples separately, with Answers, 3s.  
" " " without Answers, 3s.

In use at Harrow School, Marlborough College, Rugby School, Bilton Grange (Rugby), Edinburgh, Glasgow, Aberdeen, St. Andrews, Manchester, Rochdale, Birmingham, Liverpool, Birkenhead, Wigan, Durham, Lancaster, Newcastle, Sunderland, Darlington, York, Scarborough, Leeds, Sheffield, Nottingham, Bradford, Halifax, Wakefield, Leicester, Coventry, Shrewsbury, Cheltenham (Dean Close School), Cheltenham Ladies' College, Cheltenham College, Bath College, Bristol, Oxford, Uppingham, Repton, Malvern, Sedburgh, Giggleswick, Southport, Preston, Bury, Bolton, Newark, Clifton, Berkhamsted, Bournemouth, Eastbourne, Canterbury (The King's, S. Edmund's, and Simon Langton Schools), Dover, Portsmouth, Exeter, Cornwall, Tavistock, Epsom, Dublin, Melbourne, Sydney, N.S.W., New Zealand, South Africa, &c.

## JUNIOR ARITHMETIC.

By W. G. BORCHARDT, M.A., B.Sc. Complete, 1s. 6d.; with Answers, 2s. The Examples separately, with or without Answers, 1s. 6d.

In use at Harrow School, Marlborough College, Shrewsbury School, Dulwich College, Goldsmiths' College (New Cross), Edinburgh, Glasgow, Aberdeen, St. Andrews, Manchester, Rochdale, Birmingham, Liverpool, Birkenhead, Wigan, Blackburn, Lancaster, Newcastle, Sunderland, North Shields, York, Leeds, Hull, Sheffield, Derby, Nottingham, Bradford, Oakham, Halifax, Wakefield, Leicester, Crewe, Newcastle (Staffs.), Chester, Coventry, Leamington, Wolverhampton, Cheltenham (Dean Close School), Bath College, Bristol, Bromsgrove, Bedford, Oxford, Cambridge, Cardiff, Brighton, Hastings, Felsted, Epsom, Melbourne, Sydney, Natal, &c.

## ELEMENTARY STATICS.

By W. G. BORCHARDT, M.A., B.Sc. Crown 8vo, with or without Answers, 4s. 6d. "A book which every teacher should possess; it contains all the book-work he is likely to want and more, while it is a most useful mine of excellent examples."—*Nature*. "The experiments described and the numerical and graphical examples worked out in the text should be amply sufficient to give sound ideas of the fundamental principles."—*School World*.

## RIVINGTONS' DIRECT METHOD FRENCH SERIES

Edited by W. G. HARTOG, B.A., Lecturer in French at University College, London, and at the East London College; Occasional Inspector and Assistant Examiner to the University of London.

This Series is based on the generally accepted rules for the teaching of modern languages; provides continuity of teaching, and consists of:—

### A FIRST BOOK OF FRENCH ORAL TEACHING.

By C. V. CALVERT, B.A. Edited by W. G. HARTOG, B.A. Crown 8vo, 2s. There are 24 Illustrations of the Stories, of which 14 are full-page. These Illustrations depict French people and French life, and were drawn by a well known exhibitor in the Paris Salon.

**WALL PICTURES.** Four of the Illustrations reproduced separately in black and white. They can be had in two styles—1. Mounted on linen, 3s. 6d. net each. 2. Mounted on linen, varnished, taped, and with moulding at top and roller at foot, 6s. net each.

**THE FIRST SIXTY LESSONS PHONETICALLY TRANSCRIBED.** By D. L. SAVORY, M.A., Lecturer at the University of London. Crown 8vo, 1s.

### FABLES EN PROSE ET EN VERS.

With Oral and Written Exercises, Questionnaire and Grammar, and suggestions for Free Composition and Poetry for Repetition. By W. G. HARTOG, B.A. Crown 8vo, with Illustrations, 2s. 6d. This book is suitable for pupils after their first year of French, learned on the Oral Method.

### MELANGES FRANCAIS.

An Elementary Reader for the Second and Third Years of French Instruction. With Oral Exercises in French, containing Questionnaires, Grammar, Exercises écrits, and a complete French-English Vocabulary. By W. G. HARTOG, B.A. Crown 8vo. With 11 full-page Illustrations. 2s. 6d.

### ANECDOTES ET RECITS.

A Reader for Elementary and Middle Forms. With Oral Exercises in French, Questionnaires, Grammar, Exercises écrits, Passages for Retranslation based on the Text, and a French-English Vocabulary. By W. G. HARTOG, B.A. Crown 8vo, with 8 full-page Illustrations, 2s. 6d.

### LECTURES ET CONVERSATIONS FRANCAISES.

With Oral and Written Exercises in French. By W. G. HARTOG, B.A. Crown 8vo. With Map of France and Plan of Paris. 2s. 6d.

### PAGES CHOISIES DES GRANDS ECRIVAINS.

A more advanced book for French Reading and Conversation, on the same plan as "Lectures et Conversations." With French Notes and Oral Exercises. By W. G. HARTOG, B.A. Crown 8vo, 1s. 6d.

### POETICAL FRENCH READER.

Selections from the Poems of LA FONTAINE, RACINE, CORNEILLE, MOLIÈRE, CHÉNIER, HUGO, and DE VIGNY. With Biographical Sketches, Notes, and Exercises. By W. G. HARTOG, B.A. Crown 8vo, 2s. 6d.

### GRAMMAIRE FRANCAISE PRACTIQUE, BASÉE SUR LA METHODE INDUCTIVE.

Par W. G. HARTOG, B.A. Crown 8vo, 3s. 6d. Part I., forming a complete Elementary Grammar, may be had separately, 2s. 6d.

### A FIRST BOOK OF ORAL (or Written) FRENCH PROSE COMPOSITION.

With Notes. Designed to follow Part I. of "Grammaire Française." By W. G. HARTOG, B.A. Crown 8vo, 1s.

### LECTURES SCIENTIFIQUES.

A French Reader for Science Students. Containing Extracts from Modern French Scientific Works in Chemistry, Physics, Mathematics, Physiology, and Botany. With a Glossary of Technical Terms. By W. G. HARTOG, B.A. Crown 8vo, 5s.

## RIVINGTONS' DIRECT METHOD FRENCH SERIES (continued)

**BEGINNERS' TEXTS.** With Notes, Exercises in French, Passages for Retranslation, Questionnaires, and Vocabulary. Edited by W. G. HARTOG, B.A. Small fcap. 8vo, with Illustrations. Each Volume, 1s.

**La Joie fait Peur** (Mme DE GIRARDIN).  
**Valérie** (SCRIBE).  
**Le Major Cravachon** (LABICHE, LEFRANC, and JESSÉ).  
**Le Diplomate** (SCRIBE).

## RIVINGTONS' DIRECT METHOD ELEMENTARY GERMAN TEXTS

Edited by D. L. SAVORY, M.A., Lecturer in the University of London, Goldsmiths' College; Author of "A First German Reader," &c. Small crown 8vo, with Illustrations, each Volume 1s. 6d.

This new Series of Elementary German Texts consists of stories complete in themselves, selected from the best modern Authors. They are easy in style, but not childish in matter, and are intended for students who have already acquired a simple vocabulary and the elements of grammar.

**Das Gespensterschiff** (WILHELM HAUF).  
**Die Geschichte des jungen Herrn Anton** (HEINRICH SEIDEL).  
**Krambambuli** (MARIE VON ERNER-ESCHENBACH).  
*Other Volumes in preparation.*

**READY IMMEDIATELY. The Cheapest, Most Attractive, and Most Readable**  
**History Text-Book for Secondary Schools now before**  
**the Educational Public.**

# Nelson's School History Of Great Britain and Ireland.

By G. W. PROTHERO, M.A., Litt.D.,  
Formerly Professor of History in the University of Edinburgh.

480 pages. Cloth. Price Two Shillings and Sixpence.

**Illustrated with Forty-eight excellent Coloured Reproductions from  
paintings by Great Historical Artists.**

Furnished with Summary of Dates and Facts, Genealogical Tables, and other convenient aids to memory.

The most complete history text-book yet published for schools, suitable either for general middle-form work or for examinations up to matriculation standard.

Not merely a history of England, but a history of the British Isles and the British Empire.

Written in lucid, straightforward language, and excellently adapted for school pupils who cannot comprehend the intricacies of national policy and the exact significance of constitutional changes.

A New Series of carefully graduated Reading Books designed  
to form a Ladder to Literature.

## The Royal Treasury of Story and Song.

The First Series of Literary School Books, in which each reading is complete in itself, and of sufficient length to arouse and sustain juvenile interest. Each volume beautifully illustrated with numerous full-page Pictures in colour and black and white, as well as marginal Drawings of an interesting and charming character.

The Royal Treasury will be published in Seven Parts, of which the following are now ready:—

- Part I. **DOORS OF GOLD.** 128 pages. 10d.  
Select fairy tales, simply written, with familiar rhymes and verses.
- Part II. **FAIRY FAVOURS.** 160 pages. 1/-  
Imaginative tales from good literary sources, select folk-tales of a romantic and humorous character, with a selection of some of the best fairy poetry in the language.
- Part III. **THE HALL OF HEROES.** 208 pages. 1/3  
Tales of early heroes of the chief European nations, with narrative poetry, mostly of a simple ballad character.
- Part IV. **GOLDEN GIFTS.** 272 pages. 1/6  
Romantic tales and narrative poetry.
- Part V. **THE ENCHANTED GARDEN.** 272 pages. 1/6

An Entirely New and Unique Series of  
Historical Readers.

## Highroads of History.

Prepared in accordance with the latest and most approved methods of History Teaching, and superbly illustrated with reproductions in Full Colour and in Black and White of

Great Historical Paintings by Great Artists.

Large Size, 9 in. × 7 in.

### CURRENT EVENTS.

M. LE PROFESSEUR A. P. HUGUENET will address the Société Nationale des Professeurs de Français en Angleterre on the "Expédition du Mexique" at the College of Preceptors on September 26 at 4 p.m.

THE Autumn Meetings of the Incorporated Association of Assistant Masters in Secondary Schools will be held on September 9 and 10 at the Mathematical School, Rochester.

THE First International Moral Educational Congress will be held at the University of London, September 25-29, under the presidency of Prof. Michael E. Sadler, M.A., LL.D.

THE following courses, of ten lectures each, at the University of London, are open free to all teachers in London secondary and elementary schools and to teachers in training: (1) "Outlines of French Literature," by Miss F. C. Johnson, M.A., October 14 and following Wednesdays, at 6 p.m.; (2) "Some Aspects of John Ruskin," by Miss C. F. E. Spurgeon (Final English Honours, Oxon.), October 10 and following Saturdays, at 10.30 a.m. Apply for admission, before September 26, to the London Education Offices, Victoria Embankment, W.C.

Two Courses in School Hygiene will be held next Session at University College, London, under the direction of Prof. Kenwood, assisted by Dr. H. Meredith Richards and other specialists: (1) October to March (Fridays, 7.15) for school teachers; (2) will begin early in 1909, and treat of School Hygiene and Medical Inspection of Scholars, for medical men.

A CONFERENCE on Democratic Education will be held at Birmingham University on October 17, under the auspices of the Workers' Educational Association. On the preceding day (October 16) a "demonstration" in the Town Hall will be presided over by Bishop Gore.

THE Second International Congress on Popular Education will be held at Paris, October 1-4.

THE University of Oxford has conferred the honorary degree of M.A. upon Mr. Albert J. Mockridge, B.A. Lond., the new Head Master of the Municipal Secondary School, Poole, in recognition of his services to education during his long connexion with Culham College as one of the staff, and latterly as Principal of the P.-T. Centre, Oxford.

IN recognition of his occupancy of the Professorship of Chemistry at Cambridge for nearly half a century, Prof. G. D. Liveing, F.R.S., has been presented with an illuminated address by Sir James Dewar, Jacksonian Professor,

and the lecturers and the staff of the University Chemical Laboratory.

\* \* \*

THE University of Sheffield, on occasion of the visit of the British Medical Association, conferred the honorary degree of D.Sc. upon Prof. Simeon Snell, President of the Association; Dr. Henry Davy, last year's President; Prof. Charles Joseph Bouchard, Paris; Prof. John Chiene, Edinburgh; Prof. Antoine Depage, Brussels; Dr. James Kingston Fowler, London; Prof. Ernst Fuchs, Vienna; Prof. Just Marie Marcellin Lucas-Championniere, Paris; Dr. Charles James Martin; Prof. John Benjamin Murphy, Chicago; Dr. Thomas Oliver, Newcastle; Mr. Edmund Owen, Chairman of Council; Sir Henry Rosborough Swanzy, Dublin; Prof. Hermann Tillmanns, Leipzig; and Dr. Dawson Williams (Editor of the *British Medical Journal*).

**Endowments and Benefactions.**

AN anonymous donation of half a million kronen (about £20,833) has been presented to the Vienna Academy of Sciences for the establishment of a "Radium Institute" in connexion with the new physics laboratories of the University of Vienna.

\* \* \*

THE University of Glasgow wants some £5,000 a year to meet general charges (£3,000 for apparatus and £2,000 for material); £10,000 a year for lectureships and assistants; and considerable sums for the Faculty of Law, the Library, the Hunterian Museum, and the Observatory.

\* \* \*

ABERDEEN University wants upwards of £14,000 for similar purposes.

\* \* \*

MR. G. H. SHEPHERD has presented to King Edward VI. Grammar School, Louth, a bust in white marble of Tennyson, who was at the school in 1820, with his father, William Shepherd. The bust is the work of Mr. H. Garland.

—♦♦—

THE Committee of Lloyd's Register of British and Foreign Shipping have decided to found Scholarships in Marine Engineering, with a view to enabling young engineers to pursue a course of study in engineering at a University or approved college. The scholarships, £50 a year for two years, will be established in connexion with the Institute of Marine Engineers. One scholarship will be open for competition each year by examination to British subjects of between eighteen and twenty-four years of age. There are already six "Lloyd's Register" Scholarships in Naval Architecture in existence: three at Glasgow University and three at Armstrong College, Newcastle-on-Tyne.

\* \* \*

THE University of London offers two Martin White Scholarships in Sociology, each £35 a year for two years, to students that have either (1) passed the Intermediate Examination in Arts in 1908 and undertake to study for the B.A. Honours Degree in Philosophy, with Sociology as an alternative subject, or (2) passed the Intermediate Examination in Economics in 1908 and undertake to study for the B.Sc. (Economics) Honours Degree, with Sociology as a selected subject. Apply, with three testimonials and three references, to the Academic Registrar by September 28.

\* \* \*

CAPTAIN GEORGE CROSFIELD, Secretary of the Lancashire Committee of the National Service League (72 Victoria Street, Westminster, S.W.), offers prizes—£15, £10, £5—to Masters of Secondary Schools in Lancashire for the three best essays on the thesis, "That Compulsory Military Train-

ing is necessary for the safety of the country and advantageous from the civic point of view." "Essays must be legibly written [!] and not exceed 1,500 words."

—♦♦—

\* \* \*

IN the Imperial College of Science and Technology, the Hon. R. J. Strutt, F.R.S., has been appointed additional Professor of Physics, and Mr. S. Herbert Cox full-time Professor of Mining.

An additional Professor of Zoology, a Professor of Metallurgy, and an Assistant Professor of Botany are to be appointed in the near future.

\* \* \*

IN Manchester University, Mr. J. E. Petavel, D.Sc., F.R.S., Lecturer in Mechanics and in Meteorology and Demonstrator in Physics, has been appointed Professor of Engineering; Mr. C. H. Lander, M.Sc. Man., Lecturer in Engineering; Mr. T. G. B. Osborn, B.Sc. Man., Lecturer in Economic Botany; Mr. F. H. J. A. Lamb, M.D. (Demonstrator in Physiology, Cardiff University College), Senior Demonstrator in Physiology; Mr. A. E. Woodall, M.B., Ch.B. Man., Junior Demonstrator in Physiology; Mr. T. W. Todd, M.B., Ch.B., Senior Demonstrator, and Mr. E. E. Hughes, M.B., Ch.B. Vict., and Mr. S. H. J. Kilroe, M.B. Lond., Junior Demonstrators, in Anatomy; Mr. John

MacInnes, M.A., Senior Assistant Lecturer in Classics; Mr. N. L. Ingle, B.A. Cantab., Assistant Lecturer in Classics; Mr. F. Smith, B.A., B.Sc. Man., and Miss W. G. Maitland, Demonstrators in Education; and Mr. Robert Dunlop, M.A., Honorary Special Lecturer in Irish History.

IN Sheffield University, Dr. Ralph P. Williams, M.D., B.S. Lond., D.P.H. Oxon., Medical Inspector under the Sheffield Education Committee, has been appointed Professor of Public Health, in room of Dr. Scursfield, resigned; and Miss K. L. Johnston, B.A., Lecturer in Education and Mistress of Method in the University Training College.

THE REV. T. J. LAWRENCE, LL.D. Cantab., has been appointed Honorary Reader in International Law at University College, Bristol.

SIR ALFRED WILLS has resigned the Presidentship of Hartley University College, Southampton, on account of some difference of opinion with the College Council.

MR. T. S. STERLING, B.A. Cantab., has been appointed Lecturer in English in the Hartley University College, Southampton.

THE REV. DR. MARCUS DODS has resigned, through illness, the Principalship of New College, Edinburgh.

THE REV. W. W. LONGFORD, M.A. Oxon., has been appointed Lecturer in History at St. David's College, Lampeter.

THE REV. ARTHUR COLLINGWOOD, S.J., Professor of Mathematics, Wimbledon College, has been appointed Rector of the Jesuit College, Leeds.

OUT of ten Medical Inspectors of Schools appointed by the County Council of the West Riding of Yorkshire, four are ladies—Miss K. J. S. Clark (Edinburgh), Miss J. Coupland (Nottingham), Miss E. McCall (Stoke-on-Trent), and Miss Elizabeth M. McVail (Glasgow).

MISS AGNES A. PARSONS, M.D., B.S., has been appointed a Medical Inspector of Schools under the Birmingham Education Committee.

MISS H. L. POWELL, Principal of the Cambridge Training College for Women Teachers, has been appointed Principal of St. Mary's College, Paddington.

MISS M. H. WOOD, M.A., Litt.D., late Scholar of Girton, Vice-Principal and Lecturer in Pedagogy, St. Mary's College, Paddington, has been appointed Principal of the Training College for Women, Cambridge.

MR. J. STANSFIELD, B.A. Cantab., has been appointed Vice-Principal of St. Peter's College, Peterborough.

MISS H. A. CARSON has been appointed Vice-Principal of the Cheshire Training College, Crewe.

THE REV. F. S. DENNETT, M.A., Chaplain, Worksop College, has been appointed Head Master of the Choir School, Upper St. Leonards.

MR. A. M. WILLIAMS, M.A., joint Rector and Head of the English Department, has been appointed sole Rector and Lecturer in Education, in the Training College, Glasgow.

MR. CLEMENT G. BONE, Assistant Secretary to the Warwickshire Education Committee, has been appointed Secretary to the Dorset Education Committee.

MISS BEATRICE FULLFORD, B.Sc., Science Mistress, Milham Ford School, Oxford, has been appointed Organizing Secretary for the Young Men's Christian Association in Japan.

MISS M. BURTON, B.A., Milham Ford School, Oxford, has been appointed Head Mistress of the Waterford High School.

MISS A. K. EDWARDS, of Newnham College, has been appointed Classical Mistress at Milham Ford School, Oxford; Miss Muriel Thompson, M.Sc., Science Mistress; and Miss Jessie Lowson, M.A., Mathematical Mistress in the Kindergarten.

MR. JOHN ROBERT BROWN, M.A. Cantab., of Bury, Lancashire, has been appointed Head Master of the County School and P.-T. Centre, West Suffolk.

MR. K. LONSDALE, B.A., has been appointed French Master at Maidenhead Modern School.

MR. W. J. D. BRYANT has resigned the Head Mastership of Sir Andrew Judd's Commercial School, Tonbridge, after twenty years' service.

MESSRS. JACK announce the issue (commencing in September) of a fresh popular work on natural history, "The Wild Beasts of the World," in seventeen shilling (net) parts, edited by Frank Finn, and illustrated with 100 reproductions in full colours from drawings by Louis Sargent, Charles E. Swan, and Winifred Austen.

IN connexion with the Tercentenary of Milton, the Elizabethan Stage Society, under the direction of Mr. William Poel, will revive the "Samson Agonistes" next December in London, and will afterwards give representations in Oxford, Cambridge, Liverpool, and Manchester.

THE Joint Agency for Women Teachers (74 Gower Street, W.C.) states: "For engagements for 1909 and afterwards members of the associations represented on the Committee will no longer be charged any registry fees, and commissions for them will be as follows:—Resident posts, 1½ per cent., non-resident posts, 1 per cent. on the first year's salary."

SIR HUBERT VON HERKOMER, who was for some years Slade Professor of Fine Art at Oxford, has offered to paint a full-length portrait of the Chancellor, Lord Curzon of Kedleston, as a gift to the University.

ACCORDING to the *Kölnische Zeitung*, the question of the admission of women to University study in Germany has been settled. Women subjects of the Empire will be admitted on the same footing as men; but women of other countries will require the permission of the Minister of Public Instruction for matriculation.

HARVARD UNIVERSITY has decided to open a special two-years' course in banking and finance, accounting and auditing, insurance, industrial organization, transportation, commercial law, economic resources, and civil service; and on examination will award the degree of "Master in Business Administration."

## CORRESPONDENCE.

## THE MORAL EDUCATION CONGRESS.

To the Editor of "The Educational Times."

SIR.—We beg leave to draw the attention of your readers to the First International Moral Education Congress, to be held at the University of London, Imperial Institute Road, South Kensington, on September 25 to 29.

The Congress is honoured by the good wishes of His Majesty the King. It meets under the patronage of twelve Ministers of Education, including England, the United States, France, Italy, Russia, Belgium, Spain, and Japan. It has also for its patrons fifteen heads of Colonial Education Departments: delegates are being sent by many Universities, by all the leading educational associations, and by a number of Education Authorities; and, finally, the list of Vice-Presidents and of the General Committee includes very many of the leading educationists of Europe.

Of those who are contributing papers, we may mention: England—Profs. Adams, Lloyd Morgan, Mackenzie, and Muirhead; America—Profs. Adler and Peabody; Italy—Cesare Lombroso; France—Profs. Buisson, Boutroux, and Seailles; Germany—Profs. Munch, Foerster, and Tonnies; Russia—M. and Mme. Kovalevsky; Hungary—Profs. Kármán and Schneller. The whole field of moral education in schools will be covered. The following is the general programme:—

I. The Principles of Moral Education (Chairman, the President). II. Aims, Means, and Limitations of the Varying Types of Schools (Chairman, Lord Avebury). III. Character-building by Discipline, Influence, and Opportunity (Chairman, M. le Baron d'Estournelles de Constant, Senator). IV. The Problems of Moral Instruction (Chairman, Prof. Dr. Friedrich Jodl, University of Vienna). V. (a) Relation of Religious Education to Moral Education (Chairman, Rev. Dr. Gow, Westminster School); (b) Special Problems (Chairman, Regierungsrat Dr. Gobat, Berne). VI. Systematic Moral Instruction (Chairman, Geheimrat Prof. Dr. Wilhelm Foerster, University of Berlin). (c) The Teaching of Special Moral Subjects (Chairman, Cyril van Oberbergh, Director-General of Higher Education for Belgium). VII. The Relation of Moral Education to Education under other aspects (Chairman, Prof. Ferdinand Buisson, University of Paris). VIII. The Problem of Moral Education under Varying Conditions of Age and Opportunity (Chairman, Sir William Anson, University of Oxford). (d) Biology and Moral Education (Chairman, Prince Jean de Tarchanoff, St. Petersburg Academy of Medicine). Special Moral Instruction Lessons will be given in English by Mr. F. J. Gould; in French by Pastor Charles Wagner, the author of "The Simple Life"; and in German by Frl. Jannasch. There will also be an exhibition of books and pictures.

The fee (including Report of some four hundred pages) is 10s. 6d. for the general public and 7s. 6d. for teachers. Single day tickets can be had for 2s. 6d. Return fares on all lines at single fare and a quarter. It is hoped that there may be a large attendance of the general public and of the teaching profession.

Full details may be obtained on writing to the office of the Congress, 13 Buckingham Street, Strand, London, England.—We remain, on behalf of the Executive Committee,

MICHAEL E. SADLER, President.  
 AVEBURY, Hon. Treasurer.  
 SOPHIE BRYANT, Chairman.  
 J. W. ADAMSON, Vice-Chairman.  
 GUSTAV SPILLER, General Secretary.

THE Society of Merchant Venturers has decided to petition His Majesty in Council in favour of the grant of a charter for the establishment of a University of Bristol on the lines of the draft charter prepared by the local University college, but suggesting certain modifications which will define more precisely the position in the University to be occupied by the University classes of the Merchant Venturers' Technical College. Among the most important are those which provide that Bristol students whose means are small shall still be able to obtain a University education at fees as low as those charged by the Merchant Venturers' Technical College, and that the degrees of the University shall be open to evening students.

## THE INTERNATIONAL ART CONGRESS.

THE Third International Art Congress "for the Development of Drawing and Art Teaching and their Application to Industries" was held in the Great Hall of the University of London, South Kensington, August 3-8. There was a very large assembly of delegates from some forty countries. The Earl of Carlisle was elected President of the Congress, and the following were chosen as Vice-Presidents:—Sir John Gorst (Great Britain), Prof. Woodward (United States), M. Paul Colin (France), Herr Boos-Jegher (Switzerland), Dr. Pallat (Germany), Prof. Ferrari (Italy), Prof. Nadler (Hungary), Mme. Eliesco (Rumania), Herr Palascheff (Bulgaria), Herr Segerborg (Sweden), and Fräulein Sahlsten (Finland).

## THE PRESIDENT'S ADDRESS.

The Earl of CARLISLE, in his presidential address, said this was the third Congress of its kind. The first was held in Paris in 1900, on the occasion of the International Exhibition, and the second at Berne in 1904. The Paris Congress was attended by 30 official delegates, 15 countries were represented, and the Congress had 516 members. At Berne 61 official delegates represented 25 countries, and the number of members was 648. The present Congress was attended by 51 official delegates from 37 countries, and more than 1,800 members. The originators of the Association Amicale des Professeurs du Dessin, which held these congresses, were a handful of French teachers who, as early as 1894, met to discuss the project of such a federation. Those teachers had remained members and were present to take part in this Congress. He wished that he could believe that the significance of this new international movement had at last been fully realized in this country. It was certainly not understood at either the first or the second Congress. Of 516 members enrolled in Paris, only 12 were British teachers. The presence of the Congress in London was due to the fact that those teachers were vividly impressed by the standing and encouragement given to their *cofrères* at the Conference in Paris, and subsequently at Berne, alike by public opinion and by the Governments concerned. Great thanks were due to those English teachers who had brought about this result. It was impossible to exaggerate the educational value of the exhibition connected with the Congress, and the more they looked at the well chosen exhibits the more important appeared the international movement which had brought them together. It was a movement which we in this country ought particularly to welcome, since it showed an extraordinary variety of ideas and teaching methods, and illustrated more vividly than any report could do the organization and equipment of nations which had far longer experience than we had of æsthetic and technical education. Of the subjects to be discussed the most important for this country were those which bore upon the value of co-ordination between various kinds of schools and the application of art to industry, and, for us, he thought, that was also the main feature to be observed in the exhibition. In this matter many foreign countries were our masters, and we should do well to learn what we could from them. . . . The indifference of the Government to art teaching was illustrated by their very marked neglect of this Congress. He attributed this marked neglect, and he hoped members of the Congress would attribute it, rather to extreme stupidity than to any intentional rudeness. . . . He dwelt upon that matter because it illustrated in some degree the defects of our system to which he wished to draw attention. How were we to educate our masters? Perhaps some foreign visitors might be able to say how it was that their Ministers and members of municipalities were as well educated as their pupils. The fact that our art education did not extend to our public schools—using that term in the British and not the American sense—or to our Universities might have a great deal to do with the matter. The same fact might be the cause also of one of the great difficulties with which they had to deal—the divergence between the art training of the workman in the art school and the work which he was called upon to do for the silver-smith and jeweller when he went out into the world. Another great drawback resulting from this want of cultivation in our governing classes was that every Minister or educational body was the easy prey of the eloquence of literary gentlemen with theories. Unfortunately, they had no criterion by which they could judge the practical results of the systems they had set up and knocked down. . . . Still, within his time, the movement had made immense progress.

The papers covered a very wide variety of subjects, and were followed by animated discussions in English, French, and German. We can only select a few brief summaries.

#### ART IN THE SCHOOL AND IN THE HOME.

Prof. M. A. KELLER, of the Ecole Normale Supérieure de Saint-Cloud, said there existed to-day a movement in the direction of popular art which was not yet understood by the general public, and in which the professor of drawing had accepted the double mission of inculcating the principles of drawing and of creating among his pupils the taste for art. In the school it was his part to suppress his own personality and teach his pupil by the observation of Nature to develop in himself some feeling for art. The growth of taste and the sense of beauty would then follow of themselves. Among the means which he suggested for cultivating in the young mind the proper sense of art were a well chosen scheme of mural decoration in the school itself, with reproductions of frieze borders and famous works of art, and visits to museums and monuments organized by the paid teachers of the State. Art in the home was a matter of greater delicacy, for in France the family circle was jealous of its liberty, and thus here it was the influence of the child alone that could operate, and he would gradually become the educator of his parents and of the other members of his family. The delicate taste of the girls and the manual skill of boys might thus contribute to render the home beautiful and more agreeable to the family. M. Keller also suggested that the scholars' book prizes should be superseded by really good framed engravings, that the planting of trees and flowers should be encouraged, and that children should be introduced to the beauties of Nature by excursions into the country and to museums and studios.

#### THE TRAINING OF INFANTS.

Miss KATHARINE PHILLIPS, Superintendent of Method to the London County Council, in discussing "Drawing in Infants' Schools," said that formerly children from three to seven years of age were trained according to traditional senior-school methods rather than by those arising out of their physical, mental, and social conditions and needs. Far other ideas, however, were now beginning to prevail, it being recognized by intelligent teachers that, to save time and obtain effective results, it was wiser to select from natural instincts and impulses those for cultivation which seemed to have been determining influences in man's upward course towards a finer organization of mind and body. The drawing of little children was recognized by teachers to be a language; another means of expression for the developing, struggling child intelligence. In our good modern infants' schools the little children were now not only allowed, but required, to see for themselves. They were required to record their own impressions and observations, or ideas of their impressions and observations, not what an outside adult authority insisted to them was there to be seen. Thus by practice and re-observation the infants approached slowly to "truth in seeing." As there was joyous freedom of self-expression proper to the age of children, every mark made had its meaning, purpose, and strength, however rudimentary, instead of being, as formerly, mechanical, meaningless imitation.

#### GERMAN AND AMERICAN EXPERIENCE.

Dr. GEORGE KERSCHENSTEINER, of Munich, in a paper on "The Development of the Power of Graphic Expression," reported the result of many years' experiments in connexion with 58,000 school children between the ages of six and fourteen. The conclusions at which he arrived, and which were accurate enough to warrant their use as a foundation on which to base the drawing syllabus, included the following: Boys and girls required a different syllabus, at least in the elementary school; decorative teaching should only be eliminated from the syllabus when the teaching staff showed lack of artistic feeling. As a rule, drawing from Nature could not be successfully taught in classes before the age of ten, and where systematic class teaching of drawing was begun at an earlier age it was desirable to organize drawing from memory exclusively.

Mr. HENRY TURNER BAILEY (United States) directed attention to certain experiments in the schools of the United States, which seemed to tend towards establishing methods of teaching young children through drawing live plants. The power to draw directly from the object was of such great importance that any course of instruction which failed to develop it could hardly be called successful. This power developed through constant

practice under guidance. The objects best adapted apparently to the needs of beginners in the art of delineation were the common plants, because they were everywhere available, because they presented all the problems of graphic representation in their simplest form, and because children liked flowers, and therefore drew from them with enthusiasm.

A long resolution was adopted on the motion of Mlle. TEUFFOT (Paris), declaring that the kindergarten teacher should, above all things, safeguard the child's sensibility and try to make drawing an aid to the development of all its faculties; that the exercises should be progressive, chosen from familiar objects in Nature, and quite short; and that, as drawing was so important in education, the theory and practice of this art should be specially studied by teachers.

#### APPRENTICESHIP AND EDUCATION.

Mr. W. R. LETHABY, Professor of Design at the Royal College of Art, read a paper upon "Apprenticeship and Education," in which he advanced the view that all education should be apprenticeship, and all apprenticeship education. Education had become, in the thoughts of many, far too much a mere abstract grammar and far too bookish. This bookish method had invaded even art education. Instead of learning directly how to draw in the simplest and yet surest way, one was supposed to learn first all about drawing in various subdivisions and artificial compartments, as freehand drawing, model drawing, perspective drawing, life drawing, and the like. These elaborate approaches to a practical subject, a form of gymnastic-like drawing, were very wasteful of time and very destructive of confidence. The great end was production, the great thing was the trade, the craft, and sufficient culture could be hung up to any sufficient trade. Drawing was best taught along with apprenticeship to a craft, otherwise it became so generalized that it was difficult for the ordinary student to see its application, and it became only a "subject." In thus generalizing it into a grammar apart from its application, the most valuable parts of the teaching of drawing had often been forgotten. These most valuable parts were, he considered, (1) the bringing before the student fine material on which he formed his taste; (2) the unconscious absorption of facts not only as to the shape of man, but fine ornamental forms, letters, heraldry, symbols, &c.; (3) the collection of examples for use, so that if one wanted a vine, a rose, a ship, or a stag, there was a study of it already laid up for reference. The old masters drew with this object, and that was why their drawings were treasured and handed on. Modern masters, like Alfred Stevens or Burne-Jones, drew in this way to store up observations, but how late in the day the idea came to most students that their studies were not (for example) mere "life drawings," but observations of attitude and action forming so much valuable stock in trade! These supplementary purposes of learning drawing had been, he thought, so much forgotten because drawing had been so divided off from the crafts, even from the craft of painting, and he, for his part, thought that all advanced drawing should be carried on in association with the learning of a craft, were it carpentry or sculpture; nothing else made it sufficiently real and vital.

#### CRAFTSMEN AND SCHOOLS OF ART.

Mr. W. H. BERRY, speaking of the position of schools of art in relation to the training of the present and future generations of craftsmen and designers, referred particularly to the work of the smaller schools, although, he said, many of the larger institutions failed to accomplish the object for which they were instituted. The whole tendency of many schools seemed to be to give pupils a sound grounding in the principles of drawing without any correlative idea as to what the science which they were learning might lead to. Draughtsmanship appeared to be the end of their teaching, and therein lay a grave danger, for draughtsmanship could never be of much service in itself, and must rely upon its use as a decorative factor or fail in a large measure to justify the expenditure of time upon teaching it. There seemed to be no reason why the teaching of sound draughtsmanship should not be compatible with that of fine craftsmanship; indeed, it had been proved that the latter improved the former by teaching the student the art of selection. It was lamentable that many art schools had no appreciable effect upon the manufactures of the districts in which they were situated. In such cases there must be something wrong, either in the organization of the schools or the curriculum to which they adhered. This could be remedied only by the decentralization of the schools and by making their teaching practical. By

a process of decentralization, districts or counties might be given a central institution in which their own teachers and students might be initiated into the practical as well as the æsthetic side of their education, and a system of co-operation might be devised by which the student could learn something of practice and theory simultaneously. In a large number of schools not in industrial centres dilettantism of the worst order was to be found. It was equally important that these should be decentralized. In a wealthy district which was not industrial there would be a demand for quite a different type of work from that called for in manufacturing centres. In a school so situated it would be reasonable to teach such crafts as jewellery, illumination, embroidery, bookbinding, wood-carving, and all those crafts which could be carried out in their entirety by the student. Where that had been done, it had been proved that there was scope for the students' output and a livelihood to be gained after leaving the school. That fact must be acknowledged and advantage taken of it by educating the public to understand what was in good taste and to appreciate work produced under the best possible conditions. The subdivision of labour in artistic production could not be condemned too much; it was the root of all evil in decadent art.

#### ART IN THE UNIVERSITY.

Mr. W. EGERTON HINE, Art Master at Harrow, discussed the question of the teaching of drawing in relation to the University curriculum, and said its present exclusion therefrom constituted an indictment against the illiberal and narrow scheme of education which the Universities adopted. In nearly all professions some knowledge of drawing was necessary, notably for the soldier to make topographical notes, for the sailor to illustrate his log, for the medical man to facilitate diagrammatic expression, and for the scientist and naturalist to afford them a direct and universal language for recording results of research and setting down facts. At the Universities very definite courses of art study should be open to all, practical lectures and good demonstrations should be given, and honours as well as degrees should be possible of attainment. Architecture, painting, and handicrafts should be included in the curriculum, and one or more of these subjects made compulsory in the examinations.

Mr. W. W. RAWSON, Inspector of Drawing for Cape Colony, said a special training in drawing was admittedly necessary for architects, engineers, decorators, and those in other professions dealing chiefly with the graphic representation of ideas and objects, and a similar power of representation was needed by all who had to impart knowledge. The needs of these professions would be met were a uniform and right system established in primary and secondary schools. The inclusion of art training in a University curriculum was justified—(1) as drawing, because of the necessity to make statement at will by graphic means; (2) as handicraft, in order that the uses and beauties of forms might be appreciated and a sound influence upon current workmanship exercised; (3) as fine art, because of the refining influence and the sense of delight afforded by its study, its influence upon a nation and effect upon industries, and its universal and perennial interest.

Prof. WOODWARD, of the Tulane University of Louisiana, in the course of the ensuing discussion, said the tendency in the United States was towards the amalgamation of the art schools with the Universities. Architecture had been developed under the Universities; ten or twelve Universities had departments of architecture which were the best schools in that subject in the country, with the exception of the Massachusetts Institute of Technology. The extent of instruction in art generally, however, varied greatly; in the University of Maine, 51 per cent. of the students enrolled took art or drawing in some form, while at Amherst, an older University on the English model, the proportion was as low as 5 per cent.

#### TRAINING OF ART TEACHERS IN ENGLAND AND WALES.

A report, compiled by a British Sub-Committee giving information concerning the provision made by certain Education Authorities and training colleges in England and Wales for the training of teachers in drawing and other art subjects, was read by Miss GILES. Of the 131 Education Authorities (county and county boroughs) to whom application was made, 128 sent replies. Of these, 41 made no special provision for art instruction; 17 gave instruction to uncertificated and supplementary teachers only, 15 gave free instruction to teachers, 29 had no examination, 48 had Board of Education examinations, and 6 had examinations

other than that of the Board of Education. Communications were received from 56 of the 72 training colleges applied to. The replies showed that 45 had a two-years' course and 4 a three-years' course of art instruction. The average number of students per class was 34.5. A certain number of secondary training colleges sent in answers to the questions, which showed that only one provided for the full professional training of the art teacher. Entrance to the Royal College of Art was still mainly by way of Royal Exhibitions and National Scholarships awarded on the results of the Board of Education examinations. The old "free year," on obtaining a full certificate, had been abolished, in spite of the much greater stringency of the test. The practical result had been to separate the Royal College much more from the rest of the art schools and to set the provincial cities on their mettle to provide as good, or better, training nearer home. The Sub-Committee recommended:—(1) That provision for instruction be on the basis of the recognition of drawing as a part of general education; (2) that drawing be brought into closer relation with other subjects, as its chief use in early years was as a mode of expression; (3) that teachers of all subjects practise drawing as a part of their professional equipment; (4) that prospective teachers of drawing have the professional part of the general training course, having access to this through a certificate of general fitness; that special emphasis be given to the study of child nature; that instruction be given in the special methods of teaching drawing, with practical lessons and criticism; and that examinations cover professional fitness. The Sub-Committee pointed out the necessity of provision for the training of art teachers in pedagogical principles and practice, and remarked that instruction in the special methods of teaching drawing was of little value without being taken in connexion with regular practice work. The training colleges seemed peculiarly deficient in this respect. Again, if efficient teachers of drawing were to be secured, one of the necessary conditions was that examinations should cover professional fitness. The tests so far applied dealt only with technical ability, and certificates might be held without any assurance of ability to teach.

#### ART TRAINING ABROAD.

A paper upon "The State of Training for Art Teachers in France" was submitted jointly by M. FRÉCHET, Professor at the Ecole régionale des Beaux-Arts de Nantes, and M. CATHOIRE, Professor at the Lycée Charlemagne. The paper pointed out that the teaching staff for drawing was at present recruited in a haphazard manner, and for many years those responsible for that instruction had insisted on the necessity of a more logical preparation, corresponding with modern wants. They therefore suggested the establishment of a special training college, or a training section in one of the schools of art in Paris; or, if this should prove too costly a solution to the State, candidates should be required to take a course of professional training, in which they would get practice in their profession and instruction in their duties at the same time.

M. LÉON MONTFORT, Inspector of Drawing and Manual Instruction to the Belgian Government, emphasized the claim of art to be considered as a branch of general education. Two systems of education were possible, first by means of training colleges for teachers of drawing only, with a two or three years' course in (1) the theory of art, æsthetics, archaeology, history, and the like; (2) the practice of art, painting, and design; and (3) pedagogy. The second possible course was the selection of drawing teachers from teachers of other subjects who had a special leaning to this branch of teaching, who should have taken courses at a school of art and a University.

Prof. ROBERT NADLER, of the Royal Hungarian College of Art, Budapest, described the methods adopted in his college. The double aim was to train drawing masters and professors, whose duty was to develop appreciation, artistic taste, and a conception of fine art in the pupils in public schools, and to train art students generally. The condition of admission for candidates for drawing masterships was the matriculation or teacher's certificate; for women, the passing of the sixth class of a secondary school; and for art students, a certificate of the sixth class of any kind of secondary school. All candidates had to pass an examination in drawing—head, freehand, perspective, and design. A four years' course must be taken before a student could graduate as professor or drawing-teacher. The course for women teachers also lasted four years, except in the case of students who had passed only six classes of a secondary school. Such students entered a preparatory school and then took a

five years' course. They could not graduate as teachers for training colleges. The course for fine art students was not restricted to any particular number of years, but a four years' course was usually taken. Diplomas for professors and masters of drawing were awarded to those who passed a special examination for which the subjects required were figure drawing, head and whole figure, modelling, freehand, perspective, anatomy, architectural drawing, decorative design, applied art design, still-life drawing and painting, history of art, psychology, pedagogy, and Hungarian literature. Special institutions for the training of drawing teachers should be founded ranking with the Universities. Where this was not possible, special courses should be organized in connexion with schools of art, in which the artistic and the pedagogical capacities should be equally developed.

Mr. A. W. Dow, Professor of Fine Arts in Teachers' College, New York (Columbia University), urged that art teachers had before them the task of convincing the public that art education furnished the finest kind of training for children. Inadequate teaching was responsible for the misconceptions existing in the public mind as to the significance of art. Most art courses were built upon the time-honoured academic theory which substituted imitation—whether of Nature or of a style—for appreciation of harmony, and made "learning to draw" the fundamental process of art study. To meet the diverse needs of public life an entirely new basis must be found. The public would not accept art education at its full value until there was a radical change in ideals of teaching, and consequently in methods. The purpose of art teaching in the schools was the education of the whole people for appreciation, and its results would be efficiency—the trained judgment enabling its possessor to do all things in a finer way—and the enrichment of home and civic life. He outlined a structural method of teaching art, which he had found serviceable, based upon spacing for a general effect of good arrangement, and distinct ways of creating harmony of line by the principles of subordination and rhythmic repetition. In all the years of school it was possible to relate the art work to history, geography, language, and other studies; but such relation should be very obvious and simple. It was important to keep the art course a unit.

### THE TEACHERS' REGISTER.

THE negotiations that lately took place between the Board of Education and representatives of certain educational associations with regard to the establishment of a Registration Council under the Education (Administrative Provisions) Act of 1907 (says the *Morning Post*) have been fruitless owing to the Board's insistence that the composition of the Registration Council must provide indirectly, if not directly, for the representation of every class of teacher, from the University professor to teachers of dancing or millinery. The Board of Education further make it clear that, until the teaching profession can put forward a detailed scheme in which this stipulation is satisfied, registration will continue in abeyance.

#### ADMINISTRATIVE CONSIDERATIONS.

The associations responsible for the scheme which the Board have pronounced inadequate will no doubt resent this scrupulousness, and it will be said that the Board are seizing on an excuse for delay. To any one who has closely followed the administration of the defunct Register, a far more ominous inference must suggest itself; and it is difficult to see how the correspondence which has passed between the Board and certain of the representatives in question can have left the latter ignorant of a danger which threatens the future work of registration, even if a Registration Council should be formed under conditions that satisfy the Board of Education. It seems not unlikely that the Board of Education may be content to discharge their legal obligations by establishing a Registration Council whose claim to be "representative of the teaching profession" is irrefutable, and may subsequently acquit themselves of any further responsibility. They could easily defend themselves by pointing out that under other clauses of the 1907 Act the entire conduct of the Register is relegated to the new Council, and that the conditions under which teachers are to be admitted have not now to receive the approval of the Board. The Order in Council which governed the old Register had so irritated the teaching profession that in 1907 there was a vigorous demand for a Register free from bureaucratic control, and, technically, that demand has been met. But the teachers' associations in 1907 lost sight of

the administrative considerations, which make it certain that any attempt to maintain a Teachers' Register apart from the active co-operation of the Board of Education is foredoomed to failure. The argument that the Medical Register is successfully conducted by the medical profession is irrelevant. Medical men are compelled to Register because unregistered practitioners cannot claim fees, but no one seriously believes that this condition will ever be imposed upon teachers. For them the main inducement to register must be supplied by the attitude of Education Committees and governing bodies, who, in turn, will take their cue from the Board of Education. Among points which have been overlooked is the fact that no one has ever been able to show how the considerable expense necessary for keeping up a Register can be met without help from the State. This was clearly pointed out by the late Registration Council, and any one who considers in detail the administrative work involved in registration must agree with them.

#### THE STANDARD OF EFFICIENCY.

Money, however, is not the only form of help which the Board of Education must give, if any scheme of registration is to become successful. Take the simplest of the many problems which would come before a new Registration Council—the registration of elementary and secondary-school teachers. The Registration Council would probably desire to lay down three requirements: academic attainment, professional training, and satisfactory teaching experience. How each of these requirements will work will depend on the Board. The question whether a satisfactory standard of academic attainment can be insisted upon cannot be considered apart from the fact that the Board of Education now discourage elementary teachers from taking University degrees. Yet a register of graduates from which all but a few of these teachers would be excluded seems an impossibility. If, on the other hand, as is probable, the elementary teachers' certificate is considered insufficient as a basis for registration, the whole status of the Register would depend on the chance that the Board might consent to institute an Honours Examination open to teachers in possession of the Government certificate, and specially adapted to follow on the course of study pursued in elementary training colleges. Again, with regard to training, it would be futile for the incoming Council to lay down requirements unless the Board of Education are prepared to give effect to that article of the Regulations for Grant-aided Secondary Schools which states that: "Where the Board think fit, they may, on consideration of the teaching staff as a whole, require that a certain proportion of all new appointments shall consist of persons who have gone through a course of training recognized by the Board for the purpose."

By no other means will Local Authorities be brought to realize that the presence of trained teachers on the staff of a secondary school must be looked upon as essential. The fact that the Board have not enforced this point in the past, and that the number of trained secondary teachers in the Kingdom is consequently practically negligible, makes it, indeed, a question whether the attempt to revive registration should not be deferred till this administrative stimulus to train has made itself felt. Finally, what course is open to the new Council respecting the requirement of teaching experience? To the late Council the way in this respect was made plain, for under the old Order in Council the Board of Education undertook the duty of inspecting and recognizing schools for registration purposes. What is the position now that the 1907 Act has wiped out this obligation? It is obvious that the new Registration Council cannot establish an inspectorate of their own; it is equally clear that the Board of Education will not voluntarily resume the burden. Hence it would seem that the alternative to dropping "satisfactory teaching experience" from the list of requirements would be to define it as service in schools aided by the Board of Education or otherwise recognized by them as efficient. That in such case the policy of the Council must remain closely associated with that of the Board is a foregone conclusion.

#### THE DUTY OF THE BOARD.

To sum up. A professional Register of teachers may be called into existence, but it will stand or fall as the Board of Education decree. This being so, the present deadlock in the formation of the new Council seems of little moment. It is infinitely more important that the Board of Education should recognize that in creating a Registration Council they will incur moral responsibilities which cannot be shaken off. Each day they tighten their control over the schools of this country, and, as paramount

authority, it is no longer possible for them to stand aside from the administration of a scheme which affects education, and which is, moreover, founded on their own Act. It is to be hoped that the Board of Education will now use the period of delay which will follow the publication of this correspondence for a serious consideration of their position, will draw up their own proposals for providing the necessary administrative basis for effective registration, and will themselves lay those proposals before the teaching profession.

At the twentieth annual meeting of the Society of Art Masters, held at the Victoria and Albert Museum, South Kensington (August 1), Miss Giles (Clapton) introduced the subject of the Teachers' Registration Council, and pointed out that, in the White Paper [Cd. 4185] issued by the Board of Education, Sir Robert Morant gave what was practically an invitation to all members of the profession to formulate their views and forward them without delay to the Board. To strengthen the hands of the Board of Education she proposed a resolution that that Society, which was composed entirely of holders of the Government Diploma of Art Master and A.R.C.A., most earnestly protested against the action of associations of teachers in proposing a partial and non-representative scheme for a new Teachers' Registration Council for the following reasons:—

(1) That the Education Act (Administrative Provisions), 1907, allowed the constitution of a "Registration Council representative of the teaching profession," presumably as a whole; but, at the Conference held at the College of Preceptors on February 29, the sponsors for secondary education were as two to one, and, by the confession of the Chairman, an entire and most important body of educationists was not even present to the minds of the delegates. To that Conference no such representatives were invited, nor, in spite of remonstrances from that and other kindred bodies, had any attempt since been made to call further conferences to ascertain their views. (2) That, as the ultimate end of his Majesty's Order in Council was the formation of a homogeneous and self-governing teaching profession, any attempt to cut off or sectionalize any portion or body of teachers, whether their teaching be of University rank or of the most elementary character, was a retrograde step impossible for the true educationist and calculated, if successful, to bring grievous harm to the national educational system.

The resolution was carried unanimously. Unfortunately, the attitude of the Conference at the College of Preceptors is not accurately represented. The delegates clearly and emphatically repudiated any desire for the exclusion of any class of teachers from representation. Their difficulty was to find a means of getting everybody represented. More unfortunately still, the resolution is purely negative.

The Council of the Froebel Society have addressed a letter to the Board of Education, in answer to the recent appeal of the Board for expressions "of the views of the teaching profession," again urging the direct representation of the Froebel Society upon the new Registration Council, on the ground that the Society represents the interests of a very large number of women teachers who are not "represented" by other bodies, and who are not "special" teachers for special subjects, but are trained general teachers of young children. The status, influence, and education of these teachers will, it is believed, be raised and improved by their representation upon the Council and their admission, on suitable terms, to the Register.

THE result lists of the recent Oxford Local Examinations show that the total number of candidates examined was 21,185 (3,526 preliminary, 8,302 junior, and 9,357 senior). Of these 2,831 preliminary, 6,007 junior, and 6,331 senior passed, making a total of 15,169. The senior candidates show an increase over last year of nearly 50 per cent. This large growth appears to be due to various independent causes. The practice of sending in picked boys or girls from a given school is giving place to that of entering whole classes or forms, and many candidates announced their desire to qualify for admission to a training college for elementary teachers or for exemption from a University or professional examination. There is also a considerable increase in the percentage of successful senior boy candidates. There is a tie for the first place in the first class of the seniors, in which there were 179 candidates, against 95 last year, A. A. C. Burton, Hitchin Grammar School (Mr. J. King), and E. A. Helsham, Mount St. Mary's College, Chesterfield (Rev. L. P. Wolfe), being bracketed equal. The third place is taken by S. E. Hancox, Loughborough Grammar School (Mr. B. D. Turner).

## LONDON SCHOLARSHIPS: A CRITICISM.

### THE L.C.C. SCHOLARSHIP SCHEME.

IN London (says the *Morning Post*) there is a very elaborate scholarship scheme. All children in the elementary schools between eleven and twelve years of age on July 31 are eligible for the Junior County Scholarship, and, provided they reach a certain standard of proficiency, are awarded free education at approved secondary schools for a period of from three to five years. Where the parents' income does not exceed £160 a year a maintenance allowance is added of £6 for the first three years, and if the scholarship is extended for two years more the maintenance allowance is increased to £15.

Last year nineteen hundred Junior Scholarships were allotted. For children between fifteen and seventeen Intermediate Scholarships are annually awarded by competitive examination, seventy being allotted to boys and thirty to girls. These are tenable till the age of eighteen and may be renewed for another year. Maintenance grants of £25 and £30 are added to free education. Senior County Scholarships up to 50 in number are then awarded without competitive examination to those proceeding to the Universities. These are tenable for three or four years, and are so arranged that they are held with other scholarships won by the students. A maintenance grant not exceeding £60, with fees of not more than £30 in addition to the parents' contributions and any scholarship won at the University, brings the total up to the amount required to enable the students to reside at the University selected.

Alongside of this general scheme are certain Probationer Scholarships for intending teachers, obtainable by children between thirteen and sixteen. These are estimated to be not more than eight hundred this year. There are further a number of technical, industrial, and other scholarships—e.g., four hundred Junior Domestic Economy Scholarships and some hundred and twenty Trade Scholarships for girls and a hundred and forty Trade Scholarships for boys, besides some hundreds of evening exhibitions.

### THE RESULTS.

The scheme has now been in operation some three years or more, and it is time to take stock of the results. Some facts must be noted; of the Junior Scholarships about two-thirds are awarded to girls and the bulk of the Probationer Scholarships fall to them also. This is due to the greater demand for women teachers and to the association of the scholarship scheme with the training of this class for the Council's service.

Now there is at present a larger supply of teachers available than can be absorbed, and it is desirable to consider whether the Council should not begin to revise the proportions allotted to the two sexes. It is significant that this division of the scholarships has led to girls of much lower attainments being accepted before boys of superior ability. The County Council is now considering whether the boys should not have their rightful share, and the special teachers' bias given to the scheme withdrawn. Next it will be noted how much smaller is the proportion of scholarships held in technical schools than in the secondary schools of the general literary or commercial type. Does London require so much larger a number of clerks than of skilled artisans? In this connexion it must be remembered that it is notorious that London does not train its skilled workmen. Apprenticeship has decayed and in many trades is almost defunct in London, with the result that the skilled workmen are drawn from the provinces. It would seem desirable that the proportion of scholarships assigned to the technical and literary schools should be revised. It is also asserted that many of the junior scholars are not found to reach the standard necessary to derive the fullest benefit from the education given in the best secondary schools. This leads to the consideration of the way in which the scholars are assigned to the several schools. Schools are of very varying types, and it was pointed out by the Board of Education at the inception of the scheme that they must be suited to the different aims and requirements of the scholars. At present there seems to be a distinct weakness in the method of assignment. The scholars

are allowed to select their schools, and, though the schools may refuse to admit those obviously below their standard, there may be cases where the best scholars apply for the lower grade secondary schools near their homes and the weakest may be sent to the highest class of secondary school. A better grading of schools at which scholarships may be held is desirable, and some method of guiding the scholars to the right choice must be devised. There are other considerations besides the mere relative ability shown by the children at eleven or twelve years of age. It is no use sending boys to Dulwich, the City of London School, and University College School, or girls to the best high schools, if they are entirely out of touch with the environment of the other pupils. There is no snobbishness in saying that children from the very poor homes of the labouring classes cannot hope to keep pace with their more fortunate fellows who have home surroundings which include cultivated parents, quiet rooms for study, and plenty of books for general reading. Only exceptional children can surmount these disadvantages. It is not surprising that many of the schoolmasters find that many scholars fall behind the required standard.

#### BURSARIES AT ELEMENTARY SCHOOLS.

A new element in the situation has now been introduced by the inclusion in last year's Act of powers to give scholarships in elementary schools. Many of the superior elementary schools in London are capable of giving excellent education up to fifteen. This education may be literary or commercial, or may be given a more technical bias. There are great advantages in retaining children who are to go out to work at fifteen in the elementary schools to that age, for they do not suffer the great break in their education which is so hard on those transplanted to the different atmosphere of the secondary school. There is no reason why the superior elementary school should not give as good an education up to fifteen as the present secondary schools. The time seems to have arrived when the authorities must consider the provision of bursaries in elementary schools either in lieu of some or in addition to the scholarships in secondary schools. In fine, the County Council should now endeavour to overhaul its scheme so as to ensure a greater opportunity for practical training for the actual life and work to which its scholars will

be going when their scholarships expire. It is time that we began to free our minds of cant. The Board of Education has made much of the social atmosphere of secondary schools. This may merely mean that a number of elementary-school children are placed in a position where they are looked down upon by their fellows and gain little, if any, real educational advantage. The Board has been insisting on free places in secondary schools up to 25 per cent. This may well be a serious handicap to the school, with no compensation to the free scholars. Surely education should be considered as important for its own sake and not as dependent on social atmosphere, and a good school should be able to teach a superior curriculum without any of the snobbishness implied in a supposed elevation of class. We have not yet arrived at a system by which the children of the rich sit on the same benches as their poorer fellows in the elementary schools. To try to force this idea in the secondary schools will not bring us nearer to any true education. Educated men and women can be independent of class distinctions, and the true line of progress would seem to be a system of scholarships which will enable the children of the working classes to obtain in higher elementary, or in municipal, secondary or technical, schools, the educational facilities which will enable them to develop the best in themselves and fit themselves for the highest places in the community for which they may prove themselves capable.

## REVIEWS.

## THE PALACE MIRACLE.

*The Riddle of the "Bacchæ": the Last Stage of Euripides' Religious Views.* By Gilbert Norwood, M.A., Fellow of St. John's College, Cambridge; Professor of Greek in University College, Cardiff; formerly Assistant Lecturer in Classics in the University of Manchester. (5s. net. Manchester University Press.)

"We do not always remember, when reading Greek tragedies, that they are interpreted to us either by Greek scholiasts, the most hopelessly undramatic of men, or by modern professors, who are hardly better judges of the stage. Thus, there is not a really subtle point in the Greek play which these people can appreciate." So wrote Dr. Mahaffy nearly thirty years ago, and there is still much truth in the remark: we still desiderate as interpreter "a great actor who is also a thorough Greek scholar." Meantime, Prof. Norwood thinks "it can be shown that features in the 'Bacchæ' of far-reaching importance have been almost completely overlooked and utterly misunderstood," and in particular one feature, which is "the key to the 'Bacchæ' and to the nature of the poet's matured opinion about the popular gods"—namely, "what seems the most triumphant vindication of the godhead of the 'Lydian,' the overthrow of the palace of Pentheus." "It is true, indeed," says Prof. Norwood, "that many have suspected that all is not well—how could they fail to do so?—but the importance of the point has never, to the best of my knowledge, been pointed out at all." Dr. Mahaffy's reminder tends to moderate one's surprise. It is scarcely less remarkable, if Prof. Norwood's solution be the true one, that it should have first occurred to an undergraduate on the threshold of his twenties (1901). In any case, it is well to have the question definitely raised on a new theory presented in full argument.

Euripides was required by the expectations of his audience to deal somehow with the traditional demolition of the palace of Pentheus. Pentheus, who has been absent from his capital, finds on his return that a young stranger, described to him as "a wizard skilled in spells" and said to have come from the land of Lydia, has been teaching the Dionysiac rites, and that in consequence the princesses and other women of the palace, as well as of the city, have gone off to roam on Mt. Kithairon in Bacchanalian fashion. He conceives it his duty as ruler, in the interests of morality, to stop such proceedings. He orders his officers to arrest the stranger, who is in fact (according to his own account at least) Dionysus himself in mortal form, and to imprison him in [? near, *πῆλας*] the royal stables. The Chorus, consisting of Lydian women-followers of the god, are greatly excited about the loss of their leader, whom they did not know to be Dionysus himself. Presently Dionysus raises his shout, *qua* Dionysus; the Chorus, still further agitated, anticipate (according to the popular belief, on the presence of a god) that "quickly will the palace of Pentheus be shaken in ruin," and immediately, of course, they exclaim: "Do ye see these stone impostos on the pillars tossed to and fro?" So far, all is perfectly natural and intelligible. But now Dionysus (as mortal) joins the Chorus and explains what happened to him in his captivity, telling, among the rest, how Dionysus (as god) "threw down the house to the ground, and it fell in complete ruin." And yet "the whole subsequent action of the play most peremptorily forbids us to imagine, by any sort of obedience to convention or by any other kind of self-deception whatsoever, that the palace has really fallen down." "If this is a fact, it is," as Prof. Norwood says, "infinitely the most important fact in the play."

Various explanations have been suggested: (1) the downfall of the house is not represented on the stage, but the audience believe what the Chorus (and Dionysus) say about it; (2) the palace is shaken, but does not fall; (3) only a part of the palace falls; (4) it is not the palace, but merely the stable-dungeon, that collapses. But "the expressions used make it certain that the royal dwelling itself is meant," and "all other mention points in the same direction." Besides, these explanations fail either to realize the importance of the event or else to take account of all the facts. Now Prof. Norwood shall speak for himself:

This marvel of the sudden might of the god manifesting itself against the palace of his enemy, a story with which every one in the audience is familiar and for which they are looking, does not happen and cannot happen. It is an appalling practical joke, a colossal *παρὰ προσδοκίαν*.

But it is also far more. It is an object lesson in the history of religion, a searchlight directed full upon the mists of error. . . . The spectacle presented to us is that of the Maenads writhing in an ecstasy of fantastic terror before the palace, which stands all unaffected by their ravings, and inside we hear the impostor shrieking his commands, apparently to the deaf stone and the unresponsive fires beneath the earth, in reality to the Asiatic maidens and to the deluded monarch in the house. Euripides has wished to show us unmistakably that the legend is false. But to ignore the alleged miracle, simply to omit it from his play, would have been to leave his audience in doubt as to his opinions on the matter. Instead of doing so, by a master-stroke of his art he has shown us the thing *not happening*.

Prof. Norwood will not take the stranger's word for it that he is Dionysus: the claim "is contradicted over and over again by the facts of the play." This is, he thinks, "the key to the whole mystery." If, then, the "Lydian" is not Dionysus, who is he? "This self-styled god, according to the view of Euripides, is simply a human being with an abnormally complex character, amazing abilities, and a colossal ambition"—"in spirit a Hindoo"—expert in all the religious learning of the East. How, then, did he operate on the Chorus? What kind of persuasion is it that convinces one in spite of the evidence of one's eyes?

Only one—*hypnotism*, or what less scientific ages would call magic. Dionysus is a magician—"a foreign wizard skilled in spells," as Pentheus quite accurately calls him—and he works his "miracles" by hypnotizing his victims or companions into thinking that they see them. This hypothesis, and this alone, will solve the riddle of the sham miracle which is the leading proof of the divine power which he claims to possess.

Now, one can understand why Dionysus "hypnotizes" the Theban women and Pentheus himself; but why should he hypnotize the Chorus, who are already devoted to him, and whose pre-suppositions and excitement work together naturally to assure them of the fall of the palace? To assure them temporarily at least, and hypnotism could not do more unless it were permanent. But Prof. Norwood supposes that the hypnotic trance of the Chorus ceased on the reappearance of Dionysus, and that his explicit reference to the collapse of the building and to the appearance of the god brought back the delusion to their minds; and that "in this way it will become a permanent memory and form one more weapon against unbelievers." Possibly against unbelievers elsewhere, but not against unbelieving Thebans on the spot, who were now specially to be converted, but who yet saw the palace standing as of yore, and, according to the theory, must not be hypnotized, because their evidence is necessary to show that the palace did not fall. Moreover, the hypnotism must be maintained so long as the Chorus remain within sight of the palace, or, at any rate, so long as their attention is not diverted—powerfully diverted—from the palace. Anyhow, "this is an excellent example of the poet's method of dealing with the religious legends. He takes care," says Prof. Norwood, "to make the supposed marvel as probable as is consistent with an irresistibly cogent demonstration that it never happened."

Prof. Norwood sets out with a sketch of Euripides' religious beliefs (as seen in his plays) and of his peculiar method of expressing them, in order to show in what frame of mind he was likely to handle the religion of Dionysus—an extremely delicate and difficult task, seeing that the poet is always speaking not in person, but only in character. He next reviews the difficulties that have already been found in the "Bacchæ." Then he deals with the palace miracle, examines the characters of Dionysus and of Pentheus, starts fresh difficulties in the play, propounds his own theory, and meets special difficulties that his own theory involves. It is impossible to deal adequately even with the new reading of the palace miracle in a brief notice. Scholars will, of course, study Prof. Norwood's ingenious volume. On a first reading, we should have to object on numerous points of detail, and we confess we cannot accept the new theory as at all convincing. At the same time, the essay is very able and enterprising, and we hope it will stir up fruitful discussion.

## THE MEANING OF HISTORY.

*Factors in Modern History.* By A. F. Pollard, M.A., Professor of Constitutional History in University College, London. (7s. 6d. net. Constable.)

Prof. Pollard has issued a series of ten lectures, delivered when and to whom he does not inform us; and to these he has appended an eleventh on "The Study of History in its relation to the University of London," originally delivered at University College some four years ago. The subject has, indeed, made

### A Treasury of Verse.

For School and Home in Four Parts. Selected and arranged by M. G. EDGAR, M.A.

Part I., 128 pages, sewed, 6d.; or cloth limp, 8d.  
Part II., 160 pages, sewed, 6d.; or cloth limp, 8d.  
Part III., 160 pages, cloth boards, 10d.  
Part IV., 192 pages, cloth boards, 1s.  
Part V. (Ballads), 192 pages, cloth boards, 1s.

*The features of this series are:*

- (1) Careful grading.
- (2) As many "Stories in Song" as possible have been included.
- (3) Tried favourites and copyright poems which deserve place in a standard collection are generously represented.
- (4) A number of attractive poems which will be new to many English readers have been included.
- (5) Nature Verse is well represented.

### Supplementary Readers.

Each with 16 Full-page Illustrations. Large crown 8vo, price 1s. 6d. each, strongly bound in cloth.

"The price is ridiculously low. . . . Any one of the books might be a gift-book, so attractively is it presented. They make one eager to stand before a class of boys or girls of twelve or thirteen years of age."—*School World*, Special Article, August, 1907.

13. **THE BOOK OF RUSTEM.** Retold from the "Shah Nameh" by E. M. WILMOT-BUXTON.

14. **STORIES FROM CHAUCER.** Retold by J. W. M'SPADDEN.

15. **STORIES FROM THE OLD TESTAMENT.** Retold by S. PLATT.

16. **STORIES FROM THE ODYSSEY.** By H. L. HAVELL, B.A.

17. **STORIES FROM THE ILIAD.** By H. L. HAVELL, B.A.

18. **TOLD BY THE NORTHMEN.** Retold by the Sagas and Eddas by E. M. WILMOT-BUXTON.

19. **STORIES FROM DON QUIXOTE.** By H. L. HAVELL, B.A.

**DAYS BEFORE HISTORY.** By H. R. HALL. 1s.

**THE CAVE BOY.** By MARGARET MACINTYRE. 1s.

*Prospectuses of any of the above will be sent post free.*

GEORGE G. HARRAP & CO., 15 York Street, Covent Garden, London, W.C.

some progress in the favour of students during those four years; but, as it brings no income, not even bread and cheese, one can hardly expect it to be popular. "London, it is said, engages about fifteen hundred new teachers for its schools in every year. Surely," says Prof. Pollard, "some of these should have undergone a course of University instruction in modern history—a course which, for the vast majority of them, is only possible within the London radius." But, then, even supposing all the fifteen hundred have to teach modern history, consider the limited results required of them, or even possible for them. If Prof. Pollard asks matriculants at London University about the origin and growth of the idea of Imperial federation, and finds that "about half the candidates who attempted that question had not the ghost of a notion what Imperial federation meant," we confess we do not share much in his surprise. What real knowledge could the average matriculant be expected to possess? The facts, and especially the experiences, that give meaning to history are very different in the different planes of examiner and elementary candidate. However, we are glad that Prof. Pollard considers post-graduate research as "a vastly more promising topic" than an undergraduate school. The materials in London are vast beyond reckoning, and, besides students holding scholarships, there are many young people of sufficiently independent means and of sufficiently literary tastes to furnish a brigade of researchers, who may at least dig out and marshal a vast quantity of hitherto unused facts. "Of the extant materials for English history," says Prof. Pollard, "not one-tenth has yet been calendared or printed, and the whole of English history, as it is written and read or known, is like an edifice built on foundations which do not occupy one-tenth of the possible area." There is thus the most ample scope as well as urgency. How far such researchers are willing to submit to expert direction and co-ordination is another matter.

When we come to Prof. Pollard's own work as represented by these lectures, we are impressed with a very different aspect of the question. In his first paragraph he expressly declares that, whatever he may say or do in his course, he is not going to narrate a history of England during the sixteenth and seventeenth centuries. "An effort of that kind would simply result in the perpetration of yet another of those miserable text-books of English history which may be necessary, but are certainly evil, which prefer knowledge to understanding and seem expressly designed to nip the bud of historical interest and to clip the wings of historical imagination." We have already had our say on this subject, and would willingly see the tide of history books for schools at an ebb for some time to come—till fresh researches have thrown fresh light upon really important occurrences. If the energies dissipated upon such compilations could only be concentrated upon research they would result in useful additions to our knowledge instead of futile additions to the "re-hashes of old facts flavoured only with an original spice of error." Prof. Pollard's object is "primarily to stimulate imagination"; that is to say, "the power of realizing things unseen and of realizing the meaning of things seen." The archivist, the burrower after facts, has his value in his place; but "no accumulation of materials, no ransacking of archives will make a man a historian without the capacity to interpret and construct." The school history writer, so far as he keeps pace with the researchers, can do useful work in presenting the facts they have discovered in proper connexion and balance; and, when Prof. Pollard avows that "facts are only a secondary consideration" from his point of view, he must not be misunderstood. "Indeed," he adds, "one's facts should be correct; but their meaning is greater than the facts themselves"—or, rather, we should say, the facts are not the facts unless and until they are presented in their true meaning. By taking vertical sections of his centuries Prof. Pollard is able to exhibit fresh aspects of facts made familiar by the ordinary histories and to give his selected subjects a more spacious canvas. Thus, he treats of nationality, the advent of the middle class, the new monarchy, the English Reformation, Parliament, political ideas of the period, Church and State, Cromwellian institutions, and colonial expansion. One notable and important characteristic is the lecturer's steady insistence on looking in the past for the roots of the present. "Nothing can be explained in human affairs without reference to the past." The principle may be very obvious; but it is astonishingly ignored and needs reassertion. The style is untrained and the manner is flavoured with *ὄψαρις*; but the sustained grip and verve make ample amends, and, in a word, no teacher of history—certainly no teacher of the history of England in the sixteenth

and seventeenth centuries—should fail to ponder these vigorous and luminous lectures.

We never care to note shortcomings of works of marked general excellence like these lectures, except with a view to further editions. But is it the case that "there is no really national war before the Hundred Years' War between England and France"? Surely the War of Scottish Independence was such a war; but perhaps Prof. Pollard, with the Continent in his eye, had his back turned on Scotland for the moment—important as were the effects of that war. We meet the expressions "English nationality" and "British nationality." They are not to be used indifferently, and, while Prof. Pollard, perhaps, does not confuse them (there is a doubtful case on page 14), yet the hearer (and the reader) should have been incidentally warned. We do not remember the principle "that *salus populi was suprema lex*," as laid down "in the language of the Twelve Tables" (page 158) under any reconstruction of them. "It was at Byzantium that the absolutist maxims of the Roman civil law were elaborated in theory and put into practice" (page 161). Was there really any such elaboration in theory? Of course, Ulpian wrote "Quod principi placuit legis habet vigorem" long before, and the principle held good at Byzantium; but wherein consisted the elaboration? We, too, have our "Le Roy le veult"; but there is nothing absolutist about it, though, as Maitland says, "to this day the form makes the statute the act of the King." In the one case, as in the other, the concomitant circumstances should have their weight, and then the absolutist reputation of the Roman legislation would be very considerably modified. Is the Code of Justinian any more essentially "absolutist" than the English Statute Book?

"It is the strangest educational phenomenon of the time," says Prof. Pollard, "that Educational Authorities, Governments, Universities, some County Councils, and most head masters should be under the delusion that they can turn out efficient citizens without the glimmering of an idea as to the causes which have made them what they are. The Duke of Newcastle, who did not know that Cape Breton was an island, has his counterpart in the Government Departments of to-day, and it is neglect of historical studies which often makes the brilliant man of science as inefficient in the sphere of politics as is the politician in the world of science." To such deluded personages we commend this volume, with the hope that a perusal of it will relax the purse-strings and enable some of the scholars that are capable of writing history to devote themselves to the task without frittering away their time and strength on elementary classes and without side glances at the coming of the landlord for his rent or the demand of the authorities for their taxes. But it is not historians alone that are in such evil case in this triumphant time of an Empire on which the sun never sets.

## GENERAL NOTICES.

### CLASSICS.

*The Seven against Thebes of Aeschylus.* By T. G. Tucker, Litt. D. Cantab., D. Litt. Dubl., Professor of Classical Philology in the University of Melbourne. (9s. net. Cambridge University Press.)

Prof. Tucker has followed the principles that he adopted in his edition of the "Choephoroi," his main object being "the conscientious interpretation of the 'Septem' as a work of dramatic art and a monument of Greek literature." The "conscientiousness" might have been taken for granted, and so might Prof. Tucker's enumeration of the accomplishments indispensable to an editor. A very full and learned introduction deals with the locality—primitive Thebes, Cadmus and the Cadmeans, and the topography as conceived by Aeschylus—and with the play. The text is thoroughly examined in a wisely conservative temper (we remember to have read in the preface to Prof. Tucker's "Supplices": "In the case of Aeschylus, I am fain to confess that my distrust of the MS. deepens rather than diminishes"; but that was twenty years ago), and treated with remarkable acuteness and ingenuity sharpened by scholarship; a translation is furnished in excellent prose, idiomatic, yet adhering faithfully to the essential meaning; and ample notes provide a most instructive and stimulating commentary, with frequent and singularly apt illustration from Latin and English literature. A very able recension of the Medicean scholia is appended, and there are Greek and English indexes. The work is fresh and vigorous, and establishes itself in the very front rank of scholarly editions. In noticing the "Choephoroi" we said: "It is greatly to be hoped that Prof. Tucker will ultimately complete an edition of the whole trilogy." We would now extend the hope to the whole of the plays, and with increased emphasis. The accuracy and the beauty of the typography extort admiration.

*The Trachiniae of Sophocles.* With a Commentary abridged from the larger edition of Sir Richard C. Jebb, Litt.D. By Gilbert A. Davies, M.A. (4s. Cambridge University Press.)

Prof. Davies has followed the lines adopted in the previous volumes of the series, and he has had the advantage of consultation of Sir Richard Jebb's unpublished corrections. The volume will be extremely useful in schools, and probably it will be welcome to many that have passed beyond the schools, but still make efforts to keep up their Greek. If Prof. Davies has erred at all, it is perhaps on the safe side of inclusion: we rather doubt whether all the references he leaves will be sedulously looked up.

**MATHEMATICS.**

*Trigonometry for Beginners.* By J. W. Mercer, M.A. (4s. Cambridge University Press.)

The subject is well and carefully handled, although there is still unfortunately too much evidence of the old method of treating the trigonometrical ratios of acute angles as if the lines involved were absolute magnitudes instead of lengths to which later on the character of all positive and negative lines must of necessity be attached. The author writes primarily for students to whom practical problems are likely to present themselves rather than the intricacies of theory. The course, therefore, affords much valuable scope for acquiring familiarity with various useful four-figure mathematical tables. Perhaps a more than usually large number of worked examples is given, many of these being highly instructive owing to the suggestive nature of the discussion. The exercises for solution by the students themselves are very numerous and also varied in character. They include many problems on forces, for the writer seeks to impress the beginner with a sense of the wide application and great utility of this special branch of mathematical science.

*Elementary Geometry.* By Cecil Hawkins, M.A. (3s. 6d. Blackie.)

A new edition, and for the most part merely a reprint, of the earlier issue. A few articles have, however, been revised with a view to simplifying the demonstrations they contain by giving them in a less condensed form. The chapter on parallels is also new, and the theory is now based by the writer on the consideration of parallel straight lines as those which are perpendicular to the same straight line. To quote the author's own words from the preface to the new edition: "All the changes have been thoroughly tested in the classroom."

*The Elements of Plane Geometry.* By Edward J. Edwardes, M.D. Lond., M.R.C.P. Lond. (3s. 6d. Edward Arnold.)

An interesting text-book, which treats the subject of elementary geometry in a manner that, although it is not widely different from the

methods to be found in most treatises of similar standard, is nevertheless characterized by an indefinable freshness and originality. The work seems to have gained rather than lost by owing its existence to a writer in no way connected with the world of school. It is thoroughly modern in conception and entirely disregards Euclid's order of treatment. It makes no attempt to supply references, the author reckoning (it would appear) on lovers of geometry like himself, on the ideal teacher and the ideal pupil who will invariably be strict, the one in requiring, the other in supplying or looking up, the necessary references. The discussion of ratio and proportion is excellent in many respects, but it is not satisfactory to regard ratios so often as single quantities and to oblige the reader to make an effort to keep before him the fact that he is considering not single quantities, but relations between pairs of quantities. Moreover, is there any real gain in departing from Euclid's definition of proportion and adopting its converse? The least attractive feature of the volume is contributed by the diagrams, the character of which is very poor, whether we regard the roughness of execution or the insignificance of the size.

*Elementary Mathematics.* By Alex. Leighton, M.A., B.Sc., F.E.I.S. (Blackie.)

A useful volume for beginners in mathematics. The subjects treated are algebra, as far as and including quadratic equations, and the elements of geometry, both plane and solid. The text-book is suitable for use in higher elementary schools and by all pupils who require a course similar to that necessary for those intending to take lower grade mathematics at the Scotch Leaving Certificate Examination. An excellent and important feature of the section on geometry is the method which the author adopts of dealing with individual propositions in three stages. First, there is an experimental investigation leading up to the enunciation; next we have the formal demonstration; and, last, the truth, when established, is applied to the solution of problems depending on it.

**FRENCH AND GERMAN.**

*Graduated French Exercises and Questionnaires on Accidence and Syntax* from the earliest stages up to the Subjunctive Mood. By F. E. Robeson, M.A., Assistant Master at Eton College, formerly Scholar of Merton College, Oxford. (3s. 6d. Rivingtons.)

"What is noteworthy about Mr. Robeson's volume," says Mr. Robeson's head master in a short preface, "is the thoroughness with which the work has been tested by practical experts"—that is to say, by colleagues who have used and frankly criticized the exercises for four years. That should count for much in favour of the book: at all

# CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.  
 President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.  
 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.  
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS** of **MUTUAL LIFE ASSURANCE** without personal liability on highly favourable terms to

## THE CLERGY AND THEIR RELATIVES.

**ALL PROFITS BELONG TO THE MEMBERS.**

Accumulated Fund, **£4,242,820.**

Annual Income, **£453,897.**

Bonuses Distributed, **£4,256,464.**

**LOW PREMIUMS. LARGE BONUSES.**

Notwithstanding the lowness of the Premiums charged, the **BONUSES** are on an **EXCEPTIONALLY HIGH SCALE.**

**NEW AND SPECIAL POLICIES.**

Application is invited for the **PROSPECTUS**, and Leaflets explaining two new Policies, with valuable Options.

**1. WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

**2. PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

**SPECIMEN OF RATES FOR £1,000, WITH PROFITS.**

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

events, it indicates a serious effort to attain serviceable results. A brief outline of the grammar, stripped to the essentials and judiciously emphasized at important points, precedes the exercises. The exercises (164) very soon take the form of continuous narratives for translation into French, and, while following the order of the grammar, they are very carefully graduated in difficulty, with occasional helps or suggestions in the text or at the foot of the page. "Questionnaires français," exemplary rather than exhaustive, and yet tolerably extensive, though placed after the exercises, will no doubt be used concurrently. Then follow special vocabularies (to the several exercises), and a full general vocabulary. The successful working of the exercises will ensure a comprehensive and thorough grip of the language, and, at the same time, a real intellectual training.

*France et Allemagne.* By Edgar Quinet. Edited by C. Cestre, Maître de Conférences à l'Université de Lyon. (3s. 6d. Clarendon Press. Oxford Higher French Series.)

M. Cestre brings together about a score of separate articles written by Quinet at various times and published as pamphlets or as contributions to the *Revue des Deux Mondes* from 1830 to 1867. They are mostly discussions of political affairs bearing on the relations of France and Germany, not in any spirit of party, but from the point of view of the philosophical historian; and they also deal incidentally with literature, philosophy, and religion. "Quinet, en effet, expose dans ces pages l'état moral et politique de la France et de l'Allemagne, de 1830 à 1867, avec le dessein nettement marqué d'éveiller la France à la conscience de son propre génie et à la défense de sa nationalité, pour elle-même et pour la force civilisatrice qu'elle représente en Europe." The introduction consists of a long and able monograph (in French) upon Quinet's life and work. The notes, which are chiefly of an historical character, are very useful; and so is the chronological table appended. A very careful and capable edition.

*Goethe's Torquato Tasso.* Edited by John Firman Coar, Ph.D., Professor of Germanic Languages and Literatures in Adelphi College, Brooklyn, N.Y. (4s. Ginn.)

Prof. Coar intends this edition "for college students who have an easy reading knowledge of the German language and who are interested in German literature as literature." The play is full of difficulties, and the introduction and the ample notes are directed mainly to the solution of them. At the same time the editor aims at stimulating independent thought, and not at providing cut-and-dried opinions; and he hopes that the materials he furnishes will prompt students "to read the drama in the spirit of intelligent and sympathetic criticism." Some "repetitional exercises" are given, and there is a very full vocabulary. The edition is laborious and valuable, and it will be very serviceable to private readers as well as to students in colleges and higher schools. The form is handy and the get-up is very agreeable.

Messrs. Macmillan publish the forty-first edition of the well known *Dictionary of the English and German Languages*, by William James—the German-English and English-German in one volume (4s. 6d.). The work has been "entirely rewritten and greatly enlarged," by George Payn, with the assistance of German collaborators of repute. The preface, English and German, is over the signature of Bernhard Tauchnitz, and the volume has been excellently printed by him; whence it may be inferred that the great Leipzig house has done its best for the new edition. We have used one or other of the earlier editions for many years, and always found the book very satisfactory. We therefore give it warm welcome in its improved form. Though both parts are in one volume, it is still quite convenient to handle, and it is strongly and flexibly bound.

#### ENGLISH LITERATURE.

"The Belles-Lettres Series."—(1) *Exodus and Daniel.* Two Old English Poems. Edited by Francis A. Blackburn, Ph.D., Associate Professor of the English Language in the University of Chicago. (2s. 6d. net.) (2) *Liber Psalmorum: The West Saxon Psalms.* Edited by James Wilson Bright, Ph.D., D.Litt., Caroline Donovan Professor of English Literature in the Johns Hopkins University, and Robert Lee Ramsay, Ph.D., Instructor in English in the University of Missouri. (2s. 6d. net.) (3) *The London Merchant, and Fatal Curiosity.* By George Lillo. Edited by A. W. Ward, Litt.D., F.B.A., Master of Peterhouse. (Heath.)

(1) Dr. Blackburn gives the text from the single manuscript in the Bodleian Library, with critical notes upon it at the foot of the page; an introduction treating generally of the form and contents of the two poems; explanatory notes on different passages; a bibliography; and a complete glossary. He thus makes full provision for the needs of the student. The edition is marked by minute care, sound scholarship, and good judgment. (2) Contains "the prose portion, or the 'First Fifty,' of the so-called Paris Psalter," with the rubrics and *avouments* of the rest. The text follows the manuscript in the Bibliothèque Nationale, and is conservatively edited, with brief textual notes at the foot of the page, and a bibliography of the entire Psalter is appended. The introduction is delayed for a time owing to difficulties in tracing records. It will review all preceding study of these Psalms, and attempt to carry nearer to solution some problems relating to the character and to the sources of the version. Meantime, students will be glad to have the text and the bibliography, which are treated very carefully, and they will look forward with interest to the appearance of the introduction. (3) Dr.

Ward's edition of two of Lillo's plays is characterized by his well known erudition and literary conscientiousness.—The series is ably edited, beautifully printed, and convenient in form—a great boon to students of English.

"The Elizabethan Shakespeare."—(1) *The Merchant of Venice.* (2) *Love's Labour's Lost.* (3) *The Tragedy of Julius Caesar.* Edited by William Henry Hudson, Lecturer to the University Extension Board of the University of London. (2s. 6d. net each. Harrap.)

In this important series of Shakespeare's plays, Mr. Hudson goes back to the First Folio—"the only text that can lay any claim to be the author's," as well as (in the words of Halliwell-Phillips) "the most interesting and valuable book in the whole range of English literature." "It is the aim of the present edition," writes Mr. Hudson, "to place this unrivalled text before the public faithfully, but in easily readable form, together with such a systematized apparatus of brief textual footnotes, and fuller, but not too copious, literary notes, glossaries, lists of Variorum readings, and introductions for each play, as may combine with the Elizabethan texts the advantages of a thoroughly modern editorial equipment, embracing the fullest results of Shakespearean scholarship." There needs no apology for going back to the First Folio: on the contrary, it is the only rational and scientific course. Mr. Hudson's departures from it on certain points of spelling—dropping the long *s*, *y* for *th*, and some such orthographical peculiarities—do not practically affect the Elizabethan atmosphere of the First Folio, or even fidelity to the text, while they will undoubtedly help to overcome modern distaste for archaic forms. The whole of the apparatus of criticism, explanation, and illustration is competent, and valuable to the student and to the general reader; each volume has a photogravure frontispiece; and the type and get-up are excellent. We give the series a very warm welcome.

#### EDUCATION.

*German Education Past and Present.* By Friedrich Paulsen, Ph.D., Professor of Philosophy in the University of Berlin. Translated by T. Lorenz, Ph.D. (5s. net. Fisher Unwin.)

It is with extreme regret that we have just heard of the death of the accomplished and broad-minded author of this exemplary work. In the preface to the English edition of Paulsen's great book on "The German Universities and University Study" (which we noticed in our February issue last year), Prof. Sadler justly spoke of him as "the greatest living authority upon the history of higher education in German-speaking lands." The present work, which originally appeared a couple of years ago in Teubner's popular series "Aus Natur und Geisteswelt," is a masterly survey of German education generally in its historical development, under "the conviction that the development of education is not an isolated movement, beginning and ending in itself, but is dependent on the general progress of the inner life of mankind." Accordingly, Paulsen has "endeavoured everywhere to make the dominant tendencies of this larger movement and their influence on educational organization stand out as clearly and distinctly as possible." The last chapter, "Retrospect and Outlook," is extremely suggestive, especially where the future trend of educational opinion is anticipated on the basis of the past and the present. Paulsen's breadth of view and balance of judgment may be illustrated by a single point:

"The powerful Labour movement, which dominates our times, is open to many reproaches. . . . But, for all that, it is a great upward movement. The masses have roused themselves. . . . An idea of the future has come to life in them and is enlisting all their energies, and an abundance of active interests has thus been set free. Nature and history hold converse with men who have a question to ask—the question of the future. A vast literature of books and periodicals has come into being, turning the searchlight of this new idea on all departments of social life. However far this literature may leave scientific exactness and critical caution, however far it may leave truth behind, one thing is to be said in its favour: it is read, studied, and assimilated with passionate enthusiasm. Indeed, it is only for the sake of this literature that the masses have become readers at all. Nor do I doubt that, amongst the energies set free by the modern Labour movement, moral forces are to be found, such as self-command and self-discipline, self-devotion and self-sacrifice for a great cause. And, be the cause itself good and possible or not, the value of these moral forces remains the same, and they will not be lost. Perhaps the old experience will repeat itself here of the man who went out to search for a dreamland and found a real world. The Social Democratic Utopia may not be destined to be realized anywhere in the world, but, if it succeeds in awakening new ideas and forces in our modern society, reposing in indolent ease on power and tradition, it has fulfilled its purpose."

"Upon the whole," Paulsen concludes that "there is no department of historical life which could give our souls greater encouragement to take a hopeful view of the future than the history of education." The translation is capably done and the terminological notes prefixed by the translator will be very useful.

Messrs. J. & J. Paton issue the eleventh annual edition of their well known *List of Schools and Tutors* (1s. 6d.). It covers, as usual, the whole range of educational institutions, ranging them in groups, setting forth all necessary information about them, and furnishing a vast number of illustrations. It does not profess to be exhaustive; it is, indeed, expressly selective, but it gives a very sufficient number of the best English schools.

(Continued on page 408.)

# DENT'S MODERN LANGUAGE SERIES.

EDITED BY  
Professor WALTER RIPPMMANN, M.A.

IMPORTANT WORKS RECENTLY ISSUED.

**THE SOUNDS OF ENGLISH.**

**LES SONS DU FRANÇAIS.**

**DEUTSCHE LAUTE.**

Three Charts. Size, 30 × 30 inches.

These Charts, drawn up by Professor WALTER RIPPMMANN, are particularly suitable for class use, the symbols being very distinct. The arrangement will commend itself to Teachers. Unmounted, 1s. net each; mounted on linen, 2s. 6d. net; mounted on linen, with rollers, 3s. 6d. net.

Small reproductions of each Chart, with examples of the sounds, which Pupils can paste in their books, have also been prepared; these are sold in packets of 30, price 1s.

**NOTE.**—A special Prospectus of the above Charts can be had upon application to the Publishers.

**A FRENCH PHONETIC READER.** By S. A. RICHARDS, B.A.

A careful and well-graded selection of passages in prose and verse. In accordance with the views of experienced teachers, the phonetic transcription is given first, and the text in the ordinary spelling occupies the second half of the book. Reference is made easy by identical numbering of the lines.

**FABLES EN ACTION.** By VIOLET PARTINGTON. Extra fcap. 8vo, 1s.

Miss Partington's little French plays are well known. In this new volume she has had the happy thought of dramatizing some of the famous fables of La Fontaine.

**FRENCH SPEECH AND SPELLING.** By S. A. RICHARDS, B.A. A First Guide to French Pronunciation. Extra fcap. 8vo, 8d.

**EASY FREE COMPOSITION IN FRENCH.** By Miss L. M. BULL. Extra fcap. 8vo, 1s. 4d.

**FREE COMPOSITION AND ESSAY WRITING IN FRENCH.** By A. PRATT and ANTOINE PHILIBERT. Extra fcap. 8vo, 1s. 4d.

**DER GOLDENE VOGEL AND OTHER TALES.**

A Second Year German Reader. With Exercises. Edited by WALTER RIPPMMANN, M.A. Extra fcap. 8vo, 1s. 4d.

**EISENHANS AND OTHER TALES.** A Second Year German Reader, with Exercises. By WALTER RIPPMMANN. Extra fcap. 8vo, 1s. 4d.

The exercises in *Der Goldene Vogel* and *Eisenhans* are typical of the latest advance in reform teaching. They consist of questions based on the text, and exercises in word-formation and applied grammar.

**DENT'S ANDERSEN IN GERMAN.** Edited, with Exercises, by WALTER RIPPMMANN. With many beautiful Pictures by THOMAS, CHARLES, and WILLIAM ROBINSON. Crown 8vo, 1s. 4d.

*An Edition is issued with a Glossary at 2s. 6d. net.*

"A pleasing volume. . . . Eminently suitable to be placed in the hands of pupils who have had a year's tuition in German along reform lines."—*School World*.

**SPECIMENS OF ENGLISH, READ, SPOKEN, AND RECITED.** By WALTER RIPPMMANN. Extra fcap. 8vo, 1s. net.

## DENT'S CLASSICAL SERIES.

ON THE LINES OF DENT'S MODERN LANGUAGE SERIES.

General Editor: Professor WALTER RIPPMMANN, M.A.

Fourth Edition.

**DENT'S FIRST LATIN BOOK.** By HAROLD W.

ATKINSON, M.A., sometime Head Master of the Boys' High School, Pretoria, and J. W. E. PEARCE, M.A., Head Master, Merton Court School, Sidcup. With 12 illustrations by M. E. DURHAM. Small crown 8vo, cloth, 5s.

Effects for Latin a compromise between the usual "classical method," and the "reform method" now frequently used in the teaching of modern languages.

*The Schoolmaster* says:—"A unique book. . . . It represents a wonderful stride made in teaching Latin."

*The Phonetic Part of the First Latin Book is issued separately at 6d.*

**DENT'S LATIN PRIMER.** By E. S. FORSTER, M.A. 1s.

This *Primer* is intended for pupils who begin Latin early. The *Primer* is fully illustrated, and the elements of the grammar and vocabulary are presented in a very attractive manner. Special attention has been given to connecting Latin words with the English derivatives.

"The graduation of the matter is very carefully worked out . . . the little book is excellently done."—*Educational Times*.

**NOTE.**—Each of the above books contains a Phonetic Transcript of the Roman Pronunciation of passages in the Reader.

**DENT'S WALL PICTURES.** For Teaching Latin.

Four Coloured Pictures enlarged from the First Latin Book. Size, 30 × 22 inches. Unmounted, 2s. net each; mounted on linen and eyeleted, 3s. net; mounted on linen, with rollers, 5s. net.

**ROMAE, SEXTI DOMUS.**

**ROMAE, TRIUMPHUS.**

**POMPEIIS, OSTIUM TABERNAE ET VIA STRATA.**

**IN GALLIA, PROELIUM EQUESTRE ET PEDESTRE.**

**FORUM LATINUM.** A First Latin Book. By Dr. E.

VERNON ARNOLD, Professor of Latin at the University College of North Wales. Small crown 8vo, 3s. 6d.

**AENEAE FACTA ET FATA.** A Stepping-stone to

VIRGIL. With Notes and Exercises on the text by Dr. E. VERNON ARNOLD. With numerous Illustrations. Small crown 8vo, cloth, 2s.

A complete List of Books contained in the above Series can be obtained from the Publishers, who also cordially invite applications for Specimen Copies from Principals of Schools and Colleges.

London: J. M. DENT & CO., ALDINE HOUSE, BEDFORD STREET, STRAND, W.C.

for boys and girls, from which the paterfamilias or guardian can make his own selection, guided by the information supplied. This year it is bigger than ever: it runs well over 1,100 pages. It is handsomely got up, and must be extremely serviceable to parents that wish to select a school for their children.

The Hungarian Exhibition furnishes a broad and attractive glimpse of Hungarian scenes, and especially of the activities of the Hungarian people. In connexion with it we have some brochures of an educational character: (1) *Education in Hungary*, a very comprehensive and interesting exposition, issued under official authority and worthy of preservation for study and reference; (2) *Hungary*—a short outline of its history—by Louis Felberman; (3) *Alexander Petöfi*, by Ilona Ginever (*née de Györy*)—a brief sketch of the young and ill-fated poet; (4) *Shakespeare in Hungary*, by Prof. Augustus Gyulai—also a brief sketch; and (5) a *Bibliography of English authors' works translated into the Hungarian language (1620-1908)*, collected by Dr. Augustus Gyulai. These brochures increase an intelligent interest in the Exhibition and in Hungary and its people.

The *Illustrated Handbook* to the Exhibition in connexion with the International Drawing Congress, edited by Keighley Snowden and illustrated liberally with photographs by Reginald Haines, is a very interesting record of certain features of the Exhibition that are of high educational value. The articles upon various art colleges and schools give excellent summaries of their work and methods, and the illustrations are numerous, varied, and instructive. The Retrospective Exhibition of the Board of Education, though not properly a feature of the Congress, has also been included on account of its interest and significance.

## FIRST GLANCES.

### CLASSICS.

Erasmus, Selections from. By P. S. Allen, Fellow of Merton College, Oxford. 3s. 6d. Clarendon Press.

[Principally from the Letters of Erasmus. Intention "to illustrate through them English life at a period of exceptional interest in our history." Good selection; judicious notes; vocabulary; life of Erasmus. Excellent portraits of Erasmus, Archbishop Warham, Dean Colet, and Sir Thomas More; specimen of Erasmus's handwriting (two pages). Capital collateral reading.]

M. Antoninus Imperator ad se ipsum. *Recognovit brevisque adnotatione critica instruit I. H. Leopold.* 2s. 6d. Oxonii: e typographeo Clarendoniano.

[Prefatory account of MSS., editions, and commentaries. Thorough critical revision of the text.]

Plato's Apology of Socrates. Edited by Harold Williamson, M.A., Assistant Master, Manchester Grammar School, late Tutor and Lecturer at Balliol College, Oxford. 2s. 6d. Macmillan (School Class-Books).

[Very useful introduction and ample notes. Contents headings to the paragraphs of the text. Handy and helpful school edition.]

Plautus. Acting edition of the Mostellaria. With a translation into English verse. Edited by G. Norwood, M.A. 1s. net. Manchester University Press (Sherratt & Hughes).

[“Arranged, translated, and enacted by the Classical Society of the Victoria University of Manchester.” Spirited translation, opposite text.]

Vergil: *Aeneid*, Book X. Edited by L. D. Wainwright, M.A., Assistant Master, St. Paul's School. George Bell (Bell's Illustrated Classics).

[Introduction, biographical and literary; notes liberal and useful; vocabulary; 25 illustrations. Text in sections, with introductory summaries.]

Welsh, The Latin Element in. By Samuel J. Evans, M.A. Lond., Head Master of the County School, Llangefni. 6d. net. Newport, Mon.: Southall.

[Brief, but very interesting, comparative outline.]

### MATHEMATICS.

Algebra, Modern, Elementary, Blackie's. In three Parts. By R. C. Bridgett, M.A., B.Sc., F.C.S. 1s. 6d.

[“Embodying the graphic and other methods recommended by the Mathematical Association and the Board of Education.” Up to and including quadratic equations. Examples abundant and carefully graduated; examination papers; answers. Very useful.]

Arithmetic, Pitman's Correlated. By T. W. Troughton, B.A., Head Master, Camden Street Council School, Birmingham, formerly Lecturer in Mathematics, &c., at Chester Training College. Book II. (answers, notes, oral work, &c.), 1s. net. Book III., 3d.

Arithmetic, Revision, The Normal. By W. G. Akam, A.C.P., Principal of Faversham Certificate Classes for Teachers. 1s. net. Normal Press (Normal Tutorial Series).

[Comprehensive, varied, and practical.]

Cambridge Tracts in Mathematics and Mathematical Physics. No. 9. Invariants of Quadratic Differential Forms, by J. Edmund Wright, M.A., Fellow of Trinity, Associate Professor of Mathematics, Bryn Mawr College, U.S.A. 2s. 6d. net. Clay (Cambridge University Press Warehouse, Fetter Lane, E.C.).

Geometry, Solid, through the Stereoscope. Demonstration of some of the more important Propositions, prepared by Edward M. Langley, M.A., Bedford Modern School. Underwood & Underwood.

[“There is nothing in the school curriculum to which the stereoscope is better suited to give valuable aid to both teacher and student than that of Solid Geometry. The most serious difficulty in the effective teaching of this branch is entirely overcome by the use of the stereoscope.” Worked with a set of 25 slides.]

Ratio Co-ordinates and Carnot's Theorem. 1s. net. Whittaker.

[Attempt “to explain the use of a certain kind of ratio co-ordinates, which seem to present some advantages in dealing with the projective properties of conic sections.” 24 figures.]

Trigonometry, Experimental. By R. C. Bridgett, M.A., B.Sc., F.C.S. 1s. Blackie.

[Introductory. Exercises; examination papers. Answers.]

### SUPPLEMENTARY ENGLISH READERS.

Charles & Dible's "Grosvenor" Series of Supplementary Readers.—No. 1, Three Famous Voyages (Columbus—Vasco da Gama—Magellan). No. 2, Three Founders of our Empire (Raleigh—Wolfe—Clive). No. 3, Three Famous Women (Elizabeth Fry—Florence Nightingale—Mary Somerville). 3d. net each.

[Freshly and simply narrated. Illustrated. Nicely got up.]

McDougall's Supplementary Series.—Junior: No. 5, The Wishing Well. 2d. Intermediate: No. 7, Pandora's Box; No. 8, Prince Geraint and Fair Enid. 2d. each. Advanced: No. 11, Scenes from Quentin Durward; No. 12, The Merchant of Venice; No. 13, As You Like It; No. 14, The Tempest. 2d. each.

[Good matter, type, and get-up.]

Macmillan's Supplementary Readers.—Junior: (1) Fairy Tales, I.; (2) Fairy Tales, II.; (3) Tales from Andersen (Ugly Duckling—Fire-tree—Nightingale). 4d. each. Intermediate: (1) Fables from Aesop, and others; (2) Sindbad the Sailor; (3) Ali Baba. 4d. each. Senior: (1) Adventures of Robinson Crusoe; (2) Tanglewood Tales (Circe's Palace, and The Golden Fleece). 4d. each. Shakespeare (text only): (1) The Merchant of Venice; (2) The Tempest; (3) A Midsummer Night's Dream; (4) Macbeth; (5) King Lear; (6) Julius Caesar. 6d. each.

[Good matter; superior get-up.]

Nelson's Supplementary Readers.—No. 18, Three Lays of Ancient Rome (Prophecy of Capys—Horatius—Battle of Lake Regillus). 4d.

[Introductions; notes; 2 maps. Strong get-up.]

Pitman's Supplementary Readers.—(1) Stories from the Classics (Jason and The Golden Fleece, by Emily Isabel Slater). (2) The Merchant of Venice, and (3) King Lear—“carefully adapted for school use.” 4d. each. (4) Stories from the Classics (The Heroes of Troy, by Emily Isabel Slater). 3d.

[(1) and (4) simply and clearly told; illustrations. (2) and (3) have short introductions, and the story of the plays adapted from Lamb, and glossarial notes; illustrations; well got up.]

### EDUCATION.

Board of Agriculture and Fisheries. Various Leaflets. [No. 66, Fowl Cholera. No. 203, Utilization of Peat Lands. No. 209, Gooseberry “Cluster-Cup” Disease. No. 211, Cider Orchards. Practical. Gratis and post free from the Secretary; letters of application need not be stamped.]

Board of Education. (1) National Competition, 1908: List of Awards and Report of Examiners. Illustrated. 3s. (2) National Competitions: Retrospective Exhibition, 1908. Unillustrated List. (3) Regulations for Technical Schools, &c., 1908-9. Cd. 4,187. 2d. Wyman.

Cambridge University. Higher Local Examinations. Examination Papers (June), with Regulations for Examinations in December, 1908, and June, 1909. 2s.; by post, 2s. 2d. Clay (Cambridge University Press Warehouse, Fetter Lane, E.C.).

Cape of Good Hope. Education Report for 1906-7.

Child Study (July). 6d. net. Edward Arnold.

[Four excellent articles.]

English Association Leaflets. No. 6, The Teaching of English in Girls' Secondary Schools, by Miss G. Clement, B.A. No. 7, The Teaching of Shakespeare in Schools (expanded, but still, in a sense, provisional). 6d. each. Copies from Miss Elizabeth Lee (Secretary), 8 Mornington Avenue Mansions, West Kensington.

## NEW MATHEMATICAL AND SCIENTIFIC SERIES FOR SCHOOLS.

SOME RECENT ADDITIONS.

### HISTORICAL GEOGRAPHY ON A REGIONAL BASIS.

By ERNEST W. DANN, B.A., THE GRAMMAR SCHOOL, REIGATE.

Vol. I.—THE BRITISH ISLES. Vol. II.—EUROPE. Price 2s. 6d. each.

*Extract from Preface.*—These little volumes have been written to give students a more definite idea of the interrelation of Geography and History than they can possibly gain from the passing allusions in books entirely devoted to the one or the other subject. Of the importance of Historical Geography there can be no doubt; but there is a great deal of confusion of terms. It is often forgotten that Geography is the substantive and Historical the adjective, and it is most important to give the science its proper physical basis. Moreover, the study of it should be based upon reason and not upon memory. Kaleidoscopic political changes at rapid intervals do not require a high order of intelligence to acquire, and are merely interesting; the study of man on the earth is a far deeper matter.

- ELEMENTARY TRIGONOMETRY.** By CECIL HAWKINS, M.A., Senior Mathematical Master at Haileybury College, Hertford. Small crown 8vo, without Answers, 3s. 6d.; with Answers, 4s.
- GEOMETRICAL CONICS.** By Professor G. H. BRYAN, F.R.S., and Prof. R. H. PINKERTON, M.A. 3s. 6d.
- ANALYTICAL CONICS.** By Prof. CHARLOTTE ANGUS SCOTT, D.Sc., Bryn Mawr College, U.S.A. 3s. 6d.

**AN INTRODUCTION TO PRACTICAL BOTANY.** By E. H. DAVIES, B.Sc. (Lond.), F.G.S., County School, Barry, Glam. Small crown 8vo, 2s.

**SCHOOL HYGIENE.** By HERBERT JONES, D.P.H. (Camb.), Fellow and Hon. Secretary to the Incorporated Society of Medical Officers of Health; Fellow of the Royal Sanitary Institute, &c. Small crown 8vo, 2s.

**SPECIAL NOTE.**—Attention is directed to the fact that all the above books are subject to discount. The Publishers cordially invite application for specimen copies from Principals of Schools and Colleges.

London: J. M. DENT & CO., Aldine House, Bedford St., Strand, W.C.

**MATHEMATICS.**

16418. (W. F. BEARD, M.A.)—ABC is a triangle;  $I, I_1, I_2, I_3$  are the in- and ex-centres and O is the circum-centre; the internal and external bisectors of the angles meet the opposite sides at D,  $D_1$ , E,  $E_1$ , F,  $F_1$ . Prove that  $OI, OI_1, OI_2, OI_3$  are respectively perpendicular to  $D_1E_1F_1, D_1EF, DE_1F, DEF_1$ .

Solutions (I.) by R. F. DAVIS, M.A.; (II.) by LOUIS A. FENN; (III.) by A. M. NESBITT, M.A., and others.

(I.) Let the external bisectors of the angles of the triangle ABC meet the respectively opposite sides in L, M, N.

Then  
 $AE^2 = AI^2 + IE^2 + 2AI \cdot IE$   
 or  
 $AI^2 + 2AI \cdot IE = AE^2 - IE^2$   
 $= AE^2 - AE \cdot HE$   
 $= AE \cdot AH$   
 $= AB \cdot AC$

Thus  
 $AB \cdot AC - AI^2 = 2AI \cdot IE = 4Rr$   
 $= BC \cdot BA - BI^2$   
 $= CA \cdot CB - CI^2$

by symmetry.

Then  
 $LB \cdot LC = LA^2 + AB \cdot AC = LA^2 + AI^2 + AB \cdot AC - AI^2 = LI^2 + 4Rr$ ,  
 or the square of the tangent from L to the circum-circle exceeds the square of the tangent from L to a point circle at I by  $4Rr$ .

Similar results hold for M, N.  
 Hence L, M, N are collinear; and LMN is a line parallel to the radical axes of these two circles, or perpendicular to their line of centres OI.

(II.) (1) To show that OI is perpendicular to  $D_1E_1F_1$ .

Square on tangent to circle  $I_1I_2I_3$  (centre S) from  $D_1$  = rectangle  $D_1I_2 \cdot D_1I_3$  = rectangle  $D_1C \cdot D_1B$  (because  $I_2BCI_3$  cyclic) = square on tangent to circle ABC (centre O).

Therefore  $D_1$  is a point on radical axis of circles  $I_1I_2I_3$ , and ABC.  
 Again, square on tangent to circle  $I_1I_2I_3$  from  $E_1$  = rectangle  $E_1I_1 \cdot E_1I_3$  = rectangle  $E_1C \cdot E_1A$  (because  $I_1CAI_3$  cyclic) = square on tangent to circle ABC from  $E_1$ .

Therefore  $E_1$  is a point on radical axis of circles  $I_1I_2I_3$ , and ABC, i.e.  $D_1E_1F_1$  is the radical axis of these circles.

Therefore line of centres (i.e. SO) is perpendicular to  $D_1E_1F_1$ .  
 But S, O, I are in directum (because S is circum-centre, I is ortho-centre, and O is N.P. centre of  $\Delta I_1I_2I_3$ ).

Therefore OI is perpendicular to  $D_1E_1F_1$ .

(2) To show that  $OI_1$  is perpendicular to  $D_1EF$ .  
 It may be shown, as above, that  $D_1$  lies on radical axis of circles  $I_2I_3$  and ABC.

Now, because  $IAI_2C$  cyclic, rectangle  $EC \cdot EA = EI \cdot EI_2$ .  
 But  $II_2$  is a chord of the circle  $I_2I_3$ .  
 Therefore E lies on the common chord of the circles ABC,  $II_2I_3$ .  
 Therefore E lies on the radical axis of these intersecting circles.  
 Similarly, F lies on the same radical axis.  
 Therefore  $D_1EF$  is radical axis of these two circles.  
 But centre of  $II_2I_3$  is image of S in  $I_2I_3$ , and it may be easily shown that  $I_1OS'$  (where S' is the centre of  $II_2I_3$ ) lie in directum.  
 But S'O is perpendicular to  $D_1EF$ .  
 Therefore  $OI_1$  is perpendicular to  $D_1EF$ .

The other lines mentioned may be similarly shown to be perpendicular.

*A Note on the Nine-Point Circle.*

(Continued. See Reprint, N.S., Vol. xv, p. 25, and Educational Times, July, 1908.)

By W. GALLATLY, M.A.

A'B'C' being the mid-point triangle of ABC, take any point P on the nine-point circle; draw the chord PQ perpendicular to BC, and the diameter TOT' of the circle ABC parallel to A'Q. Let  $\alpha\beta\gamma$  be the pedal triangle of S, any point on TOT'.

It has been shown (references above, q.v.) that the circle  $\alpha\beta\gamma$  passes through P. It is now required to prove that  $\beta\gamma, \alpha P$  meet on B'C'.

Draw AR perpendicular to TOT'. It is easily proved that AR and PH<sub>1</sub> (AH<sub>1</sub> perpendicular to BC) are equal and equally inclined to AH<sub>1</sub>. Draw Aa' parallel to BC, meeting aS in a'.

The trapezium  $\alpha PRa'$  is obviously symmetrical, so that  $\alpha'RP\alpha$  is cyclic, and  $\alpha P, \alpha'R$  meet on B'C'.

The figure  $S\beta RAa'\gamma$  is also cyclic. Hence  $\alpha'R, \beta\gamma, \alpha P$  are the three common chords of three circles  $\alpha PRa', S\beta RAa'\gamma, \alpha P\beta\gamma$ .

Therefore they meet at a point; and this point lies on B'C'. This theorem is due to M. G. Fontené, who published it in N. A. M., 1906. His proof is analytical.

A particular case is given by Sir W. Rowan Hamilton: Let XYZ be the points of contact of the in-circle, and let YZ cut B'C' in Q. Then XQ cuts the nine-point circle at its point of contact with the in-circle.

It is worth notice that, if we draw a parabola having P as focus and touching A'B'C', then TOT', parallel to A'Q, is also parallel to the Simson-line of P, or vertex-tangent. It also passes through O, the orthocentre of A'B'C'. Therefore TOT' is the directrix.

16024. (V. RAMASWAMI AIYAR, M.A.)—Let the n-th differential coefficient of  $f(x)$  be positive as  $x$  increases from  $b$  to  $a$ . If  $n = 1$ , we know result (1) below. If  $n = 2$ , we have result (2). If  $n = 3$ , prove result (3). The law of formation is apparent, and an endless succession of results (4), (5), (6), ... could be formed. Demonstrate that these hold for  $n = 4, 5, 6, \dots$  respectively.

$$f(a) > f(b) \dots\dots\dots(1).$$

$$f'(a)(a-b) > f(a) - f(b) > f'(b)(a-b) \dots\dots\dots(2).$$

$$\frac{f''(a)}{1.2}(a-b)^2 > f'(a)(a-b) - [f(a) - f(b)]$$

$$> [f(a) - f(b)] - f'(b)(a-b) > \frac{f''(b)}{1.2}(a-b)^2 \dots\dots\dots(3).$$

Solution by Professor NANSON.

The results stated all follow from the theorem that, if  $\phi(a)$  is positive, when  $a > b$ , so is  $\int_b^a \phi(a) da$ . Thus, if  $f'(a)$  is positive, so is  $f(a) - f(b)$ . Hence, if  $f''(a)$  is positive, so are  $(a-b)f'(a), f'(a) - f'(b)$ , and therefore also

$$(a-b)f'(a) - [f(a) - f(b)], [f(a) - f(b)] - (a-b)f'(b).$$

Hence, if  $f'''(a)$  is positive, so are  $\frac{1}{2}(a-b)^2 f''(a), (a-b)f'(a) - [f'(a) - f'(b)], [f'(a) - f'(b)] - (a-b)f''(b)$ ; and therefore also

$$\frac{1}{2}(a-b)^2 f''(a) - (a-b)f'(a) + [f(a) - f(b)],$$

$$(a-b)f'(a) - 2[f(a) - f(b)] + (a-b)f'(b),$$

$$[f(a) - f(b)] - (a-b)f'(b) - \frac{1}{2}(a-b)^2 f''(b)$$

are positive, and so on, indefinitely.

16376. (L. ISSERLIS, B.A.)—Prove that the equations

$$x = a + b \sec^2(\theta) \cos(\theta - k), \quad y = c + b \sec^2(2\theta) \cos(\theta + k),$$

in which  $a, b, c, k$  are constants, represent a point on a conic, and that by varying  $k$  a set of confocal conics is obtained.

Solutions (I.) by A. M. NESBITT, M.A., and others;  
(II.) by M. I. TRACHTENBERG, B.A.

(I.) Changing origin to  $(a, c)$ , we get

$$\tan \theta = (x - y) \cot k / (x + y), \quad x^2 - y^2 = b^2 \sin 2k \tan 2\theta,$$

$$\text{or} \quad (x^2 + y^2) \cos 2k - 2xy = -b^2 \sin 2k,$$

which reduces to  $y^2/\cos^2 k - x^2/\sin^2 k = 2b^2$ , when referred to principal axes; and this represents a system of confocal hyperbolæ.

(II.) Transferring the origin to  $(a, c)$ , we have

$$x = b \sec^2(2\theta) \cos(\theta - k), \quad y = b \sec^2(2\theta) \cos(\theta + k);$$

therefore

$$x + y = 2b \sec^2(2\theta) \cos \theta \cos k, \quad x - y = 2b \sec^2(2\theta) \sin \theta \sin k;$$

therefore, eliminating  $\theta$ , we have

$$(x + y)^2/(4b^2 \cos^2 k) - (x - y)^2/(4b^2 \sin^2 k) = 1,$$

which is a conic whose axes bisect the angles between the axes of coordinates (assumed to be rectangular). The difference between the squares of the axes is a multiple of  $(\cos^2 k + \sin^2 k)$ —i.e., is constant. Thus by varying  $k$  a set of confocal conics is obtained.

16389. (M. T. NARANIENGAR, M.A.)—In the cardioid  $r = a(1 - \cos \theta)$ , show that the locus of the intersection of normals at the points  $a, 2a$  is a circle. Interpret the result geometrically.

Solution by JAGAT CHANDRA PAL.

Since the tangent at the point  $a$  makes with the radius vector an angle  $= \frac{1}{2}a$ , the perpendicular from the origin on the normal at the point

$$\begin{aligned} &= r \cos \frac{1}{2}a \\ &= a(1 - \cos a) \cos \frac{1}{2}a, \end{aligned}$$

and it makes with the initial line an angle  $= \frac{3}{2}a$ ;

therefore the Cartesian equation of the normal at the point  $a$  is

$$x \cos \frac{3}{2}a + y \sin \frac{3}{2}a = a(1 - \cos a) \cos \frac{1}{2}a \dots \dots \dots (1).$$

Similarly the Cartesian equation of the normal at the point  $2a$  is

$$x \cos 3a + y \sin 3a = a(1 - \cos 2a) \cos a \dots \dots \dots (2).$$

Multiply (1) by  $2 \cos \frac{3}{2}a$ , and from this subtract (2), then

$$\begin{aligned} x &= a [(1 - \cos a)(\cos a + \cos 2a) - (1 - \cos 2a) \cos a] \\ &= a [\cos 2a - \cos^2 a] = -a \sin^2 a. \end{aligned}$$

Substituting this value of  $x$  in (2), we easily get  $y = a \sin a \cos a$ ; therefore  $x^2 + y^2 = a^2 \sin^2 a (\sin^2 a + \cos^2 a) = a^2 \sin^2 a = -ax$ ; therefore  $x^2 + y^2 + ax = 0$ , which is evidently a circle on the line joining the cusp and the mid-point of the axis as diameter.

16422. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Give the general solution of, and also the lowest solution in integers of,

$$(x^4 + y^4 + z^4) = 2(x^3 + y^3 + z^3).$$

Solutions (I.) by Prof. E. B. ESCOTT; (II.) by the PROPOSER.

(I.) If  $z^2 = x^2 + y^2$ , the equation becomes

$$4(x^4 + x^2y^2 + y^4) = 4(x^3 + x^2y^2 + y^3),$$

an identity. Smallest solution (not zero),  $x = 3, y = 4, z = 5$ .

(II.) From the present writer's solution of Question 16368 (p. 188 of April issue), it may be inferred that

$$U^4 + V^4 + W^4 = 2C^2, \quad \text{where } W = U + V,$$

and that, by taking  $U = x^2, V = y^2, W = z^2 = x^2 + y^2$ , which can be satisfied by taking  $x = \xi^2 - \eta^2, y = 2\xi\eta, z = \xi^2 + \eta^2$ , the above becomes  $x^4 + y^4 + z^4 = 2C^2$ , where  $C = x^4 + y^4 + z^4$ .

This solves the Question.

The lowest solution is given by  $(x, y, z) = (3, 4, 5)$ , viz.,  $2(3^4 + 4^4 + 5^4) = 2(2 \cdot 481^2) = (3^4 + 4^4 + 5^4)^2$ .

16382. (M. T. NARANIENGAR, M.A.)—If forces proportional to the sides of a triangle act at any point of the nine-point circle towards the feet of the perpendiculars of the triangle, their resultant passes through the point of contact of the inscribed or escribed circle with the nine-point circle.

Solution by the PROPOSER.

This Question was suggested by a problem communicated to me by my friend Prof. V. Ramaswami Aiyar, which has since appeared in the *Mathematical Gazette* (Vol. iv., p. 166), with solutions published on pp. 235, 236.

It may be solved in the following manner:—

(1) If two circles touch at X, and D is a point on one, then DX varies as the tangent from D to the other circle.

For, if DL be the tangent,

$$DL^2 = DX \cdot DD',$$

and

$$DX \propto DD',$$

since the circles touch at X; therefore DX varies as DL.

(2) Now, let D be the foot of the perpendicular from A on BC, and D' the mid-point of BC. Also, let the in-circle touch BC at L, and the nine-point circle at X. Then DX varies as DL, since D is a point on the nine-point circle; therefore

$$\begin{aligned} DX &= \lambda \cdot DL = \lambda(DD' - D'L) \\ &= \lambda [R \sin(C - B) - \frac{1}{2}(c - b)], \end{aligned}$$

since  $D'L = \frac{1}{2}(BL - CL) = \frac{1}{2}[(s - b) - (s - c)] = \frac{1}{2}(c - b)$ .

Hence, if forces act through the feet of perpendiculars at any point P of the nine-point circle, and are proportional to the sides, the sum of their moments round X varies as

$$\Sigma \{ \lambda a [R \sin(C - B) - \frac{1}{2}(c - b)] \} = \lambda R \Sigma [a \sin(C - B)] - \frac{1}{2} \lambda \Sigma [a(c - b)] = 0.$$

Thus, the resultant passes through X.

By varying the position of P on the nine-point circle and drawing separate figures, the several cases of the Question may be examined.

The Question proposed by Prof. V. R. Aiyar may be proved in a similar manner.

16313. (SARADAKANTA GANGULI, M.A.)—Sum the following series

- (1)  $\frac{1}{1^2} + \frac{2}{2^2 + 3^2} + \frac{3}{4^2 + 5^2 + 6^2} + \frac{4}{7^2 + 8^2 + 9^2 + 10^2} + \dots$
- (2)  $\frac{1^3}{1^2} + \frac{2^3}{2^2 + 3^2} + \frac{3^3}{4^2 + 5^2 + 6^2} + \frac{4^3}{7^2 + 8^2 + 9^2 + 10^2} + \dots$
- (3)  $\frac{1^2}{1^3} + \frac{2^2}{2^3 + 3^3} + \frac{3^2}{4^3 + 5^3 + 6^3} + \frac{4^2}{7^3 + 8^3 + 9^3 + 10^3} + \dots$

Solution by MAHENDRA NATH, D.E., M.A., B.Sc., and others.

Lemma.—  $\frac{\pi x}{2} \coth \pi x = \frac{1}{2} + \sum_{n=1}^{\infty} \frac{x^2}{x^2 + n^2}$  (see Ex. 118, p. 55, Edwards's *Diff. Calc.*).

The denominator of the  $n$ th term in (1) and (2) is  $(a + 1)^2 + (a + 2)^2 + \dots + (a + n)^2$ ,

$$\begin{aligned} \text{where } a &= \frac{n(n-1)}{2} = na^2 + 2a \frac{n(n-1)}{2} + \frac{n(n+1)(2n+1)}{6} \\ &= n \left[ \frac{n^2(n-1)^2}{4} + \frac{n(n^2-1)}{2} + \frac{(n+1)(2n+1)}{6} \right] \\ &= \frac{n(3n^4 - 6n^3 + 3n^2 + 6n^3 - 6n + 4n^2 + 6n + 2)}{12} \\ &= \frac{n(3n^4 + 7n^2 + 2)}{12} = \frac{n(3n^2 + 1)(n^2 + 2)}{12}. \end{aligned}$$

Therefore, in (1),  $t_n$  (the  $n$ th term)

$$= \frac{12}{(3n^2 + 1)(n^2 + 2)} = \frac{4}{(n^2 + \frac{1}{3})(n^2 + 2)} = \frac{1}{3} \left[ \frac{1}{n^2 + \frac{1}{3}} - \frac{1}{n^2 + 2} \right].$$

Therefore, from the Lemma, the sum

$$= \frac{1}{3} \left[ 3 \left( \frac{\pi}{2\sqrt{3}} \coth \frac{\pi}{\sqrt{3}} - \frac{1}{2} \right) - \frac{1}{2} \left( \frac{\pi}{\sqrt{2}} \coth \frac{\pi}{\sqrt{2}} - \frac{1}{2} \right) \right].$$

In (2), 
$$t_n = \frac{12n^2}{(3n^2 + 1)(n^2 + 2)} = \frac{4n^2}{(n^2 + \frac{1}{3})(n^2 + 2)}$$

$$= \frac{2^2}{3} \frac{1}{n^2 + 2} - \frac{1}{3} \frac{1}{n^2 + \frac{1}{3}}$$

Therefore the sum

$$= 2^{\frac{2}{3}} \cdot \frac{1}{2} \left( \frac{\pi}{\sqrt{2}} \coth \pi \sqrt{2} - \frac{1}{2} \right) - \frac{1}{3} \cdot 3 \left( \frac{\pi}{2\sqrt{3}} \coth \frac{\pi}{\sqrt{3}} - \frac{1}{2} \right)$$

$$= \frac{12\pi}{5} \left( \frac{1}{\sqrt{2}} \coth \pi \sqrt{2} - \frac{1}{2\sqrt{3}} \coth \frac{\pi}{\sqrt{3}} \right).$$

The denominator of  $t_n$  in (3)

$$= (a+1)^3 + (a+2)^3 + \dots + (a+n)^3 \left[ \text{where } a = \frac{n(n-1)}{2} \right]$$

$$= \frac{n^3(n^2+4n^2+3)}{8},$$

on slight simplifications. Therefore

$$t_n = \frac{8}{n^3+4n^2+3} = \frac{8}{(n^2+1)(n^2+3)} = 4 \left[ \frac{1}{n^2+1} - \frac{1}{n^2+3} \right].$$

Therefore the sum

$$= 4 \left[ \left( \frac{\pi}{2} \coth \pi - \frac{1}{2} \right) - \frac{1}{3} \left( \frac{\pi\sqrt{3}}{2} \coth \pi \sqrt{3} - \frac{1}{2} \right) \right]$$

$$= 2 \left[ (\pi \coth \pi - 1) - \frac{1}{3} (\pi \sqrt{3} \coth \pi \sqrt{3} - 1) \right].$$

16242. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Factorize completely (into prime factors)  $N = (3^{34} + 2^{34})$ .

Solution by Professor SANJANA, M.A.

$$3^{34} + 2^{34} = 27^{17} + 8^{17} = 8^{17} \left[ \left( \frac{27}{8} \right)^{17} + 1 \right].$$

It can be shown that  $x^{18} + 1$  is the product of the following factors:—

$$x^2 + 1, \quad x^2 + 3x + 1 \pm \sqrt{(6x)(x+1)}, \quad x^6 + 3x^3 + 1 \pm \sqrt{(6x^3)(x^3+1)}.$$

When  $x = \frac{3^2}{8}$ ,  $\sqrt{(6x)}$  and  $\sqrt{(6x^3)}$  are both rational; make the substitution and multiply out by  $8^{18}$ , and we get the following values:—

$$793; \quad 1441 \pm 1260; \quad 417,915,721 \pm 157,036,320.$$

Now  $793 = 13 \cdot 61$ ;  $2701 = 37 \cdot 73$ ;  $260,879,401 = 109 \cdot 2,393,389$ ; and  $574,952,041 = 13,177 \cdot 43,633$ ,

as shown by the Proposer (*Reprint*, Vol. XIII., New Series, pp. 106, 107). Thus, finally,

$$N = 13 \cdot 61 \cdot 37 \cdot 73 \cdot 181 \cdot 109 \cdot 2,393,389 \cdot 13,177 \cdot 43,633.$$

16007. (Professor NANSON.)—Eliminate  $x, y$  from

$$x^2 = ax + by + c, \quad xy = a'x + b'y + c', \quad y^2 = a''x + b''y + c''.$$

Note by the PROPOSER.

The result (3), *Reprint*, Vol. XIII., New Series, p. 48, cannot possibly be the eliminant of the given equations, for when  $a, b, a', b', a'', b''$  are all zero this equation is satisfied identically, and yet in this case the given equations cannot have a common solution unless  $cc'' = c'^2$ . But independently of this difficulty, which may readily be met, the result stated, after correction of obvious slips, has a factor of the fourth order which is wholly irrelevant to the problem. A somewhat similar remark applies to the solution by cubics indicated on the same page. The process there described leads to an eliminant of order 15, whereas it is well known that the true eliminant is of order 12 when all the coefficients are literal.

The correct eliminant is readily found by Sylvester's rule given in Salmon's *Higher Algebra*, Art. 91, and apparently in part rediscovered by Dr. Muir, see *Trans. Roy. Soc. of Edin.*, Vol. XXXIX., p. 675.

Throwing each equation into the three forms

$$\lambda x^2 + \mu y + \nu = 0, \quad \lambda x + \mu y^2 + \nu = 0, \quad \lambda x + \mu y + \nu = 0,$$

and then eliminating dialytically first  $x^2, y, 1$ ; then  $x, y^2, 1$ ; and, finally  $x, y, 1$ , it follows that for all values of  $x, y$  which satisfy the given equations  $Cx - A - a''x^2 + a'xy - c''x + c'y = 0$ ,

$$Cy - B'' - by^2 + b'xy - cy + c'x = 0,$$

$$\Delta - \frac{1}{2}c''x^2 - \frac{1}{2}cy^2 + c'xy - Ax - B'y - \frac{1}{2}B'x - \frac{1}{2}A'y = 0,$$

where  $A, B, \dots$  are the co-factors of  $a, b, \dots$  in the determinant  $\Delta = (ab'c'')$ . The dialytic eliminant of these three equations and the three given equations can now be written down as a six-line determinant. By obvious combinations of either rows or columns, this may be reduced to the following symmetrical three-line determinant, which is of order 7 in the given coefficients, viz.,

$$\begin{vmatrix} C - c'' - aa'' + a^2, & c - a''b + a'b', & A + ca'' - c'a' \\ c - a''b + a'b', & C' - c - bb'' + b^2, & B' + bc'' - b'c' \\ A + ca'' - c'a', & B' + bc'' - b'c', & \Delta - cc'' + c \end{vmatrix}.$$

When  $a, b, a', b', a'', b''$  are all zero, this reduces to  $-(cc'' - c')^2$ , which is correct. Also for the three equations

$$x^2 = by, \quad y^2 = a''x, \quad xy = c',$$

it reduces to  $-c'(a''b - c')^2$ , which is correct. Finally, the terms of highest order have  $\Delta$  for a factor, which is correct, because when the first members of the given equations are replaced by zeros, the condition for a common solution is  $\Delta = 0$ .

QUESTIONS FOR SOLUTION.

16491. (H. STANLEY REDGROVE, B.Sc.)—It is required to determine the values of  $a$  and  $b$ . Experiments are carried out with the following results:—

- Experiment 1:  $a = -94 \cdot 3$ . Experiment 3:  $b = -86 \cdot 8$ .
- Experiment 2:  $a = -31 \cdot 9$ . Experiment 4:  $b = -85 \cdot 1$ .
- Experiment 5:  $a - 2b = 135 \cdot 8$ .

Calculate from these data the most probable values of  $a$  and  $b$ .

16492. (S. NARAYANA AIYAR.)— $a, b, c, d, \dots, l$  are  $l$  quantities;  $\rho_{ab}$  denotes  $(a^2 - 2ab \cos \theta + b^2)^{\frac{1}{2}}$ , and  $\phi_{ab} = \tan^{-1} a \sin \theta / (a \cos \theta - b)$ .

$$A_x = \int \frac{\rho_{ab} \rho_{bc} \rho_{cd} \dots \rho_{nl}}{(a-b)(a-c)(a-d) \dots (a-l)} \cos(\phi_{ab} + \phi_{bc} + \phi_{cd} + \dots + \phi_{nl}) d\theta,$$

$$B_x = \int \frac{\rho_{ba} \rho_{bc} \rho_{cd} \dots \rho_{bl}}{(b-a)(b-c)(b-d) \dots (b-l)} \cos(\phi_{ba} + \phi_{bc} + \phi_{cd} + \dots + \phi_{bl}) d\theta,$$

$$L_x = \int \frac{\rho_{la} \rho_{lb} \rho_{lc} \dots \rho_{lk}}{(l-a)(l-b)(l-c) \dots (l-k)} \cos(\phi_{la} + \phi_{lb} + \phi_{lc} + \dots + \phi_{lk}) d\theta,$$

$$A_x = \int \frac{\rho_{ab} \rho_{bc} \rho_{cd} \dots \rho_{nl}}{(a-b)(a-c)(a-d) \dots (a-l)} \sin(\phi_{ab} + \phi_{bc} + \phi_{cd} + \dots + \phi_{nl}) d\theta,$$

$$B_x = \int \frac{\rho_{ba} \rho_{bc} \rho_{cd} \dots \rho_{bl}}{(b-a)(b-c)(b-d) \dots (b-l)} \sin(\phi_{ba} + \phi_{bc} + \phi_{cd} + \dots + \phi_{bl}) d\theta,$$

$$L_x = \int \frac{\rho_{la} \rho_{lb} \rho_{lc} \dots \rho_{lk}}{(l-a)(l-b)(l-c) \dots (l-k)} \sin(\phi_{la} + \phi_{lb} + \phi_{lc} + \dots + \phi_{lk}) d\theta.$$

Show that (1)  $A_x + B_x + \dots + L_x = C + \theta + \sum_{r=1}^{r=l-1} \frac{\sin r\theta}{r}$ ,

$$(2) A_x + B_x + \dots + L_x = C' - \sum_{r=1}^{r=l-1} \frac{\cos r\theta}{r},$$

where  $C$  and  $C'$  are constants.

16493. (D. EDWARDES, B.A.)—If  $a_0, a_1, a_2, \dots, f, \theta$  are functions of  $x$ , and if  $a_0 = f/\theta, a_1\theta + a_0 d\theta/dx = df/dx$ , and generally

$$a_n\theta + a_{n-1}d\theta/dx + \dots + a_0 d^n\theta/dx^n = d^n f/dx^n,$$

then  $a_2 = 1/\theta d/dx (\theta da_0/dx)$ .

Is there any compact form for  $a_n$ ?

16494. (T. MUIR, LL.D.)—If

$$c_{rs} = a_{rs} + b_{rs}\sqrt{-1}, \quad c_{sr} = a_{sr} - b_{sr}\sqrt{-1}, \quad \text{and } c_{rr} = 0;$$

show that  $|c_{11} c_{22} c_{33} c_{44}|$  is equal to the sum of two expressions of the form

$$\begin{vmatrix} l & p & 1 \\ m & -q & 1 \\ n & r & 1 \end{vmatrix}.$$

16495. (Professor SANJANA, M.A.)—Resolve into factors

$$(a) 28^{21} + 1, \quad (b) 44^{11} + 1, \quad (c) 6^{30} + 1.$$

16496. (Professor E. B. ESCOTT.)—The numbers 259, 592, 925 are all divisible by 37. Show that there is a number of 5 digits possessing the same property, i.e., of having a common factor when the digits are permuted cyclically.

16497. (Major C. H. CHEPMELL, (late) R.A.)—The special roots of the cyclotomic equation  $x^{21} - 1 = 0$  are given by the sextic

$$y^6 - y^5 - 6y^4 + 6y^3 + 8y^2 - 8y + 1 = 0 \quad (y = x + 1/x),$$

and this can be resolved into two cubics

$$2y^3 - y^2 - y - 5 \pm \sqrt{(21)(y^2 - y - 1)} = 0.$$

Resolve the sextic into three quadratics, the coefficients of which depend on  $\omega, 1/(1-\omega), (\omega-1)/\omega$ , the three roots of  $\omega^3 + \omega^2 - 2\omega - 1 = 0$  the 7-cyclotomic equation.

16498. ("SOLIDUS." Suggested by Question 16350.)—What is the number of coefficients in the general symmetrical homogeneous rational integral function of four letters? And what is the number for such a function of three letters, if we drop the restriction that it be homogeneous?

16499. (A. M. NESBITT, M.A.)—Eliminate  $a, b, c, d$  from  $p = bc^2, q = ad^2, r = (ac + 2bd)c, s = (bd + 2ac)d$ .

16500. (M. T. NARANIENGAR, M.A.)—In a four-cusped hypocycloid, as  $P$  describes the curve, show that the foot of the tangent moves with simple harmonic motion.

16501. (H. L. TRACHTENBERG, B.A.)—A rectangular hyperbola has its asymptotes parallel to the axes of a conic, passes through its centre, and touches it at  $P$ . Prove that it passes through the centre of curvature at  $P$ .

# PROFESSOR MEIKLEJOHN'S SERIES.

## BOOKS SUITABLE FOR COLLEGE OF PRECEPTORS (1909) AND OTHER EXAMINATIONS.

### ENGLISH.

- THE ENGLISH LANGUAGE: Its Grammar, History, and Literature.** By J. M. D. MEIKLEJOHN, M.A. **Twenty-eighth Edition.** Revised and Enlarged, with Exercises and Additional Analysis. Crown 8vo, 486 pp. ... .. **4s. 6d.**
- A NEW GRAMMAR OF THE ENGLISH TONGUE.** With Chapters on Composition, Versification, Paraphrasing, and Punctuation. With Exercises and Examination Questions. **Twenty-third Edition.** (120th Thousand.) Crown 8vo, 284 pp. ... .. **2s. 6d.**
- A SHORT HISTORY OF THE ENGLISH LANGUAGE.** By Professor MEIKLEJOHN. **Twelfth Edition.** Crown 8vo, 76 pp. ... .. **1s.**
- THE ART OF WRITING ENGLISH.** A Manual for Students. With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN, M.A. **Sixth Edition.** Crown 8vo, 340 pp. ... .. **2s. 6d.**
- A NEW SPELLING BOOK ON THE COMPARATIVE METHOD.** With Side Lights from History. **Fifteenth Edition.** Crown 8vo, 152 pp. ... .. **1s.**
- THE SPELLING LIST (10,000 Difficult Words).** For Civil Service and other Examinations. With a Key to Correct Spelling. By Professor MEIKLEJOHN. **Eighth Edition.** Crown 8vo, 104 pp. ... .. **1s.**
- SHAKESPEARE'S JULIUS CÆSAR.** Edited by M. J. C. MEIKLEJOHN, B.A. (Oxon.). Crown 8vo, 136 + xx pp. ... .. **1s.**
- COMPOSITION FOR SCHOOLS AND COLLEGES.** Based on Outline Essays, with Exercises in Style. By C. H. MAXWELL, B.A. **Third Edition.** Crown 8vo, 138 pp. ... .. **1s.**
- GENERAL INFORMATION QUESTIONS (with Answers and Index).** By A. B. COWAN. Crown 8vo, 200 pp. **1s. 6d.**
- "This seems a useful idea—it would certainly be a godsend to an examiner setting a 'general paper' for boys."—*The Times*.

### GEOGRAPHY.

- A NEW GEOGRAPHY ON THE COMPARATIVE METHOD.** With Maps and Diagrams, and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. **Thirty-seventh Edition (Revised).** (180th Thousand.) Crown 8vo, 630 pp. ... .. **4s. 6d.**  
Also in **Two Parts. 2s. 6d. each.**
- Part I.—Containing Europe (including the British Isles), with Introduction to Geography, and Index, Maps, and Diagrams.**  
**Part II.—Containing Asia, Africa, the Americas, and Australasia, with Index, Vocabulary, Maps, and Diagrams.**
- THE COMPARATIVE ATLAS.** By J. G. BARTHOLOMEW, F.R.G.S., and edited by Professor MEIKLEJOHN. Containing 64 Plates, a General Index, and a Chapter on Map Drawing. **New Edition (Revised)** ... .. **2s. 6d.**
- A SCHOOL GEOGRAPHY.** With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. **Sixth Edition (Revised).** Crown 8vo, 410 pp. ... .. **2s. 6d.**
- EUROPE: Its Physical and Political Geography.** With Chapters on Latitude and Longitude, Day and Night, and the Seasons. With a double-page Map in Colour. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. **Third Edition (Revised).** 96 pp. ... .. **6d.**
- AFRICA: Its Geography, Resources, and Chronicle of Discovery up to 1898.** For the Upper Standards. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. **Fifth Edition (Revised).** Crown 8vo, 75 pp. ... .. **4d.**
- TEST QUESTIONS IN GEOGRAPHY.** Selected from Public Examination Papers. By A. T. FLUX. Crown 8vo, 82 pp. **1s.**

### HISTORY.

- A NEW HISTORY OF ENGLAND AND GREAT BRITAIN.** With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. **Twenty-third Edition.** (105th Thousand.) Crown 8vo, 704 pp. 55 B.C. to the Death of Queen Victoria ... .. **4s. 6d.**  
In **Two Parts. 2s. 6d. each.**
- Part I.—From B.C. 55 to A.D. 1509. Tenth Edition.** **Part II.—From 1509 to 1901. Twelfth Edition.**  
Also in **Three Periods. 2s. each.**
- First Period—From B.C. 55 to A.D. 1485. Second Period—From 1485 to 1688. Third Period—From 1688 to 1902.**
- A SCHOOL HISTORY OF ENGLAND.** With Maps and Vocabulary of Historical Terms. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. **Fifth Edition.** Crown 8vo, 470 pp. ... .. **2s. 6d.**  
This book is intended to stand midway between Professor Meiklejohn's New History and his Short History.
- OUTLINES OF THE HISTORY OF ENGLAND AND GREAT BRITAIN TO A.D. 1902.** **Seventh Edition.** Crown 8vo, 84 pp. ... .. **6d.**
- TEST QUESTIONS IN HISTORY.** Selected from Public Examination Papers. Arranged by A. T. FLUX. Crown 8vo, 80 pp. **1s.**

### MATHEMATICS.

- A NEW ALGEBRA.** As far as the Binomial Theorem. Including Chapters on Graphs. By G. COLLAR, B.A., B.Sc. (Joint-Author of "A NEW ARITHMETIC"). Crown 8vo, 438 pp. ... .. **4s. 6d.**  
"Special attention is called to the early chapters, which give improved methods of working—for example, complementary addition, contracted multiplication and division: also to the chapters on Factors and Graphs, and to the special care with which the theory has been treated throughout the book."
- A NEW ARITHMETIC (Theoretical and Practical).** By G. A. CHRISTIAN, B.A. (Lond.), and G. COLLAR, B.A. (Lond.). **Thirteenth Edition (Revised).** Crown 8vo, 552 pp. ... .. **4s. 6d.**  
**KEY TO NEW ARITHMETIC. 6s. net.**
- A SHORT ARITHMETIC.** By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. **Third Edition.** Crown 8vo, 196 pp. (With Answers, **1s. 6d.**) ... .. **1s.**

A Complete Catalogue will be sent post free to any address.

MEIKLEJOHN & HOLDEN, 11 Paternoster Square, E.C.

**16502.** (M. V. ARUNACHALAN, M.A.)—TA, TB are tangents to a parabola of which S is the focus. TS is produced to meet the circum-circle of the triangle TAB in the point C. Prove that S is the middle point of TC.

**16503.** (W. F. BEARD, M.A.)— $A_1A_2A_3 \dots A_n, B_1B_2B_3 \dots B_n$  are two similar and similarly situated figures, with O as centre of similitude;  $B_1B_2 \dots B_n$  is turned through any angle about O;  $A_1B_1, A_2B_2, \dots, A_nB_n$  meet  $A_2B_2, A_3B_3, \dots, A_1B_1$  at  $C_1, C_2, C_3, \dots, C_n$ . Show that, if  $C_1C_2 \dots C_n$  is equiangular to the other figures, then all three figures are regular polygons.

**16504.** (S. G. SOAL.)—Given the ratio ( $k$ ) of the two interior diagonals AC, BD of a cyclic quadrilateral (ABCD), and the distance ( $d$ ) between their middle points, express in terms of ( $k$ ) and ( $d$ ) the length of the exterior diagonal (FG).

**16505.** (JAMES BLAIKIE, M.A.)—Show how to cut (1) a regular hexagon, (2) a regular octagon, into the smallest number of parts which can be placed together to form a square.

**16506.** (Professor NANSON.)—Four points in a plane are joined in all possible ways. Given all the angles at two of the points, find those at the other two points.

**16507.** (R. F. DAVIS, M.A.)—A is a given point on a given circle; PQ a variable chord passing through a given point O. Find the envelope of the nine-point circle of the triangle APQ.

**16508.** (Professor NEUBERG.)—Soit OABC un tétraèdre qui a un trièdre trirectangle en O. La perpendiculaire élevée au centre de gravité G du triangle ABC sur le plan ABC rencontre les plans OAB, OBC, OCA aux points  $C', A', B'$ . Démontrer que

$$GA' : GB' : GC' = (OA)^2 : (OB)^2 : (OC)^2.$$

**16509.** (Professor R. W. GENESE, M.A.)—From a point P perpendiculars are drawn to the faces of a given tetrahedron. The feet of the perpendiculars lie in one plane. Prove that the locus of P is a cubic surface containing the edges of the tetrahedron.

#### OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**11262.** (Professor MUKHOPADHYAY.)—A conic is drawn osculating two given conics  $S = 0, S' = 0$  at the points P, P'; prove that the locus of the point of intersection of the tangents at P, P' is  $\Delta'S^2 - \Delta S'^2 = 0$ , where  $\Delta, \Delta'$  are the discriminants of S, S' respectively.

**11303.** (Professor RIBOUD.)—Déterminer une progression géométrique composée de  $n$  termes entiers dont la somme est  $s$ , sachant que ces termes et leurs sommes, 2 à 2, 3 à 3, ...,  $n$  à  $n$ , reproduisent la série des premiers nombres entiers.

**11619.** (Professor MORLEY.)—Let  $a_r, b_r$  ( $r = 1$  to 4) be tetrads having a common Jacobian. Prove that  $\sum 1/(a_r - b_r) = 0$ .

**11646.** (J. H. GRACE.)—If  $p_n/q_n$  be the  $n$ th convergent to a recurring continued fraction which has  $r$  quotients in its recurring period, and  $s$  quotients before the recurring period commences, prove that

$$(1) p_{n+r} = A.p_n - (-1)^r p_{n-r},$$

provided  $n > r + s$ , (2)  $p_{n+r} = B.p_n + C.q_n$ ,

where A, B, C are the same for all values of  $n$ . [The denominators of the partial quotients are here supposed to be all unity; if they are not, (1) will be slightly altered.]

**11696.** (Professor LUCAS.)—Dans un jeu de dominos jusqu'au double  $n$ , on remplace le domino  $(a, b)$  par  $(a^p, b^q)$ . Quelle est la somme de tous les points ainsi obtenus?

**11744.** (R. W. D. CHRISTIE.)—No part being greater than 3, numbers of form  $6N + M$  have  $(3N + M)(N + 1)$  partitions, if  $M < 1 \rightarrow 5$ ; but, if  $M = 0$ , unity must be added to the result. *E.g.*, the partitions of 17, no part being greater than 3. Here  $N = 2, M = 5$ ; therefore there are 33 partitions.

#### NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

*Vol. XIII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

## DURING THE VACATION

USE

(Awarded Bronze Medal of Royal Sanitary Institute) (Regd.)

**ODOURLESS** or powerful **CERMICIDAL** Floor Fluid,

FOR THE HYGIENIC AND ECONOMIC DRESSING OF ALL  
**SCHOOL, LABORATORY,**

Library, Museum, Studio, Office, and other Floors—either  
Wood, Linoleum, Stone, Concrete, or Polished, &c.,

"FLORIGENE" "WEIGHTS" and LAYS the

## DUST

(See the Official Memorandum on the Cleansing and Disinfecting of Schools),

Purifies the Atmosphere, aids the Prevention of Throat Irritations and Diseases, saves Time, and greatly reduces the Labour of the Cleaners.

"FLORIGENE" need only be applied three times a year, as each application lasts for two to four months, according to wear.

No Scrubbing, unless preferred, and the troublesome and injurious Sprinkling of Floors with water or wet sawdust is entirely dispensed with.

BOOKS, FURNITURE, APPARATUS, &c., are less likely to soil and seldom require Dusting or Cleaning.

"FLORIGENE" is extensively used in numerous Government, Municipal, College, Laboratory, School, Library, Museum, and other important Buildings, with highly satisfactory results.

Send for particulars, Bacteriological, Medical, and other Reports, and Testimonials to

The "DUST-ALLAYER" Co.,

185 QUEEN VICTORIA STREET, LONDON, E.C.

Contractors to Admiralty, War Office, H.M. Office of Works, &c.

## SPECIAL OFFER.

AS AN ADVERTISEMENT.

One of the leading manufacturers of Gold Fountain Pens challenges to demonstrate that their Pens are the very best, and have the largest Sale; that no better article can be produced.

**They offer to give away the Half-Guinea Diamond Star Gold Fountain Pens, 1908 Model, for 2/6 each.**

This Pen is fitted with 14-carat Solid Gold Nib, iridium pointed, making it practically everlasting, smooth, soft, and easy writing, and a pleasure to use. Twin Feed and Spiral, to regulate the flow of ink, and all the latest improvements.

**The Self-Filling and Self-Cleaning Perfection Fountain Pen is a marvel of Simplicity; it deserves to be popular.**

It is non-leakable, fills itself in an instant, cleans itself in a moment—a press, a fill—and every part is guaranteed for two years.

**The Massive 14-carat Gold Nib** is iridium pointed and will last for years, and improves in use. Fine, medium, broad, or J points can be had.

**This Marvellous Self-Filling Pen, worth 15/-, is offered to Teachers for 5/6.**

Every Pen is guaranteed, and money will be returned if not fully satisfied. Any of our readers desiring a really genuine article cannot do better than write to the Makers,

**THE RED LION MANUFACTURING CO., Ltd.,**

71 High Holborn, London, W.C.,

and acquire this Bargain. (Agents wanted.)

## IF YOU WISH TO GET THE BEST

from CONTINUOUS and SILENT READING, the Books used must be suited to the Pupils.

## The 'A.L.' Masterpieces

OF

## Standard Literature

have been specially prepared for use in Secondary Schools, in the Upper Classes of Elementary Schools, and in Continuation Schools.

Each book contains a Short Life of the Author, with Portrait, an Introduction, a few brief Notes at the end (mainly for the Teacher), and a Glossary of such words as a pupil will require a little help upon.

Size Crown 8vo, bound in cloth, published 1s.

The first books in this series are:—

### No. 1. The Cloister and the Hearth.

In this book all references which might hurt the susceptibilities of Roman Catholics have been excluded, but the story, as a story, is complete.

### No. 2. Livingstone's Travels in South Africa.

This book covers Livingstone's great journey to the west, and back again to the east, in which he discovered the Victoria Falls.

### No. 3. Westward Ho! (Ready very shortly.)

E. J. ARNOLD & SON, LTD., LEEDS & GLASGOW.

Now Ready.

A NEW AND THOROUGHLY REVISED EDITION (containing nearly 80 additional pages) of

## DE FIVAS' NEW GRAMMAR OF FRENCH GRAMMARS.

ENLARGED BY THE ADDITION OF CAREFULLY CHOSEN

GRADUATED FRENCH TEXTS FOR PREPARATORY READING AND TRANSLATION.

Foolscap 8vo, 474 pages, price 2s. 6d., cloth. (KEY, 3s. 6d.)

"The Fifty-seventh Edition of the 'New Grammar of French Grammars' shows a most thorough revision, with considerable enlargement. . . . Its new lease of life will be a very long one."—*Educational Times.*

### BOOKS FOR TECHNICAL STUDENTS.

**FIELD TELEPHONES FOR ARMY USE; including an Elementary Course in Electricity and Magnetism.** By Lieut. E. J. STEVENS, D.O., R.A., A.M.I.E.E., Instructor in Electricity, Ordnance College, Woolwich. With Illustrations. Crown 8vo. [Just published. Net 2/-]

**PRACTICAL CHEMISTRY FOR ARMY AND MATRICULATION CANDIDATES, AND FOR USE IN SCHOOLS.** By GEOFFREY MARTIN, B.Sc., Ph.D. With 74 Illustrations. Crown 8vo, cloth . . . . . [Just published. Net 2/-]

**GEOMETRY FOR TECHNICAL STUDENTS.** An Introduction to Pure and Applied Geometry and the Mensuration of Surfaces and Solids, including Problems in Plane Geometry useful in Drawing. By E. H. SPRAGUE, A.M.Inst.C.E. Crown 8vo, cloth . . . . . Net 1/-

**ELEMENTARY ELECTRICAL ENGINEERING.** In Theory and Practice. A Class-book for Junior and Senior Students and Working Electricians. By J. H. ALEXANDER, M.B., A.I.E.E. With 181 Illustrations. Crown 8vo, cloth . . . . . Net 3/6

**PRACTICAL COAL-MINING.** An Elementary Class-Book. By T. H. COCKIN, M.Inst.M.E., Lecturer on Coal-Mining at Sheffield University College. 440 pp., crown 8vo, cloth . . . . . Net 4/6

London: CROSBY LOCKWOOD & SON, 7 Stationers' Hall Court, E.C., and 121a Victoria Street, S.W.

# Cambridge University Press

**Modern Geometry.** By C. GODFREY, M.A.,  
Head Master of the Royal Naval College, Osborne, and A. W. SIDDONS, M.A., Assistant Master at Harrow School.

Crown 8vo.  
4s. 6d.

The present volume is a sequel to the "Elementary Geometry" written by the same authors. It covers the schedule of Plane Geometry required for the Special Examination in Mathematics for the Ordinary B.A. Degree at Cambridge; and represents what the authors take to be a useful course for any student of Mathematics, whether he intends to read for Mathematical Honours or to take up Physics or Engineering. For those who ultimately make a special study of Geometry, this book would serve as an introduction to more advanced treatises.

**Elementary Geometry (Practical and Theoretical).** By C. GODFREY, M.A., and A. W. SIDDONS, M.A.

Crown 8vo.  
3s. 6d.  
Or in  
Two Volumes,  
2s. each.  
Or in  
Five Parts,  
1s. each.

"After a careful examination of the various books on the new geometry that have recently been published, we have no hesitation in commending this book as the best for preparatory schools."—*Preparatory Schools Review*.

"This book deserves to be placed on the list of text-books to be used in all secondary schools."—*Local Government Chronicle*.

**Plane Geometry for Secondary Schools.**

By CHARLES DAVISON, Sc.D., and C. H. RICHARDS, M.A., Mathematical Masters at King Edward's High School, Birmingham.

This book may now be obtained in four separate parts, corresponding to the four main divisions of the work:

Book I.—Triangles and Parallelograms.  
Book II.—Areas.  
Book III.—The Circle.  
Book IV.—Proportion applied to Geometrical Magnitudes.

Crown 8vo.  
4s.  
Or, in  
Four Parts,  
1s. each.

"The plan of the present volume is good. Whilst the leading propositions appear in the form of bookwork, others scarcely less important are discussed as worked riders. A full complement of exercises for individual practice in original solution is, moreover, included, the questions being sometimes set as exercises on special propositions, and sometimes classed together as miscellaneous problems and theorems."—*Educational Times*.

**Elementary Algebra for Secondary Schools.**

By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham.

The author's aim has been to prepare a text-book that may be of use in all but the highest classes of a secondary school. The subjects included are, for the most part, those which are common to all text-books of elementary algebra; but a few, such as indeterminate equations of the first degree, the remainder theorem and simple partial fractions, are introduced at an earlier stage than usual. The applications of graphs are confined to the illustrations which they afford of the methods of solving simultaneous equations and of the theory of quadratic equations and expressions. In the solution of simultaneous quadratic equations, they are especially useful, as they serve to show the geometrical meaning of every step in the process employed.

Crown 8vo.  
6s.

**A School Algebra Course.** By F. GORSE, M.A., Head Master of the Intermediate School, Bootle. With or without Answers. Complete in One Volume or in Three Parts (without Answers).

Crown 8vo.  
Complete, 3s.  
Parts,  
1s. each.

The three parts are divided as follows:—  
Part I. To Simple Simultaneous Equations (including Factors), with Appendix.  
Part II. Factors to Quadratic Equations, with Appendix.  
Part III. Surds to the Binomial Theorem, with Appendix.

"Altogether the Algebra is one which we have no hesitation in commending to teachers of mathematics on the outlook for a course of exercises on modern lines."—*Educational News*.

**Inorganic Chemistry.** By E. I. LEWIS, B.A., B.Sc., Assistant Master at Oundle School.

Demy 8vo.  
5s.

"Ought to be extremely useful to science masters. It is clear, concise, and sensibly arranged, and the boy who conscientiously works through it should really understand Chemistry."—*Speciator*.

"A more philosophical aspect of chemistry is put before the student than is usual in elementary text-books, and on the whole fuller and more detailed information is given, which marks the book out as likely to be very useful for revision, and also to help the teacher to prepare his lessons."—*Chemical News*.

**Studies in French Education from Rabelais to Rousseau.** By GERALDINE HODGSON, B.A., sometime Cobden Scholar of Newnham College, Cambridge; Lecturer on the History and Theory of Education at University College, Bristol.

Crown 8vo.  
3s. 6d. net.

This book was written in response to a suggestion from Dr. S. S. F. Fletcher, of Cambridge. No book dealing exclusively with French Education seemed to exist in English; yet the History of Education is singularly incomplete if the contributions of the great French Educators be omitted.

**Principles and Method in the Study of English Literature.** By WILLIAM MACPHERSON, M.A., English Master in the County Secondary School, Beckenham.

Crown 8vo.  
2s. net.

These chapters are written primarily from a teacher's point of view. The author has attempted to state the logical and psychological principles that underlie the study of English Literature, and to illustrate methods of teaching that follow naturally from them, with special reference to the mental growth and requirements of pupils in secondary schools. The book may, it is hoped, prove helpful not only to teachers, but to readers generally who seek guidance in the study of English Literature.

**The Modern Language Review.** A Quarterly Journal devoted to the Study of Mediæval and Modern Literature and Philology. Edited by Prof. JOHN G. ROBERTSON, with the assistance of an Advisory Board.

Contents of Vol. III., No. 4, July, 1908.

#### ARTICLES.

MISCELLANEOUS NOTES, REVIEWS, MINOR NOTICES.

Subscription  
Price.

"The Modern Language Review" appears four times a year—in October, January, April, and July. The annual subscription is 12s. 6d. net, payable in advance.

Vol. I. (1905-6), Vol. II. (1906-7), and Vol. III. (1907-8) may be had, bound in buckram, at 10s. net each. Single numbers from these volumes, 2s. 6d. net each.

**The Elementary Theory of the Symmetrical Optical Instrument.** By J. G. LEATHEM, M.A. (No. 8 of "Cambridge Tracts in Mathematics and Mathematical Physics.")

Demy 8vo.  
2s. 6d. net.

In Gauss's "Dioptrische Untersuchungen" there is little trouble with sign conventions, and continued fractions are not employed. These are, however, prominent features in more recent presentations of the first-order theory of the optical instrument, and render the subject somewhat difficult to the beginner. It is the aim of the present Tract to eliminate all unnecessary difficulties and to give a quite elementary account of the theory; and to this end it has seemed desirable to follow (in Sections I.-IV.) the general lines of Gauss's memoir.

**Invariants of Quadratic Differential Forms.**

By J. EDMUND WRIGHT, M.A. (No. 9 of "Cambridge Tracts in Mathematics and Mathematical Physics.")

Demy 8vo.  
2s. 6d. net.

The aim of this tract is to give, as far as is possible in so short a book, an account of the invariant theory connected with a single quadratic differential form. It is intended to give a bird's-eye view of the subject to those as yet unacquainted with the subject, and consequently the author has endeavoured to keep it free from all analysis not absolutely necessary.

A Catalogue of New and Standard Books for Schools will be sent on application.

LONDON: CAMBRIDGE UNIVERSITY PRESS WAREHOUSE, FETTER LANE. C. F. CLAY, Manager.

# THE EDUCATIONAL TIMES,

AND  
Journal of the College of Preceptors.

Vol. LXI.] New Series, No. 570.

## COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

### MEMBER'S MEETING.

The next Monthly Meeting of the Members will take place on Friday, the 23rd of October, at 7.30 p.m., when Professor J. ADAMS will read a Paper on "The Teacher's Imperfections: How to deal with them."

A discussion will follow the reading of the Paper. Members have the privilege of introducing their members.

### LECTURES FOR TEACHERS.

On Thursday, 1st of October, JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London, will commence a Course of Twelve Lectures on

### "THE PRACTICAL TEACHER'S PROBLEMS."

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools. The Lectures will be given on Thursday Evenings at 7, beginning on October 1st.

For Syllabus, see page 450.  
The Fee for the Course is Half-a-Guinea.  
Members of the College have free admission to this Course.

### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will commence on the 28th of December, 1908.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in October.

**Certificate Examinations.**—The Christmas Examination for Certificates will commence on the 8th of December, 1908.

**Lower Forms Examinations.**—The Christmas Examination will commence on the 8th of December, 1908.

**Professional Preliminary Examinations.**—These Examinations are held in March and September. The Spring Examination in 1909 will commence on the 2nd of March.

**Inspection and Examination of Schools.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*  
Bloomsbury Square, W.C.

## UNIVERSITY OF ST. ANDREWS.

### L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

## LONDON COLLEGE OF MUSIC. (Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

Patron: HIS GRACE THE DUKE OF LEEDS.  
Dr. F. J. KARN, Mus. Bsc. Cantab., Principal.  
G. AUGUSTUS HOLMES, Esq., Director of Examinations  
EXAMINATIONS, 1908.

The NEXT EXAMINATION in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 400 Provincial Centres in DECEMBER, when Certificates will be granted to all successful candidates.

The Higher Examinations for the Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma, L.C.M., and Fellowship (F.L.C.M.) also take place in DECEMBER.

Gold and Silver Medals and Book Prizes are offered for competition according to the Regulations.

LOCAL SCHOOL CENTRES.—Full particulars with reference to the formation of these Centres will be forwarded to Principals of Schools upon application.

SYLLABUS for 1908, together with Annual Report, may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best Professors at moderate fees. The College is open 10 a.m. to 9.30 p.m.

A COURSE of TRAINING in Pianoforte and Singing for Teachers is held at the College.

VACATION LESSONS for Teachers and others are given at Easter, August, and Christmas.

T. WEBBES HOLMES, *Secretary.*

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—Sir H. R. REICHEL, M.A., LL.D.

New Session began September 29th, 1908. The College Courses are arranged with reference to the Degrees of the University of Wales; they include most of the subjects for the B.Sc. Degree of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture (including Forestry) and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional fee for ordinary Arts Course, £11. 1s.; for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students: fee, from Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses apply to

JOHN EDWARD LLOYD, M.A.,  
*Secretary and Registrar.*

### THE INCORPORATED

## FROEBEL EDUCATIONAL INSTITUTE,

TALGARH ROAD, WEST KENSINGTON, LONDON, W.  
Recognized by the Board of Education as a Training College for Secondary Teachers.

Chairman of the Committee—Sir W. MATHER.

Treasurer—Mr. C. G. MONTEFIORE, M.A.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

## TRAINING COLLEGE FOR TEACHERS.

Principal—Miss E. LAWRENCE.

## KINDERGARTEN AND SCHOOL.

Head Mistress—Miss A. YELLAND.

Students are trained for the Examinations of the National Froebel Union and other Examinations.

TWO SCHOLARSHIPS of £20 each, and two of £15 each, tenable for two years at the Institute, are offered annually to Women Students who have passed certain recognized Examinations.

Prospectuses can be obtained from the PRINCIPAL.

## DENMARK HILL PHYSICAL TRAINING COLLEGE FOR LADY TEACHERS, LONDON, S.E.

Full preparation for Public Examinations. British College of Physical Education: English and Swedish systems. Massage and Remedial Work. Board of Education: Science.

Swimming and Sports. Schools supplied with fully qualified Sports Mistresses. For particulars apply—Miss K. SELMAN STANGER, Trpvena, Sunray Avenue, Denmark Hill, London, S.E.

## UNIVERSITY OF LONDON.—UNIVERSITY COLLEGE.

Session 1908-09.

A Training Course in School Hygiene will be given by Prof. HENRY KENWOOD, M.B., D.P.H., Medical Officer of Health for the County Council of Bedfordshire, &c., and H. MEREDITH RICHARDS, M.D., D.P.H., Medical Officer of Health for the Borough of Croydon and Medical Officer to the Croydon Education Committee, assisted by other Specialists.

The Course designed to meet the requirements of School Teachers, School Lecturers, and of those qualifying to become School Inspectors, will begin on Friday, October 9th, at 7.15, and will be continued on subsequent Fridays until the end of March, 1909.

Facilities for practical work will be given to those joining this Course; Certificates of proficiency will be granted to those who qualify themselves.

Fee for the Course, two and a half guineas. Those desirous of attending this Course, to which not more than forty will be admitted, should apply to—

WALTER W. SETON, M.A.,  
*Secretary.*

University College,  
London (Gower Street).

## BADGES, HAT BANDS, CAPS

AT WHOLESALE PRICES.

Write—SCHOOLS AGENT, 1 Arundel Villas, Chelmsford Road, South Woodford, N.E.

## BEDFORD COLLEGE FOR WOMEN

(UNIVERSITY OF LONDON),

YORK PLACE, BAKER STREET, LONDON, W.

Principal—Miss M. J. TUKE, M.A.

The Session 1908-9 will open on Thursday, October 8. Students enter their names on Wednesday, October 7.

Lectures are given in preparation for all examinations of the University of London in Arts and Science, for the Teacher's Diploma (London), for the Teacher's Certificate (Cambridge), and for the Cambridge Higher Local Examination.

A single Course in any subject may be attended. There is a Special Course of Scientific Instruction in Hygiene.

Six Laboratories are open to students for Practical work.

Regular Physical Instruction is given, free of cost, to students who desire it by a fully qualified woman teacher.

THREE ENTRANCE SCHOLARSHIPS (two in Arts and one in Science) will be offered for competition in June, 1909.

Students can reside in the College. Full particulars on application to the PRINCIPAL.

### TRAINING DEPARTMENT FOR SECONDARY TEACHERS.

Head of the Department—Miss MARY MORTON, M.A.

Two Scholarships (one of the value of £20, one of the value of £15, for one year) are offered for the Course of Secondary Training beginning in January, 1909. The Scholarships will be awarded to the best Candidate holding a Degree or equivalent in Arts or Science.

Applications should reach the HEAD OF THE TRAINING DEPARTMENT not later than December 12.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. H. WOOD.

Girton College, Cambridge; Classical Tripos, M.A. (London), Lit.D. (Dublin), late Vice-Principal of St. Mary's College, Paddington.

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN INTERMEDIATE AND SECONDARY SCHOOLS, EDINBURGH.

This College provides a year's Professional Training for well educated women who intend to become Teachers.

The Course is supervised by the Edinburgh Provincial Committee for the Training of Teachers and recognized by the Scotch Education Department and by the Teachers' Training Syndicate of the University of Cambridge.

Prospectuses and further particulars from the Principal, Miss M. R. WALKER, 5 Melville Street, Edinburgh.

## CHURCH EDUCATION CORPORATION.

### CHERWELL HALL, OXFORD.

Training College for Women Secondary Teachers.

Principal—Miss CATHERINE I. DODD, M.A. (late Lecturer in Education in the Manchester University).

Students are prepared for the Oxford, the Cambridge, and the London Teacher's Diploma. Special arrangements made for Students to attend the School of Geography.

Two Scholarships of £40 each are offered to students with a degree entering Cherwell Hall in October.

Exhibitions and Scholarships awarded in December and July.—Apply to the PRINCIPAL.

## BIRKBECK COLLEGE.

BREAMS BUILDINGS, CHANCERY LANE, E.C.

### DAY AND EVENING CLASSES.

Principal—G. ARMITAGE-SMITH, D.Lit., M.A.

The College provides approved courses of Instruction for the Degree of the University of London in the Faculties of Arts, Science, Economics, Laws, under Recognized Teachers of the University.

Well appointed Laboratories. Facilities for research. New Session commenced on Monday, 28th September.

Full particulars on application to H. WELLS EAMES, Secretary.

## The Tutorial Institute, 39 BLOOMSBURY SQUARE, LONDON.

Principal:

J. F. EWEN, M.A.,

Honours in Mathematics and Physics.

Founder and late Principal of  
The London and Northern Tutorial College.

The Principal has had over 12 years' successful experience in preparing by Correspondence and Orally for the Higher Examinations qualifying Secondary Teachers. Over 2,000 successes have been officially credited to his students, who have completed over 300 Diplomas and Degrees. Strong Staff of Tutors, all University Graduates, mostly in Honours.

### CORRESPONDENCE INSTRUCTION.

All Fees payable by Instalments.

A.C.P.—New Classes now forming. All subjects, £4. 4s. Education, £1. 11s. 6d. from all subjects except Education. Full Course, £2. 12s. 6d. A.C.P.'s can complete extra work for I.C.P. for Composition Fee, £4. 4s. Education alone, £1. 11s. 6d.

Diploma Guide Free.

Inter. Arts.—Full Courses. 20 lessons each subject, £1. 11s. 6d.

B.A.—Thorough Tuition by Honours Graduates.

Inter. Science.—Special Attention to Mathematics and Physics. Full Course, £2. 2s. each subject.

B.Sc.—Expert help by eminent specialists.

Matriculation.—Full Preparation in usual subjects, 10s. 6d. monthly.

Higher Locals.—Fullest and most successful help. Usual Subjects, £1. 11s. 6d. each.

FROEBEL CERTIFICATES.—Thoroughly practical instruction by highly qualified Teachers.

Froebel Guide Free.

LL.A. SPECIAL ORAL CLASSES.

Evenings and Saturdays. More Successes and Diplomas than all other classes combined.

New Practical Guide to L.L.A. Free.

## KING'S COLLEGE, LONDON. (UNIVERSITY OF LONDON.)

DEPARTMENT FOR TRAINING TEACHERS FOR SECONDARY SCHOOLS.

Theory, Practice, and History of Education: J. W. ADAMSON, B.A., Professor of Education (Head of the Department).

Ethics: Rev. A. CALDECOTT, D.Lit., D.D., Professor of Mental and Moral Philosophy.

Psychology: C. S. MYERS, M.A., M.D., Professor of Psychology.

The Department is recognized by the Board of Education as a Training College for Secondary Teachers. The Course, which includes practical work in Secondary Schools, extends over one academic year, beginning in October or January. It is suitable for those who are preparing to take the Teacher's Diploma, University of London, or the Certificate of the Teachers' Training Syndicate, University of Cambridge.

The fee is £20 for the year, if paid in advance, or 8 guineas per term (three terms in the year).

Two Scholarships, of £20 each for one year, tenable from October 1, 1908, are offered to suitable Candidates (men) who are Graduates of a British University.

Application should be made to Prof. ADAMSON, King's College, Strand, W.C.

## S.T. THOMAS'S HOSPITAL, ALBERT EMBANKMENT, S.E. (UNIVERSITY OF LONDON.)

The WINTER SESSION will commence on OCTOBER 1.

The PRIMARY F.R.C.S. CLASSES began on TUESDAY, September 1.

The Hospital occupies one of the finest sites in London and contains 603 beds.

Entrance and other Scholarships and Prizes (26 in number) of the value of more than £500, are offered for competition each year.

Upwards of 60 resident and other appointments are open to Students after qualification.

A Students' Club forms part of the Medical School buildings, and the Athletic Ground, nine acres in extent, situated at Chiswick, can be reached in 40 minutes from the Hospital.

A Prospectus, containing full particulars, may be obtained from the Medical Secretary, Mr. G. Q. ROBERTS.

C. S. WALLACE, B.S. Lond., Dean.

**Rapid Preparation for:—**

- Matriculation,
- Intermediate Arts and B.A.,
- Intermediate Science and B.Sc.,
- L.L.A. (St. Andrews),
- COLLEGE OF PRECEPTORS' DIPLOMAS.

Address—**THE PRINCIPAL,**  
Burlington Correspondence College,  
OLAPHAM COMMON, LONDON, S.W.

**Messrs.**

**TRUMAN & KNIGHTLEY, LTD.,**  
Educational Agents,

158 to 162 OXFORD STREET,  
LONDON, W.

Telegrams—"TUTORESS, LONDON."  
Telephone—No. 1136 City.

*This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.*

**A.—EMPLOYMENT DEPARTMENT.**

(i.) **ASSISTANT MASTERS & TUTORS.**

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) **ASSISTANT MISTRESSES.**

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) **LADY MATRONS AND HOUSE-KEEPERS.**

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

## University Correspondence College.

The Educational Times.

Moral Education.

THOUGH the International Moral Education Congress had but opened its doors when we went to press, the nature of the proceedings had been anticipated in our preliminary notices, and finds effective expression in the Presidential Address of Prof. Sadler, which we reproduce in full text in another column. Seeing that almost all the leading educationists of Europe, and notable representatives of the United States and Japan, without distinction of religion or party, responded to the appeal of the organizers for support, the success of the gathering could not remain in doubt. The "severely practical object" of the Congress—"that of improving the moral education offered in schools"—has appeared to persons of the most diverse speculative outlooks a matter of serious importance; and the discussions of the Congress cannot but evolve valuable suggestions, expanding or contracting individual opinions hitherto independently entertained. The limitation of range is to be noted: "the Congress restricts itself to a general survey of school problems from a moral point of view"—matters of school organization, of methods of training and teaching, of discipline, of direct and indirect moral instruction, of the relation of moral education to religious, intellectual, æsthetic, and physical education—"leaving untouched the questions of home education, of self-education, and of religious and philosophical education," which there will be opportunities for treating in subsequent Congresses. The report of an international inquiry on the subject, edited by Prof. Sadler, was published by Messrs. Longmans in two compact volumes at the psychological moment of the eve of the meeting of the Congress. This report and the forthcoming volume of Congress papers and discussions will form a very adequate basis for practical conclusions.

The report discusses "the influence of education upon conduct and character." The first volume deals with the United Kingdom; the second is devoted to inquiries in foreign countries and in British colonies. The first section of the first volume exposes "the roots of the problem" from

points of view, concluding with a symposium on the question how the ethical efficiency of education could be increased. Generally, efficiently conducted, on different countries have been very ... Executive Committee lines laid down for the reporters by the ... its vary con- of the Advisory Council. Naturally, the results of the siderably in importance. At the same time, the scope of investigation is wide; the information records the judgments of experienced teachers and of other persons in a position to furnish trustworthy evidence, such as parents, administrators, &c.; and, what is of the first importance, the most divergent views are frankly presented. "On some of the questions which have been investigated there is everywhere sharp division of opinion and much conflict of judgment. The essays now published reflect this variety of view. They do not attempt to disguise the depth of the differences in religious conviction which divide those who are engaged in different parts of the field of education." This was essential; a one-sided report would have been a fiasco, promptly and properly extinguishing the whole project. "But the inquiry has disclosed a large measure of agreement upon many matters of school organization, a wide range of valuable and encouraging experiment, and a growing desire on the part of each nation (and of the different groups in each nation) to study and to learn from educational experience divergent from their own." The hope, then, is that the evidence will be studied fully and fairly, with a view to the largest possible agreement in practical applications—a hope chastened not by ecclesiastical wranglings alone. The section on Ireland is bitter, but instructive, reading—to minds not closed to instruction.

It would be hopeless to go into details, and it is unnecessary, for everybody interested in the movement will peruse these volumes; but the more outstanding of the results may be at least particularized. First, it is to be noted that the school has the control of the child only for about one quarter of his waking hours. There is little difficulty about the subject-matter of a moral course: it is already substantially set forth in the English Code for public elementary day schools, and approved by the evidence of these volumes as well as by public opinion. There is great divergence, of course, as to the sanctions to which, in

imparting moral instruction, the teacher should appeal; but, while "our evidence shows that in every country there is an ideal of personal and civic obligation which may be taken as a basis for school teaching by adherents of almost every school of thought," there is a widespread feeling of the necessity of appeal to religion. There must, therefore, be freedom for the effective expression of differences of religious conviction. A moderate view, based on long and thoughtful experience, is given by Dr. Otto Anderssen, of Christiania: "On the whole, I believe that the more the centre of gravity of the instruction is transferred from the dogmatic to the historic and ethical, and the denominational gives place to what is central and common in Christianity, to its doctrines of love and duty and its great civilizing mission, the greater will be the importance of religion to the inner life of children." The growth of a good character is to be recognized as a prolonged and complex process. By what methods, then, can schools most effectively help? The evidence emphatically shows "the conviction that the most potent factor in moral education—more potent even than the corporate influence of an honourable community—is the personality of the teacher, whether he who teaches be parent or teacher in the narrower sense of the word or employer or elder comrade in home, school, or place of business." "The most essential things of all lie in the personality of the teacher—in sympathy, in moral insight, in an almost pastoral care, in a sense of justice, in candour of heart, in self-discipline, in consistency of conduct, in a reverent attitude of mind, and in a faith in things unseen." Therefore the right kind of teacher is to be carefully sought out and prepared for his duties and sustained in his work.

Then there is the corporate life of the school and the influence of the curriculum; and, in connexion with the curriculum, we would direct attention to the paper by Mr. Hogben, Inspector-General of Schools for New Zealand, who tells us that "the greatest obstacle of all to moral education in the schools is the unreality of much of the school teaching." "If the schools do not fit their pupils for the needs of their future lives," he writes, "theorists may talk about the culture of this study or that as much as they like, but the schools will have failed, because to the vast majority of their pupils the lessons of the classrooms have had no relation to the facts of the universe, moral or otherwise." The paper by the Principal of the Hyannis Normal School (Massachusetts) indicates the same view, which is steadily maintained by Dr. John Dewey, and emerges in the advocacy of manual training by Sir Philip Magnus. The question between direct and indirect moral instruction is sharply conflicting; but "there is a general agreement among experienced teachers that direct moral instruction, when given at the right time, and in the right way, is a valuable element in moral education." After all, we come back to the importance of the well instructed teacher with a competent maintenance and a reasonably free hand. "Possible failure to secure and to retain the services of a sufficient number of the best type of men and women as teachers is perhaps the gravest danger which threatens the future of our elaborately organized systems of modern education."

## NOTES.

At the two ends of the month there have been the meetings of the Educational Section of the British Association at Dublin and of the First International Moral Education Congress in London. We give the Presidential Addresses of Profs. Miall and Sadler, and summaries of a few of the many able and interesting papers submitted for discussion. We hope to be able to find space in our next issue for the substance at least of some important addresses, which, to our regret, we must hold over at present.

SIR OLIVER LODGE, in the August number of the *National Review*, pleads for financial assistance to Birmingham University, and the *Morning Post* vigorously enforces his plea in an article that we regret to be unable to reproduce in full. The most striking thing about Sir Oliver's article, says our contemporary with painful justice, is "that it is true not only of Birmingham, but of every University and University College in Great Britain."

There is something tragic about the utter indifference displayed in this country, not only by ordinary middle-class opinion, but by successive Cabinets and Ministers of Education, to everything that concerns University education. There is no sign that those who govern the nation, and particularly those who govern its education, realize that the character of every grade of school must ultimately be determined by the character of the Universities which train the leaders of educational thought. There is no sign that they appreciate the fact that the prosperity of a nation to-day depends on its ability to organize the means of acquiring scientific knowledge. There is no sign that they realize that the different parts of a national system should be an interconnected whole, in which the schools supply the Universities with talent, and the Universities give light and leading to the schools. There is no sign that they are even aware that University education in this country is being strangled for want of money. . . . In short, the English attitude to University education at the present day is what the English attitude to secondary education was in the day of Matthew Arnold. It is ill informed, sceptical of its value, resolutely Philistine, and it is confirmed in its ignorance and scepticism by the refusal of successive Education Ministers to so much as touch upon the subject. Yet clearly, to put the matter on the lowest grounds, if foreign armaments require that England should be armed to meet them, foreign improvements in University education require that England should place her University equipment on a level with theirs.

"A nation which neglects the highest kind of education as it is neglected in England cannot, in the long run, hold its own in competition with one which gives serious thought to its improvement, and backs its thought with ample financial support. The total sum spent by the English Government on University education is so small as to constitute a grave national danger."

Of course, all this has been said over and over again, but it needs to be insistently repeated till the significance of it be officially recognized. It is not only that a comparatively small proportion of the population receive a University education, or that the Universities fail to exert their proper influence upon the educational planes from which they are reinforced, but "more important is the fact that teaching is hampered and research is starved"; indeed, "in some Universities the state of things is so bad as to be almost incredible." "The understaffing deplored in our elementary schools is nothing to the understaffing in our Universities"; and, as Sir Oliver Lodge points out, "there is literally no end for the discoveries lying in wait for us in the biological and pathological regions—nothing but money is needed." And the money invested would make a most ample return.

We must note, however, that, while the argument is here, as usual, conducted on the basis of "science," it is applicable just as fully in other departments, where scientific method is equally pursued. Our contemporary would find in London University a whole faculty practical destitute of endowment, with immense fields of study calling hopelessly for research. "The idea that private benefactions would be checked is a pure assumption based merely on a *priori* theorizing. Between 1870 and 1900 private benefactions in America, where large public assistance is given, amounted to £23,000,000; in Great Britain, where public assistance is negligible, they amounted to £3,000,000." We confess we have but little expectation that the Minister of Education will "earn his title by making the improvement of English University education the chief business of his official career": there are no votes in it, and learning (excepting "science") is not clamorous.

THE REV. J. O. BEVAN, in recent letters to the *Guardian* and the *Church Times*, laments the condition of religious teaching not only in public and in private schools, but also in Sunday schools. He writes:

In our national elementary-school system, definite religious instruction is imperfect, even under favourable circumstances of entry; Church of England, and denominational schools generally, are menaced; clerical teachers are discouraged in their visits, even to their non-provided schools; teachers are led by their Union to agitate for the abolition of so-called tests; a purely secular system is favoured by many members of both Houses of the Legislature; denominational colleges are penalized; colleges founded and maintained by Local Education Authorities provide no distinctly moral or religious teaching; and, lastly, our Sunday schools are imperfectly organized, and staffed by men and women who are possessed of good intentions, but who, in the majority of cases, have never been taught to teach. In this case, the deficiencies are the more marked, inasmuch as the system compares more and more unfavourably with the secular instruction imparted in the day school, and with the buildings, appliances, teachers, and methods thereto attaching.

"It is amazing," says Mr. Bevan, "to reflect that this state of things has been so long acquiesced in by the authorities of the Church"; and he thinks the explanation is that attention has been distracted from Sunday-school and secondary education by "the noise and dust of the fray carried on in respect of the day schools."

HOWEVER, "we must adapt ourselves to the new conditions" in the new era that is undoubtedly opening out "full of unrest, of danger, and of trial"; and, with his usual courage, Mr. Bevan proposes a remedy:

That we may be helped to return to our duty, I venture to suggest the establishment of a Teaching Order or Fraternity, the members of which should be banded together to undertake the task of imparting definite religious Church teaching to the children of the Church, in schools of all grades, in both day and Sunday schools; for my special point is that the problem is one, and that the work should be carried on consecutively. The Order would be called the "Guild of the Holy Child"; and be as wide as the Church in inception, being organized on diocesan and parochial lines, and federated into one great Anglican Union.

The organization is outlined in the *Guardian* of August 19. At last, however, we come upon a rock that has wrecked so many excellent schemes that we cannot but fear for the fate of Mr. Bevan's project: "A considerable sum of money would be required to inaugurate and carry on such a scheme as this." In view of the pecuniary difficulties of the voluntary schools, is this considerable sum of money likely to be found? If all Churchmen were as hopeful and indomitable

as Mr. Bevan, it would promptly be found; but are they? Mr. Bevan at any rate submits "that the subject of definite Church teaching in our schools is so vast, so comprehensive, so momentous in regard to the welfare both of the Church and realm, that it should be anxiously and instantly considered at our ruridecanal meetings, Diocesan Conferences, and in Convocation itself." That, at least—if there be any real vitality in the question.

ON the occasion of the opening of a new school at Hawick, the Lord Advocate had his foot on his parliamentary heath, and he put it down with a proud satisfaction. Before coming to the ceremony, he had looked over the Scottish Education Bill again, "and he wished to say quite emphatically to them [*urbi et orbi*] that if it were passed into law in the shape it had now assumed, after having emerged with the substantial consent of all parties in Grand Committee, he should reckon that the state of education in Scotland could thus be marked as thirty years in advance of that of England and sixty years in advance of that of Ireland. He said so after having made a considerable study of the comparative educational systems, and having, to his cost, and to his great labour, had to assist in piloting the measure through the House. Thirty years ago it would have been considered almost a dream to have such an educational measure, even in Scotland." There is indeed much to be said for the Bill—"the vast merits of this Bill"—and Mr. Shaw, it will be seen, did not fritter away his opportunity. Referring to the new school, "I know," he said, "that under this roof the infant can enter and be taught free and accomplish rung after rung of the educational ladder until he is brought to the very portals of the University itself." There is a proud example. And it is but a single realization of the national ideal. "I have realized," said Mr. Shaw, "that Knox's was the true sentiment—that it is not for individual advancement alone, not for individual ambition alone, that it is a good thing, but that it is for the comfort of the State at large, for the comfort of the commonwealth of Scotland, as Knox put it, that this education should, from the humblest to the highest in the land, be made available." If England and Ireland feel uncomfortable under the comparison, no doubt Mr. Shaw will tell them they "have the haft and the blade in their own hands."

A CORRESPONDENT writes:—"In the 'Short History of National Education in Great Britain and Ireland,' which Mr. T. Ll. Humberstone has written at Sir W. Mather's request for the British Education Section of the Franco-British Exhibition, due attention is drawn to the private efforts of such men as Lawrence Sheriff, Robert Raikes, and Joseph Lancaster, which have done so much to pave the way for the national education of to-day. But Mr. Humberstone's pamphlet is marred by one serious omission. The success both of the London University Matriculation Examination and of the various local examinations has been largely due to the steady support of the better private schools. Public schools for girls would not be what they are were it not for the efforts, a generation and a half ago, of Miss

Buss, in her private school in Camden Street, and of many others like her. The so-called "public schools" are dependent for most of their best pupils on the preparatory schools, all private, to which Dr. Sadler devoted the forty chapters of Vol. VI. of "Special Reports." It is nothing less than a national disaster when it becomes the fashion to ignore, depreciate, and (sometimes) hurray out of existence work of this nature. For it is only when freer work of this kind flourishes that the rigidity which characterizes so much of the public management of education can be kept in check. From more than one quarter are we beginning to hear the cry, *Timeo Morantem et dona ferentem.*"

### SUMMARY OF THE MONTH.

THE annual autumn conference of the Incorporated Association of Assistant Masters in Secondary Schools was held at Rochester (September 9, 10). Mr. R. F. Cholmeley (St. Paul's School), who presided, said the question of tenure continued to be of vital importance. Through the action of the association in connexion with the Richmond case, it had been proved that the legal position of assistant masters needed reforming, and the result was that the Board of Education had seen the necessity for an alteration in the law. They had a legislative enactment in the Endowed Schools (Masters) Act of 1908, which was not a great and comprehensive measure of reform; but it was something that an association of professional men should be able to induce a powerful and much preoccupied Government to redress a single crying grievance at the end of a busy session. Nobody could pretend that the situation was yet wholly satisfactory, or that the need of work and vigilance was past. The Act contained just one extremely unpleasant surprise (Lord Robert Cecil's amendment). The Endowed Schools were but a fraction of the secondary schools of England, and the assistant masters were not the whole of the assistant teachers in secondary schools. They ought not to rest content until they had seen a proper regulation for the interest of the teachers in every kind of school that came within their sphere of action; and it was one of the greatest disappointments that in the Act nothing was done for assistant mistresses. Closely connected with the question of tenure was that of the financial position of teachers, and here, again, much remained to be done. It was still a matter of chance whether a schoolmaster, however high his qualifications, obtained a salary sufficient to enable him to live in anything better than a kind of genteel poverty. Yet there were signs of progress. Salary scales were becoming more general, and pension schemes were to be discovered by searching. After discussion, the following resolution, moved from the chair, was carried:—

That this Association thanks His Majesty's Government for the greater security of tenure provided for assistant masters by the Endowed Schools (Masters) Act passed at the end of the last Session of Parliament; and notes with extreme regret the acceptance in the House of Commons of an amendment depriving masters, summarily dismissed, of a right to be immediately informed of the reasons of such dismissal.

A resolution thanking the Incorporated Association of Head Masters for "their effective co-operation in endeavouring to obtain greater security of tenure for assistant masters in secondary schools" was carried unanimously. The report of the executive committee showed that the membership of the association now stood at about 2,300, and, so far, 290 new members had been elected.

THE Conference also passed the following resolutions on the Regulations for Secondary Schools, 1908:—

*Staff.*—That this Association warmly welcomes the statement of the Board of Education that the increased grants now offered to secondary schools are intended not to give relief to local rates, but to increase the efficiency of the schools by providing the means whereby better qualified and better paid teachers may be secured.

*Curriculum.*—That this Association views with satisfaction the continuation of the Board's policy of giving increased freedom to schools in the arrangement of their own curricula.

*Functions of Governing Bodies.*—That, in the opinion of this Association, the requirement of the Board of Education that the functions of the

Governing Bodies of schools shall be adequately defined in a written document will be to the advantage of every one concerned in the work of secondary education.

*Training of Secondary Teachers.*—That this Association welcomes the encouragement given to the professional training of secondary teachers by the system of grants in aid of courses of training lately initiated by the Board of Education; but hopes that the Board will grant similar aid for the training of secondary teachers in such secondary schools as may be specially recognized for the purpose.

At the same Conference Mr. Charles Bird (Head Master of the Mathematical School, Rochester) read a paper on the "Financial Position of Assistant Masters." In the great public schools, in the wealthier of our endowed schools, and in schools where fees were high there was not so much to complain of, and the same could be said of the county and municipal schools established by Local Education Authorities, where scales of salaries had been inaugurated and where the funds required could be obtained from the rates. But in the less wealthy of the endowed schools salaries were in a very unsatisfactory state. He thought that many difficulties were likely to arise and much injustice done to schools and masters by allowing all the different Secondary Education Authorities to settle their own scales. Obviously there should be a uniform system throughout the country. The scale, perhaps, should be elastic to suit different local conditions, but the same general principle should run through it. But, if there were to be a uniform scale, it was pretty obvious that the money must come from the Central Authority and not from the local one. The ideal arrangement would, of course, be for the Board of Education to give an annual grant equal to the total salary of the assistant masters, leaving the fees and endowments (if any) to pay the head master and the working expenses and to provide scholarships and exhibitions. Some such arrangement would still leave the wealthier schools better off than others and would not obliterate the services rendered to a town or neighbourhood by the founder. Another method would be for the Board of Education to make up the annual deficit on the estimate every year on condition that the masters were paid according to scale. The objection to such a scheme was that a school with a large endowment would be no better off than a poor one. Another plan might be for the Board of Education to make a certain fixed grant per head to the school, smaller than at present, and pay annually in addition the total amount by which the salaries exceeded the minimum. The revision of the salary question surely should be the work of the Central Authority. If the Central Authority were to provide the funds for the payment of masters, it might be argued that it should also appoint, promote, and remove them. He did not know whether that would be acceptable to assistant masters as a body, but he was sure it would be inconvenient and objectionable in many ways. There would be no objection, however, if, as in most county schools, the head master or the local governors selected and nominated, while the Board of Education formally appointed or confirmed. Similarly with regard to dismissals.

THE third International Congress of the History of Religions was held at Oxford under the Presidency of the Right Hon. Sir Alfred Lyall. The work was distributed in nine sections: 1. Religions of the Lower Culture (including Mexico and Peru): President, Mr. E. S. Hartland. 2. Religions of the Chinese and Japanese: President, Prof. Herbert A. Giles (Cambridge). 3. Religion of the Egyptians: President, Prof. Flinders Petrie. 4. Religions of the Semites: President, Prof. Morris M. Jastrow (Philadelphia). 5. Religions of India and Iran: President, Prof. T. W. Rhys Davids (Manchester). 6. Religions of the Greeks and Romans: President, M. Salomon Reinach (Paris). 7. Religions of the Germans, Celts, and Slavs: President, Prof. Sir John Rhys (Oxford). 8. The Christian Religion: President, Rev. Prof. Sanday (Oxford). 9. The Method and Scope of the History of Religions: President, Count Goblet d'Alviella.

THE General Meeting of the Classical Association is to be held in Birmingham on October 8 to 10. Mr. Asquith will deliver his Presidential Address. Papers will be read by Prof. Mackail on "How Homer came into Hellas," and by Prof. Sonnenschein on "The Unity of the Latin Subjunctive." The Greek Pronunciation Committee will present its final report, and the Curricula Committee an interim report. The latter is of general interest and importance, emanating, as it does, from a body of men who may be considered as representative of classical

education in English Universities and schools of various types. The first part of the report deals with the question raised at the Cambridge meeting last year whether a short course of Latin, such as finds place in schools not mainly classical, is of sufficient educational value to justify its retention. There will be a performance of the "Hippolytus" of Euripides (in Dr. Gilbert Murray's English translation) by Miss Horniman's company, with incidental music by Mr. Granville Bantock.

THE Froebel Society has been making an inquiry with respect to schools and institutions in other countries for children between three and seven years of age, and has obtained some most interesting and valuable information on the subject. The countries include France, Germany, Austria, Switzerland, Holland, Denmark, Norway and Sweden, Finland, Russia, Italy, Egypt, Japan, the Colonies, and the United States. As would be expected, the conditions vary greatly in different parts of the world. In most countries the age at which attendance at the primary schools becomes compulsory is six years; but in a few it is seven, and, generally speaking, the State makes no provision for children below this age. In some cases it is done by the municipality, or voluntary effort is supplemented and aided out of public funds, but these institutions are rather of the nursery type, and formal lessons have little or no place in them. The report is to be published as an appendix to a special report on the same subject which is to be issued shortly by the Board of Education.

THE Board of Education has issued (Cd. 4288) the first part of "Statistics of Public Education in England and Wales, 1906-8." The present part is confined to educational statistics; the second part, which will appear later, will deal wholly with financial statistics. The number of technical institutions in England recognized by the Board during 1906-7 was 31, and the number of teachers therein 521. The Board defines a technical institution as one giving an organized course of instruction in day classes, including advanced instruction in science or in science and art, and provided with a staff and equipment adequate for the purpose. The number of students who attended these institutions at any time during the year was 2,655 (including 325 girls and women), and 1,446 of these attended a full course of instruction. Of the 2,330 boys and men attending, 542 were under seventeen years of age and 469 were twenty-one years of age or more. The number of evening schools and classes in England, recognized by the Board, for the education of persons already engaged in some occupation which takes up the greater part of their time, was 5,368 in 1906-7. These classes varied very widely in character and scope; 29,946 teachers were employed in them, 687,681 students attended during the year, and the Board paid grants on account of 515,897. There were in the same year 676 secondary schools in England recognized by the Board as eligible for grants as compared with 600 in the previous year. These schools accommodated 62,712 boys and 50,877 girls, the numbers in the preceding year being respectively 60,353 and 44,681.

THE Central School of Arts and Crafts in Kingsway (Southampton Row), by far the most magnificent of the schools so far opened under the auspices of the London County Council, was inaugurated by means of an exhibition of the students' work lasting three days. On the first floor is the splendidly commodious department for silversmiths' and allied work; on the second floor the finely equipped school of "book production" (printing, binding, lithography, &c.); on the third floor the school of drawing, design, and modelling; and on the fourth floor the sections for embroidery and needlework, with the stained-glass and the decorative department on a yet higher floor of the great building. While the majority of the classes will be held in the evenings, the teaching work is practically continuous. Most of the students are of the male sex, but there are also classes for female workers in lace, needlework, painting, &c. A library of architectural works for loan and reference is being formed, as well as a museum for specimens and models. A technical day school for boys is to be run in connexion with the new scheme, its object being to enable lads that intend to enter some branch of the silversmiths' trade or "kindred crafts" to pursue their general education, and, incidentally, to obtain such knowledge of the principles of design and construction as may enable them ultimately to shape a career for themselves. Ten free studentships are offered by the L.C.C. to boys possessed

of good mechanical ability, and the fees generally are very moderate. For the past twelve years the work of the school has been conducted in restricted premises in Regent Street.

An informal Conference on the question "How to Create an Intelligent Interest in Reading among Boys and Girls" was held at the office of the National Home-Reading Union. Dr. Paton, of Nottingham, presided, and among those present were the editors of the *School World*, *School Guardian*, *School Education*, Mr. Bray, of the L.C.C. Education Department, and the Secretary, Miss A. M. Read. Dr. Paton explained that the object of the Union, so far as it related to boys and girls, was to increase the effectiveness of the reading lesson in day, evening, and Sunday schools, so that the gift of reading may mean a love of systematic reading of the best literature, and may not only broaden school education, but may prolong and confirm its influence. A necessary means to the accomplishment of this object is the formation of reading circles in connexion with the elementary schools. The Union has been instrumental in establishing 1,190 such circles, 435 being in connexion with London schools. The Board of Education is in sympathy with the movement and has circularized the teachers, calling their attention to the advantages offered by the Union. Several speakers dwelt on the need of friendly co-operation between the Home-Reading Union and the local free lending libraries, and Dr. Paton assured the Conference that library committees and chief librarians were helping the work in every way possible. The advantages of old boys' clubs, the need of co-operation on the part of school managers, the sympathetic help of the press in making the objects of the Union known were also considered. The Conference agreed to the proposal that Dr. Paton should draft a summary of the suggestions and forward them to the Board of Education.

THE Diploma of "Associate of the City and Guilds of London Institute" has been awarded to 91 matriculated third year students of the Central Technical College who have completed a full course of instruction; 58 in Civil and Mechanical Engineering; 26 in Electrical Engineering; and 7 in Chemistry. Bramwell Medal, F. H. Bramwell; Siemens Memorial Medal and Premium, R. E. Neale. Certificates have been awarded to 25 matriculated third year students who have completed a full course of instruction at the Central Technical College, and to 62 students who have completed a full course of instruction at the Technical College, Finsbury.

THE Secondary Schools Committee of the Cheshire County Education Committee reported that eight University Scholarships had been awarded to the following students: Louis A. Penn, Wallasey Grammar School; Harved J. Davies, King's, Chester; Gertrude M. Powicke, Romiley; Agnes A. Plant and Harry Richardson, Crewe Secondary; John G. Morgan, Wrexham; Harry Grenville, Wallasey Grammar School and Manchester; and Harold Garner, Liverpool Institute. A scholarship for vocal music was awarded to Miss Elsie Morgan, Crewe, and technological scholarships to C. Warburton and L. Whinyates, Runcorn Secondary School.

THE total number of candidates entered for the Cambridge Local Examinations held in July was 6,014, exclusive of 315 candidates examined at colonial centres. In the Senior Examination 686 boys and 830 girls passed, 60 boys and 13 girls being placed in the First Class. Sufficient merit was shown by 280 boys and 201 girls to entitle them to exemption from one or both parts of the Previous Examination. Of the Junior candidates 1,068 boys and 938 girls passed, the numbers placed in the First Class being 88 and 14 respectively. In the Preliminary Examination 255 boys and 196 girls satisfied the examiners.

FIFTEEN nationalities represented, and not one student of American parentage (says the *New York Herald*), makes the American International College at Springfield, Mass., one of the unique institutions of higher learning in the States. When the institution was first founded it was known as the French Protestant College. In 1894 this name was changed to the French American College, while in 1905 another change was effected to the American International College. With nearly a million immigrants going into America every year, the necessity of educating them is apparent. Coming in such vast numbers

they are destined to powerfully affect the development of the great composite American nation. That they may contribute the best of their inheritance they must be made to share in higher education, which has done so much for America. Of the 110 students in the college about sixty are Italians. The Armenians come second in number and the Greeks third. The other nationalities include Syrians, Persians, Bulgarians, Spanish, Cubans, French, Scotch, Russians, Norwegians, Swedes, Chinese, and Japanese. With such a composite student body it is no easy task to arrange the work, map out the courses of study, and bring about an assimilation of the nationalities. "It is surprising," says Prof. Whiteford, Dean of the College, "how little race jealousy or animosity is shown. These races live together harmoniously and with very little strife. Although English is taught in the classrooms, yet, I believe, it is on the athletic field and in the dining hall that the students make the most rapid advance. As a rule, the foreigner is bashful when thrown with strangers. Students often come to the college who cannot speak a word of English, and yet in a few months' time you will hear them coaching on the baseball field in true American style." The college grounds comprise about five acres of land in one of the pleasantest parts of Springfield. There are six buildings, affording accommodation for about a hundred and twenty-five.

THE Minister of Public Instruction, Victoria, in his Report for 1906-7, writes:

Manual training has proved itself not only one of the most popular, but, at the same time, one of the most valuable, of the new departures taken by the Department during recent years. Its popularity is shown by the fact that, although it is an optional subject and involves a fee of 2d. per lesson, the centres are all full, with the splendid attendance of 92 per cent. As some evidence that the time spent at them is not lost, as was at first feared in some quarters, but that the work develops the intelligence, the mental power of the pupils, it may be observed that at the last Departmental examination for scholarships and exhibitions the majority of the winners were boys who had been members of Sloyd classes. These facts, together with the applications for new centres which have been received from various towns, have led the Department to authorize the training of a fresh group of teachers. Their course of training will be completed in December, and new centres will be established in order of priority of application. One was opened at Creswick in March, and, in spite of the scattered nature of the district, was filled immediately. One of the most striking displays at the recent State Schools Exhibition was the working Sloyd centre and exhibit of finished models. It formed a great centre of attraction and did much to remove any lingering misconception as to the nature of the work.

THE Government of Queensland has decided to grant fifty district scholarships for grammar schools. Each scholarship will have a currency of three years, and the grant will be made each year as long as Parliament provides funds for the purpose. Each of the ten grammar schools in the State will have five scholarships allotted to it. The conditions are the same as those for the annual scholarships and bursaries now granted, except that the winners must attend the grammar schools nearest to their homes. In addition to these scholarships thirty-six State scholarships and bursaries will be given this year. The examination of competitors for these will be held in December next. There are twenty-seven scholarships available for boys and nine for girls. They have a currency of three years, and the papers for examination are English, arithmetic, geography, general knowledge, and a paper on a subject which will be disclosed at the examination. The bursaries total eight—six for boys and two for girls, and entitle winners to free education at a grammar school or any other school approved by the Governor in Council, together with an allowance not exceeding £30 a year for three years. Only candidates who have to board away from home will be eligible holders, and no bursary will be awarded to a child whose parents or guardians are in a position to pay for his education. In each of the preceding cases the candidates must be children who will not attain the age of fourteen years until after December 31 next.

A CORRESPONDENT writes:—"The standard of secondary education in Queensland is set by the grammar schools, which are ten in number and are controlled by boards of trustees, one half of whom are for the most part elected by subscribers to the school funds, the remaining members being appointees of the Government, the State having contributed and still contributing largely

to the establishment and maintenance of these schools. The full school course is usually five years, and the subjects of instruction are Latin, Greek, French, or German, mathematics (including advanced courses in arithmetic, algebra and geometry, and also mechanics, trigonometry, and conic sections), English language and literature, history, ancient and modern (including European history), book-keeping, inorganic chemistry, physics, and other semi-scientific subjects, to which is added, in the case of girls, a thorough musical education. The methods of tuition are modern and scholarly, and the constant successes of the Queensland students, when pitted against the pupils of the neighbouring States in the examinations held by the Sydney and Melbourne Universities, give annual evidence of the high standard of efficiency maintained in the secondary schools of the colony. Revised regulations will come into force in the Queensland educational system. The three principal features are (1) a modification of the method of determining the salaries of head teachers; (2) the making of two additional grades of State schools by (a) reclassifying the present State schools and (b) by grading as State schools all the existing provisional schools which are vested in the department; and (3) the issuing of special regulations for the establishment of continuation schools."

DR. FREDERICK H. M. BLAYDES died at Southsea in his ninetieth year. He was (says the *Athenæum*) "a well known classical scholar, who had a reputation on the Continent as well as at home. He did a large amount of valuable work in his editions of Aeschylus, Sophocles, and Aristophanes, and some of his emendations are likely to hold a permanent place in classical texts. But, like many eminent scholars of an earlier generation, he permitted himself wide divergences from the MSS., which would not be tolerated nowadays, and his 'Adversaria' require careful sifting."

#### UNIVERSITIES AND COLLEGES.

THE University of London has just established an Advanced Certificate in Religious Knowledge, designed specially to meet the needs of teachers—quite undenominational in character, and indicating thorough acquaintance with the historical groundwork. The subjects of the examination are divided into two groups—compulsory and optional. The compulsory subjects include a general knowledge of the contents of the narrative portions of the Old and New Testaments, and the circumstances under which the books were composed, with the general features of the teaching of selected books. The optional subjects include Greek Testament, a period of Church History, the History of Christian Doctrine, the History of Christian Worship, Christian Ethics, Philosophy of Religion, and a Comparative Study of Religions. The first Examination will be held in January at the same time and at the same Centres as the Matriculation Examination of the University. Copies of the Regulations may be obtained from the Registrar of the University Extension Board, University of London, South Kensington, S.W.

The Holiday Course for Foreigners was a great success, many more applications for admission being received than could be entertained. Of the 266 students, Germany sent nearly 100, Sweden 57, Holland 24, France 23, and Denmark 21. There were also students from Japan and from every European country except Spain and Greece.

THE total number of students in the several Faculties of the University in the past session was as follows:—All Faculties excepting Medicine and Technology (including women students), 1,048; Faculty of Medicine (including 15 women students), 327; Faculty of Technology (including one woman student), 149; total, 1,524; allowing for 32 students entered both as Science and Medical students, net total, 1,492. In addition, there were 234 persons attending evening classes. This number is exclusive of about 140 students attending Lectures on Railway Economics and of 200 attending courses in Law and Economics at the Bankers' Institute. The following are the numbers of students who have been working in preparation for the degree examinations of the University in the several Faculties other than Medicine: Arts, ordinary 205 (118), honours 109 (67); Science, ordinary 127 (34), honours 186 (18); Law, 24; Music, 3; Commerce, 38; Theology, 25; Technology, 70 (1); totals, ordinary

492 (153), honours 295 (85). (The figures in brackets denote the number of women students.) In addition to the above, 14 students were preparing for the Teacher's Diploma (9 of these being women students), 52 were preparing for the matriculation examination, and 25 were elected Research students. 105 students in the past session were students of the University Training College for Men—viz., 40 of the first, 31 of the second, and 34 of the third year. 124 students in the past session were students of the University Training College for Women—viz., 59 of the first, 30 of the second, and 35 of the third year.

**Birmingham.** THE Social Study Committee of Birmingham University have organized for the coming session a course of systematic instruction and practical training, which is intended to be of use to the following classes:—(1) officials and others engaged in civic administration in one or other of its branches; (2) workers who desire experience and training in connexion with municipal and social, local government and philanthropic institutions; (3) the clergy and church workers of various denominations; (4) officials of Trade Unions, friendly and other societies. The University will provide lectures, accompanied in appropriate cases by practical demonstrations (e.g., visits of sanitary inspection), will secure facilities for visits, under competent guidance, to public institutions, and will also procure suitable introductions to labour organizations, charitable bodies, &c. The curriculum extends over one year, and consists largely of evening lectures. The lectures will deal with the British Constitution, local government, industrial history, economic analysis, statistics, industrial conditions, sanitation, law for social workers, and methods of social work.

It is with great regret that we record the death of Prof. Churton Collins, practically from overwork. He was a picturesque, militant figure in the University, as he had been before as author, journalist, and Extension lecturer, and he was a great favourite with the undergraduates. He did much useful and stimulating work in literary criticism, well informed, appreciative, and fearlessly outspoken.

**Sheffield.** THE mining department of Sheffield University carries on its work, not merely in Sheffield, but also among the men of the West Riding, Derbyshire, Nottinghamshire, and Leicestershire. In Derbyshire, for example, there are no fewer than 26 centres for local mining classes, and last year there were 611 students, while the total number of students that have been in the Derbyshire classes since 1891–2 is 7,393. During the past seventeen years, 16,589 students in all have received instruction. The number last year was 1,445, against 1,510 in 1906–7, 1,422 in 1905–6, and 1,191 in 1904–5. The number of students at the University courses last year was 215—being a record. The report, on the whole, appears to be very satisfactory. There appear plenty of young fellows anxious to improve themselves, and who persevere in the higher classes. The conduct of the miners has been excellent, and their work good; and the home work has been specially well answered by the majority. Fourteen students entered for the diploma course. In the certificate course at the University there were 100 students. It is interesting to note that 36 hailed from the West Riding, 3 from Sheffield, 59 from Derbyshire, and 2 from Nottinghamshire. Of the 100 only four were taking single courses, while 52 were in their second year, and 44 in their first. Although illness, accidents, and work affected the attendance of about 13, the average attendance for first-year students was 90 per cent., and 76 per cent. for second-year students. No fewer than 18 students got first-class certificates for the complete course and 9 students a second-class certificate. This creates a record for a single session. Several of the students received managers' certificates from the Home Office.

**New Irish Universities.** At a Conference in the City Hall, Dublin (September 3), the following resolution was adopted:—"That the Irish language, both written and oral, be made an essential subject for Matriculation, and up to the point where specialization begins, in the new Universities; that proper provision be made for the teaching of Irish in all the colleges of the new Universities; and that there should be Chairs of Irish Economics, Industries, and Agriculture." A resolution was also adopted stating that Irish should be made a compulsory subject in the National Board's training colleges for teachers.

## THE BRITISH ASSOCIATION EDUCATIONAL SCIENCE SECTION.

### USEFUL KNOWLEDGE.

Address by Prof. L. C. MIALL, D.Sc., F.R.S., President of the Section.

I PROPOSE to speak to you about useful knowledge, and you will, I think, admit the importance and the appropriateness of the subject. . . . I do not wish to exaggerate the importance of useful knowledge. It is not everything, nor yet the highest thing, in education. . . . But the fact that useful knowledge occupies nearly all the school time shows its practical importance, and disposes us to welcome any means of making it more effective.

### BOOK-LEARNING.

The knowledge of books may be an excellent form of useful knowledge; it may also, when it strives merely to record and remember, be unproductive and stupefying. . . . It has been the ambition of many scholars to read everything that was worth reading, and to fill great volumes with the imperfectly digested fragments. In the ages of learning, the schoolmaster too became a pedant. His chief duty he supposed to consist in furnishing his boys with knowledge which they might some day want. If it were not that Nature has endowed schoolboys with a healthy power of resistance, their memories might have come to resemble the houses of those who believe that whenever they throw a thing away they are sure to want it again—houses in which room after room is so packed with antiquated lumber as to be uninhabitable.

The Renaissance called up men who made a vigorous protest against unused learning. Rabelais put into grotesque Latin his opinion that the most learned scholars may be far from the wisest of men. Montaigne said over again in pointed phrases what common-sense people had been saying for ages, that he who knows most is not always he who knows best; that undigested food does not nourish; that memory-knowledge is not properly knowledge at all. . . . Happily for us, a great deal that we once knew, and might foolishly wish to keep, quickly fades from the memory. . . . What we remember so greatly exceeds what we can use that we need not deeply regret the loss that is always going on. . . . No doubt we often find it necessary to recall a multitude of small facts, in order, it may be, to elicit a general conclusion or to produce a telling argument. But is it wise to prepare years in advance by storing all the facts in the memory? I cannot think so. The study of the bodies of animals teaches us that muscle and nerve, which are easily fatigued and require an abundant blood-supply, are never employed in Nature where bone or tendon will serve. Exercise of the memory involves nervous strain, and after an early age a considerable nervous strain. It is more economical and more businesslike to employ mechanical contrivances rather than brain tissue for such purposes, to leave the vast mass of useful facts in grammars, dictionaries, and textbooks, and to collect those for which we have a present use in the notebook or the card-index. There is another appliance which the serious student finds almost as useful as the notebook or the card-index—I mean the waste-paper basket.

The history of learning warns us that it is not good to lay up in our memories a great store of knowledge whose use lies far in the future. Apply to knowledge what moralists tell us about money. It is only the money that you may expect to put to use within a reasonable time that does you any good, and the same holds true of knowledge. Unused knowledge, like unused money, becomes corrupt. Uncritical, ill-mastered knowledge is, at its best, a knowledge of useful things, which, as Hazlitt points out, is not to be confounded with useful knowledge.

If I felt it necessary to show that all book-learning is not futile, I might dwell upon the great subjects of languages and history. But you will gladly allow me to pass on to branches of useful knowledge with which I am more familiar.

### SCIENCE.

It is the function of science to produce verifiable knowledge. Science achieved her earliest successes by investigating the simplest properties of tangible things—number, form, uniform motion. Here she learned how to combine the knowledge of many concrete facts into general statements, which (to the confusion of thought) we call scientific laws. Science applies her general statements to new cases, using facts to make general

statements and general statements to discover or verify facts, so that a considerable part of scientific knowledge is in perpetual use. Science is no longer content with the study of simple properties and tangible things. She will consider facts of every kind as soon as she can find the time. There is no hope of withdrawing from scientific treatment any kind of experience which the human senses or the operations of the human mind furnish; to be safe from the inroads of science, you must betake yourself to some study which does not meddle with facts.

Generalization involves incessant reference of effects to their causes. Facts can only be ill classified and superficially generalized so long as the causes of the facts remain uninvestigated. Science of any good kind sets up, therefore, the habit of methodical inquiry and the habit of reasoning—productive reasoning, we might call it, to distinguish it from the reasoning of the schools. The best examples of productive reasoning are to be found in the investigations of science, and especially of those experimental sciences which deal with simple tangible objects, whose properties can be studied one at a time.

The virtues of science are exactness, impartiality, candour. Scientific impartiality means the determination to accept no authority as binding except the assent of all competent persons. Scientific candour means perpetual readiness to revise opinions which are held in respect. Loyalty, except of one kind, loyalty to herself, science has no use for and does not cultivate.

I think it is true, but you can judge as well as I, that during the last four centuries there has been no generator of useful knowledge at all comparable with science.

#### SPENCER'S ESTIMATE OF THE PLACE OF SCIENCE IN EDUCATION.

Herbert Spencer has raised the question: What knowledge is of most worth? He considers knowledge in its bearing on life and health, on the gaining of a livelihood, on citizenship, on artistic production and enjoyment; lastly, as a means of discipline. The answer which he gives under each head is "Science"; that is his verdict on all the counts. A decision so clear, which is, moreover, powerfully and even eloquently supported, cannot fail to be impressive. It is naturally welcome to those who are devoted to the cause of science, and we can all see that, if accepted, it will simplify many troublesome questions. Will it not guide us in choosing a school staff, in drawing up a curriculum, in fixing the future occupations of our children?

But we must first scrutinize the verdict itself. Let us begin by putting a preliminary question so as to remove all risk of ambiguity. Who or what is to possess the knowledge whose worth is to be estimated? Spencer seems to contend that for everybody and under all possible circumstances science is that knowledge which is most valuable, but this is a conclusion hard to receive. There are persons who are intellectually unfit to acquire the scientific habit of mind, or who follow an occupation incompatible with any but a light and recreative study of science. Suppose that a youth is wholly uninterested in science; or that after fair trial he shows no capacity for it; or that he is eager to become a poet; or that he will inherit a lucrative business in which science plays no part; would not these propensities and circumstances modify our choice? I cannot believe that Spencer was so unpractical as to deny them any weight at all. Is it possible that he was thinking of mankind, of the British nation, or of some other large collection of men; that it is to the nation or the race that science will prove itself of most worth? If this is the right interpretation, we have some ground for blaming Spencer's neglect to mention so important a qualification. Those who admit that the nation requires scientific knowledge beyond knowledge of any other kind are not compelled to maintain that the individual man must give his chief attention to science. A minute division of labour, intellectual as well as manual, is necessary in modern life, and we become every day more dependent upon other people's knowledge. An elementary knowledge of many sciences, such as Spencer valued and himself possessed, steadily becomes less attainable, and less applicable to real business; less attainable, because the standard is always rising; what was a respectable acquaintance with science in the days when Spencer was educating himself would now be thought no better than a smattering; less applicable, because business now requires and commands the science of experts. . . . Obviously the best knowledge of any kind can only be possessed by a few.

Spencer seems to expect that every intelligent mother should enjoy a knowledge of human physiology which will be a sufficient practical guide for the rearing of a family; but here, too, I have my doubts. Since the first publication of his essay the require-

ments of human physiology have risen in a surprising degree. The knowledge that can be got by reading even so admirable a text-book as "Huxley's Lessons" does not nearly suffice for the practical adviser. On this point I can speak with experience. . . . A little knowledge may indeed be dangerous when it is applied to the diagnosis of disease or to sanitary construction.

Those who agree with me that the science which is applicable to industry or to public health is steadily growing harder of attainment will not, I hope, turn this into an argument for restricting the study of science to a few. The elementary science of the school, if good of its kind, is valuable for its effect upon the character and the intelligence; it is necessary for the timely discovery of young people who can be trained to carry on scientific discovery; and it engenders a sympathy with science which is of high importance to the State. If the science of the school does no more than make the phenomena of everyday life a little more comprehensible and a little more interesting, it will fully justify itself.

Spencer would, I feel sure, have admitted that even when science is to be the chief occupation of after-life, it should not occupy more than part of a well ordered course of school study. The chemist or physiologist often requires to express his own meaning by speech or writing; it will be highly advantageous that he should express it clearly and vigorously. He must get effective command of at least one foreign language. He ought to know enough mathematics and drawing to make his own calculations and sketches. He ought to have learned how to use books. Spencer does not exclude literature and the fine arts from education, but in his scheme they are not to claim very much. "As they occupy the leisure part of life, so should they occupy the leisure part of education."

I do not suppose for a moment that this passage was written with the intention of pouring contempt upon literature, and it is really appropriate to the current fiction which to-day is, and tomorrow is cast into the oven, but what insensibility to the claims of the higher literature it betrays! "On traite volontiers d'inutile," says Fontenelle, "ce qu'on ne sait point; c'est une espèce de vengeance."

These considerations move me to reject Spencer's verdict. There is not, and cannot be, a scale of usefulness by which everybody's choice can be at once determined. Before deciding what the schoolboy is to study we must inquire what are his aptitudes, inclinations, and opportunities. And the importance of science, which I do not think Spencer has exaggerated, will be fully recognized when every nation and city, every profession and trade, every person and interest, can be guided as often as need arises, not by their own scientific judgment, but by the judgment of scientific experts.

Every one agrees, in the abstract, that scientific information, the heap of scientific facts, is a small matter in comparison with scientific method and the scientific spirit. We do not, it is true, give effect to our convictions in practice. The teacher of science still loads the memory with facts; the examiner in science still passes or ploughs according to the quantity of facts that the candidates have got up. It requires an effort to keep hopeful, but we must go on steadily pointing out what we take to be the right way. The reformers of science teaching are now bent upon such improvements as these: they wish to see a greatly improved synthesis of the student's knowledge, so that the things that he learns in one place and from one teacher should be intimately combined with what he learns in another place and from another teacher. Further, they wish to see a large extension of personal inquiry and personal verification of the fundamental scientific facts. It is thus, we think, that the future man of science will become possessed of a compact and harmonious body of useful knowledge, which may in favourable cases incorporate with itself the experience of after-life and exhibit the incomparable virtue of healthy natural growth.

#### TECHNICAL EDUCATION.

Of technical learning I must say but little, and that little must be said with reserve. For my only acquaintance with the subject is indirect, and arises from long connexion with a city and University where technical education is prominent. I hope not to express presumptuous opinions on a kind of useful knowledge which I know so superficially.

Technical education may be pursued in at least three ways: (1) We may seek to qualify the pupil for his calling by a thorough training in some science or art, and then, by the application, under the guidance of an expert, of that science or art to a particular industry. The experience of at least two generations

seems to show that this method is really effective; it does what it professes to do. (2) The second method aims at no more than supplying information directly applicable to the industry in question. Surely this is the least profitable of the three. The information is not accurately lodged, either in the memory or in the notebooks of the students; it soon becomes obsolete in consequence of the advance of knowledge; and it does little to cultivate intelligence or the power of doing. Where intelligence and the power of doing already exist, mere information may be valuable, but the best storehouse of information is the printed book. (3) Lastly, we may aim at nothing more than facility by repetition. Such practical arts as reading, writing, drawing, needlework, and cookery are largely acquired by imitation and constant practice. Skill in these arts is a tool, whose profitable application depends much upon the intelligence and enterprise of the possessor. Independent attempts to meet difficulties, friendly criticism of these attempts, questioning about the causes of failure, are the expedients which a wise and experienced teacher, ever at hand, would employ. Such a teacher is, of course, rarely to be had, but is now and then found in a sensible mother. Perhaps the best substitute for the sensible mother would be plain, practical lessons on elementary science, such as the Edgeworths, Dawes, and Henslow used to give.

#### LITERATURE.

Literature differs from most kinds of useful knowledge in having an immediate value. Like beautiful scenery, health, liberty, friendship, and other felicities of life, it is good in itself, apart from the advantages which it brings. Nevertheless, literature is not satisfied with delighting. Like architecture, it aims at utility as well as beauty, and employs its power of delighting to instruct and guide.

The benefits which we receive from literature are comparable with those which we receive from good society. We are expected to enjoy and appreciate; we are not to be for ever asking: "What have I got that I can carry away?" Literature may be more than good society; it may compare with the intimate talk on grave subjects of a wise and high-minded friend. Unfortunately those whose office it is to introduce us to literature often treat it as if it were only a particular sort of useful knowledge. They occupy our attention so completely with grammar, metre, etymology, and historical allusions that we have no leisure to enjoy and appreciate. . . .

I have little fear that the scientific age which is now upon us will be permanently hurtful to literature. No new Lucretius, it may be, will write on the Universe, no new Milton on the Creation and the Fall. But contemplative and lyrical poetry will survive all changes in our philosophy. The higher criticism, which is the study of life as well as of letters, will survive too. One literary art, the art of rhetoric, may be weakened and lost when the scientific spirit becomes predominant—that sort of rhetoric, I mean, which may be fitly described as insincere eloquence. Rhetoric seeks above all to persuade, and, in a completely scientific age, men will only allow themselves to be persuaded by force of reason. Even in our imperfectly scientific age those men gain most by speech who have something important to say, who say no more than they know, and who use all possible plainness.

It will be enough for my present purpose if we can agree that literature has an aim and purpose of its own, and must not be treated simply as a branch of useful knowledge. Literature and science, for instance, are incommensurable.

#### THE NECESSITY OF CHOOSING.

It is an intellectual luxury to run over the kinds of useful knowledge that we should like to possess. Among them come languages, ancient and modern, some giving access to high literature, some yielding historical or scientific information, some acquainting us with communities or modes of thought very unlike our own. Then come a multitude of sciences, which, perhaps, show the engineer how to build railway bridges or tell the navigator how to cross the Atlantic or help us to improve our health and lengthen our lives. I barely mention history, geography, and innumerable practical arts. We seem to be led into a well filled treasury and invited to say what we will have. But one unpleasant condition is laid down—we may choose what we please, but we must pay for it. A new study generally means outlay of money and always means outlay of time. We soon find ourselves forced to behave like the man whose wife has tempted him into a fine London shop. Like him, we begin to ask: "How much can I afford to spend here?"

Every head master and head mistress is occupied with the eternal question how to make room for all the things that are demanded of the school. Theorizers, who have no responsibility for the time-table, insist from time to time upon new additions, and are happy if they can only express their own opinions with an emphasis which satisfies their sense of justice. It is my opinion that far too much has already been conceded to demands which, reasonable when taken separately, are unreasonable when taken together. I have known the time-table of a girls' school overloaded to such a point that in one form chemistry and English literature got no more than an hour a week between them. The head mistress, no doubt, hated the arrangement, but had to conform.

I have said that the grounds for introducing each separate subject are often perfectly reasonable. Thus, by ancient usage, Latin is made a necessary subject in certain schools. Then a claim is put in for Greek as more interesting and equally important. French and German demand admission, and put forward claims which can hardly be overstated. The result is that some boys in secondary schools attempt four languages, and many attempt three. Then we usually find that no foreign language, ancient or modern, is mastered to the point at which it can be used in reading, writing, or conversation. Our wish to be fair and consistent has landed us in an absurdity. The root of the whole difficulty lies in the fact that, while there are perhaps fifteen or twenty branches of knowledge eminently fit to be taught in school, no pupil can profitably undertake more than five or six at a time. . . . I wish that the head master or head mistress might find courage and strength to require that every subject admitted to the curriculum should come round frequently, at least for two or three years, as nearly as may be once a day, but we cannot be rigid in these matters.

The sciences taught in school may spoil one another's chances in the same way. Not a few schools are convinced that they must have chemistry and physics because of their industrial importance, hygiene because of its relation to the health of the community, physiology to make the hygiene intelligible. The schoolboy is made to buy more sciences than he can pay for, and his time is gone before he reaps any of the advantages which are so much desired.

#### TOO MUCH AND TOO LONG.

One inevitable result is that the school hours, including the preparation of lessons, are nearly always too long. Another result is that the schoolboy who is willing, but not very clever, is often overworked. I have known many such cases myself, and have also known cases in which excellent results have been attained in a good deal less than the customary time. If we could consent that our pupils should remain ignorant of many useful things, if we could materially shorten the lessons of very young pupils, and if we could bring the home lessons into much smaller compass, I believe that the education which we offer would really be more valuable.

#### NATURAL AND ARTIFICIAL EDUCATION.

If we had a pupil put into our hands for solitary instruction, like the Emile of Rousseau, we should find it wise to begin by studying him closely, and three things would particularly require attention—his aptitudes, his inclinations, his opportunities. The first two are self-explanatory, but the word "opportunities" may present some difficulties. It includes, of course, opportunity of learning, but the chief stress is to be laid upon opportunity of exercise in after-life. This is the opportunity which stimulates interest and rewards exertion. Moral character, intellectual character, curiosity, love of knowledge, equipment for practical life, and, so far as I can see, all considerations which ought to govern the choice of a study, come under one or other of the three requisites—aptitude, inclination, opportunity.

In school we have not so much solitary pupils as groups of pupils to consider, and this compels us to accept compromises which are familiar to every teacher. We have often to study the wants of a school form as well as the wants of an individual.

Some writers have given to the education which considers first of all aptitude, inclination, opportunity, the name of "Natural Education," while that which makes its choice of studies on abstract or arbitrary grounds, with little reference to the needs of the pupil, they call "Artificial Education." We may be allowed to revive these terms for the sake of brevity. To me they seem appropriate as well as convenient in practice.

The advocates of natural education have sometimes reached absurdity by pressing the claims of one of the three requisites to the neglect of the rest. Tolstoy would make inclination supreme,

even in early education. He exemplifies Quick's remark that writers on the school course who are not schoolmasters are almost all revolutionary. Others have attended too exclusively to the opportunity of future exercise. The old grammar schools, thinking much of the future wants of the pupils who might wish to enter the Church, often added Hebrew to the compulsory Latin and Greek. Fortification was frequently taught to little boys. When the Berlin Realschule was founded (1747) it offered, among other things, instruction in the rearing of silkworms and the discrimination of ninety kinds of leather.

Nothing, I think, gives us a clearer notion of what natural education can accomplish under favourable circumstances than foreign travel, which is a form of self-education prescribed by grown-up people to themselves. Even the milder forms of compulsion are wanting here; aptitude, inclination, and opportunity are everything. The preparation, the actual journey, and the recollections yield abundance of instruction to those who use them well. For weeks before setting out the traveller will turn over maps and conversation books, inquire about handy cameras or collecting boxes, and study the country which he is about to visit with an eagerness which he never felt before. The journey itself, if only it be such a journey as an active mind will frame, cannot but call forth many powers, physical, intellectual, and moral, that are rarely exercised at home. The love of science, the love of languages, the love of scenery, the love of adventure, the love of society, the love of poetry, all get a new stimulus. And the journey, already profitable in anticipation and in execution, is not exhausted when we return home. Our experiences in unfamiliar countries vivify many a page of history and many a scrap of useful knowledge which would have been otherwise languidly remarked or passed by altogether.

Let us suppose that all is done, not *by* the traveller, but *for* him, that routes are chosen, hotel bills paid, carriages and boats hired, languages interpreted, information supplied, all without effort on his part. In a few months he will barely remember what places he has seen and what he has passed by. This may remind us that natural education is only kept alive by *doing*.

Of course the grown-up person is not like a child, and there is need of steady and impartial government, of drill, in short, if the child is to take all the pains that are indispensably necessary in school work. All our teaching cannot be recreative. Does not this show, some of you will say, that your natural education is inadequate, and that a sterner thing, which takes little or no account of inclination, is demanded in school? I think not. I think that inclination is a power that we ought to employ as often and as far as we can. No doubt it is inadequate; our very definition makes inclination only one of three requisites. The child at school may usefully remind us that the opportunity of future exercise in some cases becomes necessity, and will take no denial. Nevertheless all three should be considered, and that teacher will prosper best who lets none of them drop out of sight. Do not forget, too, that inclination is the modifiable requisite; we can stimulate, and even create it; we can also fatally discourage it. It is only natural education, I still maintain, which can count upon the energetic co-operation of the child.

On the other hand, if we ignore aptitude, inclination, and opportunity—if we pour out information upon which the pupil does no work, merely because we think it ought to be good for him, then we have a dull, perhaps a sullen, mind to deal with, which neither will nor can learn to good purpose. The example for all time of artificial education is, or lately was, the setting of every boy in every grammar school to learn Latin, if not Latin and Greek.

Those who believe that natural education is at once the most formative and the most productive, that it helps to build up body and mind, that it encourages the acquisition of truly useful knowledge, should attend to one point which often escapes notice. Natural education demands leisure for the pupil. At the present moment the leisure of the pupil has been reduced to a very small amount indeed. We strive for efficiency, for good examination results, for knowledge of useful things. The negligence of the old race of schoolmasters, which winked at monstrous abuses but allowed a certain independent school-life, has been replaced by zeal and conscientiousness, which occupy every hour, and sometimes treat independent occupations as mere idleness. Long rambles, such as were the delight of my boyhood, when we used to go miles in search of a wasp's nest, are in certain modern schools abolished by compulsory games. Some day or other (the reform will not come in my time) we shall recognize that the chief occupation of the young child should be spontaneous natural play. . . .

#### HEURISTIC METHODS.

Dr. Armstrong's heuristic method is well known in this section. He tells us that neither the name nor the thing is altogether new, and the same may be said of nearly every educational expedient. Promising schemes are proposed, tried perhaps on a small scale, and dropped, often for lack of enterprise on the part of the teachers, and years after some one discovers them again. Dr. Armstrong tells us where he got the name and quotes a passage from Edmund Burke, which clearly describes the method. It is now a good many years since I saw Mr. Heller give several lessons on this plan in elementary schools in London, and was then permanently convinced of the real value of the heuristic method. I only wish that we had a score of such, each worked out as carefully as Dr. Armstrong's model.

The method need not be confined to experimental science, nor to science at all. I have attempted something of the same kind in elementary biology. Why should not teachers of history carry out a little historical research with the help of an upper form? Suppose that the subject chosen was English town and country life in the sixteenth century. Harrison's "Description of England," Shakespeare's plays, Walton's "Lives," some of the modern books which collect the testimony of foreign visitors during the reigns of Elizabeth and James I., Spenser's "View of the State of Ireland," and Hume Brown's "Scotland before 1700" are, let us suppose, accessible to the class. Useful materials from these and any other sources might be arranged in a card-index. Co-operation is eminently desirable, and a little club of pupils might well make their index in common. Then the materials should be treated in literary form, every detail of literary workmanship receiving attention. I fully expect to be told that this plan has actually been tried in some school or other. The historical researches of the school may give opportunity for the use of foreign languages, for map drawing, or for the handling of statistical information. . . .

The advocates of learning by inquiry and learning by doing will descend even into the nursery. What an opportunity is afforded by toys!—an opportunity that those who purchase all their children's toys throw away. Surely every little girl ought to be encouraged to make plausible dolls out of the rag-bag, every little boy to make his own menagerie, his own boats and whistles and sledges. Even the bought toy gives opportunity for inquiry. Ask any child if he has noticed that the animals of the Noah's Ark are always thicker at one end, usually the hinder end. There is a reason for this, and a curious reason, which the child may be helped to discover.

#### MASTERY OF SOMETHING.

Let us indulge less than we do the passion of intellectual avarice, if only because avarice blinds us to the relative values of things. The old French anatomist Méry said of himself and his colleagues that they were like the rag-pickers of Paris, who knew every street and alley, but had no notion of what went on in the houses. The accumulation of miscellaneous knowledge of useful things—copious, inexact, inapplicable—may, like rag-picking, leave us ignorant of the world in which we live. Let us try to reach the inner life of something, great or small. The truly useful knowledge is mastery. Mastery does not come by listening while somebody explains; it is the reward of effort. Effort, again, is inspired by interest and sense of duty. Interest alone may tire too quickly; sense of duty alone may grow formal and unintelligent. Mastery comes by attending long to a particular thing—by inquiring, by looking hard at things, by handling and doing, by contriving and trying, by forming good habits of work, and especially the habit of distinguishing between the things that signify and those that do not.

It is too much to expect that mastery will often be attained in school. School is but a preparation, not, I think, for promiscuous learning, but for the business of life. The school will have done its part if in favourable cases it has set a pattern which will afterwards develop itself naturally and harmoniously.

#### SCIENCE IN SECONDARY SCHOOLS.

A Sub-Committee of the Committee on the Curricula of Secondary Schools, consisting of Prof. R. A. Gregory (Chairman), Mr. W. D. Eggar, Mr. O. H. Latter, Mr. Hugh Richardson, Mr. C. M. Stuart, and Mr. G. F. Daniell (Secretary) presented their report of an inquiry into the sequence of studies in the

Science Curriculum. The following extract from the circular letter will show the scope of the inquiry:—

The Sub-Committee charged to make inquiries about the best sequence of scientific studies in boys' secondary schools (which for purposes of this inquiry may be taken to mean schools other than public elementary or technical institutions) recognize that the actual order in which science subjects are taught depends upon a variety of circumstances. Such are the type of school, local conditions, the future career of pupils, external examinations, and the personal preferences and qualifications of teachers.

But we suspect that there is a natural order of treatment which is indicated by the mutual interdependence of the subjects, and to an even more important degree by the brain development of the pupil. We anticipate that, from the replies of experienced teachers, inspectors, and examiners, we shall obtain trustworthy information on this question.

It seems of importance to specify the average age of the class in which the work has been done; to describe the method of teaching, giving an indication of the relative importance (a) of lectures, tutorial work, laboratory work, and (b) of text-books used by the boys, dictated notes, notes composed by the boys.

A series of specific questions—questions relating to the sequence of studies in the science section of the curriculum of boys' schools—were submitted to the science masters and inspectors who were consulted. The results of the inquiry are summarized. Following are the conclusions:—

#### OPINIONS AND RECOMMENDATIONS OF THE SUB-COMMITTEE.

(1) The organization of the studies of chemistry and physics, and especially their correlation, shows marked improvement, both in secondary day schools and in the "sides" of those large public schools in which the science work is regarded as an important part of the general intellectual training.

(2) The attention universally given to laboratory practice and to the development in the boys of the powers of *doing* and *describing* deserves nothing but praise. The considerable degree of freedom given to teachers has clearly encouraged independent experiment and thoughtful criticism as regards their work. The resulting variety and elasticity in their methods is, in our judgment, a good feature which we wish to preserve. As indicated below, we desire to give greater freedom to teachers by modification of the influence of examinations.

(3) We are in sympathy with the endeavour of the Public Schools Science Masters' Association to overcome the neglect of science in preparatory schools. The boys should be made to feel from the first that the study of science is an essential part of their education. Both in the preparatory departments of day schools and in preparatory schools some mensuration should be included as part of the mathematical work. But an essential part of the preparatory course in science should be natural history (including some physical geography) and the rudiments of physics. The real value of these studies depends upon training in observation.

(4) No school course can be considered complete without at least two years' systematic practical work in science. We direct the careful attention of head masters as well as science masters to the problem of how, without overpressure, to make the study of science an intellectually fruitful and stimulating part of the work in higher secondary schools of those boys whose special gifts are linguistic or literary. We think that the value of sound scientific literature of a general character and of good lectures well illustrated for older and intellectual boys is underrated. Evolution, geology, electricity, optics, sound, human physiology, and astronomy seem suitable subjects. The feeling that there has been of late years a loss of popular interest in science is shared by your Committee, who feel that we must look to the schools to improve matters. While fully recognizing the importance of quantitative methods, we feel that qualitative work also deserves encouragement and respect. We wish to avoid producing the student described by Prof. J. J. Thomson (Section A, Liverpool, 1896) in the words, "he commences his career by knowing how to measure or weigh every physical quantity under the sun, but with little desire or enthusiasm to have anything to do with them."

(5) We are struck with the unanimity shown by our correspondents concerning the influence of external examinations upon the teaching of science. This influence is found to be harmful. The harm is produced partly by having to work along the lines of too rigid a syllabus, but chiefly from the fact that science is intended to teach *principles*, while the examination asks for *details*. A boy may have derived the full benefit from a course of science lessons without remembering the experiments therein; for the examination, however, he has not to repeat these experiments; he has to memorize them, and to study how to re-

produce what he remembers in the approved examination style. Anything further from true scientific method could not possibly be conceived. It has been suggested that the written and practical examination should be replaced by, or include, an oral examination based upon the candidate's own work as shown in his notebooks, leading on to its application to other problems, and the plan is worth trying; it is hoped that some examining bodies may be induced to make some experiments in this direction. Working on the lines of a prescribed syllabus limits the teacher's initiative and discourages research methods. The syllabus in nearly all cases prescribes too much for the majority of schools, and, therefore, too much is attempted in the schools. This prevents sufficient attention to the scientific method of inquiry. There are many branches of science, but one scientific method. This consists in obtaining facts and ideas by experiment or observation, classifying and comparing them, and discovering a formula or principle to express them. All the school work in science should be imbued with the aim of cultivating an appreciation of and familiarity with scientific method. Examinations will continue to impede this aim in so far as the school work is forced to conform to the examination rather than *vice versa*.

(6) We desire a more extended recognition of geography as a science subject in association with elementary geology. Rightly taught by means of exercises, both in and out of school, geography is capable of providing a training in scientific method, of inspiring interest in natural phenomena, and of co-ordinating work in many branches of science.

(7) We are of opinion that more attention may wisely be given to the claims of biology in upper forms.

(8) We note with satisfaction that the necessary correlation is observed as regards chemistry and physics. We find that there is too little correlation of (a) mathematics with physics, (b) chemistry with English composition, (c) Nature study with art, (d) physics with workshop instruction, (e) geography with all other branches, especially meteorology and Nature study. The need for more correlation of mathematics and physics implies the need for more co-operation between teachers of those subjects. We believe that the classification into mathematical sets might be accepted by the science masters as the classification for science sets also. It should be pointed out that much of the work which has been done in the physical laboratory can advantageously be transferred to the mathematical classes. Mensuration, including the greater part of the work frequently described as elementary physical measurements, should be part of the mathematical teaching. The work in the physical laboratory should, even at the beginning, be of a truly experimental character.

(9) We are impressed with the need of bringing all science work into closer touch with everyday experience (see Prof. Miers's Address to the Public Schools Science Masters' Association, January, 1908, published in an abridged form in the *School World*, March, 1908).

(10) We question the value of the stream of elementary text-books continually poured forth. The multiplication of such books is an impediment rather than an aid to progress. On the other hand, there is a need of inspiring and well written books on scientific works and achievements. It is unwise to limit a boy's ideas in science to the narrow experience he can gain in a laboratory or can hear in a classroom; such a course must in many cases lead to distaste for science. What is wanted is a scholarly literature of science.

(11) There are too few laboratory assistants in secondary schools of all types; a most wasteful "economy."

#### TRAINING FOR TEACHING.

By CHARLES MACGREGOR.

No system of training will ever produce finished teachers; but every system should send forth students with some knowledge of the principles and methods of teaching, and with so much skill in practice as will bridge the gap between experience and inexperience, and serve to lessen the difficulties of that first period of responsible work which is often so profitless to the pupils and painful to the teacher. The students should go forth knowing what has been thought and done educationally in the past, knowing the best that has been thought and done in the present, aware that education is in process of evolution, and full of the desire to contribute to its advance.

1. Sound knowledge is the first essential for teaching of the right kind, and any satisfactory system must be based on a sound general education, or must provide for that. The ordinary

school subjects of English, science, mathematics, history, and geography should be restudied with more maturity of mind, on a higher intellectual plane, and in a more philosophical manner than is possible in a secondary or preparatory school. Concentration of effort should also be aimed at, and the subjects not spread over the whole course, as in the Ecoles Normales, and in some of the German Seminars and of our own colleges.

2. The students must know not only the material they are to work with, but also the material they are to work upon. They must go through a serious course of psychology, not introspective psychology only, but experimental psychology, and, above all, child study. With the study of the mind must proceed the study of the body, and this also must be thoroughly practical, under a competent medical officer. It might include a little anthropometry. A third part of this division should include a short course in ethics, helping the students to the better consideration of the problems of moral education. All this work—psychology, hygiene, and ethics—must possess a vital connexion with the students' work in the schools.

3. To the knowledge of the materials students are to use, and the knowledge of the material they are to work on, must be added knowledge of the methods by which these are to be connected and skill in their use. This involves (a) history and science of education; (b) study of particular methods of teaching school subjects; and (c) practice in teaching. Needless to say, these three must be correlated in the closest possible fashion. Detachment is disastrous.

(a) The history must be brought up to date and include the work of Parker and Dewey, as well as that of Herbart or Rousseau. There should certainly be also a course of lectures on educational systems of other countries, and at least an introduction given to the valuable stores of material in the Board of Education Reports.

(b) In connexion with the study of methods there should be a special school at the Centre, where students may see methods and experiments which they are not likely to see in the ordinary schools. (It is a misfortune that our City schools are not used to some extent for experimental purposes. Some blind experimentation goes on, but little conscious experiment towards a definite issue, and no systematic examination and comparison of results. Joint Committees of Head Masters, School Board, Training Authorities, and of the local Inspectorate could do valuable work in this direction.) Each student should be accustomed to the idea of experiment in education, and each also should have to prepare a thesis requiring observational, if not experimental, work.

(c) An effective system of training, besides providing for such school work as will give reality to the studies already mentioned, must allow for an adequate amount of practice in teaching. A student may have an excellent knowledge of methods and yet make a poor use of them.

The period of training for non-University students should be three years, and for University students four. The following is an outline of a suitable arrangement of the professional work for the non-University students.

*First Year.*—Psychology, experimental psychology and child study = 100 hours; hygiene = 40 hours; ethics = 20 to 30 hours; two hours per week in the schools, chiefly for observational and experimental work correlated with these subjects.

*Second Year.*—History and science of education = 100 hours; methods, criticism, and demonstration lessons at the Centre = 60 hours; attendance at schools two hours per week during the winter and four during the summer = 80 hours. At the beginning of the summer should be given out the subject for a thesis, to be handed in at the end of the following winter.

*Third Year.*—About six hours per week of teaching practice and at least a fortnight's continuous teaching = 150 to 200 hours; work on thesis and oral on same; special study for kindergarten, housewifery, or rural courses = 200 hours.

During the last two years great advance has been made in Scotland in the provisions for the training of teachers. The country is divided into four provinces, with Centres at the four University towns. The gathering of students into these Centres where they can have the best educational facilities has been rendered possible by the grant of use of the public schools for practice purposes, one of the most valuable features of the new regime. There are courses of training for elementary- and for secondary-school teachers, as well as for teachers of special subjects (art, &c.). For the last two classes the period of training is one year; for the first class, two years if they are not graduating, and three if they are.

The two-year course is, in practice, a fairly crowded one of 1,800 hours, one third of which are given up to professional work—education, psychology, hygiene, logic, ethics, methods, and teaching; the other two-thirds are for "culture subjects"—science, mathematics, &c. The regulations, however, permit of the omission of any subject of general education from the curriculum. Of the time for professional work, about 250 hours are allowed for the study of methods and practice in teaching. This period is devoted to lectures and discussions on methods, to demonstration and criticism lessons, and to properly supervised practice in the schools. It will be seen that the provisions go a considerable way towards meeting the requirements set forth above.

### SALARIES AT BÂLE.

(From the *Neue Züricher Zeitung*.)

THE staff of the Gymnasium at Bâle have addressed a printed memorandum to the Education Department asking for a revision of the system of salaries. They begin by pointing out—and that with perfect justice—that the existing system, basing salaries on the number of hours during which each teacher is employed per week, compels the masters at the Gymnasium to teach for more hours weekly than are compatible with the really conscientious performance of their duties. The regulations presuppose that the teachers in higher schools will, as a rule, teach for 27 to 28 hours weekly, those in middle schools for 30. The length of time is too great for a master in a Gymnasium, who is rightly expected to remain in touch with the progress of knowledge. Thus he has to choose between two alternatives, both equally prejudicial to the school in which he is employed: either he must not take full work, or he must give up any idea of further study or research. The memorandum points out that the number of hours required of a teacher in the Bâle Gymnasium is considerably greater than what is expected in similar schools in other countries and in other cantons of Switzerland (Bâle 25 to 30, France 15, Prussia 22, Zurich 20 to 22, Lucerne 20, &c.). In spite of the proportionately low average of hours in the German Gymnasiums, recognized medical and educational authorities have protested against the overworking of the teachers in the higher schools. In 1899 the Medical Congress at Munich formulated almost unanimously the following recommendation: "To get rid of the prevalent overpressure of the teachers in the higher schools, their normal weekly work should be fixed at 16 to 18 hours at most."

But the system of payment by time, still existing in Bâle, but long since abolished in other cantons and replaced by fixed salaries with a strictly limited number of hours, is incompatible with the reforms demanded by medical and educational experts in the interest of the schools. The Bâle system seems really intended to secure the most complete exploitation of the teacher's strength. Moreover, on purely educational grounds it is desirable to adopt the system preferred in other cantons, at any rate in schools in which specialists are employed even in the lower classes. For the necessity imposed by the Bâle system of making up each teacher's hours to a prescribed number often frustrates the best intentions of drawing up the time-table on sound educational principles. Unity and consistency of method are essential conditions of success, especially in the lower classes. But, under the Bâle system, with the different numbers of hours assigned to each subject in the several classes, it is often impossible for the teacher to move up with his class. Moreover, subordinate subjects, such as geography and history, must often be utilized to make up the time-table of this or that teacher. Hence arises a frequent change of teachers, involving great difficulties both for them and for their pupils, and often preventing the growth of a feeling of pleasure and satisfaction in the work.

PROF. BORGMAN has resigned the Rectorship of St. Petersburg University as a protest against the policy of the Minister of Education. It is also reported that the Council of Ministers has empowered the Minister of Public Instruction to forbid women to attend University lectures in future, but to permit those who have already received permission, and whose transfer to higher educational institutions for women is impossible, to complete their studies at Universities.

## MACMILLAN & CO.'S NEW BOOKS.

# A SCHOOL ARITHMETIC.

By **H. S. HALL, M.A.**, and **F. H. STEVENS, M.A.**

Complete, with Answers, 4s. 6d.; without Answers, 3s. 6d. Or, in Two Parts—Part I., with Answers, 2s. 6d.; without Answers, 2s. Part II., with Answers, 2s. 6d.; without Answers, 2s. Answers, 1s. KEY in Preparation.

This work follows closely the recommendations of the Mathematical Association.

## A Modern Arithmetic with Graphic and Practical Exercises.

By **H. SYDNEY JONES, M.A.** Parts I. and II., with or without Answers, 2s. 6d. each. Complete, with or without Answers, 4s. 6d.

## A New Algebra.

By **S. BARNARD, M.A.**, and **J. M. CHILD, B.A., B.Sc.**

Volume I., containing Parts I., II., and III. 2s. 6d.

Part I.—A generalized Arithmetic in which letters are employed to represent Natural Numbers and the idea of Algebraic Form is introduced.

Parts II. and III.—Zero and Negative Numbers and Fractions are considered. These two new classes of numbers are defined so that the expressions  $a-b$  and  $a/b$  may always have a meaning.

## PRACTICAL ARITHMETIC AND MENSURATION.

By **F. CASTLE, M.I.M.E.** 2s.

## MACMILLAN'S OROGRAPHICAL MAP OF EUROPE.

Designed by **B. B. DICKINSON, M.A.**, and **A. W. ANDREWS, M.A.** Cloth, mounted on Rollers, 15s. ALSO NOTES TO SAME, limp cloth, 1s.

## INDEXING AND PRÉCIS WRITING.

By **G. B. BEAK, M.A., F.R.G.S.** Limp cloth, 2s. 6d. KEY to same, 1s. 6d. net.

## A LATIN READING BOOK. Gotham and other Stories.

By **Rev. E. D. STONE**, formerly Fellow of King's College, Cambridge, and Assistant Master at Eton. Crown 8vo, 1s. 6d.

## SIEPMANN'S PRIMARY FRENCH SERIES. NEW VOL. Le Lac de Gers.

Par **RODOLPHE TOPFFER**. Adapted and edited by **F. L. CARTER, M.A.** Globe 8vo, limp cloth, 1s.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.

## THE EDUCATIONAL SUPPLY ASSOCIATION, LTD., 42 HOLBORN VIADUCT, LONDON,

SUPPLY EVERY SCHOOL REQUISITE,

PUBLISH AND SEND GRATIS AND POST FREE THE FOLLOWING CATALOGUES:—

CATALOGUE OF SCHOOL STATIONERY AND REQUISITES;

CATALOGUE OF SCHOOL FURNITURE;

CATALOGUE OF SCHOOL TEXT-BOOKS;

CATALOGUE OF REWARD BOOKS AND PRIZES;

CATALOGUE OF CHEMICAL APPARATUS, CHEMICALS, AND REAGENTS.

## Requisites for Geometrical Drawing.

THE EDUCATIONAL SUPPLY ASSOCIATION has prepared a series of Boxes of Mathematical Instruments suited to the new requirements concerning Geometrical Drawing. The instruments are in all cases thoroughly reliable; they are manufactured expressly for the Association, some of the articles being protected by patents. As no unnecessary useless articles are included, a serviceable box of instruments is supplied of a better quality than would otherwise be possible and at a lower price than usually obtains for boxes of instruments of a similar quality.

### BOXES OF MATHEMATICAL INSTRUMENTS.

The "SCHOLARS" Box of Instruments. 1s. per Box.

Cloth-covered box, containing Brass Pencil Compass to take any size pencil, Lead Pencil, two Set Squares, Six-inch Boxwood Rule, and Protractor.

The "PREPARATORY SCHOOLS" Box of Instruments. 1s. 4d. per Box.

Cloth-covered box, containing Patent Brass Pencil Compass, Divider Point, Black Lead Pencil, Compass Pencil, two Set Squares, Brass Semi-circular Protractor, Six-inch Rule marked centimetres, &c.

The "CAMBRIDGE" Box of Instruments. 1s. 9d. per Box.

Cloth-covered box, containing every instrument required by Students entering for the Cambridge Local Examinations in accordance with the Official Schedule.

### THE "SAFETY" MATHEMATICAL INSTRUMENTS (Patent).

The "SAFETY" Mathematical Instruments are provided with a bow head which can be detached and screwed over the steel point, thus protecting it from injury and rendering it safe to carry the instrument in a satchel or in the pocket. One great advantage of these instruments is that, if the protecting portion is lost, an ordinary compass still remains; the compass takes a pencil of any size.

The "VIADUCT SAFETY" Pencil Compass ... .. 6s. 6d. per dozen.

The "VIADUCT SAFETY" Divider ... .. 5s. 6d. per dozen.

### RULED PAPER FOR MATHEMATICS.

The Ruled Paper supplied by the Educational Supply Association is noted for the quality of the paper and the accuracy of the rulings. Papers with a great variety of rulings have been prepared—which are supplied either simply as paper or made up into books.

Samples and Particulars of these will be forwarded on application.

# CLERGY MUTUAL ASSURANCE SOCIETY,

2 &amp; 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.  
 President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.  
 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.  
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS** of **MUTUAL LIFE ASSURANCE** without personal liability on highly favourable terms to  
**THE CLERGY AND THEIR RELATIVES.**

**ALL PROFITS BELONG TO THE MEMBERS.**

Accumulated Fund, **£4,242,820.**

Annual Income, **£453,897.**

Bonuses Distributed, **£4,256,464.**

## LOW PREMIUMS. LARGE BONUSES.

Notwithstanding the lowness of the Premiums charged, the **BONUSES** are on an **EXCEPTIONALLY HIGH SCALE.**

**NEW AND SPECIAL POLICIES.** Application is invited for the **PROSPECTUS**, and **Leaflets** explaining two new Policies, with valuable Options.

**1. WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

**2. PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

## SPECIMEN OF RATES FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

**NOTE.**—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

**No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.**

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

## FOR THE LOCAL EXAMINATIONS.

*NOW READY.*

## THE PRELIMINARY EDITION OF CARTER'S SCRIPTURE MANUALS.

### 1. ST. MATTHEW.

CROWN 8vo. CLOTH, 1s. NET.

Contains just what is wanted and no more. No difficult words. All explanations simple.

THE

## PRELIMINARY GEOGRAPHY

Of ENGLAND AND WALES, SCOTLAND, IRELAND, and INDIA, with an Introduction on **Physical Geography, Maps, Geographical Terms, position and climate in reference to Geography, &c., &c.**

By A. G. HAYNES, B.A.

CROWN 8vo. CLOTH, 1s.

**THE GEOGRAPHY OF INDIA** may be had separately, price 3d.

## SHORT FRENCH EXAMINATION PAPERS (110).

Each containing Six Idiomatic Sentences to render into French. Very useful for Oral Work. Second Edition. Price 2s. 6d., cloth.

"A very useful set of questions."—*Modern Language Quarterly*.  
 "We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers, 6s. net. (A list of errata is issued with this.) By H. E. LADELL, M.A., late Head Master of the London International College, Isleworth.

## THE PUBLIC SCHOOL SPELLING CARD.

Fiftieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

## FRENCH ESSENTIALS AND FRENCH CONVERSATION SENTENCES.

Third Edition. Price 2s. cloth. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

"The sentences are a useful addition."—*Bookman*.

## BOOKS BY ALL PUBLISHERS IN STOCK.

LARGE STOCK OF STATIONERY READY FOR IMMEDIATE DESPATCH.

**PROMPT EXECUTION OF ORDERS GUARANTEED.**

**RELFE BROTHERS, LTD., 6 CHARTERHOUSE BUILDINGS, ALDERSGATE, LONDON, E.C.**

# SELECT LIST

OF BOOKS FOR

## SECONDARY SCHOOLS.

**Text-Book of Geography.** By G. C. FRY, M.Sc. 4s. 6d.  
 This book is intended for use in the upper forms of schools and by candidates for the London University Matriculation, the Teacher's Certificate and Preliminary Certificate, and other Examinations of similar standard. It deals with both general and Regional Geography.

**The Government of the United Kingdom, its Colonies and Dependencies.** By A. E. HOGAN, LL.D., B.A. 2s. 6d.

The treatment of the subject falls under the following headings:—Introduction — Legislature — Executive — Judicial System — Local Government — Imperial Government.

**Elements of the Duties and Rights of Citizenship.** By W. D. ASTON, B.A., LL.B. *Third Edition.* 1s. 6d.

"Might be well introduced as a text-book into the upper classes of secondary schools."—*Guardian.*

**The School Arithmetic.** An Edition of the *Tutorial Arithmetic* for School use. By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath. *Second Edition.* 3s. 6d. Also in two Parts:—Part I., 2s.; Part II., 2s.

"The best arithmetic for schools on the market."—*Mathematical Gazette.*

**Geometry. Theoretical and Practical.** By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc.

PART I. Contains the matter of Euclid I., III. (1-84), IV. (1-9). With or without Answers. 2s. 6d.

PART II. Euclid II., III. (85-87), IV. (10-16), VI. 2s.

"One of the best books on modern lines."—*Oxford Magazine.*

**Plant Biology.** By Professor CAVERS, D.Sc., F.L.S., A.R.C.S., Professor of Biology at the Hartley University College, Southampton. 3s. 6d.

"The very best of the multitudinous works of this class that have passed through our hands."—*Guardian.*

**Life Histories of Common Plants.** By Professor F. CAVERS, D.Sc., F.L.S., A.R.C.S. 3s.

An Introductory Course of Botany based on the Experimental and Observational Study of Types.

**The New Matriculation Heat; The New Matriculation Light; The New Matriculation Sound.** By R. W. STEWART, D.Sc. 2s. 6d. each volume.

These volumes provide a complete school course of co-ordinated theoretical and practical work in Elementary Heat, Light, and Sound.

**Magnetism and Electricity, The School.** By R. H. JUDE, M.A., D.Sc. 3s. 6d.

"A useful text-book, that seems much sounder as regards fundamental conceptions than most elementary works on electricity."—*Oxford Magazine.*

**An Introductory Course to Chemistry.** By H. W. BAUSOR, M.A. 2s. 6d.

A text-book for beginners, written on modern lines.

**The Matriculation English Course.** By W. H. LOW, M.A., and JOHN BRIGGS, M.A., F.Z.S. 3s. 6d.

"The matter is clearly arranged, concisely and intelligently put, and marked by accurate scholarship and common sense."—*Guardian.*

**The Matriculation French Course.** By ERNEST WEEKLEY, M.A. *Third Edition, Enlarged.* 3s. 6d.

This book, though written primarily to meet the requirements of London University Matriculation Examination in French, is generally suitable as a school text-book, and as such has met with a wide adoption.

**The Tutorial Latin Grammar.** By B. J. HAYES, M.A., and W. F. MASOM, M.A. *Fourth Edition.* 3s. 6d.

"It is accurate and full without being overloaded with detail, and varieties of type are used with such effect as to minimize the work of the learner."—*Schoolmaster.*

**University Tutorial Press, Ltd.,**

W. B. CLIVE, 157 Drury Lane, London, W.C.

### CURRENT EVENTS.

At the meeting of members of the College of Preceptors on October 23, Prof. J. Adams will read a paper on "The Teacher's Imperfections: How to deal with them."

ON October 1 Prof. Adams will deliver at the College of Preceptors the first of a course twelve lectures to teachers on "The Practical Teacher's Problems." The lectures will be given on successive Thursday evenings.

Mlle. A. M. GACHET will address the Société Nationale des Professeurs de Français en Angleterre on "La Femme Poète," at the College of Preceptors, on October 31, at 4 p.m.

THE General Meeting of the Classical Association will be held at Birmingham on October 8-10.

THE Board of Education Library is closed for the purpose of removal to the new building in Charles Street, Whitehall, and will not reopen until October 15.

IN connexion with the meeting of the British Honours Association the University of Dublin conferred the following honorary degrees:—

D.Sc.: Mr. Francis Darwin, F.R.S.; Sir David Gill, K.C.B., F.R.S.; Dr. William Napier Shaw, F.R.S.; Captain Henry George Lyons, F.R.S.; Prof. Horace Lamb, F.R.S.; Prof. Charles Scott Sherrington, F.R.S.; Prof. Ernest Rutherford, F.R.S.; Prof. Archibald Byron Macallum, F.R.S.; Dr. Albert Kossel; and Dr. Ambrose Arnold William Hubrecht.

M.D.: Sir Thomas Lauder Brunton, Bart., F.R.S.  
 LL.D.: Sir James Augustus Henry Murray.

MR. NORIE MILLAR, of Cleve, Chairman of Perth School Board, the Rev. Dr. John Smith, Chairman of Govan School Board, and Lord Newlands ("whose recent benefactions to the University of Glasgow merit the gratitude of the whole profession") have been elected honorary Fellows of the Educational Institute of Scotland.

THE Russian Minister of Public Instruction has announced that official sanction will not be accorded to any of the Russian Universities to grant honorary degrees to Count Tolstoy.

SIR JOHN HOLDER has presented to the University of Birmingham a stained glass window for the Great Hall, illustrating various branches of University work. The cost is about £1,000.

DR. HENRY JULIAN HUNTER has left some £14,000 to Sheffield University.

**Appointments  
and Vacancies.**

MR. ROBERT FORSYTH SCOTT, M.A., Fellow and Senior Bursar, has been elected Master, of St. John's College, Cambridge, in succession to the late Dr. Taylor.

THE REV. E. W. WATSON, M.A., Professor of Ecclesiastical History in King's College, London, and Rector of Sutton (Bedfordshire), has been appointed Regius Professor of Ecclesiastical History in the University of Oxford. (The appointment is understood to have been declined by Canon Hensley Henson.)

THE Chair of English Literature in the University of Birmingham is vacant through the lamented death of Prof. J. Churton Collins.

PROF. D. J. HAMILTON has resigned the Erasmus Wilson Chair of Pathology in Aberdeen University, which he has held since 1882.

MR. PERCY T. HERRING, M.D., assistant in the Physiology Department of Edinburgh University, has been appointed to the new Chandos Chair of Physiology in the United College, St. Andrews.

DR. HUGH MARSHALL, Lecturer in Chemistry, Mineralogy, and Crystallography in Edinburgh University, has been appointed Professor of Chemistry in University College, Dundee.

IN Queen's University, Kingston (Ontario), the Rev. Ernest F. Scott, M.A. Glas., B.A. Oxon., of the South U.F. Church, Prestwick, has been appointed Professor of Church History; and Mr. Archibald Young Campbell, of St. John's College, Cambridge, Assistant Professor of Classics.

MR. A. H. MACKENZIE, M.A. Aberd., has been appointed Professor of Science and Manual Training at the Training College for Secondary Teachers at Allahabad.

THE REV. W. LOWER CARTER has been appointed Lecturer in Geology in the East London College.

MR. ALFRED W. GIBB, M.A., D.Sc. Aberd., has been appointed Lecturer in Geology in Aberdeen University.

THE REV. WILLOUGHBY C. ALLEN, M.A., Exeter College, Oxford, has been appointed Principal of the Church of England Theological College, Manchester.

THE REV. A. W. PARRY, B.A., B.Sc., Principal of Exeter Training College, has been appointed Principal of the South Wales Training College.

MR. ERNEST B. LUDLAM, M.Sc. Vict., Science Master, Ackworth School, Pontefract, has been appointed Science Master in charge of the Chemistry Department at Clifton College, in succession to the late Mr. W. A. Shenstone, F.R.S.

MR. F. W. ROGERS, M.A. Dub., has resigned the Head Mastership of Chelmsford Grammar School.

MR. G. AIMER RUSSELL, M.A., B.Sc., Rector of Peterhead Academy, has been appointed Rector of Paisley Grammar School, in succession to Mr. James Stirling, retired.

MR. K. V. PLUM, M.A. Oxon., assistant master at Epsom College, has been appointed Head Master of Skipton Grammar School.

MR. C. H. HIRST WALKER, M.A. Oxon., F.C.S., Head Master of Oldbury Secondary School, has been appointed Principal of the new Secondary School, Whitehaven.

MR. JOHN HENDERSON STEWART, M.A., B.Sc., Science Master, Bathgate Academy, has been appointed Senior Science Master at Peterhead Academy.

Literary Items. AMONG the forthcoming publications of the Oxford University Press we note "The Renaissance and the Reformation," by E. M. Tanner; a revised text of Aristotle's "Poetics" (with critical introduction, English translation, and commentary), by Prof. Bywater; "The Moral System of Dante's 'Inferno,'" by W. H. V. Reade; and fresh additions to numerous valuable series. In the Student's Series of Historical and Comparative Grammars, a "Comparative Greek Grammar," by Prof. Joseph Wright, is next on the list.

THE Caxton Publishing Company announce a comprehensive work, "The Book of Nature Study," in six volumes, written by well known authorities and edited by Prof. J. Bretland Farmer, D.Sc., F.R.S., of the Royal College of Science, London. The aim is to give detailed and systematic guidance to parents and teachers in introducing children to the study of Nature. Technical language is avoided as far as possible. The work is elaborately illustrated, and will contain a series of folding models showing internal structures, &c.

AN English translation of the studies and notes appended to the French edition of the first volume of Stubbs's "Constitutional History," by M. Petit-Dutaillis, Rector of the University of Grenoble, has just been published by the Manchester University Press.

THE Walter Scott Publishing Company is issuing an illustrated edition of Wilson's "Tales of the Borders" in twenty-four 1s. pocket volumes, and a new edition of Ibsen's works in six volumes, edited by William Archer. Interesting additions to various popular series are also promised.

General. THE Board of Education are prepared to receive applications both from men and women who either are, or are qualified to become, secondary-school teachers and who desire to obtain employment for at least a year in Prussia as assistants in secondary schools. Similarly, the Board will receive annually from the Prussian Kultus Ministerium lists of candidates recommended for appointment to secondary schools in England. Full particulars and forms of application from the Director of Special Inquiries and Reports, the Board of Education, Whitehall, London.

THE buildings at Eton College constituting the memorial of Old Etonians that fell in the South African war are now completed. The original estimate of the cost was some £40,000. The work is in Renaissance style.

A CHAIR of Irish History has been founded in the University of Notre Dame—the largest Catholic educational institution in the United States.

CLASS LISTS

OF CANDIDATES WHO HAVE PASSED THE CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS.—JULY, 1908.

LIST OF SUCCESSFUL CANDIDATES AT COLONIAL CENTRES.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively:—

- a. = Arithmetic. | d. = Drawing. | f. = French. | ge. = German. | h. = History.
al. = Algebra. | e. = English. | g. = Geography. | gr. = Greek. | l. = Latin.
s. = Scripture.

The small figures 1 and 2 prefixed to names in the Second and Third Class Lists denote that the Candidates were entered for the First and Second Classes respectively.

[Bracketing of names denotes equality.]

BOYS.

- FIRST CLASS [OR SENIOR].—PASS DIVISION.
Turtle, M.A. d. Queen's Coll., Nassau, Bahamas
Lightbourn, P.M. Queen's Coll., Nassau, Bahamas

## COLLEGE OF PRECEPTORS.

PROFESSIONAL PRELIMINARY EXAMINATION—PASS LIST.  
SEPTEMBER, 1908.

THE Supplementary Examination by the College of Preceptors for Certificates was held on the 8th, 9th, and 10th of September in London, and at five other local centres—viz., Birmingham, Bristol, Leeds, Liverpool, and Manchester. The following candidates obtained Certificates:—

## First Class [or Senior].

## Pass Division.

Barton, M. H.	Gillett, S. H.	Packman, C. W. G. V.
Benson, F.	Hills, W. A. S.	Wedgwood, G.

## Second Class [or Junior].

## Honours Division.

Kenyon, J. H. S. h.	Penman, Miss J. e. h. g. f. l.	van Geyzel, L. E. g.
Peak, N. a.	Samuel, J. T. ch.	Whitten, M. G. a. al. f. g. e.

## Pass Division.

Austin, W. A. a.	Garry, E. W. a.	Ord, G. g.
Bann, W. W.	Griffiths, A. E.	Parker, C. a.
Bates, R. N. a.	Hands, P. T.	Pearse, H. E. a.
Blake, P. a.	Heddy, W. R. H. a.	Pearson, M.
Bleakley, A. D.	Hollis, H. F.	Phillips, P. F. G.
Boucher, H. M.	Horsley, L.	Price, H. P.
Breese, M. C. a.	Jenkins, E. E.	Richards, L. P.
Buck, E.	Jennings, E. A.	Rowbotham, E. S. a.
Buckley, H. H.	Judge, E. W.	Stevens, S.
Buer, W. B.	Kemp, J. W. h. a.	Stewart, W. A.
Cockcroft, W. L.	Kersh, M. E.	Stokes, G. A.
Cole, A. H. a.	Kettlewell, N. H. a.	Taylor, H. F.
Cook, Miss J. M.	King, J. H. a.	Townshend, O. B.
Crossley-Meates, B.	Klosz, R. L.	Tydemann, B. V.
Cutting, J. A. W. a.	Millett, H.	Wallace, P. A. a.
Davenport, T.	Moors, R. H.	Ward, E.
Davies, W.	Mulliner, N.	Welton, F. E.
Deane, G. S.	Mullins, G. E.	Williams, H. B.
Elphick, S. E.	Neal, F. J. a.	Woodcock, E. C.
Fisher, A. L. W.	Neal, J.	Woods, R. S.
Fraser, A. L.	Nicholson, R.	

N. B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively:—

a. = Arithmetic	g. = Geography.
al. = Algebra.	ge. = German.
ch. = Chemistry.	h. = History.
e. = English.	l. = Latin.
f. = French.	

## THE COLLEGE OF PRECEPTORS.

## MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on September 19. Present: Mr. E. A. Butler, Vice-President, in the chair; Prof. Adamson, Dr. Armitage-Smith, Mr. Baumann, Rev. J. B. Blomfield, Rev. A. W. Boulton, Mr. Brown, Mr. J. L. Butler, Mr. Hawe, Rev. R. Lee, Mr. Millar-Inglis, Dr. Morgan, Mr. Pinches, Mr. Rushbrooke, and Mr. Vincent.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Summer Examination for Diplomas had been held on August 31 to September 4, and had been attended by 343 candidates. The Professional Preliminary Examination had been held on September 8 to 10, and had been attended by 204 candidates.

He reported that the Local Examinations conducted by the College on behalf of the Newfoundland Council of Higher Education had been held at 100 centres in June last, and the class lists of the successful candidates, together with the examiners' reports on their work, had been sent out to the Newfoundland authorities on the 22nd of August. The total number of candidates examined in the four grades was 2,297.

A proposal made by the Council of the Law Society, for a common form of certificate to be supplied by examining bodies whose certificates are accepted in lieu of the Law Preliminary Examination, was referred to the Examination Committee for consideration.

The report of the Finance Committee was adopted.

It was resolved that the name of a member of the College, against whom a conviction had been recorded in a criminal court, should be removed from the Members' List, in accordance with Sect. I. cl. 8 of the By-Laws.

Mr. C. Pendlebury, M.A., 40 Glazbury Road, West Kensington, was elected a member of the Council.

The following persons were elected members of the College:—

Mr. G. H. Green, L.C.P., 83 Seymour Road, Harringay, N.  
Mrs. D. M. Hogben, Ivydene Hall, Great Malvern.

The following books had been presented to the Library since the last meeting of the Council:—

By the AGENT-GENERAL FOR NEW SOUTH WALES.—Annual Report of the Department of Mines, New South Wales, 1907.

By DR. A. E. C. DICKINSON.—Beazley's Dawn of Modern Geography, Vol. II.; Labande's Un Diplomate Français à la Cour de Catherine II. (2 vols.); Maspéro's Dawn of Civilization (Egypt and Chaldea), and the Passing of the Empires (850 B.C.—330 B.C.).

By SIR WILLIAM MATHER.—Humberson's Short History of National Education in Great Britain and Ireland.

By G. BELL & SONS.—Ashton's Intermediate Grammar; Baker and Bourne's Elementary Mensuration.

By A. & C. BLACK.—Reynolds' Asia (Regional Geography).

By BLACKIE & SON.—Blackie's Elementary Modern Algebra, Part III.; Clark's Laboulaye's Yvon et Finette.

By HACHETTE & Co.—Bue's Graduated French Composition; Ceppi's French Lessons on the Direct Method (Intermediate Course); Paillardon's La Vie par l'Image.

By LONGMANS & Co.—Report on Moral Instruction and Training in Schools (2 vols.).

By METHUEN & Co.—Chottin's Remy le Chevrier; Evans's La Bataille de Waterloo; Hett's Short History of Greece; Lydon's Preliminary Geometry.

By the OXFORD UNIVERSITY PRESS.—Smith's Bouët-Willaumez's Batailles de Terre et de Mer.

By RIVINGTONS.—Pardoe's Transitional French Reader.

By the UNIVERSITY OF LONDON.—The Libraries of London.

Calendars of Glasgow University; University of Manitoba; University College, Bristol; St. Andrews University; The London School of Economics and Political Science.

## INTERNATIONAL MORAL EDUCATION CONGRESS.

## PRESIDENTIAL ADDRESS.

By Prof. M. E. SADLER.

## THE SCHOOL COMMUNITY.

It may be convenient if I attempt to sketch in outline the plan which has been prepared by the Committee for our discussions during the Congress. We begin by considering the ethical aims of a school, elementary or secondary; day school or boarding school; for boys alone or for girls alone; or for boys and girls together. We propose to examine the means which each kind of school can command in its task of helping in the formation of character, and to review the limitations under which the work of each is, necessarily or unnecessarily, at present done. It will be observed, therefore, that the programme takes the *school community*, not the individual pupil, as the unit for our first consideration. This is significant of the educational thought of our time. In an age which throbs with individualism and which is possessed by an intense desire for self-realization and for full personal development, our wisest educators see that there is a moral influence of great value in the responsibilities and collective duties imposed upon its individual members by a school community which is morally healthy, wisely organized, largely self-governing, and not too closely watched. It is fitting that an educational congress held in England emphasis should thus be placed upon the school community. For it was in England that nearly eighty years ago, at a time when the spirit of individualism threatened to become too self-assertive through the stir of industrial and commercial life which resulted from the development of the factory system and our rapidly extending trade, Thomas Arnold of Rugby and his contemporaries (for in this great work Arnold stood most conspicuous but not alone) developed the restraining and moralizing power of self-government in a school community, set among surroundings which appeal to the imagination, which cultivate the sense of beauty, and which inspire loyalty to what was noble and self-sacrificing in the past. The idea of the school community is a medieval idea touched by the modern spirit. England, the pioneer of new developments of the factory system, is of all countries one of the most conservative in the continuity of her educational tradition. Thomas Arnold's name we honour to-day as the man who first impressed upon modern educational thought the value of the school community as a factor in moral training and in the formation of character. But Arnold was a Wykehamist and an Oxonian. At Winchester and at Oxford he had learnt the moral power of collegiate life. And the magical influence of Winchester and of Oxford, and of other great institutions of similar lineage and like antiquity, is in part due to the fact that there, as in some other English institutions, there still is preserved much that was best in the tradition of the Middle Ages.

*Factors in Corporate School Life.*

Regarding, therefore, the corporate life of the school as being of especial importance, we pass on to the next discussion on the programme of the Congress—namely, to the analysis of the factors which make this corporate life most potent for good in its influence upon character. Of capital importance in this connexion is the personality of the teacher. The power, the secret sources, of personality are difficult to analyse. But it is a kindling ray of sympathy and insight that enables personality to transmit its power. And with this must go the power of example and, in appealing to the confidence of young people, the half instinctive choice of right methods of approach. A country which desires for itself an inspiring and invigorating education will, if it allow itself to be guided by unmistakable evidence, do wisely to attach very high importance to the human element in its educational organization. It will not be niggardly of human influence, however generous it may be with bricks and mortar. It will not choose its teachers by intellectual tests alone. It will attach an even greater value to pastoral instinct and to the spirit of self-sacrifice than to the possession of a brilliant University degree. It will not allow its teaching staff to be masculine in the wrong places, or get too overwhelmingly feminine in others. It will enable its teachers to know their pupils one by one, at home as well as at school, and to have regard to their individual needs. It will see that the teacher receives exact and careful preparation for his future duties, and is enabled and encouraged to go on learning how to fulfil them with deeper insight and with ripe experience illuminated by study and reflection. And, if it is wise, the community will not allow anxious fears for the future, and the dread of want or dependence in old age to harass the teacher's mind and to darken the cheerfulness of a happy and unselfish disposition.

A second factor in the corporate life of the school, to the discussion of which the Congress will next proceed, is the intellectual and moral influence of a well-chosen course of study directed by teachers who thoroughly know their subject and who are determined that their pupils should understand what they learn and (even though it be but a little) learn it well.

A third factor in the corporate life of a school, and consequently next to be discussed at the Congress, is the organization of those duties and recreations which teach young people, through having responsibilities, to rise to the height of the graver responsibilities which await them in later years. This side of school organization must be determined, in large measure, by sensible medical advice. In the moral tone of a school a great deal depends upon open windows, sunlight, wise diet, easy clothing, cold water, and plenty of sleep. Experience also shows that school life may be kept fresh and wholesome by well chosen organized school games, provided that games are not allowed to dominate the situation and to become the one fount of honour among the young. There is also strong reason for thinking that the moral and character-forming influences of a school are strengthened by making constructive, practical work—"real work," as boys call it, work done for the needs of the community in a spirit of thoroughness, of science, and of service—a very much more important part of school training than the sedentary traditions of the Revival of Learning have so far allowed. We have all, I venture to submit, much to learn from the experience of the best industrial schools.

*"WORDS IN SEASON WISELY SAID."*

But, apart from the corporate life of the school, there must be, and in good education always is and always has been, some direct imparting of moral ideas. Men and women need the inspiring force of a clearly apprehended religious and moral ideal. The Congress will therefore proceed to discuss how far such an ideal should be directly inculcated upon the pupils, having regard to the recalcitrancy of youth and to the fact that the efficacy of sermons is not always so great as the preacher, warm with his own emotions, sometimes allows himself to assume. The Congress will consider the moral influence which may be exerted through skilful and tactful suggestion, whether such suggestion be conveyed by the teacher's tone of voice and expression or by the lessons read from his bearing and his life, or by the texture of the school curriculum, or by art and by music, or by the inspiration of poetry and of noble prose, or by the dignity and reverence shown in school festivals and worship, or by the beauty of school buildings and of playing-fields which bear witness to the liberality of benefactors and awaken honourable memories of the past.

Apart, however, from such indirect and individual suggestion,

however skilfully may be planned its incidence upon the heart and mind of those sensitive to its teaching, the long experience of educators (including in that category parents and employers of labour and even elder comrades at school or at home) has led to the unanimous conviction that there is a need at the right moment for words in season wisely said. This is the germ of what, in technical and rather forbidding language, we call direct moral instruction. How far such instruction should be extended, how far it should be punctually recurrent, how far it should be anticipated by its recipients at a given hour in the cycle of each week or day are subjects upon which the Congress hopes to learn much from the experts by whose names the roll of this Congress is adorned. I venture to allow myself but one observation. Some difference of opinion upon this important subject may, I think, be traced to an unconscious divergence in educational ideals. At the present time two ideas of the right organization of a school are in contrast amongst us. One of these views lays especial stress upon what may be called the didactic power and duty of the school. The other view lays especial stress upon the educative power of the varied activities of a school community. Those who incline to the first of these two views instinctively turn to methods of moral instruction which repel and even irritate those who incline to the second. But both agree in the belief that the highest work of a school is to kindle noble ideals of life and of duty. For my own part, being a member of the party of the Left-Centre, I suspect that neither of these two ideals holds the whole of the truth, and that neither in its extreme form is really applicable to all the needs, the complicated and elusive needs, of the young. Perhaps the discussions of the Congress may help us to a synthesis of the two conflicting views. Perhaps we may be led to think that the right course is to blend with the more abstract and didactic part of school work, especially in the elementary and middle secondary schools, a larger measure of constructive occupation and of self-directing activity. Presiding over our deliberations might stand two busts, those of Pestalozzi and of Herbart; with perhaps a few apt quotations from John Dewey.

But, to whatever conclusion we incline, we cannot but be impressed by the profound and immediately practical character of the problem under review and by the fact that the roots of it strike down into the deepest things. The organizers of the Conference have therefore (wisely in my judgment) determined to invite distinguished representatives of different schools of thought to submit to us the results of their mature reflection upon the place which religious education should have in moral training, and to communicate to us the results of the experience gained in many types of schools by those imparting religious instruction on the one hand, or civic and moral instruction upon a basis detached from theological teaching on the other. I am persuaded that nothing but good can ensue from the temperate and respectful consideration of these vital matters, at a gathering attended by scholars and teachers, many of whom bear illustrious names. You will not, I venture to hope, regard me as passing beyond the limits of my duty if I feel it right to state, with deep respect for the convictions of those who differ from me, and with an earnest belief that we have all much to learn from the practice and criticism of those who hold a view conflicting with our own, that in my personal judgment there are certain parts of moral education, necessary to the good life, which are inseparable from one or other form of religious belief.

*RELATIONS BETWEEN HOME AND SCHOOL.*

But the school is not a thing apart. It is influenced by social conditions and by the home. The Congress will therefore proceed to discuss the relations between home and school. It will also review the special difficulties of schools in poor districts; the need for educational care through the critical years of adolescence; the work of boys' and girls' clubs; the influence of old scholars' associations; the educative power of holiday camps for boys and girls alike; the work of continuation classes in training for citizenship, for self-respect and skill in practical occupations and for the making of good homes; and (not least important) the remarkable influence of the Adult Schools, of the Workers' Educational Association, and of the People's High Schools in Denmark in shaping character and in inspiring young men and women with a worthy ideal of life.

This will bring the Congress, in its review of the relations between schools and the life of the outside community, to the consideration of biological questions of great moment—to the influence of heredity and of environment, and to the educational

needs which arise in dealing with the physiological and psychological conditions induced by adolescence.

#### SPECIAL PROBLEMS.

May I, in conclusion, emphasize three points as deserving special consideration?

First, how far is it possible, under present conditions, for our public elementary schools, which train the vast majority of the citizens of the future, to furnish for their pupils the precious character-forming influence of a corporate school life? Is it not desirable that the classes, committed to the charge of the teachers, should be made smaller? But (to use Bishop Berkeley's word) one query more: Can a teacher individualize more than thirty or thirty-five pupils in one class?

Secondly, should not more be done in the course of preparation at our Day Training Colleges especially to give teachers the opportunity of more systematic preparation for the duty of moral education? Is it not important that the teacher should be equipped more fully than is often now the case, with the knowledge needed for the task of guiding conduct and of endeavouring to impart faith in a moral ideal? And, if the answer to these queries is in the affirmative, ought not the period of the teacher's professional training to be extended, in order that the course of preparation may thus be deepened without risk of overpressure and of intellectual congestion?

Thirdly, is it not necessary that, under the conditions of modern life, more should be done to give educational help and guidance to young people during the years of adolescence? So far as statistics enable us to judge the true state of the case, not more than one out of every three children who leave the elementary schools of England and Wales at thirteen and fourteen years of age receives, during the years which follow, any kind of systematic educational care. Far too great a number pass out of the range of all good educational influence. Far too few receive the regular training which might help in quickening an ideal of personal and civic duty. This surely is a problem which calls for the earnest consideration of all educators, and of the statesmen to whom is committed the guidance of governmental effort in national education.

#### THE SCOPE AND AIM OF ETHICAL EDUCATION.

By FELIX ADLER,

Professor of Applied Ethics, Columbia University, New York.

Ethical education must embrace human conduct in all its branches. Ethics is not "three-fourths of conduct," or any other fraction of conduct, but controls, or should control, the whole of conduct. The practice of singling out as specially moral the virtues of social intercourse, such as gentleness, devotion to the happiness of others, self-sacrifice, &c., is misleading in the extreme. It gives colour to the belief that the moral end is but one along with other ends of life, such as the ends of science, of art, of material enrichment, of pleasure, &c.

But ethical science is the science of the sovereign end, the science at least which sets out with the assumption that there is a sovereign end and which undertakes to search for it. . . . It follows therefrom that, in all properly ethical teaching, the thought that there is an aim transcending all others needs to be constantly brought home to the pupil, and that he is to be assisted in discovering the relations which connect all the minor with the major ends. The saying of Aristotle still holds good: "If, then, there be an end which we desire for its own sake, and if we are not for ever to choose one thing for the sake of something else, since this would be a *progressus ad indefinitum* which would stamp human endeavour as idle and vain, it is evident that this final end must be life's highest good."

Further, it follows, so far as school education is concerned, that the ethical note is to be sounded in the teaching of all branches of the curriculum, in the teaching of mathematics, of natural science, in the manual training no less than in history, literature, and art. If the whole nature of man is to be ethically affected, and not merely that side of him which is prominent in social intercourse, the system of instruction in all its branches must be made to contribute to this result. It follows also, as a matter of course, that the feelings and the will must be enlisted in behalf of the ethical aim. Indeed, one of the gravest perils connected with ethical education, as all agree, is that of over-emphasizing the intellectual side of it. . . .

Ethical education should aim to include the whole nature of the pupil and not merely to inculcate the virtues of social intercourse. This was the first general statement submitted. The second is: ethical education must be pervaded by the ethical

spirit. Emphasis on the spirit, as opposed to the letter, is indeed a commonplace. But it behoves us to attach a precise meaning to the term *spirit* if we would understand the real scope and force of the above statement. The ethical standard is an ideal standard, to which we can never more than remotely approximate.

The worth of a man consists never in his actual moral achievements; but in the constant effort he puts forth towards higher achievement. The glint of goodness, so far as it shines into human life, appears, so to speak, in the moment of transition from one level to a higher level. The ethical spirit, therefore, consists in the blending of a profound humility, respecting the results one has attained, with the unrelaxing determination still to strive. And the true ethical teacher is he who communicates to his pupils the impulse to strive. There need be no fear on this account that the pupil will overlook the distance which separates him from the master. On the contrary, recognizing the comparative height to which the master has risen above him, and impressed at the same time with the small value which the latter attaches to his superior acquirements, the pupil will be shamed out of his own conceit, and realize as he could not otherwise do the infinity of the task which is set to human beings.

It would seem, then, that the personality of the teacher is the decisive factor in ethical education. But the phrase, "personality of the teacher," is to be understood in the sense just expounded. It is not enough, as is commonly said, that the teacher shall be right-minded, impartial, honest, strict in the performance of duty, in order to impress the same qualities on his pupils. All these qualities may, after all, but produce a kind of technical righteousness. Without the ethical spirit, the spirit of humility and striving, they will fail to reach the mark.

And one other most important amendment of the common view as to the influence of the personality of the teacher I would here venture to submit. It is undoubtedly true that the right teacher, the teacher "by the grace of God," may, and often does, exercise an influence for life upon his pupils. But yet the very best results cannot be reached by a single teacher, a fine personality in the midst of other less worthy or unworthy members of the staff of teachers. It is the whole staff in their relations with one another that produces the most lasting effect. It is the exemplary conduct, not of one, but of the whole body of masters acting in one spirit and for one purpose that will leave its abiding trace on the nature of the pupils and reconstitute their life in its inmost motives.

The greatest difficulty in the discussion of this entire subject, however, remains. It has sometimes been said by adherents of the movement for ethical education, as well as by its critics, that the object of the movement is to substitute a naturalistic morality for a supernatural morality, a secular or mundane for a theological, a scientific for a religious morality. I cannot too earnestly express my complete dissent from such views as these.

Again, it has been held that in ethical education, avoiding contentious issues, we should confine ourselves to propagating those points of morality which are common to the different philosophical and religious sects, to those simple and fundamental moral teachings upon which all can agree. To this common fund theory, however, as it may be called, there is a twofold objection. First, that the common fund does not really exist, or at all events to an infinitely smaller extent than is supposed. . . . The second objection is that the method of arriving at agreement by the elimination of differences, if it be applicable at all, would lead us to a residual minimum of morality, wholly devoid of vitality and of the power to move. . . .

The hope of agreement and progress in ethical education depends for its realization upon our willingness to stake everything on verification in experience. But by experience I here mean experience in the moral field, and by verification the method appropriate to the moral field and not some alien method that may apply in other fields. The great step, it seems, to be taken at this time is to bring about at least a provisional segregation of the moral sphere from that of science, art, &c., to study patiently the phenomena that lie within this sphere, and no longer to treat it as a dependency either of theology on the one hand or of physical science on the other. Of the sort of paramount principle or rule which I have in mind as forming the starting-point of ethical education, examples may be found in the golden rule of the New Testament and in the Kantian rule: "Treat thy fellow man, never merely as a means, but ever also as an end." But other formulas have to be found covering sections of the moral sphere to which these do not adequately apply, and the task of discovering them will be the prime task

of the student of a progressive ethical science. It will sufficiently appear from what has been said that the help of the metaphysician, of the theologian, and of the earnest thinker, whatever his personal bias be, so far from being discarded, is liberally welcomed.

Finally, a few statements to indicate my position in regard to some practical aspects of the movement for ethical education.

I fear nothing so much as a too rapid extension of this movement, a mushroom growth of it. The work is so difficult and delicate that it should not be entrusted to any except to teachers thoroughly trained and possessing the qualifications before mentioned.

If it is put into the hands of others harm will come of it instead of good, and a reaction will inevitably follow. Of no other subject is it so true—*Corruptio optima pessima*.

Direct teaching, whenever it is given, should not be given in the form of ethics lessons. The assimilation of it to the ordinary school lesson should most carefully be avoided. It should take the form of intimate communion between the master and his pupil friends. It should consist of a series of talks on the wisdom of life, embodying the experience which an older seeker after moral salvation has gathered, and which he passes on to those who are setting out, if perchance he may aid them in their quest.

But it seems to me best on all accounts that this part of the work should not be undertaken by the State, both for the reason already given, the scarcity of suitable teachers, and because State teaching, as at present organized, almost inevitably tends to become formal and mechanized. The task of direct ethical teaching had better be left, for the present at least, in the hands of voluntary associations.

#### IDEAS AS MORAL FORCES.

By Prof. JOHN ADAMS, University of London.

It is generally admitted that such ideas as *evolution* and *liberty* are moral forces. But we feel that these form part rather of the social environment than of the equipment of the individual. In moral education we are more interested in those ideas that the individual regards as specially his own. The plain man usually regards his ideas as a sort of possession. He has worked for them; he has them; they are his property. This attitude of mind clearly corresponds to the psychological view of the ideas as presented content, as material on which the soul works, as the furniture of the soul. From this standpoint ideas are inert things that can be manipulated by some force outside themselves, but that have no force of their own. The newer view is that ideas are in themselves forces. In dealing with ideas there is danger of that hypostatization to which we are all tempted. The man who regards ideas as his possessions naturally treats them as if they have in some sort an existence apart from himself; and even when the newer view is adopted this tendency remains. Psychologists, even while warning others of the dangers of hypostatization, are frequently led into speaking of ideas as if these were independent entities. They talk, for instance, of ideas acting and reacting upon each other: an obvious impossibility unless they have an independent existence.

The true view is that the soul is one and indivisible, and the ideas are the manifestations of its activity. In their fight against the faculty psychology, recent writers have striven to avoid hypostatization by referring to what are usually called faculties as "modes of being conscious." The expedient admits of further application. An idea is as much a mode of being conscious as is, say, memory or imagination. The ideas are, indeed, only highly specialized faculties. This is illustrated by the newer way of describing the concept. The old view was that by a process of abstraction and generalization we contrived to reach a general idea that formed a part of our stock of knowledge. The concept was static. The new view is that the concept means the acquiring of the power to deal intelligently with certain contingencies that arise in a more or less uniform way. My concept of a dog, for example, is the power I have acquired of behaving myself more or less intelligently towards dogs. Thus, our ideas cannot properly be described as our possessions. It is quite as reasonable to say that they possess us as that we possess them. Indeed, it is quite common to hear such an expression as "he is completely possessed by that idea." The truth is that we *are* our ideas and cannot be separated from them. Whatever force an idea has comes from the soul of which it is a manifestation. But ideas are forces none the less, and can be manipulated from without as well as from within. Their importance in moral education cannot well be over-estimated.

The process of moral education is well expressed in a word that used to be very popular in religious writing—*edification*. It is the educator's business to build up the soul, and the ideas are the forces at his disposal. From this point of view ideas are the paid-up capital of experience. They are the power left behind as the result of the exercise of function. The ideas that form the equipment of a person at any given moment *correspond* to the world of his experience. This does not mean that there is any real *resemblance* between mental content and the external world. We do not carry about in our souls tiny replicas of our material environment. What we have acquired is an organized system of reactions that enables us to meet the exigencies of an experience that is continually varying, but varying according to certain reasonably uniform laws.

The moral application may be made clear by a consideration of what takes place in temptation. What we have here is the attempt of some external influence to call into activity certain ideas that already exist in the soul that is under temptation. It does not consist in the putting of evil ideas into the soul—this would only be the preparation for future temptation. "For from within, out of the heart of men, proceed evil thoughts" and the rest.

To strengthen our pupils against the hour of temptation, it is not enough to supply them with a mental content of ideas that are good. It is the force of the ideas that counts. In the ultimate resort no idea can be regarded merely as presented content; every idea has some presentative activity, however small. The way to increase the presentative activity of an idea is to arrange that it shall be frequently brought into consciousness. This secures a quantitative increase; but if we wish to give the activity a bias to act in a given direction, we must regulate the conditions under which we present the idea. The same idea presented to different souls will produce different exercises of activity according to the previous experience of the souls in question.

The educator has not the power to restrict completely the ideas that may be presented from without to the souls of the pupils. Even if the monastic ideal is applied in its most drastic form there remains the moral surd of that relative non-ego that we call the body. "Dich kannst du nicht entfliehen." The teacher's negative work is to reduce undesirable presentations to a minimum. On the positive side he has to build up all the ideas into a whole that is organized in such a way as to lead to those forms of activity that he desires. Ideas of evil may be present in the soul of the pupil; but they may be so related to ideas of good that the total resultant of the idea forces is morally satisfactory.

This deliberate moral organization is the best way to meet the difficulties of those who are never tired of complaining that a knowledge of right by no means secures that right shall be done. It is well, at the same time, to point out that it is too frequently forgotten that knowledge of evil does not necessarily mean that evil will be done. The sight of means to do good deeds may have as powerful effects as the sight of means to do ill deeds. As a process temptation works both ways, though custom has limited the word to the less desirable application. The chief lever at the teacher's disposal in manipulating ideas is suggestion.

*Conclusions:* (1) Ideas are never wholly passive; (2) the presentative activity of ideas can be deliberately increased by the teacher; (3) character can be formed by the manipulation of the idea forces quantitatively and qualitatively.

#### LONDON SECONDARY EDUCATION.

THE Report of the Executive Officer to the London County Council on Higher Education for the year ended July 31, 1907, contains some interesting facts, especially with regard to secondary-school accommodation, with regard to which some striking comparative figures are given. The Report says:

It has often been stated that one of the principal weaknesses in the educational system of this country has been the inadequate supply of secondary schools. The great public schools for boys and the high schools for girls have provided for the needs of those who can afford to pay fairly high fees, but there has been no national system of secondary education adequate to meet the needs of all classes of the population. The Royal Commission on Secondary Education in 1895 called public attention to this need, and advocated the establishment of Local Authorities which should be empowered to provide secondary education. It was not, however, until the passing of the Acts of 1902 and 1903 that

such Authorities were created, and there is little doubt that the power given to County Councils under those Acts to organize and promote secondary education within their areas is one of the most useful features of that legislation. Before giving details as to secondary-school accommodation in London, it may be interesting to consider briefly the provision made for secondary-school education in certain foreign countries and in certain counties and towns in England.

#### SECONDARY-SCHOOL ACCOMMODATION PER 1,000 OF POPULATION.

##### (a) Public and Private Schools.

	Boys.	Girls.	Total.
Essex .....	6.11	5.76	11.87
Hampshire .....	6.58	3.88	10.46
Derbyshire .....	3.53	1.54	5.07
Exeter .....	11.14	13.73	24.87
Birkenhead .....	6.59	8.72	15.31
Newcastle-upon-Tyne...	6.79	5.88	12.67
Liverpool .....	4.14	3.70	7.84
Huddersfield.....	3.99	3.46	7.45

##### (b) Public Schools only.

	Boys.	Girls.	Total.	Over 9 years of age only.
Prussia.....	5.04	—	—	12.67
Connecticut...	—	—	—	13
Massachusetts...	—	—	—	17.26
Maine .....	—	—	—	18.94
United States ...	—	—	—	10.61

No figures are available in the London area with regard to the provision of accommodation in private schools, but as regards accommodation in public and semi-public schools, a preliminary investigation shows that the figures may be taken as follows:—

	Boys.	Girls.	Total.
London .....	3.4	4.3	7.7

These figures are comparable with those given under (b) from Prussia and America which relate to public schools only.

In comparing the figures for London, however, with those of the United States and Prussia, it should be remembered that the accommodation in London provides for a very large number of children under the age of thirteen years. Such children in London form about one-half of the total of those in secondary schools.

Even allowing for the fact that a considerable proportion of London children of the upper and middle classes receive their education at boarding schools in the country, it will be clear from the facts given above that the provision of secondary-school accommodation for London falls very far short of that of Prussia, and very short not only of that of the progressive States of the American Union, but even of the average for the whole Union. In order to provide 10.61 secondary-school places per 1,000 of the population in London (the standard for the United States generally), it would be necessary to increase the present accommodation by nearly one-half.

The proposals at present under the consideration of the Council provide for the erection of buildings accommodating 5,010 pupils. This, however, does not represent the increase in accommodation which will be provided, since no fewer than 3,370 places will be required in lieu of places now provided in buildings which are unsatisfactory or which will be required for other purposes. The proposed increase is therefore only 1,640. It is estimated that this increase will enable the Council to meet the assessed needs of its own scholarship holders.

Since the establishment of the Council's scholarship scheme in 1905, the problem of increasing the secondary-school accommodation in London has been a pressing one. Some additional accommodation has been secured by giving building grants to aided schools, whereby they have been enabled to increase the number of pupils admitted, although in certain cases the additions have not allowed the number of children to be appreciably increased, but have merely saved the school from ceasing to be recognized by the Board of Education on account of overcrowding.

The Executive Officer goes on to show that the greater part of the secondary education in London is provided in schools not maintained by the Council. There are about 90 such schools under the management of governing bodies, of which 40 are independent of the Council's assistance. The Council does, however, make grants to 51 secondary schools, so as to enable them to maintain a higher standard of efficiency or to accommodate a larger number of pupils than would be possible with the income from fees and endowments alone.

With regard to the training of teachers, it is estimated that the Council will require to engage annually for the next few years 1,450 trained, certificated teachers. Of this number 570 are expected to come from colleges not maintained by the Council, leaving 880 to be supplied from the Council's training schools. The annual output from these schools in 1907 was 745; but arrangements are being made to provide further accommodation.

## REVIEWS.

MISS BEALE.

*Dorothea Beale of Cheltenham.* By Elizabeth Raikes.  
(10s. 6d. net. Constable.)

In her own "History of the Ladies' College," Cheltenham, Miss Beale narrated very carefully the origin and growth of the institution, and she left ample materials for the continuation of the story from 1900 down to the time of her death in the end of 1906, as well as "many letters, diaries, and autobiographical fragments," which, with letters and reminiscences of friends, furnish adequate means of depicting her personality. Her biographer has made very full use of the materials, and has carried out her task with thorough sympathy and with undoubted success. The volume will be prized as a gracious memorial by pupils and friends of Miss Beale, and it will be welcome to the public as a record of educational development under the guidance of a devoted, energetic, and masterful personality. There are ten illustrations, including three portraits of Miss Beale at different periods.

"The daughter must have resembled her father both in literary taste and zeal." We could have wished to learn more about her father: he "belonged to a family with cultivated tastes and interests"; he was a "busy man" pursuing many interests; he was "fond of music," and "was also a prime mover in getting up concerts of sacred music"; and apparently his circumstances were comfortable. His letters show that he was an eminently sensible man. "The home atmosphere was serious and intellectual: Dorothea said she owed much to the literary tastes of her parents"; and she grew up in the midst of "the constant practice of all those qualities which are the law of a well ordered religious home." Compelled to leave school at thirteen, she entered upon "a valuable time of education under the direction of myself"; already "dreaming much, and seeking for a fuller realization of the great spiritual realities, which make one feel that all knowledge is sacred." In 1847, at sixteen, she was sent to a fashionable school for English girls in the Champs Elysées—an experience terminated by the Revolution of 1848. She was now "a grave and quiet girl," "remarkable even in a studious sedentary family for her love of reading and study," not without knowledge of "a stern side of life" (which is left unexplained), and with "an innate sense of duty already hedging her steps and protecting her strong, eager spirit from flights of 'unchartered freedom.'" We can quite understand how she would assist the studies of her younger sisters and brothers; we can well believe that she conscientiously darned socks; but that she "dressed a doll," even "for a little sister's birthday"—well, it might have been a duty, and "it is on record."

At Queen's College Miss Beale was first a pupil and then a teacher, and her experience here proved an important factor in her training for her life's work. But she soon began to feel "that there was a tendency for the whole administration to get too much into the hands of one person, and that there was consequently not enough scope for that womanly influence which she felt to be so important where the education of young girls is concerned." So she resigned and took a smaller salary at Casterton. But there "the constant restraints, the monotonous life, the want of healthy amusements," and so forth, had produced "a spirit of open irreligion and a spirit of defiance very sad to witness"; and the strain of teaching a round dozen of different subjects was severe, to say nothing of the aggravation of difficulties by theological differences. One more remove, and Miss Beale found her fitting sphere—the realization of a dream of her youth—"an air-castle school, with a central quadrangle, cloisters and rooms over": she was elected Principal of the Ladies' College, Cheltenham, not indeed without more religious questionings, in 1858. Here she reigned and governed for forty-eight years. She found the place brick and she left it marble.

The task was far from easy. The College was in a very shaky condition when she took it in hand, and administrative difficulties were sufficiently trying. How the Principal eventually triumphed by tact, resolution, and organizing power, and how she ruled her scholastic community, will be read with great interest in the ample details of this biography. By 1875 the pupils had risen from 80 to 300; in 1883 they were 500; in 1893 they were 800; at Miss Beale's death they were verging on 1,000. And her energies overflowed her college: St. Hilda's Settlement at Shoreditch and St. Hilda's College at Oxford are emanations

from Cheltenham, and the Guild of the Cheltenham Ladies' College for old pupils was one of the most fruitful of her extra-college enterprises. The root of all her success was her intense religious conviction, guided by a masculine judgment and will-power.

Deep religious life [says her biographer] was no phase nor change of thought which came to her with years of experience. It was not wrought for her in the furnace of sorrow, though many times there renewed and purified. It was so much the dominating force of her mind and life—that by which every day and every year shew as controlled and inspired—that it may be reverently regarded as a special gift to one called to a great service. "I cannot," she wrote, "recall the time when God was not a present friend." . . . But the religion of Dorothea Beale was far, indeed, from being a mere succession of beautiful and comforting thoughts. It meant authority; it involved all the difficulties of daily obedience; it meant the fatigue of watching, the pains of battle, sometimes the humiliation of defeat. . . . Sorrow and regret for sin and mistakes passed into fresh effort against them; the perception of a beautiful thought or idea became a new motive for definite acts of charity and diligence.

Though treating her own personal expenditure with a monastic strictness, Miss Beale was very free-handed in relief of difficulties in the development of schemes for the benefit of her protégées in connexion with undertakings associated with the College. But she was properly stringent in requiring value for her money and in seeing that it was neither thrown away nor bestowed on those that could fend for themselves by reasonable exertion.

Never heartily sympathetic with what is generally called charitable work, afraid of seeing money given without a really equivalent return in usefulness and good work, there was one appeal to which she never turned a deaf ear. Probably she never knew any case of a girl honestly trying to improve herself, and failing in the effort for want of means, without trying to help her. Her usual plan was to advance money, which she found was almost invariably returned to her in the course of time. She would, wherever it seemed right, ask for its return on the ground that it might be of use to others, and because she was ever careful to make those she helped recognize that the possession of money is a stewardship only. But it was offered and lent, and sometimes given, in such a way that there should be no personal feeling of obligation and debt. "There is a loan fund," she would say when there occurred a question of the removal of a promising pupil from the college on the score of expense. And hardly any one ever heard her say more than this of the large system of help which she initiated, and to a very great extent sustained alone.

"In teaching Miss Beale's definite aim was to inspire. She sought but little to inform, but much to kindle a thirst for knowledge, a love of good and beautiful things, and to awaken thinking power." Her biographer asks: "What was the secret of her really marvellous influence?" The answer is: "Personal magnetism she undoubtedly possessed, and that of a rare and abiding quality, a quick eye to perceive, and a touch which could evoke the best even in the most unlikely. But her influence and power for good came surely as much from what she would not do as from what she actually did for her children. Her strength lay in what she would herself call 'passive activity.' It was her claim not to teach them so much as to lead them to the One Teacher, to bring them into such relationship with Him that they could hear His Voice."

Her pupils, no doubt, were devoted to her—in one sense or another. Let us call her a Puritan—a Saint upon earth. Yet her biography, with all the earnestness and strenuousness of an elevated purpose, strikes the merely human outsider with a certain chill—as through the vacant aisles of a solemn cathedral or from an Alpine peak. There is no sense of relaxation, no leisure to look around upon the world and find it, after all, genial and beautiful. However, the great usually dwell apart and alone. Miss Beale was great in her own sphere. She did great things for the education of women—for education generally. Her children will call her blessed.

#### OPTICAL THEORY AND PRACTICE.

*The Theory of Optical Instruments.* By E. T. Whittaker, M.A., F.R.S. (2s. 6d. net. Cambridge University Press.)

We note with the greatest interest the progress of the issue of the "Cambridge Tracts in Mathematics and Mathematical Physics." The present tract is contributed by Dr. Whittaker, the Royal Astronomer of Ireland and one of the general editors of the able series. It may be stated that the author's principal object in undertaking to prepare his short treatise was to make good a deficiency felt to exist by a number of students of

astronomy, photography, and similar subjects. The practice and the study of such branches of science constantly bring the student face to face with the defects to which optical instruments are liable, and which it is his first aim to obviate as far as possible. A scientific investigation of coma, astigmatism, distortion, &c., accurate from the mathematician's point of view, but set forth in language as simple and direct as might be practicable, was felt to be a desideratum. It is just on these lines that Dr. Whittaker has framed his work, giving his readers an analysis of the defects of instruments, of the causes of the same, and of the best means of overcoming them, at least partially. The examination of the subject is based on direct reference to the first principles underlying the theory of light, and the whole discussion is prosecuted with a restrained vigour and a delightful simplicity of manner which reveal undeniably the work of a master mind. The contents of the treatise lend themselves to a division of the tract into three chapters. The first of them, going back to the very elements of the theory, treats of the present-day explanation of the cause of light and its mode of propagation. The laws of reflexion and refraction are shown to arise as immediate consequences of the truth of the wave theory and of the influence of different media on the velocity with which the waves advance. Image formation, whether due to a single refraction or to a series of refractions, the lens, the spherical mirror, astigmatism, the existence of primary and secondary foci, and other equally important subjects, are considered in due order. The second chapter brings the reader to the study of defective images and their origin. Each source of imperfection is sufficiently investigated in its turn and a description of the available means of correction follows. Nevertheless, it has to be admitted finally that, theoretically, a perfect optical instrument is absolutely unattainable. The proof which establishes the unwelcome truth was discovered by Klein, and has been incorporated in the present tract. In the third—the final—chapter, the writer gives a short but most instructive, as well as interesting, account of some of the chief instruments in use at the present day. Although the work is, in the first place, intended for the student of applied science and for the practical worker, yet there is much in it that the author hopes and believes will prove valuable and attractive to the worker in the field of pure mathematics. As an example, we may mention Klein's investigation to which allusion has already been made, and in which use is made of the imaginary circle at infinity. Further, the tract may serve in some sense as a guide in the event of changes taking place in the "regulation" University course in geometrical optics.

## GENERAL NOTICES.

### CLASSICS.

*Some Passages in the Early History of Classical Learning in Ireland.* By the Right Hon. Mr. Justice Madden, M.A., Hon. LL.D., Vice-Chancellor of the University of Dublin. (Dublin: Hodges, Figgis, & Co. London: Longmans.)

This is an Address delivered in November last at the inaugural meeting of the Trinity College (Dublin) Classical Society, revised and furnished with notes and an appendix of pertinent extracts. Though Mr. Justice Madden does not intend it "as a serious contribution to the investigation" of the early history of his country's learning, yet, as he says, "a superficial outcrop may be useful as evidence of a rich mine beneath the surface, ready to repay the labour of the patient worker." While referring briefly to the classical culture of the early monastic schools, he deals mainly with the generation preceding the foundation of Trinity College in 1591. "I have no doubt," he says, "that the use of Latin as a written and spoken language outside the Pale is a survival from the centuries during which Ireland was the University of western Europe"—a remark that suggests large scope for investigation. At the beginning of the reign of Elizabeth, "within the Pale, and in the principal cities outside its boundary, there were grammar schools formed on the English model, some of them evidently of a high order, from which students proceeded to the English Universities. In Celtic Ireland there were schools of a different kind, endowed and protected by the chieftains, in which students were educated, not only in the native law and medicine, and in the bardic literature, but in the Latin classics." Mr. Justice Madden recalls Sir Henry Sidney's attempt to establish an Irish University, and sketches generally his policy of educational reform. Especially interesting are the appended extracts from Stanyhurst's description of Ireland in Holinshed, and particularly the section dealing with Shakespeare's use of Stanyhurst's writings. The whole Address is most instructive and suggestive. It will, no doubt, be the starting-point of fresh inquiries.

Mr. Fisher Unwin has just issued a second impression of the late Dr. E. S. Shuckburgh's excellent work "Augustus: the Life and Times of the Founder of the Roman Empire," in his valuable "Half-Crown Library of History and Biography" (2s. 6d. net). This will be a welcome boon to the student and to the general reader.

#### MATHEMATICS.

- (1) *The "Alert" Arithmetics*. Books I. and II. By Henry Wilkinson. (Pupil's Books, 3d. each; Teacher's Books, 4d. each. Nelson.) (2) *Correlated Arithmetics (Scheme II.)*. Books I. and II. (Scholar's), 3d. each; Book I. (Teacher's), 1s. net. By T. W. Trought, B.A. (Pitman.) (3) *"Adaptable" Arithmetics*. Book I. Scholar's Book, 4d.; Teacher's Handbook, 1s. (Blackie.) (4) *Practical Arithmetics*. Pupil's Series, Book VI., 5d. Teacher's Series, Book V., 1s. 6d. By W. Knowles, B.A., B.Sc. Lond., and H. E. Howard. (Longmans.)

We have here specimen volumes of each of the above publications. The first two treatises, at least in so far as the early numbers are concerned, are illustrated not merely by diagrams, but by pictures. Of these the "Alert" Arithmetics (Nelson) are likely to be found, from a pictorial point of view, especially fascinating by little children. Either work, in the hands of a good teacher, affords material for a very thorough training in the groundwork of arithmetic. The leading feature to be noted with regard to the "Adaptable" Arithmetics (Blackie) is that each book is arranged so as to give complete instruction in some section or sections of the subject. The method adopted really accounts for the title selected, as the little text-books may be adapted very readily to the special needs of special schools. The "Practical" Arithmetics (Longmans), if we may judge the whole from the part, form an excellent series. The work is planned on the lines of Mr. C. T. Millis's scheme for the correlated teaching of arithmetic, geometry, and the elements of practical mathematics. In fact, the publication might well have been given a more general title than it bears at present. The course, we are told, has stood well the test of actual employment for class purposes.

*The Teaching of Practical Arithmetic to Junior Classes*. By J. L. Martin. (2s. 6d. Harrap.)

Though there is little that is really new in Mr. Martin's manual, yet the text gives within a small compass much that will be found instructive and suggestive by teachers whose work lies more or less among junior pupils. The book must appeal more particularly to the young professional, by whom there is no doubt very much may be learnt from its pages as to the best methods of dealing with first principles.

*Algebraic Examples*. Book I. By A. F. Van der Heyden, M.A. (1s.; with Answers, 1s. 6d. Edward Arnold.)

The elementary portion of a two-volume compilation. Book I., containing a valuable and carefully graduated series of exercises in elementary algebra, is suitable for pupils until they are ready to advance further than quadratic equations. The author has evidently worked with a higher aim than that of merely framing questions the solution of which involves practice in the early processes of algebra. Many of the examples lead to the acquisition of information the possession of which is calculated to help the student materially in later work.

*Geometry for Schools*. By E. Fenwick, M.A., LL.D. Camb., B.Sc. Lond. (1s. 6d. Heinemann.)

Are we to look on this publication as a class-book to be used principally by the teacher, or is it to be placed in the hands of the scholars? If intended primarily for the former, then it is decidedly good; for it gives clear and terse, but nevertheless, in general, sufficiently full proofs of the theorems of elementary geometry. In accordance with the new ideas the problems have been set apart for a special course. Alternative modes of demonstrating the same propositions are constantly given, and it is this feature which renders the text-book less suitable for students than for their teachers: for the former are more than liable to be hindered and not helped by varied demonstrations of the same theorem. The style in which the volume has been issued is bold; the type is large, but of a rather unusual and in some respects trying character, whilst the diagrams present a somewhat rough appearance.

#### ENGLISH DICTIONARIES AND ENGLISH ETYMOLOGIES.

*The Student's English Dictionary*. By John Ogilvie, LL.D. Edited by Charles Annandale, M.A., LL.D., editor of Ogilvie's "Imperial Dictionary," &c. (4s. 6d. net. Blackie.)

Though this is a new edition of a work that has done excellent service for a generation, it is practically an entirely new work; for, while all the old articles have been thoroughly revised, they have really been to a great extent rewritten, and many thousands of additional articles have been inserted. Besides, extensive and varied appendixes have been added by way of supplement to the information of the dictionary proper. The new matter deals largely with scientific and technical terms and with the natural expansion of the vocabulary of modern speech and literature; and it includes numerous phrases and idioms not previously treated in the volume. The etymologies, too, have been recast in the light of modern philological investigation. There are nearly 800 illustrations—much more than double the former number. The price is all but incredible. As Dr. Annandale justly says, the volume "may claim to be second to no work of reference of similar scope."

*An English Dictionary, Etymological, Pronouncing, and Explanatory*. By John Ogilvie, LL.D. (1s. net. Blackie.)

Another extraordinarily cheap dictionary for school and general use, and as good as it is cheap. There is a supplement of technical and other newer vocabularies; and explanatory lists of affixes and suffixes, of foreign words frequently occurring in English authors, and of abbreviations and contractions often used in printing and writing are usefully appended.

*Significant Etymology; or Roots, Stems, and Branches of the English Language*. By the Very Rev. James Mitchell, M.A., D.D. (Blackwood.)

This is not exactly a dictionary; but it is of a cognate character. It is "not written for philologists"—who would find excuse for occasional grumbling over it—"but for intelligent and thoughtful men and women who are interested in the study of their own language and of the sources from which it is derived." The words are discussed not alphabetically at all, but in groups, "beginning with words connected with the universe at large; then the heavenly bodies; the earth, its two great domains of land and water; the mineral, vegetable, and animal kingdoms; man, his bodily structure, including food, clothing, and habitation, his mental powers, his moral faculties, and his spiritual nature." We leave Dr. Mitchell to make up matters with the philologists against a second edition, and prefer to regard the useful and attractive aspect of his book. It certainly does furnish an extraordinary variety of interest, and will prove very instructive to such as are not professed philologists. It recalls, in a general way, Trench's "Study of Words," though the scheme is different. It is written in an easy and agreeable style.

#### HISTORY.

*History of England for use in Schools*. By Arthur D. Innes, M.A., formerly Scholar of Oriel College, Oxford. (4s. 6d. Cambridge University Press.)

Mr. Innes writes more especially for the middle and upper forms of schools, and he covers the whole space of English history, with a vigilant regard to proportion and to the educational value of historical teaching. He presents the facts "as a story, a drama, in which events are born of events, each successive scene is the product of the previous scene, great actors play their parts, and picturesque incidents give colour and interest to the whole." He writes with great spirit and vividness, as well as with simplicity and lucidity, and he is remarkably well furnished with the latest results of historical inquiry. Appended are six admirable summaries—constitutional, ecclesiastical, Scottish, Irish, Indian, and Colonial; half-a-dozen careful genealogical tables; a glossary of technical terms, political phrases, &c.; a chronological summary, and an index. There are 13 maps and 8 plans. The work is exceptionally capable and useful.

*A History of Scotland for Schools*. By P. Hume Brown, M.A., LL.D., Fraser Professor of Ancient (Scottish) History and Palæography, University of Edinburgh. (3s. Oliver & Boyd.)

There can be no doubt at all that this is the best of school histories of Scotland. It is based on the most advanced results of modern investigation—speaking generally, and ignoring some traditional embellishments (like Randolph's chaplet, Edward's army of "one hundred thousand men, of whom forty thousand were horsemen," at Bannockburn, and legendary stories that should have been left with Mr. Meikle in the "Junior History" and labelled as imaginative and romantic). The volume gives the cream of the author's Scottish studies in simple language and in broad and comprehensive outlook. Genealogical tables are appended, and the illustrations are very numerous and very good.

The revised edition of *The Student's American History*, by D. H. Montgomery, published by Messrs. Ginn in "The Leading Facts of History Series," has suffered undeserved neglect at our hands. It is an admirable work, distinguished by the fullness of its treatment of political and constitutional history, and of the chief events bearing on the development of the nation. "It quotes the statements of public men, original documents, and authorities in order that the history of our country may speak for itself on the points of greatest interest to the student and the teacher"—a number of them in facsimile. Various important groups of matters—documents, tables, &c.—are given in appendix. There are 29 full- and double-page maps, 48 maps in the text, and 30 illustrations.

Messrs. Macmillan reissue *The History of Italy*, by William Hunt, M.A., D.Litt., Vicar of Congresbury, which has long held an honoured place in the "Historical Course for Schools" edited by Freeman (3s. 6d.).

Mr. Fisher Unwin reissues *The Hungry Forties*—a remarkable series of "descriptive letters and other testimonies from contemporary witnesses" depicting "life under the bread tax." Mrs. Cobden Unwin furnishes a touching introduction. The book constitutes a grim challenge on a very grave question.

#### EDUCATION.

*Pestalozzi: an Account of his Life and Work*. By H. Holman, M.A. Cantab., formerly Professor of Education in the University College of Wales, Aberystwyth. (3s. net. Longmans.)

"To say the least of it, he is very much to be envied and pitied who

cannot still learn something from Pestalozzi." Mr. Holman's aim is "to provide students, and teachers who still study, with the material for a thoughtful survey of the principles and practices of one of the greatest of the world's pioneer educators and educationists." He has laboured to set forth clearly what Pestalozzi thought, wrote, and did rather than to expound his own views about these things, though he gives his own views freely enough, but in due subordination to his principal object. This, we take it, is the best service that he could have done, whether to Pestalozzi or to modern educationists: the thing is to get at the original sources and to deal with the man and his work at first hand—the more arduous, but the only profitable procedure. So far as Mr. Holman inevitably "has, by selection, given a particular tone and colouring to his view of his hero, he has deliberately chosen to make it as appreciative as possible." So far as he errs, he errs on the safe side. The treatment is singularly fair, comprehensive, and enlightened, and it keeps in steady view the relations of Pestalozzi and his work to the spirit of the age he lived in. There is no better account of Pestalozzi in English. The volume is a substantial, and in a sense an original, contribution to the history of educational theory and practice; it is sincerely and deliberately worked out; and it is plainly and agreeably written. There are four illustrations, one of them an interesting portrait frontispiece.

In the *Cape of Good Hope Education Report for 1907*, Dr. Muir, the Superintendent-General of Education, presents an account of very satisfactory progress. The local administration of public schools has now passed practically into the hands of the School Boards, only 268 out of 2,104 schools remaining outside their control at the date of the report, and probably none at all now. The schools for European children have increased by 454, while the pupils enrolled have increased by 6,482—unprecedentedly large increases; but no substantial advance is reported in either respect as regards coloured children. The average attendance of European pupils exceeds 90 per cent.; that of coloured children has considerably improved, and now stands at over 83 per cent. The level of attainments, though lower than it ought to be, is rapidly rising in the case of European pupils; but the majority of the coloured do not get beyond Standard II. The quality of the instruction shows steady improvement, and Nature study and elementary agriculture are being added, where possible, to the general curriculum. The percentage of certificated teachers has risen from 50 to 53 per cent. of the total number of teachers at work. Building schemes have been kept back by the financial depression, which has also, this year as last, unfortunately curtailed even Dr. Muir's statistics: "The making of a break in the series," as he justly remarks, "practically ruins the whole for the purposes of the educational statistician." There has been a considerable increase in the number of students attending the five University colleges, though there is no noteworthy development to record in connexion with the higher education. This report is one more testimony to the signal ability and discretion of Dr. Muir's administration.

*The Red Code*, 1908 (English and Welsh editions combined), by J. H. Yoxall, M.A., and Ernest Gray, M.A., is the sixteenth annual issue (1s. net, Educational Supply Association, for the N.U.T.). The information is very full and the annotations are extremely useful. The work has been revised down to September of this year.

#### RELIGIOUS AND MORAL.

*Bible Lessons for the Young and Notes and Outline Lessons for Teachers* thereon. By the Rev. M. G. Glazebrook, D.D., Canon Residentiary of Ely, formerly Head Master of Clifton College. (4s. 6d. Rivingtons.)

The "Bible Lessons" consist of 120 passages selected from the Authorized Version, with occasional connecting narratives in abstract, and are accompanied by 8 maps for different periods. The "Notes and Outline Lessons" contain a scheme for each Bible lesson, with adequate notes: "they suggest a general line of treatment and supply the necessary information, but leave the handling of the lesson to the teacher's own initiative." A very serviceable "Dictionary" of information on special subjects is appended. The whole work is marked by ability and good sense.

*The Prayer Book in the Making*. By the Rev. Frank H. Weston, M.A., Vicar of Lastingham, Yorks. (5s. net. Murray.)

Mr. Weston addresses his history of the Book of Common Prayer to "the plain man," the average church-going layman—"him that occupieth the room of the unlearned." The disposition of the matter is lucid and the style is appropriately simple. The study of the book need not be confined to the "unlearned": all readers will find it instructive as well as interesting.

*Recollections and Letters of the Rev. W. H. E. McKnight, M.A.*

By Edith Isabel Thomson. (6s. Masters.)

"With the death of the Rev. W. H. E. McKnight expired the male line of a branch of the ancient and once powerful clan MacNaught." Mr. McKnight was Rector of Silk Willoughby in Lincolnshire from 1879 to his death in 1896 at the age of seventy-eight. His niece has drawn freely upon his letters and speeches (political as well as ecclesiastical). The interest mainly lies in the record of a serious, unobtrusive, and affectionate character, devoted with single mind to his parish duties, with occasional excursions into general politics. Such lives, indeed, count for much in the national sum, and tho

affectionate record may be read with sympathy widely beyond the family and friends of the late rector.

*The Profit of Love: Studies in Altruism*. By A. A. McGinley. (5s. net. Longmans.)

Mr. McGinley, avoiding the sentimental aspect of love, deals with its practical and permanent influence upon the physical and moral well-being and upon the development of the individual and of the race. "What the author insists on," the Rev. George Tyrrell explains in a vigorous preface, "is that we need men and women rather than schemes and systems; that the remedy is to be sought in character rather than in legislation; that we must work at the roots of social good and evil, not at the branches and extremities." That is to say, without minimizing any of the various efforts at social elevation, the fundamental thing is character: "our first duty to our neighbour is an inward one—a duty of judgment and feeling, 'to love him as myself.'" The treatment is broad, comprehensive, earnest, and full of thoughtful suggestion.

#### MISCELLANEOUS.

*The Country Home* (6d. net, Constable), a monthly that has now appeared in half-a-dozen numbers, is most varied, practical and interesting, and it is very liberally and effectively illustrated.

Messrs. Baird & Tatlock (45 Renfrew Street, Glasgow), Instrument Makers to the Admiralty, issue pamphlets illustrating their Simple Improved Theodolites, combined with plane table, and combined with plane table and sextant, for school and college use in practical geography, mathematics, &c.

#### FIRST GLANCES.

##### CLASSICS.

*Greek Anthology, Select Epigrams* from the. Translated by J. W. Mackail, M.A., LL.D., sometime Fellow of Balliol College, Professor of Poetry in the University of Oxford. 2s. net. Longmans (Pocket Library).

[Admirable translation (in prose), accurate and graceful. Very welcome in cheap and agreeable form.]

*Hannibal, Scenes from the Life of: Selections from Livy*. Edited by W. D. Lowe, M.A., formerly Scholar of Pembroke College, Cambridge; Lecturer in Education, Durham University; and Junior Censor, University College, Durham. 1s. 6d. Clarendon Press.

[Passages judiciously selected and arranged; historical introduction; full notes; English exercises for retranslation; vocabularies; 5 maps. Very attractive and serviceable for beginners.]

*Latin Delectus, The New*. Book I. By W. Jenkyn Thomas, M.A., Head Master of the Hackney Downs School, and E. P. Doughty, M.A., Classical Master at the same School. 1s. 6d. Horace Marshall.

[For earlier reading in schools with a leaving age of about sixteen. Extracts varied and interesting; ample notes; vocabulary; 8 excellent illustrations.]

*Latin Grammar, A First*. By E. H. Scott, M.A., late Head Master of the Boys' Secondary School, Barberton, Transvaal, and Frank Jones, Assistant Master, King Edward's Grammar School, Aston, Birmingham. 2s. Blackie.

[Essentials selected and driven home.]

*Latin Grammar, A School*. By H. G. Ford, M.A., Assistant Master in Bristol Grammar School, formerly Scholar of Wadham College, Oxford. 2s. 6d. Methuen.

[“To meet the needs of boys of varying ages and standards, from those of a beginner to those of an ordinary sixth form.” Based on sixteen years' experience. Thoughtful and careful work.]

*Ovid: Metamorphoses XI*, 410-748. Edited J. F. Stout, B.A. Camb. 1s. 6d. Clive (University Tutorial Series).

[Useful introduction and notes.]

##### MATHEMATICS.

*Algebra, A New*. Vol. I. (containing Parts I, II, and III, with answers). By S. Barnard, M.A., Assistant Master at Rugby School, late Fellow and Lecturer at Emmanuel College, Cambridge, and J. M. Child, B.A., B.Sc., Lecturer in Mathematics, Technical College, Derby, formerly Scholar at Jesus College, Cambridge. 2s. 6d. Macmillan.

[“An attempt to meet the growing demand for a school algebra which contains a logical development of the subject in accordance with modern views.”]

*Algebra, The Eton*. Part I. By P. Scoones, M.A., and L. Todd, M.A., Assistant Masters at Eton College. 2s. 6d. Macmillan.

[Up to and including quadratic equations and simple graphs. Examples only; abundant and well chosen. Specimen examples worked, to secure uniformity of method.]

*Arithmetic, A Modern*; with Graphic and Practical Exercises. By Sydney Jones, M.A., late Scholar of Christ's College, Cambridge, Head Master of Cheltenham Grammar School. Part II, with answers. 2s. 6d. Macmillan.

[“The essential parts of arithmetic are dealt with in the spirit of recent recommendations.” Exercises abundant.]

- Arithmetic, Girls', McDougall's. Book I. (for Class IV.). 4d.  
 Arithmetic of Commerce, The Elements of the. By H. H. Talbot. 1s. 3d. Jack (Commercial Series).  
 [Worked examples and exercises plentiful.]  
 Arithmetic, Practical, and Mensuration. By Frank Castle, M.I.M.E., Mechanical Laboratory, Royal College of Science, South Kensington. 2s. Macmillan.  
 [Practical processes "in accordance with modern ideas as to the needs of evening continuation schools and technical classes."]  
 Calculus, Differential, for Beginners. By Alfred Lodge, Assistant Master at Charterhouse, formerly Fereday Fellow of St. John's College, Oxford, late Professor of Pure Mathematics at the Royal Indian Engineering College, Cooper's Hill. With an Introduction by Sir Oliver Lodge, D.Sc., F.R.S., LL.D., Principal of the University of Birmingham. 4s. 6d. George Bell (Cambridge Mathematical Series).  
 [Third edition, revised; miscellaneous examples added.]  
 Conic Sections, Analytical Geometry of the. By the Rev. E. H. Askwith, D.D. 7s. 6d. net. A. & C. Black.  
 [Complete treatise. Seventy-six diagrams in text.]  
 Geometry, A Preliminary. By Noel S. Lydon, Owen's School, Islington. 1s. Methuen.  
 [Full and careful course; numerous exercises.]  
 Geometry, Concurrent Practical and Theoretical. By W. J. Potter, M.A. Cantab., Second Master, The Roan School for Boys, Greenwich. Part I. 1s. 6d. net. Ralph, Holland, & Co.  
 [Substance of Euclid I., 1-34, with additions.]  
 Geometry, Modern. By C. Godfrey, M.A., Head Master of the Royal Naval College, Osborne, formerly Senior Mathematical Master at Winchester College, and A. W. Siddons, M.A., Assistant Master at Harrow School, late Fellow of Jesus College, Cambridge. 4s. 6d. Cambridge University Press.  
 [Sequel to the author's "Elementary Geometry." 56 theorems; 679 exercises.]  
 Mensuration, Elementary. By W. M. Baker, M.A., Head Master of the Military and Civil Department of Cheltenham College, and A. A. Bourne, M.A., formerly Head Mathematical Master on the Classical Side at Cheltenham College. 1s. 6d. George Bell (Cambridge Junior Mathematical Series).  
 [Elementary treatment; range fairly complete. Numerous examples; revision papers at various stages.]

## ENGLISH LITERATURE.

- Blackie's Red Letter Shakespeare.—(1-3) King Henry VI., Parts I., II., and III. 1s. 6d. net each.  
 [Charming edition.]  
 Cassell's Readings from Dickens. 6d. (limp cloth).  
 [Popular extracts, "given as condensed by Dickens himself for his readings." Very good selection. Four coloured and four plain plates.]  
 Chambers's "Standard Authors."—(1) Hereward the Wake (C. Kingsley); (2) The Lances of Lynwood (Charlotte M. Yonge); (3) Tom Brown's School Days (Hughes); (4) The Talisman (Scott). 1s. each.  
 [Good type and tasteful get-up. Attractive series.]  
 Ginn's "Standard English Classics."—(1) Selections from Byron. Edited by Samuel Marion Tucker, Professor of English Literature, Florida State College for Women. 1s. (2) Selections from Poe. Edited by J. Montgomery Gambrill, Head of the Department of History and Civics, Baltimore Technical Institute. 1s. 6d.  
 [Good literary introductions; brief notes. (1) has illustrations; (2) has a portrait of Poe as frontispiece. Type and get-up agreeable.]  
 Heath's "English Classics."—(1) Bacon's Essays. Edited by Fred Allison Howe, LL.B., Ph.D. 1s. 6d. (2) Joan of Arc, and the English Mail Coach (De Quincey). Edited by Charles M. Stebbins, M.A. 1s.  
 [(1) Adequate introduction, biographical and literary; considerable notes; glossary, index. (2) Useful biography and account of the romantic revival in English literature; brief notes, with questions interspersed. Excellent series.]  
 Nelson's Library.—(1) Eight Days, a Tale of the Indian Mutiny, by R. E. Forrest. (2) The Wages of Sin, by Lucas Malet. (3) Lady Audley's Secret, by Miss Braddon. (4) The Pit, by Frank Norris. (5) An Adventurer of the North, by Sir Gilbert Parker. 7d. each.  
 [Good reading; agreeable type; flexible binding; frontispiece to each volume.]

## POETRY FOR SCHOOL AND HOME.

- Girl's Book of Poetry, The. In 3 Parts: Junior, Intermediate, and Senior. 4d. each. Macmillan.  
 [Very good selection, well graduated.]  
 Longfellow, The Shorter Poems of. Selected by G. Clifford Dent. 3d. net. Dent (Temple English Literature Series for Schools).  
 [Biographical introduction; brief notes.]

- Macmillan's Departmental Poetry Books. Five Books: Infants; Junior I.; Junior II.; Senior I.; Senior II. Edited by S. C. B. Edgar, M.A., Kent Road Higher Grade School, Glasgow. 2d., 4d., 5d., 5d., 5d.  
 [Contain all the poems given in the Scottish Education Department's Memorandum on the teaching of English as "typical examples of poems suitable for the various divisions of a primary school." Capital selection; large and clear type.]  
 McDougall's Alexandra Recitation Books. No. 6. 2d.  
 [Good selection; brief notes after each passage.]  
 McDougall's Divisional Poetry Books. Book I.: for Infants, 2d.  
 [30 pieces; suitable; well printed.]  
 Oxford Elementary School Books. (1) First Book of Verse; (2) Second Book of Verse; (3) Third Book of Verse. 2d., 3d., 3d. Henry Frowde; Hodder & Stoughton.  
 [Appropriate selections; agreeable type and get-up. Each book has a coloured frontispiece.]  
 Patriotic Songs for Schools. 2d. net. National Society's Depository.  
 [Collection of Songs in one, two, and three parts, adapted for the use of children. Almost all taken from the "Song Book for Schools." Music arranged and harmonized by Sir C. Villiers-Stanford, Mus.Doc., Professor of Music in the University of Cambridge.]  
 Pitman's Illustrated Poetry Books for Schools. Book III. 5d.  
 [Beautifully printed and profusely illustrated.]  
 Reciter, Empire Day: Poems of Patriotism, of Labour, and of Peace. No. 71 of "The Penny Poets" (39 Whitefriars Street, E.C.).  
 [Stirring pieces, well selected.]  
 Rhymes and Stories. Compiled and edited by Marion F. Lansing, M.A. Illustrated by Charles Copeland. 1s. 6d. Ginn (The Open Road Library of Juvenile Literature).  
 [First volume of the series. Familiar rhymes, nursery tales, &c. Liberal and effective illustration. Well got up.]  
 Verse, A Book of, for Boys and Girls. Compiled by J. C. Smith. Parts I., II., and III. 4d., 6d., 1s. Parts I.-III. 2s. cloth. Clarendon Press.  
 [Excellent and abundant selection; well arranged.]  
 Verse for School and Home, A Treasury of. Selected and arranged by M. G. Edgar, M.A. Parts I. and II. 6d. each; limp cloth, 8d. Harrap.  
 [Old favourites and fresh pieces; very useful selection.]

## GERMAN.

- Andersen in German. Edited by Walter Rippmann. With Illustrations by Thomas, Charles, and William Robinson. 1s. 4d. Dent (Modern Language Series).  
 [Seven stories; exercises appended. Charming reader.]  
 Bell's First German Course. By L. B. T. Chaffey, M.A., Assistant Master at Eton. 2s. Bell's Modern Language Series.  
 [Rapid reading lessons, with necessary helps; short stories. Grammar outline appended. Vocabulary; illustrations.]  
 Science German Course. By C. W. Paget Moffatt, M.A. Lond., M.B., B.C. Cantab. 3s. 6d. Clive (University Tutorial Series).  
 [Enough grammar for translation from German; 88 passages in German—general, mathematics, physics, chemistry, &c. Vocabularies, separate and general. Very serviceable.]  
 Science Students, German Grammar for. By W. A. Osborne, M.B., D.Sc., Professor of Physiology and Histology in the University of Melbourne, and Ethel E. Osborne, M.Sc. 2s. 6d. net. Whittaker.  
 [To enable one "to read scientific articles and treatises published in the German tongue." Special stress on chemistry in the exercises. Well planned and executed. Most useful.]  
 Science Students, A Second German Course for: Readings from recent German Scientific Publications. Selected, arranged, and annotated by H. G. Fiedler, Professor of German in the University of Oxford (formerly in the University of Birmingham), and F. E. Sandbach, Lecturer in German in the University of Birmingham. 2s. 6d. net. Moring (De la More Press).  
 [Supplement to the authors' "First German Course for Science Students," but may follow any other similar course, such as Prof. and Mrs. Osborne's (above). Progressively arranged. Very useful notes; grammar summary appended. Excellent selection.]

## EDUCATION.

- Board of Education.—(1) Statistics of Public Education in England and Wales, 1906-7-8: Part I., Educational Statistics. Cd. 4288. 2s. 3d. ## THE OXFORD GEOGRAPHIES.

By A. J. HERBERTSON, M.A., Ph.D., Reader in Geography in the University of Oxford.

### *The Preliminary Geography.*

Second Edition, 160 pages, with 72 Maps and Diagrams. 1s. 6d.

*Preparatory Schools Review.*—"Where a class-book of geography is first introduced, this should be the book. There is nothing else so good."

### *The Junior Geography.*

Second Edition. 288 pages, with 166 Maps and Diagrams. 2s.

*School World.*—"Is good everywhere. The sketch maps are most interesting and most instructive."

### *The Senior Geography.*

Second Edition. 370 pages, with 117 Maps and Diagrams. 2s. 6d.

*School World.*—"The relation of cause and effect is continually insisted upon, and the lesson driven home by the frequent insertion of educative maps and plans and cross-sections."

## OXFORD TREASURY OF ENGLISH LITERATURE.

By G. E. HADOW, Tutor in English Literature, Lady Margaret Hall, Oxford; and W. H. HADOW, Fellow of Worcester College, Oxford. Three Vols. 3s. 6d. each.

Vol. III—*Jacobean to Victorian.*

*Guardian.*—"It would be difficult to name a more complete work of its kind even in the matter of selection, while the literary criticism is illuminating and original."

*Previously Published.*

Vol. I—*Old English to Jacobean.* Second Edition.

Vol. II—*Growth of the Drama.* Second Edition.

## PALGRAVE'S GOLDEN TREASURY.

With 100 Additional Poems to the end of Nineteenth Century. From 1s. net. *(World's Classics.)*

*Schoolmaster.*—"The value of the work as a representative collection has been decidedly enhanced."

## THE RENAISSANCE AND THE REFORMATION.

A Text-Book of European History, 1494-1610. By EMMELINE M. TANNER, History Mistress at Sherborne School for Girls. With Maps. 3s. 6d. [*Immediately.*]

## TROIS SEMAINES EN FRANCE.

An Illustrated Reader, with Questions for Conversation and Grammatical Exercises. By D. L. SAVORY, French Lecturer at Goldsmiths' College, University of London; and L. CHOUVILLE, B. & S. L., Assistant Master at the Perse School, Cambridge. Second Edition. 2s.

*The Journal of Education.*—"The narrative is simple and natural. . . . The questionnaire provides a searching test."

## SELECTIONS FROM ERASMUS,

Principally from his Epistles. By P. S. ALLEN, Fellow of Merton College, Oxford; Editor of "Erasmian Epistolae." With Life of Erasmus, 5 Illustrations, Notes, and Vocabulary of Special Words. 3s. 6d.; and on India paper, 4s.

*Educational Times.*—"A good selection with judicious notes."

## SCENES FROM THE LIFE OF HANNIBAL.

**SELECTIONS FROM LIVY.** Edited, with Historical Introduction, Notes, Maps, Vocabularies, and English Exercises. By W. D. LOWE. Fcap. 8vo, 1s. 6d.

## OLD TESTAMENT HISTORY.

Narrated for the most part from the Bible. By GEORGE CARTER. With Maps. 2s.

## SCHOOL ALGEBRA.

By W. B. PATERSON (20th Wrangler), Trinity College, Cambridge; Mathematical Master, Mercers' School; formerly Mathematical Master, Christ College, Brecon; and Assistant Mathematical Lecturer, Owens College, Manchester. Part I. [*Immediately.*] With Answers. 2s. 6d. Without Answers. 2s.

## AN INTRODUCTION TO THE THEORY OF GROUPS OF FINITE ORDERS.

By HAROLD HILTON, Lecturer in Mathematics at Bedford College, formerly Fellow of Magdalen College, Oxford, and Assistant Mathematical Lecturer at the University College, Bangor. 14s. net.

*Athenaeum.*—"The student who is making a serious study of this branch of pure mathematics will find this text-book of great assistance."

## TYPES OF FLORAL MECHANISM.

Part I, Types II-XII (Jan. to April). With Diagrams and 39 Coloured Plates. By A. H. CHURCH. 21s. net.

*School World.*—"It would be difficult to conceive a work more useful, instructive, or inspiring. . . . In the school library and in the country house the work will truly be a thing of beauty, and a joy to all who make use of it."

Select List of Educational Works, List of Books set for various Examinations, and Complete Catalogue (144 pages) post free.

# MESSRS. BELL'S NEW BOOKS

## MASON'S NEW ENGLISH GRAMMARS.

Revised in accordance with Modern Requirements by

A. J. ASHTON, M.A., Senior English Master, Kelvinside Academy, Glasgow; and Examiner in English to the College of Preceptors.

NOW READY. 125 pages. 1s.

### MASON'S JUNIOR ENGLISH GRAMMAR.

JUST PUBLISHED. 218 pages. 2s.

### MASON'S INTERMEDIATE ENGLISH GRAMMAR.

READY SHORTLY (Completing the Course).

### MASON'S SENIOR ENGLISH GRAMMAR.

JUST PUBLISHED. Crown 8vo. 1s. 6d.

## ELEMENTARY MENSURATION.

By W. M. BAKER, M.A., and A. A. BOURNE, M.A.

The intention of the authors has been to make the subject of Mensuration accessible to those who know no Mathematics except elementary Arithmetic. Although the character of the book is elementary, however, its range is fairly complete, and it will be found useful for all examinations where elementary Mensuration is required.

IN PREPARATION. Crown 8vo. 2s.

## A LATIN READER

(Verse and Prose).

By W. KING GILLIES, M.A. (Glas.), B.A. (Oxon.), Snell Exhibitioner, Balliol College, Senior Classical Master in the High School of Glasgow; and HECTOR J. ANDERSON, M.A. (Edin.), B.A. (Oxon.), Exhibitioner of Oriol College, Inspector of Training Colleges, Cape Colony.

Crown 8vo. With the Original Maps. 2s.

## JOSEPH HALL.—MUNDUS ALTER ET IDEM

(An Old World and a New).

Edited for School Use, with Introduction, Notes, and Vocabulary, by E. J. ANDERSON, M.A., Inspector of Training Colleges in Cape Colony, late Classical Master at Hillhead Public School, Glasgow.

Pott 8vo. Illustrated. 1s.

## TALES BY ERCKMANN-CHATRIAN.

*Le vieux Tailleur. Le Combat de Coqs. Pourquoi Menebourg ne fut pas rendu.*

Edited, with brief Notes and Vocabulary, by O. H. PRIOR, Assistant Master at Rugby.

Third Edition, Revised.

## A FRENCH HISTORICAL READER

By H. N. ADAIR.

With Illustrations, Brief Notes, a Vocabulary, and a new Composition Supplement. 2s. Without Supplement, 1s. 6d. Supplement separately, 6d. net.

Ready immediately. Crown 8vo. Illustrated. 2s.

## A GERMAN HISTORICAL READER

By J. E. MALLIN, B.A., Strand School, King's College.

## BELL'S ENGLISH TEXTS FOR SECONDARY SCHOOLS.

General Editor—A. GUTHKELCH, M.A.

*New Volumes.*

## COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, LONDON, W.C.

### Lectures for Teachers

ON THE

## SCIENCE, ART, AND HISTORY OF EDUCATION.

### THE PRACTICAL TEACHER'S PROBLEMS.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The Second Course of Lectures (Thirty-sixth Annual Series) will commence on Thursday, October 1st, at 7 p.m.

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

#### SYLLABUS.

I. (Oct. 1.) *The Teacher's Library*: three main sections, books needed by teacher as (a) human being, (b) knowledge-monger, (c) educator: (a) and (c) too often neglected: special value of books used by teacher during childhood: the upper and lower limit of professional books under (c); possibility of excess in educational theory: plea for greater recognition of newer class of literary presentations of educational problems: teaching “the inarticulate profession”: practical help that may be had from such books: how to use educational periodicals.

II. (Oct. 8.) *How to get some good out of Psychology*: need for a change in the point of view: rational and experimental psychology: need of both by the teacher: danger of pedantry in both: place of the proposed middleman between the psychologist and the practical teacher: the teacher must be allowed to direct the psychologist (not the psychologist the teacher) as to the results to be sought: list of things the teacher wants to know, compared with the list of things the psychologist wants to tell him: teacher must not confine himself to child-psychology, his profession demands the treatment of his fellow adults as well.

III. (Oct. 15.) *How to deal with Officials*: an example of the teacher's need of adult psychology: the difference between the human being and the official: the invariable third: official questions and answers: how to interpret them: the official mind and how to approach it: an instructive bit of law: the official art of compromise: manipulation of conflicting official regulations: the whole question reviewed from the point of view of the teacher as himself an official.

IV. (Oct. 22.) *How to deal with Parents*: generally wrong attitude of teachers towards parents: *in loco parentis* theory: “foster parent”: getting at parents through children and *vice versa*: parents' antagonism to school authority has definite relation to their social rank: special difficulties of different classes of teachers: conflicting influences of fathers and mothers: genuine co-operation between school and home: golden mean between parental indifference and interference.

V. (Oct. 29.) *How to Learn*: the other side of teaching: absence of the desire to know: how to rouse it: even when desire is present there is difficulty enough: kinds of learning: reproduction: the dynamic view: constructive learning: rhythm of learning: concentration and diffusion: fallacies about thoroughness: temporary and permanent learning.

VI. (Nov. 5.) *Class Management and Teaching*: ordinary psychology deals with the individual: teacher needs collective psychology as well: relation of class to crowd or mob: minimum number to constitute a class: sympathy of numbers: class leaders: difference between class teaching and private coaching: advantages and difficulties in having to teach several persons at the same time: the average pupil: the type: the composite: the ghostly class.

VII. (Nov. 12.) *How to combine Lecturing and Teaching*: teachers' general disapproval of lecturing: nature of lecturing as opposed to teaching: newer methods of teaching history, geography, and geometry are demanding a certain amount of lecturing: dangers of lecturing in schools as compared with colleges: the pupils' share in the process of lecturing: the art of listening: intermittent hearing: the lecturer's relation to the text-book.

VIII. (Nov. 19.) *Written work in School*: absolute necessity for a good deal of written work in school: note-taking, exercise writing, essays: crudery of correction: the surd of efficient correction in (a) quantity, (b) quality: co-operative correction: psychological dangers of correction: the norm of correction: spelling and dictation exercises: analysis of most common errors and their causes.

IX. (Nov. 26.) *Verbal Illustration*: nature of illustration in general: distinction from exposition: mental backgrounds: relativity of illustration to the materials at command: exemplification: enumeration: nature of analogy and its place in illustration: the metaphor and other illustrative figures: how to find suitable verbal illustrations: source books of illustration.

X. (Dec. 3.) *Graphic Illustration*: the actual object and the model as means of illustration: the value of the picture as illustration, especially as compared with a verbal description: different illustrative values of a picture according as it is used for intellectual, moral, or aesthetic teaching: the diagram as compared with the picture: dangers that lurk in diagrammatic illustration: certain weaknesses in our space sense: supremacy of the straight line in illustration.

XI. (Dec. 10.) *How to deal with Dullness*: nature of dullness: its relativity to time and subject: the temporary dunce: the permanent dunce: the all-round dunce: the specialized dunce: the scale of dullness: the “defective point”: subjective and objective dullness: stage at which objective dullness is welcomed by the pupil: the tyranny of “problems,” and the legitimate claims of the relatively dull.

XII. (Dec. 17.) *The Problem of Examinations*: various functions of examinations: teacher as examiner: how to prepare an examination paper: allocation of marks: how to make the best of the external examiner: the personal equation: the use of “old examination papers”: preparation of “set books”: “the index” in revision of examination work: how to prepare pupils for an external examination with the minimum educational damage.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.

**MATHEMATICS.**

16439. (R. J. DALLAS.)—Show that  $\frac{1}{1} \frac{2}{2+} \frac{3}{3+} \dots$  is equal to  $1/(e-1)$ .

Solutions (I.) by A. H. S. GILLSON and T. K. VENKATARAMAN, M.A.; (II.) by A. M. NESBITT, M.A., C. M. ROSS, and others.

(I.) Let  $u \equiv \frac{1}{1+} \frac{2}{2+} \frac{3}{3+} \dots$  to infinity. Then, since

$$\frac{1}{\alpha} \mp \frac{\alpha}{\beta \pm 1} \mp \frac{\beta}{\gamma \pm 1} \mp \frac{\gamma}{\delta \pm 1} \mp \dots = \frac{1}{\alpha} \pm \frac{1}{\alpha\beta} + \frac{1}{\alpha\beta\gamma} \pm \frac{1}{\alpha\beta\gamma\delta} + \dots;$$

therefore

$$\frac{1}{1+} \frac{1}{1+} \frac{2}{2+} \frac{3}{3+} \dots \text{ ad inf.} = \frac{1}{1} - \frac{1}{2!} + \frac{1}{3!} - \frac{1}{4!} + \dots = 1 - e^{-1};$$

therefore  $\frac{1}{1+u} = \frac{e-1}{e}$ ; therefore  $u = \frac{1}{e-1}$ .

(II.) Denote the expression by E, and put

$$E = \frac{1}{1+} \frac{2}{2+} \dots \frac{r}{r+a_r}$$

Let this be assumed  $= \frac{u_r + U_r a_r}{v_r + V_r a_r} = \frac{u_{r+1} + U_{r+1} a_{r+1}}{v_{r+1} + V_{r+1} a_{r+1}}$ .

Now, since  $a_r = \frac{r+1}{r+1+a_{r+1}}$ ,

$$\text{this becomes } \frac{(u_r + U_r)(r+1) + u_r a_{r+1}}{(v_r + V_r)(r+1) + v_r a_{r+1}}$$

Hence, by equating the terms

$$U_{r+1} = u_r, \quad u_{r+1} = (u_r + u_{r-1})(r+1),*$$

with corresponding relations for the v's; the latter may be written

$$u_{r+1} - (r+2)u_r = -(u_r - (r+1)u_{r-1});$$

and so again for the v's. But  $E = \frac{u_1 + u_0 a_1}{v_1 + v_0 a_1}$ , so that  $u_1 = v_1 = v_0 = 1$ ,

$$u_0 = 0. \quad \text{Thus } \left. \begin{aligned} u_r - (r+1)u_{r-1} &= 1, & \text{when } r &= 1 \\ v_r - (r+1)v_{r-1} &= -1, & \text{when } r &= 1 \end{aligned} \right\}$$

It follows, then, that  $u_{r+1} - (r+2)u_r = (-1)^{r+1}$ ,

while  $v_{r+1} - (r+2)v_r = (-1)^r$ .

Taking, then, the equations already obtained

$$\begin{aligned} u_1 - 2u_0 &= 1 & \dots\dots\dots(1), \\ u_2 - 3u_1 &= -1 & \dots\dots\dots(2), \\ u_3 - 4u_2 &= 1 & \dots\dots\dots(3), \\ \dots & \dots & \dots\dots\dots \\ u_{r+1} - (r+2)u_r &= (-1)^r & \dots\dots\dots(r+1). \end{aligned}$$

Multiply them by factors which will make all but  $u_{r+1}$  and  $u_0$  vanish on addition; i.e., multiply the mth equation by  $(r+2)!/(m+1)!$ , we get

$$u_{r+1} - 2u_0 = (r+2)!/2! - (r+2)!/3! + (r+2)!/4! - \dots + (-1)^{r+1}(r+2)!/(r+2)!,$$

the equation for the v's having the signs of the right-hand side reversed. Thus

$$E = \lim_{r \rightarrow \infty} \frac{u_{r+1}}{v_{r+1}} = \lim_{r \rightarrow \infty} \left[ \frac{\left(\frac{1}{2!} - \frac{1}{3!} + \dots\right)}{\left\{1 - \left(\frac{1}{2!} - \frac{1}{3!} + \dots\right)\right\}} \right] = \frac{1/e}{1-1/e} = \frac{1}{e-1}.$$

The PROPOSER contributes the following solution:—

The functions  $n!$  and sub-factorial  $n$  are both solutions of the succession equation  $u_{n+1} = n(u_n + u_{n-1})$ . Now, if  $p_n/q_n$  be the nth convergent of the continued fraction

$$\frac{b_1}{a_1 +} \frac{b_2}{a_2 +} \dots \frac{b_n}{a_n +} \dots,$$

we have  $p_{n+1} = a_n p_n + b_n p_{n-1}$ ,  $q_{n+1} = a_n q_n + b_n q_{n-1}$ .

Putting  $a_n = b_n = n$ , we see that, if  $a_1 b_1$  and  $a_2 b_2$  are properly chosen, the fraction whose nth component is  $n/n$  will have

$$p_n = \text{sub-factorial } (n+1), \quad q_n = \text{factorial } (n+1).$$

We must take  $b_1 = 1$ ,  $a_1 = 2$ ,  $b_2 = 2$ ,  $a_2 = 2$ , and then

$$\frac{1}{2+} \frac{2}{2+} \frac{3}{3+} \dots \frac{n}{n} = \frac{\text{sub-factorial } (n+1)}{\text{factorial } (n+1)}.$$

\* It is clear from early cases that we may take these results without any constant multiplier.

In limit  $n = \infty$ , this fraction is thus  $= 1/e$ , and hence the absolutely consistent form  $\frac{1}{1+} \frac{2}{2+} \dots \frac{n}{n+} \dots$ , is  $= \frac{1}{e-1}$ .

A Proof of Euc. VI. 3 which was recently drawn up by a boy named Hunt, of the Church of England Grammar School, Melbourne.

Communicated by W. F. BEARD, M.A.

Mr. Beard writes:—It will be noticed that the following proof does not involve any proposition but Euc. VI. 1:—

Let ABC be a triangle, and let the bisector of the  $\angle BAC$  meet BC at D. To prove

$$BD/DC = BA/AC,$$

turn the  $\angle CAD$  about AD till it coincides with the equal angle BAD. Let C fall at C'; then

$$BD/DC = \Delta BAD/\Delta CAD$$

(Euc. VI. 1)

$$= \Delta BAD/\Delta C'AD$$

$$= BA/AC' \text{ (Euc. VI. 1)} = BA/AC.$$

16348. (W. F. BEARD, M.A.)—ABC is a triangle; the escribed circle opposite A, whose centre is I, meets the circum-circle at D; ID produced meets the circum-circle again at E. Prove that IE is equal to the diameter of the circum-circle.

Solutions (I.) by Rev. W. ANDERSON, M.A., the PROPOSER, and many others; (II.) by JAMES BLAIKIE, M.A.

(I.) Let O be the circum-centre; R,  $r_a$  the radii of the circum-circle and escribed circle.

$$\begin{aligned} ID \cdot IE &= \text{square of tangent from I to the circum-circle} \\ &= OI^2 - R^2 = 2Rr_a; \end{aligned}$$

but  $ID = r_a$ ; therefore  $IE = 2R$ .

(II.) Let IA meet the circum-circle at F, and let AC touch the ex-circle at G,

$$\begin{aligned} \angle FIC &= \angle ICG - \angle IAC \\ &= \angle ICB - \angle IAB \\ &= \angle ICB - \angle FCB \\ &= \angle ICF; \end{aligned}$$

$$\text{therefore } IF = FC, \quad ID \cdot IE = IF \cdot IA;$$

$$\text{therefore } IE = FC \cdot IA/IG = FC/\sin \angle FAC = 2R.$$

16448. ("λ, μ.")—Resolve into three linear factors  $(\alpha + \beta + \gamma)^3 - 9(\alpha^2\beta + \beta^2\gamma + \gamma^2\alpha)$ .

Solution by S. T. SHOVELTON, M.A., and V. DANIEL, B.Sc.

If the factors are assumed to be

$$(ka + l\beta + m\gamma)(ma + k\beta + l\gamma)(la + m\beta + k\gamma),$$

we have, by comparison of terms,

$$klm = 1, \quad km^2 + ml^2 + lk^2 = -6, \quad k^2m + m^2l + l^2k = 3, \quad k^3 + l^3 + m^3 + 3klm = 6.$$

Therefore k, l, and m are roots of  $x^3 - 3x - 1 = 0$ . Therefore,

$$k = \omega^2 \sqrt[3]{(-\omega) + \omega^2 \sqrt[3]{(-\omega^2)}}, \quad l = \omega \sqrt[3]{(-\omega) + \omega^2 \sqrt[3]{(-\omega^2)}},$$

and

$$m = \omega \sqrt[3]{(-\omega) + \omega^2 \sqrt[3]{(-\omega^2)}},$$

where  $\omega$  and  $\omega^2$  are cube roots of unity.

16458. (C. M. ROSS.)—Prove that the value of the determinant

$$\begin{vmatrix} 1+x^2 & x & 0 & 0 & \dots \\ x & 1+x^2 & x & 0 & \dots \\ 0 & x & 1+x^2 & x & \dots \\ \dots & \dots & \dots & \dots & \dots \end{vmatrix}$$

of the mth order is  $1 + x^2 + x^4 + \dots + x^{2m}$ .

*Solutions (I.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.;  
(II.) by D. P. VARADARAJAN, B.A., and others.*

(I.) Let  $1 + x^2 = y$  (for shortness), and let  $\Delta_m$  denote the determinant of  $m$ th order. Then, it will be found by working out a few cases (say of  $m = 2, 3, 4, 5, \dots$ ), and thence by induction, that

$$\begin{aligned} \Delta_m &= y\Delta_{m-1} - x^2\Delta_{m-2} = \Delta_{m-1} + x^2(\Delta_{m-1} - \Delta_{m-2}) \\ &= (1 + x^2 + x^4 + \dots + x^{2m-2}) + x^2 \cdot x^{2m-2} \\ &= 1 + x^2 + x^4 + \dots + x^{2m}. \end{aligned}$$

(II.) Let  $f(m)$  denote

$$\begin{vmatrix} 1+x^2 & x & 0 & 0 & \dots \\ x & 1+x^2 & x & 0 & \dots \\ 0 & x & 1+x^2 & x & \dots \end{vmatrix}$$

of the  $m$ th order. Then

$$f(m) = (1+x^2)f(m-1) - x \begin{vmatrix} x & x & 0 & 0 & 0 & \dots \\ 0 & 1+x^2 & x & 0 & \dots \\ 0 & x & 1+x^2 & x & \dots \end{vmatrix}$$

of the  $(m-1)$ th order. But

$$\begin{vmatrix} x & x & 0 & 0 & \dots \\ 0 & 1+x^2 & x & 0 & \dots \\ 0 & x & 1+x^2 & x & \dots \end{vmatrix} = x \begin{vmatrix} 1 & 0 & 0 & 0 \\ 0 & 1+x^2 & x & 0 \\ 0 & x & 1+x^2 & x \end{vmatrix} = xf(m-2);$$

therefore

$$f(m) = (1+x^2)f(m-1) - x^2f(m-2).$$

Hence

$$\begin{aligned} f(m) - f(m-1) &= x^2[f(m-1) - f(m-2)] \dots \dots \dots (1), \\ f(m-1) - f(m-2) &= x^2[f(m-2) - f(m-3)] \dots \dots \dots (2), \\ \dots &= \dots \dots \dots \\ f(3) - f(2) &= x^2[f(2) - f(1)] \dots \dots \dots (m-2); \end{aligned}$$

therefore, by addition,

$$f(m) - f(2) = x^2[f(m-1) - f(1)], \quad f(1) = 1 + x^2, \quad f(2) = 1 + x^2 + x^4;$$

therefore  $f(m) = x^2f(m-1) + 1 + x^2 + x^4 - x^2 - x^4 = 1 + x^2f(m-1)$ .

Hence  $f(m) = 1 + x^2(1 + x^2(1 + x^2(\dots)))$  to  $m$  terms;

therefore  $f(m) = 1 + x^2 + x^4 + x^6 + x^8 + \dots + x^{2m}$ .

N.B.—With a different notation, namely,  $\Delta_m, \dots$ , for  $f(m), \dots$ , the Proposer's solution is similar to Solution II., but the last two lines he replaces as follows:—

Again, multiplying the equations (1) to  $(m-2)$  together,

$$\Delta_m - \Delta_{m-1} = (x^2)^{m-2} [\Delta_2 - \Delta_1] = x^{2m} \dots \dots \dots (A).$$

Eliminating  $\Delta_{m-1}$  between (A) and  $\Delta_m - x^2\Delta_{m-1} = 1$ ,

$$(1-x^2)\Delta_m = 1 - x^{2m+2};$$

therefore

$$\Delta_m = 1 + x^2 + x^4 + \dots + x^{2m}.$$

18291. (Communicated by I. ARNOLD.)—A person engages to travel from London to Constantinople, and to touch the Equator in his journey. Required the point of contact and the length of his track, admitting it to be the shortest possible, and the Earth a sphere.—[From Hann's *Spherical Trigonometry*.]

*Solution by JAMES BLAIKIE, M.A.*

Let L, C, D, O, N represent London (longitude  $0^\circ$ , latitude  $51\frac{1}{2}^\circ$ ), Constantinople (longitude  $29^\circ$ , latitude  $41^\circ$ ), the image of Constantinople in the Equator, the centre of the Earth, and the North Pole, and let the great circle LD meet the Equator in K.

Then, by great circle geometry,  $LK + KC = LD$ ; a minimum.  
Also, by spherical trigonometry,  $\cos LOD = \cos NOL \cos NOD + \sin NOL \sin NOD \cos LND$ ,  
 $= -\cdot 10 = \cos 96^\circ$  approximately;  
therefore  $LD = \frac{90}{\cos 96^\circ}$  Earth's circumference,  
 $= 6700$  miles approximately.

To find K we may use analytical geometry, taking the Equator as the plane of  $xy$ , the meridian of London as the plane of  $xz$ , and  $ax + by + cz = 0$  as the equation of the plane LD. The co-ordinates of L are  $r \cos 51\frac{1}{2}^\circ, 0, r \sin 51\frac{1}{2}^\circ$ . Those of D are  $r \cos 41^\circ \cos 29^\circ, r \cos 41^\circ \sin 29^\circ, -r \sin 41^\circ$ .

Also at K  $y/x = -a/b = \tan \text{long. K}$ . Substituting the co-ordinates of L and D in the equation in turn and simplifying, we obtain

$$-a/b = \cdot 3096 = \tan 17^\circ 12' \text{ approx.}$$

Hence K is a point in the Congo Free State.

*The Nagel Point.*

By W. GALLATLY, M.A.

Let H be the ortho-centre of ABC. Along AH, BH, CH mark off  $AP = BQ = CR = 2r$ , so that the perpendiculars at P, Q, R to AH, BH, CH meet in the Nagel Point N.

Since  $\angle HPN = 90^\circ$ , PQR lie on the circle (HN); and  $\angle PQR = \angle PHR =$  angle between AH, CH = B; so that PQR is inversely similar to ABC. It can readily be proved (Fuhrmann's "Synthetische Beweise," p. 109) that I the in-centre of ABC is also the in-centre of PQR, so that I is the double point for ABC, PQR.

Since H is the ortho-centre and N the Nagel Point of ABC, while O, I are corresponding points for the mid-point triangle  $A'B'C'$ ; therefore  $IO = \frac{1}{2} \cdot HN$ , and  $OI$  is parallel to  $HN$ ; therefore  $IO = \omega N$ , where  $\omega$  is the centre of circle (HN), and  $I\omega NO$  is a parallelogram.

Again  $(\omega I)(OI)$  are pairs of homologous points in PQR, ABC, so that the linear ratio for the two figures is given by  $m = \omega I/OI$ .

But this is also the ratio of the radii; therefore

$$\omega I/OI = \omega N/R = OI/R;$$

therefore

$$\omega I \cdot R = OI^2 = R(R-2r);$$

therefore

$$\omega I = ON = R-2r.$$

Hence the circle described with centre N and radius  $2r$  touches the circle ABC.

This is a form of Feuerbach's Theorem, for, with regard to the anti-complementary triangle, N is the in-centre and O the centre of the nine-point circle.

Let ON cut the circle ABC in Z. Then, since

$$\omega I/\omega N = \omega I/OI = OI/OZ,$$

and since the angles  $I\omega N, IOZ$  are equal, and drawn in contrary directions; therefore N and Z are homologous points, and  $ZABC, NPQR$  are similar.

To prove that AZ is parallel to QR. Let  $\theta, \theta'$  be the angles made by AZ, QR with BC. Then  $\theta = \angle AZB - \angle ZBC = \angle C - \angle NQR$ , by similar figures,  $= \angle QRP - \angle NPR = \theta'$ .

The figure NRQP being similar to ZCBA,  
 $ZA : ZB : ZC = NP : NQ : NR = b-c : c-a : a-b$ .

So that the normal co-ordinates of Z are

$$[1/(b-c) \cdot 1/(c-a) \cdot 1/(a-b)].$$

The Simson line of Z for ABC is parallel to HN. Draw ZZ's perpendicular to BC, so that AZ' is parallel to the Simson line of Z.

Then  $\angle AZ's = \angle ACZ = \angle PRN$  (by similar figures) =  $\angle PHN$ ; therefore AZ' is parallel to HN.

The point W, diametrically opposite to Z, in the circle ABC, is homologous to H, diametrically opposite to N in PQR. Hence the co-ordinates of W are proportional to those of H in reference to PQR; i.e., to  $1/HP, 1/HQ, 1/HR$ . But

$$HP = 2r - 2R \cos A \cos B + \cos C - 1;$$

therefore W is  $1/(\cos B + \cos C - 1, \dots)$ .

The isogonal conjugate to the tangent at Z is

$$a(b-c)^2/a + \dots = 0,$$

which may be written in the elegant form

$$(aa + \dots)(a/a + \dots) = (a + \beta + \gamma)^2.$$

**8860.** (D. BIDDLE.)—A liqueur is ordered to consist of four spirits A, B, C, D, in the proportions 1, 2, 3, 10. When an eighth part is drawn off from the full vessel and consumed, it is found that B has been omitted, and that an excess of D has taken its place. Without necessarily refilling the vessel, introduce B, and rectify the proportions of the several spirits, with the least possible loss of material, and at the least possible extra expense, the relative cost of A, B, C, and D being 1,  $\frac{1}{2}$ ,  $\frac{1}{3}$ ,  $\frac{1}{4}$ , and allowance being made for the difference in cost between the interchanged B and D.

*Solution by the PROPOSER.*

$$1 + 2 + 3 + 10 = 16.$$

We will therefore suppose the vessel, when full, to contain a pint of 16 oz., each ounce of 480 minims; also the cost of A, B, C, D to be respectively 20s., 10s., 5s., 2s. 6d. per oz. The cost of the proper liqueur should thus be £4, but of the imperfect, only £3 5s., of which an eighth has been already consumed, reducing the value of what remains to £2 16s. 10 $\frac{1}{2}$ d.

	A	B	C	D
The proper quantities in the full vessel are, in minims ... ..	480	960	1440	4800
The quantities, as wrongly put... ..	480	—	1440	5760
The quantities now in the vessel ... ..	420	—	1260	5040
Reduce further by 320 minims, leaving	400	—	1200	4800
Then add 80 of A, 960 of B, 240 of C ...	480	960	1440	4800

We thus have the vessel full of the proper liqueur, and the cost of the additions has been 3s. 4d. + 20s. + 2s. 6d., or £1. 5s. 10d., which, added to £3 5s., makes the total cost £4. 10s. 10d. But, if we take the rejected 320 minims above referred to, and add to them, 4 of A, 48 of B, and 12 of C, the further cost is only 2d. + 1s. + 1 $\frac{1}{2}$ d., or 1s. 3 $\frac{1}{2}$ d., to obtain an additional four-fifths of an ounce of the genuine liqueur, of value 4s. Supposing this to be done, there is no loss of material at all, and full value received for the money expended, especially if the vendor be made to bear, as he should, the cost of the portion consumed, in consequence of the error on his part.

**15997.** (H. BATEMAN, B.A.)—Given a system of cubics passing through the six corners of a quadrilateral and through another fixed point O, prove that all those that touch a given line through O will touch another given line through O, the cubics which touch the line at O being excepted.

*Additional Solution by Prof. NANSON.*

The cubics which pass through the six corners, the point O, and a point P on the given line all pass through a ninth point Q. This point is plainly the one point common to the four conics which pass through O, P and any three non-collinear corners; and it may be shown to be the meet of the second tangents from O, P to that in-conic of the quadrilateral which also touches OP. For the tangents from O, P to a variable conic which touches OP and three of the sides of the quadrilateral trace out homographic pencils and therefore meet on a fixed conic passing through O, P. But, taking the variable conic to be a pair of points, one at the meet of two of the three sides, and the other at the meet of the third side with OP, we see that the fixed conic circumscribes the triangle formed by the three sides. Hence the meet of the tangents from O, P to the conic which touches OP and all four sides necessarily coincides with Q.

Taking now a second point P' on OP, all cubics through the six corners, the point O, and the point P', pass through a fixed point Q' on OQ. But when P, P' coincide, so do Q, Q'. It follows, then, that any cubic of the system which touches a fixed line OP through O also touches another fixed line through O, viz., the mate OQ of OP in the involution pencil determined at O by the conics inscribed in the given quadrilateral. The cubics which touch the given line at O must be excepted because P has been assumed to be distinct from O.

**QUESTIONS FOR SOLUTION.**

**16200.** (Professor SANJANA, M.A. *Corrected.*)—The great circle bisecting perpendicularly the side BC of a spherical triangle ABC meets the great circles bisecting internally and externally the angle A in the points D, E. Prove that  $\angle EBC = 90^\circ - \angle DBC = \frac{1}{2}(B + C)$ , and arc DE =  $\tan^{-1} \{2 \sin a \div [\cos \frac{1}{2} a \sin(B + C)]\}$ . What are the corresponding results for a plane triangle?

**16510.** (Professor E. HERNÁNDEZ.)— $l$  nombres  $a, b \dots k, l$  étant donnés, si on forme le tableau

$$\left. \begin{matrix} a, 2a, 3a \dots la \\ b, 2b, 3b \dots lb \\ \dots \dots \dots \\ k, 2k, 3k \dots lk \end{matrix} \right\} \dots \dots \dots (1)$$

il y aura autant de colonnes dont tous les nombres sont des multiples de  $l$  qu'indique le plus grand commun diviseur des nombres  $a, b, c \dots l$ .

**16511.** (Rev. F. H. JACKSON, M.A.)—Obtain a more general form of Abel's result

$$(x + a)^n = x^n + na(x + b)^{n-1} + \frac{n(n-1)}{2!} a(a-2b)(x + 2b)^{n-2} + \dots,$$

referred to in the Solution to Question 16403, *Educational Times*, August, 1908, viz.:

$$(x + a)^{(n)} = x^n + [n] a(x + b)^{(n-1)} + \frac{[n][n-1]}{[2]!} a(qa - [2]b)(x + [2]b)^{(n-2)} + \dots + \frac{[n][n-1][n-2]}{[3]!} a(qa - [3]b)(q^2a - [3]b)(x + [3]b)^{(n-3)} + \dots$$

in which

$$(x + a)^{(n)} = (x + a)(x + aq)(x + aq^2) \dots \text{to } n \text{ factors}$$

$$[n] = (q^n - 1)/(q - 1);$$

the general term of the series being

$$\frac{[n]!}{[r]! [n-r]!} a(qa - [r]b)(q^2a - [r]b) \dots (q^{r-1}a - [r]b)(x + [r]b) \dots \dots (x + q^{n-r-1}[r]b).$$

**16512.** (Communicated by Professor E. B. ESCOTT.)—Sum to  $n$  terms the series

$$\frac{(1+r)(1+2r)}{5!} + \frac{(1+r)(1+2r)(1+3r)}{6!} + \dots$$

(Chrystal, *Algebra*, Part II., Chap. 31, Exer. 25.)

**16513.** (The late R. W. D. CHRISTIE.)—Find an endless chain of integral solutions of  $A^2 + B^2 = C^2$ , where  $A - B = a^2 + b^2$ ,  $C - A = a^2$ ,  $C - B = 2d^2$ , are all integers.

**16514.** (R. F. DAVIS, M.A.)—Factorize algebraically

$$(1) 4x^6 + 2a^5x + a^6, \quad (2) x^7 - 2a^2x^5 + a^7;$$

and thence write down the factors of 4,000,021 and 9,800,001.

**16515.** (Professor COCHEZ.)—Résoudre  $x^r - x = (2x - x^r)^{1/r}$ .

**16516.** (R. CHARTRES.)—P is a random point within the triangle ABC ( $\Delta = 1$ ). Show that the mean value of the area

$$AEF = \int_0^{\infty} \frac{1}{n^2(n+1)^2} dx,$$

and the mean of

$$DEF = \int_0^{\infty} \frac{1}{n^3(n+1)^3} dx,$$

without calculating their numerical values.

**16517.** (M. T. NARANIENGAR, M.A.)—In a bicircular quartic, if any number of straight lines be drawn through any given point to cut the curve in four points, the product of the segments of each will be the same. Generalize the result.

**16518.** (Professor NEUBERG.)—Étant donnée la courbe  $y = \sin^2 x$ , trouver (1) les points d'inflexion; (2) l'aire comprise entre l'axe Ox et l'arc compris entre les points  $x = 0, x = \pi$ ; (3) le volume engendré par cette aire tournant, soit autour de Ox, soit autour de Oy.

**16519.** (Professor NANSON.)—Two ellipses have their axes parallel and the centre of one moves along the perimeter of the other. Find the envelope of the moving ellipse and deduce the parallels of an ellipse.

**16520.** (V. MADHAVARAO, M.A.)—The normal to a parabola at any point P cuts the curve again at Q, and the perpendicular QK to PQ cuts the diameter at P in K. Show that, if a parallel to the directrix through K meet PQ produced in R, QR = the diameter of curvature at P.

**16521.** (V. RAMASWAMI AIYAR, M.A.)—Normals AP, BP, CP are drawn to a conic, meeting at P on the curve. Show that the pedal circle of the triangle ABC with respect to P subtends at P an angle which is fixed whatever the conic and wherever the point P thereon.

**16522.** (S. NARAYANA AIYAR.)—S is a variable point on the circum-circle of a fixed triangle ABC. For different positions of the point S four systems of conics can be described circumscribing the triangle ABC with S as focus. Show that the directrices of each system of these conics are concurrent and that the points of concurrence are the in- and ex-centres of the triangle ABC.

**16523.** (A. M. NESBITT, M.A.)—Show, geometrically, that a rectangular hyperbola reciprocates into itself with respect to a concentric circle through its vertices; and prove that in space of  $n$  dimensions the surface  $xy \dots z = c^n$  reciprocates into itself with respect to the hyper-sphere  $x^2 + y^2 + \dots + z^2 = nc^2$ .

**16524.** (Professor MORLEY.)—A triangle sets up in its plane a Cremona transformation by taking the polar line of any point. Given in a plane a Desargues configuration (the complete figure of two perspective triangles), prove that there are  $\infty^2$  such transformations which will send the ten points of the configuration into the ten lines on five points.

**16525.** (JAMES BLAIKIE, M.A.)—Points P, Q, R are taken on the altitudes of a triangle ABC such that  $AP/BC = BQ/CA = CR/AB$ ; prove that the centroids of PQR, ABC coincide. Hence show that the centroids of the triangles formed by joining (1) the vertices, (2) the centroids of the equilateral triangles described similarly on the three sides of any triangle coincide with the centroid of the original triangle.

**16526.** (V. DANIEL, B.Sc.)—How should a right-angled triangle be drawn to comply with the specification:—"As remote as may be from an isosceles triangle"?

**16527.** (Professor SANJANA, M.A.)—The small circle described about a spherical triangle ABC meets the great circles bisecting internally and externally the angle A in the points F, F'. Prove that

$$\cot \frac{1}{2} \angle FF' = \sqrt{[\cot^2 R + \frac{1}{2} \tan^2 R \sin^2 (B-C)]},$$

and give the analogous result *in plano*.

**16528.** (C. M. ROSS.)—If  $\tan(\theta + i\phi) = \cos \alpha + i \sin \alpha$ , show that  $\frac{1}{2}(2n\pi + \pi) = \theta$  and  $\phi = \frac{1}{2} \log \tan(\frac{1}{2}\pi + \frac{1}{2}\alpha)$ .

**OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).**

**9886.** Every square number is divisible into two sequences from  $m$  (any integer).

**9889.** Take any number of my digits (1, 2, or 3 together) and I am equal to a sequence from unity. Cast out the nines from my dozen divisors and you'll find the factors of each of my digits. I am a famous number, but not a *perfect* number, and both myself and the sum of my digits are divisible by a *perfect* number.

**10944.** (W. J. GREENSTREET, M.A.)—If

$$\phi(x) = a_0 + a_1x + \dots + a_nx^n + \dots$$

$$\psi(x) = b_0 + b_1x + \dots + b_nx^n + \dots,$$

(1) show that  $a_0b_0 + a_1b_1 + \dots + a_nb_n + \dots = \int_0^{2\pi} [\phi(\theta)\psi(\theta)d\theta]/2\pi$ ;

and (2) find  $a_0 + ma_1x + m(m-1)a_2x^2/2! + \dots$

**11289.** (Professor RAMASWAMI AIYAR.)—If parallel forces acting at  $(n+2)$  points in space of  $n$  dimensions be in equilibrium, they will be in equilibrium when each is transferred to the centre of the hypersphere passing through the points of application of the other  $(n+1)$  forces.

[This is an extension of Professor Neuberg's Question 10765.]

**11298.** (Professor NILKANTHA SARKAR.)—A number of light rigid rods are loosely jointed together at their extremities so as to form a closed polygon, and a force applied to each side perpendicular and proportional to it. their lines of action meeting in a point. Prove that, if equilibrium be maintained, the polygon will be inscribable in a circle, and, if S be the point through which the forces act, O the centre of the circumscribed circle, and SO be produced to S' so that SS' is bisected in O, the stress at any angular point of the polygon will be perpendicular and proportional to the distance of the point from S'.

**11529.** (Professor SYAMADAS MUKHOPADHYAY, B.A.)—Find the chance that a line which meets a sphere of radius R also meets another sphere of smaller radius  $r$  whose centre is at a given distance  $d$  from the centre of the first. Examine the three cases, when the second sphere (1) lies wholly within, (2) lies wholly without, and (3) intersects the first sphere.

**NOTICE TO CORRESPONDENTS.**

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

**LATEST SELF-FILLING FOUNTAIN PEN.**

**UNUSUAL OFFER AS AN ADVERTISEMENT FOR A SHORT PERIOD ONLY**  
 The Self-Filling and Self-Cleaning Perfection Fountain Pen (worth 15/-) to Teachers for 4/- only, or 3 Pens for 10/6.

This is an advertisement offer, & will be withdrawn at the end of this year.

**ORDER NOW BEFORE IT IS TOO LATE.**

Money returned if not fully satisfied. Guaranteed for 2 years.

Description:—Non-leakable, fills and cleans itself in a moment—a press, a fill—fitted with large 14-carat gold nib, iridium tipped, guaranteed to last for years. No other Pen like it for reliability, steady flow and smooth writing. Every Pen a pleasure.

Makers—

THE RED LION MANUFACTURING CO., Ltd., 71 High Holborn, London, W.C.

No need to buy any other Pen while this offer lasts.

To obtain this advantage, mention "The Educational Times."

**MATHEMATICAL AND SCIENTIFIC SERIES FOR SCHOOLS.**

*SOME RECENT ADDITIONS.*

**HISTORICAL GEOGRAPHY ON A REGIONAL BASIS.**

By ERNEST W. DANN, B.A., THE GRAMMAR SCHOOL, REIGATE.

**Vol. I.—THE BRITISH ISLES. Vol. II.—EUROPE.**

Price 2s. 6d. each.

*Extract from Preface.*—These little volumes have been written to give students a more definite idea of the interrelation of Geography and History than they can possibly gain from the passing allusions in books entirely devoted to the one or the other subject. Of the importance of Historical Geography there can be no doubt: but there is a great deal of confusion of terms. It is often forgotten that Geography is the substantive and Historical the adjective, and it is most important to give the science its proper *physical* basis. Moreover, the study of it should be based upon reason and not upon memory. Kaleidoscopic political changes at rapid intervals do not require a high order of intelligence to acquire, and are merely interesting; the study of man on the earth is a far deeper matter.

**ELEMENTARY TRIGONOMETRY.** By CECIL HAWKINS, M.A., Senior Mathematical Master at Haileybury College, Hertford. Small crown 8vo, without Answers, 3s. 6d.; with Answers, 4s.

**GEOMETRICAL CONICS.** By Professor G. H. BRYAN, F.R.S., and Prof. R. H. PINKERTON, M.A. 3s. 6d.

**ANALYTICAL CONICS.** By Prof. CHARLOTTE ANGUS SCOTT, D.Sc., Bryn Mawr College, U.S.A. 3s. 6d.

**AN INTRODUCTION TO PRACTICAL BOTANY.** By E. H. DAVIES, B.Sc. (Lond.), F.G.S., County School, Barry, Glam. Small crown 8vo, 2s.

**SCHOOL HYGIENE.** By HERBERT JONES, D.P.H. (Camb.), Fellow and Hon. Secretary to the Incorporated Society of Medical Officers of Health; Fellow of the Royal Sanitary Institute, &c. Small crown 8vo, 2s.

**PRACTICAL NATURE STUDY FOR SCHOOLS.** By OSWALD H. LATTER, M.A., Senior Science Master at Charterhouse, formerly Tutor at Keble College, Oxford. Part I. (Pupil's Book), 2s. 6d. net; Part II. (Teacher's Aid and Answers), 6s. net.

**A FIRST BOOK OF GEOMETRY.** By W. H. YOUNG, Sc.D., Senior Examiner to the Welsh Examination Board, and Mrs. YOUNG, Ph.D. With three Coloured and many other illustrative Diagrams. Crown 8vo, 1s. 6d. net.

*The Westminster Gazette* says:—"The child does everything himself: he is not taught, he learns. The ideal which the authors have set themselves is excellent, and the book is evidently the outcome of much patient care and thought."

**A FIRST STATICS.** By C. S. JACKSON, M.A., late Scholar of Trinity College, Cambridge; Instructor of Mathematics, R.M. Academy, Woolwich; and E. M. MILNE, M.A., Royal Naval College, Dartmouth. With over 200 Diagrams and numerous Examples. Crown 8vo, with or without Answers, 4s. 6d.

**ELEMENTARY PRACTICAL PHYSICS.** By F. J. TRISTRAM, M.A., B.Sc. Fcap. 8vo, 1s. 6d.

*Education* says:—"This admirable little book approaches very near to our ideal of an elementary text-book of Practical Physics. . . . Fortunate, indeed, is the student who has his powers of observation and manipulative skill trained on the lines indicated in this excellent little book."

**GERMAN SCIENCE READER.** Compiled by C. R. Dow, M.Sc. Part I., Mathematics, Physics, and Chemistry. Small crown 8vo, 2s.

This book consists of passages on Scientific subjects in German, by the translation of which it is hoped that the student will acquire a knowledge of the more commonly occurring scientific expressions. In a book of this size it is impossible to bring in every term which would be met with in the perusal of a German scientific text-book; but it is believed that all the more common ones have been included.

**LIGHT: For Intermediate Students.** By F. E. REES, B.Sc., late Demonstrator of Physics, University College, Bangor. Small crown 8vo, 2s.

*The Schoolmaster* says:—"The book, which covers a considerable amount of ground, is exceedingly well done. It displays knowledge and thoughtful care on every page. Apart from its general use as an elementary text-book of the subject, it will, in particular, serve the requirements of those entering for an Intermediate Examination in Physics. It is worthy of notice that the pages are not crowded with text."

*A detailed list of the series may be had upon application.*

*The Publishers invite application for specimen copies with a view to introduction.*

London: J. M. DENT & CO., Aldine House, Bedford Street, W.C.

# BOOKS, &c., adapted to the New Requirements in GEOGRAPHICAL TEACHING.

SECOND EDITION, REVISED. Demy 4to, 6s. net.

## A PROGRESSIVE COURSE OF COMPARATIVE GEOGRAPHY ON THE CONCENTRIC SYSTEM.

By P. H. L'ESTRANGE, B.A., Assistant Master at Malvern College. With 177 Illustrations and 172 Maps and Diagrams in Colour.

Also in Two Volumes as under:—(1) **The Text**, with 177 Illustrations, 3s. 6d. net; (2) **The Maps and Diagrams**, with Index, 3s. 6d. net. Forming **Philips' Progressive Atlas of Comparative Geography**.

In use at Charterhouse, Rugby, Malvern, Repton, and other Public Schools, and at many Secondary Schools and Pupil-Teachers' Centres.

## A JUNIOR COURSE OF COMPARATIVE GEOGRAPHY.

Being Course A (Text only) of the "Progressive Course." By P. H. L'ESTRANGE, B.A. Demy 8vo, 2s. 6d. net.

The *Educational News* says:—"The method is sound, and the book should help to bring about a revolution in geographical teaching."

## A RATIONAL GEOGRAPHY.

By ERNEST YOUNG, B.Sc., Head Master of the Lower School of John Lyon, Harrow. In Three Parts, with numerous Maps and Diagrams. Crown 8vo, 1s. 6d. each.

The *Schoolmaster* says:—"We very strongly commend it to the notice of our readers. Whoever has to give a lesson in geography will find it of service. It is full of hints and new ideas."

## MACKINDER'S GEOGRAPHICAL STUDIES.

A Course of Elementary Studies in Geography. By H. J. MACKINDER, M.A., Director of the School of Economics and Political Science in the University of London.

**Book I.—OUR OWN ISLANDS.** With numerous Coloured Maps and Illustrations. Crown 8vo, 2s. 6d. Also in Two Parts, each 1s. 3d.

**Book II.—LANDS BEYOND THE CHANNEL.** With numerous Coloured Maps and Illustrations. Crown 8vo, 1s. 9d.

## APPLIED GEOGRAPHY.

By J. SCOTT KELTIE, LL.D., Secretary of the Royal Geographical Society. Second Edition just published. Crown 8vo, 2s. 6d.

Sir GEORGE TAUBMAN GOLDIE, K.C.M.G., President R.G.S., says:—"The best short manual on the general question (economic geography) is still, to my mind, that by Dr. Keltie."—*Address to the Edinburgh Geographical Society*.

## PHILIPS' COMPARATIVE SERIES OF LARGE SCHOOLROOM MAPS.

The *Geographical Teacher* says:—"Can be thoroughly recommended. There can be no hesitation in advising teachers to select this series."

**PHILIPS' SCHOOL ATLASES.** Prices from 6d.

**PHILIPS' SCHOOL GLOBES.** Prices from 1s. 6d.

*Descriptive Lists of any of the above and Complete Catalogue of Educational Publications may be had post free on application.*

GEORGE PHILIP & SON, Ltd., 32 Fleet Street, London.

## A History of Classical Scholarship. By

J. E. SANDYS, Litt.D., Fellow of St. John's College and Public Orator in the University of Cambridge.

Vol. II.—From the Revival of Learning to the End of the Eighteenth Century (in Italy, France, England, and the Netherlands).

Vol. III.—The Eighteenth Century in Germany, and the Nineteenth Century in Europe and the United States of America.

Vols.  
II. and III.  
Large crown 8vo  
8s. 6d. net each.

The volumes now published begin with the Revival of Learning and end with the present day. They include a survey of the lives and works of the leading scholars from the fourteenth to the nineteenth century. Each of the periods embraced in these volumes opens with a chronological conspectus of the scholars of that period, giving the dates of their births and deaths, and, in the last four centuries, grouping them under the nations to which they belong. The two volumes contain sixty-two portraits and other illustrations.

## The Student's Handbook to the University and Colleges of Cambridge. Seventh Edition. Revised to June 30, 1908.

Crown 8vo  
3s. net.

"This is an extremely business-like little book, well printed and comely in appearance, and a marvel of cheapness. For the modest sum of three shillings, the intending or actual student and his friends can purchase all the information compressible into 400 odd pages, about present means and methods of education practised on the banks of the Cam."—*Guardian*.

"The book should be on the shelves of every head master and head mistress."—*School World*.

## Experimental Elasticity. A Manual for the

Laboratory. By G. F. C. SEARLE, M.A., F.R.S., University Lecturer in Experimental Physics. (Cambridge Physical Series.)

Demy 8vo  
5s. net.

This volume has its origin in the manuscript notes prepared by the author from time to time for the use of the students attending his class in Practical Physics at the Cavendish Laboratory, and its purpose is to give the substance of his course of instruction in the subject in a form which may be useful to students. Its three chapters deal with the Elementary Theory of Elasticity, Solutions of some simple Elastic Problems, and Experimental Work in Elasticity.

## Mechanics and Hydrostatics. An Element-

ary Text-Book, Theoretical and Practical. By R. T. GLAZEBROOK, M.A., F.R.S., Director of the National Physical Laboratory.

Crown 8vo  
6s.

Or in 3 Parts:—  
Dynamics, 3s.  
Statics, 2s.  
Hydrostatics,  
2s.

It has now come to be generally recognized that the most satisfactory method of teaching the Natural Sciences is by experiments which can be performed by the learners themselves. In consequence, many teachers have arranged for their pupils courses of practical instruction designed to illustrate the fundamental principles of the subject they teach. The portions of this book designated "experiments" have for the most part been in use for some time as a Practical Course for Medical Students at the Cavendish Laboratory at Cambridge. The rest of the book contains the explanation of the theory of those experiments, and an account of the deductions from them. It is with the hope of extending some such system as this in colleges and schools that the author undertook the publication of the present book and others of the series.

## Heat and Light. An Elementary Text-Book,

Theoretical and Practical. By R. T. GLAZEBROOK, M.A., F.R.S.

Crown 8vo  
5s.

Or in 2 Parts:—  
Heat, 3s.  
Light, 3s.

"Mr. Glazebrook's volumes on Heat and Light deal with these subjects from the experimental side, and it is difficult to admire sufficiently the ingenuity and simplicity of many of the experiments without losing sight of the skill and judgment with which they are arranged."—*Saturday Review*.

## Electricity and Magnetism. An Elementary

Text-Book, Theoretical and Practical. By R. T. GLAZEBROOK, M.A., F.R.S.

Crown 8vo  
6s.

"Every schoolmaster and teacher who has under consideration the selection of a text-book for his better students should most certainly look into this book."—*Guardian*.

## Elementary Algebra. By C. H. FRENCH, M.A.,

and G. OSBORN, M.A., Mathematical Masters at the Leys School, Cambridge.

Crown 8vo  
4s. 6d.

This book includes Common Logarithms and the Binomial Theorem for a positive integral index, so that it covers the ground of all school examinations not requiring a special knowledge of the subject. It is amply sufficient for such examinations as the London Matriculation, the Cambridge Previews, the ordinary pass-work of the Higher Certificate Examination of the Oxford and Cambridge Board, the Oxford and Cambridge Locals, and others of similar standard.

## Algebra for Secondary Schools. By CHARLES

DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham.

Crown 8vo  
6s.

The author's aim has been to prepare a text-book that may be of use in all but the highest classes of a secondary school. The subjects included are, for the most part, those which are common to all text-books of elementary algebra; but a few, such as indeterminate equations of the first degree, the remainder theorem and simple partial fractions, are introduced at an earlier stage than usual. The applications of graphs are confined to the illustrations which they afford of the methods of solving simultaneous equations and of the theory of quadratic equations and expressions. In the solution of simultaneous quadratic equations, they are especially useful, as they serve to show the geometrical meaning of every step in the process employed.

## Modern Geometry. By C. GODFREY, M.A.,

Head Master of the Royal Naval College, Osborne, and A. W. SIDMONS, M.A., Assistant Master at Harrow School.

Crown 8vo  
4s. 6d.

The present volume is a sequel to the "Elementary Geometry" written by the same authors. It covers the schedule of Plane Geometry required for the Special Examination in Mathematics for the Ordinary B.A. Degree at Cambridge; and represents what the authors take to be a useful course for any student of Mathematics, whether he intends to read for Mathematical Honours or to take up Physics or Engineering. For those who ultimately make a special study of Geometry, this book would serve as an introduction to more advanced treatises.

## Elementary Geometry (Practical and Theoretical). By C. GODFREY, M.A. and A. W. SIDMONS, M.A.

Crown 8vo  
3s. 6d.  
Or in  
Two Volumes  
2s. each.  
Or in  
Five Parts  
1s. each.

"After a careful examination of the various books on the new geometry that have recently been published, we have no hesitation in commending this book as the best for preparatory schools."—*Preparatory Schools Review*.

"This book deserves to be placed on the list of text-books to be used in all secondary schools."—*Local Government Chronicle*.

## Plane Geometry for Secondary Schools.

By CHARLES DAVISON, Sc.D., and C. H. RICHARDS, M.A., Mathematical Masters at King Edward's High School, Birmingham.

Crown 8vo  
4s.  
Or in  
Four Parts  
1s. each.

This book may now be obtained in four separate parts, corresponding to the four main divisions of the work:

Book I.—Triangles and Parallelograms.  
Book II.—Areas.  
Book III.—The Circle.  
Book IV.—Proportion applied to Geometrical Magnitudes.

"The plan of the present volume is good. Whilst the leading propositions appear in the form of bookwork, others scarcely less important are discussed as worked riders. A full complement of exercises for individual practice in original solution is, moreover, included, the questions being sometimes set as exercises on special propositions, and sometimes classed together as miscellaneous problems and theorems."—*Educational Times*.

## The Winchester Arithmetic. By C. GODFREY,

M.A., Head Master of the Royal Naval College, Osborne, and G. M. BELL, B.A., Senior Mathematical Master at Winchester College.

Crown 8vo  
3s.  
Teachers'  
Edition with  
Interleaved  
Answers  
6s. net.

"The first real attempt made in a text-book to give a sound grounding to the boy of average wants and average capabilities. . . . The substance and arrangement of the chapters fulfil in a highly satisfactory manner the requirements which modern tendencies have demanded in a general grounding of the subject."—*Guardian*.

"This admirable text-book will rank high amongst its fellows, and it would be difficult to find a school arithmetic more worthy of general use."—*Nature*.

"All the arithmetic that needs to be, or ought to be, over-taken in a secondary school, is here admirably presented in a slim volume of less than 200 pages. . . . It is one of the best and most workable of the recent arithmetics."—*Bookman*.

LONDON: CAMBRIDGE UNIVERSITY PRESS WAREHOUSE, FETTER LANE. C. F. CLAY, Manager.

London: Printed by C. F. HODGSON & SON, 2 Newton Street, High Holborn, W.C.; and Published by FRANCIS HODGSON, 89 Farringdon Street, E.C.

# THE EDUCATIONAL TIMES,

AND

## Journal of the College of Preceptors.

Vol. LXI.] New Series, No. 571.

NOVEMBER 2, 1908.

{Published Monthly, price, to Non-Members, 6d.; by Post, 7d. Annual Subscription, 7s.

### COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

#### MEMBER'S MEETING.

The next Monthly Meeting of the Members will take place on Wednesday, the 18th of November, at 7.30 p.m., when Professor J. W. ADAMSON will read a Paper on "The Experimental Study of Instruction."

A discussion will follow the reading of the Paper. Members have the privilege of introducing their friends.

#### LECTURES FOR TEACHERS.

On Thursday, 1st of October, JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London, commenced a Course of Twelve Lectures on

#### "THE PRACTICAL TEACHER'S PROBLEMS."

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools. The Lectures will be given on Thursday Evenings at 7, beginning on October 1st.

For Syllabus, see page 460.

The Fee for the Course is Half-a-Guinea.

Members of the College have free admission to this Course.

#### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will commence on the 28th of December, 1908.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in October.

**Certificate Examinations.**—The Christmas Examination for Certificates will commence on the 8th of December, 1908.

**Lower Forms Examinations.**—The Christmas Examination will commence on the 8th of December, 1908.

**Professional Preliminary Examinations.**—These Examinations are held in March and September. The Spring Examination in 1909 will commence on the 2nd of March.

**Inspection and Examination of Schools.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., Secretary.  
Bloomsbury Square, W.C.

### UNIVERSITY OF ST. ANDREWS.

#### L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

### UNIVERSITY OF ST. ANDREWS.

#### UNIVERSITY HALL.

Warden:

Miss FRANCES H. MELVILLE, M.A.

UNIVERSITY HALL, for Women students, was opened in 1896, under the government of the University of St. Andrews.

The usual Course of Study at University Hall is in preparation for the Degree Examinations of the University of St. Andrews, of which all the Classes and Degrees in Arts, Divinity, Science, and Medicine are open to women on the same terms as to men.

The Sessions of Residence are the two University Sessions, viz. the Winter Session, October to March; the Summer Session (Optional), April to June.

University Hall fees for residence—Winter Session, £30-£50; Summer Session, £15-£25.

Matriculation and Class Fees average £10 for the Winter Session.

For further information, apply to the WARDEN, University Hall, St. Andrews, Fife.

### LONDON COLLEGE OF MUSIC. (Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

Patron: HIS GRACE THE DUKE OF LEEDS.

Dr. F. J. KAERN, Mus. Bac. Cantab., Principal.

G. AUGUSTUS HOLMES, Esq., Director of Examinations.  
EXAMINATIONS, 1908.

The NEXT EXAMINATION in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 400 Provincial Centres in DECEMBER, when Certificates will be granted to all successful candidates.

The Higher Examinations for the Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma, L.C.M., and Fellowship (F.L.C.M.) also take place in DECEMBER.

Gold and Silver Medals and Book Prizes are offered for competition according to the Regulations.

LOCAL SCHOOL CENTRES.—Full particulars with reference to the formation of these Centres will be forwarded to Principals of Schools upon application.

SYLLABUS for 1908, together with Annual Report, may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best Professors at moderate fees. The College is open 10 a.m. to 9.30 p.m. A COURSE OF TRAINING in Pianoforte and Singing for Teachers is held at the College.

VACATION LESSONS for Teachers and others are given at Easter, August, and Christmas.

T. WEEKES HOLMES, Secretary.

### Diploma Correspondence College, Ltd.

Vice-Principal—S. H. HOOKER, B.A., Hons. Lond.

Specialty arranged Courses for

LONDON MATRICULATION,  
**B.A., B.D., B.Sc.,**  
A.C.P., L.C.P., &c.

#### FREE GUIDES

on application to the SECRETARY.

WOLSEY HALL, OXFORD.

### THE ASSOCIATED BOARD OF THE R.A.M. AND E.C.M. FOR LOCAL EXAMINATIONS IN MUSIC.

PATRON: HIS MAJESTY THE KING.

PRESIDENT: H.R.H. THE PRINCE OF WALES, K.G.

LOCAL CENTRE EXAMINATIONS (Syllabus A). Examinations in Theory at all Centres in March and November; in Practical Subjects at all Centres in March-April, and in the London District and certain Provincial Centres in November-December also. Entries for the March-April Examinations close Wednesday, February 10th, 1909.

SCHOOL EXAMINATIONS (Syllabus B). Held three times a year, viz. March-April, June-July, and October-November. Entries for the March-April Examinations close Wednesday, February 3rd, 1909.

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 3d. per set, per year, post free.

Syllabuses A and B, entry forms, and any further information will be sent post free on application to—

JAMES MUIE, Secretary.

15 Bedford Square, London, W.C.

Telegrams: "Associa, London."

### BIRKBECK COLLEGE.

BREAMS BUILDINGS, CHANCERY LANE, E.C.

#### DAY AND EVENING CLASSES.

Principal—G. ARMITAGE-SMITH, D.Lit., M.A.

The College provides approved courses of instruction for the Degrees of the University of London in the Faculties of Arts, Science, Economics, Laws, under Recognized Teachers of the University.

Well appointed Laboratories. Facilities for research. New Session commenced on Monday, 28th September.

Full particulars on application to

H. WELLS EAMES, Secretary.

### CHURCH EDUCATION CORPORATION.

#### CHERWELL HALL, OXFORD.

Training College for Women Secondary Teachers.

Principal—Miss CATHERINE I. DODD, M.A. (late Lecturer in Education in the Manchester University).

Students are prepared for the Oxford, the Cambridge, and the London Teacher's Diploma. Special arrangements made for Students to attend the School of Geography.

Exhibitions and Scholarships awarded in December and July.—Apply to the PRINCIPAL.

## LONDON UNIVERSITY MATRICULATION

Post free, from

THE SECRETARY,  
Murlington House, Cambridge;

or from the London Office of

University Correspondence College,  
32 Red Lion Square, Holborn, W.C.

**UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.**

(A Constituent College of the University of Wales.)  
Principal—Sir H. R. REICHEL, M.A., LL.D.

New Session began September 29th, 1908. The College Courses are arranged with reference to the Degrees of the University of Wales; they include most of the subjects for the B.Sc. Degree of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture (including Forestry) and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Seasonal fee for ordinary Arts Course, £11. 1s.; for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students; fee, from Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses apply to

JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

**UNIVERSITÉ DE RENNES (France). FRENCH COURSE for FOREIGNERS OF BOTH SEXES.**

WINTER TERM: From 15 Nov. 1908 to 15 Feb. 1909.  
SUMMER TERM: From 1 March to 8 June, 1909.  
DIPLOMAS.

Diplômes de Langue et Littérature Françaises; Doctorat. Reduction of 50% on railway fares from Dieppe or Calais to Rennes. Apply for Prospectus to Prof. FEULLERAT, Faculté des Lettres, Rennes.

**DENMARK HILL PHYSICAL TRAINING COLLEGE FOR LADY TEACHERS, LONDON, S.E.**

Full preparation for Public Examinations. British College of Physical Education: English and Swedish systems. Massage and Remedial Work. Board of Education: Science. Swimming and Sports. Schools supplied with fully qualified Sports Mistresses. For particulars apply—Miss E. SPELMAN STANGER, Trevena, Sunray Avenue, Denmark Hill, London, S.E.

**WANDSWORTH TECHNICAL INSTITUTE SECONDARY SCHOOL.**

ASSISTANT MASTER required in January. English Subjects and French; German desirable. Graduate with good experience. Salary £150, rising by £10 (in accordance with the Scale of the London County Council) to £300. Further particulars and application forms, which must be returned on or before 17th November, may be obtained from the REGISTRAR.

**POST VACANT IN SWITZERLAND.**

**THE REV. G. A. BRENNEMANN,**

M.A., British Chaplain, Neuchâtel, Switzerland, wishes to find—(1) a GRADUATE in Classical Honours, (2) a GRADUATE in Mathematical Honours, for early in January, two to three hours' help daily with private pupils, Matriculation (Woolwich), in return for board and lodging; help French and German. (3) A COMPETENT ASSISTANT for about 18 hours a week, English Teaching (Elementary), four or six hours immediately, rest in April. Remuneration £100 per annum (eventually 24 hours £150). Good disciplinarian; experience and knowledge of French by April essential. Preference given to one who could take both the Classical (or Mathematical) and English work.

**TO HEAD MASTERS.**—Principal,

large London Private School, strongly recommends SENIOR ASSISTANT, who has held post nine years. Systematic teacher. Disciplinarian. Latin, French, English, Mathematics, Book-keeping, Shorthand, Games.—X., Educational Times Office, 89 Farringdon Street, London, E.C.

**OUTDOOR LIFE FOR WOMEN.**—

LEATHERINGSETT SCHOOL OF GARDENING, POULTRY, AND DAIRY WORK. Preparation for Examinations. Highly certificated teachers. Pleasant home for Students near Cromer. Write K., 536 SHILLEY'S, Gracechurch Street, E.C.

**TUITION IN ESPERANTO.**

MR. CHARLES COWPER, F.B.E.A., is open to Engagements for preparing pupils for the Oxford Local and other Examinations in Esperanto. Schools or Private Tuition. London and near Suburbs. Several years' successful experience in Lecturing and Class-Teaching. Apply (in the first instance by letter), 121 Castellain Mansions, Maida Vale, W.

**BEDFORD COLLEGE FOR WOMEN**

(UNIVERSITY OF LONDON),  
YORK PLACE, BAKER STREET, LONDON, W.  
Principal—Miss M. J. TUKE, M.A.

The Half-Term begins on Thursday, November 12th. Lectures are given in preparation for all Examinations of the University of London in Arts, Science, and Preliminary Medicine for the Teachers' Diploma (London); for the Teachers' Certificate (Cambridge); and for the Cambridge Higher Local Examination. There is a Special Course of Scientific Instruction in Hygiene.

Six Laboratories are open to Students for Practical Work. Students may attend the Art School who are taking other subjects at the College.

A Single Course in any subject may be attended. Regular Physical Instruction is given, free of cost, to Students who desire it by a fully qualified Woman Teacher.

Students can reside in the College. THREE ENTRANCE SCHOLARSHIPS, two in Arts and one in Science, will be offered for Competition in June, 1909.

Full particulars on application to the PRINCIPAL.

**BEDFORD COLLEGE FOR WOMEN**

(UNIVERSITY OF LONDON),  
YORK PLACE, BAKER STREET, LONDON, W.  
DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of the Department:—Miss MARY MORTON, M.A.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge.

Students are admitted to the Training Course in October and in January.

ONE FREE PLACE, value £26. 5s.; ONE SCHOLARSHIP of the value of £20, and a limited number of GRANTS of £10, are offered for the Course beginning in January, 1909.

They will be awarded to the best candidates holding a Degree or its equivalent in Arts or Science.

Applications should reach the HEAD OF THE DEPARTMENT not later than December 12th.

**THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.**

Principal—Miss M. H. WOOD.  
Girton College, Cambridge; Classical Tripos, M.A. (London); Lit.D. (Dublin), late Vice-Principal of St. Mary's College, Paddington.

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teacher's Diploma of the London University. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge.

**ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN INTERMEDIATE AND SECONDARY SCHOOLS, EDINBURGH.**

This College provides a year's Professional Training for well educated women who intend to become Teachers. The Course is supervised by the Edinburgh Provincial Committee for the Training of Teachers and recognized by the Scotch Education Department and by the Teachers' Training Syndicate of the University of Cambridge.

Prospectus and further particulars from the Principal, Miss M. R. WALKER, 5 Melville Street, Edinburgh.

**THE INCORPORATED FROEBEL EDUCATIONAL INSTITUTE, TALGARH ROAD, WEST KENSINGTON, LONDON, W.**  
Recognized by the Board of Education as a Training College for Secondary Teachers.

Chairman of the Committee—Sir W. MATHER.  
Treasurer—Mr. C. G. MONTEFIORE, M.A.  
Secretary—Mr. ARTHUR G. SYMONDS, M.A.

**TRAINING COLLEGE FOR TEACHERS.**

Principal—Miss E. LAWRENCE.  
KINDERGARTEN AND SCHOOL.  
Head Mistress—Miss A. YELLAND.

Students are trained for the Examinations of the National Froebel Union and other Examinations.

TWO SCHOLARSHIPS of £20 each, and two of £15 each, tenable for two years at the Institute, are offered annually to Women Students who have passed certain recognized Examinations.

Prospectuses can be obtained from the PRINCIPAL.

**The Tutorial Institute,**  
39 BLOOMSBURY SQUARE, LONDON.

Principal:  
J. F. EWEN, M.A.,  
Honours in Mathematics and Physics.

Founder and late Principal of  
The London and Northern Tutorial College.

The Principal has had over 12 years' successful experience in preparing by Correspondence and Orally for the Higher Examinations qualifying Secondary Teachers. Over 2,000 successes have been officially credited to his students, who have completed over 300 Diplomas and Degrees. Strong Staff of Tutors, all University Graduates, mostly in Honours.

CORRESPONDENCE INSTRUCTION.  
All Fees payable by Instalments.

A.C.P.—New Classes now forming. All subjects, £4. 4s. Education, £1. 11s. 6d.

L.C.P.—Graduates exempt from all subjects except Education. Full Course, £2. 12s. 6d. A.C.P.'s can complete extra work for L.C.P. for Composition Fee, £4. 4s. Education alone, £1. 11s. 6d.

Diploma Guide Free.

Inter. Arts.—Full Courses. 20 lessons each subject, £1. 11s. 6d.

B.A.—Thorough Tuition by Honours Graduates.

Inter. Science.—Special Attention to Mathematics and Physics. Full Course, £2. 2s. each subject.

B.Sc.—Expert help by eminent specialists.

Matriculation.—Full Preparation in usual subjects, 10s. 6d. monthly.

Higher Locals.—Fullest and most successful help. Usual Subjects, £1. 11s. 6d. each.

FROEBEL CERTIFICATES.—Thoroughly practical instruction by highly qualified Teachers.

Froebel Guide Free.

L.L.A. SPECIAL ORAL CLASSES.  
Evenings and Saturdays. More Successes and Diplomas than all other classes combined.

New Practical Guide to L.L.A. Free.

**JOINT AGENCY FOR WOMEN TEACHERS.**

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Hours for interviews (preferably by appointment)—

11 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

**THE JOINT SCHOLASTIC AGENCY.**

23 Southampton Street, Bloomsbury Square, W.C.

Managed by a Committee of Representatives of the following Bodies:—

Messrs.  
**TRUMAN & KNIGHTLEY, LTD.,**  
Educational Agents,  
158 to 162 OXFORD STREET,  
LONDON, W.

Telegrams—"TUTORESS, LONDON."  
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

**A.—EMPLOYMENT DEPARTMENT.**

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

1908.

## COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, LONDON, W.C.

## Lectures for Teachers

ON THE

## SCIENCE, ART, AND HISTORY OF EDUCATION.

## THE PRACTICAL TEACHER'S PROBLEMS.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The Second Course of Lectures (Thirty-sixth Annual Series) commenced on Thursday, October 1st, at 7 p.m.

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

## SYLLABUS.

I. (Oct. 1.) *The Teacher's Library*: three main sections, books needed by teacher as (a) human being, (b) knowledge-monger, (c) educator: (a) and (c) too often neglected: special value of books used by teacher during childhood: the upper and lower limit of professional books under (c): possibility of excess in educational theory: plea for greater recognition of newer class of literary presentations of educational problems: teaching "the inarticulate profession": practical help that may be had from such books: how to use educational periodicals.

II. (Oct. 8.) *How to get some good out of Psychology*: need for a change in the point of view: rational and experimental psychology: need of both by the teacher: danger of pedantry in both: place of the proposed middleman between the psychologist and the practical teacher: the teacher must be allowed to direct the psychologist (not the psychologist the teacher) as to the results to be sought: list of things the teacher wants to know, compared with the list of things the psychologist wants to tell him: teacher must not confine himself to child-psychology, his profession demands the treatment of his fellow adults as well.

III. (Oct. 15.) *How to deal with Officials*: an example of the teacher's need of adult psychology: the difference between the human being and the official: the invariable third: official questions and answers: how to interpret them: the official mind and how to approach it: an instructive bit of law: the official art of compromise: manipulation of conflicting official regulations: the whole question reviewed from the point of view of the teacher as himself an official.

IV. (Oct. 22.) *How to deal with Parents*: generally wrong attitude of teachers towards parents: *in loco parentis* theory: "foster parent": getting at parents through children and *vice versa*: parents' antagonism to school authority has definite relation to their social rank: special difficulties of different classes of teachers: conflicting influences of fathers and mothers: genuine co-operation between school and home: golden mean between parental indifference and interference.

V. (Oct. 29.) *How to Learn*: the other side of teaching: absence of the desire to know: how to rouse it: even when desire is present there is difficulty enough: kinds of learning: reproduction: the dynamic view: constructive learning: rhythm of learning: concentration and diffusion: fallacies about thoroughness: temporary and permanent learning.

VI. (Nov. 5.) *Class Management and Teaching*: ordinary psychology deals with the individual: teacher needs collective psychology as well: relation of class to crowd or mob: minimum number to constitute a class: sympathy of numbers: class leaders: difference between class teaching and private coaching: advantages and difficulties in having to teach several persons at the same time: the average pupil: the type: the composite: the ghostly class.

VII. (Nov. 12.) *How to combine Lecturing and Teaching*: teachers' general disapproval of lecturing: nature of lecturing as opposed to teaching: newer methods of teaching history, geography, and geometry are demanding a certain amount of lecturing: dangers of lecturing in schools as compared with colleges: the pupils' share in the process of lecturing: the art of listening: intermittent hearing: the lecturer's relation to the text-book.

VIII. (Nov. 19.) *Written work in School*: absolute necessity for a good deal of written work in school: note-taking, exercise writing, essays: drudgery of correction: the surd of efficient correction in (a) quantity, (b) quality: co-operative correction: psychological dangers of correction: the norm of correction: spelling and dictation exercises: analysis of most common errors and their causes.

IX. (Nov. 26.) *Verbal Illustration*: nature of illustration in general: distinction from exposition: mental backgrounds: relativity of illustration to the materials at command: exemplification: enumeration: nature of analogy and its place in illustration: the metaphor and other illustrative figures: how to find suitable verbal illustrations: source books of illustration.

X. (Dec. 3.) *Graphic Illustration*: the actual object and the model as means of illustration: the value of the picture as illustration, especially as compared with a verbal description: different illustrative values of a picture according as it is used for intellectual, moral, or aesthetic teaching: the diagram as compared with the picture: dangers that lurk in diagrammatic illustration: certain weaknesses in our space sense: supremacy of the straight line in illustration.

XI. (Dec. 10.) *How to deal with Dullness*: nature of dullness: its relativity to time and subject: the temporary dullness: the permanent dullness: the all-round dullness: the specialized dullness: the scale of dullness: the "defective point": subjective and objective dullness: stage at which objective dullness is welcomed by the pupil: the tyranny of "problems," and the legitimate claims of the relatively dull.

XII. (Dec. 17.) *The Problem of Examinations*: various functions of examinations: teacher as examiner: how to prepare an examination paper: allocation of marks: how to make the best of the external examiner: the personal equation: the use of "old examination papers": preparation of "set books": "the index" in revision of examination work: how to prepare pupils for an external examination with the minimum educational damage.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.

A SERIES OF DECORATIVE LITHOGRAPHS

ILLUSTRATING

GREAT EVENTS AND INCIDENTS OF BRITISH NATIONAL LIFE.

Designed by eminent British Artists, and reproduced with the advisory assistance of Educational Authorities.

FIRST SERIES in course of publication, containing Original Designs by—

**WALTER CRANE; FRANK BRANGWYN, A.R.A.; CAMPBELL TAYLOR;  
JOHN HASSALL; Professor GERALD MOIRA; SPENCER PRYSE.**

*The first four Prints created an enormous interest at the Moral Education Congress.*

PROSPECTUS GRATIS. PRINTS SENT ON APPROVAL.

**HANFSTAENGL, 16 PALL MALL EAST, S.W.**

## THE School World.

A MONTHLY MAGAZINE OF EDUCATIONAL WORK AND PROGRESS.

EACH NUMBER CONTAINS EIGHTY COLUMNS OF READING MATTER.

PRICE 6d. VOLUME IX., 1907, 7s. 6d. NET.

The aim of THE SCHOOL WORLD is to provide information of practical and permanent value to Schoolmasters and Schoolmistresses. To this end all important changes and developments affecting any branch of the work of teachers in secondary and other schools are dealt with by leading authorities and experienced teachers.

The Magazine has become indispensable to all who desire to keep in touch with modern and effectual methods of education.

# Cambridge University Press

**A History of Classical Scholarship.** By J. E. SANDYS, Litt.D., Fellow of St. John's College and Public Orator in the University of Cambridge.

Vol. II.—*From the Revival of Learning to the End of the Eighteenth Century (in Italy, France, England, and the Netherlands).*

Vol. III.—*The Eighteenth Century in Germany, and the Nineteenth Century in Europe and the United States of America.*

Vols. II. and III. Large crown 8vo 8s. 6d. net each.

"These volumes complete a book, the only one of its kind in English, which all lovers of classical literature will wish to possess. . . . The volumes are lavishly illustrated by appropriate portraits. They successfully carry on a work which has a peculiar value of its own as covering, with sound erudition, the whole of a field as yet not thoroughly worked except in particular places."—*Scotsman*.

**The English Grammar Schools to 1660: their Curriculum and Practice.** By FOSTER WATSON, M.A., Professor of Education in the University College of Wales, Aberystwyth.

Crown 8vo 6s. net.

The object of this book is to present an account of the development of the teaching in the English Grammar Schools from the time of the Invention of Printing up to 1660. It is a history of the practice of the schools, of their curricula, and of the differentiated subjects of instruction, in distinction from the history of the theories of educational reformers as to what ought to be taught, and how existing methods might be improved. Throughout, the attempt has been made to describe really representative documents and school text-books, as the safest way of securing a sound basis for the study of the school practice of the time.

## THE REVISED VERSION. SCHOOL EDITION.

Foolscap 8vo, with Introduction, Notes, and Maps, price 1s. 6d. net each volume.

These Editions will, it is hoped, serve a good purpose in drawing the attention of young scholars to the importance of some of the changes made in the Revised Version, and in presenting in a clear and intelligible form the best and most approved results of recent theological works on these books.

**The Gospel according to St. Matthew.**

Edited by the Rev. A. CARR, M.A. With 3 Maps.

"The most approved results of recent biblical criticism are embodied in the splendid notes; but independent of its intrinsic value, there are three artistic maps incorporated in the text. An edition as remarkable for its elegance as for its high utility."—*School World*.

**The Gospel according to St. Mark.** Edited

by Sir A. F. HORT, Bart., M.A., and MARY DYSON HORT (Mrs. George Chitty). With 2 Maps.

"Sir A. F. Hort's little book on St. Mark is a model of what such books should be."—*Glasgow Herald*.

**The Gospel according to St. Luke.** Edited

by the Rev. E. WILTON SOUTH, M.A. With 2 Maps.

**The Gospel according to St. John.** Edited

by the Rev. A. CARR, M.A. With 2 Maps.

"Mr. Carr has succeeded in presenting the best and most approved results of recent theological work on St. John in a clear and intelligible form. . . . The introductory matter deserves a special word of praise."—*Guardian*.

**The Acts of the Apostles.** Edited by the

Rev. C. WEST WATSON, M.A. With 3 Maps.

*Annotated editions of the remaining books of the New Testament are in preparation.*

**A Course of Pure Mathematics.** By G. H.

HARDY, M.A., Fellow and Lecturer of Trinity College, Cambridge.

Demy 8vo 12s. net.

This book has been designed primarily for the use of first year students at the Universities whose abilities reach or approach something like what is usually described as "scholarship standard." The author hopes that it may be useful to other classes of readers, but it is this class whose wants he has considered first.

A considerable space is occupied with the discussion and application of the fundamental ideas of the Infinitesimal Calculus, Differential and Integral. But the general range of the book is a good deal wider than is usual in English treatises on the Calculus.

**The Elementary Theory of Direct Current**

**Dynamo Electric Machinery.** By C. E. ASHFORD, M.A., Head Master, Royal Naval College, Dartmouth; and E. W. E. KEMPSON, B.A., Assistant Master, Royal Naval College, Dartmouth.

Crown 8vo 3s. net.

The authors of this little book believe that in the training of an Electrical Engineer there should be included a knowledge of the theory of the subject built up logically from first principles, each step being illustrated with the help of some piece of machinery or practical appliance of a general and simple rather than an elaborate or necessarily up-to-date type.

The present book does not cover much ground, but the authors have attempted to present as logical a treatment as is possible in so elementary a work.

**Elementary Algebra.** By C. H. FRENCH, M.A.,

and G. OSBORN, M.A., Mathematical Masters at the Leys School, Cambridge.

Crown 8vo 4s. 6d.

This book includes Common Logarithms and the Binomial Theorem for a Positive Integral Index, so that it covers the ground of all school examinations not requiring a special knowledge of the subject. It is amply sufficient for such examinations as the London Matriculation, the Cambridge Previous, the ordinary pass-work of the Higher Certificate Examination of the Oxford and Cambridge Board, the Oxford and Cambridge Locals, and others of similar standard.

**Algebra for Secondary Schools.** By CHARLES

DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham.

Crown 8vo 6s.

The author's aim has been to prepare a text-book that may be of use in all but the highest classes of a secondary school. The subjects included are, for the most part, those which are common to all text-books of elementary algebra; but a few, such as indeterminate equations of the first degree, the remainder theorem and simple partial fractions, are introduced at an earlier stage than usual. The applications of graphs are confined to the illustrations which they afford of the methods of solving simultaneous equations and of the theory of quadratic equations and expressions. In the solution of simultaneous quadratic equations, they are especially useful, as they serve to show the geometrical meaning of every step in the process employed.

**Modern Geometry.** By C. GODFREY, M.A.,

Head Master of the Royal Naval College, Osborne, and A. W. SIDONS, M.A., Assistant Master at Harrow School.

Crown 8vo 4s. 6d.

The present volume is a sequel to the "Elementary Geometry" written by the same authors. It covers the schedule of Plane Geometry required for the Special Examination in Mathematics for the Ordinary B.A. Degree at Cambridge; and represents what the authors take to be a useful course for any student of Mathematics, whether he intends to read for Mathematical Honours or to take up Physics or Engineering. For those who ultimately make a special study of Geometry, this book would serve as an introduction to more advanced treatises.

**Inorganic Chemistry.** By E. I. LEWIS, B.A.,

B.Sc., Assistant Master at Oundle School.

Demy 8vo 5s.

"Deserves a high place, not only in the school, but generally as an excellent introductory first course."—*Nature*.  
"A decidedly original work, very superior to the average text-book used in schools, especially in throwing light on general principles."—*School World*.

## The Educational Times.

### *The International Moral Education Congress.*

THE promoters of the International Congress on Moral Education can scarcely have anticipated, even in their sanguine moments, a success greater than that which has actually been achieved. Throughout the four days of the meeting large audiences, drawn from all quarters of the globe, attentively followed discussions which never lacked animation, and which were more than once prolonged by request beyond the hour set down on the programme. The interest thus exhibited within the cosmopolitan gathering itself appears to have had a parallel amongst the general public outside, if we may judge from the attention accorded to the Congress by the daily and weekly newspapers. There seems to be a growing conviction amongst the nations that the present time is critical, that it calls for a more than usual emphasis upon the moral factor in education; and this common cause of anxiety easily becomes the occasion for conference. The obvious danger is that those who confer should lose the sense of proportion and ignore the complexity of their problem while exaggerating one or two of its factors. The catholicity of the Congress saved it from this danger. Though the school stood in the foreground of debate, there was an ample recognition of the many diverse influences which go to form the full education of child and man. Very few indeed must be those members of the Congress who can retain the opinion that moral education is a thing apart, either in the schoolroom or in the larger world beyond its walls.

Of course, there were grave differences of opinion, even upon some fundamental principles: if there were no differences, there need be no conference. But this Congress enjoys a distinction probably unique. Within its fold men discussed the thorny question of the relation of religion to morals frankly, yet without bitterness. While there was no compromise on either side, both listened with respect and even with sympathy. The same admirable temper marked the debates on points of difference less fundamental. Surely the fact is full of hope. A clear understanding of the position as it appears from different points of view is

essential to the choice of common ground, and this, in turn, must precede common action. Nor were there wanting, during the course of the proceedings, signs of the possibility of effecting some degree of assimilation or reconciliation of principle. It is noteworthy that Canon Lyttelton and Mr. F. J. Gould both find in social service a central conception for moral education, and that a Salvation Army delegate, while repudiating Heaven and Hell as moral sanctions, agrees with the French speakers who insisted that morality does not await some "far-off divine event," but is the business of the moment amongst men upon this earth. The Congress was one in this at least, that it united the men who care for the things of the spirit. If succeeding gatherings maintain this unity and the fine temper which distinguished the days of this first Congress, they cannot but powerfully influence the course of education within the civilized world of the future. But to secure this, the Executive Committee, which is charged with the duty of handing on the tradition of the first meeting to the next, must exercise a wise forbearance, a large-hearted tolerance, and a scientific impartiality which will see that no school of opinion is prevented from sharing in labours whose aim is the advantage of all.

It is needless to say that the first Congress suffered from the defects of its qualities. Its original intention was to be "severely practical" and to confine its attention in the main to the affairs of the schoolroom, leaving other no less important aspects of education to be dealt with by subsequent congresses. Fortunately, the intention was not strictly carried out. Had it been invariably adhered to, there would have been a loss of perspective and a restriction of interest which would have prejudiced, or even have prevented, the holding of a second international gathering. But the expression of the intention, no doubt, ensured that papers and speeches did not stray too far from the paths of usefulness. On the other hand, the wider outlook upon the problems of education, which the Congress actually occupied, brought into view a multiplicity of matters of varying degrees of importance. So far as this meant that the Congress was in living contact with many different interests, it was all to the good. Yet the practical, concrete applications of the four days' labour were in the same measure hindered or curtailed. In the sense of practice, no issue

was fought to a close, so that the members in most cases probably went away with much "to think about," yet little of this was in a form which could be straightway applied in the classroom, the committee of the Education Authority, or the office of the administrator. The remedy would seem to lie in the prescription of much fewer subjects of discussion, and the liberal employment of sectional meetings appealing more to the expert; it would not then be necessary to consider at one and the same sitting, let us say, "The Kindergarten," "L'Enseignement moyen en Belgique," and "Berufsethik." But, certainly, division of labour comes more naturally at a later Congress than the first.

The practical person in search of history and directions, instead of criticism and general principles, will find his account in the published volume of "Papers," to which about one hundred and fifty persons have contributed; he may possibly esteem even more highly than their contributions the summarized replies to questions with which the book closes. In any case, the volume will provoke thought and stimulate experiment which may very well be focused at the Congress of 1912. Meantime, the Executive Committee has been requested to consider the feasibility of establishing an International Bureau which shall be in a position to collect and disseminate information, amongst the contributing persons and nations, as to what is being done throughout the world on behalf of moral education. A further scheme to be considered is that of an International Journal having a similar purpose. No doubt the organizers will be careful to seek the co-ordination of these agencies with those of other international bodies interested in social work. The practicability of the plan is largely a financial question, and, in view of the manifest advantage to the world at large which the realization of the proposal would bring about, it is to be hoped that a few wealthy persons may come forward to furnish it with material support. Few suggestions for ensuring peace amongst the nations are likely to be more fruitful than one which enlists them all in the task of developing individual character on the lines of a sound morality.

### NOTES.

THE Government will proceed with the Education Bill as soon as the Licensing Bill gets through Committee. There has evidently been a good deal of quiet negotiation during recent months with a view to a settlement by general agreement, without disturbing the fundamental postulates of public control and the abolition of religious tests. The *Daily News* (October 22) says, apparently with inspiration:

Broadly speaking, the position in single-school areas will, we believe, remain as in the Bill as originally drafted—i.e., the schools will pass absolutely to the Public Authority. In the urban areas the proposals under mutual discussion leave the contracting-out clause on the basis of the 47s. grant and no rate-aid untouched, and add the right of denominational entry two days a week in regard to all schools. This proposal, we believe, would be subject to the option of the Local Authority. Further, the head teacher in no case would, we gather, be allowed to give denominational teaching. The denomination would bear the cost of such teaching, the teaching to be restricted to the opening half-hour of the school day, and the religious basis of all schools being that controlled by the Cowper-Temple clause. The power of the Local Authority to decline the right of entry would be in many parts of the country a powerful instrument for bringing the denominational schools under the Local Authority, in addition to which the 47s. grant would

leave on an average 8s. a child to be provided by the denomination. Past experience of the impoverishment of Church schools suggests that this margin would not generally be forthcoming from voluntary sources. We learn that the Roman Catholics are not included in the negotiations, owing to their demand that the contracting-out facility should be based upon the four-fifths arrangement instead of the 47s. grant and exclusion from the rates. We are, of course, unable to state the precise position of the negotiations or the extent to which they involve the Churches, but there is no doubt, as we have said, that they have discovered a very close approximation to a common ground of settlement.

THOUGH the Prime Minister has probably but little time to spare for the cultivation of classical literature, no doubt the Balliol leaven still works; and at Birmingham he addressed the Classical Association with as much vigour and zest as if he had been clearing a way through the tangle of the Licensing Bill or the jungle of unemployment. He certainly did not underrate the efficacy of the work of the Association. As regards methods of studying and teaching the classics, the Association "had already in the course of two years brought about a radical change which, both in the magnitude of its scale and the rapidity of its execution, might well excite the envious admiration of iconoclasts and revolutionaries in other walks of life." Yes; but a good deal of strenuous and persistent work has yet to be done in order to secure the permanence of the impressions that have been made. Without under-estimating the value of the results of archæological investigation, Mr. Asquith properly laid stress on the superior importance of literary and philosophic treatment in the study of ancient literature. "In truth, the great writers of antiquity remain their own best interpreters," though the diggers are to be listened to when they come forward with definitely established facts. Mr. Asquith was also on firm ground when he deprecated the older limited views, both of the scope of the "classics" and of the handling of them as instruments of education, and recognized the advantages of the wider outlook of our time, the more scientific spirit, and the quickened consciousness of their relation to other forms of knowledge and other departments of investigation. It is pleasant to know that the pressure of practical problems in modern life has not yet effected the expulsion of the classical learning and spirit from the realm of statesmanship.

It seems better that Birmingham should read the classics in translations than not read them at all. Prof. Sonnenschein describes in the *Classical Review* an experiment in the teaching of Greek literature which he has already applied in the teaching of Latin literature. Under a recent regulation of the University, a course of Greek literature may be taken as a subject for the Arts degree in the second or third year of study. The class will meet three times a week, and take up in the three terms, successively, Homer, the Drama, and Plato. The reading of essential or representative portions will be accompanied by lectures on the literary aspects and contents of the works; but attention will be concentrated in the main upon the reading of the works themselves, with a view to the appreciation of them as human documents. There need be no doubt that such a course will interest the students; whether it will interest them so far as to lead them to tackle the original Greek subsequently, that is on the knees of the gods. In any case, it is well to bring as many Greekless students as possible

even into such remote (or near) contact with the mind of Greece. Likely enough, the students "may form a better idea of the contribution made by the mind of Greece to our European civilization than is formed by many a schoolboy who has painfully toiled through the elements of the Greek language and a few isolated products of the literature." But is it not largely this unnecessarily painful toil that has brought us at last to Prof. Sonnenschein's almost despairing experiment? We are learning—painfully, in our turn—the virtue of method.

In the eight years between the last two meetings of the National Federation of Assistant Teachers at Manchester, the affiliated associations have doubled and the membership has tripled: the affiliated associations have increased from 66 to 135, and the members from 6,820 to 18,100. Mr. H. Pearson, in a thoughtful presidential address at the recent meeting, dealt carefully with the supply and the training of teachers. "There is an over-supply of teachers, and several hundreds of them are unable to find posts." We must endeavour, he said, "to realize what this means to present as well as to future teachers, and what will be its probable effect upon their prospects and conditions of service." He holds that training should be dealt with first, not only for the interest and importance attaching to it, but also because the supply must depend to a great extent upon the type of training—upon the method, the cost, the nature, and the duration of the training. While welcoming the efforts to broaden the teacher's education, Mr. Pearson is rather lukewarm over "the change which postpones the technical training to such a late stage of the novitiate" as the age of twenty-one. "The new type of training," he says, "may foster students, but it cannot create teachers: the power to assimilate knowledge is no criterion of the faculty to impart it." True; but, on the other hand, it may be said that a teacher cannot impart what he has not got, and the intellectual exercise must count for something. To relieve over-supply, Mr. Pearson suggests the obvious remedy of "an immediate reduction in the size of classes." "There will never be a real 'glut' of teachers while classes in the elementary schools contain more than forty pupils." This is, of course, practically a demand for more money. While awaiting the formulation of a national standard of staffing, Mr. Pearson suggests a scheme for securing an adequate supply of teachers, the first essential being the gradual replacement of supplementary teachers by fully qualified teachers, the process to be spread over a period of five years.

THE decline in the school teaching of German is strikingly illustrated in a memorandum recently issued by the Scottish Modern Languages Association. The statement is based upon replies to circulars that were sent to thirty of the chief Higher Grade and Higher Class Secondary Schools in which modern languages had been taught in past years with conspicuous success. "The replies from both classes of schools were in remarkable agreement, showing the effect of the recent regulations for the Intermediate and Junior Student curricula upon the study of these languages in schools." French was found to be little affected. But, as to German, within the past seven years "there has been a

decrease of 39 per cent. in the number of beginners, of 30 per cent. in the whole number studying the language, and of 43 per cent. in the number taking the language in the highest school class." "In 1900 about 1,000 candidates took the Higher Grade paper in German in the Leaving Certificate Examination; it is believed that only about 500 candidates entered for that grade this year"; and "a similar reduction has taken place in the number of candidates presented for the Lower Grade." Further, "there has been a deterioration of quality in the pupils taking German." Then there is the reaction upon intending teachers. "In the Training Colleges the number of students of German has fallen from about 700 in 1900 to about 70 in 1908. In 1900 German was taken by hundreds of pupils in the Central Classes of Pupil-Teachers: to-day all the German classes have been dropped." The cause of this decrease, the Memorandum states, "is (i.) the preferential treatment given to Classics in the Leaving Certificate, Preliminary, and Bursary Examinations by compulsions and higher marks, and (ii.) above all, the recent Departmental regulations regarding Science and Drawing in the Intermediate curriculum, and regarding Science and Drawing and other practical subjects in the Junior Student curriculum." Even if freedom were granted to replace Science and Drawing by a third language in the third year of the Intermediate course, it would probably be a long and difficult business to recover the lost ground in German.

"To cleanse a schoolroom properly," says a recent Memorandum of the Scotch Education Department, "it is necessary to destroy the germ life as well as to remove the visible dust. This is why periodic disinfection is advisable, even when no known infectious disease has been present." Very good; but is this "advisable" thing actually done? The annual report of the Medical Officer of Health of a southern county strikes us as very far from reassuring, even as regards the ordinary cleansing; and the term "periodic" appears to be interpreted in a very lax sense. The question seems to be of lively interest in Bucks, for a Buckingham correspondent has telegraphed to a London contemporary results of certain experiments carried out under the direction of the Staff Science Master of the Bucks County Council. "For the past six months the floors of twenty-five schools in the county have been sprayed nightly with a liquid germicide." "The cost up to date has been £22. 10s., and the calculated increase of grants due to the additional attendance in the disinfected schools, as compared with the non-disinfected schools, amounts to £37. 7s. 6d." One is always glad to find a school balance on the right side. At the same time, we cannot help thinking that the connexion between the attendances and the spraying operations needs to be demonstrated in scientific detail. And if the causal relation is definitively established in this country district, what is to be anticipated when scientific investigation penetrates to slum schools in our large cities? What is the relation between the conditions of those southern schools in Scotland and the attendance of pupils? The cause of cleanliness needs no advocacy; but there must be some reasonable practical limit to scrubbing and spraying, and it is for science to say what it is.

## SUMMARY OF THE MONTH.

THE ARCHBISHOP OF CANTERBURY, speaking at the inauguration of new Church schools in Windmill Road, Croydon, said that in areas where there were Council and denominational schools there was no unfairness to any one; rather was the rate-payer relieved and the parent given a choice of schools. As regards "one-school areas," he believed means could be devised whereby that choice could still be given without having separate schools. He did not despair of a solution to the education problem which would preserve the principles for which each side cared most, and he was doing his very best to bring about that result.

ON October 8, Dr. Clifford, on behalf of the National Passive Resistance Committee, wrote to Mr. Asquith calling his attention to the position occupied by the members of the Passive Resistance League after five years of protest, and urging him to push his Education Bill through the House of Commons without delay, and without permitting it to be so altered as to force them to pay a rate for any sectarian teaching. Mr. Asquith replied (October 14):

I can assure you that I am fully alive to the grievances to which, notwithstanding all the efforts exerted by the Government and the House of Commons since 1906, a large and important section of the community are still exposed, and can only repeat what I said the other day at Leeds—that a removal of the cause of those grievances is, in the opinion of the Government, an essential condition of the settlement which they will use all their efforts to achieve.

At the thirty-sixth Annual Meeting of the London Teachers' Association the affairs of the body were reported to be in an extremely satisfactory condition. The membership, 15,000, had increased during the year by 1,276. It was mentioned that seventeen members had been so enthusiastic as to pay their subscriptions twice over last year. Mr. C. W. Hole, the retiring president, criticized the attitude of the L.C.C. toward the teachers' superannuation scheme. He was extremely disappointed that the L.C.C. had not given them the same measure as was meted out to its other officers. The teachers received less superannuation than any other body of officers. Although the scheme was primarily enlarged because it was found they were not being treated generously, the teachers had not been included. Mr. W. P. Folland, the new President, also dealt with the question of superannuation, protesting that members of the Association were being excluded from benefits which Parliament deliberately conferred upon them.

THE conference convened by the Workers' Educational Association at Birmingham with the object of furthering the interests of the democracy in higher education, included some two hundred delegates from various parts of the country. Mr. W. Temple, of Oxford, son of Archbishop Temple, the first president, occupied the chair. He said they were at the beginning of a period that would be marked by the claim of the workers to their share of the privileges and responsibilities of education. There was nothing, and could be nothing, that would convince the country at large of the genuineness of that claim so much as a movement like theirs, which claimed not power for selfish ends, but power to be made fit to use political power for real good. There was, he was sure, at Oxford a new sense of the duty towards labour, and the Association had brought about that new sense. Prof. Muirhead (Birmingham) said most of the workers in the world were waking up, and they were hungry for knowledge. Mr. W. J. Morgan (Birmingham) spoke in favour of the opening of continuation schools in the afternoon. He did not think the time was ripe for raising the school age. A great many people were below the poverty line and could not afford to keep their children at school until they were fifteen. It was decided to hold next year's conference at Sheffield.

At the Birmingham meeting of the Classical Association, the gramophone was used to demonstrate the principles of Greek lyrical rhythm. The subject was introduced by the Rev. Prof. Henry Browne, who advocated a radical change in the teaching of Greek poetry. An interesting experiment, he said, had been undertaken in Birmingham University to communicate some knowledge of the masterpieces of Greece through transla-

tions; but, while he was fully in sympathy with that, he thought it would be admitted that the beauty of literature depended to a great extent on external form, and rhythm was an essential element in form. Prof. Mackail (Oxford) read a paper on "How Homer came into Hellas." He traced the various phases through which Homer's work was transmitted, and declared that the organic unity and life of the "Iliad" and "Odyssey" were so complete and powerful that they came through substantially intact. Mr. Gilbert Murray and Prof. Mahaffy expressed scepticism as to this conclusion.

MR. ASQUITH'S presidential lecture, which drew a large audience, was mainly devoted to a defence of the literary and philosophical regard for classics as against the archaeological. The great masters of literature were not to be dethroned, and the work of the Association lay in the direction of rendering the study of them less tedious and less conservative. Prof. Sonnenschein discoursed amusingly and suggestively on the mysteries of the Latin subjunctive. The "Hippolytus" of Euripides (in Prof. Murray's translation) was successfully performed by Miss Horniman's company from Manchester. The membership of the Association has risen to 1,350. Lord Cromer was elected President for the ensuing year.

THE Board of Education has drawn up a new scheme for the Birkbeck College, on account of the dissolution of the City Polytechnic and the constitution of the Birkbeck College as a separate Polytechnic Institute. The main object of the scheme is to reconstitute the governing body, but some change is made in the purposes for which the College is to be used. In place of the objects set forth in the general regulations for the management of an industrial institute attached to the scheme of June 23, 1891, a new schedule of the objects of the College is set forth which differs from the original scheme mainly in the following particulars:—Instruction in the application of rules and principles of arts and science to handicrafts, trade, or business, and instruction in the details of handicrafts, trade, or business are omitted, and there is no reference to musical and other entertainments or exhibitions. The new governing body is to consist of thirty-seven persons, including a president and two vice-presidents, to be appointed by resolution of the governors, each for the term of one year, except that Lord Alverstone is to be President for life and Mr. Norris and Mr. White are to be Vice-Presidents for six years. There are to be fifteen co-optative governors, to be appointed by resolution of the governors, each for five years, and nineteen representative governors to be appointed as follows:—five by the London County Council, three by the Central Governing Body of the City Parochial Foundation, two by the London Chamber of Commerce, two by the Corporation of the City of London, two by the Senate of the University of London, and one each by the Hebdomadal Council of the University of Oxford, the Council of the Senate of the University of Cambridge, the Institute of Bankers, the Council of the Royal Society, and the Governing Body of the Imperial College of Science and Technology.

DR. WARREN, Vice-Chancellor of Oxford University, reviewing in Convocation the events of the past academic year, referred specially to Prof. Churton Collins among the losses sustained by the University. Reform was expected, he said, and with the aid of the Chancellor they would address themselves to it. In his own opinion, what called most pressing for consideration was the reform of the Hebdomadal Council and of Congregation, possibly at a later stage of Convocation, the investing of the Boards of Faculties with greater powers both of regulating studies and of appointing teachers, and more economy and specialization in lectures. Scholarships ought to be administered, if possible, with more regard to the real needs of the candidates, yet in such a way as not to destroy that healthy rivalry of competition which was of value. The question would have to be considered what was the best course of study for workingmen candidates who could only spend a short time at the University, and how this study should be rewarded or recognized by diplomas or otherwise. Dr. Warren was then duly admitted to office, and nominated as Pro-Vice-Chancellors the Principal of Brasenose, the Principal of Jesus, the Dean of Christ Church, and the Warden of New College.

THE Royal Agricultural College, Cirencester, after an existence of sixty-three years, has been reorganized, that its sphere of

activity and usefulness may be greatly widened, and that it may no longer be handicapped by non-eligibility to receive grants from public moneys. Taking advantage of the enlarged powers now conferred upon it, the College proposes to advance the cause of agriculture in general, and the agricultural interests of the West of England in particular, by actively engaging in the following kinds of work:—(1) scientific research in agricultural subjects; (2) co-operation with the University of Bristol (by which it will, no doubt, be fully recognized) in the establishment of degree courses and degrees in agriculture and forestry; (3) continuance of the important work of training landowners, estate agents, and colonists; (4) training county scholars in agriculture; (5) continuing and extending the system of short courses for sons of tenant farmers; (6) establishing classes in subjects of rural education for the benefit of teachers; (7) co-operation with county councils in their instructional and experimental work; (8) acting as a bureau of information for the benefit of West of England agriculturists.

MR. ERIC WILLIAMS repeated his very successful dramatic recital in aid of Lord Roberts's Veterans' Relief Fund at Ramsgate, on September 28, before a large and appreciative audience. General Sir Harry Prendergast, V.C., G.C.B., attended on behalf of Lord Roberts's Committee. He was received at the Harbour Station by the Mayor and Deputy-Mayor of Ramsgate, General Sir Charles Warren, K.C.B., G.C.M.G., and a Guard of Honour comprising the Chatham House College contingent of the Junior Division of the Officers' Training Corps. A contingent of the East Kent Yeomanry, under the command of Lieut. Robert Sebago Montefiore, formed an escort. Mr. Williams repeated his recital last month at Dover and at St. Leonards; and (as announced in our advertisement columns) he is open to accept further engagements at schools and colleges.

MR. R. BOSWORTH SMITH died at Bingham's Melcombe, Dorchester, in his seventieth year, after a long illness. He was educated at Marlborough and Oxford. A scholar of Corpus, he was elected a Fellow of Trinity in 1863. In 1864 he became an assistant master at Harrow, where he remained for thirty-seven years—till 1901. Since his retirement he has lived in Dorset. His most important works are "Mohammed and Mohammedanism," "Carthage and the Carthaginians," and "The Life of Lord Lawrence." He was a keen student of Nature, especially of birds; in 1905 he collected a number of articles into a volume on "Bird Life and Bird Lore." His second son, a lieutenant in the Navy, was in command of the torpedo boat destroyer, "Cobra," when it went down off the Lincolnshire coast in September, 1901.

DR. DANIEL C. GILMAN, first President of the Johns Hopkins University, Baltimore, and afterwards Head of the Carnegie Institute, Washington, died suddenly (October 13) at Norwich, Connecticut, his birthplace. Born in 1831 and educated at Yale, Cambridge, and Berlin, he became President of the University of California in 1870. Five years later he went in the same capacity to the Johns Hopkins University. His work there, over a period of twenty-six years, gained for him a place among the foremost American educators of his generation. He organized the University on a plan which was afterwards adopted in many other institutions, and he raised it to its present prominent position. In 1891 Dr. Gilman left Baltimore for Washington, where he spent three years organizing the Carnegie Institute. In addition to the work of his scholastic career, Dr. Gilman was appointed by President Cleveland to act as commissioner in the Venezuela and British Guiana boundary dispute. He was President, from 1901 to 1907, of the National Civil Service Reform League, President of the American Oriental Society, trustee of the Russell Sage Foundation for the improvement of the conditions of social life, and a prominent member of various other societies and institutions.

#### UNIVERSITIES AND COLLEGES.

Oxford. THE October term opened with great rumours of movements in the air and of general reformation of the University. It was confidently reported that the Chancellor was to be in residence and take a leading part in the furtherance of the movement. But the Chancellor has not appeared, and at present rumour has proved a lying jade; and

whatever may be impending still only impends, and the older Fellows still sip their port (their younger confrères are content with lemonade) and deplore the restless spirit of change. It seemed possible that the prospect of changes at hand might cause excitement and contest at the elections to the Hebdomadal Council, but in two of the sections—Heads of Houses and Masters of Arts—there were only three candidates for the three vacancies. It was left for the professors to put up a fight, as five professors were nominated.

Those elected were Prof. Gotch, a man of sound judgment and affairs—though a scientist—and acceptable to all parties; Prof. Wright, who may perhaps be said to be safe rather than conspicuous; and a new man in Prof. Haverfield, whose rather unpractical views will perhaps carry little weight in the august body. Prof. Oman—regarded, rightly or wrongly, for many years as a firebrand—and Prof. Gardner, disliked possibly as a rather prejudiced critic of the University system, were the unsuccessful two.

We have four new Professors. By the retirement of Prof. Bywater from the Regius Chair of Greek we lose from the active staff a man with a European reputation and an extraordinary range of accurate knowledge. It is fair to say that a University whose main function at birth was the teaching of the classics may pride itself on having in the two classical chairs men of such accepted authority as Robinson Ellis and Ingram Bywater.

In Gilbert Murray Mr. Asquith has chosen the right successor: his career as an undergraduate was extraordinarily brilliant, and when Glasgow took him away when just a graduate to be a Professor, most held their breath—with admiration or envy—at the rapidity of promotion. But Prof. Murray has gone far since then, and he brings to the Chair a striking personality and a mind which can go far further than the perhaps narrow limits of "pure scholarship."

The other new professors are the Rev. G. A. Cooke, a Hebrew scholar of pre-eminence, to succeed Dr. Cheyne as Oriël Professor; and another Ecclesiastical Professor in the Rev. E. W. Watson, from King's College, in succession to Dr. Bigg. Several resident Oxonians were mentioned as possible or probable nominees, but it is perhaps better to maintain the discretion of silence.

The last professor is a new creation—Prof. Jenkin for the Engineering School. With our recent additions to the Museum, our promised Electrical Laboratory, the new Forestry building, and the Engineering School, we are making some effort to meet the modern cry for the practically useful. It will have been noticed that the Drapers' Company have offered to erect the new electrical laboratory, and it is an open secret that they have been prompted to make their generous offer through the intervention of the Principal of Hertford.

Oxford has lost from the teachers two men who in different ways were of conspicuous standing in Oxford—Dr. Fairbairn, of Mansfield, and Prof. Miers. The former has resigned his post as Principal of Mansfield after some twenty years. Many of us can remember the heartburnings and jealousy in Oxford when these "new colleges" were founded, and Dr. Fairbairn had rather a difficult task in starting practically on new lines in a conservative University; but he started quietly and with no effort at self-advertisement, and he steadily won for himself an accepted position and justified the reputation with which he came among us. Prof. Miers has gone to London University, and we have lost in him a specialist in his own branch, a man with few, if any, rivals as a general sound man of business, and ready and willing to use his gifts in any department for the benefit of the University—a man *sui generis*, prompt, cautious, effective. He is a great loss to the University and to Magdalen College, to which he was as professor attached.

Lastly—though in order of precedence it should come in another place—the Vice-Chancellor has undertaken another year of office. The University may consider itself fortunate. Dr. Warren has had his critics, as any man who tries to take a leading part in many departments will have; but, ever since his election, when quite a junior Fellow, to the Presidency of Magdalen College—formerly one of the closest of corporations—he has justified, by his devotion to his duties and by his *gravitas* (a word which must not be taken to imply that he is insensible of the humours of life), the honours which have fallen to him.

Games are still played in Oxford. The river is in favour, and, with the unusual number of a dozen entries, there should be some good racing for the Coxwainless Fours, the finals of which will be rowed just when this paper is appearing. There seems

good reason to hope that the Rugby team will be of unusual excellence, and the back division will contain more Internationals than we have known since the historic days of "Harry" Vassall.

LARGE as is the entry of freshmen, quantity has not been sacrificed to quality. On all sides it is clear that there is a marked tendency to regard the University as a place of solid learning where a genuine training can be obtained for the business of life. The chief attractions to the outside public are the Engineering and Medical Schools, the numbers in which increase by leaps and bounds. Oriental accessions, too, are noticeable in our Law School, and the names on the lecture lists have a faint *souffron* of Gilbert and Sullivan.

Two new Professors start work this term—Prof. Oppenheim takes the place of Prof. Westlake in the Whewell Chair of International Law, while Mr. Pope fills the Chair of Chemistry held for so many years with such success by the veteran Prof. Liveing. Prof. Pope, whose appointment is likely to prove an unqualified success, was not hampered by a University training, but will be none the less welcome on that account, and, if he lives up to his reputation, will make his mark in scientific circles. One of the favourites for the appointment was Dr. Fenton, who for many years has done yeoman's service at the Laboratory, and, what is more, has found time to do important research work in his subject. It is a curious fact that many of our most efficient teachers are men whose claims have never been recognized by their own colleges. There have been cases of men good enough for Bishoprics and Professorships who have not had the chance of teaching grammar or quadratics to classes in their own colleges.

The appointment of Mr. C. T. Heycock as Goldsmiths' Reader in Metallurgy was an obvious one, but noticeable for all that. In conjunction with Mr. Neville, of Sidney, the new Reader was responsible for most valuable research work on the nature and properties of alloys. Mr. Heycock, like Dr. Griffiths, the present Principal of Cardiff University College, with whom he was so long and intimately associated in teaching work, is another example of the faults of a system which recognizes only too late the value of teaching ability in a University.

The retiring Vice-Chancellor delivered the customary valedictory oration at the beginning of term and the incoming Vice-Chancellor, Dr. Mason, Master of Pembroke, was duly admitted to office. Rapid changes have taken place in masterships of colleges during the past few years. The latest loss which the University has sustained is that of the Master of St. John's, whose sudden death, while enjoying a brief and well earned holiday on the Continent, came as a great shock to his numerous friends. The appointment of Mr. Robert Forsyth Scott to the vacant post is undoubtedly one which will tend to the advancement of the college. It is reported that Mr. Larmor was the most serious rival in the opinion of the electors.

The Syndicate which is considering the question of substitutes for the general examination has not yet delivered itself of a report: it is difficult to imagine what alterations could with advantage be made in this particular examination, but there are people among us who crave for change and who, living in a realm where poll candidates are regarded as denizens of a lower sphere, treat the poor undergraduate as a fit subject for the untutored experiments of meddlesome incapacity.

A useful change has been made in the arrangements for the first M.B. Examination, which is now held three times a year instead of twice. The October examination as now constituted is a practical recognition of the fact that much of the best work is done in Vacation time, and that a period for rest and digestion is not altogether out of place even after an intellectual meal. Our Cambridge menus are sometimes a trifle crude.

Local politics have entered upon a novel phase: two ladies have entered the lists and desire municipal honours—Miss Julia Kennedy, the well known daughter of the illustrious Prof. Kennedy, and Miss J. S. Phillpott, the daughter of an equally well known Bishop. If they are successful, they will certainly not diminish the efficiency of our local Senate.

Magdalene has made amazing strides in popular favour under the energetic rule of Mr. Donaldson, and in a few years' time the picturesque little college by the river will prove itself a power to be reckoned with in every department of University activity. Its numbers are steadily increasing, and the successes it gained on the river in the May term are proving the prelude to an advancement all along the line.

Our prospects in things athletic are not as bad as the London

prints would have us believe. The new President, Mr. D. C. R. Stuart, has splendid material for next year's crew, including his younger brother Colin, who may in time rival his brother's successes. In the football field it is not so certain that the abnormally strong side which Oxford puts into the field will be so very superior to the less fancied team of this University. At any rate, we possess in K. G. McLeod one who is probably the best three-quarter of the century, and at least six other members of the team are quite in the running for International honours. The golf team promises to be fairly good: it will almost certainly include a Magdalene freshman named Walker, who has lowered the record for the Royston links to 68 within a week of his appearance on the scene. Things are very quiet, and there seems no prospect of any excitement this side of Christmas.

A MEETING of Convocation was called for London. October 13, but a quorum could not be secured and therefore no business could be transacted.

Sir Edward Busk, who, as Chairman of Convocation, would have presided, explained informally to the meeting the amendments which the Senate had passed modifying Statute 125 dealing with the period of study necessary before the acquisition of the first degree. The statute, as it stands at present, enacts that that period should be not less than three years from the date of Matriculation. The most important modification was to the effect that a student might be allowed to take the Final Examination before the end of the three years' course provided that, after passing the Intermediate Examination, he should have attended for two years an approved course of study for the Final Examination. This modification, explained Sir Edward, was adopted on the suggestion of Convocation. Another provision of almost equal importance was to the effect that a course of study extending over not more than one year taken in another University approved for the purpose, after the passing of the Intermediate Examination, might be accepted in lieu of an approved course of study taken in London University. It was agreed that Sir Edward Busk should informally present to the Senate the approval of the meeting.

The Matriculation Pass List gives 51 names in the First Division and 364 in the Second Division. The usual lists of supplementary certificates are added.

Sir Arthur Rücker was presented (September 28) by the administrative staff of the University with a rose-bowl, designed and executed in hand-beaten and repoussé silver by Messrs. Ramsden & Carr. It bears the arms of the University, of Brasenose College, Oxford, of which Sir Arthur is an Honorary Fellow, and of his own family, displayed between panels of briar-rose pattern, and is encircled with the following inscription:—"I was wrought for Sir Arthur William Rücker, D.Sc., F.R.S., on his retirement from the Principalship of the University of London, to mark the affectionate esteem of the Officers and Staff." The presentation was made, on behalf of his colleagues, by Mr. Philip J. Hartog, the Academic Registrar.

The following Doctorates have been conferred: D.Sc. in Physiology, Dr. David Forsyth (Guy's); D.Sc. in Chemistry, Dr. S. J. M. Auld (East London College) and Henry Bassett (external student); D.Lit. in History, J. W. Horrocks (external student).

A SUPERANNUATION scheme for members of the professorial staff is to be put into operation next session. Under this a professor who reaches the age of sixty-five years will retire on a pension. The scheme is established on a contributory basis.

In the Degree Examinations of June last 75 Aberystwyth. students qualified for the B.A. or B.Sc. degree, including 47 in Honours, 10 of them obtaining

First Class and 15 Second Class Honours; 6 obtained the Secondary Education Certificate of the University and 6 the Cambridge Teachers' Diploma. There was an unusually large number of candidates at the Entrance Scholarship Examination in September. Of the 22 awards, 19 fell to pupils of Welsh County schools. Of the total number (470) of present students, 443 are matriculated and pursuing full degree courses. An increasing number of post-graduate students are engaging in scientific research, the new laboratories proving an invaluable addition to the resources of the College in this respect. The new athletic grounds are nearly ready for use, and a large and admirably

fitted gymnasium has been erected at a cost of £2,000—mostly contributed by a former student. The practice of the normal students has been extended, use being made of the schools of Newtown, in addition to the practice at Swansea and Aberystwyth. Though the number of students and the income from students' fees showed an increase last session, there is a deficit on the general college income and expenditure account of £1,648. 19s. 9d., as compared with £1,670. 14s. in the previous year.

### THE EDUCATIONAL LADDER.

**BOARD OF EDUCATION.**—Whitworth Scholarships and Exhibitions. Scholarships (£125 a year each, for three years): W. H. Mead, Southsea; W. White, Portsmouth; W. H. Stock, Swindon; E. Bate, London. Exhibitions (£50 for one year): A. H. Gabb, Swindon; A. McKenzie, Devonport; R. Bassett, Devonport; S. L. Dawe, Devonport; A. J. Triggs, Devonport; A. C. Lowe, Harrogate; J. R. Pike, Portsmouth; H. R. Allison, Gillingham; A. E. Beal, Sheerness; C. R. Kemp, London; H. L. Guy, Penarth, Glamorgan; H. G. Stephens, Leicester; F. E. Rowett, Chatham; C. E. Haddy, Torpoint, R.S.O., Cornwall; W. E. Tong, Gosport; G. W. Bird, Plymouth; C. W. Limbourne, Plumstead; W. G. Pitt, Plumstead; E. J. Cox, Gosport; G. H. Reid, Stonehouse, Devon; D. Watson, Swindon; J. E. Burkhardt, Newcastle-on-Tyne; P. R. Higson, London; A. J. Sear, Portsmouth; E. O. Hale, Stantonbury, Bucks; F. C. Ham, Plumstead; A. R. C. Winn, Hornchurch, Essex; J. Scobie, London; F. Bray, Devonport; C. P. T. Lipscomb, Plumstead.

Royal Exhibitions, National Scholarships, and Free Studentships (Science), 1908.—Royal Exhibitions: A. Riddle, Portsmouth; T. J. Hornblower, Southsea; A. H. Gabb, Swindon; A. E. Stone, Portsmouth; F. Morris, Portsmouth; S. B. Hamilton, Halifax; A. H. Barrett, Southsea. National Scholarships for Mechanics (Group A): B. C. Carter, Southsea; A. J. White, Southsea; H. H. German, Devonport; W. F. Boryer, Portsmouth; H. Mawson, Hunslet, Leeds. Free Studentships for Mechanics (Group A): G. W. Bird, Plymouth; H. G. Stephens, Leicester. National Scholarships for Physics (Group B): J. Lamb, Gateshead; H. Billett, Swindon; F. C. Hobbs, Bristol; R. Ecker, Norwich; T. W. Johnstone, Neyland, Pembroke-shire. Free Studentships for Physics (Group B): P. H. S. Kempton, Swindon; W. Jevons, Smethwick. National Scholarships for Chemistry (Group C): W. A. C. Newman, Leeds; E. W. Yeoman, Southampton; F. Hargreaves, Burnley; L. D. Goldsmith, London; E. Jobling, Hull; E. O. Jones, Leeds. Free Studentship for Chemistry (Group C): L. Owen, Trefriw, Carnarvonshire. National Scholarships for Biology (Group D): E. Hill, Bradford; H. Wormald, Wakefield; T. E. Herbert, London. Free Studentship for Biology (Group D): E. T. Halnan, London. National Scholarships for Geology (Group E); H. Hart, Camborne; A. Sharples, Burnley; J. W. Chalouner, Burnley.

**CAMBRIDGE UNIVERSITY.**—Balfour Studentship (£200 a year): Cecil Clifford Dobell, B.A., Trinity. Charles Oldham Shakespeare Scholarship: T. S. Sterling, B.A., Downing. Gedge Prize (Chemistry): Edward Mellanby, B.A., Emmanuel. Geographical Scholarship: Thomas Dunbabin, B.A., Corpus Christi (Rhodes Scholar).

*Emmanuel.*—Research Studentships: £150, T. H. Laby, B.A.; £140, R. D. Klecman, B.A.; £100, H. S. Tasker, B.A.—all members of the College. Exhibition of £50 for two years (to advanced student): L. J. Russell, M.A., B.Sc., Glasgow University. Exhibitions of £30 for two years: W. T. Gordon, M.A., B.Sc., Edinburgh University, and A. Ll. Hughes, B.Sc., Liverpool University.

*Trinity.*—Elected to Fellowships: Alfred Reginald Brown (King Edward's School, Birmingham), in Moral Science; Geoffrey Bulmer Tatham (Uppingham School), in History; John Edensor Littlewood (St. Paul's School), in Mathematics; Cecil Clifford Dobell (Sandringham School, Southport), in Natural Science.

**DURHAM: ARMSTRONG COLLEGE, NEWCASTLE.**—Daglish Fellow: H. C. Annett, B.Sc. College Fellowships: B. J. M. Lane and S. Woolff. Charles Mather Scholarship: S. G. Edgar. Junior Pemberton Scholarship: R. C. Burton. Nathaniel Clark Scholarship: H. B. Tilley. Alder Scholarship: Divided between T. R. Burrell and W. Herbertson. Shipwrights' Company Scholarship: A. Piekworth. Osbeck Exhibition for Surveying: H. M. Hudspeth. Osbeck Exhibition for Metallurgy: E. L. Ford. Freire-Marreco Medal: D. Tiplady. Gladstone Memorial Prize: G. H. Hunter. Entrance Exhibitions in Science: T. H. Lusher, T. E. Sayer. Entrance Exhibition in Literature: Daisy Bowie. Lloyds' Register Scholarship in Naval Architecture: W. R. Edgar. Corporation Exhibitions: S. L. Baister, D. M. Clough, M. L. Haigh, H. Hope, M. G. McClery, G. McIntosh, W. S. Oliver, A. T. Parsons, G. E. Stephenson, and F. H. Walker.

**LLANDOVERY COLLEGE.**—Entrance Scholarships: Ll. P. Jones (Llandaff Cathedral School), D. Ll. Ellis (St. Deiniol's, Bangor), E. de Q. Mears (Baintree, Essex), O. M. Williams (Pontyminster), E. E. Roberts (Christ Church Cathedral School, Oxford), T. B. Jones (Bridgend School),

C. B. Davies (Cowbridge School), G. Thomas (Bow School, Durham), C. A. Loveluck (Port Talbot School), K. Davies (Morpeth School, Northumberland), C. Thomas (Swansea School), C. Bowen (Llanely School), H. R. Jones (Llanely School), I. A. Aubrey (Llanely School), G. Powell (Bridgend School). Foundation Scholarships; J. C. Morris, J. R. Lewis, W. H. Jones (Llandovery College), L. D. Lewis (Pentre).

**LONDON: QUEEN'S COLLEGE.**—Arnott Scholarship: Dorothy Pain. Plumtre Scholarship: Marion Baxter. Professors' Scholarships not awarded. The following students have qualified for the Associateship of the College:—Gladys Baker, Marion Baxter, Phyllis Cherrill, Monica Geikie Cobb, Marion Thompson, and Margaret Tribe.

**LONDON UNIVERSITY.**—*The Medical Schools.*—*Charing Cross.*—Epsom Scholarship: A. M. Jones. Huxley Scholarship: E. A. Sutton. Entrance Scholarships: E. H. Morris, C. E. Williams (dental), K. V. Smith. Universities Scholarship: T. Beaton, London University.

*Guy's.*—Senior Science Scholarship for University Students: N. Mutch, B.A., Emmanuel College, Cambridge. Certificate: H. W. Barber, B.A., Clare, Cambridge. Junior Science Scholarships: J. F. G. Richards, Preliminary Scientific (M.B.) Class, Guy's Hospital; W. L. Webb, Preliminary Scientific (M.B.) Class, Guy's Hospital. Certificate: G. S. Miller, Preliminary Scientific (M.B.) Class, Guy's Hospital. Entrance Scholarships in Arts: A. J. E. Smith, Rugby; H. W. Evans, Modern School, Bedford.

*King's.*—Sambrooke Exhibition: V. W. Draper, Huddersfield Technical College. Warneford Scholarships: J. H. Dancy, Queen Elizabeth's Grammar School, Faversham; W. C. S. Wood, St. Bees Grammar School; M. A. W. Thomas, Marlborough.

*London.*—Price Scholarship in Science: D. E. Morley. Science Scholarships: J. R. K. Thomson, A. R. Elliott. Epsom Scholarship: K. Biggs. Price Scholarship in Anatomy and Physiology, open to students of Oxford and Cambridge: H. Scott Wilson, Queen's, Oxford.

*St. Bartholomew's.*—Senior Entrance Scholarships in Science: N. Mutch, B.A., Emmanuel College, Cambridge, and A. F. S. Sladden, B.A., Jesus College, Oxford. Junior Entrance Scholarship in Science: Equal, C. L. Williams, Plymouth Technical School, and V. W. Draper, Huddersfield Technical College. Entrance Scholarship in Arts: Equal: F. H. L. Cunningham, Felsted, and G. T. Loughborough, Bradfield. Jeaffreson Exhibition in Arts: W. E. R. Saunders, Wellingborough Grammar School.

*St. George's.*—University Entrance Scholarship: J. Ellison, Downing, Cambridge; G. H. Varley, St. John's, Oxford. Entrance Scholarships in Science: P. Whitehead, King's College; H. E. Thorne, St. Paul's.

*St. Mary's.*—Entrance Scholarships—Open Scholarships in Natural Science: B. W. Armstrong, Boston Grammar School; F. P. Bennett, University College, Cardiff; J. R. M. Whigham, Westminster City School; F. C. Robbs, Clarence College, Gravesend. University Scholarships: A. W. Bourne, B.A., Downing College, Cambridge; W. A. Berry, Queen's College, Belfast.

*University.*—Bucknill Scholarship: H. W. Davies, University College, Bangor. Epsom Scholarship: J. A. Cowan. Exhibitions: R. L. Horton, University College, London; C. J. A. Griffin, University College, London.

**LONDON SCHOOL OF MEDICINE FOR WOMEN.**—St. Dunstan's Exhibition: U. Griffin, London School of Medicine for Women. Scholarship: N. Tribe, Queen's College, Harley Street.

**OXFORD UNIVERSITY.**—Junior Kennicott Scholarship: Arthur L. Sadler, B.A., St. John's. Pusey and Ellerton Scholarship: Samuel H. Hooke, Jesus College. The second Pusey and Ellerton Scholarship was not awarded.

Satisfied the examiners in the Theory, History, and Practice of Education: J. H. Baines, B.A., University College; A. S. Baker, B.A., St. John's; B. L. Broughton, B.A., non-collegiate, and O. J. Coudrey, B.A., Pembroke; R. M. Morgan, University College of Wales, Aberystwyth; Emma Backhouse, B.A. Lond., University College of Wales, Aberystwyth; Edith Beard, Royal Holloway College, B.Sc. Lond; Ellen J. Benham, Adelaide, South Australia; Alice Blake, St. Hilda's Hall; Mary Cornish, St. Hugh's Hall; Phyllis Monk and Margaret E. Sale, Girton. Adjudged worthy of distinction: William G. Briggs, B.A., Magdalen; A. J. B. Green, B.A., Jesus; H. E. McL. Icely, B.A., Brasenose; and Gertrude M. Thomas, M.A. Lond., University College, Cardiff.

*Brasenose.*—Senior Hulme Scholarships (£150 a year, for four years): Edmund C. Cleary and Charles E. Fairburn, Scholars of the College.

*Merton.*—History Fellowship: F. M. Powicke, M.A. Mauc. and Oxon., Assistant Lecturer in History, Manchester University.

*St. John's.*—Fellowships: John Handyside, B.A., Jenkyns Exhibitioner of Balliol; Guy Dickens, M.A., New College; M. P. Appleby, B.A., Trinity; and A. P. Brown, B.A., New College—the last two on the Fereday Foundation.

**SHEFFIELD UNIVERSITY.**—Technical Scholarships: A. G. Barkworth and C. D. Bradshaw (Central Secondary School, Sheffield). Technical Free Studentships: W. Bagnall and R. Genders (Central Secondary School, Sheffield), H. W. Barnes (Ashville College, Harrogate).

## THE MORAL EDUCATION CONGRESS.

## MORE PAPERS IN SUMMARY.

## CO-EDUCATION.

(1) By the Rev. CECIL GRANT,  
Head Master of St. George's School, Harpenden.

It is fair that I should state the main conditions which I consider no less essential than co-education, though I have no doubt that they will not meet with unanimous agreement. Firstly, then, the school must be frankly on a religious basis, the appeal in all matters resting finally upon the religious sanction (Do this because it is the will of God). Secondly, obedience must be demanded and obtained, every disciplinary means necessary to this end being employed. Thirdly, this discipline must be approved by the general consent of the community and, except in the rarest cases, by the sense of justice of the individual, even at the moment of punishment. Fourthly, prefects must be given wide powers, and must be prepared to discuss any person or any matter freely and frankly with the head master. Fifthly, there must be no precedent which may not be disregarded and no tradition which may not be broken through. It may, perhaps, be necessary to add that experience proves that none of these five conditions are at all impossible to realize.

As to the reasons for the vital difference which I attribute to co-education. After all, "I do not know why, but it is so," would not be so inadequate an answer as it sounds. It has to suffice as an explanation of electricity, but electricity is none the less serviceable. I think, however, that some explanation is not difficult to find. It is dangerous to tamper with Nature, as civilization has in a thousand ways discovered. "Male and female created He them" embodies a natural law, and, when natural laws are disregarded, unexpected results follow. "It is not good that the man should be alone" may very well be true at an earlier age than has been suspected.

The dangers admittedly belonging to an adult monastic establishment may well show themselves even less avoidable in a monastery for boys. We are finding in many other respects that education must not be one-sided—that you must not, for example, feed a young mind on one kind of mental diet only. But if anything educational can be truly stigmatized as one-sided, surely to educate boys apart from girls is that thing.

Is co-education difficult work? It is in every respect easier to work than the rival system. Does co-education require master and mistresses of an unusual stamp? Yes, and so does any other kind of education. Can a sufficient supply of such be obtained? Yes, if they are properly sought for and adequately remunerated. I admit that this last would give co-education an unfair advantage over nearly all other English schools.

(2) By J. H. BADLEY, Bedales School, Petersfield.

Two conditions at least seem to me essential: (1) There must be equality of age and standing, and no overwhelming predominance of numbers or influence on the one side or the other; (2) while there is little need to distinguish the activities of boys and girls up to fourteen or twenty, there must, in the later years, be more variety of work and play, with possibility of separate lines of choice according to the bent and needs of the individual. Granted these conditions, there is nothing but gain in the presence of the sexes together. It is good for both to come under the influence of the other sex as well as of their own; for the boy to have to do with women and with girls whose intellect and personality command his respect, and for the girl to learn, by daily contact with boys, what are the things they resent, the weaknesses they despise, the virtues they honour. But, great as these gains are, the deepest influence of co-education on character is in the mutual understanding, forbearance, and respect between the sexes that it brings in place of a mutual ignorance that fosters at once contempt and idolization of each sex by the other; thereby making possible a truer comradeship of ideas and motives, of work and self-government shared together, not only during the school years, but as basis for the fuller community of work and interests throughout life now everywhere demanded.

And what of the danger of the early development of the sex-instinct, leading to silliness and flirtation, if not to serious attachments, to which boys and girls at school ought not to be

exposed? I am far from asserting that co-education is right for all, without exception and under all circumstances; but for most I am quite sure that it is at once a safeguard and a most valuable training. For we have to remember that the instinct is there; and, instead of ignoring or trying to repress it, we must find conditions that allow of its normal development and teach its control, and we must be ready to give guidance, when necessary, in the meaning and mastery of this as of the other powers. In the natural intercourse between the sexes in all sides of their life at school, and in the personal guidance for which this gives opportunity, is one of the greatest means to strengthen character and make life wholesome. It is as mistaken to suppose that this must intensify sex-consciousness as to fear (as others do) that it may weaken sex-attraction by dispelling its mystery. If co-education helps our children to enter less blindly upon lifelong responsibilities, and to make the comradeship that grows from community of aims the basis of marriage, this is by no means its least service. It will not change the laws of Nature; but it will help to produce a sounder type of girl and boy—and in this and in their mutual knowledge and sympathy and respect lie at once the true foundations of marriage and the best hope of the future.

(3) By ISABEL CLEGHORN, Sheffield.

This paper deals with co-education only in elementary schools. Great as are the objections to co-education as hindering the best educational progress of girls, the objections which *can* (and which *cannot*) be urged against it on what, for want of a better word, we must term the *moral* side, are still more serious, especially in the senior department of co-educational schools.

These departments, often deplorably large, are, as a rule, under a head master, and it is impossible for him to exert that necessary—nay, vital—interest required by elder girls. Of far more importance than the training of the intellect and the imparting of knowledge is the training of the womanly qualities and the development of the womanly character. To the girl from the slum home the value of the gentle, refining, humanizing influence of the good woman teacher is often the best thing in life to get.

However good may be the mixed school, however zealous and whole-hearted may be its master, no man can enter into all the hopes, the fears, the aspirations, and little vanities of the girl just beginning to feel the approach of womanhood. . . .

To sum up, there is a point in the education of boys and girls when their lines run no longer parallel, and that point is reached, to my mind, about the age of ten or twelve years, when the boy begins to feel that he will soon have to face the responsibilities of work and the girl looks forward to the responsibilities of home.

The system of co-education in our elementary schools is fraught with much danger to the best interests of both boys and girls from physical, educational, and moral standpoints, and Local Education Authorities would be well advised to pause and seek more inner knowledge of the working of the system before either building new mixed schools or combining the separate departments of old ones.

## MORAL INSTRUCTION, DIRECT AND INDIRECT.

By Dr. F. H. HAYWARD, London County Council Inspector.

Dr. Hayward assumes (1) that the child needs moral instruction, or (if the phrase be preferred) moral "suggestion"; (2) that the moulding agency consists in ideas or ideals that are impressed on the child's mind by education and environment; (3) that mere "training" is morally inadequate for such a being as the child is; and (4) that ideas are of different degrees of efficacy on conduct. He then proceeds:

If these assumptions can be justified, the case for moral instruction in *some form* is established. But what form shall the instruction take?

1. With regard to a multitude of simple habits, hygienic and other, the method must be frankly imperative. Now, an imperative method is a direct method, though it may not be called a method of moral instruction, the latter term usually implying an element of elucidation. Sooner or later the habit must be explained and justified to the child, and this process constitutes one form of direct moral instruction.

2. Such moral instruction as is given in connexion with religious instruction seems also essentially "direct." I would emphasize this point, because there are many people, especially

secondary masters, who seem to regard the proposal of direct moral instruction as something revolutionary. Almost every primary school in England has given this direct, though somewhat unsystematic, moral instruction for years, and I invite all critics to explain their silence during that time.

3. In upper classes and in secondary schools there seems need of lessons—perhaps one a week would be enough—on the duties of life and citizenship. Such lessons would naturally take the "direct" form.

Where, then, does "indirect moral instruction" come in? Let me point out that by "indirect moral instruction" is not here meant "moral training," which, as already indicated, is not of general efficacy apart from insight. Nor is "atmosphere" meant. I have not the smallest confidence in the average boy or girl learning the refinements of moral duty from pictures of Constable or Raphael or from the singing of songs. I believe that the English mind is usually unable to perceive subtle moral analogies or to draw any but the most obvious moral generalizations. Hence we come across case after case of what passes for "hypocrisy" or "inconsistency," but what is, in fact, nothing but a lack of moral lucidity or of precision in the application of a moral terminology. Almost every one desires to be "temperate," "just," "patriotic," and so forth; yet nearly every one fails, more or less, merely through inability to recognize all the ramifications of these virtues. The present writer, for example, though a teetotaller and non-smoker, is alleged to be "intemperate" (or even "enthusiastic") in matters of controversy. Though moral inconsistency is not confined to the English nation (as the plays of Ibsen sufficiently show), it is, perhaps, more characteristic of this nation than of any other, owing to the inveterate distrust of system and of ideas, which is known as English "common sense."

If "indirect moral instruction" is neither "training" nor "atmosphere," what is it? It is the provision of abundant, varied, and appropriate material in the form of stories, poems, and the like, taken from sacred and profane literature and history. I suggest that this material be so reorganized and enriched that every moral idea be copiously illustrated, though not to the exclusion of other ideas, aesthetic, utilitarian, &c. Up to the age of about twelve, the use of this material need not be accompanied by any argumentative or systematic elucidation of the implicit moral ideas, though there will inevitably be casual elucidations. Our pupils will be thus acquiring a moral terminology, or—what is much the same thing—accumulating apperception material for moral judgment. They will be learning to call *this* good and *this* bad, but they will be learning to do so informally; at any rate, they will be unconscious that behind the various subjects will lie a deeply laid scheme for the creation in them of a conscience.

At about the age of twelve, however, the various moral ideas may be brought into the focus of consciousness; distinctions may be drawn; ambiguities removed; arguments adduced; other examples given, and so forth. In other words, "direct and systematic moral instruction" will begin. And if such awful words as "moral" and "systematic" send a cold shiver down any English dorsum, I suggest that its owner try to invent a superior terminology, which is indeed badly needed.

I need scarcely point out that the relation between indirect and direct moral instruction is the same as that between "Nature study" and science, and between the practical study of a language and the formal study of its grammar. Similar difficulties and dangers exist in all three cases, the chief of which is the premature introduction of the second factor. Fortunately, however, the most earnest advocates of direct moral instruction usually admit that such instruction needs for its success a large amount of indirect moral instruction.

#### THE BALANCE OF STUDIES.

By ARTHUR C. BENSON, University of Cambridge.

What I desire to see realized—and it is not, I think, an impossible ideal—is that all boys should be turned out effective members of a commonwealth, able at all events to do their share of the world's work and to live by their labour. That first; for, whatever idealistic claims an educational programme makes, it remains unjustified and unjustifiable if it does not produce capable and efficient members of the body politic.

But when that is once secured, then I believe that the aims of education ought to be far wider, more liberal, more sympathetic,

more idealistic than they are. A hard and austere scheme of mental training is enunciated by classicists and scientists alike, which professes to combine both mental stimulus and mental discipline, but which in reality sacrifices the former to the latter, except in the case of the few specialists to whom the scheme is naturally adapted.

The plain truth is that we pitch our educational standard too high; we do not condescend enough; we drive when we ought to be guiding; we compel when we ought to attract. We do not study individual taste enough; we tend to crush personality, and call the process "fortifying."

Efficiency, intellectual pleasure, the love of virtue—it seems to me sometimes that we make, in our educational systems, very little attempt to secure any one of the three. We muddle away the first by sacrificing common sense to austerity of ideal; we despise and suspect the second; we are shy and reticent about the third. And yet I hold that these three things are like the trinity of Christian Graces, the three underlying aims of all education worth the word. Let us try to hold them all more simply in view, and not be misled or shamed by being called emotional or sentimental or easy-going, or any other of the epithets with which the Pharisees of the world have always tried to stone the prophets.

If we can get a child to *feel*, generously and swiftly, and not to be afraid or ashamed of feeling, we have done all that can be done; it is like the Gospel caution about seeking the Kingdom of Heaven *first*; afterwards, all things are added to the faithful seeker, as long as he has not sought the Kingdom for the sake of the ensuing conveniences, but for itself.

#### THE CHURCH AND THE ADOLESCENT.

At the Church Congress in Manchester Prof. M. E. Sadler read a comprehensive and suggestive paper on "The Care of the Church for her Members between the Ages of Fourteen and Twenty-one." He said:—

The subject appointed for our discussion this afternoon brings before us the question of how most wisely to secure educational and pastoral care for young people of both sexes during the critical time of adolescence and in the opening years of manhood and womanhood. This is a question which deeply concerns the economic as well as the religious and moral well-being of the nation. In many other countries besides our own its urgency and difficulty are being more clearly realized year by year. It is not a question for the Church of England alone, though the responsibility of the Church and of its individual members is great in regard to it. It is a problem which all the Churches in the land and all other organizations working for the moral and physical welfare of the nation should, so far as honesty of conviction allows, join hands in attacking. In dealing with it in an effective and systematic way, the authority of Parliament and the action of great Government Departments and Local Education Authorities are indispensable. Not less necessary are the goodwill and earnest co-operation of all employers of labour and of the great organizations of workmen. But what above all is necessary is a stronger and more enlightened sense of responsibility throughout the nation in regard to the physical, intellectual, and spiritual welfare of young people during the critical years which follow the close of the elementary school course. Our chief task is to secure this deeper sense of personal responsibility on the part of parents, of employers, of shareholders, and of those whose votes in elections can bring influence to bear upon the action of Government Departments (especially those which, like the Post Office, the War Office, and others, employ much adolescent labour) and of the municipalities. Of the growth of this deeper sense of responsibility there are some hopeful signs, and we should recognize with gratitude the example set by many public-spirited and considerate firms and the strong desire of the high officials of the Post Office to grapple with their part of the problem. But it is still necessary to make the Treasury realize the gravity of the question, and, in order to do this, to press the matter upon the thoughts and conscience of the nation, for the public expenditure of which the Treasury is trustee. . . .

#### THE INFLUENCE OF EVOLUTIONARY THOUGHT UPON EDUCATIONAL IDEALS.

Evolutionary thought has changed the perspective of our thinking about national education. It bids us be less in a hurry

for quick results. As Keble said: "Growth is slow, when roots are deep." We see how gradual must be the ascent of a populous community towards a higher plane of custom and of conduct, and how many factors, spiritual and economic as well as administrative and (in the narrower sense of the word) educational, must work together to bring about any lasting change for good. But the new way of thinking, though it has disinclined us to be sanguine about the immediate outcome of any new law or regulation, has deepened our conviction of the necessity for the systematic organization of national life, on lines which will foster health, reality of individual conviction, and the spirit of brotherhood. It turns our thoughts to the future, while deepening our reverence for those great institutions which are the bond between the future and the past. It teaches us to think always of the continuous succession of human life, and bids us endeavour to provide a social and spiritual environment in which new lives may come to birth and grow to maturity with less of tragic waste of promise and less of the cruelty of injustice and neglect. Under the influence of this new way of thinking, men realize that national education comprises many influences besides the influence, the indispensable and precious influence, of the schools. It means the power of a social environment which should both inspire and control. Home and school and the religious society to which the parents belong must work together for the educational care of the children. All three factors, raised to a higher power of devotion, must be brought into closer union for their common task. And the regular training and discipline of the young must be carried forward far beyond the premature conclusion of the elementary day-school course through the sensitive and momentous years of adolescence, so that the duties of manhood and womanhood may be entered upon with physical powers rightly trained, with the mind stored with just and inspiring thoughts, and the whole character uplifted by voluntary allegiance to a moral and spiritual ideal. This is the purpose to which the new way of thinking is insensibly directing us. And we are beginning to realize with shame that our present form of educational organization is pitifully far below that which it is our duty to create.

#### SOCIAL CHANGES CALL FOR NEW EFFORT IN NATIONAL EDUCATION.

Modern methods of factory production make it in some cases profitable to the employer to use the comparatively unskilled labour of boys and girls, who have just left the elementary schools, in such a way as to use up an unfair share of the physical and moral capital of the rising generation. It has never been so easy as it is in England to-day for a boy or girl of thirteen or fourteen years of age to find work (often involving long hours of deteriorating routine) in which there is little mental or moral discipline, but for which are offered wages that, for the time, look large and flatter the sense of being independent of school discipline and of home restraint. After a few years the lad, at the very time when he begins to want a man's subsistence, finds himself out of line for skilled employment and only too likely to recruit the dismal ranks of unskilled labour. This is one cause of premature unemployment. The recent return of the proceedings of Distress Committees under the Unemployed Workmen Act in England and Wales, during the year ended March 31, 1908, shows that more than half (53·3 per cent.) of the unemployed whose applications were entertained belonged to the class of general or casual labour. Considerably more than half (57·7 per cent.) out of the total number of applicants, who, after investigation were found qualified for assistance under the Act, were under forty years of age. And at least one out of every four of the total number (28 per cent.) was under thirty. Another piece of evidence points to the gravity of the evils resulting from our present lack of educational care during the initial years of adolescence. In the recently issued Annual Report of the Commissioners of Prisons, the Borstall Association point out that "when a boy leaves school, the hands of organization and compulsion are lifted from his shoulders. If he is the son of very poor parents, his father has no influence, nor indeed a spare hour, to find work for him, he must find it for himself; generally he does find a job, and if it does not land him in a blind alley at eighteen he is fortunate. On he drifts, and the tidy scholar soon becomes a ragged and defiant corner loafer. Over 80 per cent. of our charges admit that they were not at work when they got into trouble." Can we escape the conclusion that certain developments of modern industry, impersonal in their lack of a sense of civic responsibility, are imperilling the permanent and future interests of the State? Can we hide from ourselves the fact that

in many callings connected with transport and communication and in some branches of manufacture, the unskilled or injuriously specialized labour of adolescents is being used to a degree which calls for counteracting measures if grave and lasting injury is to be averted from the national life? And what is true of many boys is true also of an increasing number of girls. Modern industrial organization, with its tempting bribe of early wages and early independence, is beginning to use up an unfair share of the physique and of the still unformed character of multitudes of those girls who might be wisely trained for the duties of future motherhood and home-making.

#### SUGGESTIONS FOR ACTION.

There are many signs which may encourage us to take a reasonably hopeful view of the possibility of lessening these evils. Everything turns in the last resort upon the attitude of the public mind. And it is evident that people are beginning to think seriously about the practical steps which may be taken to grapple with the problem. . . .

What we need in England is greater combination of effort in dealing with a problem which is national, and not sectional, in its significance. Above all things, we need to preserve and to increase the volume of personal service in this work, to retain the devotion which has its source in religious belief, to shun the temptation to be too utilitarian in our educational ideas, and to avoid the error of thinking that legislation and the administrative action of public officials (though both are indispensable) can ever play more than a supplementary part in a task which is essentially one of pastoral oversight and of personal devotion.

Well knowing that I speak to an audience largely composed of experts, I will sum up with a brevity, which I hope no one will mistake for dogmatism, some of the remedies in regard to which there seems to be a growing consensus of opinion among English students of education. A practical handling of the problem will involve drastic reforms in the elementary day schools. The large classes should be reduced to thirty or thirty-five. The leaving age, as in Scotland, should be raised to fourteen. For the rank and file of the pupils there should be much more practical and constructive work in the higher standards, and much less reliance upon oral teaching. For many of the pupils a simpler course of study would be more helpful intellectually. Steps should be taken everywhere, as has already been done in many places, to organize the supply of accurate information about the wages and future prospects of employment in different callings, and thus to assist teachers or managers in giving wise counsel to pupils and not less to parents whose sense of responsibility and realization of future possibilities it is possible and highly desirable thus to stimulate and strengthen. Great good will also come from the movement for the readjustment of old methods of teaching in Sunday schools in the light of new knowledge which psychological investigation has placed at our command. The number of Old Scholars' Associations in connexion with public elementary schools should be increased. Hearty encouragement should be given to any efforts which foster the healthy influence of corporate life in connexion with continuation schools. Approved continuation classes should, wherever possible, be organized as part of the work of lads' or girls' social clubs. Local Authorities and private benefactors may render an important service to the community by providing more playgrounds in town and country with proper supervision for organized games. And, as Dr. Paton, of Nottingham, has urged, more use should be made of school buildings at night as social institutes for healthy recreation, including classes for physical development.

For my own part I am drawn to the further conclusion that it will eventually be found desirable and necessary to lay all employers under a statutory obligation to enable their young workers, up to the age of seventeen, to attend during the day-time or in the late afternoon courses of suitable instruction provided or approved by the Local Authority of the district. I realize the immense difficulties involved in any such requirement, and I do not look for any early adoption of the plan. There is, indeed, much to be done before we shall reach the point at which suitable continuation classes can be provided for all young people, and before the elementary schools can be placed in the position of being able to give the kind of preliminary education which all far-sighted members of the teaching profession are agreed in thinking desirable. But it is towards the statutory recognition of a new responsibility on the part of the employer, and towards the statutory enforcement of a more

prolonged attendance on the part of the pupil at the elementary school and then at the day continuation school that, unless I am wholly mistaken, the trend of events is moving. . . .

#### THE DANGER OF GIVING AN EDUCATIONAL MONOPOLY TO THE SECULAR STATE.

The Trades Union Congress has recently carried, by an immense majority, a resolution, the ultimate implication (though not, I venture to believe, the conscious intention) of which would be the effective discouragement of any kind of school or class other than those confined to secular education and under the direct management of the officials of public authorities. I would speak of this policy with the respect due to the judgment and experience of those who approve it, but nevertheless with a strong hope that it may not represent the final judgment of the nation.

It would, I believe, be a moral disaster to civilization if the training of the young were to become the jealously guarded monopoly of the secular State. The medieval Church, in her long-sustained effort to retain monopoly of educational control, was beyond doubt actuated in great measure by a noble and disinterested motive, but she was none the less wrong in this part of her conception of her practical duty. By committing herself in good faith to a false ideal of educational unity she impaired the spiritual and intellectual freedom of Europe and unwittingly injured the cause which she herself had most at heart. Not less noble and disinterested is the motive of many of those who, in our own days, would confer the vast rights of educational monopoly upon the secular State. They imagine that tragic inequalities of opportunities might be redressed, that pitiful waste of moral power and of mental promise might be prevented, if only the whole system of national education were placed, beyond possibility of competition or challenge, in the sole charge of Government. But such a monopoly, even if it could be effectively realized, would be injurious to education. At first, indeed, it might result in some real, and much apparent, gain. But, in the long run, a State monopoly in education would restrict the growth of new ideas, hamper individual initiative, discourage experiment, and either impose upon us a crippling uniformity of regulation or provoke a bitter conflict between contending ideals of life and duty, a conflict which would not only destroy the best hopes of educational advance, but cause a deep cleavage in our national life.

In the nature of things, education is a quasi-public, quasi-private thing. Its power over civic ideals is so great that the management of it, and the aspirations and purpose of those who provide it, can never lie wholly outside the watchful care of the statesmen and public servants who are responsible for national welfare. On the other hand, at the heart of all that is worthy of the name of education lie the spiritual forces which give to human life its highest significance and reveal its true meaning. Therefore, education cannot be committed to the sole charge of a purely secular organization, which is charged (by its own profession) with an exclusively secular mission, without being deprived of much of its deepest influence upon individual character. It cannot justly be argued in favour of an educational monopoly in the hands of the secular State that thus we should escape controversy on religious questions and in regard to the ideals of personal life. Experience shows that in educational matters the attempt to escape controversy by secularization leads, sooner or later, to far worse things than such controversy as we have in England to-day. Bleach education white of all that entails controversy, and what is left in our hands has little power of spiritual nutrition or of intellectual stimulus. . . .

But, if the educational monopoly of a Church and the educational monopoly of the secular State are alike inexpedient, we are led to seek a solution which will combine in national educational religious freedom for individuals and for organized groups of citizens with such measure of State supervision and aid as are needed to secure healthy conditions in the home, in the school, and in the workshop, sound physical development, large intellectual opportunities, and a strong sense of personal obligation for service in behalf of the community. I submit that *variety of types of school set in a framework of national organization* can alone give us that practical synthesis of effort which will satisfy the ineradicable convictions of the different groups in a community so varied as our own.

### CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS.

#### L'EXPÉDITION DU MEXIQUE.

Par M. A. P. HUGUENET.

Le 26 septembre dernier, M. Huguenet, professeur à Queen's College, nous parlait de la malheureuse expédition du Mexique, entreprise par Napoléon III, et qui fut, à tous les points de vue, rien moins que glorieuse pour nos armes.

Le conférencier esquisse à grands traits l'histoire de cette vaste contrée, rappelle les diverses races conquérantes qui s'y sont succédées depuis le VII<sup>e</sup> siècle; la domination espagnole; puis, de nos jours, la proclamation de l'indépendance, la création d'un empire éphémère en 1822, l'adoption d'un gouvernement républicain en 1824, et nous montre le désordre et l'anarchie régnant depuis lors en maîtres, l'état et le peuple s'épuisant en luttes intestines de tous les instants.

En 1861, la France, l'Angleterre et l'Espagne, se trouvant lésés dans leurs intérêts respectifs, interviennent, et envoient au Mexique un corps expéditionnaire. Mais devant les prétentions du Cabinet des Tuileries, l'Angleterre et l'Espagne refusent leur coopération, rembarquent leurs troupes, et la France reste seule en face de Juarez. Le but secret était de renverser la république et de fonder un empire capable de contrebalancer la puissance des Etats-Unis et de paralyser leur développement. Le général de Lorencez reçut ordre de commencer les hostilités. Le conférencier nous retrace alors cette campagne. Peu nombreux d'abord, les Français, battus à Puebla, durent attendre des renforts. L'effectif fut porté à 35,000 hommes sous le commandement du général Forey. En 1863, Puebla fut investi, et bientôt se rendit sans conditions. Peu après, Forey et Bazaine faisaient leur entrée à Mexico. Une junte fut créée pour choisir un gouvernement, et se prononça pour le rétablissement de l'empire, offrant la couronne à l'archiduc Maximilien d'Autriche, désigné par Napoléon. Mais Juarez ne renonçait pas à la lutte et tenait Bazaine en alerte. Maximilien avait bien été reconnu par les puissances de l'Europe, mais non par les Etats-Unis. Le gouvernement de Washington réclamait impérieusement la fin de l'occupation française, et force fut d'abandonner Maximilien à lui-même. Il se rendait du reste impopulaire tant aux cléricaux qu'aux patriotes. Le pays se soulevait, le péril augmentait, les petits désastres se multipliaient, et à la fin de janvier 1867, l'armée française, en pleine retraite sur la Vera Cruz, s'y embarquait définitivement. Maximilien, résolu à défendre son trône, avait refusé de la suivre. Trahi par ses généraux, il fut fait prisonnier à Queretaro et fusillé le 19 juin 1867.

Témoin oculaire de cette campagne, le conférencier ne pouvait être qu'intéressant. Il nous a fait assister à la vie du soldat en campagne, aux mille poignantes péripéties tant de la défaite que de la victoire, et nous a fourni des détails circonstanciés sur l'aspect du pays, les restes de son ancienne civilisation, les mœurs et coutumes de ses habitants. Aussi la satisfaction générale s'est-elle traduite en généreux applaudissements.

Mr. JOHN KING, Director of Studies, has issued his report to the Edinburgh Provincial Committee for the Training of Teachers for the session 1907-8. He states that the session will always be memorable for the initiation of the new system of training teachers in Scotland. The transfer of the two Presbyterian Training Colleges is now an accomplished fact: the curricula have been remodelled on the lines of the new regulations. Satisfactory progress has also been made in the difficult and important work of defining the relation of the Training College to the various central institutions—the Heriot-Watt College, the College of Agriculture, the School of Cookery, and the College of Art, with all of which it must co-operate in the work of training the different classes of teachers. When the session opened in October 766 students were admitted to training for the general certificate, including 423 new students, 301 who returned for a second year, and 42 who returned for a third year of training. Of the 343 students returning, 137 had been previously enrolled under the Church of Scotland, 114 under the U.F. Church of Scotland, and 92 under the Provincial Committee.

COLLEGE OF PRECEPTORS.—TEACHERS' DIPLOMA EXAMINATION.  
SUMMER, 1908.

THE Summer Examination commenced on the 31st of August and was held in London and at the following Local Centres:— Birmingham, Bristol, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, Plymouth, Beterverwagting (British Guiana) Bombay (India), Madras (India), Trinidad (West Indies).

The total number of candidates examined was 323.

The following are the names of the candidates who passed in the various subjects: (*hon.*) attached to a name, or to a letter denoting a subject, indicates that the candidate obtained Honours in the subject:—

**Theory and Practice of Education.**

The Prize for **Mathematics** was awarded to Herbert James Larcombe.

AT THE EXAMINATIONS OF THE  
**COLLEGE OF PRECEPTORS,**  
**MR. H. J. SMITH'S STUDENTS**  
 HAVE BEEN SINGULARLY SUCCESSFUL.

At the A.C.P. Exam., September, 1907:  
 Of 336 candidates, only 9 passed in *every* subject; only 2 obtained Honours in English.  
 Mr. A. V. S., a student in Mr. Smith's Classes, **passed in all subjects**, and obtained **Honours in English**.

At the A.C.P. Exam., January, 1908:  
 Of 513 candidates, only 13 passed in *every* subject.  
 Mr. J. E., a student in Mr. Smith's Classes, **passed in all subjects**, with **Honours in English and History**.  
 Only one other candidate out of the 513 obtained Honours in two subjects.

On several occasions Mr. Smith's students have been the only candidates to obtain Honours.

At the Exam. in December, 1907, the following results were obtained in English:—

<b>Students in Mr. Smith's Classes</b>	<b>No. of Successes</b>	<b>6</b>	<b>No. with Honours</b>	<b>2</b>
<b>In all other Classes and Private Students</b>	<b>No. of Successes</b>	<b>81</b>	<b>No. with Honours</b>	<b>1</b>

These results are sufficient to show that Mr. Smith's students obtained **THE BEST AND THE MOST EFFICIENT ASSISTANCE**.

For Full Particulars, Prospectus, Fees, and Testimonials, write to  
**MR. H. J. SMITH, B.Sc. LOND.,**  
 Rosebery House, Breams Buildings,  
 Chancery Lane, London, E.C.

# NELSON'S

## YOUNG FOLKS' BOOKSHELF

INSTRUCTIVE ——— INSPIRING ——— INEXPENSIVE

Messrs. Thomas Nelson & Sons have now issued  
the first part of the first volume of this UNIQUE  
——— SERIES of children's books, entitled ——

## BRITAIN OVERSEAS;

OR

### THE EMPIRE IN PICTURE AND STORY

A graphic and beautifully illustrated description of the British Empire—the story of how it was built up and how it is governed, of its countries, natural wonders, peoples, cities, and industries. Complete in 10 Fortnightly Parts, which will form one handsome volume of 320 pages, with 22 large Coloured Plates and hundreds of Black-and-White Pictures.

*10 Fortnightly Parts at 2d. per Part*

Competitions with Handsome Prizes have been  
arranged in connection with "Britain Overseas."

THE ATTENTION OF TEACHERS, and all interested in the education and welfare of children, is specially directed to Messrs. Nelson's new scheme of publishing high-class and beautifully illustrated books for the young at a trifling sum per week.

### WHAT ONE PENNY A WEEK WILL DO if spent in buying "BRITAIN OVERSEAS."

#### IN SCHOOL:

- IT WILL** provide fresh, fascinating, and educational **Supplementary Reading** for 20 weeks.
- IT WILL** serve as the basis of many interesting and helpful **conversational lessons**, and supply subjects for **composition and home lessons**.
- IT WILL** impress on the children the stirring **story of the Empire**, increase their knowledge of their vast heritage, and help to build up a wise and true Imperial patriotism.

#### AT HOME:

- IT WILL** encourage **home reading**, and thus stimulate the general intelligence of the children.
- IT WILL** provide them with wholesome reading of absorbing interest, and lay the foundations of much useful knowledge.
- IT WILL** encourage them to enter for interesting **competitions**.
- IT WILL** encourage the children to buy books for themselves and build up a **library of their own**.

*Please bring Nelson's Young Folks' Bookshelf  
- - under the notice of your Scholars. - -*

For Specimen Copies and full particulars of this comprehensive scheme apply to  
**Messrs. THOMAS NELSON & SONS,** PATERNOSTER ROW, LONDON;  
OR PARKSIDE, EDINBURGH.

# BLACKIE'S LIST.

A NEW ANTHOLOGY FOR SCHOOLS.

## THE CALL OF THE HOMELAND.

A COLLECTION OF ENGLISH VERSE.

Selected and Arranged by

R. P. SCOTT, LL.D., and K. T. WALLAS.

In Two Books. Each, 1s. 6d. net. Crown 8vo, cloth boards.

A Collection of English Verse, much of it contemporary, designed to illustrate the extended conception of patriotism that is developing in the national literature, both in the mother country and in her scattered family of young nations.

The Poems have been grouped according to their subject—

Book I.—Echoes from History—Britain Overseas—The Sea—The Changing Year.  
Book II.—The English Countryside—Home—Exile—Compatriots—The Call to Serve—The Call to Happiness.

## GEOGRAPHY.

STRUCTURAL—PHYSICAL—COMPARATIVE.

A TEXT-BOOK FOR SENIOR STUDENTS.

By J. W. GREGORY, D.Sc., F.R.S., Professor of Geology in the Glasgow University.

With Series of specially constructed Coloured Maps and Sketch Maps and Plans in Black and White. Large 8vo, 6s. net.

The main purpose of this book is to put before the student the most important facts concerning the Structural Geography of the Earth, and the evolution of our present continents from older lands. It marks a new departure both in aims and in method. It furnishes the student with such knowledge of the entire surface of the Earth as will ensure his acquisition of geographical perspective.

## A FIRST GEOGRAPHY.

By C. A. F. RODGERS, M.A. F.R.G.S.,

Assistant Master, Bradford Grammar School; and an Examiner in Geography to the College of Preceptors.

With Coloured Pictures and Diagrams on every page. Small 4to, cloth, 1s.

## A GENERAL GEOGRAPHY OF THE WORLD.

By HENRY E. EVANS, B.A., L.C.P.

A Text-book for Students preparing for University and other Public Examinations. 416 pages, crown 8vo, cloth boards, 3s. 6d.

## INTRODUCTION TO THE NATURAL HISTORY OF LANGUAGE.

By T. G. TUCKER, Litt.D. (Camb.), Hon. Litt.D. (Dublin),  
Professor of Classical Philology in the University of Melbourne.

Demy 8vo, cloth, 10s. 6d. net.

A new Treatise which gathers together the results of the great amount of philological work that the last quarter of a century has produced. It is intended to fulfill to-day the purpose which was served in its time by Max Müller's "Science of Language."

## GERMANY IN STORY AND SONG.

Edited by REGINALD WAKE, L.C.P., Modern Language Master, Bridgworth Grammar School, and EUGEN BRECHTEL.  
Illustrated, 2s. net.

## A THREE-TERM COURSE IN GERMAN.

By J. GREIG COCHRANE, M.A.

Illustrated. Crown 8vo, cloth boards, 2s. net.

## INTERMEDIATE GEOMETRY.

Experimental, Theoretical, Practical. By A. LEIGHTON, M.A., B.Sc., F.E.I.S.  
Crown 8vo, cloth boards, 1s. 6d.

## HEROES OF THE EUROPEAN NATIONS.

From Early Greece to Waterloo. By A. R. HOPE MONCRIEFF. 1s. 6d.

## READINGS IN ENGLISH HISTORY.

From Original Sources. Edited by E. B. MORGAN, B.Litt., and E. J. BALLEY, B.A. Illustrated. Vol. I., B.C. 64 to A.D. 1154, 2s. Vol. II., 1154 to 1485, 2s. 6d. Vol. III., 1485 to 1688, 2s. 6d.

## LANDMARKS OF EUROPEAN HISTORY.

By E. H. M'DOUGALL, M.A. Oxon.; late Assistant in the Tewfikieh School and Training College, Cairo. With many Coloured and Sketch Maps, Index, &c. 3s. 6d.

## A BRIEF SURVEY OF EUROPEAN HISTORY.

By ARTHUR HASSALL, M.A. An excellent general sketch of European History from Charlemagne to the Present time. Crown 8vo, cloth, 4s. 6d.

Write for full particulars to—

BLACKIE & SON, Ltd., 50 Old Bailey, E.C.

## ADVERTISEMENT SCALE.

Situations Vacant and Wanted—30 words or under, 2s.; each additional 10 words, 6d. (For 1s. extra, Replies may be addressed to the Publishing Office, and will be forwarded post free.)

## CURRENT EVENTS.

At the monthly meeting of members of the College of Preceptors on November 18, Prof. J. W. Adamson will read a paper on "The Experimental Study of Instruction."

M. L'ABBÉ MARGUERÉ will address the Société Nationale des Professeurs de Français en Angleterre at the College of Preceptors, on November 28, at 4 p.m. Subject: "Elle et Lui."

The University of London announces the following courses of Advanced Lectures during the current term:—

(1) Six lectures on "Early Greece and the East," by Mr. D. G. Hogarth, M.A., F.B.A., Fellow of Magdalen College, Oxford, at King's College, on Thursdays, at 4.30 p.m.

(2) Eight lectures on "Algal Flagellates and the Lines of Algal Descent," by Dr. F. E. Fritsch, D.Sc., Ph.D., F.L.S., at University College, on Mondays, at 5 p.m.

(3) Four lectures on "The Geological Structure of the Area of the Vosges," by Miss C. A. Raisin, D.Sc., Morton-Sumner Lecturer in Geology, at Bedford College, on Mondays, at 5 p.m., beginning November 16.

Admission free, without ticket.

PROF. SIR FREDERICK BRIDGE, M.V.O., D.Mus., M.A., will deliver a course of five lectures (with illustrations) on "Composers of Classical Songs" at the University of London, on Fridays, November 6, December 4, February 12, March 5, and April 2. Open free. Tickets from the Academic Registrar.

The programme of University Extension Lectures for the current session has just been issued by the University Extension Board. It includes an unusually interesting series of courses. The subject of "London" is receiving special attention, and the eleven courses which have been arranged on this subject should prove especially attractive in view of the Pageant which it is proposed to hold in London next year. A series of lectures and demonstrations in different historic buildings has also been arranged on Saturday mornings and afternoons throughout the session.

The London University Extension Board have arranged two central courses of lectures at the University during the current session—(1) 24 lectures on "Renaissance and Modern Architecture," by Mr. Banister Fletcher, F.R.I.B.A., on Mondays, at 8 p.m.; (2) 24 lectures on "English and French Painters," by Mr. Percival Gaskell, R.B.A., on Tuesdays, at 3 p.m. The courses commenced on October 5 and 6. Tickets and particulars from the Registrar to the Board.

The Board has also arranged a Three-Term Training Course for Lecturers. The Michaelmas Term work consists of 10 weekly classes on "Voice Production and the Management of the Voice," by Mr. H. H. Hulbert, M.A. Oxon., M.R.C.S., L.R.C.P., Lecturer on Voice Training at the London Day Training College and for the L.C.C., on Mon-

days, at 6 p.m. (commenced October 5), at the University. A further series of 10 classes will be given by Dr. Hulbert in the Lent Term; and, in the Summer Term, 4 lectures on "The Art of Lecturing" will be given by Prof. John Adams, M.A., B.Sc., and 4 lectures on "The Delivery of Lectures" by Dr. Hulbert. The lectures in the Summer Term will be followed by six meetings for practical work. The final two meetings of the course may be given up entirely to practice in lecturing.

KING'S COLLEGE, London, has organized a complete series of evening classes in English, covering the whole ground for Pass and Honour students in the School of English Language and Literature and for the M.A. course; also evening lectures of a more popular character. Prof. Gollancz takes supervision. Fees very moderate.

PROF. JOHN ADAMS, M.A., B.Sc., is delivering a course of eight lectures on "The Educational Bearings of the various Theories of the Nature of Ideas" at the London Day Training College (Southampton Row, W.C.), on Saturdays, at 11.30 a.m. Open without fee to teachers. Cards from Prof. Adams. Give full name and address of applicant and of the school where applicant teaches.

THE Geographical Association's first monthly meeting will be held on November 13, at 8.15 p.m., at the London Day Training College, Prof. Adams in the chair. Mr. H. J. Mackinder will deliver an address to teachers of geography. Full particulars as to the Association from Mr. J. F. Unstead, 39 Greenholm Road, Eltham.

UNDER the auspices of the Federated Associations of London Non-Primary Teachers, in conjunction with the Mathematical Association, a Conference will be held at the Polytechnic, Regent Street, W., on November 28, at 3 p.m., Prof. Bryan, President of the Mathematical Association, in the chair. Prof. Perry will deliver an address on "The Correlation of the Teaching of Mathematics and Science." Cards from Mr. P. Abbott, 5 West View, Highgate Hill, N.

A RECEPTION for the American teachers now visiting England has been arranged by the Association of Assistant Masters in Secondary Schools, in conjunction with the Assistant Mistresses' Association, at the Charterhouse, E.C., on November 10, at 8.30 p.m.

MR. CHARLES FRY'S Shakespearian Company, at the Royal Court Theatre, will give "Cymbeline" on November 7, "The Tempest" on November 14, and "Much Ado about Nothing" on November 21, at 3 p.m. Schools and students admitted to reserved seats at half price.

ON occasion of the visit of the International Conference on Electrical Units and Standards (October 17), the University of Cambridge conferred the honorary degree of Sc.D. upon Dr. Svante August Arrhenius, Director of the Department of Physical Chemistry in the Nobel Institute of the Royal Academy of Sciences, Stockholm; M. Gabriel Lippmann, Professor of Physics at the Sorbonne, Paris; Mr. Samuel W. Stratton, Director of the Bureau of Standards in the Department of Science and Labour, Washington; and Dr. Emil Warburg, Honorary Professor of Physics in the University of Berlin and President of the Physikalische-Technische Reichsanstalt in Charlottenburg.

ON occasion of the jubilee of the Museum, the University of Oxford conferred the honorary degree of D.Sc. upon Prof.

August Arrhenius, Stockholm, and Dr. Augustus G. Vernon Harcourt, M.A., F.R.S., Christ Church.

LORD CURZON has been elected Lord Rector of the University of Glasgow, defeating Mr. Lloyd George and Mr. Keir Hardie; and Mr. George Wyndham has been elected Lord Rector of the University of Edinburgh, defeating Mr. Winston Churchill and Prof. Osler.

THE University of Toronto has conferred the honorary degree of LL.D. upon Lord Milner.

THE University of Wales will confer the honorary degree of LL.D. upon Mr. Lloyd George, M.P., D.C.L., Chancellor of the Exchequer.

MR. G. LAMBERT CATHCART, M.A., Senior of the Junior Fellows, has been co-opted a Senior Fellow of Trinity College, Dublin, on the retirement of the Rev. J. W. Barlow.

LORD RAYLEIGH, Chancellor of Cambridge University, appeals for funds. The Cambridge University Association has raised its collection from £115,000 to £139,000 since the Duke of Devonshire's appeal in February, 1907; and a Committee of Cambridge men has been formed in London to help the Association, the present Duke of Devonshire being Vice-Chairman. The immediate objects are: (1) the completion of the fund for the School of Agriculture; (2) the completion of the fund for building the new museum of archaeology and ethnology; and (3) the adequate endowment of modern languages.

THE Drapers' Company has offered £22,000 to the University of Oxford for the establishment of an electrical laboratory.

MRS. E. A. FREEMAN has presented to the University of Oxford a collection of pen-and-ink sketches of English and Continental churches by the late Prof. Freeman, and a number of diplomas of membership of foreign learned societies and foreign decorations conferred upon him. These memorials will be placed in the Freeman Library.

LORD RENDEL has given a suitable site for the Welsh National Library: and the President, Sir John Williams, has contributed a valuable collection of books and manuscripts, said to be worth £20,000. Other donations have been received, and there has already been raised for the building fund a sum of £20,000, which will be supplemented by a Treasury grant.

LORD RENDEL has given £1,000 (for the ninth time) to the University College of Wales, Aberystwyth.

UNIVERSITY COLLEGE, Cardiff, has received a bequest of £100 under the will of the late Mrs. Henry Richard.

THE Hungarian Minister of Agriculture has presented various exhibits (including models, photographs, designs, collections of seeds, &c.), shown at the Hungarian Exhibition, Earl's Court, to the British Museum, King's College, London, the University of Cambridge, the Royal College of Science, Dublin, and various other scientific and educational bodies.

MR. JACOB SASSOON has given ten lakhs of rupees (£66,000) to establish a Central College of Science in Bombay.

DURING the past year Yale University received gifts to the amount of £252,688—some £20,000 more than the total teaching expenses.

FROM time to time during the past six months (says *Nature*) handsome bequests to assist the development of higher education in the United States have been announced in *Science*. In addition to many gifts of £10,000 or less, the following benefactions have been made. By the will of the late Mrs. Frederick Sheldon, £60,000 has come to Harvard University, and the amount will be increased eventually to something like £160,000; and the same University has also received from its class of 1883 the sum of £20,000. Princeton University has announced a gift of £50,000 from Mrs. Russell Sage, and the University of Virginia received the same amount by the will of the late Mr. E. W. James. Mr. Andrew Carnegie has given £40,000 to the Mechanics' Institute of New York City, and £20,000 to Rochester University. The Hampden Agricultural School obtained £32,000 by the will of the late Miss Alice Byington, and from that of the late Mr. Warren D. Potter the Massachusetts College of Pharmacy has benefited to the extent of £30,000. The children of the late Rev. Orlando Harriman have presented £20,000 to Columbia University, and Yale University has received £15,000 by the will of the late Mr. G. B. Griggs. There would not appear to be any falling off in the enthusiasm shown for higher education by wealthy Americans, who continue to be fully alive to the need for well endowed colleges throughout the States in order to fit American citizens to hold their own in the ever increasing industrial competition.

**Appointments and Vacancies**  
 DR. GEORGE GILBERT AIMÉ MURRAY, M.A., LL.D., Fellow of New College, Professor of Greek in the University of Glasgow 1889-99, has been appointed Professor of Greek in the University of Oxford, in succession to Mr. Ingram Bywater, resigned.

THE REV. J. W. BARLOW, M.A., Senior Fellow of Trinity College, Dublin, has resigned the Vice-Provostship, to which he was elected in 1899; and Dr. Benjamin Williamson, Senior Fellow, has been appointed to the office of Vice-Provost for the remainder of the present year.

THE REV. NEWPORT J. D. WHITE, D.D., Canon of St. Patrick's Cathedral, has been appointed (from temporary to) permanent Deputy for the Regius Professor of Divinity in Dublin University (Dr. Gwynn).

MR. JAMES MACKINNON, M.A., Ph.D., Lecturer in History in the University of St. Andrews, has been appointed Professor of Ecclesiastical History in the University of Edinburgh, in succession to the Rev. Malcolm C. Taylor, D.D., resigned. The Rev. Prof. Cowan, D.D., of Aberdeen University, is understood to have declined the appointment.

PROF. ALEXANDER OGSTON, M.A., M.D., will resign the Chair of Surgery in Aberdeen University at the end of the current session, after twenty-six years' service.

PROF. SIR EDWARD ELGAR has resigned the Peyton Chair of Music in Birmingham University, to which he was appointed on its foundation in 1905.

AT King's College, London, the Rev. George Body, D.D., Canon of Durham, has been appointed Special Lecturer in Pastoral Theology for 1909; Dr. St. Clair Thomson, Professor of Laryngology in King's College Hospital Medical School; Mr. H. Moore, Assistant Lecturer in Physics; and Mr. B. F. Baker, Demonstrator in Metallurgy. The Rev. George Owen, who has been appointed by the Committee of the London School of Chinese as Director, has also been elected to the Chair of Chinese in King's College.

MR. H. BYRON HEYWOOD, B.Sc. Lond., D.Sc. Paris, has been appointed Assistant Lecturer in Mathematics at the East London College (University of London).

MR. ST. GEORGE STOCK, M.A. Oxon., has been appointed Lecturer in Greek in Birmingham University.

MR. ALLEN MAWER, M.A. Cantab., B.A. Lond., Fellow of Gonville and Caius College, Cambridge, and Lecturer in English in the University of Sheffield, has been appointed Professor of English Language and Literature at Armstrong College, Newcastle (University of Durham).

AT Leeds University, Mr. H. S. Raper, M.Sc., and Mr. W. E. Crowther, B.Sc., have been appointed joint Demonstrators in Physiology; Mr. J. M. Hector, B.Sc., Lecturer in Agricultural Botany; and Miss M. V. Lebour, M.Sc., Junior Demonstrator in Zoology.

AT University College, Cardiff, Miss Doris Grunell, B.A., D.Litt. Paris, has been appointed Assistant Lecturer in French Language and Literature; and Mr. R. R. McKenzie Wallace, Assistant Lecturer in Physiology, in place of Dr. F. W. Lamb, who has been appointed Senior Demonstrator in Physiology in Manchester University.

MR. MATTHEW MONIE has been appointed Lecturer in Geology at the Glasgow Agricultural College.

MR. ARTHUR L. F. SMITH, M.A., Fellow of All Souls, has been elected to an official Fellowship at Magdalen College, Oxford, as Tutor in Modern History.

DR. WALTER COLQUHOUN has been appointed Professor of Physiology at Anderson's College, Glasgow, in room of Prof. R. Spiers Fullarton, resigned.

MR. J. T. REES has been appointed Superintendent of Education for the Borough of Swansea.

THE REV. F. B. WESTCOTT, M.A., sometime Fellow of Trinity College, Cambridge, will retire from the Head Mastership of Sherborne School at the end of the current term, after sixteen years' service.

THE REV. W. F. BURNSIDE, M.A., Cheltenham College, has been appointed Head Master of the Clergy Orphan School, Canterbury.

MR. JOSHUA HOLDEN, M.A., Head Master, Todmorden Secondary School, has been appointed Head Master of the new Secondary School at Cleckheaton.

MR. R. O. CHEW, B.Com. Manc., has been appointed Head Master of the new Municipal School of Commerce, Cardiff.

MR. W. REITH MACGREGOR, M.A., L.C.P., Assistant Master of Method, Central H.G. School, Aberdeen, has been appointed a Sub-Inspector of Schools under the Scottish Education Department.

\* \* \*

MR. JOHN H. W. MERRYWEATHER, M.A. Oxon., assistant master, Charterhouse, will retire at the end of the present term, and the Rev. E. E. Bryant, M.A. Cantab., will succeed him as House Master of Gownboys.

\* \* \*

MISS EDITH BEDDOWS, B.A. Birm., has been appointed an assistant tutor at the new Day Training College, Sunderland.

\* \* \*

MISS E. B. COOK, Assistant Mistress of Method, Homerton Training College, Cambridge, has been appointed Superintendent and Mistress of Method in the Yorkshire Training School of Cookery and Domestic Science.

Miss Florence Mason, assistant, has been promoted Head Teacher in Laundry Work in the same institution.

\* \* \*

MR. G. O'HANLON, B.A. Oxon., has been appointed Sixth-Form Tutor at Sherborne School.

\* \* \*

MR. C. M. DALRYMPLE, M.A. Cantab., Ph.D. Marb., and Mr. C. L. R. Thomas, B.A. Oxon., have joined the staff of University College School, Frognal, Hampstead.

\* \* \*

THE REV. C. H. ROWLAND, B.A. Toronto, Modern Language Master at Listowel High School, has been appointed Modern Language Master at Upper Canada College, Toronto.

SOME free studentships (L.C.C. grants) Scholarships and Prizes. are vacant at the School of Art Wood Carving, Exhibition Road, Kensington. Apply to the Manager.

\* \* \*

THE Glasgow City Educational Endowments Board have announced the arrangements for the bursary competitions to be held next year. The governors offer fifty school bursaries (stage 1) of the annual value of £5, tenable for two years, and fifty-five school bursaries (stage 2) of £10, tenable for two years. There will be twenty-four technical and higher education bursaries of £15, tenable for two years. Three University bursaries of £25, tenable for four years, will be offered; and the governors have instituted 120 bursaries for scholars who are in attendance at continuation classes, to be competed for at the close of each session. The Glasgow General Educational Endowments Board have also issued their bursary scheme, under which there will be twenty-five school bursaries (stage 1) of £5 for two years, and thirty school bursaries (stage 2) of £10 for two years. The technical and higher education bursaries of £15 will number seventeen, and there will be fifty continuation class bursaries of £3.

Literary Items. THE authors of "The King's English" (Oxford University Press) have reduced the work by a good half—chiefly by curtailing the controversial element and the number of quotations—and will presently offer it in its new form to such as "want a shorter and a cheaper book."

\* \* \*

THE Cambridge University Press announces a long expected work by Prof. Foster Watson—"The English Grammar Schools to 1660: their Curriculum and Practice." Also several new volumes of the "Cambridge English Classics," as well as various educational series.

MR. FROWDE has become joint publisher to the Early English Text Society, which is including in its extra series the "Promptorium Parvulorum"—the first English-Latin Dictionary (circa A.D. 1410), edited from the MS. in the Chapter Library at Winchester, by A. L. Mayhew, M.A.

\* \* \*

MESSRS. A. & C. BLACK announce a new work by Canon Cheyne on "The Decline and Fall of the Kingdom of Judah." The introduction contains explanations and answers to objections on the North Arabian (miscalled the Jerahmeel) theory. The same firm promises shortly another instalment of Dr. Hans Driesch's "Gifford Lectures," including a detailed analysis of the concept of teleology and its relation to the inorganic sciences.

\* \* \*

THE fresh crisis in the Near East recalls "A Military Geography of the Balkan Peninsula," by Prof. Lyde and Colonel Mockler-Ferryman, which was published by Messrs. A. & C. Black some three years ago. Though primarily military, the volume contains valuable historical and political information, with useful coloured maps.

\* \* \*

MESSRS. SAMPSON LOW, MARSTON, & Co. offer Captain Mahan's famous books on "Sea Power" in five volumes in a new and cheaper edition. Their new Illustrated Announcement List promises a variety of other interesting works.

\* \* \*

THE Gresham Publishing Company announce a comprehensive and elaborate work, in twelve quarterly volumes, "The Standard Cyclopædia of Modern Agriculture and Rural Economy," written by distinguished authorities on the special subjects and amply illustrated, under the editorship of Prof. R. Patrick Wright, Principal of the West of Scotland Agricultural College, Glasgow.

\* \* \*

THE *Art Craftsman*, a new "Monthly Magazine of Applied Arts and Industries" (3d.), incorporating "The Art Metal Worker," made a very successful first appearance in October. It is practical, and it is liberally illustrated.

\* \* \*

THE Oxford Local Examinations Delegacy General. has resolved to hold a Senior and Junior Local Examination during the week March 15-20 next year, the subjects being the same as those for the corresponding July examinations in the year. It is believed that this examination will be of use for candidates wishing to qualify as elementary teachers, for bursaries offered by various bodies, and for persons desirous of entering the professions. A preliminary examination will be held in July only.

\* \* \*

THE new extension buildings of Haileybury College, erected at a cost of £30,000, were opened by H.R.H. the Princess Alexander of Teck (October 17).

\* \* \*

THE Oxford University Press, which has exhibited in four different groups at the Franco-British Exhibition, has been awarded four Grand Prizes:—for printing; for books and bookbinding; for reproductions of old manuscripts and drawings; and for Oxford India paper. The last is the only Grand Prize awarded for paper.

\* \* \*

THE Canadian Government Emigration Department has had a new atlas prepared, "essentially and primarily a geography of Canada." School teachers and others interested in Canadian development can obtain copies free of charge on application to Mr. J. Obed Smith, Assistant Superintendent of Emigration, 11-12, Charing Cross, S.W.

## THE TEACHER'S IMPERFECTIONS AND HOW TO DEAL WITH THEM.

ADDRESS BY PROF. JOHN ADAMS, M.A., B.Sc.

At the Evening Meeting of the members of the College of Preceptors on Friday, October 23, Mr. F. STORR in the chair. Prof. ADAMS read the following paper:—

Scattered through the various works on education are many references to what the teacher should be and should know. Too frequently the stress is on the knowing, but there are a number of passages that are of sufficient breadth to be worth quoting as a sort of overture to what we have to say here. In dealing with imperfections it is well to come to some understanding regarding the general view of what perfection is.

### THE PERFECT TEACHER.

Montaigne makes a judicious distinction between mere attainments and character: "My desire is, therefore, that the parents or guardians . . . be very careful in choosing his tutor, whom I would recommend for having a head rather well made than well filled, yet both are desirable. And I would prefer wisdom, judgment, civil manners, and modest behaviour to bare and mere literal learning. . . . I would not have the teacher do all the talking, but allow the pupil to speak when his turn comes. Socrates, and after him Arcesilaus, made their pupils speak first, and then would speak themselves. . . . It is a sign of a noble and undaunted spirit to know how far to condescend to childish proceedings, how to second, and how to guide them."

No self-respecting teacher should ever be in the shameful position of having to confess that he has never read the famous description of the Good Schoolmaster as found in Thomas Fuller's "The Holy and Profane State." In his usual careful way Fuller supplies us with the various headings under which he considers the teacher's qualities: (1) his genius inclines him with delight to his profession; (2) he studies the scholars' natures as carefully as they their books (under this head he gives an analysis of pupil-character that is well worthy the teacher's attention); (3) he is able, diligent, and methodical in his teaching; (4) he is, and will be known to be, an absolute monarch in his school; (5) he is moderate in inflicting deserved correction; (6) he makes his school free to him who sues him *in forma pauperis*; (7) he spoils not a good school to make thereof a bad college; (8) out of his school he is no whit pedantical in carriage or discourse.

Sir Thomas Elyot, in his "The Governour," has some plain speaking on the subject of what schoolmasters should be, but are not. His ideal of a tutor is thus expressed: "A tutor, whiche shulde be an auncient and worshipfull man, in whom is aproued to be moche gentilles, mixte with grautie, and, as nighe as can be, suche one as the childe by imitation folowynge may grow to be excellent. And if he be also lerned, he is the more commendable." Elyot's views of the ideal tutor are perhaps even better brought out in his account of the office of a tutor. "The office of a tutor is firste to knowe the nature of his pupil, that is to say, wherto he is mooste inclined or disposed, and in what thyng he setteth his most delectation or appetite. If he be of nature curtaise, piteouse, and of a free and liberall harte, it is a principall token of grace (as hit is by all scripture determined). Than shall a wyse tutor purposely commende those vertues, extolling also his pupil for hauyng of them; and therewith he shall declare them to be of all men mooste fortunate, which shall happen to haue such a maister. And moreouer shall declare to hym what honour, what loue, what commodite shall happen to him by these vertues. And if any haue ben of disposition contrary, than to expresse the enormities of theyr vice, with as moche detestation as may be. And if any daunger haue therby ensued, misfortune or punishment, to agreue it in suche wyse, with so vehement wordes, as the childe may abhorre it, and feare the semblable aduenture."

Turning to modern writers, we find that Thomas Arnold quite agrees with Montaigne on the matter of the well made head: "What I want is a man who is a Christian and a gentleman—an active man, and one who has common sense and understands boys. . . . I prefer activity of mind, and an interest in his work, to high scholarship."

In the first chapter of Dr. Fitch's well known book, "Lectures on Teaching," we have an account of the ideal teacher. Here, as elsewhere, we have a strange mixture of attainments and qualities. He places in the first rank "ample and accurate knowledge of the thing taught"; but he is obviously not less impressed by

the necessity of having the best possible character in the teacher: "But in the case of the schoolmaster as in that of the priest, or of the statesman, mind and character have to be influenced; and it is found that in the long run nothing can influence character like character. You teach not only by what you say and do, but very largely by what you are."

While John Locke is as exacting as any of the others in his demands from the ideal teacher, he recognizes frankly the difficulty of finding the sort of person he wants. In his "Thoughts on Education" we have the following passage:—"In all the whole Business of Education, there is nothing like to be less hearken'd to, or harder to be well observed, than what I am now going to say; and that is, that Children should, from their first beginning to talk, have some *discreet, sober, nay wise* Person about them, whose Care it should be to fashion them aright, and keep them from all Ill, especially the Infection of Bad Company. I think this Province requires great *Sobriety, Temperance, Tenderness, Diligence, and Discretion*; Qualities hardly to be found united in Persons that are to be had for ordinary Salaries, nor easily to be found anywhere."

The difficulty is where to find such a person. To this difficulty the practical-minded Locke is keenly alive: "For those of small parts, age and virtue are unfit for this employment: and those who are greater will hardly be got to undertake such a charge. You must therefore look out early, and enquire everywhere; for the world has people of all sorts. . . . I can only say, Spare no care nor cost to get such a one. . . . But be sure take nobody upon friends' or charitable, no nor bare great recommendations. Nay, if you will do as you ought, the reputation of a sober man, with a good stock of learning (which is all usually required in a tutor), will not be enough to serve your turn. In this choice be as curious as you would be in that of a wife for him: for you must not think of trial or changing afterwards: that will cause great inconvenience to you, and greater to your son."

### THE IDEAL TEACHER AND THE ACTUAL TEACHER.

What Locke formally proclaims most men frankly admit when the matter is put before them. The general feeling of the public is that the very best men and women are required for the office of teacher, and it is very complimentary to our profession that there is a tacit assumption that we have the sort of men and women that are required. It is true that in individual cases the public is only too ready to point out the imperfections of the teachers that come directly in contact with it; but, all the same, there is a recognized convention that treats the teacher *qua* teacher as a person of almost perfect character. Manuals of school method, for example, almost invariably take it for granted that the teacher has a perfect character. He may be very ignorant of school method, and therefore need the help of the writer of the manual, but, as for character, that is taken as one of the data of the problem. It is assumed that all that has to be discovered in moral training is how the teacher can make his pupils like himself.

Now, we who are within the profession know how far short we come of the ideal that is set up for us as human beings. We know that we are full of imperfections, and sometimes we are extremely depressed when we compare our own failings with the ideals that we have in our own minds and that we set before our pupils as attractively as we can. We know that we are very far from perfect, but is it quite reasonable to expect us to be perfect? Is it even desirable? In all the ideals that we have just considered it is clear that nothing short of perfection is demanded of us. It is assumed that we cannot get too good a man as a schoolmaster. Now this view is at least of doubtful validity and is based upon the exaggeration of one aspect of the teacher's work. The teacher is certainly an example to his pupils, and it is *almost* impossible to overestimate the importance of the power of imitation as a moral force in school life. But it is not quite impossible, and, as a matter of fact, the place of imitation is sometimes misunderstood through not taking account of other modes of interaction between master and pupil.

### INTERACTION OF TEACHER AND PUPIL.

In manuals of school method there is frequently found a saying that is so generally accepted as to be regarded as almost axiomatic: "As is the master, so is the school." But this is not quite the same thing as to maintain that "As is the master, so is the pupil." We are apt to think if we but get a man of particularly fine character—a man who, as was said of Arnold, "might have been a Prime Minister"—the pupils will naturally resemble him. No doubt there is a strong tendency for the

pupil to imitate the master, and in certain respects there is likely to be a striking resemblance between the two. But imitation is not the only force at work in the process of education. The teacher performs other functions than that of a model. His work is active as well as passive. The teacher-character reacts upon the pupil-character, and sometimes the result is that the pupil-character becomes the opposite to, or, at any rate, the counterpart of, the teacher-character. When a seal is impressed upon wax, the result is something that corresponds to but does not resemble the seal. The qualities of the master may produce quite the opposite qualities in the pupil. Remember what John Stuart Mill says about the influence of strong-willed parents on their children. Speaking from his personal experience, he maintains that the exercise of parental will leaves no room for the development of the will of the child, and that strong-willed parents have weak-willed children. In the intercourse of life it is often found that the unselfishness of one person trains up another person in selfishness. It is sometimes said, for example, that the unselfishness of sisters has a great deal to do with the selfishness of brothers. Cromwell trained his Ironsides to resemble him in many ways, but in some directions his training produced an attitude of mind that was opposed to, because complementary to, his own. The power of command on the one side, for instance, was balanced by the facility of obedience on the other. The educator must not seek to impress his character upon the educand as a seal impresses wax. Rather he must strive to discover the ideal character possible to each individual, and so apply his influence as to foster the development of this character. The educational principle underlying the contemptuous saying, "Don't do as I do, do as I tell you" has at least the saving grace of modesty. Were it of practical application, it would be one of the most valuable principles of the developing science of education. Unfortunately the power of imitation is so great that the educator cannot divest himself of the responsibility involved in the mere process of living in contact with his pupils. He must walk circumspectly as a model to his class, however unwillingly he adopts this difficult part. But he can mitigate the force of imitation by manipulating the exercise of certain of his characteristic qualities. He must modify his conduct so as to suppress certain of his tendencies which are harmless and even creditable in themselves, but are unwholesome in school because they restrict the corresponding activities of the pupils. There is no harm in being a fluent talker, for example. This quality in its place is a valuable asset to the teacher. But it is also a source of danger, since the teacher is tempted to talk too much, and not to allow the pupils to talk enough. In many directions the educator's first duty is to efface himself. The teacher of vigorous personality and strong motor temperament is very apt to think he is doing capital work when he is letting off his force in strenuous teaching, while, as a matter of fact, he is repressing the energies of his pupils who ought to be doing their share and are not permitted. The drawing master, for instance, who always conducts his criticism by simply taking the pencil and putting the matter right, is abusing his technical skill with the pencil, and proves his incapacity as a teacher.

Even intellectual work may be so conducted that it weakens where it should strengthen. Listen to this public eulogy of a distinguished teacher: "His students had such implicit confidence in his knowledge, and such reverence for his opinion, that after leaving him they no longer cared to think for themselves. They were satisfied by the conclusions reached by a mind so much superior to their own, possessing a grasp and insight which they realized was so far in advance of anything they could ever hope to attain."\*

Meant as a panegyric, this is really an indictment of the teacher in question. It is a proclamation of disastrous professional failure. This is one of the many cases in which the personal advantages of the man may interfere with his success as a teacher. Quickness of perception and ease in mastering problems are in themselves excellent qualities, but if they render the teacher incapable of realizing the difficulties of his pupils they become to that extent hindrances. The cure is to be sought, naturally, not in a deliberate blunting of perception—as in the case of the brilliant lawyer who, when he had to deal with a duller opponent, always drank a bottle of stout so as to reduce his mind to a state of dullness that could cope with the confused thinking of his rival—but in a careful study of the pupil's point

of view, and a deliberate adaptation of teaching methods to meet that view.

In actual teaching, what the teacher is and knows and does is naturally of importance, but is of less importance than what the pupils know and do. In education the thing that matters is what the pupil does or thinks. We cannot be too frequently reminded that teaching and learning are correlative terms. However attractive the teacher may be, he cannot learn for the pupil, and if the pupil does not learn, the teaching has been in vain. It is not enough that the teacher teaches and the pupil learns. Unless the pupil learns because of the teaching there has been no genuine teaching done. It is quite possible—and probably much more common than outsiders would imagine—that the teacher may go through a process that he calls teaching, and the pupils go through a process that is really learning, and yet the two processes have no causal relation.

#### ADVANTAGES OF IMPERFECTIONS.

We can never have too good a man as a teacher, but we can have a man whose goodness is thrown away because of his incapacity to bring his good qualities to bear upon his pupils in the only way that will produce the effect he desires. It is comforting for those among us who are modest enough to feel that we could not make quite satisfactory Prime Ministers that we may yet be first-rate teachers where potential Premiers fail. We do not require to be perfect human beings in order to be excellent teachers; in fact, the question not unnaturally arises whether we may not be even better teachers because of our imperfections.

There is danger in even suggesting that our weaknesses may actually be of advantage to us in our professional work. We at once think of lowered ideals, decreased effort, self-complacent content with things as they are. But those of us who venture to speak to teachers about their professional work have so much to do in the way of screwing up the pitch that we may well rejoice in occasionally finding an opportunity of saying a comforting word. There can be no harm in confessing that certain of the teacher's weaknesses as a human being not only do no harm to his professional work, but actually help it. A man has more influence over others when he has gone through their experience. From this point of view a teacher may be "faultily faultless." The sedentary bookish teacher, for example, may altogether fail to understand the temptations of the strongly motor pupil who disturbs the peace of the class or comes in with a record of violence in the playground. The master who has never stolen an apple is not on that account a better judge in a case of orchard robbery. Historians tell us that the execution of Cranmer produced more effect upon the people of England than the executions of many braver men, because Cranmer's hesitations and vacillation appealed to a wider circle than did the heroism of the others. The ordinary man can understand Cranmer's recantation better than Dr. Taylor's dancing to the stake. But it does not follow that we admire Cranmer more, and even when we find that our personal imperfections are not altogether disadvantageous in our professional work we must not become complacent over them, much less cultivate them.

#### IMPERFECTION IN KNOWLEDGE.

Taking up our imperfections in the way of professional equipment we have no difficulty whatever in deciding how they should be treated. If our knowledge of the subjects we teach is insufficient there is nothing for it but to apply ourselves at once to such study as shall remedy the defect. It is true that even here there are those who maintain that there is a certain advantage in imperfect preparation. It is sometimes said that the teacher who has a very profound knowledge of his subject is apt to be unsympathetic towards beginners, and, in fact, incapable of teaching the rudiments of the subject at all. This view is certainly wrong. A teacher cannot know too much of anything. All that is implied is that a learned teacher may not give enough attention to the practical details of his profession. He may rest content with knowing his subject, and make the fatal error of neglecting the study of the nature of the pupil and of the best methods of presenting matter to the pupil. Any defects, therefore, in knowledge of the subject matter to be taught, or of the best methods of teaching the subject, must be regarded as imperfections of the teacher that have no redeeming feature. Such defects are hindrances in his work, and must be made good if the teacher is to remain in the profession without loss of self-respect.

\* Quoted by S. B. Sinclair: "The Possibility of a Science of Education," page 13.

## IMPERFECTION IN PERSONAL CHARACTER.

Of imperfections in the personal character there are, from the teacher's standpoint, really two classes. To one class belong those qualities that are necessarily inimical to success in teaching, to the other those qualities that need not necessarily injure the usefulness of the teacher in his work and may indeed in some measure help him.

*Lack of Sympathy.*

After making several rather elaborate classifications of the first kind of personal imperfections, I find that they always resolve themselves into different manifestations of one fundamental defect that is in itself fatal to even a moderate degree of success in our profession. *Lack of sympathy* is the one irremediable defect in a teacher. By sympathy must be understood sharing in another's joys as well as in his woes. The literal meaning of the word rather limits us to the first use. The Germans seem to feel the need of the double application of the word more than we do, for they have two separate words: they have not only *Mitleid* but *Mitfreude*. The educational equivalent for "sympathy" is really the power to put oneself in the place of another, to view matters from his point of view; and the possibilities of success in the profession vary in direct ratio to the degree in which this power is possessed. Its absence means that the person cannot even begin to be a teacher.

The lack of sympathy shows itself in a great variety of ways. The dead coldness towards pupils that is so repellent in some unsuccessful teachers is one of the most marked symptoms. Naturally, unsympathetic coldness must be distinguished from that reserve that is a source of strength in certain teachers. Sympathy does not by any means demand gush, though all truly sympathetic reserve can occasionally thaw out into something that may fairly be called enthusiasm. But unsympathetic coldness never thaws, and is pathologic. A sense of humour is never found where sympathy is absent, and without a sense of humour no teacher can be really successful. We need not go quite so far as the London head master who maintained that all the equipment the teacher needs is a knowledge of his subject and a sense of humour; yet it must be admitted that no one who is defective in the sense of humour can be a really fine teacher. This is one of the imperfections that have no compensation. Though a person cannot have humour without sympathy, it is possible to have sympathy without humour, though by the very nature of the case the sympathy must be limited. Many teachers with a feeble sense of humour are able, by the keenness of their sympathy in other directions, to compensate to some extent for the lack and to get at their pupils through other channels. But at the best the lack of humour is a positive defect that tells against the teacher.

Another defect arising from the lack of sympathy is shown in the boredom that marks the work of some teachers who are always looking at the clock. The unsympathetic teacher may have a vivid enough imagination as a personal gift, but is unable to use it effectively in teaching, and the same is true in a less degree of the other mental processes. It is a debatable point whether the power of sympathy can be cultivated. It is probable that the matter stands practically in the same position as the discussion about the possibility of improving the memory. As memory, considered as a natural endowment, cannot be improved, and yet by a careful training the original natural power may be used to greater advantage by skilful manipulation of the matter on which it is exercised, so the power of sympathy with which a teacher comes into the world may be used to greater or less advantage according to circumstances. The unsympathetic teacher will never become sympathetic if he takes no trouble to make himself acquainted with the things in which his pupils are interested. Sympathy must be nurtured by being supplied with the proper material. If, after doing his best to become acquainted with the pupils' points of view on various matters, and giving earnest attention to the subjects that seem to interest the pupils, he still feels cold and unsympathetic, the teacher had better consider the advisability of seeking a new line of life.

*Defects of Temper.*

Of the imperfections that are really defects to be deplored in themselves and that yet are not necessarily detrimental to the teacher, perhaps the chief is bad temper. A sour temper is often allied to lack of sympathy; but a quick temper may go along with a very amiable disposition. No doubt a chronic ill-temper is an evil in any school. "Hadst thou a curst master when thou went'st to school?" is as apposite a question to-day as it was in Shakespeare's time. There are still schools and classes in

which the pupils may "read the day's disasters in his morning face." But, after all, if the outbursts are not violent or long continued, no real damage is done to the school relations—particularly if the master's temper is usually lost in cases where the objects of the outburst feel that they are in the wrong. Further, teachers who are the victims of bad temper have often the chance of giving an admirable lesson in self-control. When the pupils know that the master has a bad temper, and that now and again he lets it go, and always regrets it afterwards, they note with interest and admiration every time they see that he is tempted to lose his temper and yet restrains himself. All this implies that the teacher does not really feel a little proud of his bad temper. The attitude of mind that makes a man speak apologetically, but complacently, of his "so-and-so of a temper" is fatal in a teacher. The pupil's sense of justice revolts at being exposed to the caprices of such self-satisfied losers of self-control.

Quick temper very often goes with what is called the motor temperament, and, as the temperament that is regarded as specially suitable in a teacher is what is called a "converted or perverted motor," we get a suggestion of the process the temperamental psychologists would recommend in the way of dealing with quick temper. Horace Mann's description of the Scottish schoolmaster's promptness is a good example of the motor temperament at work. Mann tells us that the error is committed, the blow administered, and the next pupil questioned before the onlooker has time to realize what it is all about. There is no need for all this haste. The teacher in question would have done his work all the better if he had restrained the motor tendency and, by voluntary inhibition, had given time for the resulting action to be based upon the whole character of the teacher, and not upon the small arc of it that was involved in the instantaneous reaction to the stimulus of the error. The control of the temper can be won by a judicious cultivation of inhibition, resulting in certain delays that have the double advantage of giving the pupil time to think and the master time to get his impulses into equilibrium.

*The Distribution of Dullness.*

Teachers, as a class, are very frequently accused of dullness. There is a Scottish saying which implies that a little dullness is not altogether undesirable in a wife; and perhaps the saying may be transferred to the teacher without serious error, if it does not imply that he is stupid or that he is dull all along the line. Universal dullness would render a teacher intolerable to his class; but dullness properly distributed among the various subjects, and among the various hours of the time-table, may have an excellent effect on the class. There is nothing more tiresome than continual brilliancy. Dullness, then, is one of the teacher's imperfections that tend towards good. The place of routine and comparative dullness is not yet sufficiently recognized in our school arrangements. We are so busy stimulating our pupils that we forget that they sometimes require to lie fallow for a little while.

*Less Reputable Imperfections.*

Unfortunately there are other personal imperfections of teachers that are less reputable than those already mentioned, and the problem arises how we are to deal with them. Take such disagreeable matters as greed, laziness, slovenliness in dress, indecision, spitefulness, flippancy, we shall find that our office as teachers puts us in a very favourable position for overcoming them. We are provided with many keen young critics whose influence is none the less potent that they are not allowed to express their verdicts to ourselves. Further, we are given over into their hands by having to condemn in our official capacity—whether directly or indirectly does not materially alter the case—all offences against the minor and major morals; and therefore must frequently have to condemn ourselves. Everybody maintains that boys are very severe critics, though it is generally admitted that they are just. It is seldom that we have the bitterness contained in the boy's answer when asked where his (clerical) head master was: "He's in the garden practising self-abnegation." The head master had just given a school sermon on self-abnegation and was at that moment in the garden smoking.

Even the most indifferent among us cannot feel happy in doing something that we have directly or indirectly condemned in others. If we find fault with Smith minor for coming into class with untied bootlaces, we cannot feel comfortable in our own unbrushed coat; and so with more important matters.

## SIMULATION AND DISSIMULATION.

There arises here a very serious problem: How far is the teacher entitled to conceal his imperfections? how far is he entitled to appear better than he really is? On the one hand, it is surely not desirable to parade our weaknesses before our pupils, and, on the other, it looks uncommonly like hypocrisy to do our best to appear better than we are. Some ingenious teachers draw a distinction between "simulation" and "dissimulation." They maintain that a teacher is not entitled to simulate a virtue that he does not possess; but, on the other hand, he is not called upon to proclaim a defect that mars his character. He may disseminate his weaknesses, but may not simulate virtues that are not his.

Obviously it is not to the advantage of the pupils that they should know all the weaknesses of their teachers, and equally obviously it is not to the teacher's advantage to pretend to be better than he is—unless he is at the same time trying to be better. In the case of teachers honestly trying to improve their character, the Lange-James theory of the relation between emotion and its expression may give some justification in modifying the outward appearances so as to suggest a state within that does not yet exist, but is on its way to come into being.

The reverence that we owe the young prevents us from daring to appear in our true colours. But, on the other hand, the very shame we feel at being compelled to conceal our true selves is a strong incentive to make those selves worthy to bear the light of day.

Prof. Adams having replied to questions put by one or two members of the audience, a hearty vote of thanks to the lecturer, proposed by the Chairman and carried by acclamation, concluded the proceedings.

## THE COLLEGE OF PRECEPTORS.

## MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on October 17. Present: Mr. Eve, in the chair; Mr. Bain, Mr. Barlet, Rev. J. O. Bevan, Rev. J. B. Blomfield, Mr. Brown, Miss Dawes, Mr. Hawe, Dr. Maples, Dr. Marx, Mr. Millar-Inglis, Mr. Pendlebury, Mr. Pinches, Miss Punnett, Mr. Rule, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Starbuck, Rev. J. Twentyman, Mr. Walmsley, and Mr. White.

The minutes of the last meeting were read and confirmed.

The Secretary reported the results of the recent Summer Examination of Teachers, and diplomas were granted to those who had satisfied the prescribed conditions. (For list, see page 476.) The Prize of £5 for Mathematics was awarded to Mr. H. J. Larcombe.

Prof. J. Adams was appointed to give the Psychology Course of Lectures to Teachers in the early part of next year.

Saturday, January 23, 1909, was fixed as the date of the next Ordinary General Meeting of the members of the College, and it was decided that the annual dinner should take place on the evening of the same day.

The report of the Finance Committee, showing the result of the operations of the College during the first three quarters of the current year, was adopted. It was resolved that the sum of £100 should be invested in the purchase of Great Eastern Railway Debenture Stock on account of the Teachers' Training Fund.

It was resolved: "That it be referred to a Special Committee to consider what steps, if any, should be taken to extend the social work of the College."

The following persons were elected members of the College:—

Miss E. O. Cudlipp, A.C.P., 10 Darnley Road, Hackney, N.E.

Mr. E. J. Still, Emwell School, Warminster.

The following books had been presented to the Library since the last meeting of the Council:—

By the RESEARCH DEFENCE SOCIETY.—Experiments on Animals.  
By G. BELL & SONS—Adair's French Historical Reader; Baker and Bourne's Elementary Mensuration; Gillies and Anderson's Latin Reader; Prior's Tales by Erckmann-Chatriain, First Series; Smith's General Chemistry for Schools and Colleges.

By W. B. CLIVE.—London University Guide and U.C.C. Calendar, 1909; Matriculation Directory, September, 1908.

By MACMILLAN & Co.—Barnard and Child's New Algebra, Vol. I.; Castle's Practical Arithmetic and Mensuration; Dowse's Book of Poetry Illustrative of English History, Part II.; Hutchison's Scott's Tales of a Grandfather, First Series; Jones's Modern Arithmetic, Part II.; Martin's Stories from the Arabian Nights, and Grimm's Fairy Tales; Stone's Latin Reading Book; Williamson's Plato's Apology of Socrates.

By METHUEN & Co.—Trevelyan's English Life Three Hundred Years Ago.  
By J. MURRAY.—Martin's Examples in Practical Arithmetic, Part II.; Earl Stanhope's Reign of Queen Anne; Wyld's The Teaching of Reading.  
By WHITTAKER & Co.—Biddlecombe's Thoughts on Natural Philosophy; Bird's Junior Geography.  
Calendars of Birkbeck College; University College, London; Aberdeen University; Royal College of Surgeons of England; Armstrong College, Newcastle-on-Tyne; University of Leeds; and Queen's College, Cork.  
Incorporated Accountants' Year-Book.

## MORE EDUCATIONAL PAPERS IN SUMMARY.

## TRAINING IN TEACHING.

By Miss C. P. TREMAIN.

DURING recent years public interest in educational matters has greatly increased. There is now a tendency to make the provision of the means of education a national, county, or municipal charge, instead of relying on private initiative. Logically, the first step towards improvement in education would be to direct attention to the better professional training of teachers. But school buildings, equipment, codes and curricula, examinations, and system of scholarships have received far more attention, and the necessity for teachers being specially prepared for their work on intelligent, rational, and thoughtful lines has only lately been realized. Primary-school teachers, both men and women, secondary-school women teachers, and teachers of special technical subjects form the main body of "trained" teachers, but even of these a large majority are still untrained. Only a very small proportion of men actively engaged in secondary-school teaching, or in directing and inspecting primary and secondary-school work hold a teacher's diploma.

The training of teachers has three distinct stages:—

(i.) General Education in school, college, or University, where the methods of teaching employed have an important, if indirect, influence on future teachers.

(ii.) Professional Training in training college or department, where the course should include instruction in the theory and practice of education and in school hygiene. The course should be largely determined by the previous general education of the student rather than by his future work; it should be *intensive* rather than *extensive* as regards time; it is best pursued alone, not as in most primary training colleges along with the general education. The short post-graduate training for intending secondary-school teachers seems to give better results than the longer course for intending primary-school teachers who are pursuing degree and training courses together. The purpose in studying the theory of education is to induce a scientific habit of mind in approaching educational questions. Practice in education, which includes the preparation and presentation of lessons by the student, the hearing and reporting on lessons given by others, aims at developing and increasing skill in teaching. The aim of training is not to produce finished and perfect teachers, but rather "aspiring" and intelligent ones who will be able to adapt themselves to, and learn from,

(iii.) The Experience Stage of Training, in which the student passes into the responsible classroom teacher. This has often been the sole training of successful teachers, but the increasing complexity of life, the urgent need for clear ideals on the part of experts to whom democratic educational bodies look for guidance, as well as the needs of the taught, imperatively demand that future teachers shall regard their work from a professional standpoint. Those who so regard their work will not feel that finality is reached when a teaching diploma has been obtained, nor even when their pupils obtain brilliant examination results.

Theory and practice should correct and supplement each other. This may be attained through the work of students in demonstration schools and classes, and still more by the active participation in school teaching of all members of the training college staff. The teaching should be under the most natural conditions possible, and therefore series of lessons in the ordinary course are to be preferred to criticism and the so-called "Model" lessons.

Some problems in training which press for solution are—

(a) *How to adjust the claims of liberal and professional education*—cf. German and American normal colleges.—The special difficulties in primary-school teaching, which have caused a premium to be placed on the pupil-teacher system (e.g., unwieldy classes), are gradually disappearing, and many county council

schemes show a better way than this for preparing future teachers. Secondary schools are displacing pupil-teacher centres and less actual practice in teaching is required of a student before he enters a training college.

(b) *How to obtain adequate school practice for those who have had no experience as pupil-teachers or student-teachers.*—A demonstration school plus classes in schools of different scope and management would seem to afford the best practice. There are special difficulties due to local and other conditions in obtaining adequate practice. Schools are sometimes afraid of admitting graduates who teach under supervision to classes which are readily entrusted to untrained teachers fresh from college. The work of supervising school practice must be individual; hence training to be efficient must necessarily be expensive. The trainer of teachers, in addition to good school experience and progressive knowledge of educational principles, needs sympathetic insight in dealing with students.

(c) *How efficiently to test practical work in teaching.*—Here there has been a great advance from the examination "show" lesson of earlier days. But it would appear desirable to withhold the full certificate of ability to teach until the young teacher has shown, after experience as a responsible teacher under suitable conditions, his powers as teacher and governor. The executive powers of an individual cannot be tested in the same way as his receptive and reflective powers.

A special difficulty in training at present is, that more has to be attempted in the time than can be done efficiently. The secondary school, which is recognized as taking part in the work of training teachers, would render valuable assistance by directing more attention to the subjects which are necessary to every teacher (*e.g.*, the mother tongue, drawing, clear enunciation, physical culture, &c.).

#### INFLUENCE OF MENTAL VALUES OF TYPES OF EDUCATION.

By Prof. E. P. CULVERWELL, F.T.C.D.

While the application of psychology to the practice of education has doubtless been of great service, there is a dangerous tendency not only to investigate, but to *decide*, questions of curriculum and method on purely psychological grounds. The chief object of this paper is to show that this claim is invalid, and that even our limited knowledge of physiology can give us help in criticizing psychological arguments.

The psychological discussion of a question may be as exhaustive as possible, and yet may omit the determining factor; for psychology can never be a science complete in itself. This follows from the fact that changes in mental states may be due to physiological changes which have no mental counterpart—*e.g.*, the whole mental outlook may be changed by a dreamless sleep.

Whether mental conditions are wholly determined when the physiological conditions are given is unknown; yet the following assumptions may be generally accepted:—(1) There is no mental change without a corresponding passage of energy from one region of the brain to another. (2) To every difference in mental action there corresponds a difference in the mode of this passage of energy. (3) Whenever a mental state is revived there is some revival of the corresponding passage of energy. In particular we may assume that if the whole mental state is vividly revived, then the original nervous action is closely repeated; if the revival is but faint or partial, then the corresponding nervous disturbance or oscillation is faint or partial compared with the original one.

These assumptions can be applied to a destructive criticism of the psychological argument against the theory of formal education. It follows from them that there is a marked physiological difference between what we commonly speak of as superficial thought on the one hand and deep thinking on the other, and that experience alone can exonerate the method of interest from the charge of producing superficial rather than deep thinking.

For consider the difference between concrete and abstract thought. Concrete thinking, if mere recollection, implies the revival in its natural form of the nerve disturbance which originally passed. It also includes a comparison of two ideas in regard to a common element which is strong in both. This is a less complicated operation than to compare them in regard to an element which is weak in both. In the former case the excitation follows the natural path—what we may describe as the path of least natural resistance. In the latter case, how-

ever, the excitation has to be of a very special character: it must be so arranged as not to excite the more vigorous—and therefore, as we should suppose, the more easily excited nervous oscillations—and yet it must excite the less vigorous one. If the thinking be very abstract—*e.g.*, the deduction of a common principle underlying many sense experiences which were not simultaneously received—then it is evident that the stimulation must be of a very specialized kind. The great majority of mankind is unable to stimulate the brain in this way. Instead of keeping so many different brain oscillations simultaneously excited, the nervous energy flows along the path of least natural resistance, and some vigorous element in one of the many images to be compared excludes the other ideas altogether.

The Herbartian argument against formal education, as well as such psychological and physiological arguments as those of Prof. Bagley in his "Educative Process," fall to the ground when examined in connexion with the physiological point of view.

It is well to observe that the ordinary man has little power of abstract reasoning. With most men the nervous energy follows the path of natural least resistance, except so far as they are trained. Inconsistent ideas lie side by side in our minds; we can only direct the energy along the natural path. In other words, we take things at their face value. If we had more practice in comparing ideas which lie far apart in our minds (the comparison of which has therefore but little immediate interest), we might see far more deeply than we do. Thus we have no *a priori* right to expect that an education which follows the path of interest will be the best for producing the highest kind of organization of which a given brain is capable. With some brains no doubt it will. With others it may lead to superficiality.

An instance of the excessive tendency to do away with formal reasoning is to be found in the amount of geometrical construction and example now usual before the principles of true demonstration are entered on.

#### TESTS OF EDUCATIONAL EFFICIENCY.

By T. P. GILL.

This paper, while dealing with the general question in the title referred also to the situation in Ireland, which is now at a moment of great significance for education. A new University system is about to be organized, and the country is being called on to take stock of her whole educational equipment and to consider the end to which she wishes it to conduce. The situation is thus one of general as well as particular interest. What results does the country intend her educational system to produce? By what means does she propose that the results are to be produced? How does she propose to assure herself that she is getting these results? In other words, what is to be the aim, the method, and the test of the educational activity of the nation? It is one of the most practical tasks of the hour in Ireland to consider these questions, and the answers to them should be known and understood by the teachers in every school—from the Kindergarten to the University—and, if possible, by every parent.

In connexion with the aim of a national system of education, it is desirable to examine what is meant by educational efficiency. Efficiency must be considered (1) from the individual and (2) from the social and national point of view. It must be all-round efficiency, physical, mental, and moral—aspects closely related, yet distinct in themselves. It is the business of education to develop all three. Again, efficiency is the fitting of the individual (*a*) to pursue efficiently his calling in life, his trade or profession, and (*b*) to be a good man and a good citizen. The professional, the bread-and-butter efficiency is necessary; and not only is it necessary to aim at it in connexion with professional or technical education, but from an early stage in general education it is essential that the pupil should be made to think of what is to be his calling in life and how he is best to prepare himself for it. This object of education, however, must be pursued in such a way as not to eclipse the higher end of producing the good man and the good citizen. On the contrary, it must be realized that the practical efficiency itself is impaired in proportion as the higher end is neglected or lost sight of. National and individual efficiency in every country has suffered from this error. So has national and individual happiness. Ireland must study to avoid this error.

In connexion with methods and tests, the suitability of certain methods and tests to produce the results aimed at must be considered. The influence of the test on the method is sometimes so great that it is impossible to separate them. For instance,

the fact that a written examination was imposed by law as the sole test has fatally governed the whole character of the Irish intermediate system for nearly two generations. Tests and methods must vary with the things being dealt with. Physical, mental, and moral things cannot be tested in the same way. The subject, the circumstances, and the end in view must always be borne in mind in devising a test or a method. Moreover, in a test, in considering any one part, we must provisionally examine the whole—see if all the parts are there and if the proportions are right. In other words, the time-table, the very vital question of the disposal of the pupil's time, must be taken into account. In a test we cannot look at the individual pupil alone, we cannot judge the pupil apart from the system and the teacher.

Educational tests may be considered under the three aspects: physical, mental, and moral. (1) Physical: in connexion with the general bodily development of the pupil and the effects of bodily health and occupation upon intellectual efficiency and moral strength; in connexion with manual training; and in connexion with the question in its broadest sense of discipline, order, and method. (2) Mental: the aim of producing a logically disciplined mind. The end of testing here is to see that the observing and reasoning faculty is being rightly trained: that cram is avoided; that observing, thinking, and correlating power is being developed. (3) Moral: the test here should aim at ascertaining whether the teachers have the right outlook and influence; whether the pupil is being really led on to know, admire, and love the right things; to understand his duties, private and public; to select true aims in life; to develop a noble individuality. The importance, in relation to his moral strength and general efficiency, of making the pupil from an early stage think about his trade, profession, or career in life, and of thus giving a personal and purpose-like character to his education.

How are these aims being followed or hindered in the Irish educational system at the present time, and how far is it practicable, by improvements in the methods of testing or other means, to get them followed more effectively? How far is the work of the system in its different branches—primary, intermediate, technical, agricultural, University—susceptible of development in these directions under existing machinery?

## CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—Ed. E.T.]

### MORAL INSTRUCTION.

To the Editor of "The Educational Times."

SIR,—The press in general has been so generous in its reports of the International Moral Education Congress recently held, and has so clearly perceived its great significance, that I venture to ask you, in view of the wide interest that has been created in the cause of the moral education of the young, to allow me to call attention in your columns to the work of the Moral Instruction League, whose propaganda during the past ten years prepared the way for this important Congress, and which exists to give practical effect to the promotion of the cause for which the Congress was held.

The League has already influenced the Board of Education to make some provision for moral instruction in public elementary schools, and some sixty Local Education Authorities to take action in the direction of providing in their schools for more or less systematic moral instruction. Its graduated Syllabus of Moral and Civic Instruction for Elementary Schools (a copy of which I shall be glad to send gratis to your readers on receipt of a post-card) has already been very widely adopted, and its moral-lesson books, adapted to the various ages of children, have been welcomed by all, since they present moral ideas to children in ways that cannot fail to interest them and give offence to none, since they keep strictly to that neutral moral ground which is common to all theological and non-theological bodies.

I shall be glad to supply further information about the League to any desiring the same.—I am, Sir, &c.,

HAROLD JOHNSON,

Secretary of the Moral Instruction League.

6 York Buildings, Adelphi, London, W.C.

October 6, 1908.

## REVIEWS.

TOLSTOY.

*The Life of Tolstoy: First Fifty Years.* By Aylmer Maude. (10s. 6d. net. Constable.)

Mr. Maude has special qualifications for writing a biography of Tolstoy: he has lived in Russia for twenty-three years; he has known Tolstoy well for several years, having visited him frequently in Moscow and stayed with him repeatedly at Yásnaya Polyána (Bright Glade); he has to a certain extent acted in co-operation with him; and he has studied his works with a more than friendly enthusiasm, which, however, has not blunted his critical faculty. He thus disposes his readers to anticipate a reasonably full and accurate statement of the facts of Tolstoy's life and an instructive estimate of the bearing of these facts, mental as well as external. This is all the more important, inasmuch as "so many people are interested in Tolstoy and so few seem to understand him."

Tolstoy is "descended on his father's side, and still more on his mother's, from aristocratic families who were more or less in passive opposition to the Government, and who shared the humanitarian sympathies current in the early years of the reign of Alexander I." He was born in 1828 at Yásnaya Polyána, an ancestral estate near Toula. His childhood was singularly happy: he himself, notwithstanding his sensitive introspective nature, speaks of "that splendid, innocent, joyful, poetic period of childhood, up to fourteen." In 1841 the family removed to Kazán, where Tolstoy studied at the University from 1844 to 1847. On matriculation his knowledge seems to have been unequal: of history "I knew nothing," he says, and of geography "still less; I was asked to name the French seaports, but I could not name one." At the end of the first year he failed in his examinations, not altogether, it appears, from his own fault. "Ivanóv, Professor of Russian History, prevented me from passing to the second course (though I had not missed a single lecture and knew Russian history quite well) because he had quarrelled with my family. The same professor also gave the lowest mark—a 'one'—for German, though I knew the language incomparably better than any student in our division." The gay life of Kazán society, however, had something to do with his failure to take his degree.

In the spring of 1847, Tolstoy returned to his estate of Yásnaya Polyána "to 'perfect' himself, to study, to manage his estate, and to improve the condition of his serfs." Next year he went to St. Petersburg and passed a couple of University examinations, but got deeply into debt, and proposed to "enter the Horse-guards as a Junker" (volunteer cadet). However, he spent the next three years partly at Yásnaya and partly in Moscow—"among the wildest and most wasted years of his life," with penitence and self-reproach interspersed. In 1851, he went to the Caucasus, where his eldest brother Nicholas was an artillery officer. Here he did a considerable amount of fighting and of writing. In 1854, he at length received the order allowing him to pass the examination (then a mere formality) entitling him to become an officer, and presently he joined the Russian army in the Crimea. The first of his three sketches of the siege of Sevastopol happened to have been read in proof by the Emperor Alexander II., who gave instructions to "take care of the life of that young man"; and so he was removed from Sevastopol to the command of a mountain platoon at Belbék some fourteen miles off. Towards the end of the war he was sent home with despatches, but his hopes of promotion from sub-lieutenant were dashed by a suspicion that he was the author of some popular soldiers' songs that scarcely pleased the authorities. His "experience of how war is recorded produced in him that supreme contempt for detailed military histories which he so often expressed in later years." He left the army in 1856. He married in 1862. Occasional travel, constant literary work, and social philanthropy fill out the rest of the period.

The important thing, however, is the mental and moral vicissitudes of the great writer and industrious thinker. Mr. Maude deals fully with the genesis, progress, and character of Tolstoy's numerous writings up to his fiftieth year, and tells us a great deal about his literary friends and associates. The moral aspect is a complex problem, and can be dealt with only in detail: the autobiographical sketches are not to be taken without some grains of salt, which Mr. Maude is careful to supply. If a general expression must be attempted, perhaps nothing could be said better than this:

In later times, when Tolstoy's reputation was world-wide, critics often

amused themselves by pointing out inconsistencies in his conduct and questioning his sincerity. But the proof of his sincerity is writ large in the story of his life. Time after time, from the earliest pages of his diary, we find him vehemently resolving never more to do certain things, but always to do other things, and again and again confessing, in the greatest tribulation, that he had failed to carry out his intentions; yet, in spite of everything, he returns, and again returns, to his earliest ideals, and gradually shapes his life into accord with them, and eventually forms habits which, when he first extolled them, appeared utterly beyond his reach. Not insincerity, but impetuosity, retrieved by extraordinary tenacity of purpose, has always characterized him. It is the same with his thirst for knowledge as with his yet deeper thirst after righteousness. Often as he was swayed by the lures of life, each of those two great desires found its satisfaction at last.

And, again: "A knowledge of the social surroundings in which Tolstoy grew up is essential to a due understanding of the doctrines he subsequently taught."

It was because he grew up in a detached and irresponsible position that the state of his own mind and soul was to him so much more important than the immediate effect of his conduct on others, and the same cause led him to remain in ignorance of lessons every intelligent man of business among us learns of necessity.

His independent position made easier the formation of that state of mind free from intellectual prejudice which enabled him later on to examine the claims of the Church, of the Bible, of the economists, of governments, and the most firmly established manners and customs of society, untrammelled by the fear of shocking or hurting other people, though all the time his feelings were so sensitive that it has never been possible for him to doubt or question the goodness of those lines of conduct which he had admired and approved when in childhood he saw them practised by those near and dear to him.

Contrasting his moral attitude with that of a young Englishman anxious to do right in our day, I should say that Tolstoy had no adequate sense of being a responsible member of a complex community with the opinions and wishes of which it is necessary to reckon. On the contrary, his tendency was to recognize, with extraordinary vividness, a personal duty revealed by the working of his own conscience and intellect, apart from any systematic study of the social state of which he was a member.

He thus came to see things in a way we do not see them, while he remained blind to some things with which we are quite familiar.

There is great truth in this analysis, and it suggests much that is to be taken into account in estimating Tolstoy's teaching.

Mr. Maude devotes a special chapter to the Yásno-Polyána School. Tolstoy had already described his experiences. Mr. Maude's summary is this:

One of the profoundest convictions impressed on Tolstoy's mind by his educational experiments was that the peasants and their children have a large share of artistic capacity, and that art is immensely important because of its humanizing effect on them and because it arouses and trains their faculties. Unfortunately, the works—literary, poetic, dramatic, pictorial, and plastic—now produced are being produced expressly for people of leisure, wealth, and a special, artificial training, and are therefore useless to the people. This deflection of art from the service of the masses, of whom there are millions, to the delectation of the classes, of whom there are but thousands, appears to him to be a great evil.

The whole work is most interesting. Mr. Maude has worked laboriously and sincerely and with pronounced success. There are eight illustrations, six of them containing portraits of Tolstoy at different periods.

#### EDUCATION IN MATHEMATICS.

*A Study of Mathematical Education.* By Benchara Branford, M.A. (4s. 6d. Clarendon Press.)

Long experience in the work of training both students and teachers, an enthusiastic love of the profession of teaching, and an earnest desire to forward the cause of efficient education, all contribute to fit the writer for the production of this treatise. To some considerable extent the volume is developed from notes for lectures on the subject, and this probably accounts for a tendency to repeat the same statements and for a rather disconnected style. Some of the root principles which the writer wishes to inculcate are very generally admitted; others, perhaps, have not hitherto been much advocated. Thus, for instance, there are few now who fail to see the advantage of teaching the various branches of mathematics included in a school course in such a manner that each may lend its aid to the study of the others. On the other hand, possibly only the few have devoted attention to the following question: How far does the ideal mathematical development of the individual reflect the mathematical progress of the world generally in the march of ages? It seems rational to accept Mr. Branford's view that the history

of mathematics, if fully recorded and closely studied, would show development along natural lines and that the teacher of mathematics would be enabled to derive from this source inspiration for his own work in training the individual. The author advocates with much wisdom the theory that, if we would attain substantial success in the education of the young in mathematics, we should study the mathematical equipment with which the individual child first enters the schoolroom and should graft the subsequent teaching on that. Such a course would prevent the school from appearing an absolutely new world, and would, moreover, obviate the evil due to constantly recurring discontinuity in school and home life and experience. One observes with pleasure the instruction to teachers to *educate* in the true sense of the word. The power of an able teacher to derive from his class the elements of such knowledge as he wishes to mould into a compact whole and to cause to lie in the minds of his pupils, as it already lies in his own, is truly great; the influence of the teaching which proceeds along these lines is really lasting. Mr. Branford brings out in clear relief the stages by which the mind of the average child arrives at the full comprehension of any mathematical truth. The phases of absence of knowledge, of the reception of vague impressions, of incomplete grasp of the truth, and of full conviction pass gradually from one into the other, and it is disastrous to hurry unduly the successive stages.

Much that is likely to be very suggestive to teachers, whether beginners or not in the practice of the profession, is contained in the various chapters which describe more or less in detail lessons either actually given by the author or given by others in his presence. One very interesting section records a geometry lesson as given to a class of blind children. Another specially suggestive chapter contains an autobiographical account of the training in mental arithmetic of the well known calculator and engineer Bidder. A very salutary note of caution is struck with reference to the recent reform movement in the teaching of mathematics. In the interests of progress it was necessary to break away from the old system, but there is at present a danger of going to the other extreme and of making mathematical teaching too arbitrary in its character. Hence in the future it may very possibly be deemed advisable to construct a general fundamental, but sufficiently elastic, scheme of development embracing elementary mathematics generally. Students of the science of education in general and of the science of mathematical education in particular will do well to follow closely the arguments of the author of the present work.

#### A "PRIZE" NOVEL.

*The Woman and the Sword.* By Rupert Lorraine. (6s. Fisher Unwin.)

The latest addition to Mr. Fisher Unwin's "The First Novel Library" may fairly take rank with the best of the interesting series, which now numbers fifteen volumes. It is not to be expected that an author already tolerably well known should enter into competition even for a hundred-guinea prize; but the system does offer an excellent opportunity for the debut of a fresh aspirant, and a whale may upon occasion sail in among the minnows. Mr. Rupert Lorraine is perhaps not a practised story-teller; but he has read up the period of his heroine's adventures, and he depicts them with not a little graphic force. "The woman" of the story, though spirited in difficulties, which she incurs with astonishing thoughtlessness, exercises but little power of attraction. The essential interest centres in "the sword," and specially in the doings of "a war-worn soldier of fortune, whose blade had been at the service of half the captains in Europe" in the days of Wallenstein and Gustavus Adolphus. True, he had just retired from military service after twenty years of the tented field; but the vagaries of the heroine (as we must call the lady) took him back to the Continent, and led him through certain adventures among more or less disorganized bands in the neighbourhood of Nordhausen. We thus obtain some glimpses of the shocking state of the country resulting from long years of demoralizing warfare. The private element of the story involves a necessary villain, and the Count von Zinkendorf performs the part with a thoroughness without much relief. Substantially, it is a story of adventure. There is no development of character, no nice discrimination of qualities. It is a rude time, a rough scene: and the narrative, in consonance with the time and the scene, is direct and forcible, with little utilization of the obvious opportunities for contrast—for the troubles of the heroine do not serve the occasion—and with

little assistance from the resources of constructive art. A vigorous story of rough adventure, with lights on the deplorable social conditions within the range of the scenes: one cannot say more. Some unfortunate misprints, which mar an otherwise agreeable volume, should be eliminated against another edition.

## GENERAL NOTICES.

### CLASSICS.

*Vergil.* Translated by John Jackson. (3s. 6d. net. Clarendon Press.)  
A prose translation of a great poem is at best but stewed fruit, palatable enough in its way, but still a very different sort of thing from the original. Mr. Jackson has made a serious and sustained effort, thinking out the meaning with constant care, not only in the more crucial and contested passages, but throughout the poems, and expressing it in plain, vigorous, and not too ornate language. He cannot escape comparison with Prof. Mackail. We are not sure, indeed, whether he has not taken some pains to avoid Prof. Mackail's phraseology: where the one speaks of a "rustic reed," the other speaks of a "rural pipe"; where the one "wonders" the other "marvels"; and so forth. In any case, Mr. Jackson is quite independent and establishes a claim to at least complementary consideration. His translation will be very useful to students: it will not merely operate as a "crib," but it will also make them think. It is a worthy addition to the Oxford series of translations.

*Lays of Hellas.* By Charles Arthur Kelly, M.A., late Scholar of Oriol College, Oxford. (3s. 6d. net. Kegan Paul, Trench, Trübner, & Co.)

Mr. Kelly unfortunately did not live to see his lays in book form. There are six ballads on thrilling episodes of Greek history, and from thirty to forty sonnets inspired by various historical scenes of the ancient Greek world. They have all appeared at one time or other in well known periodicals, and for the present volume they have been generally revised and amended. The author's deep interest in the subjects is evident. It must be said, however, that Mr. Kelly's appreciation was stronger than his powers of expression and of dramatic conception. Some of the sonnets, indeed, furnish very good verses, and even groups of good verses; but hardly one of them escapes the marring intrusion of some strangely unpoetic turn, as if the writer could not wait for the tarrying thought or expression. Still, youthful readers will probably catch some of his enthusiasm.

*Tertullian De Baptismo.* Edited by J. M. Lupton, M.A., Assistant Master and Librarian in Marlborough College. (4s. 6d. net. Cambridge University Press.)

This treatise of Tertullian's is of special value as being the earliest extant work upon its subject and as treating the doctrine in considerable fullness. Mr. Lupton speaks justly of "the natural ability and force of the man, his training as a rhetorician, his multifarious reading, and the practice in the courts which gave sharpness and precision to his language." The introduction deals comprehensively with the main aspects of the work—historical, doctrinal, and textual. The notes are very carefully directed to really important matters, and they are both lucid and concise. Useful indexes are appended. The volume belongs to the valuable series of Cambridge Patristic Texts, and will be very welcome to Patristic students.

### MATHEMATICS.

- (1) *The Oxford Elementary Arithmetics.* Teacher's Books I. and II., 6d. each; Pupil's, I., II., and III., 2d. each. By H. A. Jamieson, M.A. (Henry Frowde and Hodder & Stoughton.) (2) *The "A. L." Methodic Arithmetic.* Books A-D, 3d. each; Answers (in single separate volume), 9d. By David Thomas. (E. J. Arnold.) (3) *Arnold's "Effective" Arithmetics.* Books I.-V., 2d. each; VI., 3d. (Edward Arnold.) (4) *Practical Arithmetic Examples.* Part I. By J. L. Martin. (6d. John Murray.)

(1) Of "The Oxford Elementary Arithmetics" we have before us specimens both of the Teacher's and the Pupil's series. The Teacher's volumes comprise the exercises which form the entire contents of those for scholars, and the former are, moreover, furnished with excellent notes for the guidance of masters and mistresses, together with useful tables and the answers to many of the exercises. Each volume covers the ground assigned for the work during a school year. The type is good, with clear script figuring, and the frequent enclosure of each digit of a number in its own square compartment is calculated to give emphasis to the principle of local value.

(2) Books A to D of the "A. L. Methodic Arithmetic" provide the earlier portions of a course the later stages of which were given in volumes recently noticed in these columns. We need but recall here the leading feature of the compilation—namely, that the left-hand pages show methods of neat working and arrangement, whilst on the right-hand are sets of questions for solution by the pupils.

(3) Arnold's "Effective Arithmetics" are in six serviceable compact Parts and are suitable for the successive standards of elementary schools. Teachers will find in them a large collection of questions for class use, graduated in difficulty and of an essentially practical character.

(4) We notice also Part I. of another excellent publication—"Practical

Arithmetic Examples." Issued by Mr. John Murray, it combines simple notes on arithmetic with a quantity of material for practice, and has been arranged with a view to the requirements of Standards V. and VI. of elementary schools. The author, Mr. J. L. Martin, has taken as the basis of his work Consterdine and Andrew's "Practica Arithmetic."

*Euclid Simplified.* By Saradaranjan Ray, M.A. (Calcutta: The City Book Society.)

The work has now reached its fourth edition, a fact that sufficiently justifies its production. Adapted in scope to the needs of Matriculation and Intermediate students, it constitutes a valuable and largely successful attempt to secure the advantages of modern ideas without removing all the old familiar landmarks. The method by which the writer has sought to blend the old and the new will meet with full appreciation, principally when the volume falls into the hands of those who recognize an undeniable element of weakness in the recent text-books on geometry considered as a whole—namely, the want of some uniformity in the scheme of development of the subject. In the present work the general sequence of Euclid is maintained, but the relative importance of the propositions is made evident, the leading ones helping to form the framework of text, whilst the minor problems and theorems occupy in general their old places, but are printed in smaller type and classed as exercises, for the solution of which hints as to standard methods are frequently given. Many important theorems are introduced at appropriate stages of the course and are accorded due prominence, but they are designated by supplementary numbers or letters and leave Euclid's references intact.

### SCIENCE.

*The Physics of Earthquake Phenomena.* By Cargill Gilston Knott, D.Sc., &c., Professor of Physics (1883-91) in the Imperial University of Japan, Lecturer in Applied Mathematics in the University of Edinburgh. With many diagrams. (14s. net. Clarendon Press.)

The volume consists of the Thomson Lectures delivered in 1905-6 at the United Free Church College in Aberdeen—probably the only systematic course ever delivered on the subject in this country. Dr. Knott was infected by the seismological enthusiasm of Prof. Milne, his colleague in the University of Tokio. "It was my good fortune," he says, "to witness the conception and growth of many of his most fruitful ideas, to see how, at every turn, he appealed to experiment to elucidate a new problem in seismology, and to note the persistent ingenuity with which he followed up an almost invisible line of research." In the present volume Dr. Knott does not attempt to deal with all even of the important aspects of seismology; he purposely limits his discussion to such phenomena as have suggested physical investigations or as, from their nature, touch closely on physical theory. He treats the subject, in fact, "not as a branch of technical geology, but as belonging to the wider domain of natural philosophy, both experimental and mathematical." He describes the more outstanding phenomena of earthquakes, gives an account of seismic surveys, examines the principles of construction of the more efficient instruments devised for obtaining a continuous record of a shock, discusses the devices for measuring surface motions, investigates the distribution and (at considerable length) the periodicity of earthquakes, considers the manner in which seismic disturbances are transmitted through the material of the earth (elasticity), and so on. The treatment is very simple and most interesting, and the volume is an able contribution to the literature of the subject.

A fourth impression (second edition) of *First Stage Steam*, by J. W. Hayward, M.Sc., A.M.I.Mech.E., Assistant Professor of Mechanical Engineering in McGill University, Montreal, issues from the University Tutorial Press (Clive, 2s.). Exposition, worked-out examples, and exercises are alike excellent. The work meets the requirements of the Board of Education Examination; and the examination papers set in 1901-07 are appended.

*An Elementary Study of Chemistry*, by William McPherson, Ph.D., Professor of Chemistry, and William E. Henderson, Ph.D., Associate Professor of Chemistry in Ohio State University, appears in a revised edition (1906), largely rewritten (6s., Ginn). It is a practical and serviceable work, clearly and fully explanatory, with plenty of exercises and ninety figures.

### ENGLISH LITERATURE.

*The Shakespeare Apocrypha:* being a Collection of Fourteen Plays which have been ascribed to Shakespeare. Edited, with Introduction, Notes, and Bibliography, by C. F. Tucker Brooke, B.Litt., Senior Demy of Magdalen College, Oxford. (3s. net. Clarendon Press.)

"The ambition of the editor has been to provide an accurate and complete text, with adequate critical and supplementary matter, of all those plays which can, without entire absurdity, be included in the 'doubtfully Shakespearian' class." Mr. Brooke cuts down "a list, as complete as seems practicable, of the uncanonical plays which have been ascribed to Shakespeare"—forty-two in number—to thirteen: "Arden of Faversham," "Lochrine," "Edward III.," "Mucedorus," "The First Part of Sir John Oldcastle," "Thomas Lord Cromwell," "The London Prodigal," "The Puritan," "A Yorkshire Tragedy," "The Merry Devil of Edmonston," "Fair Em," "The Two Noble Kinsmen," and "The Birth of Merlin." To these he adds "Sir Thomas More," a play discovered less than a century ago, but more or less probably revised at least by Shakespeare. In the introduction

he deals very fully and instructively with the history and claims of the fourteen. The text is reproduced in the original spelling, and critical notes are freely given at the foot of the page. Explanatory and other notes are appended; and there is a careful bibliography. Mr. Brooke has expended immense labour and minute care upon the text, as well as upon the investigation of the claims, of the various plays; and he has laid all Shakespearean students under a deep debt of gratitude. The Clarendon Press must also share in the recognition; for the typography, though sufficiently difficult, is remarkably accurate, and the get-up is chaste and agreeable.

*The Diary of John Evelyn.* Edited by Austin Dobson, Hon. LL.D. Edin. (3s. 6d. Macmillan. The Globe Edition.)

Evelyn's so-called "Diary" answers to its name in so far as it is a narrative of events arranged under specific dates in chronological order; but it was not, like Pepys's diary, always composed day after day on the given dates, "but must often have been 'written up' long after the incidents recorded, and sometimes when the writer's memory betrayed him, or when he inserted fresh information under a wrong heading." It is rather a book of memoirs. Though never intended for publication, it is usually written with measure and reserve, so that the psychological interest is by no means prominent. However, it presents a chronicle that extends continuously for more than sixty years, from the stormy years preceding the Commonwealth to the early period of Queen Anne—"an age," as Evelyn's epitaph characterizes it, "of extraordinary Events and Revolutions." "His position," says Dr. Dobson, "gave him access to many remarkable persons, in and out of power, and his report of such occurrences as came under his notice is scrupulously careful and straightforward. Touching at many points the multifarious life of his epoch and reflecting its varied characteristics with insight and moderation, his records have a specific value and importance which fairly entitle them to be regarded as unique." Dr. Dobson adopts Forster's text, with some corrections. He has handled freely the notes of Bray and Foster, so as to utilize them to the best advantage; and he has added a large number of illustrative and explanatory notes of his own, the result of much patient and tedious investigation. Some Letters of Evelyn's and a list of his works are appended, and there is a very full index. An admirable edition.

#### HISTORY.

*The Life of Alexander Severus.* By R. V. Nind Hopkins, B.A., late Senior Scholar of Emmanuel College, Cambridge. (4s. Cambridge University Press.)

This essay gained the Prince Consort Prize in 1906, and is now published as No. 14 of the valuable series of "Cambridge Historical Essays." The period lies in the first half of the third century: Alexander lived from A.D. 203 to 235. The ancient historians furnish a considerable amount of material for the history of Alexander's reign, though only one of them can be taken on trust; but Mr. Hopkins has diligently ransacked other sources—the Code and the Digest, coins and inscriptions—and has read widely in the literature of his subject. Alexander had a very difficult part to play, and it is to be remembered, in estimating his career, that he was still a very young statesman when he died. It is a great deal, in the circumstances, to be able to say for him that "he laboured with sincerity, if without insight, and for a brief moment he revived something of the broken majesty of Rome." Mr. Hopkins treats the reign of Alexander, as well as his personality, with breadth, insight, and competent knowledge, and thus makes a valuable as well as interesting contribution to the study of an important period of the Empire.

*An Introductory History of England.* Vol. II.: From Henry VII. to the Restoration. By C. R. L. Fletcher, Fellow of Magdalen College, Oxford. (5s. Murray.)

Readers of Mr. Fletcher's first volume will need no further persuasion to read his second volume. Though he professes to write "for boys," and does indeed write admirably for boys, there can be no doubt that the full-grown man or woman will follow his narrative with unflagging interest and with much profit. When he speaks of his "crabbed, tortuous, and elliptical English," he but perpetrates a genial libel on his pen: he writes with remarkable simplicity and vigour, and, if a pregnant Greek word slips in here and there, the reader innocent of Greek will readily get over the stile—and remember it. The history of the period is presented in masterly selection and arrangement, with a running criticism that puts life into the succession of dramatic pictures. The work rests on a solid and extensive groundwork of serious historical study, and is moulded by a vivid realization of the significance of the recorded facts. The social life of the times, as well as the political and military movements, is forcibly depicted. The dedication to Prof. Pollard is a refreshing testimony to the mutual generosity of modern workers in the same literary fields. There are three maps, a genealogical table, and an index—all very useful.

#### FOLK-SONG.

*Folk-Songs from Somerset.* Gathered and edited, with Pianoforte Accompaniment, by Cecil J. Sharp and Charles L. Marson, Vicar of Hambridge. Third and Fourth Series. (5s. each net. Simpkin & Co.)

There are twenty-five songs in each of the series, and we hope the anticipation that the field is practically exhausted has not been realized. These collections are full of interest to the lover of songs and ballads—

an interest fostered by the appended notes, which point to other forms gathered from other sources and preserved in other books. The Somerset songs, Mr. Sharp tells us, "have travelled far beyond the limits of the county in which they were recovered: they have obtained a footing in the Universities, in several of the public schools as well as in many elementary schools, and they have been heard upon the concert platform of London and of many of the chief cities of the provinces." Most deservedly—if the singers would only bear in mind Mr. Marson's caution and render them "with the utmost simplicity and directness and with close attention to time and rhythm." "To be able to compose melodies of the sweep, power, variety, and intricacy of these," says Mr. Marson, "would place any man instantly at the head of all the melodists of the world. Indeed, no one man, not even if he were a Beethoven, could compose tunes of such good general level, and at times of such surpassing excellence, as those which have been evolved or composed communally by many generations of men in the long period of the racial life." We are greatly indebted to Mr. Sharp and Mr. Marson for so much salvage of the national musical heritage and for the influence their collections have had and are having upon the laudable movement for the revival of English folk music.

*English Folk-Song: Some Conclusions.* By Cecil J. Sharp. (Simpkin & Co.)

An exhaustive treatise on English folk-song must, of course, await the recovery of the existing material by such researches as have been conducted by Mr. Sharp and Mr. Marson in Somerset and by others in a few other counties. Though the present tentative work is entitled "English" folk-song, it is, in fact, based almost entirely upon the author's experiences of Somerset, or rather, of about two-thirds of Somerset, which has yielded him between twelve and thirteen hundred tunes out of the fifteen hundred of his collection; but the probability is strong "that the distribution of folk-songs throughout the kingdom is to a large extent independent of locality." Moreover, while past attention has been given mainly to the words of the old ballads, Mr. Sharp concerns himself mainly with music. "I have recorded many of the characteristics of the folk-singer," he writes; "his manner of singing, peculiarities of intonation, his attitude towards tradition, and so forth, all of which have come under my own observation. I have also enunciated certain theories concerning the origin and nature of the folk-song that have been deduced from these observations and to which they seem to lead." All this is necessarily provisional, subject to modification by the results of extended research. The inquiry is most patiently and carefully and ably worked out, and forms a very valuable contribution to the study of the evolutionary origin of the folk-song. Mr. Sharp adopts the view of communal origin in the sense expressed by Boehme: "First of all one man sings a song and then others sing it after him, changing what they do not like."

#### ART IN THE SCHOOLROOM.

*The Scholars' Cartoons,* "a series of decorative lithographs illustrating great events and incidents of British national life, designed by eminent artists and reproduced and published with the advisory assistance of educational and artistic authorities by Franz Hanfstaengl" (16 Pall Mall East, S.W.), are intended to supply schools and scholars with "instructive and decorative pictures of indisputable artistic merit" at a moderate price. "Each series will consist of ten Prints, some of which will be original lithographs, drawn by the artists themselves on stone, and the others will be careful reproductions of original drawings, made specially for this series." The collaborators of the first series are Walter Crane, John Hassall, Gerald Moira, Leonard Campbell Taylor, Spencer Pryse, and Frank Brangwyn, A.R.A. The size will be uniform: 28½ × 21 in., the printed surface being 26½ × 19. We have two specimens: "The Arrival of Julius Caesar" and "The Defeat of the Spanish Armada," both from drawings by John Hassall. The outlines are fine, and the colouring is very successfully managed. We hope Mr. Hanfstaengl will be encouraged to carry out the full programme.

#### MISCELLANEOUS.

The first three Parts of *The Wild Beasts of the World*, by Frank Finn (1s. net each, Jack), are very attractively written and presented in spacious type, with liberal and vigorous illustration. The treatment happily combines scientific accuracy and popular expression. The complete work will consist of seventeen Parts, containing a hundred reproductions in full colours from drawings by Louis Sargent, Charles E. Swan, and Winifred Austin. It will be most interesting and instructive to young readers.

The August issue of the *Art Workers' Quarterly* was a special International Art Congress number (1s. net; 8 Clifford's Inn, Fleet Street, E.C.). The articles are of practical value and the illustrations are profuse and excellent.

The Summer number of the *Geographical Teacher* (1s. net to other than members of the Geographical Association: George Philip & Son) has been delayed till the autumn "in order to make the information about Geographical Courses at our Universities as complete as possible." This information is adequately full, and the rest of the number is well up to the usual high standard.

The thirty-first volume of the *Geographical Journal* (January–June, 1908: Stanford) is a most instructive compendium of current geographical

information and discussion, with numerous and excellent maps and illustrations.

The first volume of the *Report of the United States Commissioner of Education* for the year ending June 30, 1906, contains a vast amount of information on education and educational institutions not only in America, but throughout the civilized world. As usual, the articles are very full and well informed and the statistics are abundant and valuable.

From Messrs. Misch & Co. (Cripplegate Street, E.C.) we have some attractive specimens of coloured post-cards, the pictures being mainly of a religious significance.

We have received from Mr. A. J. Johnson, Tollington House, Coppetts Road, Muswell Hill, N., a list and samples of some two hundred lantern slides illustrating the Life and Plays of Shakespeare, the pictures being chosen from photographs and from representative pictures by well known artists. They should prove very useful by way of rendering more vivid the scenes of the dramas.

We have unfortunately overlooked Mr. Percy Lindley's sketch of *Holidays in Belgium and the Belgian Ardennes*, charmingly written and charmingly illustrated. It is said that a Highland minister, going up to the general Assembly of the Church in Edinburgh and finding himself a week or two late, sent word to his people that he would stay till next year and make sure of being in time. Holiday-makers should make a note of this little pamphlet against next year.

## CHRISTMAS BOOKS.

### HISTORICAL AND DESCRIPTIVE.

*Heroes of Modern Crusades*, by Edward Gilliat, M.A. Oxon., sometime Master at Harrow School (5s., Seeley), is a worthy addition to the admirable "Library of Romance." It consists of "true stories of the undaunted chivalry of champions of the down-trodden in many lands." There are the crusades against slavery, against brutalities of law and administration, against ignorance, drink, and oppression. Among the champions are Wilberforce and Clarkson, Abraham Lincoln, St. Vincent de Paul, John Howard, Oberlin, Romilly, Father Mathew, Lord Shaftesbury, General Gordon, Sir George Williams, Quintin Hogg, Dr. Grenfell, and Dr. Barnardo. The volume is alive with interest throughout. It does "seem strange that wrongs so terrible should need to have been righted in times so near to ours"; and it is well that the new generation should know the story of these "heroes of our modern Crusades," who had to fight so strenuous and so sustained a battle against ignorance, prejudice, and self-interest. And it is not to be forgotten that the battle is still raging. Sixteen illustrations.

*Between Two Crusades*, by Gertrude Hollis (2s. 6d., S.P.C.K.), is a tale of A.D. 1187, the events arising on the breach of the four years' treaty made between Christians and Saracens on the death of King Baldwin the Leper (1185), by Reginald of Chatillon, the Christian lord of Kerak, a fortress near the southern end of the Dead Sea, on the main caravan route from Egypt. The wrath of Saladin gives promise of keen conflict, and the promise is adequately fulfilled. Blood flows freely at the Horns of Hattin (a saddle-backed hill, "where Christ preached the Sermon on the Mount"); the castle of Tiberias falls to Saladin; and so on to the loss of the Holy Sepulchre and the downfall of the Latin kingdom of Jerusalem. There will be keen interest in following the adventures of the two youths, Henfrid de Castellan and Ralph of Kingston. Illustrations by Adolf Thiede.

*Dame Joan of Pevensey*, by the Rev. E. E. Crake (1s. 6d., S.P.C.K.), is "a Sussex tale." The sea-fight off Pevensey Haven between Sir John Pelham, the Deputy-Constable of Pevensey Castle, and the "fierce Paynims," in the year of grace 1390, was "rather a combat of demons than of men, for no one asked or gave quarter"; but the Englishmen won the day, and rescued from the hands of the pirates Sir Thomas de Lescure and his daughter, the Mistress Joan. As Sir John's son, a youth of nineteen, was prominent in the fray, the reader begins to anticipate. However, there are adventures on the Continent to follow: Sir Thomas has to rescue his chateau of "Sans Egal" from a usurper, and John Pelham has to fight a hot-blooded French chevalier. And Pevensey Castle itself needs to be defended. Mr. Crake shows no great narrative fluency, but the story is well put together, and it is full of animation and bustle. Illustrations (coloured) by Oscar Wilson.

*The Bravest Gentleman in France*, by Herbert Hayens (3s. 6d., Nelson), is a stirring tale of war and adventure in the days of Louis XIII. Louis Greville, a boy of seventeen, goes to Paris with his guardian, who is presently assassinated in the street, apparently for the possession of a green bag with papers in it—papers that play a very important part in the history of the hero. The Duke of Montmorency and Cardinal Richelieu were then at daggers drawn, and Louis's guardian was bound to the Duke by the strongest ties of gratitude and affection. Louis is thus thrown into a vortex of intrigue and conspiracy, and naturally has to fight duels, to spell out mysteries, to battle for his party, and to feel the bitterness of defeat as well as the sweetness of victory. His training by his guardian stands him in good stead in danger, and he manifests fine natural qualities in trying circumstances. Who he really was must

be discovered from that green bag. A gallant story told with great verve. Four illustrations in colour.

*The "Grey Fox" of Holland*, by Tom Bevan (2s., Nelson), is a bustling tale of adventure in Holland during the insurrection against Philip II. The date is 1576. The experiences of Simon Renard and Dirk Dirckzoon will be followed with sustained interest through plots and counter-plots and fighting on sea and on land; and the general movement, with the social conditions of the time and region, is sketched with a vigorous hand. Readers that remember "Beggars of the Sea" and "Red Dickon the Outlaw" will be glad to meet Mr. Bevan again. Two illustrations in colour.

"Peeps at Many Lands" is the general name of an attractive and instructive series of volumes published by Messrs. A. & C. Black. The most considerable of them is *The World*, from the fertile and engaging pen of Ascott R. Hope, who takes us round our own country first, and then conducts us through the other countries of the world, pointing out to us the more distinctive characteristics of the peoples, and telling us things of interest from their history. By the time we have finished our tour, we get a capital general notion of the various countries and their peoples, and we feel that we have picked up our information in an extremely easy and agreeable way. Mr. Hope is always good company, and knows how to instruct without seeming to want to indoctrinate. This should be a favourite volume. Thirteen full-page illustrations in colour.—Two of the smaller volumes are: *England*, by John Finemore; and *Siam*, by Ernest Young, B.Sc., Head Master of the Lower School of John Lyon, Harrow, and formerly of the Education Department, Siam. Both are well written, and full of interest; and each has 12 full-page illustrations in colour. The series conveys much useful information in agreeable fashion, and ought to be very popular.

*The Pageant of British History*, described by J. Edward Parrott, M.A., LL.D., and depicted by more than a score of our most eminent artists in thirty-two illustrations in colour and thirty-two more in black and white, makes a very handsome volume. In spacious type and in pictorial binding. Outstanding events are selected for narration, not in historical detail, but on broad lines, and with a certain elevation of manner—after the fashion of a pageant. The reader will gain a general impression of the story as it passes in picturesque grouping under his eyes. Young people will read it with avidity. Messrs. Nelson are the publishers.

### TALES OF ADVENTURE.

*The Galleon of Torbay*, by E. E. Speight (6s., Chatto & Windus), announces itself as "a romance telling how some Western men and women, Virginia bound, were lost for three hundred years, how a Devon boy found their old city beyond the lagoons and led the folk from havoc, how a brown maiden fell in love with him in the heart of danger and followed him through the unknown mountains, and how a Yorkshire cricketer harboured them in Mexico; with many another adventure, into which is woven a span of the wild girlhood of the Moon-wind." Here is material of promise for lively pages, and the promise is fully satisfied. The "blend of cricket and woodcraft" brings the adventurers through strange tangles of difficulty and danger; the grit of Devonshire and Yorkshire is justly glorified; and the mystery of the Mani people, who had migrated three hundred years before, under the pressure of Spanish outrage, from the volcanic region of Central America to a new home "that lieth between the hidden channels and the untraversed mountains," on the borders of Yucatan and Guatemala, is astonishingly unveiled. Mr. Speight writes in slightly quaint style and with great delicacy of feeling.

*Adventures among Wild Beasts*, by H. W. G. Hyrst (5s., Seeley), is a collection of "romantic incidents and perils of travel, sport, and exploration throughout the world." The stories mostly fall within the first sixty years of the last century, for wild beasts are not so plentiful now as they were in the time of our grandfathers: civilization is not good for them. The encounters between the hunter and the quarry "display the marvellous instinct of the animal not less than the courage and resource of the man." The interest, accordingly, is most varied and instructive. Mr. Hyrst finds his examples among beasts of all sorts in all parts of the world—bears, reindeer, walrus, elephants, tapirs, yaks, peccaries, wild cats, &c. The stories are effectively told, in their characteristic settings. Twenty-four illustrations.

*Fire, Snow, and Water*, by Edward S. Ellis (2s. 6d., Cassell), depicts striking aspects of "Life in the Lone Land" through a series of incidents that are supposed to have occurred a short time before the surrender of its territorial rights by the Hudson Bay Company. The adventures of Brinton Warren (son of one of the directors of the Company) and Fred Newton will be followed with tense interest. The burning of their ship is only a beginning; buffaloes, wolves, musk oxen, Athabasca "zephyrs," "the malignant Chippewyan," and so forth, furnish materials of abundant natural and human concern. A French Canadian, who comes early on the scene, plays an important part in the developments right down to the end. The story moves briskly, and it is simple, natural, and instructive. Four illustrations.

*Rolf the Rebel*, by Bessie Marchant (2s., S.P.C.K.), is the story of the son of a baronet, who went out to the West Indies for his health, grew heartily sick of the sleepy aristocratic life of Havana, and fought as a rebel insurgent in Cuba. The insurgent chief, Ycabo Baneza and

his fortunes probably attract as much interest as the hairbreadth escapes of Rolf. The scenes are varied and picturesque, and the incidents are developed naturally and briskly. Three coloured illustrations by W. S. Stacey.

#### ROMANCE OF SCIENCE.

*Astronomy of To-day*, by Cecil G. Dolmege, M.A., LL.D., D.C.L. (5s. net, Seeley), is a popular introduction to the science in non-technical language. Dr. Dolmege attempts "to take the main facts and theories of astronomy out of those mathematical forms which repel the general reader, and to present them in the ordinary language of our workaday world." To the general reader, then, he makes the whole exposition perfectly plain and simple and presents the phenomena in a very attractive form. He avails himself of all the historical interest of discovery and of successive speculation, and at the same time gives the most recent views on questions of difficulty. The volume is most instructive. Twenty-four illustrations and twenty diagrams.

In *Scientific Ideas of To-Day* Mr. Charles R. Gibson offers a popular account of the nature of matter, electricity, light, heat, &c., in non-technical language (5s. net, Seeley). The subjects are technically treated under the title of "Physics"—formerly of "Natural Philosophy"—a title not attractive to everybody; but everybody ought to know something about such common phenomena, and Mr. Gibson avoids technicalities and uses language that is within the reach of all readers: "his explanations demand no previous knowledge of science whatever, and no acquaintance with mathematics." He has essayed a very difficult task, but he succeeds in conveying in the simplest possible manner a great deal of information about modern scientific ideas, and the charm of the volume will no doubt lead many of his readers to further inquiries. Those who have read his previous volumes on similar lines will not need any recommendation to take up the present one. "Men of science do not stumble over discoveries by mere chance; there is always a chain of facts leading up to each discovery." And Mr. Gibson takes care to utilize the historical and personal interest attending discoveries in the scientific subjects that he deals with. A very interesting and stimulating work. Forty-two illustrations and diagrams.

*The Romance of Modern Geology*, by E. S. Grew, M.A. (5s., Seeley), "describes in simple but exact language the making of the earth, with some account of prehistoric animal life." How the earth took its shape; the effects of weather, rivers, the sea upon its history; the operation of cold and ice on the earth and of fire within it; the formation of the planet and its stages of growth, with the vicissitudes of earthquake, &c.; the development of life and the succession of more and more efficient brains—these are but a few points in a most comprehensive, well considered, and interesting history. The exposition is very simple and lucid, so that there is no need of any preliminary technical knowledge in order to understand it, and every page is instructive as well as absorbing. The volume is an admirable addition to "The Library of Romance." Twenty-five illustrations.

*The Romance of Bird Life*, by John Lea, M.A. (5s., Seeley), belongs to the same excellent series. It is "an account of the education, courtship, sport and play, journeys, fishing, fighting, piracy, domestic and social habits, instinct, strange friendships, and other interesting aspects of the life of birds." Here is a medley rivaling the contents of a haggis. Under appropriate headings Mr. Lea groups an extraordinary amount of observation, industriously gathered from the most diverse quarters and effectively pieced together. The interest is continuous, and the array of facts impresses the reader. The volume deserves to be widely circulated. Twenty-six illustrations.

*Denizens of the Deep*, by F. Martin Duncan, F.R.P.S. (3s. 6d., Cassell), treats of the plants and the more common animals to be found at the seaside, with an introductory chapter of hints on collecting and photographing. It is essentially, but not severely, descriptive, and there are sixty-three illustrations from original photographs by the author, effectively reproduced. The volume would be an instructive companion to an enterprising boy let loose on the beach to explore the seaweeds and to hunt for crabs "and things."

*Trees Shown to the Children*, by Janet Harvey Kelman, in thirty-two coloured plates and described by C. E. Smith (2s. 6d. net, Jack), is the sixth volume of a charming and instructive series. The pictures are carefully drawn and deftly coloured. The descriptions are simple and clear, with the added interest of historical and social lore that has grown about many of the trees.

#### FAIRY TALES.

*Grimm's Fairy Tales* are always to the front at Christmas, and very rightly so. Here is a bright edition by J. R. Monsell, who also embellishes the volume with a dozen colour plates of lively fancy, to say nothing of numerous illustrations. The boy that gets this book will be a "Hans in luck." (3s. 6d. Cassell.)

*The Book of Princes and Princesses*, by Mrs. Lang, edited by Andrew Lang, is a charming addition to the long series of magic volumes issuing from the same partnership. The stories are all true stories: Mr. Lang makes this open avowal, although he knows well that there is a decided reluctance to read true stories; only, as nobody is obliged to read this bookful of true stories, everybody will read them, for it is the obliga-

(Continued on page 494.)

# OXFORD UNIVERSITY PRESS.

## THE OXFORD GEOGRAPHIES.

By A. J. HERBERTSON, M.A., Ph.D., Reader in Geography in the University of Oxford.

### *The Preliminary Geography.*

Second Edition, 160 pages, with 72 Maps and Diagrams. 1s. 6d.  
*Preparatory Schools Review*.—"Where a class-book of geography is first introduced, this should be the book. There is nothing else so good."

### *The Junior Geography.*

Second Edition, 288 pages, with 166 Maps and Diagrams. 2s.  
*School World*.—"Is good everywhere. The sketch maps are most interesting and most instructive."

### *The Senior Geography.*

Second Edition, 370 pages, with 117 Maps and Diagrams. 2s. 6d.  
*School World*.—"The relation of cause and effect is continually insisted upon, and the lesson driven home by the frequent insertion of educative maps and plans and cross-sections."

## THE RENAISSANCE AND THE REFORMATION.

A Text-Book of European History, 1494-1610. By EMMELINE M. TANNER, History Mistress at Sherborne School for Girls. With Maps. 3s. 6d. [Immediately.]

## OXFORD TREASURY OF ENGLISH LITERATURE.

By G. E. HADOW, Tutor in English Literature, Lady Margaret Hall, Oxford; and W. H. HADOW, Fellow of Worcester College, Oxford. Three Vols. 3s. 6d. each.

### Vol. III—Jacobean to Victorian.

*Guardian*.—"It would be difficult to name a more complete work of its kind even in the matter of selections, while the literary criticism is illuminating and original."

Previously Published.

Vol. I—Old English to Jacobean. Second Edition.

Vol. II—Growth of the Drama. Second Edition.

## VIRGIL.

Translated by JOHN JACKSON. Extra fcap, 8vo, 3s. 6d. net; on Oxford India paper, 4s. 6d. net. [Oxford Library of Translations.]

## SCOTT'S WOODSTOCK; or, The Cavalier.

Edited, with Introduction, Notes, and Glossary, by J. S. C. BRIDGE, New College, Oxford. 2s.

## SCOTT'S ROB ROY.

Edited, with Introduction and Notes, by B. S. RAIT, New College, Oxford. With 44 Illustrations. 2s.

## A BOOK OF VERSE FOR BOYS AND GIRLS.

Compiled by J. C. SMITH. Part I, paper, 3d.; cloth, 4d. Part II, paper, 6d.; cloth, 8d. Part III, paper, 1s.; cloth, 1s. 3d. Parts I-III, cloth, 2s. In leather bindings, from 3s. 6d. Second Impression.

## DEUTSCHES REFORMLESEBUCH.

Enthaltend dreissig Erzählungen aus der deutschen Geschichte, mit Fragen für Sprechübungen, mit grammatischen Übungen und einem deutschen Wörterverzeichnis. Herausgegeben von D. LL. SAVORY, Dozenten an der Universität, London, Goldsmiths' C. lege, früherer Oberlehrer am Marlborough College, und z. z. Lektor an der Universität Marburg. Mit Abbildungen. With 15 full-page and numerous other Illustrations. Price 2s. 6d.

## TROIS SEMAINES EN FRANCE.

An Illustrated Reader in the Direct Method, with Questions for Conversation and Grammatical Exercises. By D. LL. SAVORY, French Lecturer at Goldsmiths' College, University of London; and L. CHOUVILLE, B. es L., Assistant Master at the Perse School, Cambridge. Second Edition. 2s.  
*The Journal of Education*.—"The narrative is simple and natural. . . . The questionnaire provides a searching test."

## SCENES FROM THE LIFE OF HANNIBAL.

SELECTIONS FROM LIVY. Edited, with Historical Introduction, Notes, Maps, Vocabularies, and English Exercises. By W. D. LOWE. Fcap, 8vo, 1s. 6d.

## SCHOOL ALGEBRA.

By W. E. PATERSON, Trinity College, Cambridge; Mathematical Master, Mercers' School; formerly Mathematical Master, Christ College, Brecon; and Assistant Mathematical Lecturer, Owens College, Manchester. Part I. (now ready). With Answers, 3s. Without Answers, 2s. 6d.

Select List of Educational Works, List of Books set for various Examinations, and Complete Catalogue (144 pages) post free.

London: HENRY FROWDE, Oxford University Press, Amen Corner, E.C.

tion that causes the reluctance. There are fourteen stories, admirably told; and the volume is beautifully got up, with eight coloured plates and numerous illustrations by H. J. Ford (6s. Longmans.)

*Fairy Tales from South Africa*, collected from original native sources and arranged by Mrs. E. J. Bourhill and Mrs. J. B. Drake, with illustrations by W. Herbert Holloway, are very welcome varieties. Most of them were told by Swazis, others by Zulus, others by tribes on the Portuguese border and by the Mapoch Kafirs. It is not so very easy to get hold of such stories: "You see, the Kafirs are afraid white people would laugh at them, and so they will only begin if they are quite sure you are really interested." We are quite sure that readers of this collection will be really interested; we are not so sure, though, that they will not laugh over them. (3s. 6d. Macmillan.)

#### OLD FAVOURITES IN NEW DRESS.

Messrs. Duckworth issue a popular edition of three famous books by the late Richard Jefferies, in liberal type and in tasteful get-up. (1) *After London, or Wild England*, a weirdly imaginative forecast of a relapse into barbarism, with glints of future recovery. (2) *Amoryllis at the Fair*, with an introduction by Edward Garnett. This work, says Mr. Garnett, "is one of the truest criticisms of human life you are likely to meet with. The song of the wind and the roar of London unite and mingle therein for those who do not bring the exacting eye of superiority to this most human book." (3) *Bevis, the Story of a Boy*, with an introduction by E. V. Lucas. This is the *Bevis* of "Wood Magic," but still a boy, yet "so much older as to be able to sail a boat, make a real gun, and shoot an otter." As a book for boys, says Mr. Lucas, "*Bevis*, I think, stands alone in its blend of joy in the open air, sympathetic understanding of boy nature, and most admirable writing." The book was first published a quarter of a century ago in three volumes; a few years later it was issued in one volume with pictures, but abridged: Messrs. Duckworth here and now give its first real chance of popularity with boys. We heartily echo Mr. Lucas's wish: "May it be very successful!" (3s. 6d. each.)

Messrs. Macmillan are issuing a new "Shilling Edition" of the best works of some of the most popular writers of English fiction. We have Kingsley's *Westward Ho!* and Mrs. Craik's *The Head of the Family*—both beautifully printed, furnished with frontispieces and decorated title-pages, and strongly and chastely bound (1s. net each). It needs no prophet to foretell that this series will prove a conspicuous success.

#### STORIES FOR GIRLS.

A spirited and charming story is *That Girl*, by Ethel Turner (6s., Fisher Unwin). The scene is laid at Sydney. Captain Curtis, having come into an unexpected fortune, retires from seafaring and settles on a hillside near the town; but his happiness is incomplete because the owner of the land between him and the shore, Mrs. Henderson, will not sell it to him at any price—just because he is Captain Curtis. On his last voyage Mr. and Mrs. Henderson, with their little daughter, had been marooned by him because the daughter had caught smallpox. The daughter died, and so did her nurse, who had previously bargained that in case of her death Mr. Henderson should suitably maintain her daughter, Marie Neil, to the age of eighteen. Hence Mrs. Henderson's implacable enmity. She builds a row of villas between the Captain and the sea, but the children of the place naturally mix, and the life-lines of the orphan and ill-used Marie get intertwined with those of the hillside family. The story is deftly and naturally worked out, not without the aid of dramatic entertainments, which have important bearings on the future of the heroine and of the bright and manly son of the Captain. Twenty-five pretty illustrations by Frances Ewan.

In *Margery Redford and her Friends* (5s. net, Chatto & Windus) Mrs. M. H. Spielmann illustrates the operations of the observant and analytical intellect of a "little Miss Sherlock Holmes." If a haystack is burned down, a necklace of pearls missing, a pet dog stolen, an examination paper cribbed, and so forth, the culprit is as good as lost the moment she starts upon his tracks. In the last turn of all the position is reversed, and somebody divines a little secret of her own. The episodes are strung together in a natural way, and each of them is developed in a simple and dramatic manner, which young readers will find entertaining and perhaps suggestively instructive. Sixteen illustrations by Gordon Browne, R.I.

#### FOR THE CHILDREN.

Messrs. Blackie are, as usual, very liberal benefactors of the young folk this Christmas. We have backed *Blackie's Children's Annual* (3s. 6d.) from its first appearance; and this year it has several full-page plates more than ever before, so that now over fifty of the pictures (that is, a third of the whole) are printed in colour. Both the authors and the artists have proved their knack of pleasing the children. The "Annual" is now in its fifth year and thriving amazingly. Besides, there are picture books, in great variety, to suit all purses. The *Three Jovial Puppies*, by J. A. Shepherd, rhymes by E. D. Cuming (6s. net), is a spacious book with vigorous pictures illustrating humorous adventures. In the *Fairy Ring*, written and illustrated by Florence Harrison (6s. net), is also of ample proportions and daintily executed, within and without, with a pretty fancy and a delicate taste. *Peggy's Travels*, pictured by Alice M. Cook and written by Walter Cook (3s. 6d.), has sixteen full-

page coloured plates and sixty illustrations in black and white, and shows how Peggy took afternoon tea with little Japs, visited the Great Wall of China, drew water from a well in Egypt, feasted on bananas in the South Sea Islands, and so forth. It will be instructive as well as amusing to accompany her. *Dutchie Doings*, pictured by Ethel Parkinson and rhymed by Walter Chapman (3s. 6d.), has twenty-four full-page coloured drawings and tells, in picture and in verse, how a little Dutch town girl and her country cousins visit each other and have strange adventures in farmyard and market-place, and on and even in the canals—a cheery and charming volume. *Some Kiddies*, by Ruth A. Hobson (2s. 6d.), contains a delightful series of twelve pictures in full colour and over twenty vignettes in two colours, and the thoughts of the "Kiddies" are expressed in simple and pretty verses. Then there are Nature pictures and stories and verses. *Tales and Talks in Nature's Garden*, by Mrs. Alice Talwin Morris (3s. 6d.), has over thirty pages in full colour and a great many black-and-white illustrations by Gordon Browne, R.I., while the "tales and talks" are simple and sensible, dealing in a natural way with common objects and scenes. *The Rabbit's Day in Town* (1s. 6d.) is an extravaganza, humorously illustrated in twenty-two full-page pictures in full colour by Walter Corbould, and explained in couplets by E. H. Procter, the music for the verses being very simple. *Out of Doors*, by Mrs. Alice Talwin Morris (1s.), is a good specimen of the "Nature-Story Picture Books," containing over thirty full-page drawings, with smaller illustrations, the cover and some twenty pages being in colour. The stories are bright and attractive. *Gulliver's Travels*, retold by Agnes Crozier Herbertson and illustrated in great spirit by John Hassall, R.I. (1s.), is sure to be a grand favourite. There are some sixty illustrations, about a third of them in bright colours. In the charming sixpenny series of "Animal Picture Books," we have *The Pussycat Hunt*, "a most exciting run"; *Naughty Little Jumbos*, with wondrous trunks and humours; and *Fin at the Seaside*, including croquet and golf and a crab-race, the performers being animals. Each book contains both coloured and black-and-white illustrations, and they are all brightly got up.

Messrs. Nelson also offer some delightful books for the children. *The Menagerie Book* (2s. 6d.) pictures in graphic style and in deft colouring the more important animals, as well as the visitors to the show; and the showman makes a characteristic speech in explanation. Directions are given how to cut out and arrange parts so as to obtain a more vivid representation. A handsome and elaborate contrivance, which the young folk will appreciate. Then there is *The Little Robinson Crusoes*, "or Donald and Betty's Adventures on an Uninhabited Island," narrated cleverly by Harold Avery, and skilfully illustrated by fifty-two pictures, a goodly number of them full-page and in colours, by Harry Rountree (2s. 6d.). Most splendid of all is *Alice's Adventures in Wonderland*, with ninety-two coloured illustrations, many of them full-page, by Harry Rountree. The volume is spaciously printed and handsomely got up, and it will be a long delight to the fortunate possessor.

Messrs. Caswell provide their usual varied and agreeable literary entertainment for the children at the Christmas season. There is *Bo-Peep*, a veritable "treasury for the little ones," with appropriate stories both in prose and in verse, and a profusion of illustrations in all the colours of the rainbow (2s. 6d.). There is *Tiny Tits*, a favourite "magazine for very little folks," with attractive little stories in very simple language, and with abundance of speaking illustrations (1s. 4d.). Then there are some new-comers: *Stories for All* (1s.); *Out-of-School Tales* (1s.); *The Transformations of the Truefitts*, by S. H. Hamer—all of them generously printed and illustrated, as well as amusing.

Messrs. Macmillan issue charming editions of *The Rose and the Ring* (Thackeray), with the author's numerous and humorous illustrations, and *Through the Looking Glass* (Lewis Carroll), with fifty illustrations by John Tenniel (1s. net each). The type is excellent and the form is convenient.

Messrs. Jack have added to their delightful "Told to the Children" series *Stories of Beowulf*, admirably told by H. E. Marshall, with eight weird pictures by J. R. Skelton. A new volume of their similar "Stories from History" series is *Stories of the Vikings*, deftly told by Mary Macgregor, and illustrated with eight pictures in colour by Monro S. Orr.

Messrs. Chatto & Windus present *Yesterday's Children*, charmingly illustrated by Millicent Sowerby in many full-page coloured pictures, to say nothing of pretty head-pieces and tail-pieces, and written in descriptive verses of uncommon merit by Githa Sowerby. Among "yesterday's children" are the Spartan, the first doll, the nun, fairies, the May Queen, the jester, the sampler, mermaids, the Sphinx, &c. A clever and engaging collection.

*The Children's Aeneid*, "told from Virgil in simple language," by the Rev. Alfred J. Church, M.A. (5s., Seeley), is sure to be a first favourite with the children that are fortunate enough to have it placed in their hands. The story is retold in simple and charming form, and with a keen eye for effect, the point of each episode standing out clear. Students of the original will be interested to read the narrative in this fresh and pointed presentation; and so, it may be hoped, will the general reader innocent of Latin. Twelve illustrations deftly drawn and coloured.

#### VARIOUS.

*The Peace of the Church* and a dozen other short stories "for Sunday evenings," by Mary H. Debenham (2s. 6d., National Society), are based on facts or episodes of church history in Anglo-Saxon, medieval, and

# CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.  
 President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.  
 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.  
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS** of **MUTUAL LIFE ASSURANCE** without personal liability on highly favourable terms to  
**THE CLERGY AND THEIR RELATIVES.**

**ALL PROFITS BELONG TO THE MEMBERS.**  
**Accumulated Fund, £4,242,820. Annual Income, £453,897.**  
**Bonuses Distributed, £4,256,464.**

**LOW PREMIUMS. LARGE BONUSES.** Notwithstanding the lowness of the Premiums charged, the **BONUSES** are on an **EXCEPTIONALLY HIGH SCALE.**  
**NEW AND SPECIAL POLICIES.** Application is invited for the **PROSPECTUS**, and Leaflets explaining two new Policies, with valuable Options.

**1. WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

**2. PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

**SPECIMEN OF RATES FOR £1,000, WITH PROFITS.**

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

modern times. They are pleasantly written, as are all the stories in the long list of Miss Debenham's works. Four illustrations.

*The Red Light*, by C. E. C. Weigall (2s. 6d., Cassell), tells its story with vigour and directness, and in excellent tone. The contrast of rich and poor runs throughout, with interesting turns of the wheel of fortune, which brings things right in the long run. The style, too, is markedly good. An unpretentious, but excellent, story. Four illustrations by Malcolm Patterson.

*The Mystery of the Squire's Pew* and five short stories, by Katherine E. Vernham (1s. 6d., National Society), make attractive reading. They show considerable dramatic force in construction and characterization, and a breezy freshness in the dialogue. Two illustrations.

*Hearty Gray*, by William Webster (1s. 6d., S.P.C.K.), is "a tale of the East Coast"—of the fishing town of Veringham. "Hearty" (christened David) was a fine young fisherman, partner with his widowed father; and Letty, an orphan niece of the husband of a married sister of Hearty's, kept house for the two. Besides, there is Maggie, a young neighbour. Moreover, Granny dies, leaving £300, in three bags; and, when the depository is searched, there are only two bags, and Hearty has the key, given to him by Granny. So Hearty is in a compound pickle and has to be got out of it somehow. A plain story, with many a true touch of human interest. Three coloured illustrations.

*His Father's Son*, by G. R. Wynne, D.D. (1s., S.P.C.K.), is a tale of childhood in the main, concerned with the activities of Perry Walton from eight onwards—making dams and water-wheels, handling guns, revolvers, and rifles, and having varied adventures more or less exciting, his father pronouncing him "a chip of the old block." Eventually he goes through a twelvemonth of the South African War and meets his fate—not at the hands of the enemy, but from the eyes of a cousin who nurses him through an illness. The childish adventures contain the main interest of the story. Frontispiece and diagram.

*Robin of Sun Court*, by Eleonora H. Stooke (1s., National Society), is a very charming story of a "ragged Robin" brought up in "one of the worst slums of Plymouth," with a good mother and a weak, drunken step-father. There are good people in the mean street as well as bad. The tone is excellent and the style good.

*Guy's Ordeal*, by H. Elrington (1s., S.P.C.K.), narrates somewhat crudely the adventures of the son of a poor clergyman who was sent on holiday to Clevedon Farm, where he was received as a boy that had been advertised for and set to menial labour, the occupant of the farm to whom he had been sent having removed to Clevedon Manor and been careless enough to date his invitation simply Clevedon.

**MATHEMATICS.**

**16504.** (S. G. SOAL.)—Given the ratio ( $k$ ) of the two interior diagonals AC, BD of a cyclic quadrilateral (ABCD), and the distance ( $l$ ) between their middle points, express in terms of ( $k$ ) and ( $l$ ) the length of the exterior diagonal (FG).

*Solution by R. F. DAVIS, M.A.*

Let AB, DC intersect in E; DA, CB in F. Denote AB, BC, CD, DA, AC, BD, CE, BE, AF, BF by  $a, b, c, d, p, q, x, y, u, v$  respectively.

Then  $x : y = u : v = p : q = k : 1$ ,

where  $k$  is given. By a well known theorem,

$$EF^2 = x(x+c) + u(u+d).$$

But  $x(x+c) = y(y+a)$  or  $k(x+c) = x/k+a$ .

$$x = (kc-a)/(1/k-k); \quad x+c = (c/k-a)/(1/k-k);$$

$$x(x+c) = \{c^2+a^2-(k+1/k)ac\}/(1/k-k)^2.$$

Similarly,  $u(u+d) = \{b^2+d^2-(k+1/k)bd\}/(1/k-k)^2.$

Hence  $(1/k-k)^2 \cdot EF^2 = a^2+b^2+c^2+d^2-(k+1/k)pq$ , since  $ac+bd = pq = -(p^2+q^2) = 4l^2.$

**16490.** (Professor NANSON.)—Find the condition that the three involutions determined by three pairs of points on the same base may have one focus in common.

*Solution by M. T. NARANIENGAR, M.A.*

Let  $(aa')(BB')(CC')$  denote the distances of the three pairs of points from a certain origin. Then, if  $f$  denote the distance of the common focus from the same origin, we have

$$f^2 \{ (a+a') - (b+b') \} - 2f(aa' - BB') + aa' (b+b') - BB' (a+a') = 0 \dots (1),$$

and two other similar equations.

The condition required is therefore the condition that the three quadratics in  $f$  should have one root common.

By varying the position of the origin the condition may be expressed in the following simple form:  $-xyz + a^2x + b^2y + c^2z = 0$ , where  $a, b, c$  are the semi-lengths of AA', BB', CC', and  $x, y, z$  are the distances between their middle points taken analytically.

**16460.** (Professor E. B. ESCOTT.)—To find prime numbers  $p$  such that  $(p^2-1)^2$  shall have three or more divisors of the form  $px+1$  where  $x$  is less than  $p$ . Are there any values of  $p$  for which there are four divisors other than the following?—

$p = 29,$	$x = 1, 6, 11, 27,$
$p = 71.$	$x = 1, 9, 19, 69,$
$p = 239,$	$x = 1, 16, 41, 237,$
$p = 3191,$	$x = 1, 57, 666, 3189,$
$p = 60761,$	$x = 1, 47, 1559, 60759,$
$p = 2370059,$	$x = 1, 1540, 17821, 2370057,$
$p = 6679639,$	$x = 1, 2585, 35531, 6679637.$

*Solution by the PROPOSER.*

It is evident that, if  $px+1$  is a factor of  $(p^2-1)^2$ , the remaining factor is of the form  $py+1$ . Putting  $(p^2-1)^2 = (px+1)(py+1)$  and expanding, we have  $p^3-2p = pxy+x+y \dots (1).$

Let  $x+y = pz$ . Substituting for  $y$  in the equation (1), we have  $z = (p^2+x^2-2)/(px+1) \dots (2).$

In (2)  $p$  and  $x$  may be interchanged without affecting  $z$ .

If (2) be considered as an equation in  $x$ , we have  $x_1+x_2 = pz$  and  $x_2 = pz-x_1$ .

Since  $p$  and  $x$  may be interchanged, we may put

$$x_1' = p, \quad p' = pz-x_1.$$

Similarly,  $x_2' = p'z-p = (pz-x_1)z-p$ ;

and, as before,  $x_1'' = p', \quad p'' = p'z-p.$

We see, then, that in the recurring series

$$P_n : x_1, p_1, p_1 z - x_1, \dots \dots \dots (3),$$

where the scale of recurrence is  $P_{n+2} = zP_{n+1} - P_n$ , any two consecutive terms will give values for  $x$  and  $p$ , where  $(x_1, p_1)$  is any solution of (1).

We have for every value of  $p$  the evident solutions  $x = 1$  and  $x = p-2$ ,  $z = p-1$  and  $z = 2$ . So for every prime  $p$  in the series

$$P_n : 1, x, x^2-x-1, x^3-2x^2-x+1, \dots \dots \dots (4),$$

where the recurrence formula is  $P_{n+2} = (x-1)P_{n+1} - P_n$ , the number  $(x^2-1)^2$  has three divisors.

*Examples.*—  $x = 3$  |  $P_n : 1, 3, 5, 7, 9, 11, \dots$   
 $4$  |  $1, 4, 11, 29, 76, 199, \dots$   
 $5$  |  $1, 5, 19, 71, 265, \dots$   
 $\vdots$  |  $\vdots$

If any numbers occur in two series (excepting the first series), the corresponding value of  $(p^2-1)^2$  will have four divisors. Some of these may be found by equating two of the terms of (4).

Let  $x^3-2x^2-x+1 = y^2-y-1 \dots \dots \dots (5)$

or  $4x^3-8x^2-4x+9 = (2y-1)^2 \dots \dots \dots (6);$

then we find only the following solutions of (6):—

$$x = 1, 2, 4, 5, 7, 40, 134, 189;$$

$$y = 1, 1, 6, 9, 16, 247, 1540, 2585;$$

$$y^2-y-1 = -1, -1, 29, 71, 239, 60761, 2370059, 6679639.$$

If we put  $x^5-4x^4+2x^3+5x^2-2x-1 = y^2-y-1$

or  $4x^5-16x^4+8x^3+20x^2-8x+1 = (2y-1)^2 \dots \dots \dots (7),$

we find only the solutions:

$$x = 1, 2, 3, 6;$$

$$y = 2, 1, 4, 57;$$

$$y^2-y-1 = 1, -1, 11, 3191.$$

We have then the seven values of  $p$  given in the question.

**16445.** (Professor NANSON.)—Salmon has shown that the locus of the focus of a parabola described about a triangle is an octavic, but Hudson has shown (*Reprint*, New Series, Vol. XI., p. 108) that the locus is a quintic. Reconcile these results.

*On the more general Proposition of the Locus of the Foci of Parabolas satisfying three Conditions.*

By T. J. I'A. BROMWICH.

[Extracted from *The Messenger of Mathematics*, New Series, No. 439, November, 1907, and reprinted by kind permission.]

In Salmon's *Conic Sections* (6th Edition, p. 390) there is a curious oversight in applying the theory of characteristics to the problem stated above.

In general, if a system of conics satisfies four conditions, the locus of the intersection of tangents to the system drawn from two fixed points A, B is a curve of degree  $3\nu$ , and the points A, B are multiple points of order  $\nu$  on the curve; where  $\nu$  is the number of conics of the system which can be drawn to touch a given line.

But if one of the prescribed four conditions is to touch AB, then (as proved by Salmon) any line through A cuts the locus in only  $\nu$  points (instead of  $2\nu$ ) distinct from A; and Salmon infers that the locus is then of degree  $2\nu$ , assuming that A, B are still  $\nu$ -fold points on the locus.

But the assumption in italics seems to be untrue; in fact, to find the branches of the locus which pass through A, we must consider the conics of the system which touch AB at B. It will be seen that each of these gives a branch passing through A. Thus if there are  $\lambda$  conics which touch AB at B, the point A will be a  $\lambda$ -fold point on the locus.

Hence, assuming that A, B have no special relation to the remaining three conditions which specify the system of conics, we find the result: *The locus of the intersection of tangents from A, B, to a system of conics which touch AB and satisfy three other conditions, is a curve of degree  $(\lambda + \nu)$  and the points A, B are  $\lambda$ -fold points on the locus.*

It is perhaps worth while to tabulate the values of  $\lambda, \nu$  in the simpler cases corresponding to the various forms of the conditions:—

(1) 3 points,	$\lambda = 1, \nu = 4.$
(2) 2 points, 1 line	$\lambda = 2, \nu = 4.$
(3) 2 lines, 1 point	$\lambda = 2, \nu = 2.$
(4) 3 lines,	$\lambda = 1, \nu = 1.$

Of course case (4) gives the well known elementary proposition that the locus of the focus of a parabola touching 3 lines is a circle.

In these four cases  $\lambda$  is equal to the smaller of  $\mu$  and  $\nu$ , where  $\mu$  denotes the number of conics of the system which pass through a given point. But  $\lambda$  is not always obtained by this rule, as may be seen by considering the parabolas which pass through two points and touch a fixed line at one of these points; then  $\lambda = 1, \mu = 2, \nu = 2$ .

My attention was directed to this locus by a problem proposed by Mr. R. F. Davis in *The Educational Times*, asking for a discussion of the locus of the focus of a parabola passing through three fixed points. Now here  $\nu$  is 4, and so Salmon's result gives a curve of degree 8, with quadruple points at the circular points. But from the solutions given by Mr. Youngman and Professor W. H. Hudson (*Educational Times Reprint*, Vol. XI., pp. 84, 103) for certain special cases of the problem, it appears that the locus is of degree 5, without singularity at the circular points. This, of course, agrees with the synthetic solution given above in case (1).

By elementary analysis it is not hard to express the co-ordinates of the focus in the form

$$x = f(t)/h(t), \quad y = g(t)/h(t),$$

where  $f, g, h$  are of the fifth degree in  $t$ . Thus the locus is unicursal;

but a determination of its Cartesian equation is not easy. On the other hand, if  $\rho_1, \rho_2, \rho_3$  are the distances of the focus from the fixed points A, B, C, it is not difficult to see that

$$a^2\rho_1^2 + b^2\rho_2^2 + c^2\rho_3^2 - 2bc\rho_2\rho_3 \cos A - 2ca\rho_3\rho_1 \cos B - 2ab\rho_1\rho_2 \cos C = 4a^2$$

using the ordinary notation. This is found by expressing the fact that  $\rho_1, \rho_2, \rho_3$  are equal to the distances of A, B, C from some line (the directrix). When  $a = b$ , and  $C = \frac{1}{2}\pi$ , this equation reduces at once to the Cartesian equation given by Professor Hudson.

**16481.** (W. F. BEARD, M.A.)—Two conics S, S' cut one another in A, B, C, D: the pole of AB, with regard to S, lies on S'. Prove that the pole of CD with regard to S also lies on S'.

*Additional solution by G. G. MORRICE, M.D.*

Project C, D into the focoids. The pole of CD, with regard to S, is then the centre of the circle S; and we only have to prove that the circum-circle S' of the triangle formed by AB and its pole passes through the centre O of S.

**16488.** (Professor S. SIRCOM.)—Give a general description of the cubic surface :—

$$x^3 + (z - y - 1)x^2 - 2(3yz - 8)x + (z + y - 1)(4z^2 - 4yz + 3y^2 - 16z + 8y + 16) = 0,$$

and determine its real right lines.

*Solution by W. H. BLYTHE, M.A.*

Write  $z + 2$  for  $z$ . Then

$$x^3 + (z - y + 1)x^2 - 2x(3yz + 6y - 8) + (z + y + 1)(4z^2 - 4zy + 3y^2) = 0.$$

When  $x = 0$  we have one real straight line in the plane  $z + y + 1 = 0$  and two imaginary straight lines, having the origin as one real point.

Any plane of the form  $x = k(z + y + 1)$  will cut the surface in the straight line  $x = 0, z + y + 1 = 0$  and in a conic.

The projection of this conic (orthogonal) upon the plane  $x = 0$  will be

$$(k^3 + k^2 + 4)z^2 + 2yz(k^3 - 3k - 2) + (k^3 - k^2 + 3)y^2 + 2z(k^3 + k^2) + 2y(k^3 - 6k) + k^3 + k^2 + 16k = 0.$$

The condition for a parabola is

$$5k^4 + 11k^3 - 10k^2 - 12k + 8 = 0.$$

Roots approximately  $\cdot 79, \cdot 7, -1\cdot 13, -2\cdot 52$ .

The condition for straight lines

$$k(71k^4 + 223k^3 - 140k^2 - 328k + 128) = 0.$$

Roots approximately  $1\cdot 12, \cdot 38, -1\cdot 37$  and  $-3\cdot 22$ , and 0.

The form of the equation

$$x[4z^2 + (y + 5)^2 - 41] = (x + y + z + 1)[(2z - y)^2 + y^2 + (x - y)^2]$$

is worth notice.

Giving different values to  $k$ , and tracing the curves in each section, we find the shape of the surface.

Suppose the surface to be seen from a point in the straight line  $x = 0, y - z = 0$  at a considerable distance from the origin. We find one infinite sheet upon which lie three real straight lines. These three straight lines lie in the plane  $x + 1\cdot 4(y + z + 1) = 0, 1\cdot 4$  being an approximate value. We also find a second sheet composed of two infinite hyperbolic portions. The position of these may be indicated by the section  $x - \cdot 75(y + z + 1) = 0$ , the projection of which upon the plane  $x = 0$  is a straight line, together with the hyperbola

$$319z^2 - 490yz + 183y^2 + 9100 = 0$$

transferred to the centre  $z = -32, y = -39$ .

In the following description denote the infinite sheet by A. The portion of the second sheet that lies behind the plane of the picture and high up to the right by B, and the remaining portion of the second sheet that lies in front of the plane of the picture and low down to the left by C.

We note that B and C taken together appear somewhat like the hyperboloid of revolution  $504(X^2 + Y^2) - 2Z^2 + 9100 = 0$ , taking rectangular co-ordinates at the centre of the hyperboloid, the axis of revolution being approximately

$$x = \cdot 75(y + z + 1), 4z - 3y = -17.$$

To trace section by section—

- I.  $k = 1\cdot 12$ . The conic represents two imaginary straight lines; the plane touches B.
- II.  $k = 1$ . An ellipse cut from B, which rapidly changes to
- III.  $k = \cdot 79$ , which is a parabola also cut from B.
- IV.  $k = \cdot 75$ . A hyperbola cut from B and C.
- V.  $k = \cdot 7$ . We again have a parabola cut from B; the sections now become ellipses cut from B.

- VI.  $k = \cdot 39$ . The ellipse has diminished to a point; the plane again touches B in two imaginary straight lines. The revolving plane now does not meet the surface except in the straight line  $x = 0, z + y + 1 = 0$ .
- VII.  $k = 0$ . Again we have two imaginary straight lines. In this, and all following sections, the revolving plane cuts or touches A.
- VIII.  $k = -\cdot 333$ . An ellipse touching  $x = 0, z + y + 1 = 0$ .
- IX.  $k = -1$ . An ellipse  $4z^2 + (y + 5)^2 - 41 = 0$ .
- X.  $k = -1\cdot 13$ . A parabola.
- XI.  $k = -1\cdot 3$ . A hyperbola.
- XII.  $k = -1\cdot 4$ . Two straight lines.
- XIII.  $k = -1\cdot 5$ . The hyperbola takes the conjugate form.
- XIV.  $k = -2\cdot 52$ . A parabola.
- XV.  $k = -3$ . An ellipse.
- XVI.  $k = -3\cdot 22$ . Two imaginary straight lines; the plane touches the surface at a point. The conic is imaginary from  $k = -3\cdot 22$  to  $-\infty$  and from  $\infty$  to  $1\cdot 12$ .

**5966.** (ELIZABETH BLACKWOOD.)—Find the average area of the circle that passes through three points taken at random on the surface of a sphere.

*Solution by R. CHARTRES.*

Area of circle PQR =  $\pi y^2$ . Number of cases =  $4\pi x^2$ .

$$M = \int_0^{\pi} (\pi y^2) 4\pi x^2 dx \div 3\pi a^3 = \frac{4}{3}\pi a^2.$$

Generally, the mean of the  $n$ th power of the area

$$\begin{aligned} &= \int_0^{\pi} (\pi y^2)^n 4\pi x^2 dx \div 3\pi a^3 \\ &= 6\pi^n a^{2n} \int_0^{\frac{1}{2}\pi} \sin^{2n} \theta \cos^2 \theta \sin \theta d\theta \\ &= \frac{6\pi^n a^{2n}}{2n+3} \int_0^{\frac{1}{2}\pi} \sin^{2n+1} \theta d\theta. \end{aligned}$$

**16479** (i.) (W. J. GREENSTREET, M.A.)—Solve  $\Sigma(b-c)x = 0; \Sigma(b^2-c^2)yz = 0; \Sigma(b-c)yz + \Sigma a(b^2-c^2) = 0$ .

*Solutions* (I.) by D. M. KELKAR, B.A., L.T.; (II.) by A. M. NESBITT, M.A.; (III.) by C. M. ROSS.

(I.) From the equations

$$(b-c) + (c-a) + (a-b) = 0, (b-c)x + (c-a)y + (a-b)z = 0$$

we get, by cross multiplication,

$$(y-z)/(b-c) = (z-x)/(c-a) = (x-y)/(a-b) = k \text{ (suppose);}$$

therefore  $y-z = k(b-c), z-x = k(c-a), x-y = k(a-b)$  ..... (1).

Similarly, from  $\Sigma(b^2-c^2)yz = 0$  and  $\Sigma(b^2-c^2) = 0$ , we get

$$x(y-z)/(b^2-c^2) = y(z-x)/(c^2-a^2) = z(x-y)/(a^2-b^2);$$

therefore, from (1),

$$kx/(b+c) = ky/(c+a) = kz/(a+b) = l \text{ (say);}$$

therefore  $x = l(b+c)/k, y = l(c+a)/k, z = l(a+b)/k$  ..... (2).

Substituting these values in  $\Sigma(b-c)yz = -\Sigma a(b^2-c^2)$ , we get

$$(l^2/k^2) \Sigma(b-c)(a+b)(a+c) = -\Sigma a(b^2-c^2),$$

i.e.,  $-(l^2/k^2)(a-b)(b-c)(c-a) = -(a-b)(b-c)(c-a)$ ;

therefore

$$l/k = \pm 1.$$

Hence, from (2),  $x = \pm(b+c); y = \pm(c+a); z = \pm(a+b)$ .

(II.) If we put  $x = \lambda a + \mu, y = \lambda b + \mu, z = \lambda c + \mu$  (an assumption which the first equation entitles us to make), the second yields

$$\lambda^2 \Sigma bc(b^2-c^2) + \lambda \mu \Sigma(b+c)(b^2-c^2) + \mu^2 \Sigma(b^2-c^2) = 0,$$

or, dividing by  $\Pi(b-c), \lambda^2 \Sigma a + \lambda \mu = 0$ . Now  $\lambda$  is not zero, from the third equation; so that  $\lambda \Sigma a + \mu = 0$ . This third one yields  $\lambda^2 \Sigma bc(b-c) = \Pi(b-c)$  or  $\lambda^2 = 1$ , whence  $x = \pm(a-\Sigma a) = \pm(b+c), y = \pm c, z = \pm c$ , the signs being all positive or all negative.

[Rest in Reprint.]

*Sur les Erreurs de Racines des Nombres approchés.*

By Professor E. HERNÁNDEZ.

Soient  $a + \epsilon$  et  $a - \epsilon$  des valeurs approchés par excès et par défaut du nombre exact  $a$ .

L'erreur absolue de la racine  $m$ -ième, est

$$\begin{aligned} &\sqrt[m]{(a+\epsilon)} - \sqrt[m]{a} \\ &= \frac{\epsilon}{\sqrt[m]{(a+\epsilon)^{m-1}} + \sqrt[m]{(a+\epsilon)^{m-2}}\sqrt[m]{a} + \dots + \sqrt[m]{(a+\epsilon)}\sqrt[m]{a^{m-2}} + \sqrt[m]{a^{m-1}}} \end{aligned}$$

dans le premier cas, et

$$\sqrt[m]{a} - \sqrt[m]{a-a} = \frac{a}{\sqrt[m]{a^{m-1}} + \sqrt[m]{a^{m-2}}\sqrt[m]{a-a} + \dots + \sqrt[m]{a}\sqrt[m]{(a-a)^{m-2}} + \sqrt[m]{(a-a)^{m-1}}}$$

dans le second.

On déduit facilement que

$$\sqrt[m]{a+a} - \sqrt[m]{a} < \frac{a}{m\sqrt[m]{(a+a)^{m-1}}} \text{ et } \sqrt[m]{a} - \sqrt[m]{a-a} < \frac{a}{m\sqrt[m]{(a-a)^{m-1}}}$$

Les erreurs relatifs correspondants auront pour expressions

$$\frac{\sqrt[m]{a+a} - \sqrt[m]{a}}{\sqrt[m]{a+a}} < \frac{a}{ma} \text{ et } \frac{\sqrt[m]{a} - \sqrt[m]{a-a}}{\sqrt[m]{a}} < \frac{a}{m\sqrt[m]{a}\sqrt[m]{(a-a)^{m-1}}}$$

Mais on a évidemment

$$\frac{a}{m\sqrt[m]{a}\sqrt[m]{(a-a)^{m-1}}} < m \frac{a}{(a-a)} = \frac{a}{ma} \left(1 + \frac{a}{a-a}\right)$$

On voit qu'en tout rigueur, on peut dire que l'erreur relatif de la racine est plus petit que la  $m$ -ième partie de l'erreur relatif du nombre proposé, seulement quand celui-ci est approché par excès. Dans le cas où le nombre est approché par défaut, tout ce qu'on peut dire, c'est que l'erreur relatif de la racine  $m$ -ième est plus petit que  $2a/ma$ .

16477. (The late R. W. D. CHRISTIE.)—Prove that an infinite number of solutions can be obtained from

$$3^2 + a^2 = b^2$$

e.g. 3, 4, 5; 3,  $\frac{5}{4}$ ,  $\frac{13}{4}$ ; 3,  $\frac{7}{8}$ ,  $\frac{25}{8}$ ; &c., ad inf.

Solutions (I.) by SARADAKANTA GANGULI, M.A., and others;  
(II.) by Professor SANJANA, M.A., and M. T. NARANIENGAR, M.A.

(I.) The equation  $(3n)^2 + x^2 = y^2$ , where  $n$  is any integer, can be solved in integers by the rule of Plato, or by the rule of Pythagoras, according as  $n$  is even or odd. If  $i$  and  $l$  be the values of  $x$  and  $y$  respectively corresponding to a particular value of  $n$ , a solution of the equation in question will be  $3, i/n, l/n$ . Since an infinite number of integral values can be given to  $n$ , an infinite number of solutions can be obtained from the given equation.

(II.) As  $b^2 - a^2 = 9$ , we may put  $b+a = 9, \frac{1}{2}.9, \frac{1}{3}.9, \frac{1}{4}.9, \dots, 2.9, 3.9, 4.9, \dots$ ; then  $b-a = 1, 2, 3, 4, \dots, \frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \dots$ . Solve the simple equations and the given results will be obtained.

Generalization of some Brocard Theorems.

By W. GALLATLY, M.A.

Describe a circle on any straight line JL as diameter. Draw JA<sub>1</sub>, JB<sub>1</sub>, JC<sub>1</sub> parallel to BC, CA, AB. Draw AR parallel to JL, and RS perpendicular to BC, so that S is the pole of the Simson line parallel to JL. Let ST be the diameter through S, so that SRT = 90°, TR is parallel to BC, and arc RB = arc TC.

(1) A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> is inversely similar to ABC.

For, JB<sub>1</sub> being parallel to CA, and JC<sub>1</sub> to AB, it follows that

$$B_1A_1C_1 = B_1JC_1 = A.$$

(2) The figure ASBTC is similar to AJB<sub>1</sub>LC<sub>1</sub>.

Since JC<sub>1</sub> is parallel to AB<sub>1</sub> and JL to AR, therefore

$$LJC_1 = RAB = TSC,$$

from equal arcs BR, TC. So LJ B<sub>1</sub> = TSB. Therefore L and T are homologous points in the two figures; so also are the diametrically opposite points J and S.

(3) SA, SB, SC are respectively parallel to B<sub>1</sub>C<sub>1</sub>, C<sub>1</sub>A<sub>1</sub>, A<sub>1</sub>B<sub>1</sub>.

For SBA = JB<sub>1</sub>A<sub>1</sub>, from similar figures = JC<sub>1</sub>A<sub>1</sub>. But JC<sub>1</sub> is parallel to AB. Therefore SB is parallel to A<sub>1</sub>C<sub>1</sub>.

(4) If  $\alpha, \beta, \gamma$  be the coordinates of J for A<sub>1</sub>B<sub>1</sub>C<sub>1</sub>, then

$$a \cdot JL = JB_1 \cdot JC_1;$$

therefore

$$\alpha : \beta : \gamma = 1/JA_1 : 1/JB_1 : 1/JC_1.$$

Hence, by similar figures, the coordinates of S with regard to ABC are as  $1/JA_1, 1/JB_1, 1/JC_1$ . Similarly, the coordinates of T are as  $1/LA_1, 1/LB_1, 1/LC_1$ .

It will be noted that the position of S depends solely on the direction of JL, and therefore S may be fitly called the "Simson Point" for the direction JL.

As examples examine the circles on OI, OH, as well as the Brocard circle on OK.

The relations between the two figures being reciprocal, the Simson line of J for A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> is parallel to ST.

QUESTIONS FOR SOLUTION.

16529. (M. T. NARANIENGAR, M.A.)—A luminous point is placed within a triangle whose sides reflect. Prove that the successive images formed by reflection in the sides in a definite order will lie on one of three definite pairs of parallel straight lines. Find the conditions that there may be an infinite number of images.

16530. (Communicated by W. G. RANDALL.)—A quantity of cable has to be packed on a drum, the size of the flange C varying, but the width B and diameter A of the hub being constant. Draw a graph to give the following information:—The size of flange and number of layers of cable corresponding to any length of cable of any over-all diameter which has to be packed.

16531. ("λ. μ.")—Has the equation  $y^2 = 4x^4 - 40x^2 - 8x^2 + 60x + 9$  any solutions, integral or fractional, other than  $x = 0, y = \pm 3; x = 1, y = \pm 5; x = 1\frac{1}{2}, y = \pm 7\frac{1}{2}$ ?

16532. (T. STUART, D Sc.)—Find the lowest integral values of  $\theta, \phi, \psi$ , satisfying the equation  $(\theta^2 - \phi, \psi^2)/(\phi^2 - \theta, \psi^2) = \text{a square}$ .

[NOTE.—This equation is closely connected with the celebrated Eulerian equation  $X^4 + Y^4 = U^4 + V^4$ .

16533. (W. J. GREENSTREET, M.A.)—In an examination the candidates must get  $x$  marks on the first of the four papers set. The maximum number obtainable on each paper is  $y$ , and the minimum for a pass is  $z$ . In how many ways can a candidate just get his  $y$  marks for a pass?

16534. (JAMES BLAIRIE, M.A.)—A rectangular parallelepiped has its length and breadth each equal to twice its height. Show that it can be cut into five parts which can be arranged so as to form a polyhedron bounded by six square and eight hexagonal faces. Also show that such polyhedra can be placed together so as to fill space.

16535. (Professor SANJANA, M.A.)—Two right circular cylindrical surfaces are placed with their axes in the same plane. The radii of their circular sections being equal and the axes being inclined to each other at a given angle, find the volume enclosed by the surfaces.

16536. (Professor MORLEY.)—Six points in space determine a cubic curve R<sup>3</sup> and a Weddle surface W. Let (at)<sup>6</sup> be the binary sextic determining the 6 points on R<sup>2</sup>, and observe that any binary sextic S, expressible as the sum of two-sixth powers, determines by its two cubic factors two points of space. Prove that, if S be apolar to (at)<sup>6</sup>, the two points lie on W.

16537. (Professor NANSON.)—A chord of a conic passes through a fixed point. Show that the normals at its extremities meet on a unicursal cubic. Show, also, that the cubic breaks up into a conic and a straight line when the point is on an axis of, or at an infinite distance from a tangent to, the given conic. Show further that the two conics cannot coincide unless the given conic is a parabola and that they do then coincide for a particular position of the point.

16538. (SARADAKANTA GANGULI, M.A.)—The reciprocal polar of the evolute of the ellipse  $x^2/a^2 + y^2/b^2 = 1$  with respect to the circle described on the distance between the foci as diameter is  $a^2/x^2 + b^2/y^2 = 1$ . Also trace this curve.

16539. (Professor NEUBERG.)—De tout point M(x, y) d'une courbe donnée C on déduit un point M<sub>1</sub>(x<sub>1</sub>, y<sub>1</sub>) d'une nouvelle courbe C<sub>1</sub> au moyen des formules

$$x_1 = ax/y + b, x_1^2 + y_1^2 = c/y + e.$$

La tangente en M à C et le normale en M<sub>1</sub> à C<sub>1</sub> rencontrent respectivement l'axe Ox ou Oy en des points T et N<sub>1</sub> tels que le produit OT.ON<sub>1</sub> a une valeur constante.

16540. (W. F. BEARD, M.A.)—Prove geometrically that the latus rectum of the parabola, which has closest contact with an ellipse at any point, varies inversely as the cube of the diameter through the point.

16541. (W. AUSTIN SLEIGH, B.A. Suggested by Question 15977.)—If O, L, M be the centres of the circles SPS', GCg, GCl, prove that the sum of the squares of the radii of these last two is half the sum of the squares of OG, Og.

16542. (V. RAMASWAMI AIYAR, M.A.)—Given a harmonic pentagon H. On a given base AB, and on the same side of it, five harmonic pentagons A, B, C<sub>i</sub>, D<sub>i</sub>, E<sub>i</sub> [i = 1, 2, 3, 4, 5] are described directly similar to H. Prove (1) that the five points C<sub>i</sub> lie on a circle X<sub>c</sub>, and form the vertices of a harmonic pentagon H<sub>c</sub>, directly similar to H; in like manner, the five points D<sub>i</sub> lie on a circle X<sub>d</sub> and form the vertices of a harmonic pentagon H<sub>d</sub> directly similar to H, &c.; (2) that if

ABCDE be a variable harmonic pentagon, described on AB on the side in question, with Brocard angle equal to that of H, the loci of the vertices C, D, and E are the circles  $X_c$ ,  $X_d$ , and  $X_e$ ; (3) that if C', D', E' be inner limiting points of the circles  $X_c$ ,  $X_d$ ,  $X_e$  respectively and the line AB, then ABC'D'E' is a regular pentagon; and (4) that the circles  $X_c$ ,  $X_d$ ,  $X_e$  are all touched by a pair of circles passing through A and B. [The theorems are stated for a pentagon; but similar theorems hold when H is a harmonic polygon of any number of sides. Have these extensions of properties connected with the Neuberg circle of a triangle (corresponding to one of the sides taken as the base) been given?—PROPOSER.]

16543. (A. M. NESBITT, M.A.)—EF is a common tangent to two circles, ADDE and ADCF. CDB is drawn parallel to EF, and G is the harmonic conjugate of D with respect to BC. If the circles GDA and EDF cut in H, prove that DH is perpendicular to BC.

16544. (C. E. YOUNGMAN, M.A.)—Across two given circles B, C, through the point A common to both, draw that chord PAQ which makes the area PBCQ maximum.

16545. (S. NARAYANAN, B.A., L.T.)—Prove that the nine-point centre of a triangle is equidistant from the middle points of the joins of any point in a side with the corresponding vertex and the ortho-centre.

16546. (C. M. ROSS.)—If  
 $\cot^{-1}(a+x) + \cot^{-1}(a+y) + \cot^{-1}(a+z) = \cot^{-1}a$ ,  
 $\cot^{-1}(b+x) + \cot^{-1}(b+y) + \cot^{-1}(b+z) = \cot^{-1}b$ ,  
 $\cot^{-1}(c+x) + \cot^{-1}(c+y) + \cot^{-1}(c+z) = \cot^{-1}c$ ;  
 $a, b, c$  being unequal quantities the above equations are not consistent unless  $bc+ca+ab=1$ .

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10525. (Professor WOLSTENHOLME, M.A., Sc.D.)—The pedal of the parabola  $y^2 = 4ax$  is taken with regard to the point (X, Y): prove (1) that the three inflexions of the pedal lie on the straight line

$$x(3a+X) - yY + X(a-X) = 0;$$

also (2) that if from each inflexion P be drawn a straight line Pp touching the pedal in p, a conic can be drawn touching the pedal in the three points p, and this conic will touch the nodal tangents.

10585. (J. J. BARNIVILLE.)—The asymptotes of three equilateral hyperbolas coincide in pairs so as to form an equilateral triangle; the trilinear equation of the curve being  $a\beta\gamma \pm d^3 = 0$ , find the intercepted area.

10686. (D. BIDDLE.)—A hollow cylinder of radius R revolves about its (vertical) axis with a uniform angular velocity v, and there radiate from the axis, at uniform distances d, n thin laminæ, each forming a sector of the horizontal circle bounded by the cylinder, and each one n-th of the circle in extent. They are placed in uniform spiral fashion, so that they completely obstruct vision through the cylinder when this is viewed parallel to its axis. From a height (= d) above the first sector, a sphere of radius r is allowed to fall vertically, but at random, over the cylinder. Assuming  $g = 32.1$ , and disregarding the resistance of the air, find the probability that the sphere misses all the sectors.

10682. (Professor REALIS.)—Trouver la valeur de l'intégrale  
 $\int x^n / (P_n x^n + P_{n-1} x^{n-1} + \dots + P_2 x^2 + P_1 x + 1)^{1-m} dx$ ,  
 où l'on a posé  $P_k = \{(k+1)(k+2) \dots (k+m-1)/(m-1)!\}$   
 $m$  désignant un nombre entier plus grand que l'unité, et  $n$  un entier positif quelconque.

11790. (Professor NASH.)—Prove that every prime number of the form  $6n+1$  can be expressed in the form  $x^2 - 3y^2$  and that no prime of the form  $6n-1$  can be so expressed. [This can be proved without using any of the  $q$ -series of elliptic functions.]

11798. (Captain DE ROCQUIGNY.)—Aucun nombre triangulaire ne peut être une puissance exacte de 2.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,  
 Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XIII. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.O. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

PUBLIC SCHOOL MODERN HANDWRITING.

By R. WENLOCK, F.R.G.S.

Medallist and First Prizeman, Royal Society of Arts, Member of the London Chamber of Commerce, County School, Barry, Glamorganshire.

A Handbook intended as a substitute for the engraved copy-book headlines, containing an Exposition of the Principles, Specimens of writing and 26 Exercises. Price 6d. net. Crown 8vo.

FRANCIS HODGSON, 89 Farringdon Street, London, E.C.

TO TEACHERS OF LITERATURE. THE Gc LANTERN SLIDES.

Over 200 Slides illustrating the

Life and Plays of Shakespeare,

From Photographs and Drawings by distinguished artists, admirably adapted for Shakespearean Lectures and Readings, as well as for School Use in the Study of the Plays set for the College of Preceptors and other Examinations.

Lists and full particulars from  
 ALFRED J. JOHNSON,  
 Tollington House, Coppetts Road, Muswell Hill, N.

LATEST SELF-FILLING FOUNTAIN PEN.

UNUSUAL OFFER AS AN ADVERTISEMENT FOR A SHORT PERIOD ONLY

The Self-Filling and Self-Cleaning Perfection Fountain Pen (worth 15/-) to Teachers for 4/- only, or 3 Pens for 10/6.

This is an advertisement offer, & will be withdrawn at the end of this year.

ORDER NOW BEFORE IT IS TOO LATE.

Money returned if not fully satisfied. Guaranteed for 2 years.

Description:—Non-leakable, fills and cleans itself in a moment—a press, a fill—fitted with large 14-carat gold nib, iridium tipped, guaranteed to last for years. No other Pen like it for reliability, steady flow and smooth writing. Every Pen a pleasure.

Makers—

THE RED LION MANUFACTURING CO., Ltd., 71 High Holborn, London, W.C.

No need to buy any other Pen while this offer lasts.

To obtain this advantage, mention "The Educational Times."

EDUCATIONAL WORKS

By A. K. ISBISTER, M.A., LL.B.

(Late Dean of the College of Preceptors.)

Sixteenth Edition, with Map. 12mo.

CESAR'S COMMENTARIES on the GALLIC WAR.

BOOKS I.-V. With Notes, Critical and Explanatory, a Vocabulary of all the Words in the Text, and

Easy Reading Lessons for Beginners ..... price 3s. 6d.

BOOKS I.-VII. do. do. .... price 4s. 6d.

Do (without the Reading Lessons) ..... 4s. 0d.

Twenty-fifth Edition.

BOOK I. (with Vocabulary, Reading Lessons, &c.) ... 1s. 6d.

Fourteenth Edition. 12mo, price 3s. 6d.

XENOPHON'S ANABASIS, Books I. to III. With

Notes, Vocabulary of all the Words in the Text, and a Series of Easy Reading Lessons for Beginners. Designed as a First Greek Reading Book in Schools.

New Edition. 18mo, price 9d.

THE ELEMENTS OF BOOK-KEEPING, by SINGLE

and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

New Edition. 12mo, price 1s. 6d.

LESSONS IN ELOCUTION AND EXPRESSIVE

READING FOR BOYS, based on Grammatical Analysis; with a choice Selection of Extracts for Reading and Repetition, classified, of Goldsmith's "Deserted Village," set out into Principal and Subordinate Sentences, illustrating the theory of Emphasis and Pauses.

New Edition. 12mo, price 1s. 6d.

LESSONS IN ELOCUTION AND EXPRESSIVE

READING FOR GIRLS, based on Grammatical Analysis; with a choice Selection of Extracts for Reading and Repetition, classified, under heads for practice in various styles of Reading, and annotated for Expression, Emphasis, and Pauses, and the Analysis of Sentences, with the figure [of a Girl] showing the proper attitude in Reading.

**"The True University of These Days is a Collection of Books."**—THOMAS CARLYLE.

For a long time Teachers have been able to make collections of non-copyright works for a small expenditure. They can now add to their bookshelves the best books of their own time by purchasing the volumes of

# NELSON'S SHILLING LIBRARY

A Series of Copyright Works on Travel, Biography, History, and General Literature, issued by arrangement with some of the leading Publishers.  
LIBRARY STYLE. CLOTH ELEGANT. GILT TOP. ILLUSTRATED.  
**FIRST FOUR VOLUMES NOW READY**

## SCRAMBLES AMONGST THE ALPS - Edward Whymper.

The classic of mountaineering literature. Mr. Whymper was the first to conquer the Matterhorn; and the tale of the years of failure and the many daring attempts, as well as of the tragedy which clouded his success, is little short of a saga.

## COLLECTIONS AND RECOLLECTIONS - Rt. Hon. G. W. E. Russell.

Mr. G. W. E. Russell is, in one sense, the Charles Greville of our own day, intimately acquainted with the inner workings of social and political life, and commenting upon them with a shrewd and delicate humour. The present volume is his best known work, and no such miscellany of good stories and witty sayings is to be found in modern literature.

## THE GREAT BOER WAR - Sir A. Conan Doyle.

This is the *only* single-volume history of the war. The object of the publishers in including it in Nelson's Shilling Library is to enable the hundreds of thousands of people who either fought themselves in South Africa, or had friends and relations fighting there, to acquire a memento of the great struggle in a cheap form.

## LIFE OF JOHN NICHOLSON - Captain Trotter.

John Nicholson was the man of destiny of our Indian Empire, and the tale of his deeds in the Mutiny is perhaps the most stirring of all the tales of Britain's wars. Captain Trotter's biography is the standard work on the subject, and it will be welcomed by many readers.

### READY IN NOVEMBER.

THE MEMORIES OF DEAN HOLE.  
WILD LIFE IN A SOUTHERN  
COUNTY - Richard Jefferies.  
THE PSALMS IN HUMAN  
LIFE - R. E. Prothero.  
LIFE OF GLADSTONE - Herbert W. Paul.

### READY IN DECEMBER.

THE FOREST - Stewart E. White.  
THE GOLDEN AGE - Kenneth Grahame.  
THE SIMPLE ADVENTURES  
OF A MEMSAHIB - Sara J. Duncan.  
THE REMINISCENCES OF SIR HENRY  
HAWKINS (Lord Brampton).

**Price ONE SHILLING NET per Volume.**

On Sale at all Booksellers and Bookstalls.

**THOMAS NELSON AND SONS,**  
35 & 36 Paternoster Row, London, E.C.; Edinburgh, Dublin, and New York.

# THE EDUCATIONAL TIMES,

AND

DEC 11 1908

Journal of the College of Preceptors.

Vol. LXI.] New Series, No. 572.

DECEMBER 1, 1908.

{Published Monthly, price, to Non-Members, 6d.; by Post, 7d. Annual Subscription, 7s.

## COLLEGE OF PRECEPTORS. (INCORPORATED BY ROYAL CHARTER.)

### GENERAL MEETING.

The Half-Yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, W.C., on Saturday, the 23rd of January, 1909, at 3 p.m.

### MEMBERS' DINNER.

The Members' Dinner will take place at the Hotel Cecil, Strand, W.C., on Saturday, the 23rd of January, at 6.30 p.m. Tickets (not including wine), 6s. each. Members who intend to be present are requested to send early notice to the SECRETARY. Members may obtain tickets for their friends.

### LECTURES FOR TEACHERS.

The First Course of Lectures (Thirty-seventh Annual Series), by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on "The Application of Psychology to the Work of the School," will commence on Thursday, February 4th, at 7 p.m.

The Course is meant to meet the needs of Teachers who wish to improve their acquaintance with what underlies the principles of their profession, whether they have any examination in view or not. The reading of the students will be guided, and problems set for their exercise. Every opportunity will be taken of making practical applications of psychological principles to the work of the class-room. The Fee for the Course is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

### EXAMINATIONS.

**Diplomas.**—The next Examination of Teachers for the Diplomas of the College will commence on the 28th of December, 1908.

**Practical Examination for Certificates of Ability to Teach.**—The next Practical Examination will be held in February.

**Certificate Examinations.**—The Midsummer Examination for Certificates will commence on the 29th of June, 1909.

**Lower Forms Examinations.**—The Midsummer Examination will commence on the 29th of June, 1909.

**Professional Preliminary Examinations.**—These Examinations are held in March and September. The Spring Examination in 1909 will commence on the 2nd of March.

**Inspection and Examination of Schools.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary*.  
Bloomsbury Square, W.C.

## UNIVERSITY OF ST. ANDREWS.

### L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

## THE ASSOCIATED BOARD OF THE E.A.M. AND E.C.M.

FOR LOCAL EXAMINATIONS IN MUSIC.

PATRON: HIS MAJESTY THE KING.

PRESIDENT: H.R.H. THE PRINCE OF WALES, K.G.

**LOCAL CENTRE EXAMINATIONS (Syllabus A).** Examinations in Theory at all Centres in March and November; in Practical Subjects at all Centres in March-April, and in the London District and certain Provincial Centres in November-December also. Entries for the March-April Examinations close Wednesday, February 10th, 1909.

**SCHOOL EXAMINATIONS (Syllabus B).** Held three times a year, viz., March-April, June-July, and October-November. Entries for the March-April Examinations close Wednesday, February 3rd, 1909.

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 3d. per set, per year, post free.

Syllabuses A and B, entry forms, and any further information will be sent post free on application to—

JAMES MUIR, *Secretary*.

15 Bedford Square, London, W.C.

Telegrams: "Associa, London."

## BIRKBECK COLLEGE.

BREMS BUILDINGS, CHANCERY LANE, E.C.

DAY AND EVENING CLASSES.

*Principal*—G. ARMITAGE-SMITH, D.Lit., M.A.

The College provides approved courses of Instruction for the Degrees of the University of London in the Faculties of Arts, Science, Economics, Laws, under Recognized Teachers of the University.

Well appointed Laboratories. Facilities for research. *New Session commenced on Monday, 28th September.* Full particulars on application to

H. WELLS EAMES, *Secretary*.

## UNIVERSITÉ DE RENNES (France).

### FRENCH COURSE for FOREIGNERS

OF BOTH SEXES.

WINTER TERM: From 15 Nov. 1908 to 15 Feb. 1909.

SUMMER TERM: From 1 March to 8 June, 1909.

DIPLOMAS.

Diplômes de Langue et Littérature Françaises; Doctorat.

Reduction of 50% on railway fares from Dieppe or Calais to Rennes. Apply for Prospectus to

Prof. FEUILLEBAT, Faculté des Lettres, Rennes.

## Diploma Correspondence College, Ltd.

*Principal*—J. W. KNIFE, L.C.P., F.R.S.L.  
*Vice-Principal*—S. H. HOOKE, B.A., Hons. Lond.

*Specially arranged Courses for*

LONDON MATRICULATION,  
**B.A., B.D., B.Sc.,**  
A.C.P., L.C.P., &c.

### FREE GUIDES

on application to the SECRETARY.

WOLSEY HALL, OXFORD.

## LONDON COLLEGE OF MUSIC.

(Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

PATRON: HIS GRACE THE DUKE OF LINDS.  
Dr. F. J. KARN, Mus. Bsc. Cantab., Principal.  
G. AUGUSTUS HOLMES, Esq., Director of Examinations.  
EXAMINATIONS, 1909.

The NEXT EXAMINATION in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 400 Provincial Centres in APRIL, when Certificates will be granted to all successful candidates.

The Higher Examinations for the Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma, I.C.M., and Fellowship (F.L.C.M.) take place in JULY (JUNE for Scotland and Ireland) and DECEMBER.

Gold and Silver Medals and Book Prizes are offered for competition according to the Regulations.

LOCAL SCHOOL CENTRES.—Full particulars with reference to the formation of these Centres will be forwarded to Principals of Schools upon application.

SYLLABUS for 1909, together with Annual Report, is now ready, and may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best Professors at moderate fees. The College is open 10 a.m. to 9.30 p.m.

A COURSE of TRAINING in Pianoforte and Singing for Teachers is held at the College.

VACATION LESSONS for Teachers and others are given at Easter, August, and Christmas.

T. WEEKES HOLMES, *Secretary*.

## CHURCH EDUCATION CORPORATION.

### CHERWELL HALL, OXFORD.

Training College for Women Secondary Teachers.

*Principal*—Miss CATHERINE I. DODD, M.A. (late Lecturer in Education in the Manchester University).

Students are prepared for the Oxford, the Cambridge, and the London Teacher's Diploma. Special arrangements made for Students to attend the School of Geography.

Two Scholarships of £40 each are offered students with a degree entering Cherwell Hall in January 1909.

Exhibitions and Scholarships awarded in December and July.—Apply to the PRINCIPAL.

## DENMARK HILL PHYSICAL TRAINING COLLEGE FOR LADY TEACHERS, LONDON, S.E.

Full preparation for Public Examinations. British College of Physical Education: English and Swedish systems. Massage and Remedial Work.

Board of Education: Science. Swimming and Sports.

Schools supplied with fully qualified Sports Mistresses. For particulars apply—Miss E. SPERLMAN STANGER, Trevena, Sunray Avenue, Denmark Hill, London, S.E.

INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

ASSOCIATION OF TECHNICAL INSTITUTIONS.

ASSOCIATION OF PREPARATORY SCHOOLS.

WELSH COUNTY SCHOOLS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION.

Interviews (preferably by appointment) 12 p.m.-1.30 p.m., and 3 p.m.-5.30 p.m. Saturdays, 12 p.m.-1 p.m.

Crown 8vo, 348 pages, price 3s. 6d.

**SCHILLING'S SPANISH GRAMMAR.** Translated and edited by FREDERICK ZAGEL.

FRANCIS HODGSON, 89 FARRINGTON STREET, LONDON, E.C.

Crown 8vo, 164 pages, price 2s. 6d.

**SCHILLING'S "DON BASILIO."** A Practical Guide to Spanish Conversation and Correspondence. Translated and edited by FREDERICK ZAGEL.

FRANCIS HODGSON, 89 FARRINGTON STREET, LONDON, E.C.

**THE HAMILTONIAN SYSTEM.**

A Short and Easy Method of Learning a Foreign Language by a Close Interlinear Translation.

"This System differs from the ordinary literal translations, in giving a truly literal translation placed word for word under the words of the original, which are only so far changed in order as seemed essential to the sense. The aim is to be strictly literal, and the student is at once saved all trouble about the meaning of each word."  
 —MR. RICHARD A. PROCTOR, in *Knowledge*.

Limp cloth, price 1s.

**CÆSAR'S GALLIC WAR. Book I.** With Text as well as Interlinear Translation. Books I. to VI. Price 4s. 6d.

THE PRINCIPAL,  
University Tutorial College,  
32 Red Lion Square, Holborn, W.C.

**BURLINGTON  
CORRESPONDENCE  
COLLEGE.**

Principal—Mr. J. CHARLESTON, B.A. (Honours Oxon. and Lond.)

TUTORS.—The Staff includes Graduates of London, Oxford, Cambridge, and Royal Universities.

METHOD.—Thoroughly individual system, which ensures the closest attention to the needs of each student.

**Rapid Preparation for:—**

- Matriculation,
- Intermediate Arts and B.A.,
- Intermediate Science and B.Sc.,
- L.L.A. (St. Andrews),
- COLLEGE OF PRECEPTORS' DIPLOMAS.

Address—THE PRINCIPAL,  
Burlington Correspondence College,  
OLAPHAM COMMON, LONDON, S.W.

Messrs.  
**TRUMAN & KNIGHTLEY,**  
LTD.,  
Educational Agents,

158 to 162 OXFORD STREET,  
LONDON, W.

Telegrams—"TUTORESS, LONDON."  
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

**A.—EMPLOYMENT DEPARTMENT.**

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

1908.

## COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, LONDON, W.C.

## Lectures for Teachers

ON THE

## SCIENCE, ART, AND HISTORY OF EDUCATION.

## THE PRACTICAL TEACHER'S PROBLEMS.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The Second Course of Lectures (Thirty-sixth Annual Series) commenced on Thursday, October 1st, at 7 p.m.

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

## SYLLABUS.

I. (Oct. 1.) *The Teacher's Library*: three main sections, books needed by teacher as (a) human being, (b) knowledge-monker, (c) educator: (a) and (c) too often neglected: special value of books used by teacher during childhood: the upper and lower limit of professional books under (c): possibility of excess in educational theory: plea for greater recognition of newer class of literary presentations of educational problems: teaching "the inarticulate profession": practical help that may be had from such books: how to use educational periodicals.

II. (Oct. 8.) *How to get some good out of Psychology*: need for a change in the point of view: rational and experimental psychology: need of both by the teacher: danger of pedantry in both: place of the proposed middleman between the psychologist and the practical teacher: the teacher must be allowed to direct the psychologist (not the psychologist the teacher) as to the results to be sought: list of things the teacher wants to know, compared with the list of things the psychologist wants to tell him: teacher must not confine himself to child-psychology, his profession demands the treatment of his fellow adults as well.

III. (Oct. 15.) *How to deal with Officials*: an example of the teacher's need of adult psychology: the difference between the human being and the official: the invariable third: official questions and answers: how to interpret them: the official mind and how to approach it: an instructive bit of law: the official art of compromise: manipulation of conflicting official regulations: the whole question reviewed from the point of view of the teacher as himself an official.

IV. (Oct. 22.) *How to deal with Parents*: generally wrong attitude of teachers towards parents: *in loco parentis* theory: "foster parent": getting at parents through children and *vice versa*: parents' antagonism to school authority has definite relation to their social rank: special difficulties of different classes of teachers: conflicting influences of fathers and mothers: genuine co-operation between school and home: golden mean between parental indifference and interference.

V. (Oct. 29.) *How to Learn*: the other side of teaching: absence of the desire to know: how to rouse it: even when desire is present there is difficulty enough: kinds of learning: reproduction: the dynamic view: constructive learning: rhythm of learning: concentration and diffusion: fallacies about thoroughness: temporary and permanent learning.

VI. (Nov. 5.) *Class Management and Teaching*: ordinary psychology deals with the individual: teacher needs collective psychology as well: relation of class to crowd or mob: minimum number to constitute a class: sympathy of numbers: class leaders: difference between class teaching and private coaching: advantages and difficulties in having to teach several persons at the same time: the average pupil: the type: the composite: the ghostly class.

VII. (Nov. 12.) *How to combine Lecturing and Teaching*: teachers' general disapproval of lecturing: nature of lecturing as opposed to teaching: newer methods of teaching history, geography, and geometry are demanding a certain amount of lecturing: dangers of lecturing in schools as compared with colleges: the pupils' share in the process of lecturing: the art of listening: intermittent hearing: the lecturer's relation to the text-book.

VIII. (Nov. 19.) *Written work in School*: absolute necessity for a good deal of written work in school: note-taking, exercise writing, essays: drudgery of correction: the surd of efficient correction in (a) quantity, (b) quality: co-operative correction: psychological dangers of correction: the norm of correction: spelling and dictation exercises: analysis of most common errors and their causes.

IX. (Nov. 26.) *Verbal Illustration*: nature of illustration in general: distinction from exposition: mental backgrounds: relativity of illustration to the materials at command: exemplification: enumeration: nature of analogy and its place in illustration: the metaphor and other illustrative figures: how to find suitable verbal illustrations: source books of illustration.

X. (Dec. 3.) *Graphic Illustration*: the actual object and the model as means of illustration: the value of the picture as illustration, especially as compared with a verbal description: different illustrative values of a picture according as it is used for intellectual, moral, or aesthetic teaching: the diagram as compared with the picture: dangers that lurk in diagrammatic illustration: certain weaknesses in our space sense: supremacy of the straight line in illustration.

XI. (Dec. 10.) *How to deal with Dullness*: nature of dullness: its relativity to time and subject: the temporary dunce: the permanent dunce: the all-round dunce: the specialized dunce: the scale of dullness: the "defective point": subjective and objective dullness: stage at which objective dullness is welcomed by the pupil: the tyranny of "problems," and the legitimate claims of the relatively dull.

XII. (Dec. 17.) *The Problem of Examinations*: various functions of examinations: teacher as examiner: how to prepare an examination paper: allocation of marks: how to make the best of the external examiner: the personal equation: the use of "old examination papers": preparation of "set books": "the index" in revision of examination work: how to prepare pupils for an external examination with the minimum educational damage.

**The Fee for the Course of Twelve Lectures is Half-a-Guinea.**

\*. The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.

LONDON: LONGMANS & CO., PATERNOSTER ROW, E.C.

# THE SCHOLARS' CARTOONS.

A SERIES OF DECORATIVE LITHOGRAPHS

ILLUSTRATING

GREAT EVENTS AND INCIDENTS OF BRITISH NATIONAL LIFE.

Designed by eminent British Artists, and reproduced with the advisory assistance of Educational Authorities.

FIRST SERIES in course of publication, containing Original Designs by—

**WALTER CRANE; FRANK BRANGWYN, A.R.A.; CAMPBELL TAYLOR;**  
**JOHN HASSALL; Professor GERALD MOIRA; SPENCER PRYSE.**

*The first four Prints created an enormous interest at the Moral Education Congress.*

PROSPECTUS GRATIS. PRINTS SENT ON APPROVAL.

**HANFSTAENGL, 16 PALL MALL EAST, S.W.**

## Modern Aids for Teaching Geography.

### BACON'S Excelsior Maps. CONTOUR EDITION.

*Now Ready: EUROPE, ASIA, AFRICA.*

*Ready in December: NORTH AMERICA, SOUTH AMERICA.*

*Ready early in 1909: AUSTRALIA and BRITISH ISLES.*

Messrs. G. W. BACON & CO., LTD., are now issuing a New Series of their well known Excelsior Wall Maps. The New Series is coloured Orographically instead of Politically. The Heights of Land are shown by different shades of Green and Brown, and the Depths of Water by varying shades of Blue. The same Bold Outlines and Lettering as in the original series are retained throughout.

The Contours have been prepared with the greatest care from Governmental and other Surveys, and these Maps will certainly rank as one of the most popular, useful, and satisfactory aids for carrying out modern ideas of teaching Geography.

Size about 5 feet by 4 feet.

**Price 16s.**

# Cambridge University Press

**The English Grammar Schools to 1660 : their Curriculum and Practice.** By FOSTER WATSON, M.A., Professor of Education in the University College of Wales, Aberystwyth.

Crown 8vo  
6s. net.

A history of the practice of the schools, of their curricula, and of the differentiated subjects of instruction, in distinction from the history of the theories of educational reformers as to what ought to be taught, and how existing methods might be improved. Throughout, the attempt has been made to describe really representative documents and school text-books, as the safest way of securing a sound basis for the study of the school practice of the time.

**Chaucer.—The Clerkes Tale and the Squieres Tale.** Edited, with Introduction, Notes, and Glossary, by L. WINSTANLEY, M.A., Lecturer in English in the University College of Wales, Aberystwyth.

Foolscap 8vo  
2s. 6d.

The editor has attempted to give a clear and concise outline of Chaucerian grammar, but the main stress has been laid, as is perhaps fitting in one of the greatest of English poets, rather on the literary than on the linguistic side. The history of the "Clerkes Tale" is given much more fully than can be found elsewhere, comparing it with the originals in Petrarch and Boccaccio, and also with the most interesting of later versions, while the sources of the "Squieres Tale" have been investigated as carefully as our existing knowledge admits.

**The Electra of Sophocles.** With a Commentary, abridged from the larger edition of Sir RICHARD C. JEBB, by GILBERT A. DAVIES, M.A.

Crown 8vo  
4s.

This abridgment follows the same lines as its predecessors in the same series. The editor has made it his aim to omit nothing which contributed directly to the elucidation of the play, but in very few cases, has made small alterations and additions with the view of making particular points clearer.

THE REVISED VERSION FOR SCHOOLS

With Introduction and Notes.

**The Gospel according to St. Luke.** Edited by the Rev. E. WILTON SOUTH, M.A. With 2 Maps.

**The Acts of the Apostles.** Edited by the Rev. C. WEST WATSON, M.A. With 3 Maps.

Foolscap 8vo  
1s. 6d. net  
each.

The present editions will, it is hoped, serve a good purpose in drawing the attention of young scholars to the importance of some of the changes made in the Revised Version, and in presenting in a clear and intelligible form the best and most approved results of recent theological works on these books.

**Trees : A Handbook of Forest Botany for the Woodlands and the Laboratory.** By the late H. MARSHALL WARD, Sc.D., F.R.S.

Vol. IV.  
Fruits.  
Crown 8vo  
4s. 6d. net.

The Author intended to write three volumes in addition to those already published, but was not spared to complete his full scheme. He, however, left behind sufficient manuscript to make up two volumes. The present volume has been seen through the press by Mr. Percy Groom, and will be succeeded by a final volume, which is now in the press.

## ENGLISH LITERATURE FOR SCHOOLS

A NEW SERIES OF ENGLISH TEXTS WITH BRIEF NOTES.

Extra fcap. 8vo, cloth. Price 1s. 4d. each.

**Defoe.—Memoirs of a Cavalier.** Edited, with Introduction and Notes, by ELIZABETH O'NEILL.

**Cobbett.—Rural Rides.** Selected and Edited by J. H. LOBBAN, M.A.

**Hazlitt.—Characters of Shakespeare's Plays.** Edited, with Introduction and Notes, by J. H. LOBBAN, M.A., Lecturer in English Literature, Birkbeck College, London.

**Captain John Smith.—True Travels, Adventures, and Observations in Europe, Asia, Africa, and America, and the General History of Virginia, New England and Summer Isles, Bks. I.—III.** Edited, with Introduction and Notes, by E. A. BENIANS, M.A., Fellow of St. John's College, Cambridge.

Further volumes are in preparation and will be announced shortly.

## The Educational Times.

### *German in the Schools.*

A LITTLE over a year ago we reviewed, not very cheerfully or very hopefully, the position of German in English education. We laid stress upon the high importance of a wider and fuller knowledge of German—the educational advantages of the study of the language, the literature to which it is the key, the necessity of a command of it for the purposes of research in every department of study, and its political value for the removal of national misconceptions so “readily exaggerated by the less enlightened press of both countries,” to say nothing of its social and commercial utility. Yet another year's experience scarcely tends to render the outlook more hopeful. Elsewhere we reproduce a letter on the position of German in our secondary schools addressed to the President of the Board of Education by five very important societies fully cognizant of the facts of the case, and representing not merely literary and pedagogical, but also scientific and commercial, interests. The combination of the Modern Language Association, the London Chamber of Commerce Education Committee, the Society of University Teachers of German, the Teachers' Guild, and the British Science Guild masses a weight of opinion that is not to be ignored or undervalued. It is obvious, on the face of the matter, that no such combined representation would be possible if we were not face to face with a really serious tendency of educational administration in a direction that must lead to very unfortunate, if not to disastrous, results.

The evidences of the decay of German in secondary schools below the first rank call for very careful consideration. The first test of the combined societies is applied to the number and the percentage of candidates at the Oxford and Cambridge Local Examinations. In the Junior Oxford Locals, 440 out of 3,226 candidates took German in 1895; 479 out of 8,327 in 1907—a declension from 13·7 to 5·7 per cent. In the Senior Oxford Locals, 351 candidates out of 1,414 took German in 1895; 360 out of 6,370, in 1907—a declension from 24·2 to 5·6 per cent. While the total number of candidates has enormously increased, the number taking German has remained practically stationary. In the

Junior Cambridge Locals, 396 boys out of 5,033, and 557 girls out of 2,696, took German in 1895; 345 boys out of 4,671, and 314 girls out of 3,034, in 1906: the percentage of boys showing a slight drop, from 7·5 to 7·3, and the percentage of girls declining from 20·6 to 10·3, exactly one-half. The total of boys is somewhat diminished, but the falling-off in girls is strongly marked, almost as strongly as the percentage. In the Senior Cambridge Locals, 80 boys out of 680, and 426 out of 1,272 girls, took German in 1895; 108 boys out of 1,721, and 216 girls out of 2,015 in 1906: the percentage of boys dropped from 11·7 to 6·3, while the percentage of girls fell from 33·5 to 10·7. The total of boys increased considerably, while the girls fell off by one-half. Looking at the objects of candidates, so far as one may essay to divine them, one may doubt whether it is quite clear that the percentage test is not to be taken with a certain qualification. There is probably always a considerable proportion of candidates that want the certificate on the lowest terms, without any special regard to the superior utility of any particular subject in their subsequent career; and German may not rank in popular opinion among the softest of the options. However, the only comforting outcome of the review seems to be that the absolute number of boy candidates has somewhat increased in three of these divisions and has fallen off only in one—the Junior Cambridge Locals: the great débâcle is in the total numbers of girl candidates—as far as the separate figures are furnished—and in the percentages. It seems reasonably safe to say that the real meaning of the results demands an inquiry into the nature of the examination papers, and perhaps also into the methods of teaching. Still, the best feature of the tables only shows a practically stationary condition over a period of a dozen years; and, whatever deduction (if any) may fall to be made from the validity of the percentage principle, it is more than sufficiently plain that the position is very far from what it ought to be.

The letter further points to recent reports of the Board of Education certifying a grievous decline of the study of German in Wales and in Scotland, as well as in England. Only last month we summarized the lament of the Scottish Modern Languages Association's memorandum based upon replies to a circular sent to thirty of the principal higher-

grade and higher-class secondary schools. The Education Department of the London Chamber of Commerce is hoarse with complaints of the inadequacy of the supply of candidates for clerkships that possess a competent working knowledge of foreign languages, and these complaints bring us back to the schools that send pupils to the Oxford and Cambridge Local Examinations, as it is from them that the most of the clerks come. The Universities also suffer in natural course. With such conditions prevailing in the schools of supply, it is easy to understand that they "find it increasingly difficult to obtain students prepared to take up the higher study of German." And how far can they go in research without an adequate command of German? The conclusion is not far to seek. Progress in every department—educational, literary, scientific, commercial—is menaced with retardment. This weighty address to the President of the Board of Education was not penned a day too soon.

What can the President do to save the situation? The letter suggests that he might issue a circular to Education Authorities, governing bodies, and the principals of secondary schools, calling their attention to the dangers involved in the decay of the study of German and emphasizing the multiplied advantages of a knowledge of the language. If such a reminder ought not to be necessary, there can be little doubt that it would in some sensible measure be effective. Perhaps there is more to be expected from some way of getting round Latin. Nobody questions the value of Latin, but the superior claims put in for it rest more upon traditional ideas than upon the actual demands of modern life. Avoiding a frontal attack, the letter urges "that the Board should encourage and foster schools of the type of the German *Realschule* and *Oberrealschule*, in which two modern languages, but not Latin, are taught." This is in the right direction, but there is too much novelty about it—some may even scent a menace in it—to hope for the adoption of the suggestion without a course of urgent insistence. It is only fair, however, that "it should, as a general rule, be required that schools should make provision for the teaching of German to those pupils who wish to learn it, as it is now required that provision should be made for the teaching of Latin." The example of German study of English, and of the widespread teaching of German in other countries, should also carry weight. And the more we think of it, the more we feel the desirability of some careful inquiry into the methods of teaching German and into the character of examination papers in German; and perhaps also into the ways of regarding German as a paying examination subject, from the point of view of both teachers and pupils. In any case the question now raised must not be allowed to rest without a satisfactory solution.

## NOTES.

THE prolonged negotiations for an agreed settlement of the thorny points of the education controversy have led to yet another Education Bill. On all grounds, it seems much better to start afresh than to graft the new provisions on

the old Bill. The whole matter can be more satisfactorily reviewed in a regular second-reading debate. All friends of religious and educational peace will join in tribute to the labours of the representatives of the different interests at stake. Elsewhere we set out the main points of the new measure. Already the voice of dissatisfaction is loudly heard through the congratulations to the promoters and framers of the settlement, and forecasts of continued warfare are not wanting. "Since the Reformation," says the Bishop of Manchester, "there has been no such malversation of Church property as is proposed by this Bill: war—bitter and protracted war—is far more likely to result than peace." "The new Bill," says Mr. Hirst Hollowell, "is the worst for education and civil liberty of the four Bills introduced by the present Government." Father Bernard Vaughan thinks the Bill "almost as plausible and clever as it is dishonest and wicked"; his soul is "fired with indignation and with shame and humiliation." The N.U.T. is still in arms against contracting-out and right of entry. After all, a compromise means that you are not to have all the butter to your own side of the dish. It is not easy for militant debaters to look calmly around a question and see their opponents' case as clearly as they see their own. All this was to be anticipated, and the clamour will be re-echoed in Parliament. We are not prepared for any development of strategy that will interfere with the passing of the Bill. The rights and wrongs of the case will be more accurately estimated after a few years' experience of the working of the measure. Meantime the prospect is materially improved, and large steps are taken—deductions notwithstanding—towards a truly national system.

It is matter of regret that the constitution of a Registration Council remains still in suspense. Some six weeks ago Mr. Butcher asked the reasons for the delay; but Mr. Runciman only repeated the reasons already given. The weight of the protests "from various important sections of the teaching profession" against the educational delegates' proposals was still held to "make it difficult to regard a Council so constituted as representative of the profession as required by the statute." Mr. Runciman had referred these protests to the Committee, and was "hoping to receive from them revised proposals which will command general agreement." Very soon thereafter the Committee, after consideration of the White Paper (Cd. 4185), the report of the delegates, and a number of letters received from societies claiming representation, communicated to Mr. Runciman their resolution thereon, "that the plan of a Registration Council already recommended be further pressed upon the Board of Education," adding the opinion that, while some members thought certain modifications might be submitted to the Board as desirable, yet "these modifications can only be made by the Board, which alone is in a position to arbitrate between rival claims." The view adopted by the Committee seems perfectly sound. The profession would be glad to see indications of the willingness of the Board to contribute as suggested to the solution of the difficulties involved. It is time there were decided signs of progress.

THE *Morning Post*, reviewing the grievances of assistant mistresses in secondary schools, points out that, in comparison with the assistant master (who has "at any rate won the substantial advantage of some slight increase in security of tenure"—after a dozen years of persistent effort), the assistant mistress, "whether as regards tenure, salary, or social environment, is in every way in the more deplorable position of the two." On the question of remedy, our contemporary remarks:

The remedy for at any rate the more tangible of these grievances lies in some degree with the Board of Education. But to an even greater extent it rests with the women themselves. As soon as the Board assumed responsibility for secondary education, their inspectors reported with one voice that high-school mistresses were overworked and underpaid. The result has been that in both these points improvement is already discernible. Nor is it over-sanguine to hope that the Board's ameliorating influence will be maintained and extended, and that the question of tenure will also be dealt with in time. But, what is still more important, this prompt recognition of their grievances has encouraged women teachers to demand that in future at educational congresses and conferences, where, hitherto, consideration for their pupils' welfare has provided the main topics for discussion, some attention shall be paid to the conditions of their own life and work. The economic reasons for the original inadequacy of salaries are too well known for recapitulation here. But that women should still continue to hold ill-paid posts is in a large measure their own fault. So long as such posts are accepted, whether through force of circumstances or in a spirit of altruism, so long will they continue to be offered, regardless of the protests of individuals. Up to the present these protests have never taken shape in united action, and there seems to be a tendency to wait for some general panacea such as Parliamentary representation, in spite of the fact that so far his measure of political power has done little enough towards raising the status of the assistant master. Some association will probably be formed sooner or later to deal exclusively with the question of salary, and at some future date it may be possible, as a result of organized co-operation, to finance impecunious teachers during temporary non-employment and so prevent any acceptance of underpaid work. But, unless women are prepared as a body to rely upon themselves in the matter, and to look to the interests of the profession as a whole, any partial attempt at remedy can only end in failure.

THE Joint Committee of University and labour representatives on Oxford and the education of workpeople is energetically tackling a very difficult practical question—how to bring Oxford back to the people. Tutorial classes, financed half by the colleges and half from local sources (grants from the Board of Education, trade unions and other labour bodies), have been, and will increasingly be, established in industrial centres, not for the children of workpeople, but for adult workpeople themselves; and there is a strong demand for the sort of education provided, and, in spite of many difficulties, such as overtime, broken hours, and unsettled conditions of work, reports speak of excellent results. The connexion with the University is established in two ways: first, there will be a selection of the best students at the end of the two years' course, and the successful candidates will be provided with scholarships to enable them to go into residence at the University; and, secondly, it is recommended that all district tutors shall reside and lecture in the University during the summer term. It is, indeed, refreshing to find Oxford in the mood of entering upon such a strenuous and such an unlikely campaign. There is a new spirit in the attempt. There can be nothing but good in the endeavour to interest and to instruct the adult workpeople; and the drafts to Oxford are sure to be well received, and to disseminate and drive home as many fresh ideas as they imbibe. Everybody must wish the best success to the movement. But, after all, it

is a very long way from bringing the people back to Oxford. Why not at once set about arrangements for enabling the poorest youth with brains to go to Oxford as freely as he can go to any Scottish or German University?

THE *Cambrian News* offers stringent criticisms upon the business management of the Welsh University Colleges, and particularly upon the College at its own door in Aberystwyth. The three Colleges want a State contribution of some £30,000 a year towards their maintenance. "There are about fifteen hundred students—this is a liberal estimate (says our contemporary)—and it seems to us that the first duty of the Colleges is to increase the fees of students, to cut down expenses, and to effect other economies which would show that each College was living within its means, however cramped its work might be." Then they might proceed "to prove that they require additional help, not for maintenance, but for development." As far as our contemporary can ascertain, "there is no really efficient managing body to see to the management of the College" at Aberystwyth. "The Court of Governors is practically of no use. It meets four times a year, and does nothing. It cannot do anything. The body is too large, and meets too seldom, to exercise any efficient control, either upon expenditure or management." "The College Council is equally powerless," the greater legal authority resting with the Governors. "The Senate has no power worth mentioning, and is very inadequately represented on the Court of Governors and the Council." Whatever may be the actual facts, and granting that these criticisms may be more or less overcoloured, recent differences of opinion in Welsh academic circles have drawn attention to considerable elements of dissatisfaction; and the present journalistic onslaught may be taken as another symptom of a state of things that demands inquiry. In any case, a grant of some £30,000 a year for maintenance ought to be preceded by a competent and independent investigation.

AT the same time, the wiser course is to be generous, without too minute exploration. It is well to live within one's means, but a state of bareness and cramp is not particularly favourable to development. The personal comparison, in fact, does not in all points correspond with the academic. However, it will be agreed that the administrative department should be sound and capable, and that steps should be taken to see that public grants are first needed and then properly applied. The Chancellor of the Exchequer has the Welsh claim before him, and, though he is an enthusiastic Welshman, has spoken on the subject with measured restraint, even before the University of Wales on an occasion when he might be expected to be expansive. True, he said he was "firmly convinced that it was his duty, not as a Welshman, but as Chancellor of the Exchequer, to review the whole of the circumstances and conditions, not merely of Wales, but of Ireland, and the demands of English and Scotch education to make a very substantial contribution towards the work of the University." But he told Bangor to complete her buildings out of her own pocket, and indicated that he was thinking of bestow-

ing his contributions in salaries—certainly the most necessary and the most effective application—and that even research may have to wait for special endowment. "It would be the worst thing in the world for the Welsh people," he said, "if the Government were to do everything for them in the way of building up their educational system." There is express ground, therefore, for anticipating that Mr. Lloyd George will satisfy himself as to the real needs of the Welsh colleges before dipping his hand into the Exchequer for them. If there be any such administrative futility as is alleged so roundly by our Aberystwyth contemporary, that requires different treatment.

### SUMMARY OF THE MONTH.

The main provisions of the new Education Bill may be summarized as follows:—

1. Rate aid to be confined to schools provided by the Local Education Authority. No child may be compelled to attend a school not so provided.
2. A duty is imposed on the Local Education Authority to provide free accommodation in public elementary schools for all children whose parents desire such accommodation.
3. No teacher of a provided school may be subjected to religious tests or required to give religious instruction.
4. Religious instruction in conformity with the Cowper-Temple Clause to be given in the first three-quarters of an hour in each school day for any child whose parents desire him to receive it.
5. "Right of entry" for denominational instruction in provided schools on two mornings in the week, under conditions.
6. Owners of an existing voluntary school subject to charitable trusts may transfer the school by agreement to the Local Authority.
7. A Local Authority is given power to establish a Religious Instruction Committee, to whom all questions as to the syllabus of religious instruction provided by the Authority will stand deferred.
8. Voluntary schools (except in single-school parishes) may "contract out" and receive a Parliamentary grant—but no rate aid—on the sliding scale.

The "right of entry" (Clause 2 of the Bill) takes the form of provision for affording facilities in provided schools for denominational instruction from 9 to 9.45 on two mornings in the week to children whose parents desire them to receive it, no part of the cost being borne by the Local Authority. Assistant teachers, if permitted by the Local Education Authority, may volunteer to give religious instruction under the clause. A present head teacher of a voluntary school transferred under the Act may also volunteer, with permission of the Authority, so long as he holds his present appointment, or, in case of his transference to the head teachership of any other transferred voluntary school, for five years after the passing of the Bill. The Local Authority may not withhold permission unless the teacher's services are required for the general conduct of the school. Payment is to be made to the Authority in respect of the time spent by the teacher in giving this instruction, in proportion to the salary of the teacher and the time devoted to the instruction.

CLAUSE III. prescribes the conditions under which a school not provided by the Local Education Authority may be recognized as a public elementary school, and thus share in the Parliamentary grant. The school must not be a school in a single-school parish; there must be at least thirty children in attendance; it must satisfy the conditions of the code, and must attain an equal standard of efficiency, as regards teaching staff, school premises, and secular instruction, with provided schools. The school must belong to an Association recognized by the Board of Education for the purpose, and the Parliamentary grant will be paid to the Association. No Association will be recognized unless it is an Association of schools of a certain denomination for the whole of England and Wales.

THE amount of the grant is not an average 47s., as in the case of Mr. McKenna's Bill of this year. There is a sliding scale, varying upwards, in inverse ratio to the size of the school:

Attendance at the School as computed for the purpose by the Board of Education.		Grant per Scholar.
From 30	to 50	
" 51	" 100	55s. 0d.
" 101	" 150	54s. 6d.
" 151	" 200	53s. 6d.
" 201	" 250	52s. 6d.
" 251	" 300	51s. 6d.
" 301	" 350	50s. 9d.
" 351	" 400	50s. 0d.
" 401	" 450	49s. 6d.
" 451	" 550	49s. 0d.
" 551	" 700	48s. 6d.
" 701	" 950	48s. 0d.
" 951	" 1,300	47s. 6d.
" above	1,300	47s. 0d.

This means a considerable increase in the financial responsibility of the Exchequer and a corresponding saving of the rates.

At a meeting of Roman Catholic teachers in London (November 21) the following resolution was passed:—

That this meeting of London Catholic teachers vigorously condemns the proposal for contracting-out contained in the Education Bill, as in its very essence it must, of necessity, be unjust and uneducational, and pledges itself to uncompromising opposition to any legislative proposals which would (a) impose civil disabilities upon Catholic ratepayers; (b) rob Catholic children of their just rights to the full benefits of a national system of education; (c) penalize Catholic teachers by damaging their professional status, reduce their salaries below the recognized scale, and inevitably lead to a recrudescence of the unfair and intolerable conditions to which the Catholic teaching body was subjected prior to 1902.

The tenth meeting of the Federal Council of Secondary School Associations was held (October 28) at the College of Preceptors, Canon Bell in the chair. The position of the negotiations concerning the new Registration Council was considered, but, as the members of the Council were already involved in the action of Dr. Gow's committee, no further steps were taken. A motion from the Assistant Mistresses' Association for a Committee to consider the general question of curricula in secondary schools was discussed, but not carried, the Council feeling that the proposal could not yet be executed efficaciously. The interim Report of the Committee on the Incidence of Taxation was received, and the Committee was instructed to continue its investigations, which had already produced evidence of much inequality and hardship. The Report upon the Constitution and Functions of the Council, prepared by a special Committee, with Dr. Gow as assessor, was received, and it was decided that before further steps were taken the Chairman should ascertain the views of the Head Masters' Conference upon the general question. The Draft Superannuation Scheme of the National Association of Local Government Officers was considered, and it was agreed that the Chairman, with Mr. Cholmeley and Mr. C. H. Greene, should be constituted a special committee to examine and report upon the scheme and recommend action.

THE London County Council Education Committee is considering an extension of the Council's trade schools for girls. The first class for definite trade instruction was established at the Borough Polytechnic in September, 1904, for the training of girls in waistcoat-making. In the following year classes in dressmaking, upholstery, and designing and making of ready-made clothing were authorized, as was also the award of eighty scholarships tenable at the institutions where these classes were held. The progress of these classes was considered sufficiently satisfactory to justify their further extension, and last year additional classes were formed in the above-stated subjects, and also in corset-making, ladies' tailoring, and laundry work. It is now proposed to organize additional classes in these subjects, and also in photography and millinery, at the London County Council Trade School for Girls, the Hammersmith School of Arts and Crafts, and the Borough and Woolwich Polytechnics. The cost, which will be spread over three years, will be £6,400. All the girls who completed their training in April were able to find remunerative employment with good firms. In several important trades the highest positions are often filled by foreigners, who are employed solely owing to their better training and higher technical skill. The Council's schools will, however, train

a) body of workers capable of taking the highest positions attainable.

THE annual general meeting of the Association of Teachers in Technical Institutions was held (November 7) at St. Bride's Institute. Mr. Chas. Harrap, the President, congratulated the members on the steady progress which has been made. He said it is time there was a technical college for training teachers. No one knows better than the members of the Association how difficult it is to get competent technical handicraft teachers—men who have worked at the trade and know how to teach it. Such men, when found, deserve the best treatment from Authorities in order that they may be retained for the benefit of technical instruction generally. Among the difficulties which have to be overcome, if English technical education is to be successful, is the necessity of obtaining the concurrence of both employers and employees in any scheme intended to substitute trade-school training for part or whole apprenticeship. The London County Council has been able to form two consultative committees, one for the book-binding and another for the printing trades, each committee consisting of three employers, three representatives of the employees, and three London County Council nominees. One of these committees has completed its preliminary work, and in due course an experimental school is to be tried where lads can undergo a proper preparatory training for the trade. The youths will generally be selected by scholarship tests, and may enter the preparatory trade training school from twelve and a half years of age. The newly elected President of the Association is Mr. J. Wilson, head of the chemical department, Battersea Polytechnic, S.W., who has acted as Honorary Secretary of the Association since its formation in 1904. His successor in that office is Mr. P. Abbott, head of the mathematical department, Regent Street Polytechnic, London, W.

THE Association of Teachers in Technical Institutions has addressed a letter to the Board of Education drawing attention to the conditions of the Whitworth Scholarship and Exhibition competitions. The Association states, in response to requests from teachers who have been for years preparing candidates for these competitions, that there is a general belief that the competitions are not now in full accord with modern requirements of engineering study and training, and has drawn up the following proposals, which have been put before all engineering teachers in the Association, as well as several engineers who are Whitworth scholars, and therefore may be looked upon as an expression of present opinion on the subject. The objects of the proposals are to prevent mere cram and to encourage systematic training, as well as to give preference to engineering subjects as such. They are also intended to encourage regular workshop engineering extending over at least thirty-six months, since Sir Joseph Whitworth's intention was specially to encourage the practical mechanical engineer. The Association points out that a modern scheme of training for mechanical engineering is incomplete which does not give an opportunity for considerable electrical engineering study and practice, and expresses a hope that the Board of Education will see its way to accept the examinations of the City and Guilds of London Institute in electrical engineering. The principal changes proposed by the Association are: (1) introduction of a qualifying test; (2) a "special" freehand drawing examination to be held; (3) division of subjects into two groups; (4) a new scale of marks; (5) "relative value" factors; (6) introduction of electrical engineering as a subject; (7) more rigorous workshop qualification; (8) the deletion of building construction and drawing and naval architecture as not strictly belonging to mechanical engineering. With a view to embody the above suggestions, they submit an examination scheme. The Council urges that candidates' credentials in the matter of workshop qualifications should be very carefully investigated, and, further, that the time spent in the workshops of a mechanical engineer shall not be less than thirty-six months. Under the present rule it is possible for a candidate to qualify with eighteen months' shop practice.

MR. HENRY D. KIMBER, Chairman of the City of London School Committee, entertained a large and distinguished company at dinner in Lincoln's Inn Hall (October 30), in celebration of the foundation of "The City of London Asquith Scholarship" of £100 a year, tenable at Oxford or Cambridge for three (or four) years. Mr. Asquith made some interesting personal statements:

Among the many and varied congratulations which I have received

since I had the honour of attaining to my present position I can assure you there is none which has gone more nearly to my heart, or for which I feel more sincerely grateful, than that which you have given me to-night. In the first place, I desire to thank the Corporation of London and the Lord Mayor, its honoured representative, for the great distinction which they have done me—one of the most welcome tributes that could be paid to any man—in founding and naming with my name a scholarship in my old school, by which I hope and believe that those who like myself could not, from their own means, or the means of their friends, have by any possibility achieved the advantage of University distinction may in time to come be able, at Oxford or Cambridge, to pursue the studies they have begun at our old school. I remember with gratitude myself that it would not have been possible for me but for the benefactions first of our pious founder, John Carpenter, and then of men like Tite and others, and of the great City Companies, such as the Grocers' Company, to which I am more especially bound to pay my acknowledgments—it would not have been possible for men like myself, born in a humble station in life and not endowed with this world's goods, to have pursued the studies begun at school if it had not been for the beneficence, the wise and far-sighted beneficence, of men in days gone by, which, I am glad to think, is going to be supplemented and rivalled by the Corporation of to-day. And, next, I must acknowledge in the simplest but sincerest possible words the pleasure it gives me to find myself to-night among old schoolfellows, some of them contemporaries, some of them of a later generation, but all united by one common bond of association, of affection, and of loyalty to the City of London School.

MR. ASQUITH paid a handsome and thoroughly well deserved tribute to his distinguished Head Master:

And when I try, as I sometimes do, not to speculate upon what might have been, but to remember what was, and to analyse that debt, while I acknowledge with gratitude much that was due to the stimulating and stirring companionships of boyhood, I find its greatest factor to be the example and the teaching of our old head master, Dr. Abbott. A scholar of the finest type, he taught his pupils as well as any schoolmaster of his time the meaning and the just use of words, but, though bred himself in the straitest school of the old Cambridge scholarship. he was, I think, one of the first of our head masters to show to his class how Shakespeare and Dante might be illuminated and understood by the application of the same scientific methods which had long ago been applied to the classics of Greece and Rome. I see some here to-night—Mr. Rushbrooke, Dr. Garnett, and Mr. Hebb, and I dare say if my eyes had long enough vision I should see others—who sat in the sixth form in those days, and I am perfectly sure that there is not one of them who would not agree with me that those stimulating and vivifying lessons, in which all the acumen of scholarship and all the wealth of learning which Dr. Abbott had derived from close converse with the classics, were brought to bear with intensity, force, and illuminating power upon the study of every modern author and of every period of history. But, my old schoolfellows, behind and beyond all that there was something more. There was the force, the influence, the personality of a man cultured, disinterested, austere, but, at the same time, with a vivid interest in the affairs of mankind and in everything that concerned the boys who came under his charge, and I am perfectly certain there is not a full-grown man here who in those days—the days of the sixties and the seventies—was under Dr. Abbott's tuition and guidance who will not agree with me that the most precious possession we took away with us from the City of London School, whether to Oxford or Cambridge, or to the works of business and to the avocations of life, was the sense of that strong, self-sufficing, but, at the same time, wide-spread, vivifying, many-sided personality to which many of us have looked back in the stress and strain of life as the best example and the best influence. There is nothing, I can honestly say to you, that gives me greater pleasure to-night in meeting this gathering of my old schoolfellows than being able to join with you in this loving and grateful tribute to the man to whose moulding influence we owe so much.

Mrs. RUNCIMAN distributed the prizes to the successful girls attending the Notting Hill High School (November 13). Sir Wm. Bousfield, the Chairman of the Council of the Girls' Public Day School Trust, who presided, was able to refer to another remarkably good year's work carried out under the direction of Miss Steele, the Head Mistress, and her assistants. A Bedford College scholarship had been won by Irene Birch, who also passed the Intermediate Arts Examination at London University; Gladys Westbury secured a scholarship at the Royal Holloway College; and Lilian Lyons, who had been awarded a bursary at the same College, shared with Ethel Clover the distinction of passing the Intermediate Science Examination at London University. Nine girls matriculated at that University, and several other honours had been gained at the examinations held by the Associated Board of the Royal Academy of Music and the Royal College of Music, the Oxford and Cambridge Locals, the National Froebel Union, the Royal Drawing Society, and the St. John's

Ambulance Association. Miss Steele, in her report, made a pleasing reference to the fact that Mrs. Runciman was herself a Notting Hill Girls' School "old girl" and a former winner of a scholarship there.

MR. RICHARDSON CAMPBELL, of Manchester, the representative of the National Conference of Friendly Societies on the Workers' Educational Association, has issued a report, in which he gives a sketch of the special work done by the Association during the last year. Mr. Campbell says: "Though adult education has throughout the nineteenth century received much support and encouragement from individual University men, there has till recently been no machinery for enabling Universities to ascertain the special needs of the working classes as voiced by their representatives, and little organized effort on the part of workpeople to claim the Universities as a common national possession. This state of things has been changed by the formation of the Workers' Educational Association, which has succeeded in bringing academic and working class opinion into alliance." The Workers' Educational Association has now fifty local branches in England and Wales where classes of various kinds are provided, in many cases conducted by teachers and lecturers of ability, provided in several cases by the Committee of Oxford University, who manage the University Extension Lecture system. The Association is now prepared to establish classes specially adapted to the needs of workpeople in any of our towns when the requisite number of applicants (about twenty) can be obtained. The subjects generally taken are economics, history, literature, and political science.

A REPORT on the courses of lectures and practical lessons held within the University of Edinburgh in August last has now been issued by the Acting Committee. It is stated that the total number of lectures, readings, and recitations amounted to about 240, and the total number of practical lessons to nearly 400. The courses were attended by 256 students, of whom 77 were Scottish, 28 English and Irish, 88 German, and 49 French, the remaining 14 being of Russian, Portuguese, Scandinavian, and Italian nationality. Of the total number 133 were men and 123 women, the great majority belonging to the teaching profession. Besides these, there were several hundred occasional students and hearers. Of the 148 certificates of proficiency granted by the Committee 27 were gained by Scottish teachers under the Scottish Education Department and 121 were gained by others, including 55 Germans. The students derived great benefit from these courses, and international goodwill and the cause of national education have been undoubtedly promoted. The Committee deeply regret that the number of students of German is still so small, as German is one of the master-keys to science and art, to industry and commerce, and to ancient languages, as well as to international friendship. The average attendance at the German classes was about 30, at the French 80, at the English classes 100 to 130. The gratifying increase in the number of students from France was mainly due to the patronage of the French Government and to the invaluable services of Prof. F. Herbert. To the students, who worked with admirable zeal, and to the staff of twenty-six professors, lecturers, and teachers, the Committee tender their hearty thanks, and they are specially grateful to the eleven lecturers who so kindly gave their services gratuitously. These services, and the fact that the officials of the Council also act gratuitously, alone render the scheme financially possible.

THE REV. DR. BRUCE, for fifty years pastor of the Highfield Congregational Church, Huddersfield, died at Harrogate (November 6). A native of Aberdeenshire, he graduated at Aberdeen University in 1848, and became a teacher. He had Lord Morley as a pupil at Blackburn, and he was long associated with Huddersfield College, where Mr. Asquith was educated. He was one of those who were instrumental in starting the University Extension examinations and the College of Preceptors examinations at the College, and for some time he was Chairman of the Committee. He was a governor of the Outcote Bank and Spring Street British Schools. For twenty-one years he was a member of the School Board, part of that time occupying the position of Chairman. As a representative of Nonconformity, he was one of those who gave evidence before the Royal Commission on Elementary Education, of which Lord Cross was Chairman, in 1867. He was an active member of many societies for religious

and social work. In 1906 he received the freedom of the burgh of Huddersfield.

THE REV. DR. GEORGE EDWARD JELF, Master of Charterhouse, died on November 19. He was a son of Dr. Jelf, the first Principal of King's College, London. Educated at Charterhouse and at Christ Church, Oxford, he laboured nearly all his life in the Church, mainly at Rochester Cathedral, and it was only last year that he succeeded Canon Haig Brown as Master of Charterhouse. He was a prolific author of esteemed religious works.

DR. EDWARD CAIRD died at Oxford in his seventy-fourth year (October 31). Educated at Glasgow University, a Fellow and Tutor of Merton, he was appointed to the Chair of Moral Philosophy in Glasgow University in 1866, and taught there for twenty-seven years. In 1893 he succeeded Jowett as Master of Balliol, and held the post till his resignation a year back. He was the leading interpreter of Kant, Hegel, and perhaps Comte, in this country; and his Gifford Lectures on the Evolution of Religion, and the Evolution of Theology in the Greek Philosophers, as well as his volumes of Essays on Literature and Philosophy, are esteemed masterly. His influence on his students—"an influence that made for sweetness and light"—was universally regarded as impressive and memorable.

PROF. W. E. AYRTON died on November 8. Educated at University College, London, he took the first place in the Indian Telegraph Service Examination in 1867, and, in India, devoted special attention to electrical engineering. From 1873 to 1878 he was Professor of Natural Philosophy and Telegraphy at the Imperial College of Engineering, Japan. Here he was closely associated with Prof. Perry in electrical and physical researches. In 1879 he was appointed Professor of Applied Physics at the City and Guilds of London Technical College, and in 1884 Chief Professor of Physics at the Central Institution (South Kensington) of the City and Guilds Institute. In 1880 he was Secretary of, and in 1888 President of, the Mathematical and Physical Section of the British Association. Prof. Ayrton's widow, Mrs. Hertha Ayrton, is herself a distinguished scientist and the only woman member of the Institute of Electrical Engineers.

## UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

WE really have had a very quiet October term so far; but that is not an unmixed evil, and people have had time to attend to their proper work, as they cannot do in times of agitation and argument.

The list of Birthday Honours contained two names honoured in Cambridge and not unknown in the outer world. Prof. J. J. Thomson received a knighthood as some recognition of the epoch-making character of his discoveries in the realm of physical science and as a graceful tribute to the discrimination of the British Association in choosing so capable a President for its Canadian meeting. The other honour, that of K.C.B. to Dr. Donald McAlister, is one which is well deserved by the recipient, both in his character as Principal of Glasgow University and in the more strictly professional rôle of President of the Medical Council. Both of the men whom the Prime Minister has deemed fit to honour are as well known in Cambridge as they are well liked, "J. J." and "Donald" being the usual style and title of those who have now a right to put a handle before their first names.

The Council of the Senate have formulated a new edict with regard to the use and abuse of motor-cars with a view both to prevent inconsiderate driving and to put down unjustifiable extravagance. Here, as will always happen, the sins of the few are visited upon the many, for, taking them as a class, the undergraduate motorist will bear comparison favourably with any class in the country.

The election to the Council of the Senate was rather a tame affair, no burning question being before the University at the moment. Dr. Keynes, the Secretary of the Local Examination Syndicate, and Dr. Kenny, Professor of English Law, were nominees of both parties, and, of course, stood high upon the list in consequence. The Master of Caius (the retiring Vice-Chancellor), the Master of Queens', Prof. Seward, Dr. Tanner, Dr. Mollison, and Mr. Parry were the other members elected.

Parties are now fairly well balanced in our governing body, and faddists are conspicuous by their absence.

We have only been enlivened by one "rag," which took place, according to custom, on November 14, to work off the excitement caused by the football match against the Australians, about which more hereafter. The events of the evening included the burning, either by accident or design, of a large rick of hay worth, it is said, £100. It may be useful for frolicsome youth to bear in mind that penal servitude for life is a possible sequel to such incendiary playfulness.

We have alluded to the Australian match; our men covered themselves with glory, and, though beaten on points—11 to 9—lost by several pieces of absolute hard luck, they proved themselves far the better side in every department of the game, and thereby justified the forecasts expressed in these notes a month ago. Those who are inclined to back their opinions in the form of a wager did so at that time by risking fifty golden sovereigns to one upon the chance of Oxford being victorious on December 12. The investment would not commend itself to cautious men who follow football.

Mrs. Taylor, the widow of the late Master of St. John's, has presented the University with a collection of the Hebrew books belonging to her late husband, and has received the grateful thanks of the University for her munificence.

The affairs of the Library have been before the Senate, and the discussion which resulted was remarkable for the outspoken criticism of one of the staff who knows what he is talking about—Mr. Sayle, to wit. He observed that the most lamentable, the most disgraceful, and the most scandalous feature in the Library was the condition of the catalogue. Mr. Sayle went on to advise the formation of a new catalogue working in the books of the old and present new catalogue into the fresh edition. He withdrew his suggestion in favour of that of a new catalogue by classes, as the weight of expert opinion was against him. Some are with the experts, some are with Mr. Sayle.

A change is to be made in the mode of creation of doctors and masters. For many years the ceremony has entirely lost its meaning, and now will be abolished in favour of a simpler process—a mere list prepared by the Registry, countersigned by the proper official, and presented to the Vice-Chancellor, will take the place of the reading of meaningless lists of names to a sparse and yawning audience in the Senate house.

Cambridge men of a past generation will hear with deep regret that we have lost one of the few remaining links with the past. Andrew Graham, after many years of devoted work in astronomical science, and comparatively few of well earned retirement, died on November 5 at the ripe age of ninety-three. His life was a lesson and his record an example.

Manchester. THE Chemical Schools are being enlarged by a new block of buildings, which, it is expected, will be ready for opening in the early autumn of next year. The main part of the new block will consist of a large laboratory for forty students and fifteen new research laboratories, and the total cost is estimated to be not far short of £20,000.

Leeds. THE number of students in the Textile Industries Department, most of whom are taking complete courses of study, is larger than in any preceding year. Every place is occupied in the worsted and woollen spinning classes, in the first, second, and third year textile designing, weaving and colouring classes, in the cloth-finishing class, and in the class in the conditioning laboratory.

Wales. THE Judicial Committee of the University of Wales (Lord Justice Vaughan Williams, Sir Brynmor Jones, and Sir Isambard Owen) have decided against the claim of the authorities of the North Wales University College to admit the students of the Normal College to the examinations of the University. It is now held that "students of the University" mean students who have received instruction within the walls of one of the three constituent University colleges.

Glasgow. THE University Court have had submitted to them a request by the Senate for an inquiry into the results of the Arts Preliminary Examination in English. Last September there was a similar representation from the General Council. Out of 250 candidates presented,

only 28 passed in English; that is, there were 87 per cent. of failures. A committee was appointed to obtain an explanation from the Joint Board of Examiners (whose methods of revision were freely discussed), and to obtain all necessary information for the Court, such as the questions set and the answers.

The Committee on Educational Policy and Methods submitted to the General Council a report on the proposed institution of lecturers analogous to the *Privatdozenten* of German Universities. The committee, after pointing out that historical and local causes, as well as the system of University finance, have deprived the University of the valuable type of teacher represented by the *Privatdozent*, express the opinion that a corps of *Privatdozenten* receiving fees from students for their services, but no salaries from the University, would modify the demand on the professoriate, and, by replacing to some extent the present staff, would tend to reduce the claims on the fee fund and other University resources. The committee are fully convinced that the introduction of such an order of lecturers would be highly advantageous to the University, and they are anxious to give further consideration to the matter with the object of surmounting the practical difficulties.

### THE STUDY OF GERMAN IN PUBLIC SECONDARY SCHOOLS.

THE following letter on the position of German in secondary schools has been addressed to the President of the Board of Education by representatives of the Society of University Teachers of German, the Teachers' Guild of Great Britain and Ireland, the British Science Guild, the Education Committee of London Chamber of Commerce, and the Modern Language Association:—

We, the undersigned, desire, on behalf the bodies whose names are appended to our signatures, to represent to you the serious neglect into which the study of the German language in public secondary schools is falling.

That the number of pupils in these schools who learn German is small is incontestable; but we have reason to believe that in the schools below the first rank this number is not only small, but diminishing. Evidence of this is supplied by the following tables, which show the number of candidates who entered for the Oxford and Cambridge Local Examinations in certain years, and the number and percentage who offered German:—

#### OXFORD LOCAL EXAMINATIONS.

	JUNIOR.		Percentage.
	No. of Candidates.	No. taking German.	
1895	3,226	440	13.7
1900	4,455	441	9.8
1905	7,011	505	7.2
1907	8,327	479	5.7
SENIOR.			
1895	1,414	351	24.2
1900	1,926	282	14.6
1905	3,664	414	11.2
1907	6,370	360	5.6

#### CAMBRIDGE LOCAL EXAMINATIONS.

	SENIOR.				Percentage.	
	No of Candidates.		No. taking German.		Boys.	Girls.
	Boys.	Girls.	Boys.	Girls.		
1895	680	1,272	80	426	11.7	33.5
1900	921	1,366	62	313	6.5	22.7
1906	1,721	2,015	108	216	6.3	10.7
JUNIOR.						
1895	5,033	2,696	396	557	7.5	20.6
1900	5,413	2,964	319	483	5.9	16.3
1906	4,671	3,034	345	314	7.3	10.3

It will be seen from the above figures that the percentage who offer German is steadily diminishing, and that German as a school subject is being gradually elbowed out.

In this connexion we would bring to your notice the fact that the Reports of the Education Department of the London Chamber of Commerce have repeatedly called attention to the inadequacy of the supply of candidates for clerkships who are acquainted with foreign languages. It is from the schools which send in their pupils for the Oxford and Cambridge Local Examinations that the great bulk of clerks come.

Further evidence of this lamentable decline in the study of German is

supplied by the Report of your Board for 1906-7, which says: "German in Wales, as in England, is finding difficulty in maintaining its ground" (page 83), and the Report on Secondary Education in Scotland for 1907, in which occurs the statement: "German can hardly be said to be holding its ground . . . Inquiry shows that in England the phenomenon is still more strikingly apparent" (page 23).

Evidence is also before us to the effect that the Universities find it increasingly difficult to obtain students prepared to take up the higher study of German.

We are of opinion that this decline of German as a secondary school subject is a matter of grave national importance (a) from the point of view of general literary culture; (b) from the point of view of the public services; (c) from the point of view of practical utility, considering the value of German for serious students in all branches of knowledge, as well as for those taking up a professional, commercial, or technological career; (d) from the point of view of rendering a good understanding between the two peoples less easy.

Taking this view of the important place German should hold in the curriculum of the secondary school, we welcome the recent change in the regulations of your Board, the effect of which we understand to be that so long as provision is made for teaching Latin to pupils who may require it, the Board will offer no objection to a school making French and German the two principal foreign languages in its curriculum.

We would at the same time represent to you that much more must be done if the unfortunate decay of German is to be checked, and we therefore venture to suggest that your Board should consider the desirability of calling the attention of Education Authorities, governing bodies, and the principals of secondary schools to the steady decline in the study of German, and should, by means of a circular, as in the case of Latin, or such other method as may be thought fit, submit to those Authorities and to the public generally the many weighty and urgent reasons for regarding an acquaintance with German as being of the first importance to great numbers of young men and women and a widespread knowledge of the language a national necessity.

We would urge, moreover, that the Board should encourage and foster schools of the type of the German Realschule and Oberrealschule, in which two modern languages, but not Latin, are taught. The latter of these in Prussia ranks in standing with the Gymnasium, and its leaving certificate confers the same rights. Of schools devoting special attention to modern, as against classical languages, there are, at present in this country, very few.

Lastly, we would suggest that it should, as a general rule, be required

that schools should make provision for the teaching of German to those pupils who wish to learn it, as it is now required that provision should be made for the teaching of Latin.

In conclusion, we desire to point out (a) that the study of English is encouraged in German schools of every type; (b) that England seems to be the only country of importance where the study of German is neglected. In the United States, France, and Scandinavia especially, great weight is attached to the teaching of this language.

**CORRESPONDENCE.**

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

**THE COUNCIL OF THE COLLEGE.**

To the Editor of "The Educational Times."

SIR,—The College is to be congratulated upon the recent changes in its By-laws. These (alterations) have been introduced with the evidently sincere desire to interest a greater number of its members in the College affairs. This is clearly a step in the right direction and a promise of future developments. But, as at present determined, the actual election of members of the Council will lie in the hands of the few who can attend the annual meeting in January—that is, will remain practically unaltered. What objection would there be to using as voting papers the list of candidates that is to be sent to every member of the College throughout the country? All the electors could then vote for such candidates as they thought fit, by signing the paper and remitting the same by post in order to reach the Secretary prior to the meeting. In this way members generally could easily take part in the election. It may be added that this method of voting obtains in the Senatorial Elections of the University of London. Hoping that the Council will ultimately see their way to adopt this suggestion, I am, Sir, &c.,

W. D. ROBERTS.

Cheriton Gardens, Folkestone.

**CLERGY MUTUAL ASSURANCE SOCIETY,**

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.  
 President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.  
 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.  
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS OF MUTUAL LIFE ASSURANCE** without personal liability on highly favourable terms to

**THE CLERGY AND THEIR RELATIVES.**

**ALL PROFITS BELONG TO THE MEMBERS.**

Accumulated Fund, **£4,242,820.** Annual Income, **£453,897.**

Bonuses Distributed, **£4,256,464.**

**LOW PREMIUMS. LARGE BONUSES.**

Notwithstanding the lowness of the Premiums charged, the **BONUSES** are on an **EXCEPTIONALLY HIGH SCALE.**

**NEW AND SPECIAL POLICIES.**

Application is invited for the **PROSPECTUS**, and Leaflets explaining two new Policies, with valuable Options.

**1. WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

**2. PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

**SPECIMEN OF RATES FOR £1,000, WITH PROFITS.**

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.

40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

# NEW BOOKS FOR BOYS & GIRLS

ALL THE BOOKS IN THE FOLLOWING LIST ARE ILLUSTRATED IN FULL COLOUR.

## HERBERT STRANG'S ANNUAL.

An entirely New Miscellany for Boys, consisting of Complete Stories by HERBERT STRANG, GORDON STABLES, DESMOND COKE, CAPTAIN GILSON, and other well known writers, and articles on a large variety of subjects interesting to boys. Containing Eight Plates in Colour, by JOHN HASSALL, CYRUS CUNEO, and other artists, and numerous Black-and-White Illustrations.

Cloth, olive edges, 5/- net; Picture boards, cloth back, 3/6 net.

"People in search of a really handsome and wholesome gift-book for boys have here the very thing put into their hands."—*Bristol Daily Mercury*.

### NEW BOOKS BY HERBERT STRANG.

"Mr. Henty was the ancient master in this kind; the present master is Mr. Herbert Strang. But Mr. Strang has ten times Henty's historical knowledge and twenty times more narrative skill."—*Manchester Guardian*.

**HUMPHREY BOLD:** His Chances and Mischances by Land and Sea. A story of the time of Benbow. Price 6/- Special Presentation Edition, 7/6 net.

"Mr. Strang . . . has never done anything better than 'Humphrey Bold.'"—*Newcastle Chronicle*.

By CAPTAIN CHARLES GILSON.

**THE LOST COLUMN:** A Story of the Boxer Rebellion. With Map. Price 6/-

"Just the kind of book that an elder boy would revel in. No better could be chosen for a senior reward."—*Teachers' Aid*.

By GEORGE SURREY.

**MID CLASH OF SWORDS:** A Story of the Sack of Rome. Price 5/-

"A tale of the most rousing description."—*Liverpool Courier*.

By WINIFRED M. LETTS.

**BRIDGET OF ALL WORK.** Price 5/-

"A brave, moving story."—*Dundee Advertiser*.

**BARCLAY OF THE GUIDES:** A Story of the Indian Mutiny. Price 5/-

**LORD OF THE SEAS:** A Story of a Submarine. Price 2/6.

By DESMOND COKE.

**THE BENDING OF A TWIG.** New Edition.

Rewritten and Enlarged. Price 5/-  
"Among books of its kind 'The Bending of a Twig' deserves to become a classic."—*Outlook*.

"A real, live school story that carries conviction in every line."—*Standard*.

By CHRISTINA GOWANS WHYTE.

("The new Louisa Alcott.")

**THE FIVE MACLEODS.** Price 6/-

"Altogether a most charming story for girls."—*Schoolmaster*.

By LUCAS MALET.

**LITTLE PETER:** A Christmas Morality. New Edition. Cloth, gilt top, 6/-

BEAUTIFULLY ILLUSTRATED CATALOGUE POST FREE ON APPLICATION.

Henry Frowde and Hodder & Stoughton, London.

## MESSRS. PHILIPS' LIST.

### MACKINDER'S GEOGRAPHICAL STUDIES.

A Course of Elementary Studies in Geography. By H. J. MACKINDER, M.A., Reader in Geography in the University of London. With numerous Coloured Maps and Illustrations. Large crown 8vo.

**Book I.—OUR OWN ISLANDS.** Third Edition. 2s. 6d. Also in Two Parts, each 1s. 3d. **Book II.—LANDS BEYOND THE CHANNEL.** 1s. 9d.

Professor LYDE, University College, London, says of Book II. :—"It is extraordinarily clever; the selection of material is just as admirable as the treatment; it is infinitely the best book on Europe for school use that I have ever seen; and I cannot imagine anything better for the training of a child's outlook faculty."

### A RATIONAL GEOGRAPHY.

By ERNEST YOUNG, B.Sc., Head Master of the Lower School of John Lyon, Harrow. In Three Parts, with numerous Maps and Diagrams. Crown 8vo, 1s. 6d. each.

The Rev. Dr. O'KANE, President of St. Columb's College, Derry, says :—"Your 'Rational Geographies' cover the new (Irish) Intermediate Programme in Geography for all grades very fully. They are the brightest, best printed and illustrated, and most attractive of the books I have seen that meet the requirements of the Course."

In use at Charterhouse, Rugby, Marlborough, Malvern, Repton, Blundell's (Tiverton), Felsted, and other Public Schools, and at many Secondary Schools and Pupil-Teachers' Centres.

SECOND EDITION, REVISED. Demy 4to, 6s. net.

### A PROGRESSIVE COURSE OF COMPARATIVE GEOGRAPHY ON THE CONCENTRIC SYSTEM.

By P. H. L'ESTRANGE, B.A., Assistant Master at Malvern College. With 177 Illustrations and 172 Maps and Diagrams in Colour.

Also in Two Volumes :—(1) **The Text**, with 177 Illustrations, 3s. 6d. net; (2) **The Maps and Diagrams**, with Index, 3s. 6d. net.

### A JUNIOR COURSE OF COMPARATIVE GEOGRAPHY.

Being Course A (Text only) of the "Progressive Course." By P. H. L'ESTRANGE, B.A. Demy 8vo, 2s. 6d. net.

The *Educational News* says :—"The method is sound, and the book should help to bring about a revolution in geographical teaching."

### APPLIED GEOGRAPHY.

By J. SCOTT KELTIE, LL.D., Secretary of the Royal Geographical Society. Second Edition, Revised and Enlarged. Crown 8vo, 2s. 6d.

### PHILIPS' ELEMENTARY ATLAS OF COMPARATIVE GEOGRAPHY.

36 Plates, containing over 80 Maps and Diagrams, with 8 pages of Introductory Letterpress. Stiff covers, 1s.

### PHILIPS' MODERN SCHOOL ATLAS OF COMPARATIVE GEOGRAPHY.

64 Coloured Plates, containing 136 Maps and Diagrams, with Introductory Letterpress and complete Index. Cloth boards, 3s. 6d.

*Descriptive Lists of any of the above and Complete Catalogue of Educational Publications, also new Special List "Aids for the Teaching of Geography according to Modern Methods," may be had post free on application.*

GEORGE PHILIP & SON, LTD., 32 FLEET STREET, LONDON.

## MACMILLAN & CO'S NEW BOOKS.

### BIBLE LESSONS FOR SCHOOLS.

#### THE ACTS OF THE APOSTLES.

By **E. M. KNOX**. Globe 8vo, 3s. 6d.

\*\* Previously published:—*Genesis*, 1s. 6d.; *Exodus*, 1s. 6d.

### A BOOK OF POETRY.

Illustrative of English History. Part III. (*The Hanoverian Dynasty*). Edited by **G. DOWSE, B.A.** Globe 8vo, limp cloth, 9d. [*English Literature for Secondary Schools*].

\*\* Previously published:—Part I. (*A.D. 61-1485*), 9d.; Part II. (*The Tudors and Stuarts*), 9d.

### A SCHOOL ARITHMETIC.

By **H. S. HALL, M.A.**, and **F. H. STEVENS, M.A.** Complete, with Answers, 4s. 6d.; without Answers, 3s. 6d. Or, in Two Parts: Part I., with Answers, 2s. 6d.; without Answers, 2s. Part II., with Answers, 2s. 6d.; without answers, 2s. Answers, 1s. KEY in preparation.

This work follows closely the recommendations of the Mathematical Association.

*EDUCATIONAL NEWS*.—"Explanations and worked out examples are very clearly put, and we consider the whole a model text-book for advanced students."

### A MODERN ARITHMETIC, WITH GRAPHIC AND PRACTICAL EXERCISES.

By **H. SYDNEY JONES, M.A.** Parts I. and II., with or without Answers, 2s. 6d. each. Complete, with or without Answers, 4s. 6d.

*EDUCATIONAL NEWS*.—"With the utmost confidence we recommend this Arithmetic to all teachers of mathematics. They will find in it much that is new, and at the same time necessary for present-day requirements."

### A NEW ALGEBRA.

By **S. BARNARD, M.A.**, and **J. M. CHILD, B.A., B.Sc.** Vol. I., containing Parts I., II., and III. 2s. 6d.

Part I.—A generalized Arithmetic in which letters are employed to represent Natural Numbers, and the idea of Algebraic Form is introduced.

Parts II. and III.—Zero and Negative Numbers and Fractions are considered. These two new classes of numbers are defined so that the expressions  $a-b$  and  $a/b$  may always have a meaning.

*SCHOOL WORLD*.—"It is rich in examples of a varied character, and is admirably fitted for school purposes in virtue of its examples, apart altogether from its special merits as a logical and common-sense introduction to algebra."

### MACMILLAN'S OROGRAPHICAL MAP OF EUROPE.

Printed in 10 Colours. Designed by **B. B. DICKINSON, M.A., F.R.G.S.**, and **A. W. ANDREWS, M.A., F.R.G.S.** Varnished, mounted on Canvas, and Rollers, 15s. Unmounted 11s.

Also NOTES TO SAME, limp cloth, 1s.

*GEOGRAPHICAL TEACHER*.—"This is a very clear and detailed wall map which can be thoroughly recommended. . . . The map is a thoroughly scholarly production, and is a welcome addition to the rapidly growing number of good wall maps of British production. . . . The accompanying hand-book is really a short well-written general geography of Europe, and is worth having for its own sake."

### A LATIN READING BOOK. GOTHAM AND OTHER STORIES.

By **Rev. E. D. STONE**, formerly Fellow of Kings's College, Cambridge, and Assistant Master at Eton. Crown 8vo, 1s. 6d.

*THE SPECTATOR*.—"Mr. Stone has furnished the schoolmaster with what, we are sure, should be a great help."

### SIEPMANN'S PRIMARY FRENCH SERIES.

NEW VOLUME. **LE LAO DE GERS.**

Par **BODOLPHE TOPFFER**. Adapted and Edited by **F. L. CARTER, M.A.** Globe 8vo, limp cloth, 1s.

MACMILLAN & CO., Ltd., St. Martin's Street, London, W.C.

## EARLY IN THE VACATION

(Three times a year only)

USE The "DUST-ALLAYER" CO.'S  
ODOURLESS or powerful GERMICIDAL

# FLORIGENE

(A REGISTERED NAME suggested by FLOOR-HYGIENE)  
for the Hygienic and Economic treatment

of all **SCHOOL, LABORATORY,**  
Art Gallery, Library, Museum, and other Floors—  
Either Wood, Concrete, Stone, or Polished; also Linoleums, Cork-Matting, &c.

## "FLORIGENE" LAYS THE DUST

(See the Official Memorandum on the Cleansing and Disinfecting of Schools),

Purifies the atmosphere, aids the prevention of diseases and throat irritations, preserves floors, and greatly reduces labour.

It is easily and quickly used by the unskilled, and each application lasts for 2 to 4 months, or longer, according to the wear.

Scrubbing (unless preferred) and the injurious sprinkling of floors are entirely dispensed with.

Not sticky, but dust and dirt absorb the "Florigene" from the impregnated floors and thus become "weighted"—consequently the floors can be cleaned daily with an ordinary broom alone—the sweepings roll, and are not distributed.

BOOKS, FURNITURE, APPARATUS, &c., are less likely to soil, and seldom require dusting or cleaning.

The cost (if any) is very small when compared with the many advantages.

The "DUST-ALLAYER" CO.'S "FLORIGENE"

(Awarded the Bronze Medal of the Royal Sanitary Institute) is extensively used in Government Buildings (including Royal Colleges, Science and Art and other Departments) and Municipal Buildings, also Colleges, Schools, Laboratories, Libraries, Museums, Offices, &c., with highly satisfactory results.

Send for particulars, *Bacteriological, Medical, and other Reports and Testimonials to the Sole Manufacturers*

THE "DUST-ALLAYER" CO.,

165 QUEEN VICTORIA STREET, LONDON, E.C.

Contractors to Admiralty, War Office, H.M. Office of Works, &c.

General Scholastic Advertisements (Colleges, Schools, Classes, Tuition, &c.) 3s. 6d. for 6 lines, or 4s. 6d. the inch.

Situations Vacant and Wanted—30 words or under, 2s.; each additional 10 words, 6d. (For 1s. extra, Replies may be addressed to the Publishing Office, and will be forwarded post free.)

## CURRENT EVENTS.

THE Annual Meetings of the Assistant Masters' Association will be held on January 6-8 at St. Paul's School, West Kensington, W. There will be an exhibition of books and appliances.

THE following classes for teachers in London secondary and elementary schools are arranged for the Lent term at Bedford College for Women (University of London):—  
(1) Historical Study of the English Language. Lecturer: P. G. Thomas, M.A. Saturdays, at 10.30 a.m., beginning January 16. (2) Some Conceptions of Citizenship and Government. Lecturer: Miss Alice Blundell. Wednesdays, at 6 p.m., beginning January 20. (3) The Teaching of German by the Direct Method. Lecturer: Miss Kathleen Fitzgerald. Mondays, at 6 p.m., beginning January 18. (4) The Hygiene of School Life. Lecturer: J. A. H. Brincker, M.B., B.A., D.P.H. Mondays, 6 p.m., beginning January 18. (5) Nature Study in London Schools. Lecturer: Miss M. R. N. Holmer, M.A. Saturdays, 10.30 a.m., beginning January 16. Tickets of admission from the Executive Officer of the Education Committee, London County Council Education Offices, Victoria Embankment, W.C.

THE Seventh Annual Meeting of the North of England Education Conference will be held at the Municipal School of Technology, Manchester, on January 7-9, under the Presidency of Bishop Welldon.

Honours. MR. ASQUITH has been elected Lord Rector of the University of Aberdeen, receiving 434 votes as against 370 cast for Sir Edward Carson.

MR. LLOYD GEORGE has received the honorary degree of LL.D. from the University of Wales.

THE honour of Knighthood has been conferred upon Dr. N. Bodington, Principal of the University of Leeds, Dr. Donald McAlister, Principal of the University of Glasgow (K.C.B.), and Prof. J. J. Thomson, of Cambridge.

SIR WILLIAM RAMSAY, K.C.B., F.R.S., &c., Professor of Chemistry, University College, London, and Mr. George William Hill, the American astronomer, have been elected Corresponding Members of the Bavarian Academy of Sciences.

THE University of Cambridge has conferred the honorary degree of M.A. upon its new Professors of Chemistry and International Law, the Lecturer in Agriculture, and the Director of the Fitzwilliam Museum.

Scholarships and Prizes. THE London Inter-Collegiate Scholarships Board announce that an examination open to men and women will be held on May 11, 1909, for 20 Entrance Scholarships and Exhibitions of an aggregate total value of about £1,500.

tenable in the Faculties of Arts, Science, and Engineering of University College, King's College, and the East London College.

An examination will also be held in September, 1909, for 23 Medical Entrance Scholarships and Exhibitions of an aggregate total value of about £1,500, tenable in the Faculties of Medical Sciences of University College and King's College and in the Medical Schools of King's College Hospital, St. George's Hospital, Westminster Hospital, and the London School of Medicine for Women.

Full particulars and forms of application from the Secretary of the Board (Alfred E. G. Attoe), University College, Gower Street, London, W.C.

At Bedford College for Women (University of London) there will be awarded in the Training Department for Secondary Teachers, for the Session beginning in January, the following scholarships: (1) a free place (value £26. 5s.); (2) one scholarship of £20; (3) a limited number of scholarships of £10 each. Candidates must hold a degree, or equivalent, in Arts or in Science. Apply to the Head of the Training Department by December 14.

MESSRS. ARNOLD FAIRBAIRNS & Co. (3 Robert Street, Adelphi, W.C.) offer fifty-five prizes (from two guineas to half-a-crown) for colourings of outline drawings in "Fairies' Fountain" (published by the firm). Candidates to be under sixteen. Books to be sent in by January 24.

UNIVERSITY COLLEGE, London, has received from the late Prof. Bunnell Lewis a bequest of his classical and archæological books, photographs, coins, and impressions of gems and seals, and £1,000 to found a "Bunnell Lewis" prize for proficiency in original Latin verse composition, and translations from English and Greek into Latin verse. Also, from an anonymous benefactor (through Dr. Aders Plimmer), the sum of £250 towards the fittings of the new building for the Department of Physiology; £100 from the Chadwick Trustees in connexion with the work done in hygiene and municipal engineering; and the sum of £450 bequeathed by the late Mr. Henry A. Kay.

MR. G. H. KENRICK, the new Lord Mayor of Birmingham, has subscribed a further £10,000 to the funds of the University, making his total contribution £25,000.

OVER £11,000 has been raised for a memorial to the late Sir David Dale, Bart., D.C.L., of Darlington. The interest will be accumulated till the income reaches £500 a year, which will go to endow a Chair of Economics at Armstrong College.

MR. CECIL COCHRANE has given £5,000 to the Armstrong College Endowment Fund.

THE Edinburgh University Endowment Association has given £1,500 to the Edinburgh University Court, to be appropriated in equal proportions to the endowment of the proposed Chairs of French and German.

MRS. ALFRED BOYD has given £1,000 to St. Bartholomew's Hospital, to provide scientific instruments for the new pathological laboratories.

SIR HERBERT ROBERTS, M.P., has offered £1,000 to the building fund of the North Wales University College.

THE Rhodes Trustees have offered the University of Oxford

£250 a year for five years for the teaching of Law, especially of the subjects of the B.C.L. course, which is taken by many Rhodes scholars.

THE Mercers' Company have granted £200, the Goldsmiths' Company £500, and the Skinners' Company £100 for the Geographical Department at the London School of Economics.

THE Committee in charge of the proposed memorial to the late Mr. Augustus F. Warr has offered £4,000 to the University of Liverpool for, or towards, the endowment of a Lectureship in Equity.

THE London County Council has resolved to give the University of London an annual grant of £500 for the classes in English organized at King's College.

MRS. CHARLES TAYLOR, widow of the late Master of St. John's, has offered to Cambridge University such of the (300) Hebrew books of her husband as may be useful for the Library.

MR. GEORGE DEAN, M.B., C.M., Chief Bacteriologist at the Lister Institute of Preventive Medicine, has been appointed Professor of Pathology in the University of Aberdeen. He is a graduate of Aberdeen University and was formerly assistant to his predecessor, Prof. Hamilton.

DR. A. W. W. DALE, Vice-Chancellor and Principal of the University of Liverpool, has been offered and has declined the Principalship of Mansfield College, Oxford.

THE REV. EDMUND LEDGER, M.A., has resigned the Lectureship in Astronomy at Gresham College, which he has held for thirty-five years.

MR. BERNARD PARES has been elected to the new Bowes Chair of Russian History, Language, and Literature in the University of Liverpool.

A PROFESSOR is required for the new Gilmour Chair of Spanish in the University of Liverpool. Not less than £600. Apply to the Registrar by February 15.

THE REV. JAMES HOPE MOULTON, M.A., D.Lit., late Fellow of King's College, Cambridge, has been appointed Professor of Hellenistic Greek in Manchester University. Dr. Moulton will still continue his work at Didsbury College.

MR. GRANVILLE BANTOCK, Principal of the School of Music at the Birmingham and Midland Institute, has been appointed to the Peyton Chair of Music in the University of Birmingham, in succession to Sir Edward Elgar.

DR. T. F. FARMER, F.R.S., Fellow and Tutor of King's College and Superintendent of the University Museum of Zoology, Cambridge, has been appointed Keeper of the Zoological Department of the British Museum of Natural History at South Kensington.

THE REV. C. A. ALINGTON, M.A., Fellow of All Souls, Assistant Master at Eton, has been appointed Head Master of Shrewsbury School.

THE REV. CHARLES H. T. WOOD, M.A. Oxon., Assistant Master and Chaplain at Marlborough College, has been appointed Head Master of Sherborne School.

MR. SAMUEL E. BROWN, M.A. Cantab., B.A., B.Sc. Lond., Senior Science Master at Uppingham (since 1900), has been appointed Head Master of Liverpool Collegiate School.

MR. JAMES EASTERBROOK, M.A. Lond., is about to retire from the Head Mastership of Owen's School, Islington, after twenty-eight years' service.

AN additional Lecturer in French is required by the Curators of the Taylor Institution, Oxford. £150. Apply by December 3.

A CLASSICAL MASTER is required for the Scotch College, Melbourne. £400. Apply to R. G. H. Macfarland, Esq., Campbell College, Belfast.

MR. G. H. WOOLLETT, M.A. Cantab., Science Master, Nottingham High School, has been appointed Head Master of Malden School, New Malden.

MR. C. H. H. WALKER, M.A. Oxon., Head Master of the Secondary School and P.-T. Centre, Oldbury, Birmingham, has been appointed Head Master of the Secondary School, Whitehaven.

MR. J. I. SCOTT, M.A. Oxon., assistant master, Trent College, has been appointed Head Master of Deacon's School, Peterborough.

MR. R. S. SMITH, B.A. Lond., Second Master, Leigh (Lancs.) Grammar School, has been appointed Head Master of the Secondary School, Todmorden.

MR. GEORGE THOMPSON, Principal of County Cork Day, Trades, and Technical School at Queenstown, formerly Manual Instructor under the L.C.C., has been appointed Head Master of the new Preparatory Trades Day School, Liverpool.

Literary  
Items.

MESSRS. NELSON'S "Young Folk's Bookshelf" promises to be a very attractive repertory for home reading in conjunction with school lessons.

It will include volumes of History, Geography, Nature Study, Biography, Science, and what not—two volumes to be issued during each school year. Part I. of the first volume, "Britain Overseas," by J. Edward Parrott, M.A., LL.D. (to be completed in ten fortnightly parts, 2d. net each), is very interesting, well printed, and piquantly illustrated.

MESSRS. METHUEN announce a new series called "The Romance of History," under the general editorship of Mr. Martin Hume, M.A., Pembroke College, Cambridge. The volumes already arranged include "some subjects which will be practically new to English readers"; and scholarship will not be sacrificed to romance. The same publishers have nearly ready, or in active preparation, half-a-dozen new volumes of their handsome "Library of Art."

MESSRS. JACK are issuing a new series, "The Century Bible Handbooks," under the general editorship of Principal Walter F. Adeney, M.A., D.D., by way of completing or supplementing the idea of the "Century Bible" volumes, so as to present a survey of the latest information on Biblical subjects.

MESSRS. CONSTABLE will publish presently a series of lectures on "University Administration," by Dr. Charles W. Eliot, who is just retiring from the Presidentship of Harvard University after forty years' service.

UNIVERSITY COLLEGE HALL, Ealing, was opened by Lord Rosebery as Chancellor of the University of London (November 17). It will accommodate some forty students.

THE REV. R. J. WALKER, M.A., son of Dr. F. W. Walker, late Head Master of St. Paul's School, has been elected Mayor of Hammersmith; and Mr. R. Harris, Art Master at St. Paul's School, has been elected Mayor of Fulham. Miss Dove narrowly missed election at High Wycombe.

HARVARD UNIVERSITY and the Prussian Government have agreed to exchange five students yearly free of fees.

### THE EXPERIMENTAL STUDY OF INSTRUCTION.

AT the Evening Meeting of the members of the College of Preceptors on Wednesday, November 18, Mr. H. W. EVE in the chair, Prof. J. W. ADAMSON read the following paper:—

Nothing in the recent history of education is more striking in itself, nor more promising in respect of future profit, than the position which has been attained during the last twenty or five-and-twenty years by the experimental study of educational practice. It is, of course, unnecessary to say in this place that experiment in the schoolroom is no novelty. But, during the period named, and more especially during the last five years, there has been a noteworthy increase in the number of those who are bringing to bear on schoolroom problems those systematic observations, experiments, and records which mark scientific inquiry as distinguished from the occupations, ordinary or extraordinary, of the general practitioner. The activity of these experimentalists is not confined to one country nor to either hemisphere. They are represented in Germany, Belgium, Switzerland, France, Italy, Hungary, and America; University professors, training college teachers, and practising schoolmasters are included in their ranks.

#### POSITION OF PEDAGOGY.

The standpoint from which they study education may be compared with that occupied by the student of medicine. Chemistry, biology, physiology, anatomy, and other branches of knowledge present matters of interest to such a student, and some study of each of them is incumbent upon him. Yet his concern in these sciences is not quite that of the chemist, biologist, or physiologist; nor is his own proper study a mere accumulation of extracts made from one or all of them. He regards each from his own point of view, that is, as it bears upon the cure or alleviation of disease, or the maintenance of health; and it is this singleness in the point of view which gives unity to the study of medicine.

Prof. Meumann, one of the foremost of the experimental school, thus defines their position in his recently published lectures:

Pedagogy is neither "applied psychology" nor applied logic, nor anything of the kind: it is undoubtedly an independent branch of knowledge, namely, that of the facts of education. Although it may for its own ends employ the results of general psychology, pathology, child study, logic, ethics, and aesthetics, it brings all these under a point of view of its own, that, namely, of education; and, in consequence, problems which appear to be psychological or ethical or of some similar character, undergo modification when turned into educational questions. . . . Pedagogy is therefore as little "applied psychology" as physics is applied mathematics, or biology is "applied" chemistry and physics. It most resembles geography, perhaps, in its extensive employment of other sciences; geography is also in the position of being able to employ almost all other sciences, and yet it remains an independent branch of knowledge.\*

The references in this passage to logic, ethics, and aesthetics are to be taken as indicating that there is no question here of constructing a theory of education upon a purely experimental basis. For example, the study of the purpose, or purposes, of education in general cannot be conducted *in vacuo* nor on an

\* From preface of "Vorlesungen zur Einführung in die experimentelle Pädagogik u. ihre psychologischen Grundlagen." 2 vols. Leipzig, 1907.

empirical foundation; the experimentalists recognize the claims of ethics and sociology in this connexion as readily as they admit the claim of logic in the narrower sphere of instruction. But they are confident that the practice of the schoolroom, and the principles which underlie that practice, stand much in need of the correction or verification which experimental methods make possible.

The history of the idea of evolution during the past half-century no doubt accounts for the labours of the earlier experimentalists. These were, for the most part, students of mental development as it is exhibited during childhood, and amongst races at a low level of culture, or as it is illustrated in different forms of abnormal consciousness. Though the interests of this group of students were psychological rather than pedagogical, the educator has derived profit from their labours which he has applied both to curriculum and to method. Indeed, the second group of experimentalists owes its existence to the advance in genetic psychology brought about by the first. It is not proposed to discuss the experiments, relating chiefly to the choice of studies, which have been carried out, or, rather, are being carried out, by this second group, amongst whom Dewey and Findlay may not invidiously be named. This paper is concerned with those later experimentalists whose inquiries are addressed to the aims, conditions, and processes of the schoolroom, and more particularly to the process of instruction.

#### PEDAGOGICAL EXPERIENCE.

Their province, in short, is that of the "practical teacher." They are, therefore, fully conscious of the value of "experience"; but they are very exacting as to its character. Perhaps the quality which they value most in it is enlightenment. An enlightened experience furnishes a criticism of use and wont and of generalizations concerning teaching and learning which rest upon *a priori* or other unascertained bases. Moreover, the experience which they honour is of that constructive kind whose fruits are not limited to the individual instructor, but may also be employed by other instructors; for the experience which is constituted chiefly by a period of time plus a routine they have no respect at all. Their experiments have regard to the child at work in school, both as an individual pupil apart and as a member of a group; the mental activity of a class as such has also provided material for interesting study. The number and diversity of the investigations is much too great for specific mention, but their comprehensiveness will be gathered from such a list of topics as follows.

#### SUBJECTS OF INQUIRY.

Amongst inquiries of a more particularly psychological kind may be named the study of individuality in pupils, of the mental differences dependent upon sex, of the phenomena of attention, and of association. Imagination and the process of memorizing were amongst the earliest subjects of experiment, as were also the "apperception-masses," or stock of ideas, possessed by the child of six or seven years of age at his entry upon school life. More definitely scholastic experiments were directed to probing the conditions of work in the classroom, such as the effect of practice upon the ease and rapidity of learning, the onset of fatigue, the fluctuation of attention, and similar rhythms, mental and physical, home work and its advantages and disadvantages when compared with work done in school. A group of questions of the first educational importance arises from experiments made with reference to the effects wrought by and through the environment upon the pupil's work, and to the part played by the teacher's activity in the pupil's process of learning. The experimentalists' attention has also been turned to the automatism due to the exaggerated influence of imitation, which is a state of the pupil's mind not infrequently favoured by the conditions of school life. This list of topics could be extended, since the experimentalists' province embraces most things which belong, in Meumann's phrase, to "the economy and technique of learning."

#### METHODS OF INVESTIGATION.

The methods of investigation are various, some being best adapted to the laboratory, others to the classroom, some requiring a large number of "subjects" and the compilation of statistics, others being satisfied by the collaboration of but a few persons. There are matters of inquiry belonging to the sphere of pedagogy which can only be studied with precision when laboratory apparatus is employed and few "subjects" are observed at a time—*e.g.*, questions respecting "reaction-time" and sense-discrimination, the more minute questions respecting fatigue, the "span of attention," the effects of practice. Such

observations and experiments are primarily for the psychologist rather than the teacher, who must for the most part accept the results, verifying them whenever he gets the opportunity.

#### FATIGUE TESTS.

But the wider issues involved even in a study of fatigue may be raised and, in a measure, considered by methods in which the teacher shares. Indeed, so far as fatigue is really a schoolroom phenomenon at all, it is essential that the practising schoolmaster should take a substantial part in its investigation. The methods often employed for its detection or measurement in the laboratory are indirect and depend upon an assumption not easy to establish. The ergograph, which measures the varying power of "pull" in a finger, and the dynamometer, which measures the "squeeze" given by a contracted hand, both assume, so far as they are treated as measures of fatigue, that the freshness or tiredness of one set of muscles is an index of the condition of the entire organism, mental and physical. The same remark applies to the use for the same purpose of the aesthesiometer, which notes the varying discrimination displayed by the same area of skin under conditions which vary in point of fatigue.

Direct tests are less open to these objections, and they are more easily applied in the schoolroom than are those which require the use of instruments. They take such forms as the setting of long sums in addition or multiplication, the giving of dictation, the very rapid memorizing of figures, letters, or nonsense syllables, the discovery of the letters, syllables, or words which are omitted from a page of print, the picking out of given letters from a page printed in an unfamiliar language or from printed "pie." In all these cases there is a definite amount of work to be done which can be expressed as a number, and each "subject's" performance can be measured in that sense, the amount of failure to score the maximum being, in part at least, the measure of his fatigue. Such methods are direct, since they set a "mental" test to discover "mental" fatigue, and, to that extent, are superior to the methods alluded to above. But they share certain common disabilities. The question always arises: How much of the fatigue registered is due to the test itself, and how much represents the subject's condition before the test was applied? A disturbing element in the calculation is the effect of practice, a thing which tends to conceal fatigue, and a similar disturbance is brought about by the partially moral factor which, in sporting phrase, is called "spurt." Direct tests, again, discriminate insufficiently between "boredom" and true weariness.

#### RESULTS.

There is, accordingly, not a little uncertainty attaching to some of the tentative results so far reached through the experimental study of fatigue as exhibited by school children. But one or two conclusions seem to be established. In the first place, mere change is not rest; to be so, it must be change from heavy to light work, or to work which chiefly sets going quite different brain centres. Again, each individual, *teacher as well as pupil*, has his peculiar fatigue-curve: that is, the moment of the onset of fatigue is fairly constant for each person, as are also its progress and culmination; and these facts may be expressed in a form which characterizes that person. I do not know that the point has actually been investigated, but it seems possible also that each person, when acting as teacher, has also his peculiar fatigue-inducing curves, which may be expected to vary with different branches of knowledge and with different aspects of these branches. Teaching a new "rule" in arithmetic might involve greater fatigue to the pupils than superintending exercises undertaken by way of revision.

One should distrust a facile division of studies into those which soon cause fatigue and those which do not. The fatiguing exercise, whatever be the study, is that which calls for close, persistent attention. Here the personal equation of the teacher counts, and from this point of view the subject of study may be little more than a name, and of small importance compared with the "fatigue curves" of teacher and pupil.

The employment of statistical methods rapidly enlarges the sweep of the experimenter's net, and it is a short and an inevitable step to the use of the *questionnaire*, a schedule of carefully framed questions to which the "subjects" are invited to furnish replies.

#### MEMORY IMAGES.

The classic example of the use of the *questionnaire* as a mode of psychological inquiry is Francis Galton's set of questions

respecting visual memory,\* one of the earliest and most fruitful of the investigations into its subject. The inquiry which it initiated has been carried to much greater lengths by later investigators, and it is now generally recognized that the memory apparatus (so to call it) is not only visual, but may be auditory, motor, or of a mixed type. That is to say, experiences are sometimes and by some persons recalled as things heard or as movements made; not all memory images are pictures. The habits of reading and writing have further resulted in certain verbal sub-types; the visual image in such cases is not of a thing, but of its printed or written name, the sound of the name and not another sound is recalled, or the person *feels* himself speaking or writing the name of that which he remembers. So marked are the differences among memory images, that they are used as a basis of classification, minds being divided according to their characteristic type into visual, audile, motile, and mixed type—the last, which appears to include the majority of persons, employing two or more of the other types of memory image.

But the truth is that the *data* for classifying minds in this way are still insufficient, and the rare occurrence (so far as recorded) of the purely auditory and motile types makes the classification of restricted value to the schoolmaster. Of seven hundred children questioned, Netschajeff described the pure audiles as forming but 2 per cent. and the pure visualizers he placed at 5 per cent.

Instead of classifying minds according to these types, it seems safer to say that there are types of ideas, that most minds employ now this type, now that, in varying measure, but that some minds have marked preferences in this respect. The practical point for the teacher is that he should induce, or at least encourage, that preference which is most favourable for a particular study, irrespective of the so-called type of mind, save in the case (probably infrequent) of a pupil *who is known* to be restricted to one type. Thus, when we read that, while visualizers work "in their heads" a short division sum in 15 seconds, audiles take from 35 to 60 seconds to do the same sum, the corollary seems to be that these audiles should be helped in all ways to picture the operation, not hear it performed. A like conclusion is to be drawn from Messmer's assertion that audiles are bad at spelling.†

A study of mental images may reveal to a particular teacher that he himself is one-sided or otherwise restricted in his use of types, and the knowledge may help him to avoid mistakes. But there is one direct application, or attempted application, of the study to practice which seems partly mischievous and partly very hard to achieve. Teachers have been urged to discover the "mind-types" to which their pupils belong individually and to cultivate in each the form of memory which is typically his. The difficulty lies in the facts that memory images are not perceptions, that it is the latter which are most open to the teacher's manipulation, and that what seems to one person an obviously visual experience may appeal chiefly to another as a motor or auditory one. Hence an experience in one order—visual, auditory, tactile, or what not—may be remembered as belonging to quite another. If the differences lie rather in ideas than in "minds," then deliberate training of one type exclusively would be mischievous, assuming, of course, that it is feasible.

#### THE QUESTIONNAIRE.

The *questionnaire* is a mode of inquiry which has been extensively employed and from which much knowledge in the raw state has been gained. But it has its characteristic fallacies, as Galton's own employment of it showed. His "subjects" were carefully chosen, yet some of them (and notably the scientific men) denied the possibility of visualizing. "They had no more notion of its true nature than a colour-blind man who has not discerned his defect has of the nature of colour. They had a mental deficiency of which they were unaware, and, naturally enough, supposed that they who affirmed they possessed it were romancing." The difficulty which children find in describing their own mental states, or even in recounting a process just completed in their minds, is such that any replies to questions which depend on these descriptions should be regarded with grave suspicion. The child's part in such investigations should be confined to unconscious registration. A further danger lies

in the manner of putting the question or in the terms of expressing it. If either gives the child a "lead," the answer is vitiated, owing to the desire to "please teacher" even at the expense of more relevant considerations. Many of the inquiries into "children's ideals" seem to me to be quite futile on this account; indeed, it is probable that a large proportion of error attaches to many results of "child study" obtained by means of *questionnaires*, simply owing to the unregarded effects of "leading" questions.

#### ROTE LEARNING.

It is impossible even to enumerate here the many investigations into rote learning which have been made during the past twenty-five years, or to describe the various methods employed, or to summarize results. One can only illustrate these.

Learning by heart series of nonsense-syllables, of single words or figures, passages of poetry or prose, furnishes different kinds of data and inferences which are of direct assistance to the instructor. Of these, perhaps the most important general conclusion is that we retain most completely and longest matter which, when first presented to us, is arranged in a fashion agreeable to the synthesizing nature of intelligence.\* Ebbinghaus found that one-tenth of the effort required to master a string of unmeaning syllables sufficed to memorize a set of words of the same length which "made sense." The true memory units, like all mental constituents, are not elements, but combinations of a synthetic kind, minor systems belonging to a greater mental system. The more connected and articulate the matter to be learned by heart, the easier and the more rapid the learning. Meumann found that measurable differences in respect of ease and rapidity existed according as the material was unsystematic (*e.g.*, "dates," "vocabularies") or systematic (prose or poetry). Again, there were differences as between prose which is abstract in character and that which may be taken in at a glance; while, for quite another reason, rhythm and rime greatly facilitate the memorizing of verse. "The immediate retention of matter is disproportionately far easier if it has to do with an associated whole rather than with discrete parts. Our most practised 'subjects' retained thirteen letters, as many figures, seven to nine nonsense syllables, ten single words, twenty words of a verse of poetry, twenty-four of a philosophic prose text." Similarly: "Ten words, making fifty to sixty letters, were retained, not in accordance with the number of these letters, but in correspondence with the verbal units" ("Lectures," II., page 30). The corollary is obvious that the first step towards memorizing a passage is to understand it and to grasp its arrangement in clauses. If this is not done, a dead weight, more or less heavy, is thrown into the task. The sooner and the more accurately the gist and the chief points of a passage are seized, the quicker becomes the learning.

There are numerous studies directed to the time and manner of the repetitions which are required in order to memorize matter. Thus, the question, Is it better to concentrate these repetitions within the limits of a single occasion or to distribute them over a period of time? has been answered by Ebbinghaus in favour of the latter alternative. He found that, if the repetitions for learning different series of thirteen nonsense syllables were distributed over three days, there were thirty-eight repetitions for a single series, whereas sixty-eight were necessary when the repetitions were continued at one time until perfect rote was attained. One advantage gained by distribution is that associations occur at the first learning which have become old and well established by the time the last repetition is made, whereas associations made at one and the same time lack the quality of age. The advantage appears to be greater the fuller and the better articulated the matter to be learned is.

Meumann has made a great number of experiments respecting the mode of repetitions, of which he distinguishes three. A passage may be repeated as an undivided whole or as a series of parts learned successively. These modes may be termed respectively the unitary and the sectional. Although experiment shows that the unitary is the more advantageous, most persons spontaneously adopt the sectional mode. Messmer reports that a person learned two eight-lined verses from Schiller's "Dido" by the unitary mode in fourteen repetitions, while thirty-three were necessary for two other verses from the same poem learned by the sectional mode. It was shown later that the verses learned as a whole were better retained than those learned sectionally.

\* "Inquiries into Human Faculty and its Development." Second edition. Pages 57 ff.

† O. Messmer, "Grundlinien zur Lehre von den Unterrichtsmethoden," pages 207 ff.

\* Reference may, perhaps, be permitted to "The Practice of Instruction," Part I., Section I.

It will be remarked that the unitary mode is more in harmony with the general principle already stated; it pays greater respect to the systematic nature of a composition, and follows the lead given by the spontaneous action of the intelligence. Moreover, the associations between part and part are made in the order and direction of the composition itself, in the order in which they will occur when the learning is complete. But on the sectional plan these associations are made in the inverse order.

On the other hand, the unitary mode has disadvantages which, no doubt, account for the customary preference given to the sectional. It calls for a repetition of passages that are well known, or easy to learn, just as frequently as of those which are hard to memorize. Further, attention tends to get slack at the middle parts, rising again as the end is approached.

Meumann therefore advocates a modified form of the unitary plan, by which a short pause is made after each section, though the whole is read continuously right through. Where the matter is difficult to memorize, he thinks the best plan is to go on with the unitary mode till the mind is conscious of a "hard part," to learn this part by itself, and then return to the unitary mode. Of the three modes, Meumann regards the modified one as the quickest, and as ensuring the longest retention and completest reproduction, while the sectional mode he considers less favourable to retention than either of the others.

#### CHILDREN'S DRAWINGS.

Drawing provides a very satisfactory means of discovering the wealth (or poverty) and the general character of children's mental images, and their ability to group these in a given arrangement. A paragraph which depicts some occurrence in a lively manner is read aloud, or better, is placed in print or in writing before the children, who are required to draw the picture so described. For the particular purpose, no attention is paid to the technique or aesthetic value of these drawings, and the pupils should be aware of this, or poor draughtsmen will produce but little. An examination of even a score of such drawings usually reveals some extraordinarily mistaken interpretations of what has been read. Other investigations may also be conducted by help of material obtained in this way; as, for example, the relative capacity of the eye which sees and the hand which draws, the appreciation of beauty, and the knowledge of particular forms of experience—"power of observation," as it is commonly termed. Sully's "Studies of Childhood" have made us familiar with this employment of drawing by the investigator.

#### ASSOCIATION.

The great merit of the procedure is that the child unconsciously registers the facts, thus eliminating one great source of error. The same automatic registration may be employed in the study of the associations of ideas in individual children. Neither in this case nor in that of the drawing tests should the "subjects" be informed of the purpose of the exercise. The experimenter gives out or writes down a term; almost any noun will serve, but the more general in meaning the better; as, "house," "book," "water," &c. The "subject" writes this word and the next ten, twenty, or more which occur to him at the moment. Amongst other information to be got from an analysis of these word-lists is a knowledge of the writer's type of thinking and of his interests. Binet has produced a most striking study of two sisters, which was based largely on lists of associations obtained in a similar manner. Such lists yield their most significant results when comparisons can be instituted between one list and another. A collection of lists which have been made by a large class of boys, or girls, or, better still, by a group of both sexes, will on inspection suggest the best mode of analysis, and so assist in its own interpretation.

#### PERIODICITY OF ATTENTION.

As an illustration of an inquiry dealing with a group of children rather than with single pupils, Schuyten's observation of the periodicity of attention may be recalled. The investigation extended over a school year of ten months, August and September being holiday months. "The observations were carried out in four schools in Antwerp (two higher and two lower, with boys' and girls' divisions) and at four different times (presumably in each month). The classes to be observed were entirely separated from the rest, so that no external distraction was possible. The teacher stood behind the class and the observer stood so that he had the whole class under his eye, without himself being conspicuous. At a given signal the pupils began to read the books

which were lying open before them—silently, of course. The observer noted those who did not read—that is, did not attend. In this way the number of children who kept their attention fixed throughout a period of five minutes was counted. The following states the percentage of those who so attended throughout the working months of the year: January, 68; February, 63; March, 77; April, 69; May, 64; June, 42; July, 27; October, 48; November, 62; December, 67.

The curve is inversely proportional to that of the mean monthly temperature in Antwerp. Thus, attention seems to be inversely proportional to the temperature of the air, greater in winter than in summer. Further curves showed that attention was greater in upper classes than in lower, greater amongst boys than amongst girls, fell from 8.30 a.m. to 11, and from 2 p.m. to 4, was greater at 2 in the afternoon than at 11 in the morning, but at 2 p.m. was always less than at 8 a.m." ("Die experimentelle Pädagogik," Vol. IV., 1907).

This passage is cited for its method rather than for the "further curves," whose value as a general index must depend upon the number and variety of children observed. As they stand, these statements are more in harmony with *a priori* opinion than is the table of percentages quoted above. In the latter the figures for March and July exemplify some of the surprises of the experimental method.

#### THE "CORPORATE MIND."

A recent development of psychology which points to the gregarious nature of man as the fact of cardinal importance in all study of human mental process may prove ultimately to be of assistance to the schoolmaster. Whether or no, he is not tempted to forget the existence of the characteristic in his pupils. A number of persons attending simultaneously to one and the same object generates a common feeling and activity which is something more than the sum of the individual minds present. Indeed, this "corporate mind" often leads some of the constituent factors to surprise themselves. Kipling's soldier in the panic-stricken regiment "heard a beggar squealing" amidst the rout, and was presently astonished to discover that that "beggar" was himself. Experiments on the "mind of the class" show that class-work tends to establish a level of attainment, both in quality and in quantity, which is in favour of the weaker pupils, more especially in such activities as physical drill, singing, reciting. The younger the children, or the bigger the class, or the more mechanical the exercise, the more marked is this effect. But not all school exercises are best performed under the stimulus which the class-room supplies. Meumann has shown that solitary pupils do better than when they are in class, if the work requires imaginative power or a brief, but concentrated, attempt to memorize.

#### "HOWLERS."

There is one field of study which lies open to all teachers and examiners, but which, so far as I know, has not yet received any serious consideration, though its laughter-provoking power is fully appreciated. The careful analysis of schoolboy "howlers" would, I believe, prove a great self-revelation to all of us who are at least secondarily responsible for them, and, beyond the glimpses afforded of the individual pupil's mental processes, such an analysis, if it grew out of a large number of observations, might be expected to throw much light on the defects of method. The first requisite would be the keeping of a careful record, so that the sense of humour should not be allowed to trick the memory into making smart "copy" for the newspapers. The "howler" itself should be registered, the circumstances amidst which it is perpetrated, and whatever explanation could be assigned to it, more particularly any explanation extracted from the perpetrator.

#### EXPERIMENTAL MORAL INSTRUCTION.

A record of this kind is none the less valuable because it is a history of mistakes; indeed, it is for that very reason so much the more to the purpose. One experimentalist of the true scientific temper is prepared to risk the exposure of even graver failures. Dr. Häberlin\* proposes that, inasmuch as "the goal of moral education is dependent upon the personality of the educator," individual teachers should put on record the moral aims which from time to time they have had before them, the means they have employed to attain these, and the results

\* See "Papers . . . communicated to the First International Moral Education Congress," page 76.

which have ensued. These experiences are to be made common property through the good offices of a central bureau and the pages of a periodical devoted to the purpose.

The proposal reminds us that there are large fields of inquiry almost untouched by the experimentalists: it is admitted that their studies sometimes prove inconclusive, and that the harvest is as yet small. But the experimental movement is young, and these are the defects of youth. If to ask questions be a sign of health in the child, then this movement is in a healthy state at present, for it has certainly raised more problems than it has discovered solutions.

The CHAIRMAN, in inviting discussion on the lecture, remarked that many teachers, now no longer young, had made experiments, but not in the systematic and profitable way indicated by the lecturer.

Mr. SALISBURY said that in America many notable efforts had been made towards the experimental study of pedagogy, especially by Prof. Dewey and Colonel Parker, and, although these experiments had been conducted in an unsystematic way, they had thrown some light on the problems of general methods of instruction and of the successful approach to the mind of the child. But the results were not yet ripe for use by practical teachers.

Mr. BAKER mentioned that, in order to test the power of visualization of numbers, he had often asked his pupils to count backwards, and was astonished to find that many of them were quite unable to do so. He considered that experiments of the kind described by the lecturer had a real practical value.

A vote of thanks to the lecturer concluded the proceedings.

## THE TEACHERS' REGISTRATION COUNCIL.

### DELEGATES' REPLY TO BOARD OF EDUCATION CIRCULAR.

The following letter appeared in the *Times* of October 30:

To the President of the Board of Education.

SIR,—The Committee of delegates from twelve educational societies who, in March last, submitted to you a draft scheme for a Teachers' Registration Council, met again on October 10 to consider the White Paper (Cd. 4185) issued by your Board in July. The Chairman also read, or reported, to the meeting a number of letters from other societies which claim representation on a Registration Council.

1. In regard to the White Paper, attention was chiefly directed to the report of an interview which a deputation had with Sir Robert Morant on May 13 (pages 8–11) and to Sir R. Morant's letter of comment dated July 8 (pages 18–20). The members of the deputation made the following statements: (a) that, as they were invited to the interview and did not ask for it, they went prepared only for a friendly and informal discussion of which no report would be published; (b) that the report was not submitted in proof to any of them; (c) that they did not see the report till two months, or more, after the interview; (d) that while they cannot, at this distance of time, impugn the accuracy of the report so far as it professes to be verbal, they are agreed that some of the inferences drawn from the report are not justified.

2. Of the letters communicated by the Chairman, seventeen had been addressed to your Board and were forwarded to him by your Secretary. Of these, one was a letter from a private individual, asking for information. The rest may be thus classified: six were from societies of teachers of music (viz., the Union of Graduates in Music, the National Conservatoire of Music, the Royal College of Organists, the Incorporated Society of Musicians, the Guildhall School of Music, the National Society of Music). Four were from societies of teachers of art (viz., the London Association of Art Masters, the Society of Art Masters, the Art Teachers' Guild, the Royal Drawing Society). Two were from societies of teachers of shorthand (viz., the Society of Certificated Teachers of Shorthand and the Incorporated Phonographic Society jointly with the Incorporated Society of Shorthand Teaching). One each from the Froebel Society, the National Association of Manual Training Teachers, the Incorporated Gymnastic Teachers' Institute, and the National Association of Head Teachers.

Besides these, the Chairman reported letters addressed to him personally by the Welsh County Schools Association, the Association of Teachers of Domestic Science, Prof. Adams on behalf of the Teachers' Training Association, and two more from individuals on matters of interest to them.

Nearly all the societies above-named claimed to be directly represented on a Registration Council. A few asked only that their faculties should be represented.

The Committee, after considering the White Paper and the report of the deputation and letters above described, resolved: "That the plan of

a Registration Council already recommended be further pressed upon the Board of Education." It was thought by some members that certain modifications of the plan submitted to the Board might be desirable, but it was agreed *nem. con.* that these modifications can only be made by the Board, which alone is in a position to arbitrate between rival claims.

The Committee appointed the undersigned a sub-committee for the purpose of making the representations to your Board and conducting such further negotiations as may be necessary, subject to the approval of the Committee and of the constituent societies.—We have the honour to be, Sir, your obedient servants,

SOPHIE BRYANT,	F. STORB,
R. F. CHOLMELEY,	R. D. SWALLOW,
J. GOW,	J. WERTHEIMER,
CHARLOTTE L. LAURIE,	J. WILSON,
J. D. McCLURE,	J. H. YOXALL.
G. SHARPLES,	

## CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS.

### LA FEMME POÈTE.

Par Mlle A. M. GACHET.

SAMEDI, 31 octobre, Mlle Gachet, dont la voix souple et bien modulée, la diction exacte, la figure avenante, donnaient un cachet tout spécial au sujet choisi, nous parlait de la "Femme Poète." M. Barlet occupait le fauteuil.

La femme d'aujourd'hui, nous dit la conférencière, est bien près de son apogée. Il lui a fallu des siècles pour comprendre ce que l'on attendait d'elle, mais si le travail s'est fait lentement, il est d'autant plus parfait. Avec son intelligence éveillée, elle a profité de toutes les erreurs commises; elle a compris que son rôle le plus enviable était, non de souffler des conseils et des pensées à l'homme, mais, par son seul contact, d'éveiller et de faire mûrir chez lui des idées et des résolutions. C'est au XVIII<sup>e</sup> siècle qu'elle est le plus près du but. Elle semble le flambeau qui éclaire, guide et conduit l'humanité chancelante, voilant les faiblesses, illuminant les actes héroïques. Avec le romantisme il y eut de nouveau une déchéance. Le joli geste de tenir le flambeau la fatigue; chercher le talent, avoir la suprême joie de le faire connaître, ne lui suffit pas. Elle veut sortir de l'ombre, passer sans transition du crépuscule à l'aurore. Le mouvement manque de grâce. Il nous fait voir des femmes qui regrettent d'appartenir à leur sexe, ajoutant aux pires défauts qu'on leur impute plusieurs défauts des hommes. Elles veulent créer. Mais la femme ne possède point pour cela les qualités nécessaires. Receptive, plastique, assimilatrice, elle est tout cela à merveille. Et de ce fait elle ne saurait être créatrice. C'est la gloire de notre contemporaine de l'avoir compris. Il lui faut un modèle, et c'est dans l'ancienne Grèce qu'elle va le chercher. Les Diotime, les Aspasia, qui donnèrent à l'idiome d'Ionie de si délicieuses cadences, étaient amoureuses du beau langage autant que des belles formes. Aujourd'hui nous aimons autant les belles formes que le beau langage; l'harmonie qui semblait n'exister que dans la patrie des Praxitèle et des Phidias pénètre chez nous, et nos muses modernes prêtent une forme somptueuse aux pensées des autres. Une lèvres rose suffit à ranimer une parole glacée; la beauté rend originales les plus anciennes théories; et, sans créer, la femme cesse, pour ainsi dire, d'imiter. Ces formes légères qui glissent discrètes, silencieuses, dans le brillant sillage de la gloire masculine n'accordent leur lyre que pour notre délassement. Par un rapprochement inconscient, la moderne Europe et l'ancienne Grèce ont formé cet être qui, plus que jamais, est le Phare ou la Vestale. Mais le geste est plus large, le bras se lève plus haut. Ce n'est plus une flambée, c'est un embrasement. Telles sont Mme Judith Gautier et la Comtesse de Noailles qui synthétisent en quelque sorte ces voix féminines et sans cesse renaissantes.

Mme Judith Gautier semble représenter dans la littérature contemporaine, avec Pierre Loti, le goût de l'exotisme. "Le Livre de Jade," qui est peut-être le chef-d'œuvre de Mme Gautier, est un recueil de poèmes chinois qui datent du XII<sup>e</sup> et du XIII<sup>e</sup> siècle. Elle les a traduits exquisement pour nous. Ce sont de courts poèmes faits de finesse d'âme. Toute la sobriété pittoresque, toute la noblesse sans emphase de cet art d'Extrême Orient a admirablement passé dans la plume assouplie de son traducteur féminin. L'émotion est profonde, l'expression souriante.

Et d'une voix vibrante d'émotion la conférencière nous lit "La Maison dans le Cœur":—

"Les flammes cruelles ont dévoré entièrement la maison où je suis né. Alors je me suis embarqué sur un vaisseau tout doré pour distraire mon chagrin. J'ai pris ma flûte sculptée et j'ai dit une chanson à la lune; mais j'ai attristé la lune qui s'est voilée d'un nuage. Je me suis retourné vers la montagne, mais elle ne m'a rien inspiré. Il me semblait que toutes les joies de mon enfance étaient brûlées dans ma maison. J'ai eu envie de mourir, et je me suis penché sur la mer. A ce moment une femme passait dans une barque. J'ai cru voir la lune se réfléchir dans l'eau. Si elle voulait, je me rebâtirais une maison dans son cœur!"

Magie étrange et séduction profonde dans cette simplicité. Mme Gautier ne décrit pas, elle évoque. Ce sont des émotions nouvelles qu'elle dépose en nous, et ce désir de l'ailleurs, des pays lointains appelle notre curiosité ou notre ardeur de vivre. Et tout le long du livre ce sont des scènes d'une beauté pareille, toutes frémissantes d'une volupté candide, celle de l'extrême jeunesse et du premier amour.

Les femmes poètes ont le don d'une sensibilité extraordinaire; ce sont des musiciennes et des plus pures.

Les vers de la Comtesse de Noailles charment par leur grâce ingénue. Elle reçoit ses impressions de l'air, des jardins, de la nature. Les mots qui lui viennent au cœur frissonnent sous le vent qui passe. En des tableaux clairs, ensoleillés, elle évoque la campagne qui apaise, calme et guérit. Ce poète n'est jamais rassasié de lumière; il prend une voluptueuse satisfaction à l'inépuisable longueur des jours d'été, à leur chaleur qui semble dissoudre les corps, les fondre avec l'éther palpitant. Il possède au plus haut degré la joie de vivre, et la communique en vers langoureux et beaux.

"Le temps, de ses pipeaux, tire de clairs accords;  
Bondissez au soleil, les âmes et les corps.

Par les chemins poudreux et la verdure épaisse,  
Epuisez les plaisirs, c'est la seule sagesse.

Prenez-vous, quittez-vous, cherchez-vous tour à tour,  
Il n'est rien de réel que le rêve et l'amour.

Sur la terre indigente où tant d'ombre s'éploie,  
Ayez souci d'un peu de justice et de joie.

Estimez du savoir ce qu'il faut au bonheur;  
On est assez profond pour le jour où l'on meurt.

Vivez, ayez l'amour, la colère et l'envie;  
Pauvres êtres vivants, il n'est rien que la vie!"

La beauté de ces vers est de qualité essentiellement aryenne sinon purement et strictement française. C'est dire qu'ils sont un chant, une caresse, un parfum autant qu'un éblouissement. Et l'on plaint la langue française qui manque de mots pour exprimer toutes ces voluptés réunies! Le rêve de Mme de Noailles va vers la Grèce qu'elle sent toute sienne. On l'imagine chantant à Lesbos ou à Mitylène au bord de la mer où naquit Aphrodite et où mourut Sapho. La Grèce dont elle parle est plus près de l'Orient que de l'Attique; elle est de l'Archipel, d'un de ces rivages qui se tourne vers Smyrne ou Constantinople. Son amour de la lumière, ce sens de la beauté des paysages et des êtres, cette volupté aux pieds de la nature flatte nos sens, mais ce paganisme cruel ne va pas sans inquiéter nos cœurs formés par des siècles de tendre mysticisme.

Le style de la conférencière a été en tous points digne de son sujet. Ça été, pour le nombreux et attentif auditoire qui se pressait dans la salle, une caressante mélodie pour l'oreille, un charme pour la pensée, un délice pour l'esprit, qualités d'autant plus appréciables par ces temps de turbulentes suffragettes et de féminisme échevelé. Aussi la satisfaction générale s'est-elle traduite en généreux applaudissements.

## THE COLLEGE OF PRECEPTORS.

### PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.

The following is a list of successful candidates at the Examination held in October, 1908:—

<i>Class I.</i>		
Harris, Miss J. D.	Harris, R.	Meyer-Griffith, H. W. G.
<i>Class II.</i>		
Hambly, W. D.	Moore, W. I.	

## THE COLLEGE OF PRECEPTORS.

### MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on November 14. Present: Sir Philip Magnus, President, in the chair; Prof. Adams, Prof. Adamson, Dr. Armitage Smith, Mr. E. A. Butler, Mr. Bain, Mr. Baumann, Rev. J. O. Bevan, Rev. J. B. Blomfield, Mr. Brown, Mr. Charles, Mr. Eve, Rev. R. Lee, Dr. Maples, Mr. Millar-Inglis, Mr. Milne, Mr. Pendlebury, Mr. Pinches, Mr. Rule, Rev. Dr. Scott, Mr. Starbuck, Mr. Storr, Mr. Vincent, and Mr. White.

The minutes of the last meeting were read and confirmed.

The Secretary submitted a report of the Committee of the Joint Scholarship Agency, which showed a satisfactory record of the work of the Agency during the past year.

He reported the death of Mr. John Tidy, formerly Assistant Secretary of the College, and direction was given that a letter of condolence should be sent to Mrs. Tidy, expressing the deep regret of the Council at the death of her husband, who had served the College most faithfully and efficiently for forty years.

Mr. Millar-Inglis and Mr. Storr were appointed the representatives of the College on the Joint Scholarships Board for the coming year.

A report of the Examination Committee was adopted, and, in accordance with a recommendation in the report, the Council decided to add Irish to the list of alternative subjects for the Certificate Examinations.

The following persons were elected members of the College:—

Mr. H. J. Larcombe, B.Sc. Lond., L.C.P., The Laurels, Treaslaw, Rhondda.

Miss M. H. Shackleton, M.A. Dublin, L.C.P., 17 Denning Road, Hampstead, N.W.

The following were elected Honorary Members: Sir William Anson, M.P., S. H. Butcher, Esq., M.P., Sir William Bousfield, Arthur Sidgwick, Esq., and the Rev. Dr. E. Warre, late Head Master of Eton.

The following books had been presented to the Library since the last meeting of the Council:—

By the BOARD OF EDUCATION.—The Problem of Rural Schools and Teachers in North America.

By G. BELL & SONS.—Mallin's German Historical Reader.

By A. & C. BLACK.—Black's Senior Supplementary Readers (Rab and his Friends and Great Deeds on Land and Sea); Picture Lessons in English, Book IV.

By BLACKIE & SON.—Blackie's English Texts (Voyages and Plantations of the French in Canada, Letters on France, and The Spanish Armada); Simple Lessons on Household Management; Adaptable Arithmetics (Books III. and IV. and Teacher's Handbook to Book IV.); Stories to be Read (The Chimes, A Christmas Carol, The Cricket on the Hearth, Gulliver's Travels, Adventures of Ulysses, Robinson Crusoe, Rip van Winkle, Tales from the Arabian Nights); Clark's Labourer's Yvon et Finette; Leighton's Intermediate Geometry; Mort's Practical Geography; Scott and Wallis's The Call of the Homeland, Books I. and II.; Wake and Brechtel's Germany in Story and Song.

By LONGMANS & CO.—Saxely's Introduction to Practical Mathematics; Porter's School Hygiene and the Laws of Health.

By MACMILLAN & CO.—Carter's Topffer's Le Lac de Gers; Morrison's Essays from the *Spectator*; Scoones and Todd's Eton Algebra, Part I.

By E. MARLBOROUGH & CO.—Hébert's French Pronunciation made Easy; Mann's Esperanto Self-Taught.

By J. MURRAY.—Baily and Pollitt's Woodwork; Edmunds and Spooner's Story of English Literature (Vol. III.); Readings in English Literature (Junior, Intermediate, and Senior Courses, Vol. III.); Hartog's Souverey's Confessions d'un Ouvrier; Russell's Notes on Elementary Chemistry, and Notes on the Teaching of Elementary Chemistry; Walters and Conway's Linen—a First Latin Book.

By the OXFORD UNIVERSITY PRESS.—Delbos' Sand's La Petite Fadette; Lowe's Scenes from the Life of Hannibal; Manson's Béranger's Chansons Choies; Myers's Coverley Papers from the *Spectator*; Paterson's School Algebra, Part I.; Savory's Deutsches Reformlesebuch; Smith's Bouët-Willamez's Batailles de Terre et de Mer; Tanner's The Reformation and the Renaissance; Unstead's Practical Geography, Part I.

Calendars of Birmingham University; Victoria University of Manchester; City of London College; and King's College, London.

## REVIEWS.

### FRENCH LITERATURE.

*A Literary History of France.* By Emile Faguet. Translated by F. H. L. (12s. 6d. net. Fisher Unwin.)

This volume is one of the series entitled "The Library of Literary History." The author, M. Faguet, is a member of the Academy, and is best known by his "Etudes Littéraires" of the sixteenth, seventeenth, eighteenth, and nineteenth centuries, each volume containing monographs on famous writers of the period. To most readers such studies, to which an accomplished critic cannot fail to give a certain unity, are more interesting than a continuous literary history, which cannot help having some resemblance to a dictionary.

To the English edition M. Faguet has contributed an introduction on the action and reaction between English and French

literature, from Chaucer and Gower to the present time. He thinks that Shakespeare probably read Montaigne, but took nothing from him, in opposition to the received opinion that Gonzalo's ideal commonwealth in "The Tempest" is due to Florio's translation. In Waller, the friend of St. Evremond and La Fontaine, he finds the type of the alliance and intermixture of French wit and English character. Later, Congreve was "an exquisite pupil of Molière," and Sir William Temple transferred to England the quarrel of the Ancients and Moderns. In the eighteenth century Voltaire is a conspicuous example of English influence on French literature, while Montesquieu "owed everything, from first to last, to England."

Richardson, again, was extremely popular in France, and Diderot and Rousseau were under great obligations to his influence. In the case of Pope, the influence was reciprocal. He was "a disciple of Boileau and the inspiration of Voltaire." Horace Walpole was the friend of Mme. du Deffand; and Miss Burney, who eventually married a Frenchman, was intimate with Talleyrand and Mme. de Staël. Subsequently, the influence on France of "Ossian," Young of the "Night Thoughts," Byron, and Sir Walter Scott, were among the many complicated influences leading up to the Romantic movement. Nor is the philosophic influence of England on France wanting in the nineteenth century. Taine is reproached with being "English from head to foot." Apropos of Taine, there seems to be some misconception in the following: "Moreover, Taine was a disciple of Auguste Comte, who in his turn borrowed largely from Spencer and Stuart Mill." No doubt Comte and Mill were in correspondence before 1842, the date of the last volume of "Positive Philosophy," and Mill owes to considerable obligation to Comte, but it is scarcely likely that Comte owed an appreciable debt to Mill. Spencer's first work, "Social Statics," was published during the later years of Comte's life, when his great work was completed.

To turn to the "History" itself, it is impossible to do more than refer to a few details. The chapter on the "Chansons de Geste" is enlivened by brief sketches of some of the most famous poems to English readers it would have been interesting if reference had been made to Lord Tennyson's debt to Chrestien de Troyes in "The Idylls of the King." Of Charles d'Orléans, so long resident in captivity near Tunbridge Wells, a few charming specimens are given, and the same is done for the "Pléiade" and their precursors, Heroët and Maurice Sève.

In the chapters on the "Grand Siècle" there is a warm, but perhaps too brief, appreciation of Racine, alike as a dramatist and as a poet. Had the book been written specially for English readers, some details might have been added. The origin of the Romantic movement has often been discussed. On the whole, M. Faguet's view is epigrammatically expressed in the words: "Chateaubriand was the father of romanticism and Mme. de Staël its godmother." He summarizes Chateaubriand's message to the nineteenth century:

In spite of some men of great genius and some admirable books, which I am better able to appreciate than any one else, your fathers have been for nearly three hundred years in error on the subject of the art of writing. They have had an idea that it must be to a certain extent impersonal, and that the author should not appear in it, or pour into it his own individuality. . . . Although they were Christians and French, the fear, strengthened by habit, of bringing their personality into their work led them to say very little about Christian and national subjects, which they even consciously avoided; on the other hand, they sought most eagerly after subjects drawn from mythology and antiquity. This was a veritable aberration, which could neither deprive them of genius nor immediately weaken literature, but it did, in the end, for want of substantial nourishment, wither it. So much the better! An immense amount of material remains intact, and an immense path remains open for their successors. Consult your own heart: it is there that genius may be found; in any case it is the home of what is deepest and most fruitful in your nature; give expression to your religious feelings, and do not believe, first with Boileau and then with Voltaire, that Christianity is devoid of beauty: it is all beauty; give expression to your patriotism, and revive your national history; realized by yourself, it will be a matter for admiration; do not repress either your sensibility or your imagination, as your fathers did, because real sensibility consists in personal experience, and they only liked to express the sensibility of others; moreover, real imagination is so permeated with sensibility that it is impossible to separate one from the other. And, last of all, consider that even impersonal art, which should in no way be proscribed, receives new and higher beauty through the intervention of the author's personality; that we always describe the "non-ego" either with a sympathy of the "ego" for it, or with a reaction of the "ego" against it; that it is this very sympathy or reaction to which we give the best expression; so that if personal literature has still to be

created, impersonal literature itself must be verified, rejuvenated, and illumined with new splendour by the new art which I indicate to you.

The pages devoted to Victor Hugo are, thanks to the necessary condensation, little more than a catalogue, and make us regret the delightful *étude* in the author's "XIX<sup>me</sup> Siècle." Of Michelet M. Faguet says:

Michelet, in spite of the tricks which his ardent and too lively imagination often played him, remains, by his power of vision, an incomparable historian. He has made living before us, one by one, every age and every successive stage of French society, from the Middle Ages to the year 1815, and one may almost say every generation which has lived on French soil. It is marvellous to "see" a period, to have it materialized before our eyes, to contemplate its life, colour, and activity. It is a great achievement to make us see it as he sees it; he is the Saint-Simon of every age, and gives us impressions of every century which might be those of an eye-witness.

To Sainte-Beuve, "the master of those who know" in criticism, an enthusiastic tribute is paid:

As a critic he is quite of the first rank. He never separated criticism either from general history or moral biography. An author was for him a period to understand, a soul to study, an artist whose artistic processes were to be analysed, whose influence on later writers was to be appraised; hence it follows that any study by Sainte-Beuve, down to the smallest, is an historic inquiry, a portrait, a lesson in aesthetics, a second historical inquiry which concludes, generalizes, and completes the setting of the picture. On the other hand, inclining in his quality of moralist to trace a natural history of humanity, he liked not only to place an author in his proper surroundings, but to find out with what other authors of widely separated times and places he had points of similarity or analogy, so as to recognize, throughout the human race, "families of minds," and thus to contribute to a possible general classification of humanity.

A few lines are added on Sainte-Beuve's distrust of system and universal ideas.

The value of the book is enhanced by the excellent index, which, besides fulfilling the usual functions of an index, serves as a *catalogue raisonné* of French authors.

#### *The Practice of Instruction.* By Prof. J. W. Adamson.

(4s. 6d. National Society's Depository.)

The principle of the division of labour is now generally admitted in connexion with manuals of school method. It is no longer possible for one man to profess to deal with all the subjects in the curriculum. This is all to the good. But there is a corresponding danger. The specialist is very apt to over-estimate the importance of his subject, and to emphasize unduly the peculiarities of method that his particular needs originate. In the book before us we have an admirable correlation of the general and the special in method. Collaboration even between two authors is always a difficult business: but, when it comes to a collaboration of ten, it reflects unusual credit on the editor who brings it to such a successful issue as we find in this book. One wonders whether he first wrote his general part, covering 124 pages, and sent it round to the other contributors before they began their work. In any case, there is justification for his claim that there are no fundamental contradictions between the general principles of method set out in Part I. and the special application found in Part II. On the other hand, there is no lack of individuality of treatment in Part II. It is very interesting to note the process by which consistency may be attained in a symposium. All the common elements supplied by the different contributors coalesce with each other and form in the reader's mind a solid body of established principles, while the peculiarities of each contributor tend to react against the peculiarities of all the others, and, as a consequence, to stand out in bold relief.

The general part is exceedingly well done. The sense of proportion is well preserved throughout, as one would expect in the case of an editor who approaches his subject after giving proof in a previous work—"The Pioneers of Education"—of his competence as a historian. The various general methods are treated in their proper perspective, and not arranged in order of their temporary prominence in current educational discussions. The heuristic method, for example, is not treated as if it were of Victorian origin. A general description and critical account of the theory of instruction is followed by an illuminating study of the curriculum of Prussian schools and a discussion of questions suggested in reference to schools at home. Then follows one of the most characteristic sections of the book: that dealing with the newer experimental methods. To be sure, the treatment is somewhat sketchy, as was inevitable in a work of this kind. But it is a great thing that our students of method and

our practical teachers who retain an interest in the scientific side of their profession should learn that this experimental method is being more or less successfully worked. It is not very creditable to the profession that names like Meumann, Ebbinghaus, and Messmer are all but totally unknown to the practising teacher. In this particular Prof. Adamson has certainly deserved well of his readers and of the profession generally.

It goes almost without saying that the contributions to Part II. are of unequal merit. The editor's own contribution on the Mother Tongue is particularly clear and suggestive, and bears the mark of the skilled and experienced craftsman. The Language sections will give rise to more difference of opinion. In ancient as well as in modern languages the "Direct Method" is recommended, and its application to Greek is fully illustrated by the reproduction of actual school exercises, which have proved a snare to certain early reviewers who mistook them for pattern pieces of Greek and criticized them accordingly. The reader may not agree with Dr. Rouse's views, but cannot help admitting the skill with which he pleads his cause. The section on the Teaching of Natural Science, which is remarkably well done, is, in effect, an essay which aims at bringing about unity of purpose and consistency of method in the handling of the study throughout the school. As was to be expected from the author of "The Aims of Scientific Method," the treatment is eminently clear and logical, though it must be admitted that the result makes somewhat difficult reading for the ordinary student. But it is, perhaps, time that the ordinary student—and the ordinary member of the general public—should learn that a study of method is not child's play. The Mathematical section adheres to reformed lines. In the hands of Dr. Herbertson, Geography could not fail to be excellently treated. The subject is expounded on the "regional system," and full detail is supplied for the preparing of courses in all types of school. Another innovation in this book, though hardly a surprising one when we note the name of the publishers, is the inclusion of Religious Instruction. Principal Headlam urges a frank acceptance of the established results of Biblical criticism, argues for the value of Biblical instruction as such, but frankly demands denominational teaching. This section has less reference to actual method than have the others.

A characteristic of the whole book is the wide view it takes of the problems involved. Continental and American experience is utilized wherever possible. The German educational system is relegated to its proper place, and in the sections on the Mother Tongue and on History particular attention is drawn to French practice. A very important feature of the book is the presence of little bibliographies at the end of each of the sections. While remarkably complete within itself, the book leaves the student without excuse if he remains ignorant on any of the points referred to but not fully treated in the text. Even experienced teachers will learn much from this book, and for students in training it is invaluable.

## GENERAL NOTICES.

### MATHEMATICS.

*Practical Integration.* By A. S. Percival, M.A. (2s. 6d. net. Macmillan.)

Within the limits prescribed by the writer, the subject is carefully though rather briefly treated. Those portions alone are discussed which have a practical bearing. For a fruitful study of the principles of integration, a previous thorough knowledge of those of the differential calculus is universally acknowledged to be essential; hence this is assumed by the author on behalf of his readers and must be possessed by them, in order that they may derive full advantage from the present work. Teachers will feel additional confidence in adopting the new text-book from the fact that Mr. Percival, when consulting existing authorities, has availed himself of standard treatises occupying the first rank in the estimation of mathematical experts, as, for example, those by Lamb, Edwards, Williamson, and Greenhill.

*Ratio Co-ordinates and Carnot's Theorem.* (1s. Whittaker.)

By means of a special system of ratios, which he employs for the purpose of defining the positions of points and lines—in fact, conformably with his title, as a system of ratio co-ordinates—the author is enabled to give in this tiny pamphlet brief proofs of many leading propositions in modern geometry and in conics. The theorems for the discussion of which the system is perhaps most suitable are those concerned with projective properties. The volume will be valuable to students of the subjects considered, both on account of intrinsic usefulness and by reason of its compact form.

*A Simple Course of Weighing and Measuring.* By H. J. Ashton, F.R.G.S. (1s. net. Philip.)

The volume collects a number of rules connected with the arithmetic

of weights and measures, illustrating them by examples based on their application to practical purposes. The text is often wanting in fullness, many of the rules standing as unexplained statements merely followed by worked exercises embodying the methods considered. In many cases, however, the author indicates the principle involved. The derivation of all our units from one single fundamental unit of time is ingenious, if rather far-fetched. A short account of the metric system is included. A few misprints occur, but in general the little book is well brought out.

*The Metric System.* By F. Mollow Perkin, Ph.D. (Whittaker. 1s. 6d.)

A brief summary of the leading facts connected with the metric system, and compiled as a manual suitable to supplement the oral teaching of the subject. A series of tables and graphs gives in concise form British and metric equivalents. There are interesting sections on specific gravities, the measurement of temperatures, and equivalent values in British and foreign money. These, it is hoped, will enlarge the sphere of usefulness of the little volume. The specific gravities quoted for various substances have, in many cases, mean values lying between the limits of the densities given for them by Prof. J. D. Everett. The author lends his unqualified support to the familiar practical arguments in favour of the adoption by the United Kingdom of the metric system and decimal coinage.

### HISTORY.

(1) *A Smaller Social History of Ancient Ireland.* (3s. 6d. net.) (2) *The Story of Ancient Irish Civilisation.* (1s. 6d.) Both by P. W. Joyce, LL.D., M.R.I.A., One of the Commissioners for the Publication of the Ancient Laws of Ireland, and Honorary President of the Royal Society of Antiquaries, Ireland. (London: Longmans. Dublin; H. M. Gill & Co.)

The first of these volumes is abridged from Dr. Joyce's great work *A Social History of Ireland*, which contains a complete survey of the social life and institutions of ancient Ireland, with ample proofs and references; and the second is abridged from both. (1) is disposed in three Parts: (i.) government, military system, and law; (ii.) religion, learning, and art; (iii.) social and domestic life; and it has over 200 illustrations. (2) reproduces the essential features of the longer works in popular form. The series constitutes the only complete social picture of the people; and the lineaments are depicted throughout with the strictest regard to historical fact and with the most laborious care. Any one that peruses the narrative will at once see what a weight of meaning is contained in Dr. Joyce's remark that "the old Irish people have never in modern times received the full measure of credit due to them for their early and striking advance in the arts of civilized life, for their very comprehensive system of laws, and for their noble and successful efforts, both at home and abroad, in the cause of religion and learning." These volumes should be studied diligently by "the predominant partner."

*The Letters of Queen Victoria.* Selection from Her Majesty's Correspondence between the years 1837 and 1861. Published by authority of His Majesty the King. Edited by Arthur Christopher Benson, M.A., and Viscount Esher, G.C.V.O., K.C.B. In three volumes. (6s. net. Murray.)

A popular edition, nicely printed and tastefully got up, with sixteen illustrations distributed among the three volumes, at less than a tenth of the price of the original issue. The selections are judiciously made from some five or six hundred volumes of papers, the principle being to illustrate the development of the Queen's character and disposition and her methods of dealing with political and social matters. "That the inner working of the unwritten constitution of the country, that some of the unrealized checks and balances, that the delicate equipoise of the component parts of our executive machinery, should stand revealed, was inevitable." "Nothing comes out more strongly in these documents than the laborious patience with which the Queen kept herself informed of the minutest details of political and social movements both in her own and other countries." The notes are limited to such an amount of comment as may enable a reader without special knowledge of the period to apprehend intelligently the course of events.

### RELIGIOUS AND MORAL.

*The Cambridge Devotional Series.* (1s. 6d. net each volume. Cambridge University Press.)

A charming series, beautifully printed and chastely got up. (1) *St. Francis and his Friends*, rendered into English from Franciscan chronicles by Horatio Grimley, M.A.—very interesting and touching selections.—(2) *The Imitation of Christ; or, The Ecclesiastical Music*, by Thomas à Kempis, a translation edited by J. H. Srawley, D.D. The translation is based upon the English Version of 1620 by F.B., which has been revised throughout with the help of Hirsche's text of the original. The work is given complete, and without modifications or adaptations of language "to suit the needs of modern readers."—(3) *The Interlinear Psalms*—the Authorised Version and the Revised Version, together with the marginal notes of the Revised Version—showing at a glance the position, extent, and nature of the differences between the two Versions.—(4) *Agathos and the Rocky Island*, and other Sunday stories and parables, by Samuel Wilberforce, with introductory note by A. J. Mason, D.D., Master of Pembroke College, Cambridge. The short dialogues occasionally following the narratives have been omitted, as unnecessary to ex-

plain the meaning and application of the stories and as somewhat detracting from the artistic effect of the book.

*A New Self-Help.* By Ernest A. Bryant. (5s. Cassell.)

Mr. Bryant writes in frankly optimistic vein "a story of worthy success achieved in many paths of life by men and women of yesterday and to-day." The twenty chapters are assigned to separate groups—such as inventors, scientists, artists, founders of great businesses, and so forth; and the examples are taken from modern times freely enough to justify the title. Mr. Bryant does not seek to glorify the money-spinner or to worship success: "careers notable in their effects for the good of others have been chosen, without regard to the reward won by the authors of those efforts." The volume is fluently written and very readable; and, if there is now and again a lack of discrimination, still the general effect is no doubt stimulating and encouraging to youths that have any real grit in them.

#### HOW TO USE THE MICROSCOPE.

Mr. Robert Sutton (43 The Exchange, Southwark Street, S.E.) issues a third edition of *The Microscope and how to Use it*, by T. Charters White, M.R.C.S., L.D.S., F.R.M.S., late President of the Quekett Microscopical Club (3s. net)—a very serviceable handbook for beginners. The text has been revised, and fresh chapters on "The Marine Aquarium as a Field for Microscopical Research" and "Staining Bacteria" (the latter by Maurice Amsler, M.B., B.S. Lond.) have been added. The illustrations are from photomicrographs by the author.

#### MISCELLANEOUS.

The *Calendar* of University College, London, for the session 1908-9 contains the usual ample supply of information about the numerous courses and classes, together with some new features of interest. The outline of the history of the College, by Dr. Carey Foster, ex-Principal, has been revised and brought up to date, and there is a set of plans showing more completely than before the disposition of the extension buildings for the work of the College. The post-graduate work appears to be flourishing, both in lectures and in research: last session there were no fewer than 239 post-graduate workers. The intercollegiate system has also been developed with marked success, especially in the departments of Law and Modern Languages.

Messrs. Bowes & Bowes issue an interesting brochure, *Students' Life and Work in the University of Cambridge*, consisting of two lectures by Karl Breul, M.A., Litt.D., Ph.D., University Reader in Germanic (1s. net). The lectures were originally given by way of first information for the students, British and foreign, that attended the University Extension Summer Meeting in July and August last. We are glad to note that Dr. Breul suggests that he may go on to deal similarly with the origins and development of the University. A considerable bibliography is appended. The information is very fully and compactly presented, and it will be of much interest to parents and guardians as well as to the academic public generally.

The first (October) number of the fourth volume of *The Modern Language Review* (4s. net, Cambridge University Press) has a very thriving appearance. Special interest attaches to an article on Langland by Mr. Theophilus D. Hall, who says it was written previously to the publication of the second volume of the "Cambridge History of English Literature," and that "the conclusion arrived at by the writer of it with regard to the C-text is fully borne out by Prof. Manly." Mr. Hall, however, does not see eye to eye with Prof. Manly at all points.

Messrs. Jack have begun to issue a series of 100-colour reproductions of the finest paintings in the National Gallery. The pictures will be selected so as to represent the whole range of art of every country and school from the thirteenth to the nineteenth century in chronological order, and they will be accompanied by critical and explanatory notes. The work, which bears the title *The National Gallery*, will be completed in seventeen Parts (1s. net each). The joint editors are Paul G. Konody, Maurice W. Brockwell, and F. W. Lippmann. The first Part gives decided promise of a valuable and popular work.

Messrs. Cassell have begun to issue (1) "the King's Edition" of their ample and popular *History of England in Parts* (6d. net each). (2) Their elaborate and practical *Cyclopaedia of Mechanics*—"memoranda for workshop use, based on personal experience and expert knowledge"—which runs to five volumes and contains some 6,500 illustrations (Parts, 3d. net each). The editor is Paul N. Hasluok. (3) *Outlines of Electrical Engineering*, by Harold H. Simmons, A.M.I.E.E., Lecturer in Electrical Engineering at Finsbury Technical College and formerly Head of the Electrical Engineering Department of the Goldsmiths' Institute. This is an entirely new work, plainly written and liberally illustrated. It will be completed in fourteen fortnightly Parts (7d. net each).

*Jack's Reference Book* (3s. 6d. net) is "thirteen important reference books in one volume of 1,088 pages (9 x 6½)." The thirteen divisions are general, medical, legal, parliamentary, social, educational, commercial, and so forth. There is an enormous quantity of useful information, mainly such as a busy man wants. The price is amazing.

*Child Study for October* contains notable articles on "Child Study in relation to the Training of Teachers" (by Alex. Morgan, M.A., D.Sc.),

and "Play" (by Beresford Kingsford, M.D., D.P.H.), and very interesting suggestions for an annual "School Festival" (by Mrs. Laurence Gomme).

*The Navy League Annual*, edited by Alan K. Burgoyne, makes its second appearance in force (2s. 6d., The Navy League, 13 Victoria Street, S.W.). All the navies of the world are reviewed and a special chapter is devoted to a consideration of "comparative naval strength." "The superiority of this country appears almost brutal"; "unless attacked by some unthinkable combination, our position is unassailable." There are also a number of other articles of a pertinent character, covering the whole ground of naval affairs. A very useful assemblage of naval facts, though some of the arguments will scarcely escape question.

*The P.R.A. Annual*, 1909 (6d., Watts), contains thirteen articles of the usual advanced character. Among the contributors are Prof. Lombroso, Prof. Lester Ward, George Brandes, A. W. Benn, Dr. Callaway, and other well known writers. Mr. J. M. Robertson, M.P., expounds "The Philosophy of Bradlaugh."

*The Journal of the Municipal School of Technology, Manchester*, furnishes a very valuable record of investigations undertaken by members of the teaching staff of the several departments of the institution. Part II. of the first volume contains ten considerable articles showing results of laborious inquiry on a variety of technical subjects.

The S.P.C.K. publishes the story of *The Battle of Trafalgar*, written and illustrated by Irwin Bevan (6d.). There are thirty illustrations. The brochure will be popular.

Messrs. Collins & Irene publish *The "A.D. Infinitum" Calendar* (3d.) in card form folding to suit the pocket—"an accurate, simple, and instantaneous reference for any date of any year, past, present, or future, from the year 1 A.D. *ad infinitum*." Ingenious and convenient.

#### DIARIES.

*Letts's Diaries* (Cassell) appear in so many different forms and are so well devised and furnished for their various purposes that they no longer stand in need of commendation. We have several specimens: No. 10, Office Diary and Almanac, three days to a page, with much practically useful reference matter prefixed, in strong binding (4s. 6d.); No. 13, Pocket Diary and Almanac, a reduced form of the preceding, on similar lines, but convenient for the pocket (2s. 6d.); No. 21d, also a Pocket Diary and Almanac on a smaller scale (1s. net); No. 46, Rough Diary, giving half a page to a day (2s. 6d.); No. 34, Rough Diary and Almanac, with a week on a page, interleaved with blotting (1s.); No. 39, Scribbling Diary, with a week in an opening, interleaved with blotting, very serviceable on the desk (1s. 6d.); No. 78, Pocket Diary, six days in an opening, oblong form, convenient for the pocket, in limp morocco grain leather (1s. 6d. net); No. 111, Pocket Diary, a day to a page, limp cloth, gilt edges (2s. net). Insurance coupons are attached to each volume. These diaries have been published for over twenty years solely by Messrs. Cassell.

*Pitman's Shorthand and Typewriting Yearbook and Diary* (1s.) contains, as usual, a great deal of information about the subjects of its title. The Diary portion gives a page to a week.

#### CHRISTMAS BOOKS.

##### HISTORICAL AND DESCRIPTIVE.

*The Druidess*, by Florence Gay (2s. 6d., Ouseley), takes us back to the end of the sixth century and depicts the conflict of Celt (Pict, Scot, Bret) and Saxon and of Druidism and Christianity. There is plenty of battle and intrigue to satisfy the appetite for adventure; and, if there is some derangement of historical facts, there is a strong colouring of the rough life of the times, both in Ireland and in Western England and Wales. Between the Druidess and a Saxon lady a heroic young chieftain has a distracting time of it. The Druidess herself is strongly presented. St. Columba appears at the famous convention at Druimceta. By the way, the latest historian of Ireland calls the place Drumceata and fixes the date some twenty years earlier (575), but that does not matter much. One of the chapters sketches the first (or an early) Eisteddfod—an extraordinary scene, of which the modern assembly is a very limited and pale reflexion. The story is not very sharply outlined and the information about the period tends to be massed heavily here and there. But the freshness and interest of the materials would suggest that the story might be advantageously rewritten on a larger scale, with less disturbance of the history and more free display of the abundant embroidery.

*Sir Sleep-Awake and his Brother*, by Grace I. Whitham (2s. 6d., Blackie), is a story of the Crusades, a tale of adventure in the time of King John. The two brothers have a great estate and an immense treasure; and Sir Sleep-Awake is led to suppose that he has killed his brother, while the brother is led to believe that Sir Sleep-Awake thinks him guilty of stealing the treasure. Hence remorse and despair, which send one brother to the Holy Land on pilgrimage and the other to Spain to fight the Moors. There are plenty of difficulties by land and

sea, plenty of fighting, and no lack of trials of patience and courage. Boys will follow the developments with unflinching interest. Four illustrations by N. Tenison.

*In Empire's Cause*, by Ernest Protheroe (3s. 6d., Gay & Hancock), sketches the more picturesque scenes in the history of the country. First there is "the Making of the Homeland," which takes us down, by unequal steps, to the time of Elizabeth; next is "the procession of Empire Builders"; and, finally, "the Briton's Burden of Empire." Though the selection of the subjects and the mode of treatment ensure interest throughout, the historical grasp is not strongly marked, and the sense of proportion is not unfrequently perverted. If the author had put his finger on the decisive element elsewhere as surely as he does in his description of the battle of Omdurman, the volume would have been very valuable indeed. About a dozen full-page illustrations.

*The Silver Hand*, by Eliza F. Pollard (2s. 6d., Blackie), is a story of India in the eighteenth century. In the course of the Mahratta wars, a prosperous British merchant of Madras is shot dead during an attack on his house, and his eleven-year-old daughter Ursula, with her nurse, a Mahratta woman, disappears in the confusion. The child is found on the roadside by Scindia, and brought by him to Poona. Under peculiar circumstances her life is saved by a young Breton nobleman, who had come out to India as a soldier of fortune. By-and-by she goes in the train of Scindia to Agra, where the Breton also turns up, to get medical assistance, his right hand being grievously wounded. At a lake near Agra, she found in the right hand of a figure of Buddha carved in stone a silver hand, exactly similar to the Breton's, and "fashioned in such a way that evidently, when fastened securely on the arm, the hand and each finger would be responsive to the will of the wearer." This turned out to be "the fulfilment of an ancient prophecy," and designated the Breton as the man that should lead the Mahratta confederacy to the height of power. The story is well written, varied in interest, and full of action. Four illustrations by William Rainey, R.I.

*A Lad of Grit*, by Percy F. Westerman (2s. 6d., Blackie), is a story of adventure on land and sea in Restoration times. If Aubrey Wentworth is to take ample legacies under the will of his father, a loyal cavalier, who has met a tragic death, he must fulfil certain mysteriously expressed conditions. He finds stirring adventures amongst buccaneers of the West Indies, Algerine pirates, and English smugglers and wreckers; and during captivity in Holland he gets possession of a mysterious document affording a clue to the treasure of the cavalier. There are further adventures in the attempt to get the treasure. The reader will not have to complain of any lack of excitement in the story. Four illustrations by Edward S. Hodgson.

*Stories of the Flemish and Dutch Artists*, from the time of the Van Eycks to the end of the seventeenth century, selected and arranged by Victor Reynolds (7s. 6d. net, Chatto & Windus), is a very handsome as well as a very interesting volume. The stories are told as far as possible in the words of the original historians of the two schools. They are quaintly direct and charmingly racy, though some of them may be impeached by the severe historian; and they present very vivid pictures of certain aspects of the life of the period. Mr. Reynolds has added fuller information here and there from the researches of modern authorities. Some two dozen artists are commemorated, and there are eight coloured plates and twenty-three half-tone plates.

*Our Empire Story*, told primarily "to children," by H. E. Marshall (7s. 6d. net, Jack), but very well worth reading by elders, consists of stories of India and the greater colonies—Canada, Australia, New Zealand, and South Africa. The narrative is simple and picturesque, and, where there is popular difference of opinion, the author does not press the historical fact. It seems rather a pity to have left the siege of Delhi undescribed. But on a general view the volume is very satisfactory, and it is full of interest. The type and get-up are handsome, and there are twenty coloured full-page illustrations by J. R. Shelton, and six maps.

*How Canada was Won*, by F. S. Brereton (6s., Blackie), weaves a brisk story into the events that led up to the conquest of Canada. The subject is always interesting to the young, and it is especially opportune now in view of the recent tercentenary celebrations at Quebec. The hero proves his mettle in various tight places, and at length is placed by Washington in command of a band of scouts, who find plenty of fighting and adventure about Fort William-Henry. He falls into the hands of Indians and all but loses his life, being saved by a French colonel, whose life he had previously saved. He is taken to Quebec, whence he escapes down the steep cliffs by the aid of his former friends the scouts. He joins the British force in the attack on Louisbourg, and afterwards takes a prominent part in the capture of Quebec. An exciting story graphically told. Eight illustrations by William Rainey, R.I., and three maps.

*Under the Chilean Flag*, by Harry Collingwood (3s. 6d., Blackie), is a well devised and vigorously written story of adventure, mainly in the war between Chili and Peru in 1879-81. Jim Douglas and Terence O'Meara, second mate and third engineer of a cargo steamer, sick of the brutality of their captain, desert the ship at Valparaiso and join the Chilean navy as officers on the flag-ship of the squadron then at that port. The war breaks out, and the intelligence and spirit of the lads quickly bring them into prominence. The occupation of Antofagasta, the great battle between the "Esmeralda" and the famous "Huescar," the battle of Angamos, the bombardment of Callao, mines and countermines, alarms and excursions, capture and escape—there is

no lack of varied adventure. But what of the hidden treasure and the prophecy of Inca? The reader will discover all that in due time and be delighted with the luck of the finder. The story will rank with the best of the author's dozen (or more) volumes. Six illustrations by William Rainey, R.I.

*Mr. Midshipman Glover, R.N.*, by Staff-Surgeon T. T. Jeans, R.N. (5s., Blackie), is "a tale of the Royal Navy of to-day," and, while narrating numerous adventures both ashore and afloat, Dr. Jeans portrays the habits of thought and speech of various types of officers and men. It is rather early to write him down the modern Marryat, but he has a thorough grip of the facts, a keen eye to character, a strong sense of humour, and a graphic pen. He tells how a squadron of the British Navy, lent to the Chinese Government to destroy a rascally band of pirates, chase the enemy across the Indian ocean, capture a ship, lose a destroyer, drive a pirate cruiser ashore, exterminate a torpedo flotilla, establish a landing on the island, fight the great battle of One Gun Hill, and dismantle the pirate forts, &c. Mr. Midshipman Glover is to the fore when business is on hand; and Milly's wedding comes off all right, and "it was a jolly grand affair." Six illustrations by Edward S. Hodgson, and a map illustrating the operations against the pirates.

#### TALES OF ADVENTURE.

*Rough Riders of the Pampas*, by Captain F. S. Brereton (5s., Blackie), is a vigorous tale of ranch life in South America in the middle of last century. The hero gets into trouble at school, very unjustly, but he prefers ignominious dismissal to clearing himself at the expense of a comrade. So he is sent to South America to be out of the way. The voyage out is sufficiently eventful, and on the rancho and the pampas, between Indians and brigands, there is no lack of thrilling adventures. The story is written with the author's well known verve. Six illustrations by Stanley L. Wood.

*A Middy in Command*, by Harry Collingwood (6s., Blackie), is a stirring story of the sea, full of adventure, and admirably written. Richard Grenville, a midshipman in the slave squadron on the West African coast, is put in command of a captured slave ship, with a crew of fourteen men, and instructed to make for Sierra Leone. The ship is captured by a pirate, who scuttles her and leaves her to sink, crew and all. The crew, however, take to the boats, and there are "strange happenings" before they succeed in rejoining their own ship. Afterwards Grenville takes despatches to Port Royal, where the Admiral sets him to pursue and destroy a pirate vessel, an adventure that has unexpected developments. There is a treasure cave, of course, to be explored, and there is a young lady, too, though she is kept well in the background. The story involves excitement enough to satisfy a very exacting taste. Eight illustrations by Edward S. Hodgson.

*The Island Traders*, by Alexander Macdonald, F.R.G.S. (3s. 6d., Blackie), narrates the story of a secret Australian expedition to gain possession of a group of islands in the South Pacific already coveted by France and Germany, whose secret agents are treating to get different local chiefs to appeal to their Governments for protection. The hero carries off one chief and makes the other prisoner and impersonates him. The results are exciting enough. The author's personal experience of the South Seas stands him in good stead for incident and for local colour, and he writes with graphic force. Six illustrations by Charles M. Sheldon.

#### YARNS OF THE SCHOOL.

*The Wizard's Wand*, by Harold Avery (2s. 6d., Nelson), is "a tale of school life for girls and boys." It was Evangeline—"what a long name for such a little person!"—that discovered the wizard, an "imposing-looking gentleman," of course; and the hazel wand was a device of the wizard's for the recovery of the florin she lost on an errand. How that florin could have got into the ink-bottle was indeed a puzzle, but Evangeline had no doubt that wizard got it out. However, that is but a beginning of the mysteries, and the instructed reader does not need to be told that Mr. Avery knows how to charm girls and boys alike. Two coloured illustrations.

*The Third Class at Miss Kaye's*, by Angela Brazil (2s. 6d., Blackie), is the story of a clever self-regarding little girl, who, after some spoiling at home, has to fit herself into the life of a healthy modern private school. One of her closest friends is an older girl, whose parentage is wrapped in mystery and pathos, which evoke Sylvia's romantic interest, with practical results. The girl-life at school, the fun as well as the earnest, is admirably depicted in a lively style. Four illustrations by Arthur A. Dixon.

*Form III. B.*, by Ursula Temple (2s. 6d., Nutt), formally classes itself as a school story. It runs from entrance exam. to scholarship exam. at a girls' high school. Friendships and antagonisms, blunders and scrapes and accidents, together with fresh settings of the big school events, are very briskly and ingeniously described. Frontispiece.

*For the Sake of his Chum*, by Walter C. Rhoades (3s. 6d., Blackie), implies in its title a vicarious sacrifice. Lorden was the chum, and Lorden was thrashed by Mr. Webber, and, being a sensitive and passionate boy, he brooded over the trouble and took a dishonourable

revenge. Kerslake, who alone knew that Lorden was the culprit, and had passed his word to keep it dark, himself fell under suspicion, and dropped from the height of popularity into the abyss of contempt. The truth is partially unveiled in the course of some adventures on an island on the Scottish coast, and finally in a highly dramatic way. The story is written with much force and is varied in interest. Six illustrations by N. Tenison.

## STORIES FOR GIRLS.

*A Courageous Girl*, by Bessie Marchant (3s. 6d., Blackie), is a story of Uruguay. Anne Beauchamp's father was a sheep-farmer on the Banda Oriental and a widower. From fourteen to seventeen Anne underwent the discipline of school in England, intolerable to a "wild girl." On the voyage home she makes friends with Christine Moseley, the daughter of a railway contractor, who had saved her in "the High" at Oxford from a motor-car accident. Expecting a position of wealth and consideration, she finds her father reduced to poverty—a servant where he had been master, and lately taking to drink. Anne does his work for him in his absence, looking after the sheep, which introduces complications with the master when he comes on the scene. Incidentally, she comes to know of a plot to murder Mr. Moseley, who is building a railway in the neighbourhood, and rides through a furious storm to put him on his guard. On her return she finds her house in ruins, and other troubles follow. But we dare say she comes to her own at last. The story is brisk and well written. Six illustrations by W. Rainey, R.I.

*Daughters of the Dominion*, by Bessie Marchant (5s., Blackie), is a fine story of the Canadian frontier. Nell Hamblin works for her living as a nurse, as a telegraphist, and as keeper of a cooked food shop. In defeating a daring attempt to rob the depot she sustains an injury to an ear, so that she is compelled to give up her work as a telegraph-operator. As she is planning to lay out her compensation money in educating herself for a better sphere in life, she learns that a friend of her father's has died, leaving a sick wife and several children. Nell adopts the whole family, and starts a shop for supplying the miners at Camp's Gulch with cooked food. Wanderers from the outside world cross her path at different times and get mixed up in her story, and eventually one of them carries her off. The events are vividly conceived and effectively depicted, and the interest is easily maintained throughout. The lesson of work comes home to the Canadian. Six illustrations by William Rainey, R.I.

*"A Fish out of Water"*, by F. F. Montrésor (2s. 6d. net, John Murray), works out with remarkable discernment and in a natural and charming manner an exceedingly difficult situation. A second marriage brings an extremely literal and matter-of-fact girl into a family where the father and the two daughters of the first marriage are of a predominantly literary and artistic temperament. There is no understanding of each other's ways, and no sympathy, though the intentions are of the best and most kindly. If the contrast had been less decisively pronounced, the case would have been perhaps more natural and the problem more testing. However, the little girl, who is as "a fish out of water," at length finds her way to the water under circumstances that create not a little sensation in her circle. The story is admirably told and in strong and direct style, and with shrewd psychological penetration.

*Cousin Sara*, by Rosa Mulholland (Lady Gilbert), is "a story of arts and crafts" in a double sense (6s., Blackie). Colonel Stevenson lost his wife in India and then got his legs shot off in battle; afterwards he developed a talent for the invention of machinery. His one child, Sara, was sent home to Belfast, where she was looked after, in a distant way, by a far-off cousin of her father's, one of the Montgomeries of the Mills, in county Antrim. This flax spinner takes into his office two young fellows—Arno Warrender, a son of a dead friend, bought up in Italy, and Harvey Durrant, the protégé and supposed heir of Sir Jonas Cunyngham, wealthy banker and retired shipbuilder. Harvey is a general favourite; Arno, keener for art than for an office desk, gets into disgrace, flies to Italy, and attains the high road to distinction, not without multiplied troubles. An important invention of the Colonel's is stolen and patented by another, and it is round this fact that the action of the story turns, and Sara is prominent on the scene, whether in Belfast or in London or in Italy. The story is well constructed, cleverly worked out and admirably written, and it is excellent in tone. Eight illustrations by Frances Ewan.

*A Love Passage*, by Harriet, Lady Phillimore (2s. 6d., S.P.C.K.), is narrated with much spirit and in admirable tone. A girl of nineteen, presently to be left an orphan with no great worldly provision, accepts an offer of marriage from a good cousin John, some thirty-five years older—say fifty-three—who has made fortune and reputation in Jamaica. On the voyage out she meets a Captain of the Royal Engineers, and by the time she lands she discovers herself in a quandary between liking and gratitude on the one hand and love on the other. The Captain has to proceed at once elsewhere on service, the good cousin John has a bout of fever, and there is another Captain. Letters get into wrong envelopes and accidents happen. But Cousin John is a very fine character, and no doubt the tangle gets straightened out in the end. The interest is deftly and agreeably maintained. Three coloured illustrations by W. S. Stacey.

*Septima*, by Emily Pearson Finnemore (2s. 6d., S.P.C.K.), treats cleverly and agreeably a rather complicated tangle of incidents arising naturally enough from the attractions of the heroine. Septima, a skilful lacemaker, and granddaughter of the local tailor and postmaster, becomes engaged to the stalwart miller, scorning the attentions of the nephew

and successor of the local magnate, Lord Fairfield. A friend of the disappointed suitor, who is paying court to his sister, suggests the agency of the press-gang and the miller is duly carried off to the wars. Septima is pursued by woovers and other tribulations; and his lordship's suggestive friend is informed by his lordship's sister that she will have nothing to say to him till the miller is recovered. The story is quietly, but vigorously, evolved and written. Three coloured illustrations by Adolf Thiede.

*Heroine or ?* by Isabella B. Looker (2s., S.P.C.K.), is a simple and effective story, working out the momentous query of the title. Major Dackombe has to go away to fight in Egypt, and Winnie, a little maid of eight or nine, who "always runs away when she is frightened," is concerned about coming up to her father's standard of bravery, for he has not welcomed her requirement of a promise that "if the black men come after you, you'll run away!" When Dackombe returned (with glory) he found that his little girl had decided the question to his satisfaction. A very attractive and agreeably written story. Three coloured illustrations by Harold Pittard.

## OLD FAVOURITES IN NEW DRESS.

*Edinburgh*, "Picturesque Notes," by Robert Louis Stevenson (6s., Seeley), appears in a bright new edition, with more than sixty illustrations by T. Hamilton Crawford, of the Royal Scottish Water Colour Society. The "notes" touch the main points of interest in a singularly interesting city. They are pointed and light, impressing the characteristics of the place more effectively than a detailed and ponderous description. The volume is very liberally got up.

*The King's Signet*, the story of a Huguenot family, by Eliza F. Pollard (2s., Blackie), offers episodes of persecution following the revocation of the Edict of Nantes (1685)—a stirring story charmingly told. Four illustrations by G. Demain Hammond, R.I.

*Courage, True Hearts!* by Gordon Stables, M.D., C.M. (2s., Blackie), is "the story of three boys who sailed in search of fortune," and met with a variety of adventures, which will be read by other boys with as much zest as ever in this very agreeable new issue. Four illustrations by W. S. Stacey.

*Links in my Life on Land and Sea*, by Commander J. W. Gambier, R.N., appears in a second edition, revised throughout (5s., Fisher Unwin). It records the author's personal experiences during many years' service in all the waters of the world. The style is simple and agreeable, and the matter is instructive as well as interesting—more interesting than many a book of fiction.

*The Gods and Heroes of the North*, by Alice Zimmern (2s., Longmans), is issued in a new impression. The old stories are delightfully retold, and there are a dozen full-page illustrations. The notes at the end may, or may not, be meant for school use; but, at any rate, the volume will read as well at home, and it will make a very pleasant Christmas book for children that love to read in a quiet corner by themselves.

*The Little Duke, or Richard the Fearless*, by Charlotte M. Yonge (2s., Blackie), with four illustrations by W. M. Bowles, is a pleasant tale of the tenth century, depicting Norman life in faithful colours, and illustrating the civilizing influences of the Christian religion. This is a handsome edition.

*With Moore at Corunna*, by G. A. Henty, with eight illustrations by Wal Paget (3s. 6d., Blackie), is one of the author's most spirited stories. It will be as welcome as ever in this new edition.

*The Disputed V.C.*, a tale of the Indian Mutiny, by Frederick P. Gibbon (3s., Blackie), is also well worth the honours of a new edition. Six illustrations by Stanley L. Wood.

*In the Land of the Blue Gown*, by Mrs. Archibald Little (7s. 6d. net, Fisher Unwin), is in a second edition. The range of subjects is very wide, and the description is bright and clever. The book, in fact, furnishes a panorama of Chinese life, scenery, and architectural characteristics. The illustrations are numerous and excellent.

## VARIOUS.

*The Gorgeous Isle*, by Gertrude Atherton (2s. 6d. net, John Murray), is a story of Nevis, in the West Indies, in the heyday of its popularity (1842). Of course, it turns on an adventurous psycho-pathological problem. Byam Warner, a native of the island, but of good English descent, had made his fame ten years ago as a poet, and is shattered in health by drink. Anne Percy, a vigorous young girl from the North, "tanned by the winds of moor and sea," and possessing "a superb majestic figure," visits the island, with Warner's poetry all singing in her brain and nerves. They meet, and her influence steadies Warner, who becomes physically reinvigorated by suspending his potations. Shall Anne marry Warner, and, if she do, and if Warner have the impulse to write more poetry, which he cannot do without brandy, shall she, who married his poetical genius as much as his handsome person, place the bottle to his hand or keep it away? The working out of the problem involves a complexity of personages and social views. Even Miss Atherton's undoubted ability cannot make real tragedy out of the sordid and perverse elements.

*The Lowest Run*, and three other short stories, by Mary Cholmondeley (2s. 6d. net, John Murray), form together an unpretending volume that contains more incisive and dramatic work than a chance dozen of current novels. True, there is more vigour than polish; a certain defiant obtru-

sion of personality (perhaps explained by the preface), and even incidentally a practical advertisement of somebody's vendible goods, but then there is a substratum well worth polishing. The preface deals amusingly with some silly and malicious criticisms of the author's work—amusingly, yet not without a spice of natural, but wholly futile resentment. The author is strong enough to go her own way without looking over her shoulder to the miserable nagging of literary and society depreciators that condemn themselves out of their own mouths as unworthy to bear her train. But what can a lady do with a gentleman neighbour at a dinner-party when, on her shyly acknowledging the authorship of a book he has been praising, he tells her to her face: "I know that to be untrue"? It is not always easy for flesh and blood to suffer fools, gladly or otherwise.

*Back to Back*, by M. Bramston (2s., National Society), tells brightly and forcibly a story of a struggle against drink, with aid from religion. "You know as well as I do that we're bound to stand by one another and pull one another out of holes." Two full-page illustrations by Isabel Watkin.

*Rue*, by Mary H. Debenham (2s. 6d., National Society), carries in its name a suggestion of its motive, and its Sunday name, "Herb o' Grace," implies a strong religious colouring. The scene is in the Midlands, in connexion with a factory, and one group of the personages have the piquancy of a mixture of Italian with English blood. If a clerk carry a bag of money from Deneton to Stockport and stop on the way to drink with dubious acquaintances, there may well be occasion to rue the blunder. The characterization is good and the tone excellent, and Miss Debenham always writes with care and has something worth the writing. Four full-page illustrations by Isabel Watkin.

*Janie Christmas*, by M. Bramston (1s. 6d., National Society), is mainly of domestic interest, with incidents touching the course of true love. The lady's name comes from her being born on Christmas Eve, and left motherless with a good Samaritan of a woman that sheltered her mother, who had missed her train and her husband. From accidental circumstances she was not claimed, though probably she will find her father in the long run. There is a villain in the piece, but of course his villainy recoils on himself. The story is well written, and the characters are distinctive; but a Scotsman does not talk Cockney. Two full-page illustrations by Isabel Watkin.

*Barbara's Heroes, Ancient and Modern*, by H. Louisa Bedford (1s. 6d., S.P.C.K.), works out patiently and interestingly the ideals of a little girl up to the mature age of twenty. Her mother was dead; her father, a common soldier in India, was supposed to be dead; and Sergeant Brown, good fellow, brought her home to her grandfather, Canon Latham. Stanley Gordon, a playfellow, who is going to be another General Gordon, figures largely in the development of the story. Will she marry him? Will her father come home again? But the ideals are the real things. Three illustrations by Oscar Wilson.

*For his Father's Honour*, by John G. Rowe (2s. 6d., Nutt), describes the trials of a pit-boy. His drunken father all but causes an explosion, which is averted by the boy's presence of mind and courage, and presently the father falls under suspicion of having murdered the pit-owner. Thereby hang complications and villainies; and there are some doings also in the mine. Frank is a brave and good fellow, however, and he clears his father's honour, and eventually reaches a high position in the mining world. A vigorous and stirring story. Frontispiece.

*Martha Wren*, by M. B. Syngé (2s., S.P.C.K.), tells "a story of faithful service." Martha leaves her home at seventeen to serve in the nursery at Milborough Hall, and, between the incidents of her life there and the doings of a sister, to say nothing of the accident to the head nurse and the fire in the nursery in particular, she goes through many severe trials. Then there is Timmins, the third gardener, who enlists and becomes a hero. If the story is painful at times, it has many glints of humour and it is permeated with good feeling. Three coloured illustrations by W. S. Stacey.

*The Right Stuff*, by Ian Hay (Blackwood), is just as wayward and tantalizing as "Pip" was last year—in parts direct and vigorous, in parts laboured and trifling. The hero is developed with ability and interest, though the Under-Secretary, if a much weaker character, is a still more effective characterization. Among many other episodes of active interest there is a strenuous description of an election. Altogether the story carries the reader buoyantly on to the end. But then the author has it in him to do so much better, with patience and industry.

#### FOR THE CHILDREN.

*The Dwindleberry Zoo*, by G. E. Farrow (5s., Blackie), records the adventures of a small boy that is very fond of animals of all kinds and keeps a number of pets of his own. He has come up to London for the one purpose of visiting the Zoological Gardens, and while reading "a handsomely bound volume on natural history," which he had gained as a school prize, he is amazed by the appearance on the garden wall of a monkey, which tells him that he has come from the Dwindleberry Zoo, a place whose very existence is known only to such animals and birds as have escaped from the real Zoo, and where they can all talk and act just as they like, without any interference on the part of keepers. Roderick, of course, wants to get over the wall and see this wonderful Zoo. How he gained entrance, how the various animals received him, and what adventures he met with—all this is told in vivid and charming style by the experienced and veracious chronicler. This is one of the most delight-

ful of the books of the season. Sixty-two illustrations by Gordon Browne, R.I.

*The House of Arden*, by E. Nesbit (6s., Fisher Unwin), recounts the astonishing adventures of Edred and Elfrida Arden, who live with their aunt (who keeps seaside lodgings) and go to school. Seaside lodgings, for the children's father and his partner (who is going to wed Miss Arden) are reported to have been captured by brigands and to have lost all the money they had made in South America. The only other male of the family is Lord Arden, an old man, living (and dying) in an old Norman castle near by. The children stray to the castle and discover the spell that discovers the treasure. There is an amazing Mouldiwarp, Bonaparte and highwaymen, a secret panel, a smuggler's cave, white wings and a brownie, and other delightful and bewildering things. It may be that Mr. Arden and Uncle Jim are not dead, after all; and, at any rate, the quest of them involves further adventures. An interestingly fanciful book, with somewhere between thirty and forty illustrations by H. R. Millar.

*Peep-in-the-World*, by F. E. Crichton (3s. 6d., Edward Arnold), tells of a little girl that visits her uncle, the Baron Maximilian von Tollen, at his old castle in Germany, on the border of a forest. Here she is delighted with her new world. She strikes up an acquaintance with a dwarf cobbler, who is a lonely denizen in the forest and knows what the animals and birds say. Knut the cobbler is a misanthropical little man, but Peep-in-the-World gets round him and he eventually admits her into the League of Forest Friends, though he resists her desire to be instructed in the speech of the wild things of the wood. Still, her experiences taught her something. The story is delightfully told. Four illustrations.

*The Farm*, "shown to the children," by F. M. B. and A. H. Blaikie, in forty-eight coloured plates of farming operations and plant and animal life, and described in simple language by Foster Meadow (2s. 6d., Jack), is the fifth volume of a charming and instructive series. It is written and pictured in the hope of awakening in young readers an intelligent interest in farming. Both artists and writer have done their work most capably and attractively.

*Animals at Home*, by W. Percival Westell, F.L.S. (3s. 6d., Dent), is a collection of twenty-four essays in animal autobiography already published serially in a monthly magazine for young folk. The plan of setting each animal to tell its own life-history has the great advantage of vividness, and the reader will probably be stimulated to observation and research on his own account. Miss Marie Corelli furnishes a sympathetic and appreciative introduction. There is a coloured frontispiece (by Lucy Kemp-Welch) and numerous illustrations. An attractive and instructive volume.

*The Hill that Fell Down*, by Evelyn Sharp (3s. 6d., Blackie), is "a story of a large family." "A bit of the hill has given way, as that stuffy old Professor said it would": that is the mature version of the fact. But Penelope said: "The fairies have made the hill fall down because they were angry." Penelope has not a little to do with the fairies. She lives with Uncle Richard and Aunt Elizabeth at Cheselden Chase, and her great want, unintelligible to her kind friends, is for somebody that is not grown up to play with her. At last she forgoes with the lady of the wishing stone, whom she asks "to bring Daddy back from India, and to give her a magic carpet to take her everywhere, and a large family to play with." We leave the story there: little readers will soon find out the results for themselves. Six illustrations by Gordon Browne, R.I.

*Christabel*, by Mrs. A. G. Latham (3s. 6d., Blackie), gives a charming description of "the freaks and fancies of three little folk." Christabel herself, the oldest of the three, lives in the world of faerie, and relates weird tales to the other two; Teddie has a philosophic turn of mind; and Marybud, a child of three, has a famous soap-bubble birthday party. The earlier adventures, tragic and comic, take place at their seaside home; the later, not less exciting, are met with in "the beautiful country home of their 'fairy godmother.'" The last chapter tells "how Bell became a heroine"—a very proper ending. Four coloured plates and twenty-five text illustrations by Paul Hardy.

*Fairies—of Sorts*, by Mrs. Molesworth (3s. 6d., Macmillan), consists of four stories, the first of which fills half the volume. They are ingenious and quietly humorous, woven of fairy fancies, and are sure to delight young readers. Eight illustrations by Gertrude Demain Hammond, and handsome get-up.

*The Story of Napoleon*, by H. E. Marshall, with eight pictures by Allan Stewart and a map (of Central Europe), is a fresh addition to the delightful "Children's Heroes" series (1s. net, Jack). The writer is unable to decide whether Napoleon is "a true hero." The children will settle the point for themselves.

*The Book of Soldiers, The Book of Sailors, and The Book of Other People* (6d. net each, Blackie), are amusing little books for very little folk. They consist of rhymes by Walter Copeland and drawings by Charles Robinson.

*The Enchanted Egg*, by Harold Avery (1s. 6d., Nelson), is the story of what was supposed to be a penguin's egg, but turned out to be a very different sort of egg. The risks it underwent in the museum of its youthful proprietors give rise to amusing incidents. The spade guineas are also deceptive in a less lucrative fashion. The story is simply and interestingly developed. Coloured frontispiece and title-page illustration.

# OXFORD UNIVERSITY PRESS.

## THE OXFORD GEOGRAPHIES.

Edited by A. J. HERBERTSON, Reader in Geography in the University of Oxford.

### **PRACTICAL GEOGRAPHY.**—Part I.

By J. F. UNSTEAD, M.A., Lecturer in Geography, Goldsmiths' College, University of London. With 27 Illustrations. 1s. 6d.

In preparation, Part II, price 1s. 6d. The two Parts will be issued bound together, price 2s. 6d.

### **THE KING'S ENGLISH.**

Abridged for School use, 1s. 6d. Also the Unabridged Edition, 5s. net.

### **THE COVERLEY PAPERS FROM THE SPECTATOR.**

Edited, with Introduction and Notes, by O. M. MYERS. With a Facsimile. 2s.

### **SELECTIONS FROM ADDISON'S PAPERS IN THE SPECTATOR.**

By T. ARNOLD. 4s. 6d.

### **SELECTIONS FROM STEELE.**

Being Papers from the Tatler, Spectator, and Guardian. Edited by AUSTIN DOBSON. Second Edition. 7s. 6d.

### **SELECT ENGLISH CLASSICS.**

Edited, with Introductions, by A. T. QUILLER-COUCH. Paper covers, 3d. each; cloth, 4d. each.

*Preparatory Schools Review.*—"These little texts are a most valuable and welcome addition to the materials available for the teaching of English literature in schools. . . . The prose selections in many cases break new ground and are exactly what is most wanted. The extracts are wisely made."

#### *NEW VOLUMES.*

**EARLY ENGLISH LYRICS.** With Glossarial Notes. 48 pages.

**EVERYMAN.** Complete Text with Glossarial Notes. 32 pages.

**HORACE WALPOLE. Letters.** 48 pages.

**WORDSWORTH. Poems.** 32 pages.

**MILTON AND WORDSWORTH. Sonnets.** 32 pages.

**TENNYSON. Poems.** 48 pages.

**ROBERT BROWNING. Poems.** 48 pages.

**WALT WHITMAN. Poems.** 32 pages.

### **OXFORD PLAIN TEXTS.**

Paper covers, 3d. each; cloth, 4d. each.

**ARNOLD—SOHRAB AND RUSTUM.**

**BYRON—CHILDE HAROLD, Canto III.**

" Cantos IV.

**COLERIDGE—ANCIENT MARINER, AND CHRISTABEL.**

**GRAY—ELEGY, AND ODES.**

**KEATS—ISABELLA, AND EVE OF ST. AGNES.**

### **A BOOK OF VERSE FOR BOYS AND GIRLS.**

Compiled by J. C. SMITH. Part I, paper, 3d.; cloth, 4d. Part II, paper, 6d.; cloth, 8d. Part III, paper, 1s.; cloth, 1s. 3d. Parts I-III, cloth, 2s. Second Impression.

*Athenaeum.*—"An excellent feature is the inclusion of longer poems than are wont to find their way into such compilations. . . . The selections are made with excellent taste."

### **DEUTSCHES REFORMLESEBUCH.**

Enthaltend dreiszig Erzählungen aus der deutschen Geschichte, mit Fragen für Sprechübungen, mit grammatischen Übungen und einem deutschen Wörterverzeichnis. Herausgegeben von D. LL. SAVORY, Dozenten an der Universität, London, Goldsmiths' College, früher Oberlehrer am Marlborough College, und z. z. Lektor an der Universität Marburg. Mit Abbildungen. With 15 full-page and numerous other Illustrations. Price 2s. 6d.

### **THE RENAISSANCE AND THE REFORMATION.**

A Text-Book of European History, 1494-1610. By EMMELINE M. TANNER, History Mistress at Sherborne School for Girls. With Maps. 3s. 6d.

### **THE OXFORD STUDENT'S HISTORY OF INDIA.**

By VINCENT A. SMITH, M.A., I.C.S. (retired). With 7 Maps and 10 other Illustrations. 2s. 6d.

### **SCHOOL ALGEBRA.** By W. E. PATERSON.

Part I . . . Without Answers, 2s. 6d. With Answers, 3s.

Part II . . . " 2s. 6d. " 3s.

Parts I & II : " 4s. " 5s. [*Immediately.*]

# Clough's Correspondence College.

## AT THE LAST A.C.P. EXAMINATION

(August, 1908),

Mr. ROBERT A. WRIGHT,  
A MEMBER OF CLOUGH'S A.C.P. CLASS FOR THE ABOVE  
EXAMINATION, WAS

# THE MOST DISTINGUISHED STUDENT

ON THE A.C.P. LIST, OBTAINING

## HONOURS IN THREE SUBJECTS.

35 Victoria Road, Runcorn.

November 10, 1908.

Dear Mr. Clough,

Enclosed please find formal receipt for your cheque of £10, kindly awarded as prize re A.C.P. Examination.

I was agreeably surprised to find myself so distinguished, and further surprised to find myself the recipient of your cheque, for I had not dreamt of such success. I received invaluable help from your Classes in the Scholarship Examination, and knew that I could rely on your Classes pulling me through first time in the A.C.P. Examination, and I have not been disappointed. In fact, I don't know who would be, providing that they work systematically through your Course.

Thanking you, and wishing your Classes every success,

Yours faithfully,

ROBERT A. WRIGHT.

# ALL THE HONOURS IN ENGLISH

AT THE ABOVE EXAMINATION

## WERE GAINED BY CLOUGH'S STUDENTS.

Classes now commencing for the  
August (1909) and December (1909)  
A.C.P. Examinations.

For full particulars of any of Clough's Classes—  
P.T., Preliminary Certificate, Certificate, A.O.P.,  
Oxford and Cambridge Locals, Matriculation,  
write at once to

THE SECRETARY, CLOUGH'S CORRESPONDENCE COLLEGE,  
TEMPLE CHAMBERS, LONDON, E.C.

**MATHEMATICS.**

**16499.** (A. M. NESBITT, M.A.)—Eliminate  $a, b, c, d$  from  $p = bc^2, q = ad^2, r = (ac + 2bd)c, s = (bd + 2ac)d$ .

*Solutions* (I.) by R. F. DAVIS, M.A., and L. ISSERLIS, B.A.; (II.) by C. M. ROSS; (III.) by EDITH J. D. MORRISON, and others; (IV.) by F. G. W. BROWN, B.Sc., L.C.P.

(I.) It will be found that this elimination is of the type

$$Ax^2 + 2B/x = M, \quad B/x^2 + 2Ax = N,$$

which results in  $(MN - 9AB)^2 = 4(M^2 - 3BN)(N^2 - 3AM)$ .

In fact  $rs - 9pq = cd(5abcd + 2b^2d^2 + 2a^2c^2) - 9abc^2d^2 = 2cd(ac \sim bd)^2;$   
 $r^2 - 3ps = c^2(a^2c^2 + 4abcd + 4b^2d^2) - 3b^2cd(bd + 2ac) = c^2(ac \sim bd)^2;$   
 $s^2 - 3qr = d^2(ac \sim bd)^2.$

Hence  $(rs - 9pq)^2 = 4(r^2 - 3ps)(s^2 - 3qr).$

(II.)  $p = bc^2, \quad q = ad^2 \dots\dots\dots(1, 2),$   
 $r = (ac + 2bd)c, \quad s = (bd + 2ac)d \dots\dots\dots(3, 4).$

From (1) and (2),  $a = q/d^2, \quad b = p/c^2.$

(3) and (4) become  $r = q\lambda^2 + 2p\lambda$  and  $s = p\lambda^2 + 2q\lambda$ , where  $\lambda = c/d$ .

Again,  $\lambda s = p\lambda + 2q\lambda^2$  and  $2r = 4p\lambda + 2q\lambda^2,$

and  $2\lambda s = 2p\lambda + 4q\lambda^2, \quad r = 2p\lambda + q\lambda^2;$

then  $\lambda^2 s - 2\lambda r + 3p = 0 \dots\dots\dots(5),$

and  $3q\lambda^2 - 2s\lambda + r = 0 \dots\dots\dots(6).$

From (5) and (6) by cross multiplication

$$\lambda^2(r^2 - 3ps) = -2\lambda(9pq - rs) = 1/(s^2 - 3qr);$$

therefore  $4(r^2 - 3ps)(s^2 - 3qr) = (9pq - rs)^2,$

or  $27p^2q^2 - 18pqr s - r^2s^2 + 4qr^3 + 4ps^3 = 0,$

which is the required eliminant.

(III.) We have at once  $s/q = b/a + 2c/d,$

$$r/p = a/b + 2d/c, \quad r/q = c^2/d^2 + 2b/a c/d, \quad s/p = d^2/c^2 + 2a/b d/c.$$

Equating the two values of  $a/b$ , and the two values of  $b/a$ ,

$$r/p - 2d/c = (s/p - d^2/c^2)c/2d \quad \text{or} \quad r/p - \frac{2}{3}d/c - s/2p c/d = 0,$$

$$s/q - 2c/d = (r/q - c^2/d^2)d/2c \quad \text{or} \quad s/p - \frac{2}{3}c/d - r/2q d/c = 0.$$

Solving for variables  $c/d, d/c,$

$$d/c = (6rq - 2s^2)/(9pq - rs), \quad c/d = (6ps - 2r^2)/(9pq - rs);$$

therefore  $(6rq - 2s^2)(6ps - 2r^2) = (9pq - rs)^2;$

therefore  $18pqr s - 4(p s^3 + q r^3) - 27p^2q^2 + r^2s^2 = 0.$

(IV.) Since  $p = bc^2, q = ad^2, r = (ac + 2bd)c, s = (bd + 2ac)d;$

therefore  $rs - 5pq = 2(b^2cd^3 + a^2c^3d);$

therefore  $\frac{1}{4}(rs - 5pq)^2 = b^4c^2d^6 + a^4c^6d^2 + 2a^2b^2c^4d^4 \dots\dots\dots(1).$   
 $= b^4c^2d^6 + a^4c^6d^2 + 2p^2q^2$

Again,  $(r^2 - 2ps)(s^2 - 2qr) = (a^2c^4 + 2b^2c^2d^2)(b^2d^4 + 2a^2c^2d^2)$   
 $= a^2b^2c^4d^4 + 2a^4c^6d^2 + 2b^4c^2d^6 + 4a^2b^2c^4d^4$   
 $= 5p^2q^2 + \frac{1}{2}(rs - 5pq)^2 - 4p^2q^2, \text{ from (1),}$

giving as the eliminant

$$\frac{1}{2}r^2s^2 - 2qr^2 - 2ps^2 + 9pqr s - \frac{3}{2}p^2q^2 = 0,$$

or  $r^2s^2 - 4qr^2 - 4ps^2 + 18pqr s - 27p^2q^2 = 0.$

**16482.** (V. RAMASWAMI AYYAR, M.A.)—P, P' are corresponding points of a curve and its  $n$ -th pedal with respect to an origin O; C, C' the centres of curvature at P, P'; and M, M' the projections of C, C' on OP, OP'. Show that  $OP'/OM' = n + OP/OM$ .

[NOTE.—If through P', P parallels be drawn to the join of M' and M meeting OP, OP' respectively in Q, Q', then  $PQ = n \cdot OM$  and  $Q'P' = n \cdot OM'$ ; whence a construction for the centre of curvature at any point of the  $n$ -th pedal, or the  $-n$ -th pedal of any curve, knowing, &c.]

*Solution* by R. F. DAVIS, M.A.

In the *Reprint*, Vol. LXX., p. 91, I have given the following construction for the centre of curvature C' at the point P' on the first positive pedal corresponding to the point P on the original curve (origin O).

Bisect OP in p; join P'p and produce it to C', so that

$$pC' : P'C' = 2PM : 4OP.$$

Let p' be the middle point of OP'. Then

$$PM : OP = 2p'M' : P'M',$$

or  $OP : OM = P'M' : P'M' - 2p'M' = P'M' : OM',$

$$1 + OP/OM = 1 + P'M'/OM' = OP'/OM'.$$

Repeated applications give the formula for the  $n$ -th pedal.

**16449.** (H. L. TRACHTENBERG, B.A.)—A straight line meets the sides of a triangle in L, M, N. Through L, M, N straight lines are

drawn to meet the sides of the triangle again in  $L_1L_2, M_1M_2, N_1N_2$ . Prove that  $L_1, L_2, M_1, M_2, N_1, N_2$  lie on a conic.

*Solutions* (I.) by HENRY RIDDELL, M.E.; (II.) by Prof. SANJANA, M.A.; (III.) by Professor NANSON; (IV.) by A. M. NESBITT, M.A.

(I.) By transversals we have, neglecting signs,

$$\frac{LA}{LB} \cdot \frac{NC}{NA} \cdot \frac{MB}{MC} = 1 \dots(a),$$

$$\frac{LA}{LB} \cdot \frac{L_1C}{L_1A} \cdot \frac{L_2B}{L_2C} = 1 \dots(b),$$

$$\frac{MB}{MC} \cdot \frac{M_1C}{M_1A} \cdot \frac{M_2A}{M_2B} = 1 \dots(c),$$

$$\frac{NC}{NA} \cdot \frac{N_1B}{N_1C} \cdot \frac{N_2A}{N_2B} = 1 \dots(d).$$

Then  $(b \cdot c \cdot d)/a$  gives us

$$L_1C \cdot L_2B \cdot M_1C$$

$$L_1A \cdot L_1C \cdot M_1A$$

$$M_2A \cdot N_1B \cdot N_2A = 1,$$

$$M_2B \cdot N_1C \cdot N_2B$$

or in the form

$$\frac{AM_2 \cdot AN_2 \cdot CM_1 \cdot CL_1 \cdot BL_2 \cdot BN_1}{AL_1 \cdot AM_1 \cdot CN_1 \cdot CL_2 \cdot BM_2 \cdot BN_2} = 1,$$

and applying Carnot's theorem, &c.

(II.) In the hexagon  $L_1L_2M_1M_2N_1N_2$  ( $L_1$ ) the opposite connectors  $L_1L$  and  $M_2N_1, L_2M_1$  and  $N_1N_2, M_1M_2$  and  $N_2L_1$  meet in L, N, M, which are situated on a straight line. Hence, by the converse of Pascal's theorem, the vertices of the hexagon lie on a conic. [Rest in *Reprint*.]

*A simple method for Division of Decimals which may prove useful to the readers of the "Educational Times," who are engaged in teaching Elementary Mathematics.*

By A. H. BELL, B.Sc.

The method is so easily grasped by even young pupils whose only knowledge is simple division that I am urged to publish it. Two examples will clearly illustrate the method.

(1) To divide 2.89905 by 38.5,

$$\begin{array}{r} \text{u.} \quad \quad \quad \cdot 0753 \quad \text{Ans.} \\ 38 \cdot 5 \ ) \ 2 \cdot 89905 \\ \underline{2 \ 695} \\ \quad 2040 \\ \underline{1925} \\ \quad \quad 1155 \\ \underline{1155} \end{array}$$

(2) To divide 4.0875 by 0.075,

$$\begin{array}{r} \text{u.} \quad \quad \quad 54 \cdot 5 \quad \text{Ans.} \\ 0 \cdot 075 \ ) \ 4 \cdot 0875 \\ \underline{03 \ 75} \\ \quad \quad 337 \\ \underline{300} \\ \quad \quad \quad 375 \\ \underline{375} \end{array}$$

Note that (1) the decimal point of the quotient is directly above that of the dividend. (2) The division is proceeded with as in simple division, but the first figure of the answer is not placed until the product is arranged under the dividend; the figure is then placed vertically above the position of the first figure obtained on multiplying the units of the divisor. (3) The remaining figures follow in order.

*On a Relation between a Modification of Section in Extreme and Mean Ratio, and some of the Properties of Numbers; and showing how, by means of this relation, to divide a straight line AB in C, so that  $AC^2 = 2rAB \cdot BC$ , r being any whole number.*

By THEODORE W. HAY.

In the following preliminary theorems the natural series of numbers 1, 2, 3, ... is conceived of as divided into groups of numbers, the members of any particular group having the same number for the integral

part of their square roots, and each group being divided from the one immediately preceding or following by a square number, these segregating square numbers not being themselves considered as members of any group. Thus the first group will consist of the numbers 2 and 3, these numbers having 1 for the integral part of their square roots, and being divided from the group having 2 for the integral part of the square roots of its members by the square number 4; and so with the group having, say, 7 for its integral part of its square roots, the group consisting in this case of the numbers 50 to 63 both inclusive, and being divided from the groups immediately preceding and following by the square numbers 49 and 64 respectively.

*Lemmas.*

(1) If  $x$  be the surd part of the square root of  $m$ , the first number in the group having  $r$  for the integral part of the square roots of its members, then  $x^2 + 2rx = 1$ . For  $m = (r+x)^2 = r^2 + 2rx + x^2$ ; also  $r^2$  must be the number immediately preceding  $(r+x)^2$ . Hence

$$r^2 + 1 = r^2 + 2rx + x^2;$$

therefore

$$x^2 + 2rx = 1.$$

(2) If  $z$  be the surd part of the square root of  $p$ , the last number in the group having  $r$  for the integral part of the square roots of its members, then  $z^2 + 2rz = 2r$ . For the number  $p$  may be expressed as  $r^2 + 2rz + z^2$ , and also as  $r^2 + 2r$ . The first form =  $(r+z)^2$ ; and with regard to the second form  $r^2 + 2r$ , it is obvious that if 1 be added to it, it becomes =  $(r+1)^2$ , i.e., the square number dividing the group having  $r$  for the integral part of the square roots from the group having  $r+1$  for the integral part. Hence  $r^2 + 2r$  must be the last member of the group having  $r$  for the integral part of the square roots. Therefore  $r^2 + 2rz + z^2 = r^2 + 2r$ , and therefore  $z^2 + 2rz = 2r$ .

(3) Taking  $x$  and  $z$  as being the surd parts of the square roots of the first and last numbers in the group having  $r$  for the integral part, then  $1-z : z = z : 2r$ . For  $x^2 + 2rx = 1$ , by (1); therefore

$$2rx = 1 - x^2 \dots\dots\dots(a);$$

also, by (2),  $z^2 + 2rz = 2r$ ; therefore

$$2rz = 2r - z^2 \dots\dots\dots(b);$$

therefore, combining (a) and (b),

$$2rx/2rz = (1-x^2)/(2r-z^2) = 2rx/(2r-x^2) \text{ (for } 1 = x^2 + 2rx);$$

therefore  $1/2rz = 1/(2r-z^2)$ ; therefore  $2r(1-z) = z^2$ , i.e.,

$$1-z : z = z : 2r.$$

*Theorem.*—If a straight line AB be taken to represent unity and be divided in C so that AC equals the surd part of the square root of  $p$ , the highest number in the group of numbers having the same whole number  $r$  for the integral part of the square roots, then  $AC^2 = 2rAB \cdot BC$ .

Divide AB in C so that  $AC = \sqrt{p} - r$ , i.e.,  $AC = z$ , the surd part of  $\sqrt{p}$ . Then  $BC = 1 - z$ , for, by hypothesis,  $AB = 1$ . Also, by Lemma (3),  $1-z : z = z : 2r$ , i.e.,

$$BC : AC = AC : 2rAB, \text{ or } AC^2 = 2r \cdot AB \cdot BC.$$

**16473.** (Rev. F. H. JACKSON, M.A.)—Show that

$$\frac{\mathfrak{J}_n(abc) \mathfrak{J}_n(a/bc) \mathfrak{J}_m(ab/c) \mathfrak{J}_m(ac/b)}{J_n(abc) J_n(a/bc) J_m(ab/c) J_m(ac/b)} = \frac{q_0^2}{\Theta^2(0)} \left\{ \left( \frac{\mathfrak{J}_n(ab) \mathfrak{J}_n(a/b) \mathfrak{J}_m(ac) \mathfrak{J}_m(a/c)}{J_n(ab) J_n(a/b) J_m(ac) J_m(a/c)} \right)^2 - 16q \sin^2(-i \log b) \sin^2(-i \log c) \times \left( \frac{\mathfrak{J}_n(q^i ab) \mathfrak{J}_n(q^i a/b) \mathfrak{J}_m(q^i ac) \mathfrak{J}_m(q^i a/c)}{J_n(q^i ab) J_n(q^i a/b) J_m(q^i ac) J_m(q^i a/c)} \right)^2 \right\} \dots (A),$$

where  $J_n(x)$  denotes the  $q$  analogue of Bessel's Function

$$J_n(x) = \frac{x^n}{[2][4] \dots [2n]} \left\{ 1 - \frac{x^2}{[2][2n+2]} + \frac{x^4}{[2][4][2n+2][2n+4]} - \dots \right\}$$

in which

$$[n] = (q^n - 1)/(q - 1),$$

$\mathfrak{J}_n(x) =$

$$\frac{x^n}{[2][4] \dots [2n]} \times \left\{ 1 - \frac{x^2}{[2][2n+2]} q^{2n+2} + \frac{x^4}{[2][4][2n+2][2n+4]} q^{4n+4} - \dots \right\}$$

being derived from  $J$  by inversion of  $q$ ; thus

$$J(1/q, x) = q^{n^2} \mathfrak{J}(q, x),$$

$\Theta^2(0)$  denotes the square of Jacobi's  $\Theta$  Function, and

$$q_0^2 = \prod_{m=1}^{\infty} (1 - q^{2m})^2, \quad a = \frac{i\sqrt{q}}{q-1},$$

while  $b$  and  $c$  are arbitrary, as also are  $m$  and  $n$ .

*Solution by the PROPOSER.*

It is well known that

$$\prod_{m=1}^{\infty} (1 + xq^{-m}) = 1 + \frac{x}{q-1} + \frac{x^2}{(q^2-1)(q-1)} + \dots;$$

we form  $\prod_{m=1}^{\infty} \{1 + xq^{-m}(q-1)\} = 1 + \frac{x}{[1]} + \frac{x^2}{[2]} + \dots = E_q(x),$

$$\prod_{m=1}^{\infty} \left\{ 1 + xq^m \left( \frac{1}{q} - 1 \right) \right\} = 1 + \frac{x}{[1]} + q \frac{x^2}{[2]} + \dots = E_{1/q}(x);$$

both these series and products have a common but restricted region of convergence.

In analogy with the well known equations

$$e^{-x} I_n(x) = \frac{x^n}{2^n \Gamma(n+1)} \left\{ 1 - x + \frac{2n+3}{2(2n+2)} x^2 - \dots \right\},$$

$$I_n(x) = i^{-n} J_n(ix),$$

it is easy to establish

$$E_q(-x) I_n(x) = E_{1/q}(-x) I_n(x)$$

$$= \frac{x^n}{[2][4] \dots [2n]} \left\{ 1 - x + \frac{[2n+3]x^2}{[2][2n+2]} - \frac{[2n+5]x^3}{[2][3][2n+2]} + \dots \right\},$$

where

$$I_n(x) = i^{-n} J_{[n]}(ix), \quad I_n(x) = i^{-n} \mathfrak{J}_n(ix).$$

Also

$$E_q(-x) E_{1/q}(x) = 1.$$

We write then

$$\frac{\mathfrak{J}_n(xt) \mathfrak{J}_n(xt^{-1})}{J_n(xt) J_n(xt^{-1})} = E_{1/q}(ixt) E_{1/q}(-ixt) F_{1/q}(ixt^{-1}) E_{1/q}(-ixt^{-1}),$$

from which, putting  $a = i\sqrt{q}(q-1)$ ,

$$\frac{\mathfrak{J}_n(axt) \mathfrak{J}_n(axt^{-1})}{J_n(axt) J_n(axt^{-1})} = \prod_1^{\infty} \{ 1 - x^2 q^{2m-1} (t^2 + t^{-2}) + x^4 q^{4m-2} \},$$

so that, in Jacobi's notation, by putting  $x = 0$ ,  $t = e^{i\pi u/2K}$ ,

$$\Theta(u) = q_0 \frac{\mathfrak{J}_n(ae^{i\pi u/2K}) \mathfrak{J}_n(ae^{-i\pi u/2K})}{J_n(ae^{i\pi u/2K}) J_n(ae^{-i\pi u/2K})},$$

$$H(u) = 2q_0 q^{\frac{1}{2}} \sin u \frac{\mathfrak{J}_m(aq^{\frac{1}{2}} e^{i\pi u/2K}) \mathfrak{J}_m(aq^{\frac{1}{2}} e^{-i\pi u/2K})}{J_m(aq^{\frac{1}{2}} e^{i\pi u/2K}) J_m(aq^{\frac{1}{2}} e^{-i\pi u/2K})}.$$

The addition theorem for Jacobi's functions is

$$\Theta^2(0) \{ \Theta(u+v) \Theta(u-v) \} = \Theta^2(u) \Theta^2(v) - H^2(u) H^2(v).$$

On substituting  $J$  functions for  $\Theta$  and  $H$  functions, and replacing  $e^{i\pi u/2K}$  by  $b$ ,  $e^{i\pi v/2K}$  by  $c$ , the theorem follows at once.

**16495.** (Professor SANJANA, M.A.)—Resolve into factors

$$(a) 28^{21} + 1, \quad (b) 44^{11} + 1, \quad (c) 6^{30} + 1.$$

*Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.*

The chief step in the factorization of these three large numbers depends on the "Aurifeuillien" resolution, whereby

$N_7 = (x^7 + y^7)/(x+y)$ ,  $N_{11} = (x^{11} + y^{11})/(x+y)$ ,  $N_6 = (x^6 + y^6)/(x^2 + y^2)$  can be expressed in form  $(P^2 - Q^2)$ , when  $7xy$ ,  $11xy$ ,  $6xy = \square$  respectively. The formulae for  $P, Q$  (used below) will be found in Ed. Lucas's memoir *Sur la Série récurrente de Fermat*, Rome, 1879, p. 6. The further resolution of the co-factors  $L, M$  can be effected (when  $> 9$  million) by the aid of Tables of solutions of the congruences  $N_7 \equiv 0$ ,  $N_{11} \equiv 0$ ,  $N_6 \equiv 0 \pmod{p}$  and  $p'$  compiled by the writer (to be published shortly). The resolutions of the smaller algebraic factors may be taken from Bickmore's papers "On the Factors of  $(a^n - 1)$ " given in the *Messenger of Mathematics*.

(a)  $(N) = 28^{21} + 1$ . Let

$$N_{21} = (28^{21} + 1)/(28^3 + 1), \quad N_7 = (28^7 + 1)/(28 + 1), \quad N_3 = (28^3 + 1)/(28 + 1),$$

$$N_1 = (28 + 1).$$

Then

$$(N) = (N_{21}/N_7) N_7 N_3 N_1.$$

Here  $N_1 = 29$ ,  $N_3 = 757$ ,  $N_7 = 13007 \cdot 35771 = L_7 M_7$  (suppose). Also every septiman  $N = (x^7 + y^7)/(x+y)$  may be written

$$N = [(x+y)^2]^2 - 7xy(x^2 + xy + y^2)^2$$

$$= P^2 - Q^2 \text{ (when } 7xy = \square) = L \cdot M, \text{ suppose;}$$

so that  $L = P - Q$ ,  $M = P + Q$ . Now (for  $N_{21}$ ) take  $x = 1$ ,  $y = 28^3$ ; then  $7xy = 392^2$ ; whence

$$P_{21} = 21953^3, \quad Q_{21} = 392 \cdot 481912257;$$

$$L_{21} = 10390992085438, \quad M_{21} = 10768811294921.$$

Now  $N_{21} = L_{21} M_{21}$  is divisible by  $N_7 = L_7 M_7$ ; in fact (on trial)

$$L_{21}/L_7 = 798876919, \quad M_{21}/M_7 = 301048651.$$

Here the author's congruence solution Tables give 43, 631, 2269 as divisors of  $N_{21}$ , and no more  $< 10000$ . And, on trial,

$$L_{21}/L_7 = 43 \cdot 631 \cdot 29443, \quad M_{21}/M_7 = 2269 \cdot 132679,$$

and, finally,

$$(N) = (L_{21}/L_7)(M_{21}/M_7) N_7 N_3 N_1.$$

[Rest in Reprint.]

**11696.** (Professor LUCAS.)—Dans un jeu de dominos jusqu'au double  $n$ , on remplace le domino  $(a, b)$  par  $(a^n, b^n)$ . Quelle est la somme de tous les points ainsi obtenus?

*Solution by A. M. NESBITT, M.A.*

If we introduce a second set of dominoes, we may arrange the double series thus:—  
 $(0^n, 0^n), (0^n, 1^n), (0^n, 2^n), \dots, (0^n, n^n),$   
 $(1^p, 0^p), (1^p, 1^p), (1^p, 2^p), \dots, (1^p, n^p)$   
 $\dots \dots \dots \dots \dots \dots \dots$   
 $(n^p, 0^p), (n^p, 1^p), (n^p, 2^p), \dots, (n^p, n^p),$   
 $(0^n, 0^n), (1^n, 1^n), (2^n, 2^n), \dots, (n^n, n^n),$

yielding on vertical summation  $(n+1)S_p + (n+1)S_p$  (from all the rows but the last)  $+ 2S_p$ ;  $S_p$  as usual being  $1^p + 2^p + \dots + n^p$ . Thus the sum of the "points" on one set is  $(n+2)S_p$ .

**9886.** Every square number is divisible into two sequences from  $m$  (any integer).

*Solution by Professor SANJANA, M.A.*

Let the square number be  $n^2$ , and the two sequences from  $m$  be of  $p$  and  $q$  terms. Then we want  $\frac{1}{2}p(p+2m-1) + \frac{1}{2}q(q+2m-1) = n^2$ , i.e.,  $p^2 + (2m-1)p + q^2 + (2m-1)q = 2n^2$ . This may be written

$$[p + \frac{1}{2}(2m-1)]^2 + [q + \frac{1}{2}(2m-1)]^2 = 2 \{n^2 + [\frac{1}{2}(2m-1)]^2\},$$

and can always be satisfied by putting

$$p + \frac{1}{2}(2m-1) = n + \frac{1}{2}(2m-1) \quad \text{and} \quad q + \frac{1}{2}(2m-1) = n - \frac{1}{2}(2m-1),$$

or  $p = n$  and  $q = n - (2m-1)$ .

*Example.*—Let  $n = 9$ ; then  $81 = S(1-9) + S(1-8)$ , putting  $m = 1$ ; and giving  $m$  other possible integral values, we also obtain

$S(2-10) + S(2-7), S(3-11) + S(3-6), S(4-12) + S(4-5), S(5-13)$ , as values of  $n^2$ .

**16553.** (Professor COCHEZ.)—Quelle valeur faut-il donner à  $x$  pour que  $x^2 + 3x + 24$  soit un carré parfait?

**16554.** (Professor SANJANA, M.A.)—Prove that the indefinite integral of  $\sin \theta / \sin n\theta$  is

$$\sum_1^{n-1} \sin^{-1} \frac{n+1}{n} \log \frac{\sin(\theta - r\pi/n)}{\sin(\theta + r\pi/n)} \quad \text{or} \quad \sum_1^{n-1} \sin^{-1} \frac{n+1}{n} \log \frac{\sin(\theta - r\pi/2n)}{\sin(\theta + r\pi/2n)}$$

according as  $n$  is an odd or even integer.

**16555.** (Professor NEUBERG.)—On donne trois axes rectangulaires  $Ox, Oy, Oz$  et un plan quelconque  $\alpha$ . D'un point quelconque  $M$  de  $\alpha$  on abaisse une perpendiculaire  $MN$  sur le plan  $xOy$  et de  $N$  on abaisse

une perpendiculaire  $NP$  sur la droite  $OM$ . Trouver (1) le lieu du point  $P$ , (2) la surface engendrée par la droite  $NP$ .

**16556.** (S. NARAYANA AIYAR.)—The inverse of the lemniscate  $r^2 = a^2 \cos 2\theta$  with respect to the point  $(a/\sqrt{2}, 0)$  is a limaçon.

**16557.** (W. J. GREENSTREET, M.A., F.R.A.S.)—On the tangent at any point  $P$  on a circle a length  $PT$  is measured so that  $\angle PST = 90^\circ$ , where  $S$  is a fixed point within the circle. Prove by pure geometry that the locus of  $T$  is the polar reciprocal of the envelope of normals to a conic.

**16558.** (W. F. BEARD, M.A. Suggested by Question 16250.)—In a parabola, focus  $S$ , vertex  $A$ , a circle is described on a radius  $SP$  as diameter. Show that the circle will cut the parabola again in only one real point, unless the angle  $ASP$  is greater than  $154^\circ 24' 44''$ .

**16559.** (C. E. YOUNGMAN, M.A. Extension of Question 16034.)—Three tangents to a parabola form a triangle with orthocentre  $H$ , and the corresponding normals make a triangle with orthocentre  $H'$ ; then (1)  $H$  and  $H'$  lie on the same diameter of the curve, (2) ditto for central conics only when the normals meet at  $H'$ , (3) in the parabola  $H$  and  $H'$  coincide if the feet of the normals are concyclic with the focus.

**16560.** (J. P. GABBATT.)—Show that the two pairs of points (other than the circular points at infinity), at once isogonally and isotomically conjugate with respect to a triangle, define a family of rectangular hyperbolas concentric with the circum-circle of that triangle.

**16561.** (W. GALLATLY, M.A.)—Show geometrically that the Simson line of a point  $(a', b', \gamma')$  on the circle  $a/a + \dots = 0$  may be written in any one of the following forms:—

- (1)  $(a^2/a^2) a'(\beta' \cos C - \gamma' \cos B) + \dots = 0,$
- (2)  $(a'/a)(\beta' + \gamma' \cos A)(\gamma' + \beta' \cos A) a + \dots = 0,$
- (3)  $a \cot \theta_1 \cdot a + b \cot \theta_2 \cdot \beta + c \cot \theta_3 \cdot \gamma = 0,$

where  $\theta_1, \theta_2, \theta_3$  are the angles made by the line with the sides of  $ABC$ . Show that each of these is equivalent to Ferrers' form

$$[(c\beta' + b\gamma')/(\beta' \cos C - \gamma' \cos B)] aa + \dots = 0.$$

**16562.** (HENRY B. WOODALL.)—Find the locus of the point such that, if lines are drawn through it parallel to two sides of a triangle, the triangle shall make equal intercepts on those lines.

**16563.** (A. DAKIN, M.A.)—Find, by the methods of pure geometry, a point  $P$  in a given straight line  $c$ , such that the ratio  $AP : BP$  shall be a maximum;  $A$  and  $B$  are fixed points in a plane through  $c$ .

**16564.** (Communicated by E. P. SERGEANT.)— $A$  and  $B$  are two given points,  $XY$  a given indefinite straight line. Find a point  $C$  on  $XY$ , such that angle  $ACX$  equals twice angle  $BCY$ . [From Harper's *Euclid*.]

**16565.** (M. T. NARANIENGAR, M.A.)—In a spherical triangle  $ABC$ , whose circum-centre is  $O$ , the internal and external bisectors of the angle  $C$  meet the arc through  $O$  perpendicular to  $AB$  at  $D$  and  $E$ . Prove (i.) that  $\angle EAD = \angle EBD = \angle ECD$ , (ii.) that  $\angle EAC = \angle EBC$ , (iii.)  $\tan CD = \tan \frac{1}{2}(a+b) \sec \frac{1}{2}C$ , (iv.)  $\tan CE = \tan \frac{1}{2}(a-b) \operatorname{cosec} \frac{1}{2}C$ , (v.) the projections of  $OD, OE$  on the sides  $CA, CB$  are equal.

**OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).**

**8058.** (Rev. T. P. KIRKMAN, M.A., F.R.S.)—Draw with fewer than twelve all 4-gonal faces, Nine solids, and give their symmetrical traces.

**8064.** (J. P. JOHNSTON, B.A.)—If a cone of the second degree whose vertex lies on a fixed plane ( $M$ ) intersects a quadric ( $U$ ) in a pair of planes, one of which ( $L$ ) is fixed, the envelope of the other is a cubic of the form  $L(U + kM^2) = 0$ .

**8175.** (W. J. C. SHARP, M.A.)—Dr. Boole notices a remarkable duality which exists in partial differential equations (*Differential Equations*, p. 366, Ed. I.), and gives formulæ for the transformation of equations of the first and second order with two independent variables. Give the corresponding formulæ for any number of variables, and show that, if a partial differential equation be linear in the first minors of the Hessian of the dependent variable, except a term involving the Hessian, it can be transformed into a linear form.

**8239.** (H. L. ORCHARD, B.Sc., M.A.)—An elastic body slides twenty feet down an inclined plane, and then strikes against a small peg in the plane. If the index of elasticity =  $\frac{1}{2}$ , and the angle of the plane =  $30^\circ$ , find the initial angular velocity of the body about its centre of gravity.

**9056.** (SAMUEL ROBERTS, F.R.S.)—Show that, if  $a, b, c$  are integers, prime to one another, and  $n$  being an odd prime  $c^n - b^n - a^n = 0$ , then  $c^n - c = 2ln^2, b^n - b = 2ln^2, a^n - a = 2ln^2$ .

**9274.** (D. BIDDLE.)—A sheet of paper of rectangular form has each of its four corners folded over in any way, provided none of the corners

overlap each other. Find the mean distance of the centre of gravity from the original centroid of the paper.

#### NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,  
Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

*Vol. XIV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.O. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

#### THE LONDON MATHEMATICAL SOCIETY.

Thursday, November 12th, 1908 (Annual General Meeting).—Prof. W. Burnside, President, and, subsequently, Prof. H. M. Macdonald, Vice-President, in the Chair.

Lieut.-Col. J. M. Wade was elected a member.

The President referred to the loss sustained by the Society through the death of the late Master of St. John's College, Cambridge, Dr. Charles Taylor, who was a member of the Society for thirty-six years.

The President presented the De Morgan Medal to Dr. J. W. L. Glaisher.

The Officers and Council for the ensuing Session were elected as follows:—President, Sir W. Niven, K.C.B.; Vice-Presidents, Mr. A. Berry, Prof. W. Burnside, Prof. H. M. Macdonald; Treasurer, Prof. J. Larmor; Secretaries, Mr. J. H. Grace, Prof. A. E. H. Love; other members of the Council, Dr. H. F. Baker, Mr. G. T. Bennett, Mr. A. L. Dixon, Prof. E. B. Elliott, Dr. L. N. G. Filon, Dr. E. W. Hobson, Major P. A. MacMahon, Mr. H. W. Richmond, Mr. A. E. Western.

Prof. Burnside delivered his Presidential Address on the "Theory of Groups of a Finite Order."

The following papers were communicated:—

"On the Second Mean-Value Theorem of Integral Calculus" and "On the Representation of a Function by a Series of Legendre's Functions," Dr. E. W. Hobson.

"The Eliminant of Three Quantics in Two Independent Variables," Mr. A. L. Dixon.

"On the Dirichlet Series and the Asymptotic Expansion of Integral Functions of Zero Order," Mr. J. E. Littlewood.

"The Norm Curves on a given Base," Prof. F. Morley.

"On the Arithmetical Nature of the Coefficients in a Group of Linear Substitutions" (Third Paper), Prof. W. Burnside.

"The Conformal Transformations of a Space of Four Dimensions and their applications to Geometrical Optics," Mr. H. Bateman.

"Periodic Properties of Partitions," Mr. D. M. Y. Sommerville.

"The Solution of Integral Equations," Prof. A. C. Dixon.

"Note on the Continuity or Discontinuity of a Function defined by an Infinite Product," Mr. G. H. Hardy.

"The Energy and Momentum of an Ellipsoidal Electron," Mr. F. B. Pidduck.

"On  $q$ -Integration" and "On  $q$ -Transformations of Power Series," Rev. F. H. Jackson.

"The Complete Solution in Integers of the Eulerian Equation  $X^4 + Y^4 = U^4 + V^4$ ," Dr. T. Stuart.

"On Waves of Finite Amplitude," Mr. W. J. Harrison.

"An Asymptotic Formula for the Generalized Hypergeometric Series," Mr. T. J. I'A. Bromwich.

"Satellite Curves on a Plane Cubic," Mr. A. C. O'Sullivan.

#### LATEST SELF-FILLING FOUNTAIN PEN.

UNUSUAL OFFER AS AN ADVERTISEMENT FOR A SHORT PERIOD ONLY

The Self-Filling and Self-Cleaning Perfection Fountain Pen (worth 15/-) to Teachers for 4/- only, or 3 Pens for 10/6.

This is an advertisement offer, & will be withdrawn at the end of this year.

ORDER NOW BEFORE IT IS TOO LATE.

Money returned if not fully satisfied. Guaranteed for 2 years.

Description:—Non-leakable, fills and cleans itself in a moment—a press, a fill—fitted with large 14-carat gold nib, iridium tipped, guaranteed to last for years. No other Pen like it for reliability, steady flow and smooth writing. Every Pen a pleasure.

Makers—

THE RED LION MANUFACTURING CO., Ltd., 71 High Holborn, London, W.C.

No need to buy any other Pen while this offer lasts.

To obtain this advantage, mention "The Educational Times."

## SEELEY & CO.'S NEW BOOKS.

\* \* A Miniature Illustrated Catalogue will be sent on application.

JUST PUBLISHED.

**THE CHILDHOOD OF MAN.** A Popular Account of the Lives and Thoughts of the Primitive Races. By Dr. LEO FROBENIUS. Translated by Professor KEANE, LL.D., F.R.G.S. With 416 Illustrations, from Authentic Sources. Demy 8vo, 16s. net.  
"Light and readable and copiously illustrated—sums up in picturesque fashion all that is known on the subject."—*Evening Standard*.

**ASTRONOMY OF TO-DAY.** By CECIL G. DOLMAGE, LL.D., F.R.A.S. With 45 Illustrations. Extra crown 8vo, 5s. net.  
"Most lucid and interesting. This singularly remarkable and popular work."—*Outlook*.

**SCIENTIFIC IDEAS OF TO-DAY.** By CHARLES R. GIBSON, A.I.E.E. With 25 Illustrations. Extra crown 8vo, 5s. net.  
"Admirably simple and lucid."—*Globe*.

**EDINBURGH.** By ROBERT LOUIS STEVENSON. With 60 Illustrations in Black-and-White, and a Coloured Frontispiece. Extra crown 8vo, 6s.

**THINGS SEEN IN CHINA.** By J. R. CHITTY. With 50 beautiful Illustrations of Chinese Life in town and country. Cloth, 2s. net; leather, 3s. net; velvet leather, in a box, 5s. net.  
"By a writer who adds grace and style to entire familiarity with the country and people."—*The Birmingham Post*.

#### THE MINIATURE PORTFOLIO MONOGRAPHS.

With many Illustrations. 16mo, cloth, 2s. net; leather, 3s. net.

"The fairest of little books."—*Evening Standard*.

NEW VOLUMES.

**PETER PAUL RUBENS.** By R. A. M. STEVENSON.

**JAPANESE WOOD ENGRAVINGS.** By W. ANDERSON.

PROFESSOR CHURCH'S NEW BOOK.

**THE CHILDREN'S AENEID.** By the Rev. A. J. CHURCH, Author of "Stories from Homer," &c. With 12 Coloured Illustrations. Extra crown 8vo, 5s.  
"Will fascinate young readers. . . The illustrations enhance the charm."—*Schoolmaster*.

#### THE LIBRARY OF ROMANCE.—NEW VOLUMES.

With many Illustrations. Extra crown 8vo, 5s. each.

**THE ROMANCE OF EARLY BRITISH LIFE FROM THE EARLIEST TIMES TO THE COMING OF THE DANES.** By Professor G. F. SCOTT ELLIOT.

"A masterpiece of clearly arranged scientific knowledge, brilliant and realistic descriptive invention, and genuine humor."—*Liverpool Courier*.

**THE ROMANCE OF BIRD LIFE.** By JOHN LEA, M.A.

"Certainly one of the most fascinating, suggestive, and readable of the season's gift books."—*Spectator*.

**THE ROMANCE OF MODERN GEOLOGY.** By E. S. GREW, M.A.

"A popular introduction to Modern Geology which anyone can read with pleasure."—*Daily Graphic*.

#### THE LIBRARY OF ADVENTURE.—NEW VOLUMES.

"There could be no more attractive books for boys."—*Scotsman*.

With 16 Illustrations. Extra crown 8vo, each 5s.

**ADVENTURES AMONG WILD BEASTS.** By G. F. W. HYBET.

"A most admirable book."—*Spectator*.

**ADVENTURES ON THE HIGH SEAS.** By RICHARD STEAD, B.A.

"A wondrous haul of sea adventures, new and old."—*Journal of Education*.

#### HEROES OF THE WORLD LIBRARY.

With many Illustrations. Extra crown 8vo, 5s.

NEW VOLUMES.

**HEROES OF MODERN CRUSADES.** By the Rev. E. GILLIAT, M.A.

"Vivid and inspiring studies."—*Literary World*.

**HEROINES OF MISSIONARY ADVENTURE.** By the Rev. Canon DAWSON, M.A.

"A fascinating record . . . there is not a dry page in it."—*Record*.

#### THE PRINCE'S LIBRARY.

With Coloured Frontispiece and 8 other Illustrations. Extra crown 8vo, 3s. 6d.

NEW VOLUMES.

**CAEDWALLA: or, The Saxons in the Isle of Wight.** By FRANK COWPER.

**HANS ANDERSEN'S FAIRY TALES.** With 4 Coloured and 8 other Illustrations by H. M. BROCK.

"Delightfully bound, printed, and illustrated. . . We strongly recommend it as a prize for either boy or girl."—*Schoolmaster*.

#### PROFESSOR CHURCH'S HISTORICAL STORIES.

The Crusaders. 5s.	The Children's Iliad. 5s.
Greek Story and Song. 5s.	The Children's Odyssey. 5s.
Helmet and Spear. 5s.	Heroes of Chivalry and Romance. 5s.
Stories from Homer. 5s.	The Count of the Saxon Shore. 5s.
Stories from Virgil. 5s.	With the King at Oxford. 5s.
Stories from the Greek Tragedians. 5s.	The Hammer. 5s.
Stories from the Greek Comedians. 5s.	Last Days of Jerusalem. 3s. 6d.
Stories of the East. 5s.	Three Greek Children. 3s. 6d.
Story of the Persian War. 5s.	The Chantry Priest. 2s. 6d.
Stories from Livy. 5s.	A Young Macedonian. 2s. 6d.
Roman Life in the Days of Closero. 5s.	Heroes of Eastern Romance. 2s. 6d.
The Story of the Iliad. 5s.	To the Lions. 1s. 6d. and 2s. 6d.
The Story of the Odyssey. 5s.	The Burning of Rome. 3s. 6d.
	Stories from English History. 3s. 6d.

LONDON: SEELEY & CO., LTD., 38 GREAT RUSSELL STREET.

# BLACKIE & SON'S LIST

## GEOGRAPHY.

STRUCTURAL—PHYSICAL—COMPARATIVE.

A TEXT-BOOK FOR SENIOR STUDENTS.

By J. W. GREGORY, D.Sc., F.R.S., Professor of Geology in the Glasgow University.

With Series of specially constructed Coloured Maps and Sketch Maps and Plans in Black and White. Large 8vo, 6s. net.

The main purpose of this book is to put before the student the most important facts concerning the Structural Geography of the Earth, and the evolution of our present continents from older lands. It marks a new departure both in aims and in method. It furnishes the student with such knowledge of the entire surface of the Earth as will ensure his acquisition of geographical perspective.

## A FIRST GEOGRAPHY.

By O. A. E. RODGERS, M.A., F.R.G.S.,

Assistant Master, Bradford Grammar School; and an Examiner in Geography to the College of Preceptors.

With Coloured Pictures and Diagrams on every page. Small 4to, cloth, 1s.

## A GENERAL GEOGRAPHY OF THE WORLD.

By HENRY E. EVANS, B.A., L.C.P.

A Text-book for Students preparing for University and other Public Examinations. 416 pages, crown 8vo, cloth boards, 3s. 6d.

## A Brief Survey of British History.

By G. TOWNSEND WARNER, M.A. With Tables, Summaries, Maps, Notes, &c. 1s. 6d.

"The best English History for younger pupils. Used in all leading Preparatory Schools, and the Royal Naval College, Osborne."

## A Brief Survey of European History.

By ARTHUR HASSALL, M.A. An excellent general sketch of European History from Charlemagne to the Present time. Crown 8vo, cloth, 4s. 6d.

## Landmarks of European History.

By E. H. M'DOUGALL, M.A. Oxon.; late Assistant in the Tewitkiah School and Training College, Cairo. With many Coloured and Sketch Maps, Index, &c. 3s. 6d.

## Heroes of the European Nations.

From Early Greece to Waterloo. By A. R. HOPE MONCRIEFF. 1s. 6d.

## Readings in English History.

From Original Sources. Edited by R. B. MORGAN, B.Litt., and E. J. BALLEBY, B.A. Illustrated. Vol. I., B.C. 54 to A.D. 1154, 2s. Vol. II., 1154 to 1485, 2s. 6d. Vol. III., 1485 to 1688, 2s. 6d. (just ready).

## A Latin Course.

By E. H. SCOTT, B.A., and FRANK JONES, B.A. First Course, cloth, 1s. 6d. Second Course, cloth, Illustrated, 2s. 6d.

## A First Latin Grammar.

By E. H. SCOTT, B.A., late Head Master of Boys' Secondary School, Barberton, Transvaal; and FRANK JONES, B.A., Assistant Master, King Edward's School, Aston, Birmingham. Crown 8vo, cloth, 2s.

## Advanced Book-keeping.

For Commercial and Accountancy Classes. By WALTER GRIERSON, Author of "Practical Book-keeping for Commercial Classes." Crown 8vo, cloth, 2s. 6d. net. [Just published.]

## The Longer French Texts.

Printed in large type. Cloth limp, 8d. each. Brief Notes, Questionnaire, Memory List of Useful Phrases, and a Vocabulary.

## The Little French Classics.

Price 4d. each Book. All French authors in prose and verse, from the *Chansons de Geste* to Daudet and Paul Bourget.

## Récits tirés des Classiques français.

6d. each. Edited by Mme. C. BAGNALL, of Clapham High School, and Mlle. VIVIER.

The Stories of the great Dramatists told in simple French, suitable for Lower and Middle Forms.

JUST PUBLISHED.

## INTRODUCTION to the NATURAL HISTORY OF LANGUAGE.

By T. G. TUCKER, Litt.D. (Camb.), Hon. Litt.D. (Dublin), Professor of Classical Philology in the University of Melbourne. Demy 8vo, cloth, 10s. 6d. net.

A new Treatise which gathers together the results of the great amount of philological work that the last quarter of a century has produced. It is intended to fulfil to-day the purpose which was served in its time by Max Müller's "Science of Language."

A NEW ANTHOLOGY FOR SCHOOLS.

## THE CALL OF THE HOMELAND.

A COLLECTION OF ENGLISH VERSE.

Selected and Arranged by

B. P. SCOTT, LL.D., and K. T. WALLAS.

In Two Books. Each, 1s. 6d. net. Crown 8vo, cloth boards.

A Collection of English Verse, much of it contemporary, designed to illustrate the extended conception of patriotism that is developing in the national literature, both in the mother country and in her scattered family of young nations.

The Poems have been grouped according to their subject—

Book I.—Echoes from History—Britain Overseas—The Sea—The Changing Year  
Book II.—The English Countryside—Home—Exile—Compatriots—The Call to Serve—The Call to Happiness.

## The Teaching of English.

By A. E. ROBERTS, M.A., Principal Lecturer in English at the Islington Day Training College, and A. BARTER, L.L.A., late Head Mistress of the Braintree Pupil-Teacher School. 2s. net.

Much pioneer work lies before the English teacher, and the present book is an attempt to suggest some of the lines along which he may proceed. No space has been devoted to the teaching of reading and writing as mechanical processes, since these subjects have been frequently treated of in books in school method. The emphasis has been laid on the teaching of literature and of composition.

## Combined Course of Literary Reading and Composition.

Illustrated from Famous Pictures. Edited by LEWIS MARSH, M.A. 2s.

## English Poetry for the Young.

Selected by S. E. WINBOLT, M.A. A chronological selection of English poetry, clearly printed and well bound in cloth. 1s.

## BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. Nearly 80 volumes. To be used in correlation with the study of English Literature and History.

Among the leading Authors are:—

Malory.	Gibbon.	Drake.	Thucydides.	Dickens.
Froissart.	Macaulay.	Raleigh.	Plutarch.	Charles Lamb.
Bacon.	Carlyle.	Anson.	Livy.	Kingsey.
Burke.	Prescott.	Hawkins.	Marcellinus.	Swift.
Ruskin.	Josephus.	Cook.	Lucretius.	Borrow.

## Magnetism and Electricity and The Principles of Electrical Measurement.

By S. S. RICHARDSON, B.Sc., Associate of the Royal College of Science, London; Lecturer in Physics, Municipal Technical School, Liverpool. Crown 8vo, cloth boards, 5s. net.

## Systematic Inorganic Chemistry from the Standpoint of the Periodic Law.

A Text-Book for Advanced Students. By R. M. CAVEN, D.Sc., and G. D. LANDEB, D.Sc. Crown 8vo, cloth, 6s. net.

## A Text-book of Organic Chemistry.

English Translation from the German of A. BRUNTHSEN, Ph.D. Edited by J. J. SUDBOROUGH, Ph.D., D.Sc., F.I.C. New Edition. Revised to date. 674 pp., crown 8vo, cloth, 7s. 6d. net.

Messrs. BLACKIE & SON will be pleased to send full lists of Books suitable for Oxford and Cambridge Local Examinations, 1909, post free on application.

**BLACKIE & SON, Ltd., 50 Old Bailey, E.C.**
